Executive Summary

This Historic Environment Baseline Report has been prepared to support Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES) (Volume 6 of the Development Consent Order (DCO) application) for Norwich to Tilbury (the 'Project'), on behalf of the client, National Grid. The Project scope of work is to reinforce the high voltage power network in East Anglia. The reinforcement is needed because the existing transmission network, even with current upgrading, will not have sufficient capacity for the new renewable energy (a substantial proportion of which would be generated by offshore wind) that is expected to connect to the network over the next 10 years and beyond. Completion of the Project, together with other new reinforcements across the country, will meet this future energy transmission demand both in East Anglia and across the UK.

This report describes the Historic Environment baseline within the Study Areas for the Project in order to identify those heritage assets which have potential to be impacted by the Project. The Project route has been split into eight sections (Sections A-H) to aid navigation of documents, as it traverses the counties of Norfolk, Suffolk and Essex. Summaries of the Historic Environment baseline for each Project Section are presented in Sections 3.2 to 3.9 of this document. The assessment of the Historic Environment comprises archaeological assets, historic buildings and historic landscapes, of designated and non-designated status. The baseline draws upon desk-based sources of information, walkover surveys and setting surveys within the Order Limits and the Study Areas for the Project. Various sources have been consulted to produce the baseline report including Historic Environment Records, the National Heritage List for England, historic mapping, aerial imagery and Light Detection and Ranging (LiDAR) data. A full list of sources is presented in the bibliography.

The methodology uses three Study Areas established from the Order Limits (250 m for non-designated assets, 2 km for all designated assets and 3 km for scheduled monuments, Grade I and II* listed buildings and Grade I and Grade II* registered parks and gardens). The assets have been grouped where appropriate within the report to aid in the understanding of the relationships between assets and the wider historic landscape.

The Historic Environment baseline is described in Section C of this report. This section contains assessment of the value of the heritage assets within the Study Areas and descriptions of setting and the contribution this makes to an asset's value. For designated assets the setting assessment identifies those assets whose settings contribute to their value but do not extend to the Project. In these cases, there is no potential for impact and therefore they are excluded from further assessment in Chapter 11: Historic Environment (document reference 6.11).

The report establishes an understanding of the designated and non-designated Historic Environment and assesses the value of the identified assets. The report also includes assessment of the potential for previously unrecorded archaeological remains. This informs understanding of the need for any further archaeological investigations to develop the understanding of the Historic Environment baseline and informs the environmental impact assessment in Chapter 11: Historic Environment (document reference 6.11).

1. Introduction

1.1 Introduction

1.1.1 This Historic Environment Baseline Report has been prepared to support Chapter 11: Historic Environment (document reference 6.11) of the Environmental Statement (ES) (Volume 6 of the Development Consent Order (DCO) application) for Norwich to Tilbury (the 'Project').

1.1.2 This report presents the baseline Historic Environment resource for aspects of the Historic Environment which may be impacted by the Project. The baseline identifies, describes, and collates the baseline Historic Environment resource identified from desk-based sources, walkover and setting survey within the Order Limits and defined Study Areas for the Project.

1.1.3 The report provides an assessment of the heritage value of the Historic Environment resource (made up of individual heritage assets, including built and archaeological and designated and non-designated) within the Project's Study Areas. Assessment of value includes any contribution made by the respective heritage asset's setting.

1.1.4 The assessment of value, made in this report, has been carried through to Chapter 11: Historic Environment (document reference 6.11). As part of the assessment process, this report identifies those heritage assets that do not interact with the Project and therefore would not experience any effects. This could be through a lack of physical interaction and therefore no potential for physical effects, and/or due to the land within the Order Limits making no contribution to the setting of the heritage asset, and therefore no potential for changes to setting to affect the value of the asset. Where the Project does not interact with a specific heritage asset, these have been excluded from further assessment in Chapter 11: Historic Environment (document reference 6.11).

1.2 Project Background

1.2.1 The Project comprises reinforcement of the transmission network between the existing Norwich Main Substation in Norfolk and Tilbury Substation in Essex, via Bramford Substation, the new East Anglia Connection Node (EACN) Substation and the new Tilbury North Substation.

1.2.2 The reinforcement is needed because the existing transmission network, even with current upgrading, will not have sufficient capacity for the new renewable energy (a substantial proportion of which would be generated by offshore wind) that is expected to connect to the network over the next 10 years and beyond. Completion of the Project, together with other new reinforcements across the country, will meet this future energy transmission demand both in East Anglia and across the UK.

1.2.3 Further details of the Project are included within Chapter 4: Project Description (document reference 6.4).

1.3 Report Structure

1.3.1 The structure of this Baseline Report is outlined below:

1) Introduction including outline methodology
2) Archaeological and historical background – a high-level summary of the Project route, by period
3) Baseline – this chapter is split into the eight geographical sections of the Project: Sections A through to Section H. For each section the location, topography, geology, historic landscape, archaeological and built heritage assets are covered. Project sections are detailed below
4) Abbreviations
5) Glossary
6) Bibliography.

1.3.2 This report is also supported by a series of Annexes which include supplementary information including:

- Annex A **Figures**
- Annex B **Gazetteers,** providing a full catalogue of assets considered in the baseline of this assessment.
- Annex C **Methodology,** providing a detailed breakdown of the methodology used to establish the assessment.
- Annex D **Walkover Survey**, conducted by the Project to support baseline understanding.
- Annex E **Scoped Out Listed Buildings**, providing the rationale for scoping out of individual listed buildings within the Historic Environment Study Areas.

1.3.3 The following figures have been produced to accompany this report and are presented in Annex A:

- Figure A11.1.1: Designated Heritage Assets
- Figure A11.1.2: Non-Designated Heritage Assets
- Figure A11.1.3: Walkover – Accessed Fields
- Figure A11.1.4: Historic Landscape Characterisation and Protected Lanes.

1.3.4 No historic maps have been re-created as figures for this Project.

1.3.5 The eight geographical sections are largely based on Local Planning Authority boundaries where possible. The rationale for splitting the Project into geographical sections is to enable readers to find the locations of interest more easily to them. The eight sections are:

- Section A – South Norfolk Council
- Section B – Mid-Suffolk District Council
- Section C – Babergh District Council, Colchester City Council and Tendring District Council
- Section D – Colchester City Council
- Section E – Braintree District Council

- Section F – Chelmsford City Council and Brentwood Borough Council
- Section G – Basildon Borough Council and Brentwood Borough Council (and part of Chelmsford City Council)
- Section H – Thurrock Council.

1.3.6 Relevant legislation and policy for Historic Environment is included in Chapter 11: Historic Environment (document reference 6.11).

1.4 Aims

1.4.1 The aims of this report are as follows:

- Establish the nature of the Historic Environment (both designated and non-designated assets) within the Order Limits and Study Areas
- Assess the value of the Project's Historic Environment resource
- Assess the potential for any previously unrecorded below ground archaeological remains to survive in the Order Limits, which could be impacted by the Project
- To inform the assessment of the need for any further archaeological investigations to support baseline understanding
- To aid in establishing the scope of the Historic Environment Environmental Impact Assessment (EIA).

1.4.2 This report does not attempt to assess the potential impacts of the Project on the heritage resource, or the significance of effects; this is presented in Chapter 11: Historic Environment (document reference 6.11).

1.5 Methodology

1.5.1 A detailed statement has been prepared, outlining the proposed methodology for the Historic Environment assessment of the Project. The detailed methodology, including consulted sources of information for data gathering, is appended to the main structure of this report (Annex C). Therefore, details of the methodology are not repeated in the principal structure of this report.

1.5.2 Key aspects of the methodology are:

- Assessment focuses on the terrestrial archaeological and built heritage resource. There is no study of the historic marine environment or inter-tidal regions of the river Thames
- Use of three Study Areas as agreed through the EIA Scoping Report (document reference 6.19) and EIA Scoping Opinion (document reference 6.20)
  - 250 m Study Area established from the Order Limits, for data collection and assessment on non-designated heritage assets
  - 2 km Study Area established from the Order Limits, for assessment of effects to setting of all designated heritage assets
  - 3 km Study Area established from the Order Limits, for assessment of effects to setting of designated heritage assets of the highest significance (scheduled

monuments, Grade I and II* listed buildings and Grade I and II* registered parks and gardens)

- Discussion is led by groupings of assets in their respective archaeological periods, to understand the overall development of the Project's historic landscape and to support the assessment of heritage value through an understanding of setting.

1.5.3 The Baseline Report produced to support Chapter 11: Historic Environment (document reference 6.11) draws on the following sources:

- Historic Environment Records (HER) data for known archaeological sites, monuments, findspots and events (most recently accessed November 2024)
- Local Planning Authority websites have been viewed for information on locally listed buildings (most recently accessed November 2024)
- Data sets of designations from Historic England's National Heritage List for England (most recently accessed March 2025)
- Conservation areas have recently become available as a data download from Historic England. Data for conservation areas were cross referenced with the Local Planning Authority websites to ensure accurate data was used (most recently accessed March 2025)
- Archaeological reports (grey literature) on archaeological interventions within the Order Limits as the key consideration area for archaeological potential
- Published archaeological journals and monographs, local history books and pamphlets, including local history websites as appropriate

1.5.4 The Baseline Report also includes the following data:

- Historic maps, including Ordnance Surveys (OS), estate maps, enclosure maps, tithe maps and military plans, all available scales of OS maps (most recently accessed November 2024)
- Aerial photography, including imagery taken for the Project in 2022
- Historic aerial photography (most recently accessed April 2025)
- LiDAR data (April 2025)
- Protected lanes data from relevant Local Authorities (most recently accessed March 2025)
- Walkover and setting survey results for areas (most recently updated March 2025).

1.5.5 The HER data provided by Suffolk contains confidential information regarding the location of certain heritage assets. Within the text of the Baseline Report general location information, in order to identify the general area within a Project Section where the asset is located, is provided but no grid references are included and these assets are not shown on figures.

1.5.6 The established guidance for assigning heritage value is presented in Table A11.1.1. Assessment of value is supported by Historic England's 2008 Conservation Principles. In all cases professional judgement has been used and where appropriate

assigned values may vary from the examples presented in the table, with appropriate justification provided where this is the case.

Table A11.1.1 Heritage value assessment criteria

Value	Guidance
Very High	World Heritage Sites (including nominated sites) inscribed for their cultural heritage importance Assets that can contribute significantly to acknowledged international research objectives Assets of acknowledged international importance
High	Scheduled monuments (including proposed sites) Grade I and II* listed buildings Grade I and II* registered parks and gardens Registered battlefields Conservation areas containing buildings of predominantly high value Non-designated assets of the quality and importance to be designated Assets that can contribute significantly to acknowledged national research objectives
Medium	Grade II listed buildings Grade II registered parks and gardens Conservation areas containing buildings of predominantly medium value Assets that contribute to regional research objectives and/or have exceptional quality in their fabric or historical associations
Low	Locally listed buildings, or those of equivalent quality in their fabric or historical associations Assets of local importance Assets compromised by poor preservation and/or poor survival of contextual associations Assets of limited value, but with potential to contribute to local research objectives
Negligible	Assets with very little or no surviving archaeological/historical interest Buildings of no architectural or historical note; buildings of an intrusive character
Unknown	The importance of the resource has not been ascertained/is inaccessible

2. Archaeological and Historical Background

2.1 Introduction

2.1.1 This chapter provides a general summary of the Historic Environment baseline of the Project, organised by Project Section and period. The summary for each section can be read without reference to any of the other section summaries. The introduction to each Project Section in Chapter 3: Baseline includes a description of location, topography, and geology.

2.2 Background Summary by Project Section and Period

Section A – South Norfolk Council

2.2.1 The designated heritage assets of Section A comprise: six scheduled monuments; two registered parks and gardens; 391 scoped in listed buildings, and nine conservation areas. There are 587 non-designated heritage assets identified in Section A comprising findspots, moated sites, cropmarks, geophysical anomalies, parkland, earthworks and 20th century military assets as well as 12 buildings largely comprising post medieval farmsteads but also including a hospital and a cold war bunker.

2.2.2 The cultural heritage resource of Section A is distributed throughout its bounds and is representative of human activity following the retreat of the ice as the Late Devensian glaciation came to an end, through to the Cold War following the Second World War (WWII) of the 20th century. Findspots of Upper Palaeolithic and Mesolithic worked flint indicate human communities of hunter-gatherers crossed the land bridge which connected the British Isles to mainland Europe and followed the retreating ice and tundra conditions northwards. These communities left very little physical evidence of their existence other than their stone tool industries, but the distribution of the worked flint suggests these hunter-gatherers exploited the river valleys for their resources and as routes through the landscape. The Neolithic period is represented by more widespread and concentrated lithic scatters likely reflecting dispersed human activity as the population grew following the introduction of farming. The Bronze Age is again largely represented by scatters of pottery and flintwork, but excavated pits and ditches suggest the intensification of farming resulting in the physical manipulation of the landscape. The cropmarks of several potential barrow sites (burial mounds) are recorded in Section A and a good proportion of these are situated close to the river network and would likely have been understood as an ancestral claim of tenure over the landscape and its resources and potentially highlight rivers as tribal boundaries. The Iron Age saw further population increase, the intensification of farming and the establishment of villages as identified through several archaeological investigations within Section A. The prehistoric period is also represented in Section A by two scheduled monuments comprising: the ‘Camp in Village’ (**1003984**), the earthworks of which are considered to represent the remains of an Iron Age defended settlement or hillfort; and ‘Sites discovered by air photography at Markshall’ (**1002887**), which are cropmarks likely of Bronze Age barrows and Iron Age/Romano-British enclosures.

2.2.3 The Romano-British period saw the continued occupation of some farmsteads and settlements, the abandonment of others and the founding of larger settlements as represented by the scheduled monument 'Venta Icenorum: Roman town and associated prehistoric, Anglo-Saxon and medieval remains' (**1021463**). Venta Icenorum was founded in approximately AD 70 and laid out with streets and insulae on a grid pattern, probably on the site of an Iron Age and Romano-British settlement of the Iceni tribe. The settlement was a Civitas Capital which functioned as an economic, cultural and administrative centre for its region. The scheduled monument 'Roman sites outside town walls' (**1003954**) records Roman assets beyond the bounds of Venta Icenorum and comprise: the flint foundation of a Roman building excavated in 1846; a Roman building, huts and section of road excavated in 1938; and cropmark and excavated evidence of Roman buildings, including a Romano-Celtic temple; and a wall nearly 400 ft (122 m) long interpreted as the western boundary of a temple precinct. Elsewhere across Section A, the Romano-British period is represented by excavated remains and hundreds of findspots comprising metalwork, coins, pottery and building material that in places are so concentrated they likely represent settlements and cemeteries. One such concentration, for example, is located on land 500 m south-east of Fundenhall and partially within the Order Limits (**1130**) and likely represents a Romano-British settlement site which became the focus of an Anglo-Saxon cemetery.

2.2.4 The early medieval (Anglo-Saxon) period in Section A is represented by the scheduled monument 'Anglo-Saxon cemetery SW of Markshall Farm' (**1003953**), which suggests the possibility of Saxon settlement activity on the periphery of Venta Icenorum (**1021463**). The presence of a more nucleated settlement pattern in the early medieval period is reflected by the dozens of towns, villages and hamlets recorded by the Domesday Book of 1086. Elsewhere across Section A, the early medieval period is represented by finds of metalwork and pottery and the predominance of items considered to be grave goods suggest the locations of three Anglo-Saxon cemeteries. The first (**1187**) being located on farmland 440 m north-east of Tacolneston and 210 m west of the Order Limits; the second (**1246**) on farmland 400 m north-east of Shelfanger and just clipping the western edge of the Order Limits; and the third (**1130**) on farmland partially within the Order Limits and 500 m south-east of Fundenhall and immediately south of Hapton Road. The discovery of a bronze bowl on the Shelfanger site (**1246**) led to the identification of a richly furnished early/middle Saxon female burial (**1276**) located 360 m west of the Order Limits. The grave goods included: a necklace with a gold openwork pendant in the centre, flanked by two gold spacer beads, and then two gold coins of Merovingian King Sigebert III as pendants; a continental pottery bi-conical bowl with cordon and grooved decoration; a copper alloy bowl; an iron knife; 13 copper alloy chatelaine rings with punched ring and dot decoration; and a copper alloy chatelaine ring with a fragment of a possible decorated girder hanger attached to it.

2.2.5 The medieval period within Section A is predominantly represented by findspot and artefacts recovered during fieldwalking and metal detector surveys. There are as well, several churches and moated sites dating to the medieval period as well as settlement centres that have medieval origins. There are almost 40 Grade I and Grade II* medieval churches within the 3 km Study Area, reflecting the huge influence of the Church over the medieval landscape and the human population therein. The numerous moated sites in the area (10 within the 250 m Study Area), likely represent a network of manorial sites which defined the economic, social, and administrative organisation of rural life. The manorial system evolved as a result of the distribution of English land among the Norman nobility. Land was the primary

source of wealth and power, and the king granted vast estates to his loyal followers, who in turn became lords of these manors. The lord of the manor had the authority to administer justice through the manorial court, manage the estate's resources, and demand labour and services from the peasants. His residence, the manor house, was a symbol of his authority and status within the manor. The medieval period also saw the establishment of new settlements and the expansion of numerous settlements identified in the Domesday Book, but some such as Gowthorpe (**1232**) and Kenningham (**1067**) fell out of use and were deserted. The medieval period is also represented by the 15th century and later scheduled monument 'Newton Flotman Bridge' (**1002885**), which crosses the Tas on the south-eastern outskirts of Newton Flotman, 2.4 km north-east of Flordon and 1.5 km south-east of the Order Limits.

2.2.6 The post medieval period within Section A is characterised by the introduction of large-scale infrastructure, principally for transport, communication, and drainage, alongside the continued agricultural development and management of the landscape. The post medieval assets comprise registered parks and gardens, listed buildings, conservation areas, non-designated buildings, excavated archaeological features and finds derived from metal detector and walkover surveys. The increasingly industrialised farming industry, with its links to wider markets and greater demand provided by access to the rail network, required more labour, which in turn led to the urban expansion of many settlements. The two registered parks and gardens in Section A are of post medieval date and comprise the Grade II* listed 'Intwood Hall' (**1000320**) and the Grade II 'Rainthorpe Hall' (**1000292**). Of the 391 scoped in listed buildings of Section A, 348 are of post medieval date with the majority of these being farmhouses and associated barns and cottages, reflecting the intensification of the farming industry.

2.2.7 The modern period within Section A is characterised by an increase in industrial infrastructure, the advent of military sites and the continued agricultural management of the landscape. Heritage assets are limited to the Grade II listed 'Tacolneston War Memorial' (**1470006**), 20th century military assets including a World War One (WWI) military airfield (**1037**) located 2.5 km north-north-east of Winfarthing and partially within the Order Limits, and a Cold War bunker (**1310**) located in the grounds of the Grade II listed Quaker's Farmhouse (**1373606**).

Section B - Mid Suffolk District Council

2.2.8 The designated heritage assets of Section B comprise: 14 scheduled monuments, 516 scoped in listed buildings, one registered park and garden, and nine conservation areas. There are 3591 non-designated heritage assets identified in Section B comprising excavated remains, findspots, Portable Antiquities Scheme (PAS) records, moated sites, railways, canals, woodlands, cropmarks, burnt mounds, a milestone, Roman roads, parkland, earthworks and 20th century military assets as well as 89 buildings largely comprising post medieval farmsteads and outbuildings, but also including a bridge and a chapel.

2.2.9 The cultural heritage resource of Section B is distributed throughout its bounds and is representative of human activity following the retreat of the ice as the Late Devensian glaciation came to an end, through to WWII in the middle of the 20th century. Findspots of Upper Palaeolithic and Mesolithic flintwork, including an Upper/Terminal Palaeolithic to early Mesolithic flint scatter (**2002**) of the Ahrensburgian long blade industry (9700 - 9400 BC) found on land on the southern flank of the Waveney valley

at the northern limit of Section B, indicate human communities of hunter-gatherers crossed the land bridge which connected the British Isles to mainland Europe and followed the retreating ice and tundra conditions northwards. These communities left very little physical evidence of their existence other than their stone tool industries, but the distribution of the worked flint suggests these hunter-gatherers exploited the river valleys for their resources and as routes through the landscape.

2.2.10 The Neolithic period is largely represented by more widespread and concentrated lithic scatters likely reflecting dispersed human activity as the population grew following the introduction of farming. There are, however, the potential remains of two long barrows (**2011**, **2010**), a causewayed ring ditch (**2008**) that may represent the remains of a Neolithic causewayed enclosure or henge monument, and excavated settlement remains (**2601**). The Bronze Age is represented in Section B by cropmarks of potential funerary monuments, and scatters and findspots of lithics, pottery and metalwork, including a hoard, recorded by the Suffolk HER and by the Portable Antiquities Scheme. The greater visibility of the Bronze Age in the archaeological record likely reflects population growth and shift to a more sedentary existence reflecting the intensification of farming, whilst the presence of funerary and ceremonial monuments suggests organised and likely stratified communities. The potential funerary monuments are represented by ring ditches, some with internal pits, which may be the remains of ploughed out round barrows. A good proportion of the barrow sites are situated close to the river network and would likely have been understood as an ancestral claim of tenure over the landscape and its resources and potentially highlight rivers as tribal boundaries. The hoard, found on farmland within the Order Limits north-west of Needham Market, comprised 81 copper alloy artefacts including socketed axe heads, winged axe heads, swords, sickles and a large amount of casting waste. The Iron Age saw further population increase, the intensification of farming and the establishment of villages as identified through several archaeological investigations within Section B. The period is also represented in Section B by numerous artefact scatters and findspots largely comprising coins, pottery and metalwork.

2.2.11 The Romano-British period in Section B is represented by archaeological remains comprising evidence of domestic activity and agricultural practice, and scatters and findspots of pottery, building material and metalwork recorded by the Suffolk HER and by the PAS. The PAS data indicates widespread Romano-British activity, although many of the records likely reflect stray losses or perhaps the effects of manuring. There are, however, a number of finds concentrations that likely indicate the location of a building or farmstead and others that probably relate to settlement and funerary sites. Notable examples include: a Romano-British and Anglo-Saxon artefact scatter (**2164**) located c. 1 km north-east of Wortham that is suggestive of a Romano-British and Anglo-Saxon period inhumation and cremation cemetery; A large concentration of 1204 Romano-British artefacts (**2166**) largely north of Wickham Road between Wickham Street and Finningham suggestive of settlement activity; a concentration of 598 Romano-British artefacts (**2134**) c. 1.5 km south-west of the centre of Barking suggestive of settlement activity; and concentrations of Romano-British artefacts c. 170 m south-east of Burgate Great Green (**2162**), 280 m north-east of Barking (**2159**) and c. 1 km south-east of Great Bricett (**2145**) that may indicate the locations of buildings or farmsteads.

2.2.12 The early medieval period in Section B is represented by the more nucleated settlement pattern of dozens of towns, villages and hamlets recorded by the Domesday Book of 1086. Elsewhere within the Section, and as noted above, there is a Romano-British and Anglo-Saxon artefact scatter (**2164**) located c. 1 km north-east

of Wortham that is suggestive of a Romano-British and Anglo-Saxon period inhumation and cremation cemetery. The early medieval period is also represented in Section B by archaeological remains comprising an inhumation at St. John's House Hospital c. 1.5 km south-west of Palgrave (**2191**); a possible 'hut site' 320 m east of Worthing (**2195**); and by numerous findspots and low-density artefact scatters recorded across the Section.

2.2.13 The medieval period is represented in Section B by archaeological remains comprising evidence of domestic activity, agricultural practice and scatters and findspots of pottery and metalwork recorded by the Suffolk HER and by the Portable Antiquities Scheme. There are as well, several churches and moated sites dating to the medieval period as well as settlement centres that have medieval origins. There are 34 Grade I and Grade II* medieval churches within the 3 km Study Area, reflecting the huge influence of the church over the medieval landscape and the human population therein. The numerous moated sites in the area (20 within the 250 m Study Area), likely represent a network of manorial sites which defined the economic, social, and administrative organisation of rural life. The manorial system evolved as a result of the distribution of English land among the Norman nobility. Land was the primary source of wealth and power, and the king granted vast estates to his loyal followers, who in turn became lords of these manors. The lord of the manor had the authority to administer justice through the manorial court, manage the estate's resources, and demand labour and services from the peasants. His residence, the manor house, was a symbol of his authority and status within the manor. The medieval period also saw the establishment of new settlements and the expansion of numerous settlements identified in the Domesday Book. Several of the moated sites noted above are scheduled monuments and comprise: 'Burgate Hall moated site' (**1017331**) c. 1.5 km south of Wortham; 'Moated site at Stubbing's Entry' (**1016700**) c. 1.4 km south-west of the centre of Mellis; 'Westhorpe Hall moated site and associated fishponds' (**1016697**) on the eastern edge of Westhorpe; 'Russell's Hill moated site' (**1006000**) c. 750 m south-east of Cow Green; 'Rookyard Farm Moats' (**1451408**) on the northern outskirts of Old Newton; 'Chapel Farm moated site' (**1006050**) 140 m north of Lower Farm Road, Ringshall Stocks; 'Great Bricett moated site' (**1006048**) on the western edge of Great Bricett; and 'Offton Castle' (**1006049**) c. 380 m south of the centre of Offton. Section B also contains two further scheduled monuments comprising 'Chantry (site of)' (**1006030**) at the western end of Badley Lane, Badley, and 'Medieval ringwork in Burgate Wood' (**1016699**) within Burgate Wood and 150 m west of the Burgate Hall moated site scheduled monument (**1017331**).

2.2.14 The post medieval period within Section B is characterised by the introduction of large-scale infrastructure, principally for transport, communication, and drainage, alongside the continued agricultural development and management of the landscape. The post medieval assets comprise listed buildings, conservation areas, non-designated buildings, excavated archaeological features and finds derived from metal detector and field walking surveys. The increasingly industrialised farming industry, with its links to wider markets and greater demand provided by access to the rail network, required more labour, which in turn led to the urban expansion of many settlements. Of the 408 scoped in listed buildings of Section B, 307 are of post medieval date with the majority of these being farmhouses and associated barns and cottages, reflecting the intensification of the farming industry. There are also, however, a few country houses and public houses.

2.2.15 The modern period within Section B is characterised by an increase in industrial infrastructure, the advent of military sites and the continued agricultural management

of the landscape. Heritage assets of the modern era are limited to the site of a former pillbox (**2301**) c. 190 m north of Barking village, four WWII assets (**2300**) c. 2 km south-east of Ringshall, and the site of the demolished Sproughton/Burstall Patrol Auxiliary Unit Operational Base (**2048**) c. 2 km south-west of Bramford.

Section C - Babergh District Council, Colchester City Council and Tendring District Council

2.2.16 The designated heritage assets of Section C comprise: ten scheduled monuments; one registered park and garden (Grade II); 329 scoped in listed buildings; and nine conservation areas. There are 234 non-designated heritage assets identified in Section C comprising findspots, cropmarks, post medieval farmsteads, moats, and 20th century military assets.

2.2.17 The cultural heritage resource of Section C is distributed throughout its bounds and is representative of human activity from the palaeolithic period through to the Cold War following WWII in the mid to late 20th century. A single findspot of a Palaeolithic axe (**3002**) has been identified within Section C, which although underrepresented for the time period does indicate that communities of hunter-gatherers crossed the land bridge which connected the British Isles to mainland Europe and followed the retreating ice and tundra conditions northwards. These communities left very little physical evidence of their existence other than their stone tool industries, but the distribution of the worked flint suggests these hunter-gatherers exploited the river valleys for their resources and as routes through the landscape.

2.2.18 The Neolithic period is represented by more widespread and concentrated lithic scatters likely reflecting dispersed human activity as the population grew following the introduction of farming. Four scheduled monuments also dating to the Neolithic Period are located within Section C and comprise a 'Site discovered by aerial photography S of King's Wood' (**1006022**) interpreted as a henge, a 'Henge 70 m north east of Cross Cottages' (**1019078**), a 'Round barrow W of Lawford Hall' (**1002125**) in the form of a bowl barrow, and a 'Settlement site NNE of Lawford House' (**1002157**), likely to be a causewayed enclosure but also referred to as a henge. These assets suggest the locations of possible tribal boundaries or settlement activity in the case of the enclosure, but also the area being utilised as part of a wider religious landscape in the case of the henge monuments. The Bronze Age is further represented by scatters of pottery, tools and flintwork but excavated pits and ditches suggest the intensification of farming and settlement resulting in the physical manipulation of the landscape. The scheduled monument of a 'Crop mark site S of Ardleigh' (**1002146**) marks the location of a multi-period cropmark complex site, with archaeological material indicating a middle Bronze Age funerary 'urnfield' as well as six ring ditches producing further urned cremations of a similar type and date. Funerary sites and potential barrow locations (burial mounds) within Section C would likely have been understood as an ancestral claim of tenure over the landscape and its resources. The Iron Age saw further population increases, with an intensification of farming and settlement growth as has been identified through archaeological investigations within Section C. Possible Iron Age settlement activity has been suggested at various locations within Section C, for example at the scheduled 'Crop mark site S of Ardleigh' (**1002146**) outlined above, as well as five late Iron Age sites (**3016**), south of Wick Farm.

2.2.19 The Romano-British period in Section C is represented by archaeological remains comprising evidence of domestic activity, travel, finance, and settlement recorded in

the HER, by PAS, and Historic England. The PAS data indicates widespread Romano-British activity, although many of the records likely reflect stray losses or perhaps the effects of manuring. These finds include artefact scatters of coins, pottery, tiles, brick, oyster shell, and a stone figure (**3037**). Romano-British artefacts were found throughout Section C but a concentration of assets in Ardleigh (**1002146**), north-east of Colchester, illustrates the long-term multi-period settlement of the area, and finds including burials, ditches, pits, pottery, and kilns, indicate that the settlement was of considerable size and importance. Colchester, or Camulodunum, was an important military site and settlement during the Romano-British period, and the cropmark site (**1002146**) sits equidistant in the landscape between Colchester to the south-west and the river Stour to the north-east. The discovery of possible roman roads in this area (**3207** and **3035**) illustrates trade and travel in this area, as a possible 'commuter' settlement between the river and inland.

2.2.20 The early medieval period in Section C is represented by the more nucleated settlement pattern of towns, villages and hamlets recorded by the Domesday Book of 1086. These settlements follow the natural landscape within the Stour Valley and their communities would have utilised the river and its tributaries, as well as its farming landscape to support their livelihoods. It is also represented by HER data and PAS finds. These finds include a square enclosure cropmark (**3186**) c. 2 km south of Chattisham that indicates a former probable moat, and an earthwork of a former enclosure (**3096**) in the area around Ardleigh. Other findspots indicative of early medieval activity within the section include a strap fitting (**3069**) and a stirrup (**3093**).

2.2.21 The medieval period is represented in Section C by archaeological remains representing agricultural activity, and scatters of findspots recorded by the HER and PAS. Finds recorded throughout this section include but are not limited to artefact scatters, findspots of personal belongings (jewellery, mounts, buckles, strap ends, jettons) and materials (tiles, pottery), cropmarks of field boundaries and enclosures, and multiple farmsteads. There are several churches and settlements which have their origins in this period throughout Section C. The types of listed buildings can be categorised into churches and farmsteads (which dominate this selection), and domestic dwellings. The number of these types of buildings and their locations within or outside settlements indicate the importance of religion to rural farming communities in the medieval period. There are a few moated sites within Section C, for example scheduled monuments in Chattisham (**1019889**) and Shelly (**1019815**), and non-designated moats in Burstall (**3103** and **3047**), Shelley (**3042**), and surrounding the Church of St Lawrence in Wenham Parva (**1033410**). The moated sites in this section likely represent a network of manorial sites which defined the economic, social, and administrative organisation of rural life. The manorial system evolved as a result of the distribution of English land among the Norman nobility. Land was the primary source of wealth and power, and the king granted vast estates to his loyal followers, who in turn became lords of these manors. The lord of the manor had the authority to administer justice through the manorial court, manage the estate's resources, and demand labour and services from the peasants. His residence, the manor house, was a symbol of his authority and status within the manor. The group of listed buildings (**1003759, 1033405, 1033410**) and scheduled monument (**1003759**) at Wenham Castle are an excellent example of a medieval manorial site.

2.2.22 The post medieval period in Section C is characterised by the introduction of large-scale infrastructure, principally exemplified by the railways (**3165** and **3450**) and canals (**3245** and **3194**), as well as the continuation of agricultural development and

management of the rural landscape. The post medieval assets comprise designated and non-designated historic buildings, conservation areas, and finds recorded by the HER and PAS. The industrialisation of Britain in this period saw the mass-movements from rural areas into urban centres, and this was reflected in the architecture, the building of new dwellings and amenities, and the loss of or change to historic field boundaries due to the enclosure of farmland.

2.2.23 The modern period within Section C is characterised by military sites and the continuation of agricultural management of the landscape, as well as some post-war boundary loss within the agricultural landscape (**3223**). There is one designated heritage assets for this period, the Grade II listed 'Ketelfield and Attached Garden Terrace and Steps to the South elevation' (**1416968**). The military sites include Royal Air Force (RAF) sites and airfields, operation bases and posts, a pill box, a road barrier, and an ammunition shelter. WWII activity is well represented in the record for this area due to the area's strategic position in relation to the east coast and its proximity to mainland Europe.

Section D - Colchester City Council

2.2.24 The designated heritage assets of Section D comprise: eight scheduled monuments; 284 scoped in listed buildings; and three conservation areas. There are 121 non-designated heritage assets identified in Section D broadly comprising findspots, cropmarks, settlements, buildings and ruins, farmsteads, moated sites, a Roman road and 20th century military structures). Also, there are 15 Project identified cropmarks, 93 historic map features including ponds, historical hedgerows, former woods, orchards, railway lines and parish boundaries and 108 PAS.

2.2.25 The cultural heritage resource of Section D is distributed throughout its bounds and is representative of human activity following the retreat of the ice as the Late Devensian glaciation came to an end, through to WWII in the middle of the 20th century. This section provides evidence from across the prehistoric period, spanning from the Palaeolithic to the Iron Age, with a total of 37 assets informing understanding of this period. Findspots of Mesolithic worked flint indicate human communities of hunter-gatherers, providing some evidence of the region's inhabitants during this period and their use of the landscape and indicates that communities of hunter-gatherers crossed the land bridge which connected the British Isles to mainland Europe following the retreating ice and tundra conditions northwards. The 'Wissington Ring Ditch Cluster' (**1003758**) is a scheduled monument located approximately 1 km north of Little Horkesley. This cluster comprises two prominent ring-ditches and a cluster of smaller circles, reflecting a complex of features associated with probable Neolithic or Bronze Age activity, likely representing burial mounds or ritual structures.

2.2.26 Another scheduled monument dating to the prehistoric period is the 'Small Multivallate Hillfort known as Pitchbury Ramparts' (**101995**) situated in a rural location with agricultural fields to the south and dense woodland to the north. The hillfort offers insights into Iron Age settlement patterns, featuring earthwork boundaries and revealing information about the character and duration of its use. A prominent Iron Age site in the region, although located outside the Study Area of the Project, is the late Iron Age oppidum of Camulodunum (modern-day Colchester). Camulodunum was one of the most prominent Iron Age settlements in south-eastern Britain and played a pivotal role as a hub for political, economic, and social activities, characterised by substantial fortifications. Other notable Iron Age occupation features include those near Fossetts Lane, Park Lane in Langham, and Holly Tree Farm in

Boxted. These sites contribute valuable information about settlement practices, activities, and potential industrial endeavours during the late pre-Roman Iron Age.

2.2.27 During the Roman period Camulodunum played a central role as a colonia and the capital of Roman Britain. The Order Limits intersect the hinterland of Roman Colchester, unveiling a rich archaeological heritage. Section D encompasses various Roman assets, including two scheduled monuments and numerous non-designated sites catalogued by the Essex HER. Among these, the remains of a Roman road, 'Stane Street', stand out, connecting Colchester to Coggeshall and highlighting the advanced road network established during this period. The area near Great Tey/Marks Tey/Little Tey reveals a Roman villa (**1013516**), a scheduled monument of high value, providing insights into Roman lifestyles. Excavations at another scheduled monument, Court Knoll (**1003757**), situated near Great Horkesley/Little Horkesley/West Bergholt, provided evidence of Romano-British occupation. The site potentially continued in use, or was later reused, during the medieval period, possibly as a manor. Additionally, Romano-British artefacts, pottery, and structural remnants from across the region contribute to our understanding of occupation and activities. The Romano-British period assets within Section D are diverse, ranging from roadways and villas to earthworks and burials.

2.2.28 During the early medieval period the North Essex claylands and North Thames Basin became home to a relatively dense population of Saxon settlers. This era, although limited in archaeological visibility, witnessed the establishment of a distinct settlement pattern by the late 11th century as evidenced by entries in the Domesday Book of 1086. This documented settlements like Fordham, Wormingford, West Bergholt, Aldham, Stanway, Great and Little Tey, offering a glimpse into the settlement pattern of the region in this period. These settlements reveal an agricultural and pastoral economy centred around dispersed settlements and intricate field systems. Section D may not have direct representations of the early medieval period, but many present-day villages, hamlets, and churches likely trace their origins to this era.

2.2.29 Evidence for the medieval period emphasizes the continuity of settlement patterns and agricultural practices. This period is represented through dispersed settlements, mixed farming, and archaeological evidence such as charcoal-rich pits and medieval pottery sherds. Notable structures, including Grade I listed churches such as 'Church Of All Saints' (**1222737**) and 'Church Of St Mary Wiston' (**1351854**) contribute to the understanding of the medieval landscape. The 'Medieval Moat at Marks Tey Hall' (**1477794**) is a scheduled monument, located south of Marks Tey. This well-preserved site encompasses the surviving arms of a rectangular moat encircling Marks Tey Hall. The moated site not only provides valuable archaeological and paleoenvironmental insights but also has a documented history tracing the lineage of the Tey family and the site's evolution over centuries. Its setting, intertwined with other structures, adds to its historical significance.

2.2.30 The post medieval period in Section D is characterised by notable changes in transportation, communication, and drainage, leaving a lasting imprint on the landscape. Noteworthy was the development of the agricultural sector, which led to the expansion of established medieval settlements, driven by intensified farming practices. Evidence for the impact of this beyond the settlements themselves is demonstrated at Marks Tey, through the scheduled monument 'Circular Brick Kilns at W H Collier Brick and Tile Works' (**1020999**). This industrial site, created in 1863, consists of two circular kilns and their associated brick working floor, offering valuable insights into both 19th-century brick manufacturing and indirect evidence for the expansion of settlements and industry as this drove the demand for bricks. The

previous rural character of the area was however preserved, featuring scattered villages, hamlets, and farmsteads surrounded by enclosed field systems. The post medieval assets broadly comprise listed buildings, conservation areas, non-designated buildings, excavated archaeological features and findspots, many of which represent this intensification of farming activity within Section D during this period.

2.2.31 In the modern period the assets within Section D include WWII remains and infrastructure developments. The scheduled 'World War II Eastern Command Line at Chappel Viaduct' (**1020687**) demonstrates various defensive structures strategically positioned around the Chappel Viaduct, designed to act as a stop line in event of invasion. The Boxted WWII Airfield (**4063**) provides evidence of the operational history during World War II, with remnants of runways and perimeter tracks still visible. Other World War II assets include pillboxes, an ammunition shelter, anti-tank rails, and road barriers, contributing to the broader system of Eastern Command Line defences. Notable is the 'Road Barrier / Anti-Tank Pimple, New Road, Fordstreet' (**4042**), marked by a unique pyramid-shaped anti-tank pimple.

Section E - Braintree District Council

2.2.32 The designated heritage assets of Section E comprise: ten scheduled monuments; three registered park and gardens; 203 scoped in listed buildings, and six conservation areas. There are 160 non-designated heritage assets identified in Section E broadly comprising of findspots, moated sites, farmsteads, cropmarks, geophysical anomalies, parkland, earthworks and WWII infrastructure associated with Royal Air Force (RAF) Rivenhall.

2.2.33 The cultural heritage resource of Section E is distributed throughout its bounds and is representative of human activity following the retreat of the ice as the Late Devensian glaciation came to an end, through to WWII in the 20th century. Findspots of Upper Palaeolithic and Mesolithic flintwork indicate human communities of hunter-gatherers crossed the land bridge which connected the British Isles to mainland Europe and followed the retreating ice and tundra conditions northwards. These communities left very little physical evidence of their existence other than their stone tool industries, but the distribution of the worked flint suggests these hunter-gatherers exploited the river valleys for their resources and as routes through the landscape. The Neolithic period is represented by more widespread and concentrated lithic scatters likely reflecting dispersed human activity as the population grew following the introduction of farming. The scheduled monument of a Neolithic long mortuary enclosure and later Bronze Age round barrow (**1017230**) in the floodplain of the river Blackwater further suggests the presence of possible tribal boundaries or a claim to the tenure over the landscape. The Bronze Age is further represented by scatters of pottery, tools and flintwork but excavated pits and ditches suggest the intensification of farming and settlement resulting in the physical manipulation of the landscape. The cropmarks of several further potential barrow sites (burial mounds) are also recorded in Section E and would likely have been understood as an ancestral claim of tenure over the landscape and its resources. The Iron Age saw further population increases, with an intensification of farming and settlement growth as has been identified through archaeological investigations within Section E.

2.2.34 The Romano-British period saw the continued occupation of some farmsteads and settlements, the abandonment of others and the founding of larger settlements. High-status villa sites also appear for the first time in this period such as the scheduled

monument of ‘Roman villa, Anglo-Saxon hall, cemetery and church site, around and to the north and east of St Mary and All Saints Church’ (**1013831**). The villa complex comprised at least four buildings, associated ancillary structures and features and a footpath which later became the focus of an early medieval (Anglo-Saxon) cemetery and a church. Elsewhere across Section E, the Romano-British period is represented by excavated remains, findspots comprising metalwork, coins, pottery and building material that in places are concentrated enough to likely represent potential settlement locations. One such concentration, for example, has been identified through archaeological investigations at the scheduled monument of Cressing Temple (**1002122**).

2.2.35 The early medieval period in Section E is represented by two scheduled monuments including the ‘Roman villa, Anglo-Saxon hall, cemetery and church site, around and to the north and east of St Mary and All Saints Church’ (**1013831**) mentioned above, and the ‘cemetery 150 m east of Easterford Mill’ (**1013515**). Such activity is suggestive of nearby early medieval settlement activity. The presence of a more nucleated settlement pattern in the early medieval period is reflected by the dozens of towns, villages and hamlets recorded by the Domesday Book of 1086. Elsewhere across Section E, the early medieval period is represented by activity including early medieval (late Anglo-Saxon to Saxo-Norman) remains associated with the moat of the Anglo-Saxon manor at Cressing Temple (**1002122**), building fabric within medieval period ecclesiastical buildings such as the Church of St. Etheldreda (**1147914**), and the foundations of the ‘Church of St Mary and All Saints’ (**1169594**). These assets are also suggestive of nearby settlement and burial activity.

2.2.36 The medieval period within Section E is represented by five scheduled monuments including ‘Coggeshall Abbey’ (**1018865**), Cressing Temple (**1002122**), ‘Blunts Hall ringwork’ (**1012098**), ‘Great Loyes moated site and fishpond’ (**1008979**), and the ‘Moated site and two fishponds at Black Notley churchyard, 20 m east of St Peter's and St Paul's Church’ (**1013763**). In broad terms these scheduled monuments represent a heavy ecclesiastical presence within Section E in the medieval period. This is best demonstrated by the presence of Coggeshall Abbey and a number of further church complexes. Cressing Temple is of particular note as the location of a medieval chapel and moat associated with the Knights Templars, recorded as the first recorded settlement of the Knights Templar in the UK. This reflects the huge influence of the Church over the medieval landscape and the surrounding population. A number of moated manorial sites, farmstead complexes, and settlement centres have also been identified dating to the medieval period. The numerous moated sites in the area likely represent a network of manorial sites which defined the economic, social, and administrative organisation of rural life. This includes the registered park and garden (**1000341**) of Faulkbourne Hall (**1337782**) with 16th century origins underlying the current 19th century gardens. The manorial system evolved as a result of the distribution of English land among the Norman nobility post 1066. Land was the primary source of wealth and power, and King William I granted vast estates to his loyal followers, who in turn became lords of these manors. The lord of the manor had the authority to administer justice through the manorial court, manage the estate’s resources, and demand labour and services from the peasants. Manor houses were also a symbol of authority and status within the manor. The medieval period also saw the establishment of new settlements and the expansion of numerous settlements identified in the Domesday Book, but some such as Faulkbourne (**5018**) fell out of use and were later deserted. The medieval period is also represented by defensive fortifications such as the scheduled monument of ‘Blunts Hall ringwork’ (**1012098**) overlooking the river Brain.

2.2.37 The post medieval period within Section E is characterised by the continued use of manorial hall and farmstead complex locations, and the introduction of more large-scale infrastructure. This was principally for transport, communication and drainage, alongside the continued agricultural development and management of the landscape through more industrial level activities such as mill houses, such as 'Pointwell Mill House' (**1170230**). The post medieval assets broadly comprise of listed buildings, conservation areas, non-designated buildings, excavated archaeological features and findspots, many of which represent more intensive farming activity within Section E during this period. The increasingly industrialised farming activity, with its links to wider markets and greater demand provided by access to the rail network, required more labour, which in turn led to the urban expansion of many surrounding settlements.

2.2.38 The modern period within Section E is characterised by an increase in industrial infrastructure, the advent of military sites and the continued agricultural and industrial management of the landscape. Silver End 'model village' (**CA1**) dates to this period and was constructed between 1926 and 1932 to provide accommodation and amenities for the workforce of Crittalls Manufacturing Company Ltd., 90% of whom were disabled ex-servicemen. The remaining modern period asset of particular note is RAF Rivenhall (**5239**) constructed by the United States Army Air Forces (USAAF) and opened in 1942 during the height of WWII. The base was used by both the RAF and USAAF for various fighter command and bomber command units during the war, after which the base remained as a reserve base until 1956 when it was finally closed. Some of the land associated with the base was then leased to the Marconi Company. The northern half of the airfield has since become Bradwell Quarry.

Section F - Chelmsford City Council

2.2.39 The designated heritage assets of Section F comprise: six scheduled monuments; two registered parks and gardens; 212 scoped in listed buildings, and six conservation areas. There are 177 non-designated heritage assets identified in Section F comprising findspots, moated sites, farmsteads, funerary activity, cropmarks, geophysical anomalies, earthworks and military assets (dating from WWI, WWII and the Cold War). Also, there are 31 Project identified cropmarks and 223 historic map features including ponds, historical hedgerows, former woods, orchards, railway lines and parish boundaries.

2.2.40 The cultural heritage resource of Section F is distributed throughout its bounds and is representative of human activity following the retreat of the ice as the Late Devensian glaciation came to an end, through to the Cold War. Findspots of Upper Palaeolithic and Mesolithic flintwork indicate human communities of hunter-gatherers crossed the land bridge which connected the British Isles to mainland Europe and followed the retreating ice and tundra conditions northwards. These communities left very little physical evidence of their existence other than their stone tool industries, but the distribution of worked flints suggests these hunter-gatherers exploited the river valleys for their resources and as routes through the landscape. The Neolithic period is represented by concentrated lithics as well as a pit, hearth and postholes, likely reflecting dispersed human activity as the population grew following the introduction of farming. The Bronze Age represents a time of farming intensification resulting in further physical manipulation of the landscape. The Bronze Age is largely represented within Section F by scatters of pottery and flintwork as well as cropmarks of a possible ploughed out barrow and linear features (**6010**) within a field south of Mashbury Road. The barrows in this period would likely have been understood as an

ancestral claim of tenure over the landscape and its resources, with the potential to also highlight tribal boundaries. The Iron Age saw further population increase, the intensification of farming and the establishment of villages as identified through archaeological investigations within Section F. The principal example Iron Age activity within Section F is the scheduled monument of 'Settlement Site at Ash Tree Corner' (**1002140**) which forms part of an extensive pre-Belgic, Belgic and Romano-British settlement located on the slopes of the Chelmer Valley.

2.2.41 The Romano-British period saw the continued occupation of some farmsteads and settlements such as at Ash Tree Corner outlined above, and the abandonment of others. High-status villa sites also first appear in this period a number of which have been identified within Section F, such as the scheduled monument of 'Roman Villa 200 m east of Howletts' (**1011809**). This villa complex is visible as cropmarks and comprise of buried archaeological features and deposits including building foundations, pits, and ditches. There is also another scheduled villa (**1008895**) and associated buildings and field boundaries, located 985 m to the west of the Order Limits within the southern part of the Section. The finds recovered from this monument, and the layout of the buildings, shows that the villa was a high-status residence. Elsewhere across Section F, the Romano-British period is represented by excavated remains, findspots comprising metalwork, coins, pottery and building material, road networks, as well as funerary and religious activity. Some examples of this within Section F include a Romano-British cemetery, evidenced by cremation urns (**6080**), a temple at Stacey's Farm (**6062**), and part of a Roman road found during archaeological investigations in 1959 (**6081**).

2.2.42 No early medieval records have been recorded by the HER within Section F. However, numerous settlements recorded in the Domesday Book of 1086 are located within Section F and are suggestive of these settlements being present during this period prior to the Norman Conquest.

2.2.43 The medieval period within Section F is represented by three scheduled monuments including 'Gubbion's Hall moated site' (**1016802**), 'Barn near King John's Place' (**1002166**), and a moated site known as 'Franklin's Island' (**1017002**). In broad terms these scheduled monuments represent a number of moated sites within Section F which likely represent a network of manorial sites which defined the economic, social, and administrative organisation of rural life. The manorial system evolved as a result of the distribution of English land among the Norman nobility post 1066. Land was the primary source of wealth and power, and King William I granted vast estates to his loyal followers, who in turn became lords of these manors. The lord of the manor had the authority to administer justice through the manorial court, manage the estate's resources, and demand labour and services from the peasants. Manor houses were also a symbol of authority and status within the manor. The medieval period also saw the establishment of new settlements and the expansion of numerous settlements identified in the Domesday Book. A number of farmstead complexes, and settlement centres have also been identified dating to the medieval period within Section F. Parish boundaries dating to this period have also been identified, including Border Wood (**6017**), an ancient, semi-natural linear woodland containing a large ditch and bank. A heavy ecclesiastical presence within Section F in the medieval period is also demonstrated by the presence of 10 churches, such as the Grade I listed Church of St. Mary the Virgin (**1171104**). This reflects the huge influence of the Church over the medieval landscape and the surrounding population.

2.2.44 The post medieval period within Section F is characterised by the continued use of manorial hall and farmstead complex locations, and the introduction of more large-

scale infrastructure. This was principally for transport, communication and drainage, alongside the continued agricultural development and management of the landscape through more industrial level activities such as mill houses, such as the roundhouse of a post mill (**6147**) located at the southern limits of Chatham Green. The post medieval assets broadly comprise of listed buildings, conservation areas, registered parks and gardens, non-designated buildings, excavated archaeological features and findspots, many of which represent more intensive farming activity within Section F during this period. The increasingly industrialised farming activity, with its links to wider markets and greater demand provided by access to the rail network, required more labour, which in turn led to the urban expansion of many surrounding settlements.

2.2.45 The modern period within Section F is characterised by an increase in industrial infrastructure, the advent of WWI, WWII and Cold War military sites and the continued agricultural and industrial management of the landscape. Good examples of military installations within Section F of this period include, a WWI Second Class Royal Flying Corps night landing ground was located at Broomfield Court, Chelmsford (**6011**), an ammunition shelter (**6087**) to the south-east of Great Leighs, an Auxiliary Unit Operational Base to the south of Great Leighs (**6088**), a number of WWII pillbox and floodlight locations, and also a Cold War nuclear monitoring post (**6089**) north of Little Waltham.

Section G - Brentwood Borough Council and Basildon Borough Council (and part of Chelmsford City Council)

2.2.46 The designated heritage assets within Section G comprise: five scheduled monuments; one registered parks and gardens; 92 scoped in listed buildings; and nine conservation areas. There are 49 HER non-designated heritage assets comprising of: findspots, moated sites, cropmarks, assets identified from documentary/ cartographic sources, earthworks, settlements, a fishpond, railway crossings, a Roman road and 20th century military assets. Also, there are 21 Project identified cropmarks and 117 historic map features including ponds, historical hedgerows, former woods, orchards, old gravel pit, railway lines and parish boundaries.

2.2.47 The cultural heritage resource is scattered throughout the Section and represents activity from the prehistoric period to the modern era. There are several undated features which, if they were to be archaeologically investigated, could reveal their date and character. The prehistoric period is underrepresented in Section G, for both designated and non-designated. This is likely due to lack of investigation and recording of heritage assets from the period rather than reflective of an absence across Section G. In fact, it is likely that Section G hold similar archaeological remains for this period as in other sections in Essex. The known prehistoric assets include: two Mesolithic flint hand axes, a Neolithic hand axe, the scheduled remains of two Bronze Age bowl barrows, including urns, and an Iron Age urnfield at Nosey Woods (**1019485**). This was a multi-phase scheduled monument and appears in most of the time periods and is located close to Billericay, approximately 2.3 km to the east of the Order Limits.

2.2.48 The Roman period is also underrepresented in this Section, although the assets that have been identified do suggest that there is settlement and other activity within this area. This is likely due to lack of investigation and recording of heritage assets from the period rather than reflective of an absence across Section G. Further

investigation, partially where the Roman road (**7032**), which cuts across the Order Limits, could reveal more previously unrecorded archaeological remains from this time period. The scheduled remains at Nosey Woods (**1019485**) includes an urnfield. Burnt material was found close to the cemetery suggesting that cremations were happening in situ, or the pyre remains were interred with the burial.

2.2.49 No early medieval records have been recorded within the Order Limits or Study Area for Section G. There are, however, numerous settlements recorded in the Domesday Book within the Section indicating a strong Anglo-Saxon presence in the area prior to the Norman Conquest. The medieval period is represented across the Section mainly by settlements, most of which have continued on into the modern period. This includes heritage assets such as listed buildings, scheduled monuments, fishpond, moats and documentary or cartographic evidence. Some of the conservation areas began within this time period. The medieval period is rich in assets which show that this area of Essex was thriving during this time. The setting of the majority of the built assets have retained their historical setting, if only slightly altered which makes a considerable contribution to the value of the assets.

2.2.50 The post medieval period is well represented, mainly by settlements (and assets connected with them) some of which show continuation from the medieval period. This includes conservation areas, listed buildings, archaeological remains, findspots and documentary or cartographic evidence. The setting of the majority of the built assets have retained their historical setting, if only slightly altered which makes a considerable contribution to the value of the assets. Non-designated cropmarks of non-extant field boundaries show that the land has altered since this time by the creation or larger fields by the development of modern farming techniques. These assets add to local historical knowledge of how the land was worked during this time period.

2.2.51 The modern period for Section G comprises assets from WWI and WWII. These aid in the understand where of there were certain critical or important junctions, roads etc. Nosey Woods (**1019485**) contains WWI slit trenches. These are a rare survival and are well preserved. The asset was also used during WWI, at this time for ammunition storage.

2.2.52 The assets with uncertain date are mainly represented by cropmarks which offer a variety of hints as to what they could be and from what time period they are from. Once these assets have been archaeological examined, they function and date can, within reason, be established but until then they are unknown, and no conclusions can be made.

Section H - Thurrock Council

2.2.53 The designated heritage assets of Section H comprise: 11 scheduled monuments; 65 scoped in listed buildings; and four conservation areas. There are 105 non-designated heritage assets identified in Section H comprising excavated remains, findspots, a moated site, railways, cropmarks, Roman roads, railways, buildings, earthworks and 20th century military assets. Also, there are 11 Project identified cropmarks and 59 historic map features including ponds, historical hedgerows, former woods, orchards, old gravel pit, railway lines and parish boundaries.

2.2.54 The cultural heritage resource of Section H is distributed throughout its bounds and is representative of human activity following the retreat of the ice as the Late Devensian glaciation came to an end, through to the Second World War in the middle of the 20th

century. Findspots of Upper Palaeolithic and Mesolithic flintwork, including Upper Palaeolithic artefacts of the Chellean lithic industry (**8003**) found on Saffron Garden Farm, indicate human communities of hunter-gatherers crossed the land bridge which connected the British Isles to mainland Europe and followed the retreating ice and tundra conditions northwards. These communities left very little physical evidence of their existence other than their stone tool industries, but the distribution of the flintworks suggests these hunter-gatherers exploited the river valleys for their resources and as routes through the landscape.

2.2.55 The Neolithic period of Section H is dominated by the scheduled monument 'Causewayed enclosure and Anglo-Saxon cemetery 500 m ENE of Heath Place' (**1009286**). The causewayed enclosure comprises three circular ditches, interrupted by irregular causeways, c. 160 m in diameter, which became the focus Iron Age occupation and at least five Anglo-Saxon round barrows. Elsewhere, the Neolithic is largely represented by more widespread and concentrated lithic scatters and sparse archaeological remains, likely reflecting dispersed human activity as the population grew following the introduction of farming.

2.2.56 The Bronze Age is extremely well represented in Section H and the assets include two scheduled monuments comprising: a 'Springfield style enclosure and Iron Age enclosures south of Hill House, Baker Street' (**1009287**), which comprises an external ditch, c. 70 m in diameter, with an entrance and traces of a circular building and pits within; and the 'Crop mark complex, Orsett' (**1002134**), which is multiperiod asset spanning from the Bronze Age to the Roman period, but dominated by Bronze Age remains comprising roundhouses, associated features and a round barrow. Investigation of the multi-period palimpsest of archaeological remains west of Mucking identified three phases of Bronze Age activity, including a large ring ditch, 38 m in diameter with internal buildings, fences, pits, cremations, and a sunken-floor structure and another Springfield enclosure: the South Rings enclosure (**8059**), which comprised two concentric ditches 4 m wide by 1.5 m with an external diameter of 75 m enclosing an area of 0.44 ha. Elsewhere the Bronze Age is represented but further archaeological remains, artefact scatters, findspots and a hoard of five Late Bronze Age middle Bronze Age rapiers and palstaves (**8119**). The greater visibility of the Bronze Age in the archaeological record likely reflects population growth and shift to a more sedentary existence reflecting the intensification of farming, whilst the presence of funerary and ceremonial monuments suggests organised and likely stratified communities.

2.2.57 The scheduled monuments 'Springfield style enclosure and Iron Age enclosures south of Hill House, Baker Street' (**1009287**) and 'Crop mark complex, Orsett' (**1002134**) remained in use in the early Iron Age, whilst the scheduled monument 'Causewayed enclosure and Anglo-Saxon cemetery 500 m ENE of Heath Place' (**1009286**) became the focus of a middle Iron Age enclosed settlement. The archaeological palimpsest at Mucking was greatly contributed to in the Iron Age, whilst elsewhere in Section H the period is represented by further archaeological remains, cropmarks, and artefact scatters and findspots.

2.2.58 The Romano-British period in Section H is represented by archaeological remains identified at the scheduled 'Crop mark complex, Orsett' (**1002134**) and at Mucking where buildings, a cemetery, a double ditched enclosure, further enclosures, granaries, metalworking, a mortuary enclosure, pottery kilns and trackways were all recorded. Elsewhere in Section H the period is represented by further archaeological remains including a settlement site on the East Tilbury Foreshore on the banks of the river Thames (**8154**), cropmarks, and artefact scatters and findspots.

2.2.59 The early medieval period in Section H is represented by the more nucleated settlement pattern of dozens of towns, villages and hamlets recorded by the Domesday Book of 1086. Elsewhere within the Section, the scheduled monument 'Causewayed enclosure and Anglo-Saxon cemetery 500 m ENE of Heath Place' (**1009286**) includes five large round barrows two of which have been excavated revealing Saxon inhumations in wooden coffins; whilst a large amount of substantial sized pits which are likely to be early Saxon grubenhaus are recorded at the scheduled monument 'Crop mark complex, Orsett' (**1002134**). The Mucking palimpsest site was also the focus of Anglo-Saxon activity with evidence of buildings including grubenhaus, inhumations, cremations, metalworking and enclosures has been recorded. Elsewhere in Section H the period is represented by cropmarks, and artefact scatters and findspots.

2.2.60 The medieval period is represented in Section H by archaeological remains comprising evidence of domestic activity, agricultural practice and scatters and findspots of pottery and metalwork. There are as well, several churches and a moated site dating to the medieval period as well as settlement centres that have medieval origins. There are nine Grade I and Grade II* medieval churches within the 3 km Study Area, reflecting the influence of the Church over the medieval landscape and the human population therein. The moated site likely represents an element of a network of manorial sites which defined the economic, social, and administrative organisation of rural life. The manorial system evolved as a result of the distribution of English land among the Norman nobility. Land was the primary source of wealth and power, and the king granted vast estates to his loyal followers, who in turn became lords of these manors. The lord of the manor had the authority to administer justice through the manorial court, manage the estate's resources, and demand labour and services from the peasants. His residence, the manor house, was a symbol of his authority and status within the manor. The medieval period also saw the establishment of new settlements and the expansion of numerous settlements identified in the Domesday Book. Elsewhere in Section H there are several more listed medieval buildings and two scheduled monuments comprising: 'Bishop Bonner's Palace' (**1002196**), which comprises the remains of a circular enclosure surrounded by a ditch c. 50ft wide, possibly indicating the presence of a moat at the site said to have been the residence of the Bishop of London; 'Dene holes in Hangman's Wood' (**1002156**), which comprises several shafts up to 25 m deep each with three side chambers.

2.2.61 The post medieval period within Section H is characterised by the introduction of maritime military defences, large-scale infrastructure, principally for transport, communication, and drainage, alongside the continued agricultural development and management of the landscape. The post medieval assets comprise listed buildings, conservation areas, non-designated buildings, excavated archaeological features and finds derived from metal detector and field walking surveys. The increasingly industrialised farming industry, with its links to wider markets and greater demand provided by access to the rail network, required more labour, which in turn led to the urban expansion of many settlements. The majority of the listed buildings of Section H are of post medieval date with the majority of these being farmhouses and associated barns and cottages, reflecting the intensification of the farming industry. There are also, however, a few country houses, public houses and seven scheduled monuments. The monuments comprise 'Earthworks near church, West Tilbury' (**1002199**); 'East Tilbury Battery' (**1013880**) built in 1889 to 1890 to support Coalhouse Fort (**1013943**) with long-range fire; 'Coalhouse Fort battery and artillery defences' (**1013943**), which the foundations of a Henrician blockhouse coastal

battery, a Victorian late 19th century fort, a late 19th century Quick-Firer battery and a low-level radar tower dating from World War II.

3. Baseline

3.1 Introduction

3.1.1 This desk-based assessment outlines the current baseline understanding of the Project's Historic Environment. The findings of the assessment are presented from Section A in the north to Section H in the south and by chronological order.

3.1.2 To aid navigation through the following sections, each Project Section (Sections A to H) is presented using a consistent chronological structure. For each section, the archaeological and historical baseline is organised under the following period headings:

- Prehistoric
- Roman
- Early Medieval
- Medieval
- Post Medieval
- Modern
- Undated.

3.2 Section A: South Norfolk Council

3.2.1 Known non-designated heritage assets and conservation areas identified in this Baseline Report are referenced using a consistent Project specific identification number. The preferred identification number from the originating organisations is provided in a gazetteer (Document reference – 6.11.A1 Annex B- Gazetteers) that accompanies this Baseline Report for cross reference. Designated assets are referenced by their National Heritage List Entry numbers. Descriptions of the heritage assets are provided in this Baseline Report, Section A.

Location

3.2.2 Section A is in the County of Norfolk and wholly within the district of South Norfolk, although the 3 km Study Area extends into the districts of North Norfolk and Breckland. The Project connects in the north at the existing Norwich Main Substation c. 2.4 km south of Norwich and c. 600 m south-west of the village of Dunston. From its northern limit, Section A heads in a generally south-south-west direction, by-passing the settlements of Mulbarton, Tacolneston, Shelfanger and Bressingham before passing across the county border with Suffolk in the Waveney river valley, approximately 2.4 km west of the market town of Diss. Section A accounts for approximately 29 km of the overall Project length.

Topography

3.2.3 The topography of Section A is characterised by the Tas river valley and its tributaries to the east of the Project and by a plateau of higher land to the west. From its northern limit at the existing Norwich Main Substation (35 m above Ordnance Datum (aOD)), the Project crosses a gently undulating landscape climbing to a high point of 45 m aOD c. 1 km west-north-west of Flordon. From this point the Project crosses a tributary of the Tass at 25 m aOD; the Project then climbs again and passes through and undulating landscape with a high point of 55 m aOD south-east of Tacolneston. The Project then crosses the Tas river valley at 26 m aOD before following higher ground to south-east of Shelfanger at 48 m aOD where it crosses a tributary of the Waveney river valley at 33 m aOD. The Project again climbs to 52 m aOD north-east of Bressingham before descending to the Waveney Valley and the County border at 25 m aOD.

3.2.4 The topography of Section A has been shaped by the Tas and Waveney valleys, which have formed as natural drainage channels for the higher, plateaued land around them. This has created a gently undulating landscape of higher ground marked by dry and wet valleys. The Tass flows north towards Norwich where it feeds into the Yare, whilst the Waveney flows generally eastwards before turning north-west of Lowestoft and feeding into the Yare west of Yarmouth.

Geology

3.2.5 The solid geology of Section A consists entirely of chalk of the Lewes Nodular, Seaford, Newhaven, Culver, and Portsdown Chalk Formations. For the most part, the superficial deposits comprise chalky till of the Lowestoft Formation with sporadic patches of sand and gravel of the Sheringham Cliffs, Happisburgh Glacigenic and Leet Hill Formations, which largely define the Tass Valley and its tributaries. The southern reaches of the Tass Valley system also include sand and gravel of the Lowestoft Formation, whilst the dry valley tributaries contain superficial head deposits of clay and peat formations. The base of the Tass Valley system contains alluvial clay, silt, sand, and gravel. The Waveney Valley superficial deposits comprise peat, head clay, river terrace sand and gravel, Croxton Member sand and gravel, Ingham Formation sand and gravel and alluvial clay, silt, sand, and gravel.

Historic Landscape Characterisation

3.2.6 The historic landscape character of the Project described in this section of the report is illustrated on Figure A11.1.4: Historic Landscape Characterisation and Protected Lanes in Annex A. The northern limit of the Project north of Swainsthorpe is in National Character Area 84: Mid Norfolk, which is a long-settled agricultural landscape, where arable land is enclosed by winding lanes and hedgerows, interspersed with woodland and heath, and dissected by pastoral river valleys. The remainder of the Project in Section A is in National Character Area 83: South Norfolk and High Suffolk Claylands, which is characterised by a relatively high and predominantly flat clay plateau, incised by numerous small-scale wooded river valleys creating complex slopes (Natural England accessed 17/03/2023).

3.2.7 The South Norfolk landscape is further divided into a series of seven Landscape Types as defined in *South Norfolk Landscape Assessment: Landscape Character Areas of the Rural Policy Area* (LUC, 2006). The northern half of the Project in Section A runs approximately north-east/south-west parallel to the Landscape

Character Area (LCA) A1: The Tas Rural River Valley on higher ground to the north-west. On its route to the west of Tibenham, the Project passes in and out of LCA B1: Tas Tributary Farmland, LCA D1: Wymondham Settled Plateau Farmland, and LCA E1: Ashwellthorpe Plateau Farmland. From Tibenham, the Project passes through LCA E2: Great Moulton Plateau Farmland, LCA B4: Waveney Tributary Farmland, and LCA A5: Waveney Rural River Valley at the County border.

3.2.8 The tributary farmlands (LCA B1 and B4) are characterised by gently undulating landform created by small tributary valleys and are transitional landscapes between the upland plateau and river valley landscapes. There are scattered, small farm woodlands including Ancient Woodland; sparse hedges and hedgerow trees; and a dispersed, evenly distributed settlement pattern of small farmsteads and nucleated villages. The tributaries are elusive, often hidden within the landscape by topography or trees and there is an intricate network of small rural roads often bounded by banks or ditches. The plateau farmlands (LCA D1, E1 and E2) are a distinct flat and elevated landform with large fields of arable monoculture with long views of the district from the plateau edges and across the plateaus. There are mature remnant oak hedgerow trees and straight plateau-top roads with wide grass verges and ditches. The plateaus are sparsely settled with scattered small nucleated and long linear settlements and have isolated churches, moats, and farm ponds.

3.2.9 The Historic Landscape Characterisation (HLC) data supplied by the Norfolk HER (Norfolk Landscape Archaeology/English Heritage, 2009) indicates Section A is dominated by **negligible value** 20th century agricultural enclosure and **low value** 18th to 19th century enclosure. The 18th to 19th century enclosure were part of the 'Georgian Landscape' which was largely the result of agricultural improvements leading to the consolidation and realignment of field boundaries, and the enclosure of marginal lands such as commons and wastes. Improvements in farming practices were also made, such as drainage, manuring, ley crops and crop rotation, and the resulting changes in the field systems covered not only the agricultural central region but also extending into the Fens and Broads. The distribution of these HLC types does not seem to be influenced by the tributary and plateau farmlands LCAs, however, the enclosures on the plateaus tend to be larger. As well as the 18th to 19th century enclosure noted above, the Georgian Landscape is also represented within the Order Limits by **medium value** enclosed meadow (HNF48540, HNF36415, HNF36552, HNF42179), parliamentary fen enclosure (HNF36660) and carr woodland (HNF42177, HNF42178).

3.2.10 The pre-18th century landscape has been very much fragmented and/or incorporated to later landscapes. It is, however, represented within the Order Limits by **medium value** pre-18th century enclosure (HNF48451, HNF48510, HNF48511, HNF42461, HNF41656), Pre-18th century fen enclosure (HNF42143, HNF42144), anciently enclosed grazing marsh (HNF42274), and enclosed common land (HNF48487, HNF40950). Three parcels of **low value** 18th-20th century woodland plantation (HNF32517, HNF32616, HNF36549) are also noted in the Order Limits.

Protected Lanes

3.2.11 A large part of the road network in the East Anglian countryside derives from as early as the medieval period. Some of it possibly existed in early medieval times and it is also possible that some roads and lanes were formed before that. These lanes are part of what was once a network of minor roads and trackways connecting villages, hamlets and scattered farms and cottages. Many were used for agricultural purposes, linking settlements to arable fields, grazing or pasture, heaths and greens;

and other resources such as woodland and coastal marsh. Generally, these roads were not deliberately designed and constructed; written records of the establishment of roads during the medieval period are rare. Instead, they would have started life as trackways without a bearing surface, although often with defined boundaries including hedgerows, ditches and banks. The protected lanes of the Project described in this section of the report are illustrated on Figure A11.1.4: Historic Landscape Characterisation and Protected Lanes in Annex A.

3.2.12 The **low value** single track Heywood Road (**1004**) is of evidential and historical value, and it crosses the Order Limits between Heywood in the south-east and Winfarthing in the north-west.

3.2.13 The **low value** single track Heywood Road (2) (**1104**) is of evidential and historical value, and it crosses the Order Limits to the east of Shelfanger.

3.2.14 The **low value** single track The Heywood (**1002**) is of evidential and historical value. It is located between Shelfanger and Burston and is adjacent to the Order Limits for a permanent access route to the south-west of Heywood.

3.2.15 The **low value** single track Back Heywood Road (**1008**) is of evidential and historical value. It is located between Shelfanger and Burston and is just to the north of the Order Limits for a permanent access route to the south-west of Heywood.

3.2.16 The **low value** single track Darrow Road (**1009**) is of evidential and historical value, and it crosses the Order Limits to the east of Bressingham Common.

Conservation Areas

3.2.17 There are nine conservation areas in Section A and their assessment is presented here arranged north to south.

3.2.18 The **medium value** Stoke Holy Cross Conservation Area (**CA21**) is located on the western edge of the settlement and 1.1 km east-south-east of the northern extent of the Order Limits at the existing Norwich Main Substation. The small conservation area is focused on a Grade II listed **medium value** mill (**1373207**) that is located on a bridge over the Tas river and labelled Stoke Mill (corn) on the first edition OS map of 1882. A mill in Stoke is mentioned in a deed dated 1306, and reference made again in an old record in 1482. The current building on the site dates to 1747, although it was significantly rebuilt in 1853 following a serious fire. In the latter part of the 18th century, it was used to manufacture paper and only later adapted into a flour mill and mustard milling business (SNC, 2012a). Stoke Mill was leased to the Colman family in 1814 and as the business prospered starch and mustard factories were added, as was warehouse and a granary with a school above established by the Colmans. A windmill was added in the early 19th century and by 1845, both it and the mustard mill operated entirely by steam power. The mill complex went in to decline as the requirement for continued expansion could not be accommodated, and so the Colmans moved to new premises in Norwich when the lease expired in 1862. Most of the associated industrial buildings were demolished over the ensuing years with only the ruins of the granary and part of the Blue Warehouse remain in a recognisable form. A Mr Brock bought the mill in 1936 and used it to mix cattle feeds until the 1960s after which its fittings were removed. The ground floor of the mill is now in use as a restaurant while its upper floors remain unused. The conservation area also includes the **medium** value Grade II listed Stoke Mill House (**1169680**) and the undesignated Mill Cottage, which may have been converted from the old mustard factory. The conservation area has both historical value and evidential value as an

example of medieval and post medieval industrial activity in the area. The association with the Colman family and their business contributes to the historical value of the asset.

3.2.19 The setting of the conservation area is informed by its river valley location and by the interrelationships of the listed mill and the other listed and non-designated buildings in the complex. The setting is further informed by the former water courses of mill created to provide power. The approach to the conservation area from the south-west is a key view. The setting of the asset makes a considerable contribution, but due to the local topography, and development, mature copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.20 The **medium value** Mulbarton Conservation Area (**CA52**) covers the northern third of Mulbarton, 680 m west of the Order Limits. The conservation area covers a large green, or common, defined by common edge settlement, which is an important medieval and post medieval settlement form characteristic of Norfolk and Suffolk (SNC 2017) and contributes to the evidential and historical value of the asset. The triangular high ground of the common, containing grassland and clumps of trees, is defined by The Common to the north-east, The Common (Lower) to the south and the B1113 Norwich Road to the north-west. A large pond surrounded by houses in the main part of the village at the northern apex of the common is a key focal point adjacent to the medieval Grade II* listed Church of St Mary Magdalen church. Farmland to the to the north-west and north-east provided a strong rural character, but the later 20th century development of Mulbarton lies to the south.

3.2.21 The medieval church is the only building of the period, but the moat associated with the Grade II listed early 17th century Old Hall (**1050700**) support a medieval date for the establishment of The Common. Much of the development along The Common and Norwich Road dates to the post medieval period, although there has been some minor 20th century infill development; whilst development along The Common (Lower) almost entirely of 20th century date, a notable exception being the Grade II listed 18th century Mulbarton Hall.

3.2.22 Key views of the conservation area are on the approaches along Norwich Road to the north and south-west and along Rectory Lane to the south-east; across the green from the defining throughfares; and from within the common where glimpses of farmland, particularly to the north-west, are framed by mature trees and common edge buildings.

3.2.23 The setting of the conservation area makes a considerable contribution to its value, but due to there being no identified key views to the east and screening in the intervening landscape by development and mature tree lined hedgerows, the setting does not extend to the Order Limits.

3.2.24 The **medium value** Shotesham Conservation Area (**CA53**) comprises two elements arranged to the east and west of the Shotesham Beck, a small tributary of the Tas river. The eastern half of the conservation area is focused on the village of Shotesham and arranged around Brooke Road, The Street and Rodger's Lane. At its closest, the eastern half of the conservation area is 2.9 km east of the Order Limits, and as its setting does not extend to the Order Limits, it is not discussed further.

3.2.25 The western half of the conservation area lies 300 m to the west of the eastern half and at its closest, 1.5 km south-east of the Order Limits. The western half of the conservation area encompasses Shotesham Park; a 'designed' landscape of open

parkland dotted with trees, enclosed by dense belts of woodland, and centred on the Grade I listed Shotesham Hall (**1304783**) and associated Grade II listed assets. The conservation area also includes the Grade II listed The Mill House (**1304779**) to the north, and the non-designated assets East Keeper's Cottage on Keeper's Road, The Lodge on Mill Lane, and Park Farm on Norwich Road. The park, which is not a registered park and garden, is a landscape in the style of Capability Brown intended for the grazing of deer, for riding and walking, and to provide carefully designed approaches to, and views from, Shotesham Hall. Today, much of the tree cover survives but the open land now serves as horse paddocks and agricultural land (SNC 2018). The conservation area has evidential and historical value derived from the surviving elements of the landscaped park and the listed and non-designated buildings within the conservation area that contribute to the understanding of this asset as a designed landscape.

3.2.26 The setting of the park is informed by the interrelationships between the designated and non-designated built assets within and views to and from the park's focal point, the hall at its centre. The dense belt of woodland largely encompassing the park allowing for only very occasional glimpses of the rural landscape beyond and emphasising its insular nature. The setting of the conservation area makes a considerable contribution to its value, but due to the mature woodland belt and development, copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.27 The **medium value** Tacolneston Conservation Area (**CA19**) encompasses the northern third of the linear settlement, which covers the historic core of the village as recorded on the first edition OS map of 1884. The Order Limits is 430 m to the west at its closest point. The conservation area has two foci, the southern of which includes the Grade II* listed Manor Farmhouse, the Grade II Pelican Inn, several other Grade II listed buildings and the non-designated Tacolneston Primary School at its southern limit. Except for single properties to the north and south of Hall Road at its intersection with the B1113 Norwich Road, the buildings of this section of the conservation area are arranged on the south-eastern flank of Norwich Road with the north-western flank of the road lined by a woodland belt defining the south-eastern limit of Tacolneston Park, which is associated with Tacolneston Hall 570 m to the north-west. The northern focus of the conservation area is centred on the Grade I listed Church of All Saints, just to the north-west of the Norwich Road - Hurn Lane intersection. The Grade II* listed Old Hall and associated Grade II assets is located on the southern flank of Norwich Road opposite the church. The conservation area has historical and evidential value as an example of a linear settlement with good time-depth.

3.2.28 The setting of the conservation area is informed by views along Norwich Road including the designated buildings as well as non-designated buildings the majority of which are recorded on the first edition OS map of 1884. The setting is further informed by the interrelationships between the built environment and its relationship with the rural landscape. The significance of the rural landscape is emphasised by the mid-section of conservation area between the two foci, which provides clear, open views of farmland to the north and south. Further views of the rural landscape are experienced as the conservation area is exited along Norwich Road to the north and Hurn Lane to the east. The setting of the conservation area, therefore, makes a considerable contribution to its value, and due to the view of the Project from Hurn Lane, the setting extends to the Order Limits.

3.2.29 The **medium value** Forncett Conservation Area (**CA23**) is arranged linearly along Low Road on the western flank of the Tas Valley linking Forncett St Mary in the north with Forncett St Peter in the south. The Order Limits is 610 m to the west of Forncett St Mary at its closest point. The buildings of the conservation area are largely on the higher, western flank of Low Road with the eastern limit of the conservation area marking the limit of the floodplain. Exceptions to this are at the northern and southern limits of the conservation area where the Tas meanders away from the villages. The bends in Low Road, with trees and hedges, only enable two or three buildings to be seen at any one time in a series of individual building groups. These typically comprised a farmhouse with barn and outbuildings, separated from one another by fields, hedges, and tracks. More recently, these gaps have seen modern infill development. The character of the village is still determined more by the relationship of buildings to the landscape and trees, than to one another. A church stands at end of the conservation area, each set back from the road largely screened by trees, which limits their effect. At either end also is a large house in spacious grounds: the Old Rectory in St Peter's and Forncett Manor, originally built as a rectory, in St. Mary's. But again, their position and abundant trees screen them from the road (SNC 2021a). The conservation area has historical and evidential value as an example of a dispersed linear settlement.

3.2.30 The setting of the conservation area is informed by the topography and agricultural history of the Tas Valley, and its sinuous morphology as it hugs the valley side. The setting is also informed by the Grade II listed buildings which are scatter throughout the conservation area and by the Grade I church to the north and south. The roadside development is largely one plot deep and so views of agricultural land to the east and west are open and clear emphasising its significance. The setting of the conservation area, therefore, makes a considerable contribution to its value, but due to the topography of the Tas Valley, the setting does not extend to the Order Limits.

3.2.31 The **medium value** Winfarthing Conservation Area (**CA20**) encompasses the historic core of the village, extending from the intersection of the B1077 Short Green and Hall Road in the north to the primary school on the B1077 The Street in the south and eastwards along Church Lane (SNC 2021b). There is limited small-scale residential development to the north and south of the conservation area. At its closest, the conservation area is 370 m to the west of the Order Limits. The historic buildings, except for the medieval Grade I listed Church of St Mary, and the 19th century Grade II listed Church Hill Farmhouse are plastered/rendered 17th century timber frame farmhouses and cottages with either pantile or thatched roofs. The conservation area has historical and evidential value as an example of a linear settlement containing a small, nucleated core focused on the church.

3.2.32 The setting of the conservation area is informed by views of its historic buildings in key positions, the positive contribution of trees and natural spaces and the largely sympathetic modern infill development. The Street is itself a linear development of single plot frontages with a few historic buildings located along its length with infill development. The subtle curves of The Street and the secluded areas around the Church and Church Lane, help to create several interesting and varied internal views shaped and enhanced by mature trees, hedges, and walls. Church Lane is more intimate, with an informal group of historic buildings set amongst mature trees and open green spaces. The setting of the conservation area, therefore, makes a considerable contribution to its value. Views out of conservation area to the agricultural land beyond are limited and the view to the Project in the east is largely screened or interrupted by tree growth and by mature tree lined hedgerow boundaries. There are, however, more open views to the east from the church

graveyard and so pylon tops may be visible above the intermittent treeline. The setting of the conservation area, therefore, extends to the Order Limits.

3.2.33 The **medium value** Gissing Conservation Area (**CA54**) encompasses two separate areas of settlement with one to the north-west clustered around Upper Street and the other to the south-east focused on Lower Street. The intervening landscape and that to the south is included in the conservation area as it constitutes the remains of the former parkland of the old hall, which was demolished in c. 1700 (SNC 2021c). Gissing is located 3 km east of Winfarthing and at its closest is 1.9 km east of an Order Limits access road with the main working area 2.2 km to the west. The cluster of housing around Upper Street lies between Wash Lane to the north and Chequer's Lane to the south and includes ten Grade II listed buildings comprising largely 16th to 18th century timber frame plastered houses and cottages as well as Gissing Hall which was built c. 1840 in the Tudor style but has a 17th century wing to the rear. The Grade II listed Marlers Farmhouse and its listed outbuilding are located 300 m to the west on the northern flank of Chequers Lane.

3.2.34 The cluster of housing around Lower Street include the medieval Grade I listed Church of St Mary, an associated Grade II War Memorial, an 18th century terrace of three dwelling, an early 19th century cottage and the 17th century timber frame Crown Public House. Also included in the conservation area in the Lower Street location is the non-designated community hall (the former school) directly to the north of the church and the village bowing green to the south. Two further Grade II listed buildings are situated in the heart of the former parkland 470 m south-west of the church and comprise two 17th century barns likely associated with the former hall. The parkland itself has now largely been cleared and is arable in nature, however, some thick tree belt plantations survive, particularly to the west, and a mature copse now covers two medieval moats directly to the north of the old hall barns. The conservation area has historical and evidential value derived from the cluster of historically significant listed and non-listed buildings within the settlement. The former parkland lends some historical value to the conservation area, however as the parkland is now largely arable this contribution is limited.

3.2.35 The setting of the conservation area in the Upper Street area is informed by its buildings being arranged along rural lanes, slightly set back and with extensive mature landscaping and hedging which limit views to the relatively flat open countryside beyond. The main house in the village, Gissing Hall, is set back from the road within its grounds and hidden from the street and public viewpoints; only its crenelated towers and roofline can be partially glimpsed through the hedgerow. Between Marlers Farmhouse to the west and the other houses in Upper Street there are two long rectangular village meadows, which are included in the conservation area as former parkland. The setting of the conservation area around Lower Street is informed by the irregular clustering of buildings around small greens around the church. The church and community centre and the Crown Public House are in effect the centre and heart of the village. The group of buildings are viewed within a relatively spacious rural setting with open aspect to fields to the east and views across from Rectory Road when approaching the village from the west. The church is very prominent along Lower Street and the church's round tower is visible from surrounding fields. The setting of the conservation area, therefore, makes a considerable contribution to its value, but due to the surviving former parkland tree belts and development and mature tree lined hedgerow boundaries in the intervening landscape, the setting does not extend to the Order Limits.

3.2.36 The **medium value** Burston Conservation Area (**CA22**) encompasses the historic core of the settlement, which is focused on the Grade II* listed medieval church of St Mary and to the west and east of Mill Road and north of Diss Road. Burston is located approximately 2 km south-south-west of Gissing and at its closest point is 1.5 km east of the Order Limits. Listed buildings within the conservation area comprise the afore mentioned church, three 17th century Grade II listed timber frame structures and the Burston Strike School built in 1917 (SNC 2021d).

3.2.37 The setting of the conservation area is informed by its relatively dispersed nature with buildings fronting onto historic lanes and with no consistency in curtilage size, building orientation, buildings lines or setbacks, which contributes to the more informal rural character of the village. There are, however, only limited views of the open countryside from within the village due to extensive tree coverage in the centre of the village. Later infilling has concentrated development along Diss Road to the west, and there is a large, modern estate to the east of Rectory Road, which all lie outside the conservation area. The setting of the conservation area, therefore, makes a considerable contribution to its value, but due to the tree coverage within the village, later development to the west along Diss Road and development and mature tree lined hedgerow boundaries in the intervening landscape, the setting does not extend to the Order Limits. The conservation area has historical and evidential value as an example of a dispersed settlement; however modern infill has diffused this somewhat.

3.2.38 The **medium value** Diss Conservation Area (**CA51**) encompasses the historic core of the settlement focused on Market Place, Market Hill, Denmark Street, St Nicholas Street, Shelfanger Road and Mount Street and important green spaces at Fair Green, the Mere and Park, Rectory Meadows, and the Parish Fields. The conservation area contains numerous listed buildings and non-designated building of townscape significance largely arranged on the street plan previously mentioned. A small portion of the conservation area is detached from the main area and focused on Victoria Road, The Old Coaching Place, Waveney Road, and Vince's Road where it encompasses two Grade II listed buildings and several buildings of townscape significance (SNC 2012b). The conservation area has historical and evidential value as an example of a historic town core containing elements that contribute to the town's development and function such as the market place the Mere which has variously served as the towns water supply and sewage disposal but also played a large part in the shape of the town as it developed. The Diss Conservation Area is located at the southern limit of Section A and at its closest at Fair Green 590 m east of the Order Limits, however, the historic core of the settlement and so the conservation area itself lies 1.6 km to the east-north-east of the Order Limits.

3.2.39 The setting of the conservation area is informed by the views of the townscape along the afore mentioned throughfares and views of the listed buildings and buildings of townscape significance that line these routes. The setting is further informed by the experience of the green spaces and the panoramic view from the park, over the Mere to the church tower beyond is a key view within the conservation area. There are also several smaller spaces that make a positive contribution to the form and character of the town including yards along Market Hill, the Market Place, Mere's Mouth, and the yards off St Nicholas Street. A key feature of the town is how these spaces are often linked by a network of alleys, back courts and thoroughfares which add significantly to the character and appeal of the town. The setting of the conservation area, therefore, makes a considerable contribution to its value, but due to its insular nature its setting does not extend to the Order Limits.

Baseline Introduction

3.2.40 The following Historic Environment baseline for Section A is presented by chronological archaeological period and from north to south. Section A is further broken down into geographic subsections to allow the reader to orientate and to locate where on the appropriate figure a particular heritage asset is illustrated. These geographic subsections are largely defined by current settlements but also occasionally by landscape features such as high points and valleys and by anthropogenic features such as roads and railways. Each subsection of Section A is introduced and described only in the first archaeological period where it is appropriate to be used to avoid repetition.

Prehistoric Period

Palaeolithic

3.2.41 The **Palaeolithic** within Section A is characterised solely by findspots.

3.2.42 A low **value** 'Palaeolithic worked flint with patination and scratching' of evidential value is part of a multi-period assemblage (**1005**) found during a fieldwalking exercise within the Order Limits, 600 m north-west of Grade II listed Banyard's Hall (**1373609**) and 2.3 km east-south-east of the village of Bunwell.

3.2.43 Asset (**1216**) is a **low value** possible Upper Palaeolithic flint blade of evidential value found 560 m south-west of the Order Limits by a metal detectorist in a field in the Waveney Valley and immediately north of the Section A/Section B boundary. It is possible that this asset is related to a concentration of terminal Palaeolithic to Mesolithic flintwork (**2000** – see Section B below) identified at Wortham Ling just over the County border in Suffolk and 170 m east-south-east of the blade findspot (**1216**). These assets in combination likely represent the activities of hunter-gatherer communities exploiting the river valley for its resources and as routes through the landscape and as such both have evidential value.

3.2.44 Fieldwalking and metal detector surveys on land on the northern bank of the river Waveney c. 600 m south-west of the outskirts of Diss and 5 m east of the Order Limits has resulted in a **low value** multi-period finds assemblage (**1335**) of evidential value. The assemblage includes several late Upper Palaeolithic long blades including one lightly bruised blade segment and several with shallow ventral retouch, and four tools derived from long blades, including one end scraper, one double-ended scraper on a blade segment, one piercer on a distal end of blade and a serrated blade.

3.2.45 Further **low value** Upper Palaeolithic material comprising a late Upper Palaeolithic blade core and incomplete long blade (**1220**) of evidential value was recovered from farmland to the east of asset (**1335**) and c. 300 m north-east of the Order Limits. A **low value** part-polished Neolithic axe-head of evidential value was found in the same location.

Mesolithic

3.2.46 The Mesolithic period is represented in Section A by worked flint. These assets consist of single or very few items recovered as surface finds or as residual material in later period contexts.

Dunston and Mangreen Hall Farm

3.2.47 Dunston is a small village associated with the Grade II listed Dunston Hall (**1373206**) and located on the western flank of the Tas Valley, with the Tas and the valley floor to the east. Mangreen Hall Farm is situated 1 km to the west-north-west of Dunston on higher ground and is associated with the Grade II* Mangreen Hall (**1366150**). The development of Dunston Hall and its grounds as a hotel and spa with associated golf course and quarrying of the land around Mangreen Hall Farm has resulted in numerous archaeological investigations. This fieldwork, coupled with cropmark data and finds amassed during several metal detector surveys undertaken in the general area, has produced a detailed archaeological record including evidence of Mesolithic activity.

3.2.48 A multi-period finds assemblage (**1022**), including a **low value** Mesolithic flint serrated blade, was found during a metal detector survey within the bounds of the scheduled monument Venta Icenorum: Roman town and associated prehistoric, Anglo-Saxon, and medieval remains (**1021463**). Evaluation trial trenching immediately to the south of the survey area recovered residual **low value** Mesolithic flints from excavated Roman-British archaeological remains (**1144**) constituting a trackway and associated features. The survey and evaluation areas are located 170 m east of the Order Limits and within the Tas Valley to the west of the river. The flintwork likely represents Mesolithic exploitation of the riverine environment and its resources.

3.2.49 Fieldwalking, evaluation and excavation at Mangreen Hall Farm immediately north of the Order Limits and 450 m west of the evaluation and survey in the Tas Valley noted above, identified undated ditches, gullies and pits and a small Romano-British inhumation cemetery (**1182**). These investigations resulted in as multi-period finds assemblage that included **low value** Mesolithic flintwork including a flint blade and a flint two-orthogonal platform blade core. This site occupied higher ground overlooking the Tas Valley and its resources to the east.

3.2.50 A **low value** early Mesolithic flint blade core (**1208**) was found during a metal detector survey of land west of Mangreen Hall Farm. The survey area is located 20 m north-west of the Order Limits on higher ground, that may have provided a vantage point over lower ground to the west and south.

3.2.51 Overall, the archaeological resource at Dunston and Mangreen Hall farm has evidential value for the contribution it makes to our understanding of human activity in this location from the Mesolithic period onwards.

Swainsthorpe and Mulbarton

3.2.52 Swainsthorpe is a small village at the eastern edge of the Study Area and situated on the north-western flank of a tributary of the Tas Valley at c. 32 m aOD. The village of Mulbarton is located 2.4 km to the west on higher ground at c. 50 m aOD to the west of the Study Area. The settlements are linked east/west by Rectory Lane/Church Street and Brick Kiln Lane runs approximately parallel to this route c. 1.2 km to the south. A large proportion of the farmland to the north and south of these routes has been the subject of geophysical survey, field walking survey, metal detector survey and trial trenching resulting in a detailed archaeological record for the area.

3.2.53 Metal detecting and fieldwalking surveys ahead of the development of a site to the north of Church Road c. 600 m west of Swainsthorpe resulted in a multi-period finds assemblage (**1195**) that included **low value** prehistoric flintwork and a

Mesolithic/early Neolithic flint core. This site just clips the Order Limits to the east and is situated in a shallow, dry tributary valley of the Tas.

3.2.54 Several examples of **medium value** Mesolithic flintwork were recovered during the archaeological evaluation of land south of Brick Kiln Lane, Mulbarton in 2015. The lithics, comprising blades, cores, flakes, and an end scraper, were recovered as residual finds in later prehistoric, largely Bronze Age, features (**1270**). The site is situated partially within the Order Limits on a south-east facing slope overlooking the lower ground of a tributary of the Tas and the lithics may represent the remnants of a hunting camp located to provide views across the tributary valley. Overall, the archaeological resource at Swainsthorpe and Mulbarton has evidential value for the contribution it makes to our understanding of human activity in this location from the Mesolithic period onwards.

Flordon and Fundenhall

3.2.55 Flordon is a village located just within the eastern edge of the Study Area, and it is situated on the north-eastern flank of a tributary of the Tas Valley at c. 31 m aOD with the valley floor at 21 m aOD to the south-west. The village of Fundenhall is located 3 km to the west and is situated on higher ground at c. 62 m aOD. The intervening farmland has been the subject of numerous metal detector surveys, during which non-metallic artefacts were collected, resulting in a detailed archaeological record for the area.

3.2.56 A small assemblage of flint flakes loosely dated to the Mesolithic to Bronze Age periods were found during metal detector surveys of land around the Grade II* listed Flordon Hall in 2015 and 2017. The **low value** flints were part of a larger, multi-phased assemblage of artefacts (**1289**) found during the surveys. The survey area is located immediately south-east of the Order Limits and occupies slightly higher ground above a tributary of the Tas to the east and south.

3.2.57 Several metal detector surveys on land 500 m south-east of Fundenhall, immediately south of Hapton Road and partially within the Order Limits recovered a large multi-period finds assemblage (**1130**), which contained a **low value** Mesolithic flint blade. The site is located partially within the Order Limits and situated on higher ground overlooking a tributary of the Tas Valley to the south-east. Overall, the archaeological resource at Flordon and Fundenhall has evidential value for the contribution it makes to our understanding of human activity in this location from the Mesolithic period onwards.

3.2.58 A **low value** Mesolithic/Neolithic axe trimming flake of evidential value was recovered as part of a larger finds assemblage (**1357**) from farmland immediately to the north of Wreningham and c. 200 m to the west of the Order Limits.

Forncett St Mary and Tacolneston

3.2.59 Forncett St Mary is a village on the eastern edge of the Study Area on the western flank of the Tas Valley at c. 29 m aOD with the floor of the valley to the east at c. 22 m aOD. The village of Tacolneston is located 2.2 km to the west outside the Study Area on higher ground at c. 64 m aOD. The settlements are linked by the east/west aligned Cheney's Lane and the farmland to the north and south of this route has been the subject of numerous metal detector and fieldwork surveys, during which non-metallic artefacts were also collected, resulting in a detailed archaeological record for the area.

3.2.60 Metal detector surveys focused on a large field 330 m east Tacolneston. Over the years, the surveys amassed a large, multi-phased finds assemblage (**1145**), which included a possible **low value** Mesolithic flint blade. The survey area is 600 m west of the Order Limits and occupies slightly higher ground overlooking a shallow tributary of the Tas Valley to the north. Overall, the archaeological resource at Forncett St Mary and Tacolneston has evidential value for the contribution it makes to our understanding of human activity in this location from the Mesolithic period onwards and is suggestive of a potential prehistoric settlement in this location.

Bunwell Hill and the Tas Valley

3.2.61 Bunwell Hill is an area of high ground at 65 m aOD, now occupied by the village of Bunwell, 2.3 km north-west of the Order Limits. The hill is situated between shallow tributary of the Tas Valley to the west and east with the Tas Valley itself running approximately east/west to the south. Metal detector surveys and chance finds has resulted in the following **low value** Mesolithic assets:

- Two Mesolithic flint blades in a multi-period finds assemblage (**1066**) recovered from a field immediately south-east of the junction of Bunwell Hill and The Turnpike, 2 km south-south-east of the village of Bunwell and 240 m north-west of the Order Limits
- A Mesolithic/early Neolithic broken flint microblade and one small patinated flake in a multi-period assemblage (**1075**) recovered immediately south of survey area (**1066**) and 160 m north-west of the Order Limits
- A possible Mesolithic rod microlith in a multi-period finds assemblage (**1087**) recovered from a field partially within the Order Limits, 160 m east of the Grade II listed Banyard's Hall (**1373609**) and 2 km south-east of the village of Bunwell
- A Mesolithic flint tranchet axe with a three-sided borer flaked on the butt end (**1070**) was found within the Order Limits in a field south of Prince of Wales Road and 270 m south-east of Bunwell Hill
- Two Mesolithic blade-like flint flakes in a multi-period finds assemblage (**1083**) recovered from farmland north of Prince of Wales Road, 90 m north of the Order Limits and 2 km south-east of the village of Bunwell.

3.2.62 The Mesolithic assets noted above were recovered from the skirt of the hill at around 52 m aOD a little down from the summit before the land drops further into the valleys to the west, south and east. It is possible that the higher ground of Bunwell Hill provided Mesolithic hunter-gatherer communities with better drained, dryer ground on which to establish temporary occupation sites which may have been revisited as part of the seasonal exploitation of the valleys and their resources.

3.2.63 The potential importance of the Tas Valley and its network of tributaries to Mesolithic communities is supported by Mesolithic flint finds from fields on the southern side of the Tas Valley, c. 1.3 km south of Bunwell Hill. Metal detector surveys of fields between 1981 and 2013 resulted in considerable multi-phased finds assemblages (**1058**, **1062**), which included a **low value** late Mesolithic/early Neolithic flint blade in assemblage (**1058**) found partially within the Order Limits and a **low value** Mesolithic blade in assemblage (**1062**) found partially within the Order Limits. The survey areas are located on the Tas Valley floor and the slightly higher ground of the southern flank of the valley. Overall, the archaeological resource at Bunwell Hill and the Tas

Valley has evidential value for the contribution it makes to our understanding of human activity in this location in the Mesolithic period.

Bressingham and the Waveney Valley

3.2.64 Fieldwalking and metal detector surveys on land on the northern bank of the river Waveney c. 600 m south-west of the outskirts of Diss and 5 m east of the Order Limits has resulted in a **low value** multi-period finds assemblage (**1335**) of evidential value. The assemblage includes a Mesolithic tranchet axe and three Mesolithic microliths (obliquely blunted points), one microlith fragment (failed micro-burin), one notched microblade, and four blade cores including one very small, neat microblade core.

3.2.65 A **low value** partially perforated prehistoric stone object (**1371**) of evidential value, probably an incomplete pebble macehead, was found in garden on South View, High Road, Roydon, a little to the east of the Grade I Church of St Remigius (**1050698**). These objects are not closely datable, having been found in both Mesolithic and later prehistoric contexts.

Neolithic

3.2.66 The Neolithic assets held by Norfolk HER consist of single or very few items recovered as surface finds or as residual material in later period contexts. These assets suggest that there are low levels of dispersed human activity which seems to be focused within river valleys. There is limited, if any, evidence for settlements dating to this period.

Dunston and Mangreen Hall Farm

3.2.67 Mangreen Hall Farm is located just outside the construction zone immediately to the north and its land has been the focus of several archaeological investigations ahead of mineral extraction. The farm is situated on higher ground with lower, rolling land to the south and west and the Tas Valley to the east. This fieldwork (**1182**), noted above, resulted in the recovery of a mixed-period finds assemblage that included two early Neolithic flint single-platform flake cores, three early Neolithic flint single-platform core, one Neolithic flint end scraper, Neolithic blades, and retouched blades. This **low value** material was, however, unstratified or residual in later period archaeological features and therefore has limited evidential value.

3.2.68 The evaluation trial trenching undertaken immediately to the south of the scheduled monument Venta Icenorum: Roman town and associated prehistoric, Anglo-Saxon, and medieval remains (**1021463**), identified Iron Age and Romano-British archaeological remains (**1144**) that contained residual **low value** Neolithic flintwork including a quartzite stone axe roughout (**1372**). The residual nature of the flint means it has limited evidential value.

3.2.69 Excavation in advance of the construction of the Dunston Hall golf course on the western flank of Dunston, immediately east of Ipswich Road and 100 m south-east of the Order Limits, identified residual **low value** early Neolithic and Neolithic flintwork recovered from later prehistoric, Roman, and Anglo-Saxon archaeological features (**1136**). Once again, these finds have limited evidential value. This site is situated on land overlooking the Tas Valley to the east.

Swainsthorpe and Mulbarton

3.2.70 Moving southwards, archaeological fieldwork to the north and south of Church Road 200 m to 600 m west of Swainsthorpe has found evidence of Neolithic activity. Metal detecting and fieldwalking surveys ahead of the development of a site to the north of Church Road resulted in a multi-period finds assemblage (**1195**) that included prehistoric flintwork and a **low value** Mesolithic/early Neolithic flint core. This site clips the western edge of the Order Limits and is situated within a shallow, dry tributary valley of the Tas.

3.2.71 Fieldwalking south of South of Church Road partially within the Order Limits identified a mixed-period finds assemblage (**1229**) that included Prehistoric flintwork and an early Neolithic flint core. Likewise, further fieldwalking immediately to the east, and partially within the Order Limits, recovered more multi-period finds (**1230**) including **low value** prehistoric flintwork and a Neolithic flint scraper. The Church Road sites west of Swainsthorpe are situated on higher ground with tributaries of the Tas Valley and the Tas Valley itself to the east.

3.2.72 Approximately 1.1 km to the south-west of Swainsthorpe, Brick Kiln Lane runs east/west parallel to Church Road c. 1.2 km to the south and links Mulbarton to the west with the A140 Ipswich Road to the east. Fieldwork to the south of Brick Kiln Lane has resulted in the following **low value** Neolithic records:

- Several examples of Neolithic flintwork were recovered during the archaeological evaluation of land 350 m south of Brick Kiln Lane. The lithics, comprising flakes, cores, blades, and scrapers, were recovered as residual finds alongside Mesolithic material in later Prehistoric, largely Bronze Age, features (**1270**)
- A fieldwalking survey undertaken immediately to the east of the evaluation area recovered a mixed-period finds assemblage (**1235**), which included a scatter of Prehistoric and Neolithic flintwork including a Neolithic core and a late Neolithic core
- A Neolithic polished flint axe head (**1017**) was found immediately north of the evaluation site.

3.2.73 The find sites south of Brick Kiln Lane are situated partially within (**1270**), clipping the eastern edge (**1235**), and 70 m north-west (**1017**) of the Order Limits on a south-east facing slope overlooking the lower ground of a tributary of the Tas and the lithics may represent intermittent use of the higher ground providing views across the tributary valley and its resources and as such these finds have evidential value.

Flordon and Fundenhall

3.2.74 Continuing to the south, the land within and around the Order Limits to the north and west of Flordon and east of Fundenhall has been subjected to numerous metal detector surveys during which non-metallic surface finds were also collected. Surveys of the land around an unnamed farm 440 m north of The Street and immediately east of the Order Limits recovered a multi-period finds assemblage (**1289**) including Prehistoric flintwork and a **low value** Neolithic/Bronze Age flint fabricator. These find have evidential value for the contribution they make to our understanding of human activity in this location.

3.2.75 Neolithic **low value** findspots with evidential value are also recorded south of The Street comprising a Neolithic flint scraper (**1068**) found 400 m south-east of Order Limits, 700 m west of Flordon; and a Neolithic flint core (**1069**) found 120 m south-

east of the Order Limits, 970 m west of Flordon. The unnamed farm to the north of The Street is situated on higher ground at 37 m aOD to the north of a tributary of the Tas Valley at 22 m aOD, whilst the findspots are situated on higher ground to the south of the tributary at 40 m aOD.

3.2.76 A **low value** scatter of flint of evidential value comprising Neolithic/Bronze Age borer, scraper and retouched flake Neolithic/Bronze age flakes was recovered as part of a larger finds assemblage (**1357**) from farmland immediately to the north of Wreningham and c. 200 m to the west of the Order Limits.

Forncett St Mary and Tacolneston

3.2.77 Numerous metal detector and fieldwork surveys, during which non-metallic artefacts were also collected, has resulted in a detailed archaeological record for the Forncett St Mary and Tacolneston area.

3.2.78 Metal detector surveys focused on a large field 330 m east Tacolneston and 600 m west of the Order Limits. Over the years, the surveys amassed a large, multi-phased finds assemblage (**1145**), which included **low value** prehistoric flints comprising a Neolithic blade, an early Neolithic retouched flake and Neolithic/Bronze Age retouched flakes, scrapers, a combination flint tool, a flake, and a borer. These find have evidential value for the contribution they make to our understanding of human activity in this location. The survey area occupied slightly higher ground overlooking a shallow tributary of the Tas Valley to the north.

3.2.79 Metal detector surveys undertaken in the tributary valley bottom at 42 m aOD and on its northern flank at 50 m aOD 1.5 km north-east of Tacolneston and within the Order Limits resulted in a multi-period finds assemblage (**1164**), which included **low value** prehistoric worked flints including a Neolithic/Bronze Age retouched flake. These find have evidential value for the contribution they make to our understanding of human activity in this location.

3.2.80 The land to the south-east of Tacolneston has been subject to numerous metal detector and field walking surveys and many of these have identified evidence of Neolithic activity with evidential value. This **low value** resource with evidential value for the knowledge it provides of human activity in the area comprises:

- Neolithic flints recovered from the site of a deserted medieval/post medieval settlement (**1089**) recorded on a 1565 survey as Rattongate and Haliards. The site is located within the Order Limits south of Long Stratton Road and 400 m south-south-east of Tacolneston
- Four worked Neolithic flint were recovered as part of a multi-period finds assemblage (**1093**) from farmland located partially within the Order Limits immediately south of the deserted medieval/post medieval settlement (**1089**) and 700 m south-south-east of Tacolneston
- A polished flint axe head (**1001**) found in a field outside the Order Limits 200 m west of the deserted medieval/post medieval settlement (**1089**) and 700 m south of Tacolneston
- Neolithic flint flakes in a multi-period finds assemblage (**1103**) found on land partially within the Order Limits immediately south of the deserted medieval/post medieval settlement (**1089**) and 750 m south-south-east of Tacolneston

- Three flint flakes, two scrapers and a leaf-shaped arrowhead in a multi-period finds assemblage (**1108**) found on land just clipping the north-western edge of the Order Limits immediately east of deserted medieval/post medieval settlement (**1089**) and 860 m south-east of Tacolneston.

Bunwell Hill and the Tas Valley

3.2.81 Bunwell Hill is an area of high ground at 65 m aOD and the skirt of the hill at c. 52 m aOD was a focus of Mesolithic activity as described above. Neolithic activity with evidential value has also been recorded in this area and the **low value** evidence of this comprises:

- One retouched flake and several unmodified flakes in a multi-period finds assemblage (**1005**) found during a fieldwalking exercise within the Order Limits, 600 m north-west of Grade II listed Banyard's Hall (**1373609**) and 2.3 km south-east of the village of Bunwell
- A Neolithic flint knife in a multi-period finds assemblage (**1087**) recovered from land partially within the Order Limits and 2 km south-east of the village of Bunwell
- A Mesolithic/early Neolithic broken flint microblade and one small patinated flake in multi-period finds assemblage (**1075**) found during fieldwalking land 160 m west of the Order Limits and 1.3 km south-south-west of the village of Bunwell
- A Neolithic polished axe in a multi-period finds assemblage (**1052**) found during a metal detecting survey on land 190 m south-east of the Order Limits and 2.6 km south-east of the village of Bunwell
- Two Neolithic flint scrapers in a multi-period finds assemblage (**1083**) found during metal detector surveys of land 90 m north of the Order Limits and 2.1 km south-east of the village of Bunwell.

3.2.82 The Tas Valley turns from its general north-north-east/south-south-west course to the west where it skirts around the south facing aspect of Bunwell Hill. The Tas Valley, likely due to its resources, attracted Neolithic activity and this is demonstrated by **low value** finds of evidential value comprising:

- A Neolithic/Bronze Age retouched flint flake and scraper in multi-period finds assemblage (**1049**) found during metal detector surveys on land partially within Order Limits and 3 km south-south-east of the village of Bunwell
- A late Mesolithic/early Neolithic flint blade in a multi-period finds assemblage (**1058**) found during a metal detector survey of land partially within the Order Limits on the valley floor and 3.1 km south-south-east of the village of Bunwell
- A flint core, eight scrapers, one flake with straight edge retouch, 14 flakes or blades, a laurel leaf roughout, a Mesolithic/early Neolithic flint blade and a Neolithic/Bronze Age flint blade in a multi-period finds assemblage (**1062**) found during fieldwalking and metal detector surveys of land partially within the Order Limits on the valley floor and its southern flank, 3.3 km south-south-east of the village of Bunwell
- Neolithic worked flints including scrapers, flakes and a knife, and Neolithic/Bronze Age flints in a multi-period finds assemblage (**1118**) found during fieldwalking and metal detector surveys 110 m from the Order Limits on the valley floor and 3 km south-south-east of the village of Bunwell

- A Neolithic/Bronze Age flint flake in a multi-period finds assemblage (**1065**) found during metal detector surveys of land within the Order Limits 2.8 km south-south-east of the village of Bunwell.

Shelfanger and Winfarthing

3.2.83 The villages of Shelfanger and Winfarthing are both recorded in the Domesday Book, and both are in the largest 20% of settlements recorded. Both settlements are located on the north/south aligned B1077 with the eastern limits of Shelfanger situated inside the 500 m Study Area and southern half of Winfarthing within the 500 m Study Area 1.9 km to the north. The farmland to the east of these settlements has been the focus of several metal detector and field walking surveys, during which non-metallic artefacts were also collected, resulting in a detailed archaeological record contributing to our understanding of human activity in the area and of evidential value.

3.2.84 A large, multi-period finds assemblage (**1190**) was collected during fieldwalking and metal detecting surveys on land 110 m west of the Order Limits and 620 m north-east Shelfanger. The survey area is close to the head of a shallow tributary valley of the Tas with the floor of the valley just to the west. The finds assemblage included **low value** lithics comprising a Neolithic flint scraper, a late Neolithic/early Bronze Age plano-convex or discoidal flint knife and a Neolithic/Bronze Age flint flake.

3.2.85 Metal detector surveys on land 400 m north-east of Shelfanger and just clipping the western edge of the Order Limits resulted in a multi-period finds assemblage (**1246**) that included an early Neolithic **low value** retouched flint flake. This parcel of land is located immediately south of the field that produced the finds assemblage (**1190**) and is situated on the eastern flank of the tributary valley at 45 m aOD in the east to 38 m aOD in the valley floor in the west.

Bressingham and the Waveney Valley

3.2.86 Bressingham is a dispersed village located partially within the Study Area on land at c. 56 m aOD with the Waveney Valley floor and the Norfolk/Suffolk County border at 22 m aOD c. 1 km to the south. The farmland to the north-east through to the south-east of the settlement has been the focus of several metal detector and field walking surveys, during which non-metallic artefacts were also collected, resulting in a detailed archaeological record for the area.

3.2.87 Close to the southern extent of Section A, immediately north-west of Bressingham and 250 m west of the Order Limits, a **low value** polished Neolithic flint axe of evidential value was found as part of a multi-period finds assemblage (**1041**) recovered during a fieldwalking survey. The survey area is on higher land with the Waveney Valley to the south.

3.2.88 A **low value** Neolithic flint sickle (**1334**) of evidential value was found before 1935 at Roydon Pit on the southern edge of Roydon and c. 110 m east of the Order Limits.

Bronze Age

3.2.89 The Bronze Age is represented in Section A by HER records representing early, middle, and late Bronze Age activity. Most of the records represent lithic surface finds or residual lithics in later contexts, although some subsurface features have been identified including pits and ditches with the latter indicating land division likely related to farming. There are also cropmarks of ring ditches suggestive of barrows,

raising the possibility of funerary activity. Most of these potential barrows have yet to be archaeologically investigated, particularly around the Forncett St Mary and Tacolneston area. However, given the level of occupation activity within this area of the Project it is not unreasonable to assume that there would be high status burials in the form of barrows located close to these areas.

Dunston and Mangreen Hall Farm

3.2.90 Aerial photography has identified a large area of dispersed **low value** cropmarks (**1261**) with evidential value 190 m east of the Order Limits and within Dunston Park, the grounds of the Grade II listed Dunston Hall (**1373206**). The cropmarks indicated fragmentary enclosures, ditches, and field boundaries of possible prehistoric to Roman, however, the cropmarks in the northern half of the park have been lost through the construction of the Dunston Hall golf course.

3.2.91 Archaeological excavation, partially within cropmarks area (**1261**), in advance of construction of the Duston Hall golf course revealed multi-period archaeological remains (**1136**) including **low value** ditches and pits containing Bronze Age pottery sherds and worked flint. These are of evidential value. The site is situated on the western flank of Dunston, immediately east of Ipswich Road and 100 m south-east of the Order Limits.

3.2.92 Further trenching related to the construction of Dunston Hall golf course immediately to the north of (**1169**) and 200 m south-east of the Order Limits identified multi-period archaeological features (**1147**) that included **low value** Bronze Age ditches of evidential value containing Bronze Age pottery sherds. Some of the (**1171**) features correspond to cropmarks identified by the HER separately as (**1262**).

3.2.93 Dunston Park occupies land on the eastern flank of the Tas Valley. The land is undulating between 29 m aOD and 10 m aOD with the valley floor to the east at 6 m aOD.

3.2.94 A large **medium value** multi-period cropmark complex (**1325**) is located in a V-shaped parcel of land at the northern extent of the Order Limits between the A140 to the west and the railway to the east with Dunston c. 220 m to the south and the scheduled Roman town of Venta Icenorum (**1021463**) immediately to the east. The complex includes the cropmarks of three ring ditches (**1318**) which are all 14 m in diameter and are extremely uniform in their plan and arrangement: approximately 7 m apart. The size is towards the lower range for Bronze Age round barrows, although examples of this size do occur. Cropmark complex (**1325**) also includes a semi-circle cropmark (**1355**) that may also represent the remains of a barrow or perhaps later prehistoric enclosure. If shown to be barrows, these assets would be of **medium value** based on their evidential value. For asset (**1318**) it has been suggested that the cropmarks may be the remains of Iron Age roundhouses, but the encircling ring ditches are continuous making this unlikely.

3.2.95 The multi-period cropmark complex (**1325**) includes the possible barrows (**1318**) noted above, a possible Romano-British temple (**1315**) a trapezoidal enclosure (**1316**) possibly associated with the temple, and a wider complex of cropmarks that may represent a temple precinct or public area (**1317**). The setting of the **medium value** cropmark complex and its defined elements is informed by their interrelationships and by their relationships with the wider prehistoric and Romano-British landscape represented by the prehistoric cropmarks (**1002887**) to the north and the Venta Icenorum Roman town (**1021463**) to the east. The introduction of the rail and road networks, quarrying to the west and the Norwich Main Substation to the

south has fragmented this landscape and so the setting makes a moderated contribution to the assets' values. Due to overall distance and the fragmentation of the landscape, the setting does not extend to the Order Limits.

3.2.96 Mangreen Hall Farm is located 880 m west-north-west of Dunston and immediately north of the Order Limits on higher ground at 42 m aOD. Land to the south and east of the farm has been quarried and archaeological fieldwork ahead of phases of extraction have revealed the following **low value** Bronze Age remains with evidential value:

- Fieldwalking and subsequent trial trenching immediately east Mangreen Farm and just north of the Order Limits identified multi-period archaeological features and finds assemblage (**1182**) that includes a late Neolithic/early Bronze Age thumbnail scraper, an early Bronze Age scraper, late Bronze Age core fragments, end scraper, side scraper and pottery, and Bronze Age pits
- Fieldwalking, metal detecting and subsequent trial trenching immediately east of Mangreen Farm and partially within the Order Limits identified multi-period archaeological features and finds assemblage (**1184**) including significant prehistoric flint tool and flake scatters that included a core, flakes, a retouched flake, and scraper of probable late Bronze Age date, and late Bronze Age ditches and pits
- Fieldwalking, metal detecting and subsequent trial trenching immediately south of Mangreen Farm and partially within the Order Limits identified multi-period archaeological features and finds assemblage (**1185**) that included significant prehistoric flint tool and flake scatters of probable late Bronze Age date, and late Bronze Age/early Iron Age subsurface pits
- Metal detector survey of land 900 m south of Mangreen Hall Farm and partially within the Order Limits resulted in a multi-period finds assemblage (**1218**) that included a copper alloy late Bronze Age awl. Archaeological trial trenching immediately to the north identified multi-period archaeological features and finds assemblage (**1271**) that included late Bronze Age to Iron Age ditches pits, pottery, and possible field system.

3.2.97 Overall, the Bronze Age activity in this location suggests agricultural activity with a possible focus on the Tas valley.

Swainsthorpe and Mulbarton

3.2.98 The geophysical survey of land 700 m south-east of Mulbarton, 330 m south of Brick Kiln Lane and partially within the Order Limits identified two sides of a likely incompletely detected enclosure occupying a slight plateau in the north-westernmost part of this site at 45 m aOD (Bartlett, 2015) overlooking the lower ground of a tributary of the Tas at 27 m aOD to the south-east. The subsequent evaluation of the site identified archaeological remains (**1270**) including the enclosure ditches. Pottery recovered from the upper fills of the ditch was late Bronze Age to Iron Age in date suggesting the enclosure likely had Bronze Age origins. A middle Bronze Age date has been suggested based on its morphological similarity with middle Bronze Age rectilinear enclosures identified at several locations in Norfolk. The Bronze Age remains have evidential value and are of **medium value** if associated with settlement activity.

3.2.99 The setting of the Bronze Age remains (**1270**) is informed by its location on a slightly higher plateau of land within a largely agricultural landscape. The agricultural nature of the surrounding landscape is likely reminiscent of the asset's contemporary environment, although the pattern of enclosure has altered over time. The asset has, however, been built over by a solar park and the state of preservation of the asset is unknown. The setting of the asset, therefore, makes a minor contribution to its value, and as the asset is located partially within the Project, the setting extends to the Order Limits.

3.2.100 It has been suggested, based on features recorded on an 18th century OS map, that a field immediately north of Brick Kiln Lane, 850 m south-south-west of Swainsthorpe and 390 m east of the Order Limits contained at least one Bronze Age round barrow with evidential value (**1011**). There is, however, no corroborative evidence either on aerial photography or through geophysical survey and it is likely the site relates to either an infilled pit or an underlying geological feature. The field in which this asset was recorded was trial trenched in 2023 (not part of the Project). The record of the archaeological remains encountered has yet to be published at the time of writing. Given the uncertain evidence for this asset being a round barrow, it is of **low value**.

3.2.101 The cropmark of a possible Bronze Age barrow (**1031**) has been identified on aerial photographs are recorded in a field 600 m north of Swainsthorpe and 490 m east of the Order Limits. There is, however, some uncertainty to the origin of the cropmarks and they may represent an infilled pit or an underlying geological feature. This asset has evidential value for the potential it must contribute to understanding of the archaeological resource in the area but is of **low value** due to the uncertainty of evidence for this being a barrow.

3.2.102 The cropmarks of possible fragmentary enclosures, a ring ditch, field boundaries and ditches of unknown date (**1256**), are visible on aerial photographs 250 m north of Swainsthorpe and 140 m east of the Order Limits. It has been suggested the ring ditch might represent a Bronze Age round barrow, but again, there is some doubt over the archaeological origin of some of these cropmarks and, therefore, some uncertainty remains over the significance of this site, therefore, this asset is of **low value** but has evidential value.

Flordon and Fundenhall

3.2.103 The HER records cropmarks of ring ditches interpreted as the potential remains of Bronze Age barrows with evidential value 880 m north-west of Flordon and 20 m south-east of the Order Limits (**1030**); and 1.3 km north-west of Flordon and partially within the Order Limits (**1328**).

3.2.104 The asset (**1030**) is the tentatively identified cropmark of a ring ditch suggested in 1976, however, subsequent examination of the photo and later aerial photos seem to indicate the feature is of natural origin and therefore, of **low value**.

3.2.105 The **medium value** possible Bronze Age barrow cemetery (**1328**) is of evidential value and comprises five ring ditches arranged approximately north/south on ground to the east of a watercourse. From north to south the assets comprise (**1359**), (**1330**), (**1331**), (**1329**) and (**1332**). The southernmost ring ditch (**1332**) is located within the Order Limits, however, is very faint and its identification is tentative. Asset (**1330**) was clearly visible during the cropmark assessment undertaken by the Project and the good conditions captured on the satellite image used also revealed the presence of linear features and discrete pits. One of the linear features intersects with the ring ditch and so is likely not to be contemporary with the Bronze Age monument. The

identified cropmarks are included within the HER monument (**1328**) and the polygon has been slightly expanded to include the limits of the newly mapped assets.

3.2.106 The setting of the barrow cemetery (**1328**) is informed by the interrelationship of its ring ditches and by its relationship with the Project identified cropmark of a possible penannular ditch (**1543**) c. 320 m to the south-west. The setting is further informed by the cemetery's geographical situation on slightly raised ground above a shallow river valley to the west and east. It is possible that the river valley served as a tribal boundary and the barrows were intentionally placed to mark this division. Given the later division of the landscape in subsequent periods and the addition of the road network, the setting of the asset makes a minor contribution to its value. As the asset is partially located within the Project, the setting extends to the Order Limits.

3.2.107 A sixth possible ring ditch (**1360**) is located c. 340 m north-north-west of barrow cemetery (**1328**) c. 120 m to the south-west of the Order Limits. The irregular appearance of this ring ditch indicates that it could be of natural origin and so its interpretation as a possible Bronze Age barrow is tentative.

3.2.108 The cropmark assessment also identified a possibly penannular ditch (**1543**) in a field c. 250 m south-west of the barrow cemetery (**1328**) and partially within the Order Limits. The asset has an internal diameter of c. 21 m and an external one of c. 31 m making the defining ditch up to 5 m in width. Given these dimensions, it is possible the asset represents a **medium value** small henge of evidential value and of Neolithic or Bronze Age date or perhaps a Bronze Age round barrow.

3.2.109 The setting of the penannular ditch (**1543**) is informed by its shallow valley location with the barrow cemetery (**1328**) on the slightly higher ground to the east. If the asset represents the remains of a small henge, then this setting may reflect it use as a meeting place between human communities at a territorial boundary. Equally, as the remains of a round barrow, its setting might represent its significance as a tribal territorial marker. Given the later division of the landscape in subsequent periods and the addition of the road network, the setting of the asset makes a minor contribution to its value, but due to the proximity of the Project, the setting extends to the Order Limits.

3.2.110 The land within and around the Order Limits to the north and west of Flordon and east of Fundenhall has been subjected to numerous metal detector surveys during which non-metallic surface finds were also collected. Evidence of Bronze Age activity collected during these surveys comprises the following **low value** assets with evidential value for the contribution they make to knowledge of the Bronze age resource in the area:

- A copper alloy late Bronze Age socketed axe fragment and a copper alloy Bronze Age chisel fragment in a large multi-period finds assemblage (**1130**) recovered from farmland partially within the Order Limits and 500 m south-east of Fundenhall and immediately south of Hapton Road. The survey site is gently undulating and overlooks a tributary of the Tas Valley to the south-east
- The butt end of a middle Bronze Age copper alloy palstave in a multi-period finds assemblage (**1131**) recovered from farmland immediately north of Fundenhall Road, 980 m east-south-east of Fundenhall and 110 m east of the Order Limits
- A Neolithic/Bronze Age flint fabricator and possibly associated undated Prehistoric flintwork in a multi-period finds assemblage (**1289**) recovered from land around an unnamed farm 440 m north of The Street, Flordon and immediately east of the Order Limits

- A late Bronze Age socketed axe head fragment in a multi-period finds assemblage (**1280**) found 600 m north-west of Flordon and partially within the Order Limits
- A late Bronze Age awl in a multi-period finds assemblage (**1345**) recovered from farmland c. 750 m north-east of Wreningham and c. 250 m north of the Order Limits
- A copper alloy chain of probable Bronze Age date in a multi-period finds assemblage (**1348**) recovered from farmland c. 600 m east-south-east and c. 210 m south-west of the Order Limits
- A **low value** early Bronze Age flat axe-head of evidential value was recovered as part of a larger finds assemblage (**1357**) from farmland immediately to the north of Wreningham and c. 200 m to the west of the Order Limits.

Forncett St Mary and Tacolneston

3.2.111 The HER includes a record based on documentary sources (**1006**) that states that, in 1465 '100 shillings' worth of Roman coins were found when Nunmete Hill was excavated. Nunmete Hill may have been a barrow of possibly Bronze Age or Roman origin. This **low value** asset has evidential value for the contribution it makes to the archaeological resource and historical value for the evidence it provides of historical interest in understanding and recording the Roman period. The HER places the asset on the western edge of Forncett St Mary immediately north of Cheney's Lane and 220 m east of the Order Limits.

3.2.112 Documentary sources are also quoted by the HER to suggest the site of a second possible barrow site (**1007**) on the western edge of Forncett St Mary 110 m west of Nunmete Hill immediately north of Cheney's Lane and 120 m east of the Order Limits. A 1575 source states that the road to the north of this area was called 'Galgrym Road'. The word 'Galgrym' is thought to derive from a word for 'gallows', suggesting that there were once some gallows in this area. It is also recorded that in 1809 a mound in this area called 'Old Groggams' was levelled, and it may be that this was a gallows site. This **low value** asset has evidential and historical value.

3.2.113 The placename 'Barrow Field' (**1042**) is apparent on the tithe map for Forncett St Mary labelling a field 700 m souths-south-west of Forncett St Mary and 630 m east of the Order Limits The placename 'Barrow Field' is marked on the Forncett tithe map. This suggests that there may have been a Bronze Age barrow on the site. Given the limited evidence for the remains at this point this asset is of **low** value and has evidential value.

3.2.114 Metal detector and fieldwalking surveys within this area have produced several multi-period finds assemblages that have enhanced the archaeological record. Many of these finds' assemblages include **low value** Bronze Age artefacts with evidential value and they are described here:

- A multi-phased finds assemblage (**1145**) recovered from farmland 330 m east Tacolneston and 600 m west of the Order Limits. The survey site occupies slightly higher ground overlooking the head of a shallow tributary of the Tas Valley to the north. Bronze Age artefacts comprise Neolithic/Bronze Age flint scrapers, two Neolithic/ Bronze Age flint flakes, an incomplete middle Bronze Age copper alloy palstave, and a middle/late Bronze Age copper alloy two-edged knife. The size of this assemblage indicates that it could be evidence of a settlement site

- A multi-phased finds assemblage (**1158**) recovered from farmland 880 m east of Tacolneston and partially within the Order Limits. The survey site occupies slightly higher ground overlooking a shallow tributary of the Tas Valley to the north. Bronze Age artefacts comprise two Bronze Age copper alloy palstaves
- A multi-phased finds assemblage (**1164**) recovered from farmland 1.5 km north-east of Tacolneston and within the Order Limits. The survey site occupies the northern flank of the tributary of the Tas Valley directly opposite survey area (**1168**) and slopes downhill from the north to the valley floor to the south. The only dateable Bronze Age artefact comprises a Neolithic/Bronze Age retouched flake, although updated Prehistoric worked flint was also recovered that might belong to the period
- A multi-phased finds assemblage (**1139**) recovered from farmland immediately south of Forncett St Mary and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 150 m to the east. The recovered Bronze Age artefacts comprise a Middle Bronze Age copper alloy socketed spearhead, two Bronze Age copper alloy spearheads and a Bronze Age copper alloy axe head
- A multi-phased finds assemblage (**1167**) recovered from farmland on the western edge of Forncett St Mary immediately north of Cheney's Lane and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 980 m to the east. The only Bronze Age artefact recovered comprises part of middle Bronze Age spearhead
- A multi-phased finds assemblage (**1283**) recovered from farmland immediately south-west of Forncett St Mary, south of Cheney's Lane and 140 m east of the Order Limits. The survey site is situated on the northern flank of a shallow tributary of the Tas Valley that slopes downhill from the north to the south. The only Bronze Age artefact recovered comprises a late Bronze Age chisel.

Bunwell Hill and the Tas Valley

3.2.115 Metal detector and fieldwalking surveys undertaken across the rural landscape to the east through to the south of Bunwell Hill and within the Tas Valley have resulted in several multi-period finds assemblages providing a detailed archaeological record for the area. Bronze Age **low value** with evidential value artefacts recovered during this survey work comprise:

- A Bronze Age socketed copper alloy axe head in a multi-period finds assemblage (**1005**) recovered from farmland within the Order Limits and 2.3 km east-south-east of the village of Bunwell
- A Neolithic/Bronze Age retouched flint flake and scraper in multi-period finds assemblage (**1049**) recovered from farmland partially within Order Limits and 3 km south-south-east of the village of Bunwell
- A Bronze Age metalworker's hoard including fragments of a socketed axe, a hammer, a knife, a gouge, an annular collar, a barbed spearhead, and several unidentified objects in a finds assemblage that also included Roman items (**1057**) recovered from farmland 760 m south-east of the village of Bunwell and 230 m west of the Order Limits
- A Bronze Age socketed copper alloy point in a finds assemblage that also included Mesolithic and Neolithic lithics (**1083**) recovered from farmland north of

Prince of Wales Road, 90 m north of the Order Limits and 980 m south-east of the village of Bunwell

- An early Bronze Age copper alloy flat axe fragment in a multi-period finds assemblage (**1129**) recovered from farmland 720 m south of the village of Bunwell and 260 m west of the Order Limits
- A Bronze Age copper alloy palstave fragment and a socketed axe head fragment in a multi-period finds assemblage (**1087**) recovered from farmland partially within the Order Limits and 2 km south-east of the village of Bunwell
- A middle Bronze Age tip of a copper alloy socketed spearhead, with rounded midrib and slightly bevelled blade and two undated cast bronze fragments (**1059**) recovered from farmland within the Order Limits and 2.1 km south of the village of Bunwell
- A Neolithic/Bronze Age flint flake in a finds assemblage that also included a medieval artefact (**1065**) recovered from farmland within the Order Limits 2.8 km south-south-east of the village of Bunwell
- A flint flake and a flint scraper of Bronze Age date in a multi-period finds assemblage (**1118**), which also includes undated lithics that might be contemporary with the Bronze Age material, recovered from farmland on the Tas Valley floor 110 m from the Order Limits and 3 km south-south-east of the village of Bunwell
- Neolithic/Bronze Age flint flakes, blades and scrapers, an early Bronze Age barbed and tanged arrowhead, and Bronze Age flakes, scrapers, a borer, and pottery in a multi-period finds assemblage (**1058**), which also includes undated lithics that might be contemporary with the Bronze Age material. The finds were recovered from farmland on the southern side of the Tas Valley, c. 1.3 km south of Bunwell Hill and partially within the Order Limits.

Shelfanger and Winfarthing

3.2.116 A large, multi-period finds assemblage (**1190**) was collected during fieldwalking and metal detecting surveys on land 110 m west of the Order Limits and 620 m north-east Shelfanger. The survey area is close to the head of a shallow tributary valley of the Tas with the floor of the valley just to the west. The **low value** finds assemblage with evidential value included a late Neolithic/early Bronze Age plano-convex or discoidal flint knife, a Neolithic/Bronze Age flint flake and undated lithics, some of which may be Bronze Age in date.

3.2.117 Metal detector surveys on land 400 m north-east of Shelfanger and just clipping the western edge of the Order Limits resulted in a multi-period finds assemblage (**1246**) with evidential value that included a **low value** Bronze Age copper alloy flat axe.

Bressingham and the Waveney Valley

3.2.118 Metal detector and fieldwalking surveys undertaken across the rural landscape around Bressingham, the Waveney Valley and the Order Limits to the east have resulted in several multi-period finds assemblages providing a detailed archaeological record for the area. Bronze Age **low value** artefacts with evidential value recovered during this survey work comprise:

- A late Bronze Age socketed axe fragment in as multi-period finds assemblage (**1204**) recovered from farmland 2.3 km east of Bressingham, 110 m south of the Order Limits and east of Shelfanger Road
- A Bronze Age rapier dating to around 1200 to 900 BC (**1219**) recovered from farmland within the Order Limits, 1.2 km south of Bressingham on the Waveney Valley floor.

3.2.119 A middle/late Bronze Age spearhead in a multi-period finds assemblage (**1224**) was recovered from farmland 760 m east of Bressingham and 150 m north of the Order Limits. This asset along with the finds assemblage could indicate at a settlement site. Due to this the asset has evidential value.

Iron Age

3.2.120 The Iron Age is represented in Section A by HER records representing early, middle, and late Iron Age activity. Most of the records represent metal detector and fieldwalking finds but also included are cropmarks indicative of Iron Age activity and excavated archaeological features.

3.2.121 Assets that are potentially of late Iron Age to Romano-British date have been included in this Iron Age section and not repeated in the following Roman section.

Dunston and Mangreen Hall Farm

3.2.122 Aerial photography has identified a large area of dispersed **low value** cropmarks (**1261**) 190 m east of the Order Limits and within Dunston Park, the grounds of the grade II listed Dunston Hall (**1373206**). The cropmarks indicated fragmentary enclosures, ditches, and field boundaries of possible prehistoric to roman date. Some of these features (**1260**) are broadly parallel with the Roman Pye road to the east and a Roman date has been suggested, however, excavations in this area ahead of the construction of the Dunston Hall golf course revealed **low value** ditches of Iron Age, Roman and early Saxon date (**1136**). This asset has evidential value and can add to the local Historic Environment knowledge of this part of Norfolk.

3.2.123 Further trenching related to the construction of Dunston Hall golf course immediately north of (**1169**) and 200 m south-east of the Order Limits identified multi-period **low value** archaeological features (**1147**) that included evidence of Iron Age timber buildings and pottery sherds of evidential value. Some of the (**1171**) features correspond to cropmarks identified by the HER separately as (**1262**). Due to this the asset has evidential value.

3.2.124 Excavations again related to the development of the golf course 350 m north-north-east of (**1169**) and 170 m east of the Order Limits identified **low value,** with evidential value, Iron Age pits, postholes, and pottery of evidential value amongst multi-period archaeological remains largely of Roman date (**1144**).

3.2.125 A third phase of trial trenching related to the golf course was undertaken 90 m north-north-east of (**1169**) and 80 m east of the Order Limits. The trenching revealed **low value** undated postholes, pits and quarries and a few features of evidential value dated to the Iron Age by pottery sherds (**1146**).

3.2.126 A large **medium value** multi-period cropmark complex (**1325**) is located in a V-shaped parcel of land at the northern extent of the Order Limits between the A140 to the west and the railway to the east with Dunston c. 220 m to the south and the scheduled Roman town of Venta Icenorum (**1021463**) immediately to the east. The

complex includes an extremely faint small penannular ring ditch (**1320**), 5 m in diameter, within an area of geological cropmarks. If this ring ditch is archaeological then it may represent the remains of a small Iron Age temporary and/or agricultural structure. The cropmark of a second extremely faint penannular ring ditch (**1319**), 11 m in diameter, is located c. 35 m north-west of (**1320**). If this asset is of archaeological origin, then it likely represents the remains of and Iron Age roundhouse, or perhaps a Bronze Age round barrow. The roundhouses are potentially associated with the cropmarks of fragmentary boundary ditches (**1324**) forming incomplete enclosures to either side of a boundary ditch or trackway. It seems likely that these all relate to agricultural features. The ring ditches and boundary ditches are of **low value** based on their evidential value.

3.2.127 A geophysical survey of a site c. 800 m east of Swardeston and 70 m north-west of the Order Limits identified a small number of scattered linear anomalies. A subsequent archaeological evaluation identified a middle Iron Age pit and an undated, probably post medieval ditch (**1361**). The asset is of **low value** based on its evidential value.

3.2.128 The intensive archaeological fieldwork that has been focused on Mangreen Hall Farm quarry, which is situated on higher ground with Dunston and the Tas Valley to the east, has identified evidence of **low value** Iron Age of evidential value activity during the following phases of fieldwork:

- Geophysical survey, fieldwalking and subsequent trial trenching and strip, map, and sample excavation on land 300 m north-east of Mangreen Hall Farm and immediately north of the Order Limits identified unstratified Iron Age pottery and pits and postholes of probable Iron Age date in amongst a multi-period archaeological landscape (**1182**) (Stone, 2011). This fieldwork included elements of cropmarks (**1257**) known in the area for which an Iron Age to Romano-British date has been suggested
- Geophysical survey, fieldwalking, metal detecting and subsequent trial trenching immediately east of the farm and partially within the Order Limits identified multi-period archaeological features and finds assemblage (**1184**) that included pits dated by pottery to the late Bronze Age to Iron Age and possibly associated postholes (McNicol and McNicoll-Norbury, 2012)
- Geophysical survey, fieldwalking, metal detecting and subsequent trial trenching on land 700 m south of Mangreen Hall Farm and partially within the Order Limits identified archaeological features (**1271**) including a ditch of late Bronze Age to Iron Age date that was interpreted as an element of a field system (McNicol and McNicoll-Norbury, 2012).

Swainsthorpe and Mulbarton

3.2.129 The archaeological evaluation of land 330 m south of Brick Kiln Lane, 700 m south-east of Mulbarton and partially within the Order Limits identified **medium value** multi-period archaeological assets (**1270**), which included two sides of a large enclosure. The enclosure is of likely middle Bronze Age date (see above) but Late Bronze Age to Iron Age pottery of evidential value in its upper fills indicates the asset may have continued in use at least until the early Iron Age.

3.2.130 Two cropmark complexes are recorded in the local area for which an Iron Age to Romano-British date has been suggested based on morphology. These **low value** assets with evidential value comprise:

- Cropmarks of fragmentary ditches (**1247**) on the western outskirts of Swainsthorpe, 130 m south of Church Road and 70 m west of the Order Limits
- Cropmarks of possible fragmentary enclosures, a ring ditch, field boundaries and ditches (**1256**) are visible on aerial photographs 250 m north of Swainsthorpe and 140 m east of the Order Limits. It has been suggested the ring ditch might represent an Iron Age/Romano-British roundhouse. But there is some doubt over the archaeological origin of some of these cropmarks and, therefore, some uncertainty remains over the value of this site.

Flordon and Fundenhall

Designated Heritage Assets

3.2.131 The **high value** scheduled monument 'Camp in Village' (**1003984**) with evidential and historical value is located on the north-western outskirts of Tasburgh 1.5 km south-east of Flordon and 2.3 km south-east of the Order Limits. The camp is defined by an earthen bank and in places the rampart survives to a height of 3 m (NAT, n.d.) It is suggested that the camp, based on morphological grounds, is of Iron Age date and constitutes the remains of a defended settlement or hillfort, and its location on a promontory of land at c. 37 m aOD with the Tas Valley to the north and west at c. 18 m aOD and a tributary valley to the south at c. 19 m aOD adds some credence to this supposition. Excavations within the monument have, however, been extremely limited and focused on the south of the camp where the development of Tasburgh in the Late Saxon period onwards has encroached. No conclusively Iron Age archaeological remains have been identified during the limited fieldwork, but over 40 sherds of Iron Age pottery were recovered from later features (Davies *at al*. 1991).

3.2.132 The setting of the Camp is informed by its location on the promontory of higher land at the confluence of the Tas Valley and a tributary. This location would have provided a strategic and physical advantage should it have become necessary to defend the site during periods of inter-tribal aggression and despite some intervening development and tree cover, there are still open views to the valley floors (Figure 7.12.F17_VP1.17 Viewpoint 1.17: Grove Lane / Boudicca Way, near Tasburgh Hill Fort; document reference 7.12). The setting of the asset, therefore, makes a moderate contribution to its value but it does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.133 The land within and around the Order Limits to the north and west of Flordon and east of Fundenhall has been subjected to numerous metal detector surveys. Evidence of Iron Age **low value** activity collected during these surveys comprises the following finds with evidential value:

- An Iron Age coin, an Iron Age brooch, an Iron Age button and loop fastener and an Iron Age rowel spur in a multi-period finds assemblage (**1130**) recovered from farmland 500 m south-east of Fundenhall, immediately south of Hapton Road partially within the Order Limits and situated on higher ground overlooking a tributary of the Tas Valley to the south-east
- A Late Iron Age to Romano-British brooch in a multi-period finds assemblage (**1280**) recovered from farmland 600 m north-west of Flordon and partially within the Order Limits

- Iron Age pottery sherds in a multi-period finds assemblage (**1149**) recovered from farmland 720 m west-south-west of Flordon and 230 m south-east of the Order Limits
- An Iron Age copper alloy coin (**1127**), which was probably dipped in gold in an attempted contemporary forgery found on farmland 1.3 km north-east of Fundenhall and 120 m north-west of the Order Limits
- A possible Iron Age gold torc fragment that may also be an Iron Age/Romano-British bracelet fragment in a multi-period finds assemblage (**1251**) recovered from farmland 1.8 km south-west of Flordon and 150 m east of the Order Limits
    - A Roman bronze vessel handle escutcheon with double spiral and broken loop and a coin in a multi-period finds assemblage (**1236**) recovered from farmland c. 240 m east of Wreningham and 170 m west of the Order Limits
    - An Iron Age Terret in a multi-period finds assemblage (**1279**) recovered from farmland c. 850 m north-east of Toprow and clipping the Order Limits
    - Late Iron Age/Early Roman artefacts comprising a toggle, and brooches recovered as part of a larger finds assemblage (**1357**) from farmland immediately to the north of Wreningham and c. 200 m to the west of the Order Limits.

Forncett St Mary and Tacolneston

3.2.134 Metal detector and fieldwalking surveys within this area have produced several multi-period finds assemblages that have enhanced the archaeological record. Many of these finds' assemblages include **low value** Iron Age artefacts with evidential value and they are described here:

- A silver Iron Age Iceni coin in a multi-period finds assemblage (**1137**) recovered from farmland 860 m east of Tacolneston and within the Order Limits
- A Late Iron Age to Romano-British copper alloy brooch in a multi-period finds assemblage (**1161**) recovered from farmland 250 m north-west of Forncett St Mary and partially within the Order Limits
- A Late Iron Age to Romano-British copper alloy brooch in a multi-period finds assemblage (**1155**) recovered from farmland 700 m north of Forncett St Mary, immediately north-west of High Road and immediately east of the Order Limits
- An Iron Age enamelled copper alloy fragment, possibly part of a harness plaque in a multi-period finds assemblage (**1168**) recovered from farmland 1.3 km north-east of Tacolneston and partially within the Order Limits
- Iron Age pottery recovered from the site of a deserted medieval/post medieval settlement (**1089**) recorded on a 1565 survey as Rattongate and Haliards. The site is located within the Order Limits south of Long Stratton Road and 400 m south-south-east of Tacolneston
- A 1st century AD coin hoard that comprised three hundred and twenty-eight silver Iron Age and forty-one Roman coins in a multi-period finds assemblage (**1139**) recovered from farmland immediately south of Forncett St Mary and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 150 m to the east

- Part of an Iron Age or Romano-British linch pin in a multi-period finds assemblage (**1170**) recovered from farmland 700 m east of Tacolneston and partially within the Order Limits
- Iron Age pottery in a multi-period finds assemblage (**1242**) recovered from farmland 320 m north of Forncett St Mary and 180 m east of the Order Limits
- Sherds of Iron Age pottery in a multi-period finds assemblage (**1116**) recovered from farmland 1.1 km south-west of Forncett St Mary and 360 m east of the Order Limits
- A middle Iron Age brooch, a late Iron Age/Roman Colchester-type brooch, late Iron Age pottery and a possibly Iron Age unidentified copper alloy object in a multi-period finds assemblage (**1187**) recovered from farmland 440 m north-east of Tacolneston and 460 m west of the Order Limits. These finds, along with artefacts from the Roman, Saxon (possibly indicating at a cemetery site), medieval and post medieval periods indicate that this could be a site of a multi-phase settlement site
- Two silver Iron Age coin, an Iron Age/Romano-British glass bead and four Late Iron Age/Roman brooches in a multi-period finds assemblage (**1145**) recovered from farmland 330 m east Tacolneston and 570 m west of the Order Limits. The survey area occupies slightly higher ground overlooking a shallow tributary of the Tas Valley to the north
- A gold Iron Age Stater (**1374**) recovered from farmland c. 1 km east of Tacolneston and c. 20 m west of the Order Limits.

Bunwell Hill and the Tas Valley

3.2.135 Metal detector and fieldwalking surveys undertaken across the rural landscape to the east through to the south of Bunwell Hill and within the Tas Valley have resulted in several multi-period finds assemblages providing a detailed archaeological record for the area. Iron Age **low value** artefacts recovered during this survey work comprise the following assets with evidential value:

- Iron Age pottery in a multi-period assemblage (**1111**) recovered from farmland 1.8 km south-east of the village of Bunwell within the Order Limits
- Iron Age pottery in a multi-period assemblage (**1087**) recovered from farmland partially within the Order Limits and 2 km south-east of the village of Bunwell
- Iron Age pottery in a multi-period assemblage (**1098**) recovered from farmland 2.9 km south of the village of Bunwell in the Tas Valley and 60 m west of the Order Limits
- Iron Age pottery and a late Iron Age to early Romano-British one-piece Colchester brooch in a multi-period finds assemblage (**1058**) found on farmland partially within the Order Limits on the valley floor and 3.1 km south-south-east of the village of Bunwell
- Possible Iron Age pottery in a multi-period assemblage (**1075**) recovered from farmland 2.4 km south-south-east of the village of Bunwell and 160 m north-west of the Order Limits
- An Iron Age Iceni gold quarter stater coin, and a late Iron Age decorative boss with surviving traces of red enamel and a bronze pin which probably went through boss holding it to top of a sword pommel in a multi-period finds assemblage (**1066**) recovered from farmland 2 km south-south-east of the village of Bunwell and 240 m

north-west of the Order Limits in a field immediately south-east of the junction of Bunwell Hill and The Turnpike

- Iron Age pottery, late Iron Age to Romano-British pottery and two late Iron Age to Romano-British brooches in a multi-period finds assemblage (**1129**) recovered from farmland 720 m south of the village of Bunwell and 260 m west of the Order Limits.

Shelfanger and Winfarthing

3.2.136 A large multi-period finds assemblage (**1190**) was collected during fieldwalking and metal detecting surveys on land 110 m west of the Order Limits and 620 m north-east Shelfanger. The survey area is close to the head of a shallow tributary valley of the Tas with the floor of the valley just to the west. The finds assemblage with evidential value included late Iron Age pottery, a late Iron Age/Roman puddingstone quern fragment, a late Iron Age/Romano-British copper alloy brooch a Late Iron Age copper alloy coin, and a late Iron Age/Romano-British copper alloy nail cleaner. It is possible that this concentration of finds indicates the site of **medium value** a Transitional period farmstead of small settlement.

3.2.137 Metal detector surveys on land 400 m north-east of Shelfanger and just clipping the western edge of the Order Limits resulted in a multi-period finds assemblage (**1246**) that included **low value** Iron Age pottery and late Iron Age/Romano-British pottery of evidential value. This parcel of land is located immediately south of the field that produced the finds assemblage (**1190**) and is situated on the eastern flank of the tributary valley of the Tas with the valley floor to the west.

Bressingham and the Waveney Valley

3.2.138 Metal detecting on farmland 400 m east of Bressingham and partially within the Order Limits recovered a **low value** multi-period finds assemblage (**1293**) that includes a late Iron Age/Romano-British copper alloy vessel mount with evidential value.

3.2.139 Metal detecting on farmland 760 m east of Bressingham and 150 m north of the Order Limits recovered a **low value** multi-period finds assemblage (**1224**) that included a late Iron Age/Romano-British copper alloy cosmetic pestle with evidential value.

General Prehistoric

3.2.140 There are numerous HER records for undiagnostic and undated Prehistoric activity across the whole of Section A. These assets comprise cropmarks and artefact findspots and scatters. Finds of Palaeolithic material is extremely rare and so it is likely that the finds and scatters are derived from the ensuing archaeological periods, with the majority being deposited in the Neolithic through to the later Bronze Age when more and more of the landscape was settled by human populations and taken into agricultural and pastoral production.

Dunston and Mangreen Hall Farm

Designated Heritage Assets

3.2.141 The **high value** scheduled monument ‘Sites discovered by air photography at Markshall’ (**1002887**) with evidential value is an eight-part asset located between 1.2

km and 2.5 km north-east of the northern extent of the Order Limits and north and west of Markshall. The assets comprise cropmarks of ring ditches and enclosures and some are still apparent on 20th century satellite imagery. The assets have not been archaeologically investigated but based on their morphology they likely represent Bronze Age barrows and Iron Age/Romano-British enclosures. The assets are in three groups in an increasingly narrowing strip of land between the Tas Valley to the east and the Yare to the north and north-west.

3.2.142 The first group of assets comprises a c. 44 m diameter double ring ditch with a central pit and a D-shaped enclosure located at the confluence of the two river valleys. The ring ditch, almost certainly a large, imposing Bronze Age barrow when constructed, is located at the confluence of the valleys on land at c. 7 m aOD with the Tas Valley at c. 3 m aOD to the east and the Yare Valley at c. 5 m aOD. The river valleys during the Bronze Age would likely have served as routes for river traffic through the landscape and may also have delineated tribal territories. The imposition of the barrow at the valley confluence may have represented territorial claims over the landscape and its resources, emphasised by ancestral claims embodied by the intombed dead. The positioning of the likely Iron Age D-shaped enclosure may also have been concerned with territorial claims and its location adjacent next to the barrow would have supported validation through ancestral claims, spurious or not.

3.2.143 The second group of assets comprises three ring ditches aligned approximately north/south on the western flank of the Tas Valley, although only the two northern ring ditches are visible on 20th century satellite imagery. The features are likely to be Bronze Age round barrows with the northern asset is c. 42 m in diameter whilst the southern asset measures c. 29 m. The barrows are located on a shelf of land at c. 8 m aOD with the valley floor and the Tas to the east at c. 3 m aOD and higher ground up to c. 32 m aOD to the west. The siting of these funerary monuments, as with the barrow to the north, would likely have been understood as a claim of tenure over the landscape and its resources and highlight the Tas as a potential tribal boundary.

3.2.144 The third group of assets is located on higher ground at c. 36 m 1.2 km south-west of the barrows by the Tas. These assets, presumably ring ditches, are no longer apparent on 20th century satellite imagery. They may have represented further funerary activity or perhaps settlement activity.

3.2.145 The setting of the assets has been greatly impacted by the introduction of subsequent development, mineral extraction, industrial farming and the rail and road networks. However, although eroded by subsequent activity, the setting of the assets is informed by their relationships with each other and particularly by their interaction with the physical landscape defined by the river valleys and their confluence. The asset's setting, therefore, makes a positive contribution to their value but the setting does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.146 Mangreen Hall Farm is located just outside the Order Limits immediately to the north and its land has been the focus of several archaeological investigations ahead of mineral extraction. The farm is situated on higher ground with lower, rolling land to the south and west and the Tas Valley to the east. The fieldwork (**1182**) resulted in the recovery of a **low value** mixed-period finds assemblage that included a scatter of unstratified prehistoric worked and burnt flint. The undiagnostic flint is likely related to activity of Mesolithic, Neolithic, and Bronze Age date, which is also represented in the find's assemblage.

3.2.147 Fieldwalking, metal detecting and subsequent trial trenching immediately south of Mangreen Farm and partially within the Order Limits identified **low value** multi-period archaeological features and finds assemblage (**1185**) that included significant scatters of prehistoric flint tools and flakes of evidential value. The scatters included diagnostic late Bronze Age artefacts and archaeological features of a similar date were identified during the trial trenching and it is likely the undated material is related to this activity.

3.2.148 Fieldwalking, metal detecting and subsequent trial trenching immediately east of Mangreen Farm and partially within the Order Limits identified **low value** multi-period archaeological features and finds assemblage (**1184**) including significant scatters of prehistoric flint tools and flakes of evidential value. The scatters included diagnostic late Bronze Age artefacts and archaeological features of a similar date were identified during the trial trenching and it is likely the undated material is related to this activity.

3.2.149 Evaluation trial trenching undertaken immediately to the south of the scheduled monument Venta Icenorum (**1021463**), identified **low value** Iron Age and Romano-British archaeological remains (**1144**) of evidential value. The finds assemblage included residual Prehistoric lithics, which may be associated with artefacts of Mesolithic and/or Neolithic date also included in the find's assemblage. The evaluation area is located on the western flank of Dunston, 170 m east of the Order Limits and within the Tas Valley to the west of the river.

3.2.150 Prehistoric **low value** worked flint of evidential value was recovered as part of a multi-period finds assemblage (**1196**) during fieldwalking on farmland 740 m south-south-west of Dunston Hall and 340 m east of the Order Limits.

Swainsthorpe and Mulbarton

3.2.151 Prehistoric **low value** worked flints of evidential value were recovered as part of a multi-period finds assemblage (**1229**) during fieldwalking on farmland south of South of Church Road and partially within the Order Limits. The finds assemblage included a flint core of Neolithic date, and it is possible the undiagnostic flint is of a similar date.

3.2.152 Prehistoric **low value** worked flints of evidential value were recovered as part of a multi-period finds assemblage (**1230**) during fieldwalking on farmland on the western flank of Swainsthorpe, immediately south of Church Road and partially within the Order Limits. The finds assemblage also included a flint scraper of Neolithic date, and it is possible the undiagnostic flint is of a similar date.

3.2.153 Prehistoric **low value** worked flints of evidential value were recovered as part of a multi-period finds assemblage (**1233**) during fieldwalking on farmland 850 m south-west of Swainsthorpe, immediately north of Brick Kiln Lane and partially within the Order Limits.

3.2.154 Prehistoric **low value** worked flints of evidential value were recovered as part of a multi-period finds assemblage (**1234**) during fieldwalking on farmland 1.1 km south-south-west of Swainsthorpe, immediately south of Brick Kiln Lane and partially within the Order Limits.

3.2.155 Prehistoric **low value** worked flints of evidential value were recovered as part of a multi-period finds assemblage (**1235**) during fieldwalking on farmland 1.6 km south-south-west of Swainsthorpe, immediately south-west of Mulbarton lane and just

clipping the eastern flank of the Order Limits. The finds assemblage also included two flint cores of Neolithic date, and it is possible the undiagnostic flint is of a similar date.

3.2.156 A late **low value** prehistoric piercer/awl of evidential value was recovered as part of a multi-period finds assemblage (**1238**) during fieldwalking on farmland 610 m east of Mulbarton and partially within the Order Limits.

3.2.157 Late prehistoric **low value** flint flakes and a flint knife of evidential value recovered as part of a multi-period finds assemblage (**1277**) during fieldwalking on farmland 1.3 km south-south-west of Swainsthorpe and clipping the eastern flank of the Order Limits.

3.2.158 Metal detecting and fieldwalking surveys ahead of the development of a site to the north of Church Road, c. 600 m west of Swainsthorpe and clipping the eastern flank of the Order Limits resulted in a multi-period finds assemblage (**1195**). The finds assemblage included **low value** prehistoric flintwork of evidential value and this might be associated with Mesolithic/early Neolithic represented by a diagnostic flint core. This site is situated in a shallow, dry tributary valley of the Tas.

Flordon and Fundenhall

3.2.159 Flint implements (**1035**), initially considered to be Palaeolithic in date, were recovered in 1908 from a gravel pit located approximately 1.1 km west-north-west of Flordon and partially within the Order Limits. Subsequent analysis of the **low value** assemblage suggests most are of geological origin with some of a general later prehistoric date of evidential value indicating background levels of prehistoric activity in this area.

3.2.160 In 1970 number of **low value** prehistoric flints and antlers (**1367**) of evidential value were supposedly found in a field c. 1 km west of Flordon and c. 160 m south-east of the Order Limits.

Forncett St Mary and Tacolneston

3.2.161 Prehistoric **low value** flints (**1092**) of evidential value were recovered during fieldwalking on farmland 1.1 km south-south-east of Tacolneston and within the Order Limits.

3.2.162 Prehistoric **low value** flints of evidential value were recovered as part of a multi-period finds assemblage (**1091**) from farmland 990 m south of Tacolneston and partially within the Order Limits.

3.2.163 A prehistoric **low value** flint flake of evidential value was recovered as part of a multi-period finds assemblage (**1139**) during metal detecting on farmland immediately south of Forncett St Mary and partially within the Order Limits. The finds assemblage includes several copper alloy Bronze Age artefacts, and it is possible the flake is related to this activity.

3.2.164 Two prehistoric **low value** flint flakes (**1113**) of evidential value were recovered during fieldwalking farmland 1.1 km south-east of Tacolneston and 120 m south of the Order Limits.

3.2.165 Prehistoric **low value** flints of evidential value were recovered as part of a multi-period finds assemblage (**1107**) during fieldwalking of farmland 990 m south-south-west of Forncett St Mary and 150 m east of the Order Limits.

3.2.166 A late prehistoric **low value** retouched flint flake or scraper of evidential value recovered as part of a multi-period finds assemblage (**1242**) during metal detecting on farmland 320 m north of Forncett St Mary and 180 m east of the Order Limits.

3.2.167 A prehistoric flint scraper and six flakes of evidential value were recovered as part of a multi-period finds assemblage (**1203**) during fieldwalking of farmland 420 m north-west of Forncett Saint Peter and 200 m east of the Order Limits.

3.2.168 Prehistoric **low value** flints of evidential value were recovered as part of a multi-period finds assemblage (**1112**) during fieldwalking on farmland 1.4 km south-east of Tacolneston and 180 m south-east of the Order Limits.

3.2.169 A prehistoric **low value** flint flake of evidential value was recovered as part of a multi-period finds assemblage (**1194**) during metal detecting on farmland 650 m north-east of Tacolneston and 150 m west of the Order Limits.

3.2.170 A prehistoric **low value** scraper and a flake (**1115**) of evidential value were recovered during fieldwalking farmland 980 m south-west of Forncett St Mary and 240 m north-east of the Order Limits.

3.2.171 A prehistoric **low value** scraper and a flake of evidential value were recovered as part of a multi-period finds assemblage (**1116**) during fieldwalking of farmland 1.1 km south-west of Forncett St Mary and 400 m east of the Order Limits.

Bunwell Hill and the Tas Valley

3.2.172 A scatter of **low value** burnt flint (**1120**) of evidential value was identified during fieldwalking farmland 2.3 km south-east of the village of Bunwell and within the Order Limits. The National Record of the Historic Environment (NHER) suggests the asset is evidence of a burnt mound. Burnt mounds comprise heat shattered stones and charcoal, and when excavated, are often found to be associated with a water source, hearth, and trough. Radiocarbon dating of these assets indicates they originate in the later Neolithic and were still being constructed into the Iron Age. The purpose of these features is not understood but it has been suggested they may be related to bathing, sauna, cooking, salt production, dyeing, leather production and brewing beer.

3.2.173 Several undated **low value** lithics including flakes, blades, scrapers and two hammerstones of evidential value were recovered as part of a multi-period finds assemblage (**1087**) during metal detecting on farmland partially within the Order Limits, 160 m east of the Grade II listed Banyard's Hall (**1373609**) and 2 km south-east of the village of Bunwell.

3.2.174 Prehistoric **low value** worked and burnt flint of evidential value was recovered as part of a multi-period assemblage (**1111**) during fieldwalking and metal detecting on farmland 1.8 km south-east of the village of Bunwell within the Order Limits.

3.2.175 A **low value** archaeological feature (**1114**) of evidential value was identified in the bank of a stream 2.7 km south-east of the village of Bunwell and 20 m north of an Order Limit access road. The feature contained charcoal and pot boilers and although it was not further investigated, a prehistoric date has been attributed.

3.2.176 Fieldwalking and metal detecting on farmland 1.9 km south-east of the village of Bunwell and partially within the Order Limits resulted in a multi-period finds assemblage (**1063**) that included three prehistoric **low value** flint scrapers of evidential value.

3.2.177 A scatter of prehistoric **low value** flint of evidential value was recovered as part of a multi-period assemblage (**1098**) during metal detecting on farmland 2.9 km south of the village of Bunwell in the Tas Valley and 60 m west of the Order Limits.

3.2.178 A scatter of prehistoric **low value** lithics (**1097**) of evidential value covering a 100 m by 30 m area was identified on farmland 2.4 km south-south-east of the village of Bunwell on the southern flank of the Tas Valley and 50 m south-west of the Order Limits.

3.2.179 A concentration of **low value** burnt flint (**1084**) of evidential value was identified in a field 2.5 km south-south-east of the village of Bunwell and 30 m east of the Order Limits. The NHER suggests this might be evidence of a burnt mound.

3.2.180 Prehistoric **low value** lithics and pot-boilers (**1101**) of evidential value were recovered during fieldwalking farmland 2.1 km south-east of the village of Bunwell and 190 m north-west of the Order Limits.

3.2.181 Prehistoric **low value** flints of evidential value were recovered as part of a multi-period finds assemblage (**1102**) during fieldwalking farmland 1.9 km south-east of the village of Bunwell and 110 m north-west of the Order Limits.

3.2.182 Numerous undated **low value** lithics of evidential value were recovered as part of a multi-period finds assemblage (**1066**) during fieldwalking and metal detecting on farmland immediately south-east of the junction of Bunwell Hill and The Turnpike, 2 km south-south-east of the village of Bunwell and 240 m north-west of the Order Limits. The finds assemblage included diagnostic lithics dated to the Mesolithic, Neolithic and late Neolithic/early Bronze Age periods and it is likely the undated material provides further evidence of activity at these times.

3.2.183 Prehistoric **low value** flint scrapers of evidential value were recovered as part of a multi-period finds assemblage (**1129**) during fieldwalking and metal detecting on farmland 720 m south of the village of Bunwell and 260 m west of the Order Limits. The finds assemblage also included early Bronze Age artefacts, and it is possible the undated lithics are related to this activity.

Shelfanger and Winfarthing

3.2.184 A concentration of **low value** pot-boilers (**1020**) of evidential value was identified in a field 1 km north-east of Winfarthing and within the Order Limits. The NHER suggests this might be evidence of a burnt mound.

3.2.185 A concentration of **low value** pot-boilers (**1124**) of evidential value was identified during fieldwalking farmland 950 m north-east of Shelfanger and 50 m west of the Order Limits. The NHER suggests this might be evidence of a burnt mound.

3.2.186 A Prehistoric **low value** flint flake (**1078**) of evidential value was found whilst fieldwalking farmland 1.1 km east of Shelfanger and 150 m east of the Order Limits.

Bressingham and the Waveney Valley

3.2.187 A prehistoric **low value** flint scraper of evidential value was recovered as part of a multi-period finds assemblage (**1117**) recovered during gardening and metal detecting in the grounds of the Grade II listed Gringle Cottage (**1154386**). The cottage is in Roydon, 690 m east of Bressingham and 230 m south-east of the Order Limits.

3.2.188 Fieldwalking and metal detector surveys on land on the northern bank of the river Waveney c. 600 m south-west of the outskirts of Diss and 5 m east of the Order Limits has resulted in a **low value** multi-period finds assemblage (**1335**) of evidential value. As well as the Upper Palaeolithic and Mesolithic material noted above, the assemblage also includes over 100 undiagnostic worked flints.

3.2.189 A small area of burnt flint (**1377**) was noted on Roydon Fen in the Waveney valley c. 520 m south-south-west of Roydon High Street and c. 70 m east of the Order Limits. The HER suggests it may be the remains of a prehistoric burnt mound as such monuments are usually associated with a water source.

Roman Period

3.2.190 Evidence of Romano-British activity in Section A is represented by the scheduled remains of a town, excavated archaeological remains and finds from metal detector and fieldwalking surveys some concentrations of which may represent settlement and funerary activity.

Dunston and Mangreen Hall Farm

Designated Heritage Assets

3.2.191 The **high value** scheduled monument 'Venta Icenorum: Roman town and associated prehistoric, Anglo-Saxon, and medieval remains' (**1021463**) is of evidential and historical value and is located between Dunston to the South and Caistor St Edmunds in the north and 100 m east of the northern extent of the Order Limits. The asset is situated on the eastern flank of the Tas Valley, and from high ground to the east at c. 35 m aOD adjacent to Wash Lane, the asset slopes gently down to the Tas Valley floor at c. 5 m aOD 1 km to the west. To the west of the Tas the site is situated on Dunston Field, which climbs to c. 26 m aOD at the western limit of the asset.

3.2.192 In approximately AD 70 Venta Icenorum was laid out with streets and insulae on a grid pattern, probably on the site of an Iron Age and Romano-British settlement of the Iceni tribe. The settlement was a Civitas Capital which functioned as an economic, cultural, and administrative centre for its regions. The site comprises a palimpsest of multi-period settlement, from the complex road network and important public buildings such as the amphitheatre, forum, basilica, and bath complex associated with the Roman town, to the cropmark evidence of the late Iron Age settlement and an Anglo-Saxon cemetery. As the site was not comprehensively resettled in the post-Roman period, the site is likely to contain extensive archaeological deposits in a good state of survival that have the potential to increase understanding of the pre-Roman settlement, the foundation and development of the civitas capital and the decline of urban Roman life in the province.

3.2.193 The HER has reported several non-designated heritage assets located within and out with the bounds of the scheduled monument. As they are associated with and form part of the monument they are discussed here. The assets include:

- A multi-period finds assemblage with evidential value (**1022**), including Iron Age coins, a late Iron Age bow brooch, and a late Iron Age/Roman Nauheim Derivative brooch, numerous Roman coins, several brooches, building material, finger rings, spoons, furniture fittings, dress components, harness fittings, a steelyard weight, tweezers, a knife, and a pendant amongst other Romano-British finds of evidential value were found during a metal detector survey

- A series of undated cropmarks (**1243**, **1323**) of evidential value comprising fragmentary ditches and possible trackways were identified by the National Mapping Programme. The asset falls within an area that has been subject to several metal detector surveys (**1022**, **1327**) resulting in a large assemblage of Romano-British and Saxon artefacts, suggesting a possible date range for the cropmarks
- A fieldwalking and metal detecting survey around the walled area of Venta Icenorum Roman town found evidence for extensive Roman settlement and occupation in the area (**1337**). This distribution of artefacts, supported by casual finds between the 1960s and 2014 (**1338**), indicate the Roman town was originally larger than the walled area and extended to the south, north and west. A larger town is also suggested by cropmark complexes of enclosures and tracks in the north (**1339**) and south (**1341**) of the monument
- Venta Icenorum Roman town is situated at the northern limit of the roughly north/south aligned Pye Roman road (**1343**), which linked the settlement to Colchester in the south. The road survives as cropmarks and earthworks within the scheduled monument (**1340**) and to the south within Dunston Park (**1344**). The town also includes a section of the east/west aligned Roman road (**1342**) that linked the town with the settlement and temple at Crownthorpe, which survives as an earthwork and cropmark within the scheduled monument and immediately to the west
- Evaluation trial trenching undertaken immediately to the south of the scheduled monument Venta Icenorum (**1021463**), identified Iron Age and Romano-British archaeological remains (**1144**) of evidential value that included a possible Roman trackway leading towards a known Roman road, a pit and postholes possibly forming palisades and/or building, a large scatter of Roman pottery and several Roman tiles and tesserae. The evaluation area is located on the western flank of Dunston, 170 m east of the Order Limits and within the Tas Valley to the west of the river
- Evidence of late Saxon activity in the Dunston and Mangreen Hall Farm area is limited but includes an assemblage comprising of a late Saxon box, two brooches, a book fitting, an earring, a figurine, a pendant, a strap fitting, a late Saxon/medieval brooch, and three late Saxon to post medieval lead spindle whorls in a multi-period finds assemblage (**1022**) of evidential value. The assets were recovered during metal detector and fieldwalking surveys undertaken within the bounds of the scheduled monument Venta Icenorum (**1021463**).

3.2.194 The setting of the asset has been impacted by the introduction of subsequent development, mineral extraction, industrial farming and the rail and road networks. However, although eroded by subsequent activity, the setting of the asset is informed by its location at the confluence of a network of Roman roads and its relationship with the Tas river, which provided the settlement with fresh water and may also have provided a means of transport. The setting of the asset, therefore, makes a moderate contribution to its value and the setting extends to the Order Limits. The settings of the non-designated assets (**1022**, **1243**, **1323**, **1327**, **1337**, **1338**, **1339**, **1340**, **1341**, **1342**, **1343** and **1344**) are restricted to the bounds of the scheduled monument or immediate landscape, and so their settings do not extend to the Order Limits.

3.2.195 The **high value** scheduled monument 'Roman sites outside town walls' (**1003954**) is of evidential and historical value and comprises three individual sites to the south-west, south and east of Caister St Edmund, c. 1.3 km to 2.3 km north-east of the

northern extent of the Order Limits. These sites comprise the flint foundation of a Roman building excavated in 1846; a Roman building, huts and section of road excavated in 1938; and cropmark and excavated evidence of Roman buildings, including a Romano-Celtic temple, and a wall nearly 400ft (122 m) long interpreted as the western boundary of a temple precinct.

3.2.196 As with Venta Icenorum, the setting of these assets has been impacted by the introduction of subsequent development, mineral extraction, industrial farming and the rail and road networks. However, it is still possible to appreciate these assets as within the Roman landscape and as elements on the periphery of the Roman town. The settings of these assets do, therefore, make a positive contribution to their value, but do not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.197 A large **medium value** multi-period cropmark complex (**1325**) is located in a V-shaped parcel of land at the northern extent of the Order Limits between the A140 to the west and the railway to the east with Dunston c. 220 m to the south and the scheduled Roman town of Venta Icenorum (**1021463**) immediately to the east. The complex includes the cropmarks of a large double ditched trapezoidal enclosure (**1316**), potentially representing the remains of a **medium value** Roman temple complex or similar high-status asset of evidential and historical value. It is possible that the double ditches represent the former lines of a wide portico or covered walkway around the outside of the enclosure, which could have acted as a 'temenos' surrounding a Romano-British temple. The enclosure is trapezoidal in shape and measures approximately 80 m by 80 m. On the northern side of the enclosure, the inner and outer ditches are 7 m apart, whereas on the remaining three sides the ditches are 12 m apart, although this would seem exceptionally wide for a portico or covered walkway. The central area of the enclosure shows a distinctly darker area, which could indicate that the inner surface was slightly sunken, however a geological origin for this cropmark cannot be ruled out. Few convincing internal features have been identified, and in particular nothing clearly resembling a temple. The trapezoidal enclosure (**1316**) may be associated with the cropmark of a polygonal ring ditch or enclosure (**1315**) that may represent the remains of a Romano-British temple. The enclosure, which measures 16 to 17.5 m across, looks convincingly octagonal on some aerial photographs and a possible internal, slightly polygonal ring ditch may be visible in 1992, measuring 7.5 m across, with a break to the west suggesting the presence of an entrance. It is possible, given the possible polygonal shape of this enclosure, that it relates to a Romano-British temple, with the inner ring ditch representing the remains of central shrine surrounded by an octagonal ambulatory. The trapezoidal enclosure (**1316**) and possible temple (**1315**) are located within a wider complex of enclosures (**1317**), which possibly represents a temple precinct or public space. These Roman-British assets are of **medium value** based on their evidential and historical values.

3.2.198 The setting of Romano-British assets (**1315**), (**1316**) and (**1317**) has been considered in the Bronze Age section above where the large **medium value** multi-period cropmark complex (**1325**) is first reported.

3.2.199 Field walking and metal detector surveys within the bounds of the cropmark complex (**1325**) have produced a **low value** multi-period finds assemblage (**1326**) of evidential value that includes coins, brooches, building materials and a copper alloy lozenge shaped seal box, all of Roman date.

3.2.200 Geophysical survey and subsequent trial trenching immediately south of Mangreen Farm and partially within the Order Limits identified sparse **low value** archaeological remains (**1333**) of Roman date and of evidential value. The remains comprise ditches and pits likely representing agricultural practice, although a small quantity of unstratified Romano-British ceramic building material was recovered. This asset is located within the bounds of the larger HER monument (**1185**).

3.2.201 Metal detector survey of land 850 m south of Mangreen Hall Farm and partially within the Order Limits resulted in a multi-period finds assemblage (**1218**) that included several **low value** Roman coins including two of silver, and a dolphin brooch. Subsequent archaeological trial trenching identified multi-period **low value** archaeological features and finds assemblage (**1271**) of evidential value that included evidence of a Romano-British enclosure, elements of a field system, pits, post-holes, and a hearth.

3.2.202 Excavation in advance of the construction of the Dunston Hall golf course on the western flank of Dunston, immediately east of Ipswich Road and 100 m south-east of the Order Limits, identified multi-period archaeological features (**1136**) that included a **low value** pit with a Roman pot and a pair of double ditches of evidential value, perhaps indicating a Romano-British trackway. Metal detecting on this site also recovered Roman and medieval coins and metalwork. This site is situated on land at overlooking the Tas Valley to the east.

3.2.203 Following phases of fieldwalking and archaeological evaluation of land 290 m north-east of Mangreen Hall Farm and immediately north of the Order Limits, an excavation focused on the location of a proposed reservoir within the site identified multi-period archaeological remains (**1182**) of evidential value including a small **medium value** circular enclosure ditch, within which were six Roman graves, containing the remains of seven individuals (Stone, 2011). This site occupied higher ground overlooking the Tas Valley to the east.

3.2.204 Prior to their excavation, the setting of the Romano-British inhumations which form part of asset (**1182**) would have been informed by their relationship with the cropmark complex c. 230 m to the east (**1325**), which includes possible Bronze Age barrows (**1318**), a possible Roman temple (**1315**) within a trapezoidal enclosure (**1316**) and a wider complex of enclosures (**1317**), which possibly represents a temple precinct or public space. The setting is further informed by the asset's relationship with the scheduled monument Venta Icenorum (**1021463**) c. 600 m to the east, which would likely have been visible from the small burial ground. The asset has been completed destroyed first through excavation and then the quarrying of a large parcel of land around the asset. The setting of the asset does not, therefore, extend to the Order Limits.

3.2.205 Geophysical survey, fieldwalking, metal detecting and subsequent trial trenching on land 700 m south of Mangreen Hall Farm and partially within the Order Limits identified multi-period archaeological features and finds (**1271**) of evidential value dominated by 3rd to 4th century Romano-British remains although early Roman activity was also represented. These **low value** remains comprised linear features, pits and a possible roundhouse gully that were largely concentrated in two locations within the large survey area (McNicol and McNicoll-Norbury, 2012).

3.2.206 A parcel of land largely within the Order Limits and c. 600 m to the north-west of Swainsthorpe has been subject to geophysical survey and archaeological evaluation in support of a quarry extension. This survey identified a dense cluster of potentially archaeologically-significant responses at the western edge of the field, including

several north-north-east to south-south-west and west-north-west to east-south-east aligned linear anomalies that appear to represent ditches associated with at least one substantial enclosure. Numerous discrete anomalies were also recorded within and near the probable enclosure, suggesting this was potentially an area of settlement. The subsequent evaluation revealed linear and discrete features, many of which were potentially associated with Roman phases of activity. the pottery assemblage dates occupation to the transitional and early Roman periods (mid to late 1st century) with some indication of activity in the 3rd to mid-4th century. The early Roman is concentrated in the north-west part of the site, whilst several features of probable late Roman date were identified in the south-east corner of site. Some evidence of medieval and post medieval field boundaries was also identified (**1364**). The Roman settlement remains are considered to be of **medium value** based on their evidential value.

3.2.207 The setting of asset (**1364**) is informed by its relationship with other elements of the extensive Romano-British agricultural landscape in the local area with the scheduled monument Venta Icenorum (**1021463**) at its core. This landscape has, however, been eroded by development of the intervening centuries and so makes a moderate contribution to the value of the asset. The setting of the asset extends to the Order Limits.

3.2.208 A small **low value** complex of cropmarks (**1237**) of evidential value comprising fragmentary ditches is located 710 m south-south-west of Mangreen Farm and partially within the Order Limits. Archaeological trial trenching (McNicol and McNicoll-Norbury, 2012) in this area predominantly identified Roman-British and medieval features (**1271**), and it is likely the cropmarks related to this activity.

3.2.209 Metal detector and fieldwalking surveys in the Dunston and Mangreen Farm area have identified **low value** Romano-British assets of evidential value comprising:

- A Roman coin (**1267**) recovered from farmland 660 m south-south-west of Mangreen Hall Farm and partially within the Order Limits
- Two Roman coins in a multi-period finds assemblage (**1208**) recovered from farmland west of Mangreen Hall Farm and 20 m north-west of the Order Limits
- Two Roman copper alloy coins in a multi-period finds assemblage (**1196**) recovered from farmland 740 m south-south-west of Dunston Hall and 340 m east of the Order Limits
- Two Roman coins in a multi-period finds assemblage (**1163**) 190 m north-east of Mangreen Hall Farm and 110 m west of the Order Limits
- A copper alloy Roman coin and a copper alloy Romano-British bell in a multi-period finds assemblage (**1110**) 80 m north-west of Mangreen Hall Farm and 220 m north-west of the Order Limits.

3.2.210 Aerial photography has identified a large area of dispersed **low value** cropmarks (**1261**) of evidential value 190 m east of the Order Limits and within Dunston Park, the grounds of the Grade II listed Dunston Hall (**1373206**). The cropmarks indicated fragmentary enclosures, ditches, and field boundaries of possible prehistoric to Roman date, however, the cropmarks in the northern half of the park have been lost through the construction of the Dunston Hall golf course.

3.2.211 A **low value** complex of fragmentary cropmarks (**1250**) of evidential value, likely representing former field boundaries, have been identified on the western flank of the

A140, 30 m west of Dunston Park and 160 m east of the Order Limits. Based on orientation, the anomalies represent two phases of activity and although undated, they may relate to the evidence of Bronze Age, Iron Age/Early Saxon Roman-British activity excavated within Dunston Park (**1136**) 30 m to the east. Metal detector surveys to the south (**1197**) and (**1196**) have also recovered Romano-British artefacts.

3.2.212 The **low value** cropmarks of fragmentary undated ditches, which are likely to represent former field boundaries and trackways of possible Iron Age to Roman date (**1257**) of evidential value have been identified on land 270 m north-east of Mangreen Hall Farm and partially within the Order Limits.

Swainsthorpe and Mulbarton

3.2.213 Romano-British pottery sherds were recovered as part of a **low value** multi-period finds assemblage (**1229**) of evidential value during fieldwalking on farmland south of South of Church Road and partially within the Order Limits. Likewise, further fieldwalking and metal detecting immediately to the east, and partially within the Order Limits, recovered more **low value** multi-period finds (**1230**) of evidential value including a Roman coin and more Romano-British pottery. The Church Road sites are situated on higher ground with tributaries of the Tas Valley and the Tas Valley itself to the east.

3.2.214 Several more metal detecting and fieldwalking surveys have been undertaken in the Swainsthorpe/Mulbarton area identifying the following **low value** assets of evidential value:

- Roman coins including one of silver and a brooch in a multi-period finds assemblage (**1233**) recovered from farmland 850 m south-west of Swainsthorpe, immediately north of Brick Kiln Lane and partially within the Order Limits
- Romano-British pottery in a multi-period finds assemblage (**1234**) recovered from farmland 1.1 km south-south-west of Swainsthorpe, immediately south of Brick Kiln Lane and partially within the Order Limits
- Romano-British pottery sherds in a multi-period finds assemblage (**1278**) recovered from farmland 1.6 km south-south-west of Swainsthorpe, immediately south of Mulbarton Lane and partially within the Order Limits
- A Roman silver coin in a multi-period finds assemblage (**1195**) recovered from farmland on the western limits of Swainsthorpe, immediately north of Church Street and just clipping the Order Limits
- Romano-British pottery in a multi-period finds assemblage (**1235**) recovered from farmland 1.6 km south-south-west of Swainsthorpe, immediately south-west of Mulbarton lane and just clipping the eastern flank of the Order Limits
- Romano-British pottery sherds in a multi-period finds assemblage (**1275**) recovered from farmland 1.4 km south-south-west of Swainsthorpe, immediately north of Mulbarton Lane and 130 m east of the Order Limits
- Three copper alloy Roman dolphin brooches in a multi-period finds assemblage (**1197**) recovered from farmland on the northern flank of Swainsthorpe, 60 m north of Church Road and 360 m east of the Order Limits

- A Romano-British brooch in a multi-period finds assemblage (**1304**) recovered from farmland c. 500 m south-west of Bracon Ash and c. 25 m north-east of the Order Limits.

3.2.215 The cropmarks of a **low value** enclosure (**1051**) of evidential value are recorded on the southern edge of Swainsthorpe 240 m south of Church Street and 390 m east of the Order Limits. Given the morphology of the enclosure and associated ditches a Roman, or Late Iron Age to Roman date is possible. Roman finds recovered to the east of these cropmarks could support this interpretation. The enclosure is likely overlaid by medieval/post medieval linear boundaries.

3.2.216 There are four **low value** undated cropmark complexes of evidential value in the Swainsthorpe to Mulbarton landscape for which, based on morphological grounds, a late Iron Age/Romano-British date has been suggested. These assets comprise:

- Cropmarks of rectilinear enclosures on land north of Glebe Farm (**1254**) 220 m north-west of Swainsthorpe and partially within the Order Limits
- Cropmarks of field boundaries and ditches of probable Romano-British date (**1255**) 520 m north-west of Swainsthorpe and partially within the Order Limits. The cropmark assessment undertaken by the Project identified three sides of a possible enclosure within the bounds of (**1255**) that maybe of Romano-British date. A short linear cropmark also identified corresponds with a field boundary recorded on the first edition OS map and so is likely of post medieval date. The HER polygon for (**1255**) was slightly extended to include the whole of these **low value** assets of evidential value
- Cropmarks of possible fragmentary enclosures, a ring ditch, field boundaries and ditches of unknown date (**1256**) 250 m north of Swainsthorpe and 140 m east of the Order Limits
- Cropmarks of fragmentary ditches (**1247**) on the western outskirts of Swainsthorpe, 130 m south of Church Road and 70 m west of the Order Limits.

Flordon and Fundenhall

3.2.217 Several metal detector surveys on land 500 m south-east of Fundenhall, immediately south of Hapton Road and partially within the Order Limits recovered a large multi-period finds assemblage (**1130**) of evidential value, which contained Roman dress accessories, tweezers, hair pins, bracelet fragments, brooches including an enamelled disc brooch, steelyard weights, a figurine, surgical instrument, finger rings (one silver), nail cleaner, nails or studs, harness fitting, a key, a lock, scabbard fittings, a spoon, metalworking debris, a Roman/early Saxon military buckle and hundreds of Roman coins including some of silver. Pottery and ceramic building material has also been recovered suggesting that there is a **medium value** Romano-British settlement on the central and south-eastern part of the site. The site is located partially within the Order Limits and situated on higher ground overlooking a tributary of the Tas Valley to the south-east. The settlement site likely became the focus of funerary activity in the early Saxon period (see below).

3.2.218 The setting of the possible Romano-British settlement suggested by finds assemblage (**1130**) is informed by its location on slightly higher ground at c. 44 m aOD with the tributary of the Tas Valley at c. 27 m aOD to the south-east. The tributary would have provided water whilst the higher ground would be better drained. The setting is further informed by the distribution of further Romano-British artefact

scatters and findspots across the higher ground to the west (**1132**) and (**1162**), to the north-east (**1131**), to the south-west (**1194**), to the south (**1194**) and (**1168**) and to the east (**1251**) on the opposite flank of the tributary. The setting of the asset, therefore, makes a moderate contribution to its value, and as it is located partially within the Project, the setting extends to the Order Limits.

3.2.219 Several more metal detecting and fieldwalking surveys have been undertaken in the Flordon/Fundenhall area identifying **low value** assets of evidential value comprising:

- Two Roman brooches including an arsenical bronze bow and fantail brooch with two enamelled panels, Roman coins and a harness mount in a multi-period finds assemblage (**1133**) recovered from farmland 740 m east-south-east of Fundenhall and within the Order Limits
- A Roman brooch (**1095**) recovered from farmland 1.3 km north of Flordon and partially within the Order Limits
- A copper alloy Roman Bracelet in a multi-period finds assemblage (**1225**) recovered from farmland 930 m north of Flordon and partially within the Order Limits
- A Roman brooch and finger ring in a multi-period find assemblage (**1217**) recovered from farmland 750 m north-west of Flordon and largely within the Order Limits
- A Roman brooch in a multi-period finds assemblage (**1286**) recovered from farmland 650 m north-west of Flordon, immediately east of Flordon Road and partially within the Order Limits
- A brooch and sword belt mount in a multi-period finds assemblage (**1266**) recovered from farmland 570 m north-west of Flordon and partially within the Order Limits
- An early Roman brooch (55 AD to 80 AD) in a multi-period finds assemblage (**1265**) recovered from farmland 900 m north-west of Flordon, immediately east of Flordon Road and partially within the Order Limits
- A Roman coin and a brooch in multi-period find assemblage (**1289**) recovered during metal detector surveys of land around the Grade II* listed Flordon Hall. The survey area is located 200 m north-west of Flordon, immediately south-east of the Order Limits and occupies slightly higher ground above a tributary of the Tas to the east and south
- Romano-British pottery sherd and a copper alloy coin in a multi-period finds assemblage (**1162**) 200 m south of Fundenhall and 10 m west of the Order Limits
- A late Iron Age/Roman brooch, a Roman Hod Hill brooch and a furniture fitting in a multi-period finds assemblage (**1273**) recovered from farmland 1.7 km north-east of Fundenhall, immediately west of Wymondham Road and runs adjacent to an access road of the Order Limits
- A copper alloy Roman coin in a multi-period finds assemblage (**1131**) recovered from farmland immediately north of Fundenhall Road, 980 m east-south-east of Fundenhall and 110 m east of the Order Limits
- Fifty-six copper alloy Roman coins and one of silver, Romano-British pottery, a brooch, finger ring and bracelet in a multi-period finds assemblage (**1132**) 500 m south-east of Fundenhall and 70 m west of the Order Limits
- A copper alloy Roman bow brooch in a multi-period finds assemblage (**1151**) 1 km south-east of Fundenhall and 150 m east of the Order Limits

- Romano-British pottery sherds, Roman coins, a brooch, and a copper alloy furniture fitting in a multi-period finds assemblage (**1193**) recovered from farmland on the eastern outskirts of Fundenhall and 210 m north-west of the Order Limits
- Romano-British pottery sherds, a bracelet with punched decoration, a brooch, coins, and a lead weight in a multi-period finds assemblage (**1149**) recovered from farmland 720 m west-south-west of Flordon and 230 m south-east of the Order Limits
- Three Roman coins in a multi-period finds assemblage (**1269**) recovered from farmland 240 m north of Flordon and 220 m south-east of the Order Limits
- Roman coins, a brooch and a cosmetic spoon in a multi-period finds assemblage (**1180**) recovered from farmland 1 km north-east of Fundenhall and 240 m north-west of the Order Limits
    - Twelve Roman coins in a multi-period finds assemblage (**1279**) recovered from farmland c. 850 m north-east of Toprow and clipping the Order Limits
    - Several Roman coins, pottery sherds, a possible furniture mounts, and a Roman/Early Saxon belt mount in a multi-period finds assemblage (**1345**) recovered from farmland c. 750 m north-east of Wreningham and c. 250 m north of the Order Limits
    - A Roman flue tile fragment, three coins, a crossbow brooch, a Colchester brooch, and a knife handle in a multi-period finds assemblage (**1346**) recovered from farmland c. 300 m east of Wreningham and partially within the Order Limits
    - A Roman sestertius coin of the co-emperor Lucius Verus (**1347**) recovered from farmland c. 330 m east-north-east of Mangreen Hall (**1366150**) an c. 230 m north-west of the Order Limits
    - Roman coins in a multi-period finds assemblage (**1348**) recovered from farmland c. 600 m east-south-east and c. 210 m south-west of the Order Limits
    - Roman coins and a furniture or stud (**1349**) recovered from farmland c. 600 m north-north-west of Wreningham and 170 m north-west of the Order Limits
    - Roman brooches, coins, a copper alloy vessel fragment, a furniture fitting, a finger ring, a penannular bracelet fragment, a steelyard weight, a finger ring, and a figurine of highly unusual form consisting of a male figure with a horse's head emerging from the front of the torso were recovered as part of a larger finds assemblage (**1357**) from farmland immediately to the north of Wreningham and c. 200 m to the west of the Order Limits
    - A copper alloy Roman furniture fitting (**1373**) recovered from farmland c. 600 m east-south-east of Wreningham and c. 50 m south-west of the Order Limits
    - Three Roman coins in a multi-period finds assemblage (**1380**) recovered from farmland c. 1.1 km north-east of Wreningham and c. 220 m north-east of the Order Limits
    - Two Roman coins in a multi-period finds assemblage (**1382**) recovered from farmland c. 900 m east-north-east of Wreningham and within the Order Limits.

Forncett St Mary and Tacolneston

3.2.220 Evidence for Romano-British activity in the Forncett St Mary and Tacolneston area is limited to metal detector and fieldwalking finds, however, these finds are numerous suggesting there is likely to be several activity foci in the landscape perhaps comprising farmsteads and small settlements.

3.2.221 Romano-British pottery, Roman brooches, coins, a figurine of Jupiter, a gold finger ring, harness fitting, key handle, padlock, snap-loop, plumb bob, ring, seal box, decorative mount or fitting, vessel repair, knopped terminal of a bar, suspension bar, ingot fragments for coin manufacture, coin blank and possible coin flan was recovered as parts of a multi-period finds assemblage (**1168**) found on farmland 1.3 km north-east of Tacolneston and partially within the Order Limits. The Roman finds recovered suggest that this may have been a **medium value** metal-working site, including the manufacture of coins.

3.2.222 The setting of asset (**1168**) is informed by its location on slightly higher ground at c. 45 m aOD with a tributary of the Tas Valley at c. 25 m aOD to the south-east. The setting is further informed by the distribution of further Romano-British artefact scatters and findspots across the higher ground to the north (**1130**), (**1132**) and (**1162**), to the north-north-east (**1131**), to the north (**1194**), and to the north-east (**1251**) on the opposite flank of the tributary. The setting of the asset, therefore, makes a moderate contribution to its value, and as it is located partially within the Project, the setting extends to the Order Limits.

3.2.223 Further evidence for Romano-British activity in the Forncett St Mary and Tacolneston area derived from metal detecting and fieldwalking finds are of evidential value and comprise:

- Eight Roman **low value** coins in a multi-period finds assemblage (**1192**) recovered from farmland 1.1 km north-west of Forncett St Mary and 10 m east of the Order Limits
- Romano-British **low value** pottery in a multi-period finds assemblage (**1189**) 970 m south-east of Tacolneston, immediately south of Long Stratton Road and partially within the Order Limits
- A Late Iron Age to Romano-British **low value** copper alloy brooch and a Roman copper alloy brooch in a multi-period finds assemblage (**1161**) recovered from farmland 250 m north-west of Forncett St Mary and partially within the Order Limits
- Romano-British **low value** pottery, Roman coins, dolphin brooches and a reversed fantail brooch in a multi-period finds assemblage (**1263**) recovered from farmland 640 m north-east of Tacolneston and partially within the Order Limits
- A Late Iron Age/Roman brooch, Romano-British pottery sherds, a Roman brooch, Roman coins including two of silver, and a coin blank (all **low value**) in a multi-period finds assemblage (**1155**) recovered from farmland 700 m north of Forncett St Mary, immediately north-west of High Road and immediately east of the Order Limits
- A **low value** copper alloy Roman coin in a multi-period finds assemblage (**1175**) recovered from farmland 1.1 km east of Tacolneston, immediately north of Cheney's Lane and partially within the Order Limits
- Twelve Roman coins, Roman brooches, a Roman hair pin (all **low value**) in a multi-period finds assemblage (**1137**) recovered from farmland 800 m east of Tacolneston and within the Order Limits

- Romano-British **low value** pottery recovered from the site of a deserted medieval/post medieval settlement (**1089**) recorded on a 1565 survey as Rattongate and Haliards. The site is located within the Order Limits south of Long Stratton Road and 400 m south-south-east of Tacolneston
- An Iron Age/Roman linch pin, Romano-British pottery sherds, coins, and a copper alloy brooch (all **low value**) in a multi-period finds assemblage (**1170**) recovered from farmland 680 m east of Tacolneston, immediately north of Cheney's Lane and partially within the Order Limits
- A first century AD **low value** coin hoard that comprised three hundred and twenty-eight silver Iron Age and forty-one Roman coins, additional Roman coins including one of silver, a copper alloy brooch, a cosmetic palette, a lead seal, a lead steelyard weight, and Romano-British pottery in a multi-period finds assemblage (**1139**) recovered from farmland immediately south of Forncett St Mary and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 150 m to the east
- Romano-British **low value** pottery and a silver Roman coin in a multi-period finds assemblage (**1242**) recovered from farmland 320 m north of Forncett St Mary and 180 m east of the Order Limits
- A late Iron Age/Roman brooch, Roman brooches, a furniture fitting and a steelyard weight (all **low value**) in a multi-period finds assemblage (**1164**) recovered from farmland on the floor and northern flank of a tributary valley of the Tas 1.5 km north-east of Tacolneston and within the Order Limits
- A **low value** Roman coin in a multi-period finds assemblage (**1299**) recovered from farmland 760 m south-east of Tacolneston and 120 m north-west of the Order Limits
    - Sherds of **low value** grey ware pottery were recovered as part of a multi-period finds assemblage (**1203**) during fieldwalking of farmland 420 m north-west of Forncett Saint Peter and 200 m east of the Order Limits
- A **low value** Roman brooch and copper alloy bead in a multi-period finds assemblage (**1283**) recovered from farmland on the western edge of Forncett St Mary, immediately south of Cheney's Lane and 140 m east of the Order Limits
- Three **low value** Roman brooches and a cosmetic pestle in a multi-period finds assemblage (**1282**) recovered from farmland 190 m west of Forncett St Mary, immediately east of Stickfer Lane and an access road of the Order Limits
- Five **low value** copper alloy Roman coins and a copper alloy brooch in a multi-period assemblage (**1128**) recovered from farmland 1.3 km south-south-west of Forncett St Mary and 240 m south-east of the Order Limits
- Two **low value** Roman coins and a brooch in a multi-period finds assemblage (**1194**) recovered from farmland 650 m north-east of Tacolneston and 150 m west of the Order Limits
- A **low value** silver Roman coin and a cosmetic pestle in a multi-period finds assemblage (**1226**) recovered from farmland immediately north of Forncett St Mary, 90 m north of Cheney's Lane and 320 m east of the Order Limits
    - Roman **low value** copper alloy coins in a multi-period finds assemblage (**1074**) recovered from farmland 400 m east of Tacolneston and 210 m west of the Order Limits

- A **low value** Roman coin and a Roman penannular snake bracelet in a multi-period finds assemblage (**1253**) recovered from farmland 340 m north-east of Tacolneston, immediately east of Norwich Road and 450 m west of the Order Limits
    - Six **low value** Roman coins, a cosmetic mortar and a terret fragment in a multi-period finds assemblage (**1350**) recovered from farmland immediately east of Tacolneston and c. 200 m north-west of the Order Limits
    - Three **low value** Roman coins (**1351**) recovered from farmland c. 180 m east of Tacolneston and c. 170 m north-west of the Order Limits
- A multi-phased finds assemblage (**1145**) recovered from farmland 330 m east Tacolneston and 550 m west of the Order Limits. The survey site occupies slightly higher ground overlooking the head of a shallow tributary of the Tas Valley to the north. The finds comprise an Iron Age or Roman glass bead, Roman coins, a late Iron Age/Roman brooch; Roman bracelet fragments, brooches, a cosmetic mortar, patera handle, probable key handle, bead, finger ring and furniture stud, a lead weight, and a scatter of Romano-British pottery. This finds assemblage could indicate a **medium value** settlement site
- Roman coins and a brooch in a multi-period find assemblage (**1154**) recovered from farmland 200 m east of Tacolneston, immediately north of Cheney's Lane and 675 m west of the Order Limits. The finds from other time periods included middle/late Saxon artefacts (spindle whorls and strap end), a 15th century copper alloy strap end (in the shape of a tree), medieval coins, a brooch, a balance, a bell, furniture fittings, a prick spur, a purse frame a seal matrix, a strap fitting and a token; and a gold medieval/post medieval finger ring. A post medieval gold button, a silver button, coin and dress fastener, a copper alloy bell, buckle, button, a furniture fitting, jetton and strap fittings, and a lead weight and cloth seal were also recovered. All these artefacts suggests that there could be a multi-period **medium value** settlement located here.

3.2.224 Assets (**1145**) and (**1154** are located adjacent to each other just outside to 500 m Study Area immediately to the east of Tacolneston. They are included here as the concentration of finds raises the possibility that the Anglo-Saxon settlement of Tacolneston may have had Romano-British origins. Any settlement remains would likely be of **medium value**.

3.2.225 The setting of assets (**1145**) and (**1154**) is shared and informed by their interrelationships and by their location on the eastern side of Tacolneston. Due to overall distance, this setting does not extend to the Order Limits.

3.2.226 The HER includes a **low value** record based on documentary sources of historic value (**1006**) that state that, in 1465 '100 shillings' worth of Roman coins were found when Nunmete Hill was excavated. Nunmete Hill may have been a barrow of possibly of Bronze Age or Roman origin, and the HER places the asset on the western edge of Forncett St Mary immediately north of Cheney's Lane and 220 m east of the Order Limits.

Bunwell Hill and the Tas Valley

3.2.227 Evidence of Romano-British activity in the Bunwell Hill and Tas Valley area is restricted to fieldwalking, and metal detector finds of evidential value. These assets, recorded below, are of **low value** unless otherwise indicated.

- Romano-British grey ware pottery in a multi-period assemblage (**1111**) recovered from farmland 1.8 km south-east of the village of Bunwell within the Order Limits
- Romano-British pottery in a multi-period finds assemblage (**1087**) recovered from a field partially within the Order Limits, 160 m east of the Grade II listed Banyard's Hall (**1373609**) and 550 m east of Bunwell Hill
- A copper alloy Roman coin of Marcus Aurelius (**1121**) minted between AD 161-180 was found on farmland 2.3 km south-east of the village of Bunwell and within the Order Limits
- Romano-British pottery and Roman coins, a brooch and a bracelet in a multi-period finds assemblage (**1049**) recovered from farmland 3 km south-south-east of the village of Bunwell, on the valley floor south of the Tas and partially within the Order Limits
- Romano-British pottery and tile fragments and a copper alloy brooch in a multi-period finds assemblage (**1062**) recovered from farmland partially within the Order Limits on the Tas Valley floor and its southern flank, 3.3 km south-south-east of the village of Bunwell
- Two Roman coins and a furniture fitting in a multi-period finds assemblage (**1188**) recovered from farmland 2.2 km south-south-east of the village of Bunwell, immediately east of Brick Kiln Lane and flanking the western edge of the Order Limits
- A sherd of Roman grey ware pottery and two 4th century Roman coins in a multi-period finds assemblage (**1053**) recovered from farmland 2.1 km south-east of the village of Bunwell and 70 m north-west of the Order Limits
- A sherd of Roman pottery in a multi-period finds assemblage (**1097**) recovered from farmland 2.4 km south-south-east of the village of Bunwell on the southern flank of the Tas Valley and 50 m south-west of the Order Limits
- Roman pottery including samian, grey ware, course ware, Nene Valley wares, a silver Roman coin and several copper alloy coins, a copper alloy brooch, a finger ring, nail, and pin in a multi-period finds assemblage (**1058**) recovered from farmland partially within the Order Limits on the Tas Valley floor and 3.1 km south-south-east of the village of Bunwell
- A Roman coin in a multi-period finds assemblage (**1063**) recovered from farmland 1.9 km south-east of the village of Bunwell and partially within the n Order Limits access road
- A silvered copper alloy Roman disc brooch in a multi-period finds assemblage (**1054**) recovered from farmland 3.2 km south-south-east of the Village of Bunwell and on the floor of the Tas Valley 210 m east of the Order Limits
- A Roman sestertius coin (**1061**) recovered from farmland 3.2 km south-east of the village of Bunwell and 230 m north-west of the Order Limits on the Tas Valley floor
- Three Roman pottery sherds, Roman lead steelyard weight, and a copper alloy Roman coin in a multi-period finds assemblage (**1016**) recovered from farmland 3.6 km south of the village of Bunwell and on the southern flank of the Tas Valley 35 m east of the Order Limits

- Romano-British pottery rim sherds in a multi-period finds assemblage (**1099**) recovered from farmland 2.9 km south-south-east of the village of Bunwell on the Tas Valley floor 230 m west of the Order Limits
- A sherd of Romano-British pottery in a multi-period finds assemblage (**1102**) recovered from farmland 1.9 km south-east of the village of Bunwell and 110 m north-west of the Order Limits
- A copper alloy Roman coin, an unidentified copper alloy object and a scatter of Roman course ware in a multi-period finds assemblage (**1057**) that includes the Bronze Age Bunwell hoard recovered from farmland 2 km south-east of the village of Bunwell and 230 m north-west of the Order Limits
- Roman pottery including a sherd of samian and one Constantine Roman coin (AD 347-8) in a multi-period finds assemblage (**1052**) recovered from farmland 190 m south-east of the Order Limits and 2.6 km south-east of the village of Bunwell
- Romano-British pottery sherds, two Late Iron Age/Roman copper alloy brooches, a copper alloy first century dolphin brooch, and a copper alloy Roman coin in a multi-period finds assemblage (**1129**) recovered from farmland 720 m south of the village of Bunwell and 260 m west of the Order Limits.

3.2.228 A large Romano-British finds assemblage comprising pottery sherds including mortaria, grey ware, samian, colour-coated ware and amphora, ceramic building material, a bronze curved cosmetic palette, the head and part of a bow of a Langton Down brooch, a Roman/early Saxon hemispherical bronze bell, numerous coins, a bronze claw-hammer, a possible metalsmiths tool, a Roman to medieval lava quern fragment, a bracelet, a steelyard weight, a copper alloy strap fitting, and copper alloy tweezers were recovered as part of a multi-period finds assemblage (**1066**) from farmland 2 km south-south-east of the village of Bunwell and 240 m north-west of the Order Limits. A second Romano-British finds assemblage comprising pottery sherds, brick fragments, coins, and several other metal objects, including a copper alloy spur formed part of a multi-period finds assemblage (**1075**) that was recovered from farmland immediately south of (**1066**). The HER suggests these assets may constitute the site of a possible **medium value** Romano-British settlement location.

3.2.229 The setting of the possible Romano-British settlement site (**1066**) and (**1075**) is informed by its location on slightly raised ground at c. 46 m aOD on the northern flank of Tas river valley with the river at c. 38 m aOD. The setting is further informed by scatters of Romano-British material in the surrounding landscape to the east (**1188**) and north (**1129**). The extant agricultural landscape, although divided by later phases of enclosure, is likely reminiscent of the asset's contemporary landscape, and so the asset's setting makes a minor contribution to it value. Due to overall distance, the setting of assets (**1066**) and (**1075**) does not extend to the Order Limits.

Winfarthing and Shelfanger

3.2.230 Evidence of Romano-British activity in the Winfarthing and Shelfanger area is restricted to fieldwalking, and metal detector finds of evidential value. These assets, recorded below, are of **low value**.

- A possible Roman copper alloy disc depicting a sunken face and a Roman miniature axe head or pick (**1088**) recovered from farmland 1.1 km east-north-east of Winfarthing and partially within the Order Limits

- Late Iron Age/Romano-British pottery, Romano-British/early Saxon pottery and four Roman coins including two of silver in a multi-period finds assemblage (**1246**) recovered from farmland 400 m north-east of Shelfanger and just clipping the western edge of the Order Limits
- A Roman coin and a copper alloy object, possibly an eagle's talon (**1082**) recovered from farmland 1 km north-east of Winfarthing and within the Order Limits
- A Roman coin in a multi-period finds assemblage (**1298**) recovered from farmland 120 m east of Winfarthing and on the western flank of the Order Limits
- A Roman horse-head escutcheon from a copper alloy bowl (**1125**) recovered from farmland 880 m north-east of Shelfanger and 140 m west of the Order Limits
- A Roman coin and a steelyard weight in a multi-period finds assemblage (**1034**) recovered from farmland at the southern end of Winfarthing, immediately north of Heywood Road and 190 m west of the Order Limits
- A brooch in a multi-period finds assemblage (**1206**) recovered from farmland 560 m south-south-east of Winfarthing, immediately south of Heywood Road and 190 m west of the Order Limits
- Roman coins and brooches in a multi-period find assemblage (**1292**) recovered from farmland on the eastern flank of Winfarthing and 300 m west of the Order Limits
- A Roman gold earring in a multi-period finds assemblage (**1358**) recovered from farmland located c. 1.3 km south-east of Shelfanger and adjacent to the Order Limits.

3.2.231 A late 1st to early 3rd century Roman pottery scatter including coarse wares, buff ware, grey ware, samian, amphora, storage jar and ceramic building material including flue and pila tiles, and opus signium fragments (**1019**) of evidential value was recovered from farmland 1.1 km east-north-east of Winfarthing and 60 m east of the Order Limits and within assets (**1064**) the former Winfarthing Great Park medieval deer park and (**1088**) a wider scatter of Romano-British finds. The asset (**1019**) is possibly the location of a **medium value** Romano-British building or farmstead.

3.2.232 The setting of the asset (**1019**) is informed by its location within a wider scatter of Romano-British material (**1088**) and by its relationship with further Romano-British finds (**1082**) c. 200 m to the south-south-east. In the wider landscape there is no further evidence of contemporary activity, and it is therefore likely that the asset represents a largely isolated farmstead. The surrounding agricultural land, although divided by later periods of enclosure, therefore, likely mirrors the asset's contemporary environment and so also informs its setting. The setting of the asset, therefore, makes a moderate contribution to its value and due to the proximity of the Project, the setting extends to the Order Limits.

3.2.233 A late Iron Age/Roman puddingstone quern fragment, numerous Roman coins, brooches, a bracelet, finger rings including one of silver, spoons, a silver stud, window glass fragments, building material including flue tile and hypocaust and Romano-British pottery in a large, multi-period finds assemblage (**1190**) of evidential value was recovered from farmland 110 m west of the Order Limits and 620 m north-east Shelfanger. The site location is close to the head of a shallow tributary valley of the Tas with the floor of the valley just to the west and it is likely the extensive finds

assemblage indicates the location of a **medium value** Romano-British building or farmstead.

3.2.234 The setting of the asset (**1190**) is informed by its location at the head of the shallow valley and by lower density Romano-British find scatters to the north-west (**1034**) and (**1206**) and to the south (**1246**). It is likely that the asset represents a largely isolated farmstead within an agricultural landscape. The surrounding agricultural land, although divided by later periods of enclosure, therefore, likely mirrors the asset's contemporary environment and so also informs its setting. The setting of the asset, therefore, makes a moderate contribution to its value, but is the setting is focused on its valley head location, the setting does not extend to the Order Limits.

Bressingham and the Waveney Valley

3.2.235 Evidence of Romano-British activity in the Bressingham and the Waveney Valley area is restricted to a **low value** marble statue fragment and **low value** fieldwalking and metal detector finds of evidential value comprising:

- A few sherds of Romano-British pottery in a multi-period finds assemblage (**1335**) recovered from farmland on the northern bank of the river Waveney c. 600 m south-west of the outskirts of Diss and 5 m east of the Order Limits
- A Roman harness fitting, including a skirted terret and terret ring in a multi-period finds assemblage (**1025**) recovered from farmland 570 m north-east of Bressingham and partially within the Order Limits
- A late Iron Age/Romano-British copper alloy vessel mount and two Roman coins in a multi-period finds assemblage (**1293**) recovered from farmland 400 m east of Bressingham and partially within the Order Limits
- A Roman unfinished zoomorphic folding knife handle featuring a rendition of a hound chasing a hare, and a bird (**1290**) recovered from farmland 540 m east of Bressingham and partially within the Order Limits
- A silver Roman coin (170 AD to 171 AD) in a multi-period finds assemblage (**1252**) recovered from farmland 250 m east of Bressingham and partially within the Order Limits
- Two Roman coins in a multi-period finds assemblage (**1294**) recovered from farmland 1.1 km east of Bressingham and 70 m south of the Order Limits
- Eight Roman coins in a multi-period finds assemblage (**1301**) recovered from farmland 480 m north-east of Bressingham and adjacent to an access road of the Order Limits
- A Roman disc brooch and coin in as multi-period finds assemblage (**1204**) recovered from farmland 2.3 km east of Bressingham, 110 m south of the Order Limits and east of Shelfanger Road
- A Roman enamelled disc brooch, with blue, red, and yellow enamel (**1100**) recovered from farm land 1.1 km south-south-east of Bressingham within the Order Limits and on the northern flank of the Waveney Valley
- Roman pottery sherds in multi-period finds assemblage (**1109**) recovered from farmland 1.3 km south-east of Bressingham on the northern flank of the Waveney Valley and 70 m north of the Order Limits

- Roman coins and brooches including an unusual, possibly imported plate brooch in a multi-period finds assemblage (**1179**) recovered from farmland 870 m south-east of Bressingham and partially within the Order Limits
- A Late Roman/early Saxon belt stiffener strap fitting in a multi-period finds assemblage (**1295**) recovered from farmland immediately north-west of Bressingham and 240 m north-west of the Order Limits
- Two Roman pottery sherds and two Roman coins in a multi-period finds assemblage (**1352**) recovered from farmland on the northern outskirts of Diss and 250 m south-east of the Order Limits.

3.2.236 A life-sized **low value** carved marble head (**1086**) of the Roman Emperor Antoninus Pius (AD 138 to 150) was installed as a bollard to protect the verge from passing traffic 650 m south-east of Bressingham and 230 m east of the Order Limits adjacent to Baynard's Lane. It was sold at auction in 1990. The marble head is said to have been found at a findspot (**1123**) 75 m to the north-east of its roadside location.

Early Medieval

3.2.237 The early medieval covers the period following the end of Roman occupation of the British Isles (410 AD) up to the Norman Conquest of 1066. The Norfolk HER splits the period into three subsections (early, middle, and late Saxon) and these divisions, where applicable, have been applied to the following section.

General Saxon

3.2.238 The **high value** scheduled monument 'Anglo-Saxon cemetery SW of Markshall Farm' (**1003953**) is of evidential value and located on the north-western flank of the Tas Valley, 140 m north of Venta Icenorum (**1021463**) and 1.1 km north-north-east of the northern extent of the Order Limits. The site was investigated in the early 19th century and drawing of four urns were exhibited in 1815 and in 1882 it was reported to the Society of Antiquities that several urns and a Roman kiln had been excavated on the site. It is possible the cemetery is associated with Saxon settlement activity on the periphery of Venta Icenorum (**1021463**).

3.2.239 The setting of the asset is informed by its elevated position at c. 24 m aOD above the Tas Valley at c. 7 m aOD immediately to the south-east and its views across the Roman town of Venta Icenorum on the opposing valley flank. Research has shown that many Anglo-Saxon cemeteries reuse or are focused on earlier monuments (Lucy 2000; 124) and it is possible the graves were placed in such locations to assimilate ancestral ties and, therefore, claims to territory. The overlooking view of Venta Icenorum is, therefore, likely a key element of the cemetery's setting contributing to the value of the asset. The setting of cemetery does not extend to the Order Limits.

3.2.240 A large **medium value** multi-period cropmark complex (**1325**) is located within a V-shaped parcel of land at the northern extent of the Order Limits between the A140 to the west and the railway to the east, with Dunston c. 220 m to the south and the scheduled Roman town of Venta Icenorum (**1021463**) immediately to the east. The complex includes the **low value** cropmarks of two sub-rectangular pit-like features (**1321**) of evidential value. The pits are distinctly sub-rectangular in form, measure between 4 to 6 m across and likely represent Saxon sunken-floored buildings, known as 'grubenhäuser'. Saxon period artefacts are included in a **low value** multi-period finds assemblage (**1326**) of evidential value recovered from the general area of these

cropmarks, indicating Saxon occupation of the extramural Roman settlement west of Venta Icenorum (**1021463**).

3.2.241 **Low value** human remains (**1198**) of evidential value were identified in 1968, 1972 and 1983 in a gravel pit on the western edge of Flordon and c. 160 m south-south-east of the Order Limits. The Norfolk HER record suggests an early Saxon or medieval date for the remains but offers to reason for this assertion.

3.2.242 An Anglo-Scandinavian zoomorphic brooch and silver strap end were recovered as part of a multi-period finds assemblage (**1304**) from farmland c. 500 m south-west of Bracon Ash and c. 25 m north-east of the Order Limits.

Early Saxon (411 AD to 650 AD)

Dunston and Mangreen Hall Farm

3.2.243 A multi-period finds assemblage (**1022**), including two **low value** early Saxon brooches, a personal ornament and pottery sherds and an early/middle Saxon buckle of evidential value, was found during a metal detector survey within the bounds of the scheduled monument Venta Icenorum (**1021463**). The survey area is located immediately north of Dunston and 150 m east of the Order Limits.

3.2.244 Aerial photography has identified a large area of dispersed **low value** cropmarks (**1261**) of evidential value 190 m east of the Order Limits and within Dunston Park, the grounds of the Grade II listed Dunston Hall (**1373206**). The cropmarks indicated fragmentary enclosures, ditches, and field boundaries of possible prehistoric to Roman date. Some of these features (**1260**) are broadly parallel with the Roman Pye road to the east and a Roman date has been suggested, however, excavations in this area ahead of the construction of the Dunston Hall golf course revealed multi-period archaeological remains (**1136**) including a possible **low value** early Saxon ditch. The site is situated on the western flank of Dunston, immediately east of Ipswich Road and 100 m south-east of the Order Limits.

Flordon and Fundenhall

3.2.245 A Roman/early Saxon military buckle, and early Saxon pottery sherds, numerous brooches, sleeve clasps, scabbard fragments, strap fittings and pins were included in a large multi-period finds assemblage (**1130**) recovered from farmland partially within the Order Limits and 500 m south-east of Fundenhall and immediately south of Hapton Road. The large finds assemblage suggests the presence of a **medium value** Romano-British settlement that, following abandonment, became the focus of a **medium value** early Saxon inhumation cemetery. The site is gently undulating and overlooks a tributary of the Tas Valley to the south-east.

3.2.246 The setting of the possible early Saxon inhumation cemetery suggested by finds assemblage (**1130**) is informed by its focus on the abandoned Romano-British settlement. The setting is further informed by the distribution of further early Saxon artefact scatters and findspots across the higher ground to the south (**1168**) and to the east (**1251**) on the opposite flank of the tributary. The setting of the asset, therefore, makes a moderate contribution to its value, and as it is located partially within the Project, the setting extends to the Order Limits.

3.2.247 Numerous early Saxon artefacts of evidential value, and which form part of a multi-period finds assemblage (**1279**), have been recovered by metal detectorists from farmland c. 850 m north-east of Toprow and clipping the Order Limits. The artefacts

include early Saxon brooches, buckles, pendants, a girdle hanger and a sleeve clasp. These personal adornments suggest the presence of a **medium value** early Anglo-Saxon inhumation cemetery in the area.

3.2.248 The setting of the early Anglo-Saxon inhumation cemetery (**1279**) is informed by its association with the Bronze Age barrow cemetery (**1328**) to the south and by the settlement of Wreningham to the west, which is recorded in the Domesday Book. The setting of the asset, therefore, makes a moderate contribution to its value, and as it is located partially within the Project, the setting extends to the Order Limits.

3.2.249 Further evidence of early Saxon activity in the Flordon and Fundenhall area comprises chance finds, fieldwalking finds and metal detector finds of evidential value. These assets, recorded below, are of **low value** unless otherwise indicated.

- An early Saxon buckle in a multi-period finds assemblage (**1265**) recovered from farmland 900 m north-west of Flordon, immediately east of Flordon Road and partially within the Order Limits
    - A sword pommel of Holmegard-Kragehul type and a great square-headed brooch in a multi-period metal detector finds assemblage (**1280**) of evidential value found 600 m north-west of Flordon and partially within the Order Limits
- An early Saxon florid cruciform brooch in a multi-period finds assemblage (**1151**) recovered from farmland 1 km south-east of Fundenhall and 150 m east of the Order Limits
- An early Saxon brooch in a multi-period finds assemblage (**1193**) recovered from farmland on the eastern outskirts of Fundenhall and 210 m north-west of the Order Limits
- An early Saxon Brooch and girdle hanger in a multi-period finds assemblage (**1251**) recovered from farmland 1.8 km south-west of Flordon and 150 m east of the Order Limits
    - A Roman/Early Saxon belt mount, and an early Saxon brooch in a multi-period finds assemblage (**1345**) recovered from farmland c. 750 m north-east of Wreningham and c. 250 m north of the Order Limits
    - An early Saxon harness mount and wrist clasp hook plate in a multi-period finds assemblage (**1346**) recovered from farmland c. 300 m east of Wreningham and partially within the Order Limits
    - Early Saxon brooches, a cruciform brooch fragment, a florid cruciform brooch fragment, a brooch with extensive chip-carved ornament, a knob from a cruciform brooch, and a Great Square-Headed brooch fragment recovered as part of a larger finds assemblage (**1357**) from farmland immediately to the north of Wreningham and c. 200 m to the west of the Order Limits.

Forncett St Mary and Tacolneston

3.2.250 Evidence of early Saxon activity in the Forncett St Mary and Tacolneston area comprises chance finds and metal detector and fieldwalking finds of evidential value.

3.2.251 Several early Saxon brooches, a hairpin and one arm of a pair of tweezers were found as part of a multi-period finds assemblage (**1187**) recovered from farmland 440 m north-east of Tacolneston and 460 m west of the Order Limits. This concentration

of early Saxon brooches has been suggested as evidence of a **medium value** inhumation cemetery.

3.2.252 The setting of the asset (**1187**) by its location on slightly higher ground at c. 50 m aOD with a tributary of the Tas Valley at c. 43 m aOD to the south. The setting is further informed by the distribution of further early Saxon artefact scatters and findspots across the higher ground to the north-north-east (**1130**) and (**1168**) and to the east (**1158**) and north-east (**1251**) on the opposite flank of the tributary. The setting of the asset, therefore, makes a moderate contribution to its value, but due to overall distance, the setting does not extend to the Order Limits.

3.2.253 Further evidence of early Saxon activity in the Forncett St Mary and Tacolneston area is recorded below. These **low value** assets comprise:

- Part of an early to middle Saxon chatelaine in a multi-period finds assemblage (**1158**) recovered from farmland 880 m east of Tacolneston and partially within the Order Limits. The survey site occupies slightly higher ground overlooking a shallow tributary of the Tas Valley to the north
- A middle to late Saxon brooch in a multi-period finds assemblage (**1167**) recovered from farmland on the western edge of Forncett St Mary immediately north of Cheney's Lane and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 980 m to the east
- Three fragments of an early Saxon brooch in a multi-period finds assemblage (**1168**) recovered from farmland 1.3 km north-east of Tacolneston and partially within the Order Limits
- A small early Saxon gold and garnet mount, probably from a scabbard, in a multi-period finds assemblage (**1164**) recovered from farmland on the floor and northern flank of a tributary valley of the Tas 1.5 km north-east of Tacolneston and within the Order Limits
- An early Saxon brooch in a multi-period finds assemblage (**1283**) recovered from farmland on the western edge of Forncett St Mary, immediately south of Cheney's Lane and 140 m south of the Order Limits
- An early Saxon brooch in a multi-period finds assemblage (**1194**) recovered from farmland 650 m north-east of Tacolneston and 150 m west of the Order Limits
- A badly weathered and eroded fragment of an early Saxon long brooch with broken hinge (**1073**) recovered from farmland 1.5 km south-east of Tacolneston and 300 m south-east of the Order Limits
- An early Saxon cruciform brooch foot in a multi-period finds assemblage (**1134**) recovered from farmland 840 m east of Tacolneston and 250 m west of the Order Limits
- An early Saxon brooch and bucket binding fragment in a large multi-period finds assemblage (**1145**) recovered from farmland 330 m east Tacolneston and 570 m west of the Order Limits. The large finds assemblage is predominantly Romano-British in date and suggestive of **medium value** settlement activity. The **low value** Saxon element of the find's assemblage is smaller but may indicate continuity in settlement activity but at a reduced intensity. The survey area occupies slightly higher ground overlooking a shallow tributary of the Tas Valley to the north.

Bunwell Hill and the Tas Valley

3.2.254 Evidence of early Saxon activity in the Bunwell Hill and the Tas Valley area comprises chance finds and metal detector and fieldwalking finds of evidential value. These **low value** assets comprise:

- Early Saxon pottery sherds in a multi-period finds assemblage (**1062**) recovered from farmland partially within the Order Limits on the Tas Valley floor and its southern flank, 3.3 km south-south-east of the village of Bunwell
- Early Saxon Coptic copper alloy bowl footring fragment in a multi-period finds assemblage (**1087**) recovered from land partially within the Order Limits and 2 km south-east of the village of Bunwell
- An early Saxon girdle hanger in a multi-period finds assemblage (**1049**) found during metal detector surveys on land partially within Order Limits and 3 km south-south-east of the village of Bunwell
- Early Saxon pottery in a multi-period assemblage (**1098**) recovered from farmland 2.9 km south of the village of Bunwell in the Tas Valley and 60 m west of the Order Limits
- An early Saxon strap fitting in a multi-period finds assemblage (**1139**) recovered from farmland immediately south of Forncett St Mary and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 150 m to the east
- Early Saxon pottery sherds in a multi-period finds assemblage (**1118**) found during fieldwalking and metal detector surveys of land 110 m from the Order Limits on the valley floor and 3 km south-south-east of the village of Bunwell
- Early Saxon pottery sherds, an early Saxon brooch and an early/middle Saxon brooch in a multi-period finds assemblage (**1058**) recovered from farmland partially within the Order Limits on the Tas Valley floor and 3.1 km south-south-east of the village of Bunwell
- An early Saxon brooch in a multi-period finds assemblage (**1052**) recovered from farmland 2.6 km south-east of the village of Bunwell and 190 m south-east of the Order Limits
- An early Saxon strap-end and an early/middle Saxon hanging bowl mount in a multi-period assemblage (**1128**) recovered from farmland 1.3 km south-south-west of Forcett St Mary and 240 m south-east of the Order Limits
- An early Saxon glass bead, copper alloy tweezers and pottery sherds in a multi-period finds assemblage (**1075**) found during fieldwalking land 160 m west of the Order Limits and 1.3 km south-south-west of the village of Bunwell
- A Roman/early Saxon hemispherical bronze bell; an animal head foot of a cruciform brooch, a head plate and bow of small long brooch, a gold bracelet, a strap fitting and tweezers of early Saxon date; and an early/middle Saxon copper alloy mount in a multi-period finds assemblage (**1066**) recovered from farmland 2 km south-south-east of the village of Bunwell and 240 m north-west of the Order Limits in a field immediately south-east of the junction of Bunwell Hill and The Turnpike
- Two early Saxon brooches, one of silver, in a multi-period finds assemblage (**1129**) recovered from farmland 720 m south of the village of Bunwell and 260 m west of the Order Limits

- A large assemblage of Romano-British finds was recovered from this site leading to the suggestion it has the potential to be the location of settlement activity. The paucity of early Saxon material, however, indicates the settlement was abandoned as the Roman period came to an end.

Winfarthing and Shelfanger

3.2.255 A metal detector survey of farmland 400 m north-east of Shelfanger and just clipping the western edge of the Order Limits resulted in the recovery of multi-period finds assemblage (**1246**) of evidential value including an early Saxon pendant made from a coin of Constantius I, gilded silver disc brooch fragments with chip-carved decoration, a gold disc pendant made from beaded wire with a central cross motif, a gold disc pendant, a gold and garnet pendent, and pottery sherds. The discovery of a bronze bowl on the same site led to the identification of a richly furnished **medium value** early/middle Saxon female burial (**1276**) located 360 m west of the Order Limits. The grave goods included: a necklace with a gold openwork pendant in the centre, flanked by two gold spacer beads, and then two gold coins of Merovingian King Sigebert III as pendants; a continental pottery bi-conical bowl with cordon and grooved decoration; a copper alloy bowl; an Iron knife; 13 copper alloy chatelaine rings with punched ring and dot decoration; and a copper alloy chatelaine ring with a fragment of a possible decorated girder hanger attached to it. The burial likely represents part of a larger **medium value** cemetery which remained in use after activity ceased in the former Roman site to the north (**1190**).

3.2.256 The setting of the early Saxon element of finds assemblage (**1246**), which possibly represents an inhumation cemetery exemplified by furnished female burial (**1276**), is informed by its relationship with possible Roman-British occupation site that became the focus of early Saxon funerary activity to the north (**1190**). The agricultural landscape in which the asset is located, has seen little impact other than later phases of enclosure, and so the setting of the asset makes a moderate contribution to its value. As the asset is located partially within the Project, its setting extends to the Order Limits.

3.2.257 The remaining evidence of early Saxon activity in the Winfarthing and Shelfanger are metal detector finds of evidential value comprising:

- Several early Saxon brooches and sherds of early to middle Saxon pottery in a large, multi-period **medium value** finds assemblage (**1190**) recovered from farmland 110 m west of the Order Limits and 620 m north-east Shelfanger. The survey area is close to the head of a shallow tributary valley of the Tas with the floor of the valley just to the west and it is likely the extensive finds assemblage indicates the location of a Romano-British building or farmstead
- A **low value** early Saxon brooch in a multi-period finds assemblage (**1284**) recovered from farmland 2.2 km north-north-east of Winfarthing and 150 m east of the Order Limits
- A **low value** early Saxon brooch in a multi-period finds assemblage (**1206**) recovered from farmland 560 m south-south-east of Winfarthing, immediately south of Heywood Road and 190 m west of the Order Limits.

Bressingham and the Waveney Valley

3.2.258 Evidence of early Saxon activity in the Bressingham and the Waveney Valley area comprises metal detector and fieldwalking finds of evidential value. These **low value** assets comprise:

- Two early Saxon brooches in a multi-period finds assemblage (**1228**) recovered from farmland 450 m south of Bressingham and partially within the Order Limits
- An early Saxon brooch, possibly from an inhumation burial in a multi-period finds assemblage (**1179**) recovered from farmland 870 m south-east of Bressingham and partially within the Order Limits
- An early Saxon small-long brooch in a multi-period finds assemblage (**1295**) recovered from farmland immediately north-west of Bressingham and 240 m north-west of the Order Limits
- An early Saxon brooch a multi-period finds assemblage (**1041**) recovered from farmland close to the southern extent of Section A, immediately north-west of Bressingham and 250 m west of the Order Limits. The survey area is on higher land with the Waveney Valley 500 m to the south.

Middle Saxon (651 AD to 850 AD)

Dunston and Mangreen Hall Farm

3.2.259 Evidence of middle Saxon activity in the Dunston and Mangreen Hall Farm area is restricted to a **low value** middle Saxon brooch, a silver coin, a pin, a strap fitting and pottery sherds in a multi-period finds assemblage (**1022**) of evidential value. The assets were recovered during metal detector and fieldwalking surveys undertaken within the bounds of the scheduled monument Venta Icenorum (**1021463**) located immediately north of Dunston and 150 m east of the Order Limits. This is a possible indication that occupation, or at least activity, continued at this site into later periods.

Swainthorpe and Mulbarton

3.2.260 A middle Saxon spoon was recovered as part of a multi-period finds assemblage (**1304**) from farmland c. 500 m south-west of Bracon Ash and c. 25 m north-east of the Order Limits.

Flordon and Fundenhall

3.2.261 Evidence of middle Saxon activity in the Flordon and Fundenhall area comprises metal detector and fieldwalking finds of evidential value, some of these finds are located within the Order Limits. These **low value** assets comprise:

- A middle/late Saxon silver brooch in a multi-period find assemblage (**1217**) recovered from farmland 750 m north-west of Flordon and largely within the Order Limits
- Middle/late Saxon strap ends in a multi-period finds assemblage (**1280**) recovered from farmland 600 m north-west of Flordon and partially within the Order Limits
- A middle Saxon coin in a multi-period assemblage (**1302**) recovered from farmland 600 m north-north-west of Flordon and just clipping the eastern edge of the Order Limits

- A middle Saxon pin in a multi-period finds assemblage (**1151**) recovered from farmland 1 km south-east of Fundenhall and 150 m east of the Order Limits
- A middle Saxon brooch in a multi-period finds assemblage (**1251**) recovered from farmland 1.8 km south-west of Flordon and 150 m east of the Order Limits
    - A middle Saxon pin head in a multi-period finds assemblage (**1279**) recovered from farmland c. 850 m north-east of Toprow and clipping the Order Limits
    - A middle Saxon pin in a multi-period finds assemblage (**1345**) recovered from farmland c. 750 m north-east of Wreningham and c. 250 m north of the Order Limits
    - A middle Saxon brooch in a multi-period finds assemblage (**1346**) recovered from farmland c. 300 m east of Wreningham and partially within the Order Limits
    - A middle Saxon double-hooked dress fastener, a coin, and a Ansate brooch recovered as part of a larger finds assemblage (**1357**) from farmland immediately to the north of Wreningham and c. 200 m to the west of the Order Limits
    - A middle Saxon pseudo-coin brooch in a multi-period finds assemblage (**1380**) recovered from farmland c. 1.1 km north-east of Wreningham and c. 220 m north-east of the Order Limits
    - A 9th century copper alloy disc brooch with backward turning animal (**1381**) recovered from farmland c. 600 m east of Wreningham and c. 8190 m south-west of the Order Limits
    - An early Saxon brooch fragment, and part of a 6th century great square headed brooch (Kenninghall I type) in a multi-period finds assemblage (**1382**) recovered from farmland c. 600 m east of Wreningham and c. 80 m south-west of the Order Limits.

Forncett St Mary and Tacolneston

3.2.262 Evidence of middle Saxon activity in the Forncett St Mary and Tacolneston area comprises metal detector and fieldwalking finds of evidential value. These **low value** assets comprise:

- A middle Saxon pin head in a multi-period finds assemblage (**1137**) recovered from farmland 800 m east of Tacolneston and within the Order Limits
- A middle Saxon silver coin in a multi-period finds assemblage (**1155**) recovered from farmland 700 m north of Forncett St Mary, immediately north-west of High Road and immediately east of the Order Limits
- A middle Saxon strap fitting in a multi-period finds assemblage (**1161**) recovered from farmland 250 m north-west of Forncett St Mary and partially within the Order Limits
- A middle/late Saxon disc brooch in a multi-period finds assemblage (**1103**) found on land partially within the Order Limits immediately south of the deserted medieval/post medieval settlement (**1089**) and 750 m south-south-east of Tacolneston
- A late Saxon stirrup and a strap fitting in a multi-period finds assemblage (**1168**) recovered from farmland 1.3 km north-east of Tacolneston and partially within the Order Limits

- A middle Saxon silver coin in a multi-period finds assemblage (**1164**) recovered from farmland on the floor and northern flank of a tributary valley of the Tas, 1.5 km north-east of Tacolneston and within the Order Limits
- A middle/late Saxon brooch in a multi-period finds assemblage (**1283**) recovered from farmland on the western edge of Forncett St Mary, immediately south of Cheney's Lane and 140 m south of the Order Limits
- Middle Saxon Ipswich ware pottery sherds in a multi-period finds assemblage (**1074**) recovered from farmland 400 m east of Tacolneston and 210 m west of the Order Limits
- A middle Saxon pin, coin, and tweezers and two middle/late Saxon brooches in a multi-period finds assemblage (**1187**) recovered from farmland 440 m north-east of Tacolneston and 460 m west of the Order Limits. These finds, along with artefacts from the late Iron Age, Roman, early Saxon (these items suggest there could be burial on site), medieval and post medieval periods indicate that this could be a site of a multi-phase settlement site
- Middle Saxon tweezers and a middle/late Saxon strap end in a large multi-period finds assemblage (**1145**) recovered from farmland 330 m east Tacolneston and 570 m west of the Order Limits. The large finds assemblage is predominantly Romano-British in date and suggestive of **medium value** settlement activity. The Saxon element of the find's assemblage is smaller but may indicate continuity in settlement activity but at a reduced intensity. The survey area occupies slightly higher ground overlooking a shallow tributary of the Tas Valley to the north
- A middle/late Saxon strap end in a multi-period finds assemblage (**1154**) recovered from farmland 200 m east of Tacolneston, immediately north of Cheney's Lane and 700 m west of the Order Limits. The finds from other time periods included some Roman coins and brooches, a 15th century copper alloy strap end (in the shape of a tree), medieval coins, a brooch, a balance, a bell, furniture fittings, a prick spur, a purse frame a seal matrix, a strap fitting and a token; and a gold medieval/post medieval finger ring. A post medieval gold button, a silver button, coin and dress fastener, a copper alloy bell, buckle, button, a furniture fitting, jetton and strap fittings, and a lead weight and cloth seal were also recovered. All these artefacts suggests that there could be a muti-period settlement located here.

Bunwell Hill and the Tas Valley

3.2.263 Evidence of Middle Saxon activity in the Bunwell Hill and the Tas Valley area comprises chance finds and metal detector and fieldwalking finds of evidential value. These **low value** assets comprise:

- Middle Saxon pottery sherds in a multi-period finds assemblage (**1062**) recovered from farmland partially within the Order Limits on the Tas Valley floor and its southern flank, 3.3 km south-south-east of the village of Bunwell
- A middle Saxon strap fitting in a multi-period finds assemblage (**1139**) recovered from farmland immediately south of Forncett St Mary and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 150 m to the east
- Middle Saxon pottery sherds, a coin, a brooch, a dress hook, pins, a strap fitting, a stylus, and a middle/late Saxon brooch in a multi-period finds assemblage (**1118**)

found during fieldwalking and metal detector surveys of land partially within the Order Limits on the valley floor and 3 km south-south-east of the village of Bunwell

- A middle Saxon brooch, a silver coin, a dress hook, a hooked tag, a pin, and pottery sherds and a middle/late Saxon brooch, a finger ring, a strap end, and stylus in a multi-period finds assemblage (**1058**) recovered from farmland partially within the Order Limits on the valley floor and 3.1 km south-south-east of the village of Bunwell
- A sherd of middle Saxon Ipswich ware pottery in a multi-period finds assemblage (**1063**) recovered from farmland 1.9 km south-east of the village of Bunwell and partially within the Order Limits access road
- A middle Saxon copper alloy faceted headed pin decorated with ring and dot. It has a mid-stem bulge with incised transverse lines for grip in a multi-period finds assemblage (**1061**) recovered from farmland 3.2 km south-east of the village of Bunwell and 230 m north-west of the Order Limits on the Tas Valley floor
- Middle Saxon pottery sherds in a multi-period finds assemblage (**1052**) recovered from farmland 2.6 km south-east of the village of Bunwell and 190 m south-east of the Order Limits
- An early/middle Saxon copper alloy mount in a multi-period finds assemblage (**1066**) recovered from farmland 2 km south-south-east of the village of Bunwell and 240 m north-west of the Order Limits in a field immediately south-east of the junction of Bunwell Hill and The Turnpike.

Winfarthing and Shelfanger

3.2.264 Evidence of middle Saxon activity in the Winfarthing and Shelfanger area comprises metal detector and fieldwalking finds of evidential value. These **low value** assets comprise:

- A middle/late Saxon silver spoon in a multi-period finds assemblage (**1246**) recovered from farmland 400 m north-east of Shelfanger and just clipping the western edge of the Order Limits
- A middle Saxon pin in a large multi-period finds assemblage (**1190**) recovered from farmland 110 m west of the Order Limits and 620 m north-east Shelfanger. The survey area is close to the head of a shallow tributary valley of the Tas with the floor of the valley just to the west and it is likely the extensive finds assemblage indicates the location of a **medium value** Romano-British building or farmstead
- A middle Saxon pin in a multi-period finds assemblage (**1292**) recovered from farmland on the eastern flank of Winfarthing and 300 m west of the Order Limits.

Bressingham and the Waveney Valley

3.2.265 Metal detecting on farmland 1.1 km east of Bressingham and 70 m south of the Order Limits recovered a multi-period finds assemblage (**1294**) that included a **low value** middle Saxon silver penny of Ecgberht of Wessex.

3.2.266 A **low value** middle Saxon coin (silver sceatta) of evidential value was found by a metal detectorist as part of a multi-period finds assemblage (**1352**) in farmland on the northern outskirts of Diss and 250 m south-east of the Order Limits.

Late Saxon (851 AD to 1065 AD)

Dunston and Mangreen Hall Farm

3.2.267 A late Saxon pendent and a stirrup strap mount, both **low value**, were included in a multi-period finds assemblage (**1218**) of evidential value derived from the metal detector survey of farmland 900 m south of Mangreen Farm and partially within the Order Limits. No contemporary archaeological features were identified during the subsequent trial trenching (**1271**).

Swainthorpe and Mulbarton

3.2.268 A Saxon bridle bit link fragment and a late Saxon to post medieval lead spindle whorl were recovered as part of a multi-period finds assemblage (**1304**) from farmland c. 500 m south-west of Bracon Ash and c. 25 m north-east of the Order Limits.

Flordon and Fundenhall

3.2.269 Evidence of late Saxon activity in the Flordon and Fundenhall area comprises chance finds and metal detector and fieldwalking finds of evidential value. These **low value** assets comprise:

- A late Saxon silver and copper alloy strap-end and a late Saxon/medieval stirrup-strap mount in a multi-period find assemblage (**1217**) recovered from farmland 750 m north-west of Flordon and largely within the Order Limits
- A late Saxon stirrup, a harness setting, a lead weight and spindle whorls in a multi-period finds assemblage (**1265**) recovered from farmland 900 m north-west of Flordon, immediately east of Flordon Road and partially within the Order Limits
- A late Saxon/medieval bridle cheek piece, stirrup terminal and buckle and a Late Saxon to post medieval spindle whorl in a multi-period finds assemblage (**1225**) recovered from farmland 930 m north of Flordon and partially within the Order Limits
- A late Saxon coin, a late Saxon/medieval stirrup-strap mount and a late Saxon to post medieval spindle whorl in a multi-period finds assemblage (**1289**) recovered from land around an unnamed farm 440 m north of The Street, Flordon and immediately east of the Order Limits
- A late Saxon finger ring in a multi-period finds assemblage (**1162**) 200 m south of Fundenhall and 10 m west of the Order Limits
- An unidentified late Saxon copper alloy object was recorded as part of a multi-period finds assemblage (**1273**), recovered from farmland 1.7 km north-east of Fundenhall, immediately west of Wymondham Road. The findspot lies adjacent to an access road within the Order Limits.
- Late Saxon pottery sherds in a multi-period finds assemblage (**1193**) recovered from farmland on the eastern outskirts of Fundenhall and 210 m north-west of the Order Limits
- A late Saxon bridle fitting in a multi-period finds assemblage (**1269**) recovered from farmland 240 m north of Flordon and 220 m south-east of the Order Limits
- Two sherds of late Saxon Thetford ware pottery (**1046**) recovered from a garden 1.8 km north-north-east of Flordon and 480 m south-east of the Order Limits

- A late Saxon brooch and a silver ingot in a multi-period finds assemblage (**1279**) recovered from farmland c. 850 m north-east of Toprow and clipping the Order Limits
- A Late Saxon buckle, and a Late Saxon to post medieval spindle whorl in a multi-period finds assemblage (**1346**) recovered from farmland c. 300 m east of Wreningham and partially within the Order Limits
- A late Saxon copper alloy finger ring, a stirrup-strap mount, a harness link, a brooch, a coin (silver obol of Charles the Bald, Maastricht), a late Saxon Anglo-Scandinavian Lozenge brooch, and three late Saxon to post medieval spindle whorls recovered as part of a larger finds assemblage (**1357**) from farmland immediately to the north of Wreningham and c. 200 m to the west of the Order Limits.

Swainsthorpe and Mulbarton

3.2.270 Metal detecting and fieldwalking recovered **low value** late Saxon finds in the Swainsthorpe and Mulbarton area comprising the following assets of evidential value:

- A late Saxon brooch in a multi-period finds assemblage (**1233**) recovered from farmland 850 m south-west of Swainsthorpe, immediately north of Brick Kiln Lane and partially within the Order Limits
- A middle/late Saxon pin (**1357**) found close to the 11th century, Grade II* listed Church of St Peter in Swainsthorpe and 460 m east of the Order Limits.

Forncett St Mary and Tacolneston

3.2.271 Evidence of late Saxon activity in the Forncett St Mary and Tacolneston area comprises chance finds and metal detector and fieldwalking finds of evidential value. These assets, recorded below are of **low value** unless otherwise stated.

- Late Saxon pottery sherds in a multi-period finds assemblage (**1103**) found on land partially within the Order Limits immediately south of the deserted medieval/post medieval settlement (**1089**) and 750 m south-south-east of Tacolneston
- A late Saxon/medieval stirrup-strap mount in a multi-period finds assemblage (**1192**) recovered from farmland 1.1 km north-west of Forncett St Mary and 10 m east of the Order Limits
- A late Saxon pin head in a multi-period finds assemblage (**1137**) recovered from farmland 800 m east of Tacolneston and within the Order Limits
- Late Saxon pottery sherds in a multi-period finds assemblage (**1189**) 970 m south-east of Tacolneston, immediately south of Long Stratton Road and partially within the Order Limits
- A late Saxon strap end in a multi-period finds assemblage (**1155**) recovered from farmland 700 m north of Forncett St Mary, immediately north-west of High Road and immediately east of the Order Limits
- A late Saxon strap fitting and a late Saxon to medieval harness fitting and a mount in a multi-period finds assemblage (**1161**) recovered from farmland 250 m north-west of Forncett St Mary and partially within the Order Limits

- A late Saxon/medieval spindle whorl in a multi-period finds assemblage (**1164**) recovered from farmland on the floor and northern flank of a tributary valley of the Tas 1.5 km north-east of Tacolneston and within the Order Limits
- A late Saxon/medieval stirrup-strap mounts and a harness cheek piece in a multi-period finds assemblage (**1282**) recovered from farmland 190 m west of Forncett St Mary, immediately east of Stickfer Lane and an access road of the Order Limits
- Late Saxon pottery sherds in a multi-period finds assemblage (**1226**) recovered from farmland immediately north of Forncett St Mary, 90 m north of Cheney's Lane and 320 m east of the Order Limits
- Late Saxon Thetford ware pottery sherds in a multi-period finds assemblage (**1074**) recovered from farmland 400 m east of Tacolneston and 210 m west of the Order Limits
- Late Saxon pottery sherds and a brooch in a multi-period finds assemblage (**1187**) recovered from farmland 440 m north-east of Tacolneston and 460 m west of the Order Limits. These finds, along with artefacts from the late, Iron Age, Roman, early Saxon (possibly relating to a cemetery), medieval and post medieval periods indicate that this could be a site of a multi-phase settlement site
- Late Saxon/medieval pottery sherds, a finger ring, a harness fitting, a coin, and spindle whorls in a large multi-period finds assemblage (**1145**) recovered from farmland 330 m east Tacolneston and 570 m west of the Order Limits. The large finds assemblage is predominantly Romano-British in date and suggestive of **medium value** settlement activity. The Saxon element of the find's assemblage is smaller but may indicate continuity in settlement activity but at a reduced intensity. The survey area occupies slightly higher ground overlooking a shallow tributary of the Tas Valley to the north.

Bunwell Hill and the Tas Valley

3.2.272 Evidence of late Saxon activity in the Bunwell Hill and the Tas Valley area comprises chance finds and metal detector and fieldwalking finds of evidential value. These **low value** assets comprise:

- Late Saxon pottery sherds in a multi-period finds assemblage (**1062**) recovered from farmland partially within the Order Limits on the Tas Valley floor and its southern flank, 3.3 km south-south-east of the village of Bunwell
- Late Saxon pottery sherds in multi-period finds assemblage (**1049**) recovered from farmland partially within Order Limits and 3 km south-south-east of the village of Bunwell
- A late Saxon pierced copper alloy object in a multi-period finds assemblage (**1156**) recovered from farmland 2.4 km south-east of the village of Bunwell and partially within the Order Limits
- A late Saxon zoomorphic copper alloy pendant (**1106**) was recovered from farmland 2.2 km south-east of the village of Bunwell, immediately adjacent to a service road within the Order Limits.
- A Late Saxon stirrup in a multi-period finds assemblage (**1139**) recovered from farmland immediately south of Forncett St Mary and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 150 m to the east

- Late Saxon pottery sherds, a hooked bronze tag, a bead, a bridle bit, a brooch, a dress component, a dress hook, a finger ring, a pin, a furniture fitting, a stirrup, a strap fitting and a stylus in a multi-period finds assemblage (**1118**) recovered from farmland 110 m from the Order Limits on the Tas Valley floor and 3 km south-south-east of the village of Bunwell
- A rim sherd of late Saxon Thetford ware pottery in a multi-period finds assemblage (**1102**) recovered from farmland 1.9 km south-east of the village of Bunwell and 110 m north-west of the Order Limits
- Late Saxon pottery sherds in a multi-period finds assemblage (**1052**) recovered from farmland 2.6 km south-east of the village of Bunwell and 190 m south-east of the Order Limits
- A late Saxon bridle bit, coins, a dress hook, a silver ear ring, a silver finger ring, a furniture fitting, a harness fitting, a hooked tag, a pin, a stirrup, a stylus, weights, a copper alloy finger ring, pottery sherds and late Saxon/medieval pottery sherds in a multi-period finds assemblage (**1058**) recovered from farmland partially within the Order Limits on the valley floor and 3.1 km south-south-east of the village of Bunwell
- An unidentified Late Saxon copper alloy object in a multi-period finds assemblage (**1066**) recovered from farmland 2 km south-south-east of the village of Bunwell and 240 m north-west of the Order Limits in a field immediately south-east of the junction of Bunwell Hill and The Turnpike.

Winfarthing and Shelfanger

3.2.273 Evidence of Late Saxon activity in the Winfarthing and Shelfanger area comprises metal detector and fieldwalking finds of evidential value. These **low value** assets comprise:

- A late Saxon/medieval bracelet or mount in a multi-period finds assemblage (**1291**) recovered from farmland 700 m north-east of Shelfanger, immediately south of Heywood Road and partially within the Order Limits
- A late Saxon Thetford ware pottery sherd and silver ingot fragment in a multi-period finds assemblage (**1298**) recovered from farmland 120 m east of Winfarthing and on the western flank of the Order Limits
- A late Saxon stirrup and a late Saxon/medieval buckle in a multi-period finds assemblage (**1206**) recovered from farmland 560 m south-south-east of Winfarthing, immediately south of Heywood Road and 190 m west of the Order Limits
- Late Saxon/medieval pottery sherds and a brooch in a multi-period finds assemblage (**1292**) recovered from farmland on the eastern flank of Winfarthing and 300 m west of the Order Limits.

Bressingham and the Waveney Valley

3.2.274 Evidence of late Saxon activity in the Bressingham and the Waveney Valley area comprises a chance find and metal detector and fieldwalking finds of evidential value. These **low value** assets comprise:

- A late Saxon harness piece in a multi-period finds assemblage (**1335**) recovered from farmland on the northern bank of the river Waveney c. 600 m south-west of the outskirts of Diss and 5 m east of the Order Limits

- A late Saxon bridle fitting and a harness fitting in a multi-period finds assemblage (**1228**) recovered from farmland 450 m south of Bressingham and partially within the Order Limits
- A late Saxon/medieval Anglo-Scandinavian harness fitting in the form of a horse or lion in a multi-period finds assemblage (**1294**) recovered from farmland 1.1 km east of Bressingham and 70 m south of the Order Limits
- Fragments of early Saxon cruciform and square-headed brooches in a multi-period finds assemblage (**1301**) were recovered from farmland 480 m north-east of Bressingham, adjacent to an access road within the Order Limits
- A late Saxon stirrup strap mount (**1274**) recovered from farmland 350 m south of Bressingham and 150 m west of the Order Limits
- A late Saxon coin strap end in a multi-period finds assemblage (**1352**) recovered from farmland on the northern outskirts of Diss and 250 m south-east of the Order Limits.

Medieval

3.2.275 The medieval period within Section A is predominantly represented by findspot and artefacts recovered during fieldwalking and metal detector surveys. There are as well, however, several churches and moated sites dating to the medieval period as well as settlement centres that have medieval origins.

Dunston and Mangreen Hall Farm

Designated Heritage Assets

3.2.276 The following designated assets are in the parish of Keswick and Intwood.

3.2.277 The **medium value** Grade II listed 'Keswick Hall' (**1306331**) is located off the southern flank of Keswick Hall Road just to the south of Keswick and c. 1.5 km north-north-west of the Order Limits. The assets have evidential, historical and aesthetic value. The hall was built in 1817 by William Wilkins for Richard Hudson Gurney and additions were made around 1839. The house comprises a gault brick structure with stone and rendered dressings and slated roofs.

3.2.278 The setting of the asset is informed by its relationships with its gardens and modest parklands and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1886. The hall now serves as a business park and the gardens recorded on the OS mapping have been eroded by the addition further business units and residential properties. The hall does, however, retain an open view to the south across its former parkland and the landscape beyond. The setting of the hall, therefore, makes a moderate contribution to its value, but due to topology, infrastructure and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

3.2.279 The following designated assets are in the parish of Caistor St. Edmund and Bixley.

3.2.280 The **medium value** Grade II listed Church of All Saints (**1050544**) and the 'Remains of Church of All Saints Immediately East of Church of All Saints' (**1050545**) are located 1.9 km north-north-west of the northern extent of the Order Limits and 330 m east of the eastern outskirts of the village of Keswick. The assets have evidential and historical value. The parish church (**1050544**) has a round west tower of 12th century

date with some 14th century alterations. The small nave and chancel were added in 1893 by Herbert Green. The earlier church (**1050545**) was pulled down 1597 when the parish was united with Intwood, but the tower and west nave wall survived and were incorporated into the church of 1893. The ruins of the north, east and south walls of the medieval chancel (**1050545**) still survive immediately to the east of the extant church.

3.2.281 The setting of the asset is informed by its location on slightly raised land, its attendant graveyard, and a mature copse to the north and east. There is open farmland to the south and west with partially wooded boundaries and views across the rooftops of Keswick to the west. The wooded church grounds obscure views to the southern limits Norwich and create a sense of enclosure, whilst the views to the west and south link the assets to the rural landscape it historically served. The setting of the assets, therefore, makes a considerable contribution to their value, but due to topography and intervening infrastructure and vegetation, the setting does not extend to the Order Limits.

3.2.282 There is a dispersed group of seven listed buildings in the Markshall/Caistor St Edmunds area comprising two Grade II* assets and five Grade II assets. Six of these assets are post medieval in date and discussed below, however, the 'Church of St Edmund' (**1373145**) has medieval origins. The **high value** Grade II* listed church is located 350 m south of Caistor St Edmunds, on the western flank of Stoke Road and 1 km north-east of the northern extent of the Order Limits. The church has evidential, historical, and aesthetic value. The church is surrounded by the **high value** scheduled monument 'Venta Icenorum: Roman town and associated prehistoric, Anglo-Saxon, and medieval remains' (**1021463**) and is situated within the south-east corner of the walled town but is not included in the schedule. The church has early 14th century origins, but the structure has been maintained and added to in the centuries since.

3.2.283 The setting of the church is informed by its associated tree-lined churchyard, by its location within, and relationship with, the walled town of Venta Icenorum (**1021463**) and by its slightly elevated aspect overlooking the shallow, agricultural TAS Valley to the west. The immediate setting of the asset within its churchyard creates a sense of enclosure and calm with the Roman town walls and mature tree growth to the east adding further constraint. There are, however, views to the Tas Valley to the south-west through to the north-west broken by mature trees along the churchyard boundary. The setting of the asset, therefore, makes a considerable contribution to its value, but due to topography, vegetation and development, the setting does not extend to the Order Limits.

3.2.284 The **high value** Grade II* listed Church of All Saints (**1373136**) is located on the northern flank of Intwood Road, 1.1 km north-north-west of Swardeston, 2.2 km north-west of the Order Limits and on the north-east edge of the Grade II* listed Intwood Hall Park and Garden (**1000320**). The asset has evidential, historical, and aesthetic value. The church has 12th century origins but has 13th, 14th and 15th century additions and alterations including a 15th century octagonal upper stage to the round 12th century tower. The church was restored in 1852-3. The church is built of flint with some erratics and iron conglomerate, minimal dressings, and stone window surrounds. The roof has plain tiles to south and pantiles to north.

3.2.285 The setting of the Church of All Saints is informed by its location within its graveyard the boundaries of which is defined by a low flint wall, mature hedgerows, and yew trees. There is limited domestic development to the north and south of the church,

but this is only occasionally glimpsed through the graveyard boundaries. The setting of the asset creates a sense of enclosure and peacefulness that makes a moderate contribution to the value of the asset. Due to intervening development and vegetation, however, the setting of the church does not extend to the Order Limits.

3.2.286 The **high value** Grade II* listed Church of St Remigius (**1050433**) is located 150 m west of Stoke Lane, c. 710 m south-east of Dunston and 860 m east of the Order Limits. The parish church was built in the 13th century with alteration made in the 15th century and further alterations and restorations undertaken in 1898. It is built of flint nodules with ashlar dressings and some brick. The asset has evidential, historical, and aesthetic value.

3.2.287 The setting of the Church of St Remigius is informed by its attendant graveyard with mature tree growth and a mature copse to the north and north-east. There is a broken view of a football pitch to the west and a golf course to the south-east. There is also the railway to its west. The setting of the asset creates a sense of enclosure and tranquillity that makes a moderate contribution to the value of the asset. Due to intervening development and woodland to its west and north the views are limited. Overall, the setting of the church does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.288 Geophysical survey, fieldwalking, metal detecting and subsequent trial trenching on land 700 m south of Mangreen Hall Farm and partially within the Order Limits identified archaeological features (**1271**) including ditches representing a **low value** medieval field system, (McNicol and McNicoll-Norbury, 2012) of evidential value.

3.2.289 Medieval to post medieval **medium value** earthworks of enclosures and boundaries (**1241**) are apparent of aerial photographs taken in 1947 and 1956 immediately to the north of the Order Limits. The earthworks surround the post medieval Grade II* listed Mangreen Hall (**1366150**), which is considered to occupy a former manorial moated medieval site. The earthworks are of evidential value may represent the remains of the former medieval hamlet of Mangreen, or perhaps outbuildings and paddocks associated with the medieval moated manor.

3.2.290 The setting of the earthworks (**1241**) is informed by their relationships with the Grade II* listed Mangreen Hall (**1366150**), and the Grade II listed Mangreen Lodge and Hall Farm barn and cattle shelter (**1170403**) which fall within the bounds of the asset. Beyond the bounds of the asset, the largely former agricultural landscape has been impacted by Norwich Main Substation, pylons, the A47, quarrying and the construction of the Hornsea 3 Onshore complex. The setting of the asset, therefore, makes a moderate contribution to its value, but as it is focussed on the on the former manorial site now occupied by the hall, the setting does not extend to the Order Limits.

3.2.291 Geophysical survey, fieldwalking and subsequent trial trenching and strip, map, and sample excavation on land 300 m north-east of Mangreen Hall Farm and immediately north of the Order Limits identified multi-period archaeological remains and finds assemblage (**1182**) (Stone, 2011) that included an unstratified **low value** medieval copper alloy buckle and pottery sherds of evidential value.

3.2.292 A large **medium value** multi-period cropmark complex (**1325**) is located in a V-shaped parcel of land at the northern extent of the Order Limits between the A140 to the west and the railway to the east with Dunston c. 220 m to the south and the scheduled Roman town of Venta Icenorum (**1021463**) immediately to the east. The

complex includes the cropmarks of boundary ditches and banks (**1322**) of medieval to post medieval date. These boundaries are characteristically curvilinear in shape and do not show any clear relationship with the surrounding landscape, other than following the line of the parish boundary between Caistor St Edmund and Stoke Holy Cross. It seems likely that these curvilinear boundaries are broadly medieval in date, with some continuing in use into the post medieval period.

3.2.293 Evaluation trial trenching undertaken immediately to the south of the scheduled monument Venta Icenorum (**1021463**), identified Iron Age and Romano-British archaeological remains (**1144**) these remains are discussed above. An unstratified **low value** medieval copper alloy token of evidential value was the only medieval evidence found during the fieldwork. The evaluation area is located on the western flank of Dunston, 170 m east of the Order Limits and within the Tas Valley to the west of the river.

3.2.294 Metal detector survey and archaeological excavations, partially within cropmarks area (**1261**), in advance of the construction of Dunton Hall golf course recovered a multi-period finds assemblage and identified archaeological remains (**1136**). Evidence of medieval activity was restricted to unstratified **low value** copper alloy finds comprising a finger ring, a seal, a thimble, and pottery sherds of evidential value. The site is situated on the western flank of Dunston, immediately east of Ipswich Road and 100 m south-east of the Order Limits.

3.2.295 The probable site of the deserted medieval village (DMV) of Gowthorpe (**1232**) is located 670 m south-west of Mangreen Farm, on the eastern flank of Gowthorpe Lane and partially within an access road of the Order Limits. The potentially **medium value** cropmarks of enclosures, fields and boundaries also includes asset (**1356**) and are visible on the aerial photographs, and these may represent the remains of the settlement. The cropmarks are of evidential value and lie to the west and south-west of the Grade II* listed Gowthorpe Manor House (**1050515**), which is largely post medieval in date (see post medieval section below), but it does incorporate an early 16th century, late medieval timber framed range to the west with a mid-16th century stair turret to the rear. It is possible that this structure was built on the site of an earlier manor and incorporated or reused elements of its predecessor.

3.2.296 The DMV cropmark complex (**1232**) includes two distinct features comprising the possible **medium value** sites of St James' Chapel (**1037**) and the Humbleyard Hundred Moot (**1122**). The site of St James' Chapel (**1181**) is located 840 m south-south-west of Mangreen Farm and partially within the Order Limits and has evidential value. The chapel was endowed in 1286, was still in use in 1509, and it is thought the chapel served the Gowthorpe DMV. The site comprises a relatively broad ditched, rectangular enclosure visible on aerial photographs, and it has been suggested that the chapel was located within this enclosure. However, it has also been suggested the cropmark relates to post medieval brick production. The site of the Humbleyard Hundred Moot (**1122**) in located 830 m south-south-west of Mangreen Farm and partially within the Order Limits and has evidential value. Historic maps record this location as 'Site of Humble Yard', which is assumed to refer to the moot site. The cropmarks of possible banks and ditches potentially relating to the moot may be visible on aerial photographs. The Swainsthorpe and Swardeston Tithe maps indicate the former presence of a ditched enclosure at this location and the parish boundaries follow the edge of the enclosure, indicating that it represented a relatively early and potentially significant feature in the landscape.

3.2.297 Cropmark complex (**1232**) also contains a small group of shallow **low value** earthworks (**1221**) of evidential value at its southern limits where it overlaps with asset (**1209**), which represents an area of post medieval brick production and clay extraction. Without intrusive investigation, it is not possible to attribute asset (**1221**) to either period.

3.2.298 Also included within cropmark complex (**1232**) is a concentration of undated features interpreted as a possible sub-rectangular enclosure and associated ditches and boundaries (**1212**) of evidential value. It is possible these undated features also relate to the Gowthorpe DMV (**1232**) and if so, could potentially be of **medium value**.

3.2.299 A now ploughed out **low value** ring ditch (**1142**) is also located within the bounds of the former brickworks (**1209**). The feature is of evidential value, is 40 m in diameter, with a ditch varying between 1.5 m and 2.5 m in width and has opposing causeways to the north-west and south-east. The asset was in the past considered to be the remains of a Bronze Age round barrow, but the Norfolk HER now records a late medieval to post medieval date.

3.2.300 Another cropmark complex (**1231**) is located to the west of Gowthorpe Lane, 1 km south-west of Mangreen Farm, 245 m south-west of the Order Limits and 100 m south and south-west of Gowthorpe Manor House (**1050515**). The complex potentially represents further **medium value** settlement activity associated with the deserted medieval village of Gowthorpe (**1232**). Cropmark complex (**1231**) partially incorporates the cropmark of a trackway (**1211**) also possibly associated with the deserted village. These assets have evidential value.

3.2.301 The setting of the **medium value** non-designated assets (**1232**), (**1122**), (**1181**), (**1211**), (**1212**) and (**1231**) is shared and informed by their interrelationships, and by their relationships with the Gowthorpe Manor House complex and its two Grade II* and three Grade II listed buildings immediately to the west. The setting is further informed by the surrounding agricultural landscape with which the assets have historical and likely former functional relationships. The setting of the assets, therefore, makes a moderate contribution to their values and as assets (**1232**) and (**1122**) are located partially within the Project, the setting extends to the Order Limits.

3.2.302 Geophysical survey, fieldwalking, metal detecting and subsequent trial trenching on land 700 m south of Mangreen Hall Farm, partially within the Order Limits and directly to the east of the deserted village cropmark complex (**1231**) identified **low value** archaeological features (**1271**) including ditches of evidential value representing a medieval field system. The evaluation report speculates that the field system may be associated with the periphery of the deserted medieval village of Gowthorpe (McNicol and McNicoll-Norbury, 2012).

3.2.303 Metal detector survey of land 900 m south of Mangreen Hall Farm and partially within the Order Limits resulted in a multi-period finds assemblage (**1218**) that included Two **low value** silver medieval coins, two copper alloy jettons and a fragment of a copper alloy vessel of evidential value. Subsequent archaeological trial trenching identified multi-period archaeological features and finds assemblage (**1271**) that included **low value** medieval ditches and a possible field system of evidential value.

3.2.304 Medieval **low value** ridge and furrow earthworks (**1071**) have been identified on 20th century aerial photography in the north of Dunston Park, 210 m east of the Order Limits. The earthworks were ploughed out in the second half of the 20th century, but furrows of evidential value were identified cutting underlying natural deposits during archaeological trial trenching in 1996 (Bates 1996).

3.2.305 Another area of possible **low value** medieval ridge and furrow cultivation (**1259**) of evidential value is in a field immediately south of Hickling Lane, 750 m south-south-west of Dunston Hall (**1373206**) and 390 m east of the Order Limits. It should be noted, however, the interpretation of the cropmarks is tentative.

3.2.306 Further evidence of medieval activity in the Dunston and Mangreen Hall Farm area is represented by findspots and artefacts recovered during fieldwalking and metal detector surveys. These **low value** assets are of evidential value and comprise:

- A medieval copper alloy brooch, buckles, strap fittings, a seal, a harness fitting, dress components, a tumbrel (coin balance), a lead steelyard weight and pottery sherds in a multi-period finds assemblage (**1022**), recovered from land within the bounds of the scheduled monument Venta Icenorum (**1021463**). located immediately north of Dunston and 150 m east of the Order Limits
- A medieval copper alloy buckle and harness pendant, a lead spindle whorl, and a silver coin; and two medieval/post medieval lead weights in a multi-period finds assemblage (**1208**) recovered from farmland west of Mangreen Hall Farm and 20 m north-west of the Order Limits
- A 14th to 15th century buckle in a multi-period finds assemblage (**1163**) 190 m north-east of Mangreen Hall Farm and 360 m north of the Order Limits
- Medieval pottery sherds and medieval/post medieval pottery and brick in a multi-period finds assemblage (**1196**) recovered from farmland 740 m south-south-west of Dunston Hall and 340 m east of the Order Limits
- A medieval brooch, buckle, coin, key, knife, spur, strap fitting and a stone mortar in a multi-period finds assemblage (**1110**) recovered from farmland 80 m north-west of Mangreen Hall Farm and 220 m north-west of the Order Limits.

Swainsthorpe and Mulbarton

Designated Heritage Assets

3.2.307 The Grade I listed **high value** 'Church Of St Nicholas' (**1050695**) is located on the southern flank of School Road, 370 m north-west of the settlement of Bracon Ash and c. 1.1 km north-west of the Order Limits. The church has evidential, historical, and aesthetic value. The asset is built of rendered flint with ashlar dressings and has a plain tiled roof. The asset has medieval origins and there are elements of the structure dated to the 13th, 14th, and 15th centuries. There are the remains of an important early Renaissance terra-cotta canopied tomb of c. 1525 in chancel and the church also contains the Berney family ashlar-built mausoleum of c. 1750.

3.2.308 The setting of the church is informed by its mature tree-lined graveyard, by its relationship with the Rectory to the north-west and a copse to the north. Through the trees to the south and east there are broken views of the farmland beyond and the settlement of Bracon Ash further to the south-east. The setting of the church creates a sense of seclusion and tranquillity and, therefore, makes a moderate contribution to the value of the asset. Due to intervening mature tree growth, development, and topography, however, the setting of the church does not extend to the Order Limits.

3.2.309 The Grade I listed **high value** 'Church Of All Saints' (**1050688**) is located north-east of the junction of Church Lane and King John's Thorn, 1.2 km west-north-west of Bracon Ash and 2.5 km north-west of the Order Limits. The church has evidential, historical, and aesthetic value, has medieval origins, and the west tower may be 11th

century and pre-Conquest in date. Fourteenth and 15th century elements are apparent as well considerable evidence of Victorian restoration. The church contains the fine coloured alabaster tomb of Myles Branthwaite, a successful Norwich lawyer who died 1612, and his wife Mary in the north side of chancel.

3.2.310 The setting of the church is informed by its mature tree lined graveyard and by its relationship with the rectory 30 m to the north, which is apparent on the first edition OS map published in 1882. The church's setting instils a sense of seclusion and creates a feeling of tranquillity and, therefore, makes a considerable contribution to its value. Due to intervening mature tree growth, development, and topography, however, the setting of the church does not extend to the Order Limits.

3.2.311 The Grade II* listed **high value** 'Church Of St Mary Magdalen (**1172267**) is in the Mulbarton conservation area, on the north-eastern flank of The Common and c. 1.3 km west-north-west of the Order Limits. The asset has evidential, historical, and aesthetic value. The church has largely 14th century origins and is built of flint with stone, some brick dressing and has a lead and slate roof. the church underwent Victorian restoration work in the latter half of the 19th century and a north aisle, a north arcade and a vestry were added.

3.2.312 The setting of the church is informed by its attendant tree-lined graveyard and by its relationship with the settlement of Mulbarton arranged around the large triangular Common. A small copse is located immediately to the east of the asset. The tree lined graveyard creates a sense of peace and exclusion, however, residential properties to the north and south are visible linking the church to the settlement it serves. The setting of the church, therefore, make a moderate contribution to the value of the asset. Due to mature tree growth to the east and south-east of the asset and in the intervening landscape there no views of the Project and so the setting of the church does not extend to the Order Limits.

3.2.313 The Grade II* listed **high value** 'Church Of St Peter' (**1169726**) is in the heart of Swainsthorpe, just to the west of the junction of Church Road and Church Close and 350 m east of the Order Limits. The asset has evidential, historical, and aesthetic value. The church has a 12th century west tower with the rest of the structure dating to the 14th century except for the south porch that was rebuilt in 1885. The church is built of flint with ashlar dressings and a plain tile roof.

3.2.314 The setting of the church is informed by its attendant tree lined graveyard and by its location at the heart of Swainsthorpe. The tree lined graveyard instils a sense of seclusion and calm, but views of the roof tops of domestic dwellings draw the asset back into the community it serves. The setting of the church, therefore, makes a moderate contribution to the value of the asset. There is an existing powerline 500 m to the west of the church that runs parallel to the Project that would be 50 m further to the west. Occasional glimpses of the pylon tops may be apparent from Church Road but at ground level in the church grounds they cannot be seen. Therefore, the setting of the church does not extend to the Order Limits.

3.2.315 The Grade II* listed **high value** 'Church Of The Holy Cross' (**1050437**) is located at the southern limit of the settlement of Stoke Holy Cross, on the eastern flank of Norwich Road and c. 2 km east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church is mainly 13th century with 14th century alterations and extensive Victorian restorations carried out in 1879. The asset is built of flint with ashlar dressing and the nave and chancel have been rendered; the roof is of plain tile.

3.2.316 The setting of the church is informed by its large attendant tree lined graveyard, by its relationship with the former vicarage and by its location on a raised parcel of land overlooking the Tas Valley to the west. Despite the post medieval and early modern development of Stoke Holy Cross to the north, the asset is still somewhat isolated at the southern limit of the settlement and the enclosing tree lined graveyard instils feelings of privacy and peace. Therefore, the setting of the asset makes a moderate contribution to its value. There are, however, long range views of the Order Limits on the western bank of the Tas Valley from the western edge of the graveyard but this view is of the neighbouring parish of Swainsthorpe and is only glimpsed at ground level for the church itself. The setting of the asset, therefore, does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.317 The site of the **medium value** deserted medieval village (DMV) of Kenningham (**1010**) has evidential value and is located 500 m east of Mulbarton and partially within the Order Limits. The village was deserted over the course of the medieval and early post medieval periods. The parish was united with Mulbarton in 1452, when there were only a few houses left in the village. The earthworks of probable medieval house platforms and other features are visible on the ground and on aerial photographs. Fragments of a medieval stone mortar have been found on the site.

3.2.318 The site of the former medieval church of Kenningham (**1067**) is located 450 m east of Mulbarton, 210 m west of the Order Limits and immediately to the west of the DMV (**1010**). The church was united with the church in Mulbarton in 1452 and demolished before the Reformation. Slight earthworks of evidential value remain on the site that may represent **medium value** remains.

3.2.319 The geophysical survey of a field 1 km east of Mulbarton and partially within the Order Limits identified a complex of anomalies (**1227**) of evidential value, some of which likely represent an area of potentially **medium value** medieval occupation, potentially associated with the adjacent deserted settlement of Kenningham (**1010**) immediately to the north and west. The anomalies comprise two parallel pairs of adjacent ditches with the area in between subdivided into a series of individual plots or enclosures by a series of perpendicular linear anomalies. There are also numerous pit-type discrete anomalies within the enclosed areas. Fieldwalking in the same area identified two **low value** medieval pottery sherds of evidential value in a multi-period finds assemblage (**1278**), whilst fieldwalking immediately to the south also identified **low value** medieval pottery of evidential value in a multi-period finds assemblage (**1235**).

3.2.320 The setting of the **medium value** assets that likely represent elements of the deserted medieval village of Kenningham (**1010**), (**1227**) and (**1067**) is shared and is informed by their interrelationships and by their relationships with the Grade II listed Kenningham Hall (**1373056**), which is located within the bounds of the DMV (**1010**). The setting is further informed by the surrounding agricultural landscape with which the assets have a historical and likely former functional relationship. The setting of the assets, therefore, makes a moderate contribution to their value and as assets (**1010**) and (**1227**) are located partially with the Project, the setting extends to the Order Limits.

3.2.321 A **low value** complex of cropmarks (**1264**) of evidential value has been identified 540 m south-west of Swainsthorpe and partially within the Order Limits. The cropmarks are located partially within another complex (**1223**) that have been interpreted as

post medieval field boundaries that predate 19th century Tithe and OS mapping. A probable post medieval date for the cropmarks (**1264**) is supported by contemporary artefacts recovered during fieldwalking surveys (**1239**) and (**1238**) in the same area.

3.2.322 The archaeological evaluation of land immediately north of Swainsthorpe and 360 m east of the Order Limits identified multi-period archaeological remains and finds assemblage (**1193**). The finds assemblage included a few sherds of residual **low value** medieval pottery and roof tile of evidential value.

3.2.323 A complex of cropmarks representing potentially **medium value** boundary ditches, enclosures, and ponds of probable medieval to post medieval date (**1244**) is located immediately south of Swainsthorpe and 250 m east of the Order Limits. The features are of evidential value and likely represent the development of, and activities associated with the village of Swainsthorpe. A second complex of potentially **medium value** cropmarks representing boundaries and pits (**1245**) is located at the western limit of Swainsthorpe and clips the eastern side of the Order Limits. These features are also considered to related to the development and occupation of the settlement of Swainsthorpe from the medieval through to the post medieval periods.

3.2.324 The setting of assets (**1244**) and (**1245**) is formed by their relationships with the settlement of Swainsthorpe. Beyond the bounds of the assets, the surrounding agricultural landscape has been altered by modern residential development and by modern infrastructure comprising the road and rail networks. The setting of the assets, therefore, makes a minor contribution to the value of the assets, and as setting is focussed on the settlement of Swainsthorpe, it does not extend to the Order Limits.

3.2.325 Further evidence of medieval activity in the Swainsthorpe and Mulbarton area is represented by **low value** findspots, and artefacts of evidential value recovered during fieldwalking and metal detector surveys. These assets comprise:

- Medieval/post medieval pottery sherds in a multi-period finds assemblage (**1238**) recovered from farmland 610 m east of Mulbarton and partially within the Order Limits
- Medieval pottery sherds in a multi-period finds assemblage (**1271**) recovered from farmland 980 m east of Mulbarton, immediately south of Church Road and partially within the Order Limits
- A medieval copper alloy buckle, pottery sherds and a silver coin; and medieval/post medieval pottery sherds, a copper alloy vessel fragment and three buttons in a multi-period finds assemblage (**1230**) recovered from farmland on the western flank of Swainsthorpe, immediately south of Church Road and partially within the Order Limits
- A medieval silver finger ring and coin, a copper alloy seal matrix, strap loop, a jetton and pottery sherds; and a medieval/post medieval copper alloy vessel leg and a scabbard fitting, a silver hooked dress tag and pottery sherds in a multi-period finds assemblage (**1233**) recovered from farmland 850 m south-west of Swainsthorpe, immediately north of Brick Kiln Lane and partially within the Order Limits.
- Medieval and medieval/post medieval pottery sherds in a multi-period finds assemblage (**1234**) recovered from farmland 1.1 km south-south-west of Swainsthorpe, immediately south of Brick Kiln Lane and partially within the Order Limits

- A medieval/post medieval brick in a multi-period finds assemblage (**1195**) recovered from farmland on the western limits of Swainsthorpe, immediately north of Church Street and just clipping the Order Limits
- A sherd of medieval pottery and a sherd of medieval/post medieval pottery in a multi-period finds assemblage (**1277**) recovered from farmland 1.3 km south-south-west of Swainsthorpe and clipping the eastern flank of the Order Limits
- A sherd of medieval pottery in a multi-period finds assemblage (**1275**) recovered from farmland 1.4 km south-south-west of Swainsthorpe, immediately north of Mulbarton Lane and 130 m east of the Order Limits
- A silver medieval coin in a multi-period finds assemblage (**1197**) recovered from farmland on the northern flank of Swainsthorpe, 60 m north of Church Road and 360 m east of the Order Limits
- A medieval to post medieval dress accessory, a medieval leash swivel and a medieval/post medieval lead weight were recovered as part of a multi-period finds assemblage (**1304**) from farmland c. 500 m south-west of Bracon Ash and c. 25 m north-east of the Order Limits.

Flordon and Fundenhall

Designated Heritage Assets

3.2.326 The **high value** scheduled monument Newton Flotman Bridge (**1002885**) crosses the Tas on the south-eastern outskirts of Newton Flotman, 2.4 km north-east of Flordon and 1.5 km south-east of the Order Limits. The asset has evidential and historical value. The bridge dates to the 15th century but has later additions. The original four bays of the bridge were constructed of ashlar but in 1835 the bridge was widened, and the south-eastern bay was rebuilt in brick. The bridge to lengthened by one bay to north-west in the 20th century. The three surviving medieval bays consist of shallow two-centred arches of two chamfered orders. The vaults are reinforced by closely set chamfered transverse ribs.

3.2.327 The setting of the bridge is informed by its location crossing the Tas on the outskirts of the town, and although the asset carries only foot traffic today, its function is retained. The setting of the bridge, therefore, makes a considerable contribution to its value but does not extend to the Order Limits.

3.2.328 The **high value** Grade II* listed 'Church Of St Mary The Virgin' (**1050704**) is located on the western flank of the A140 Ipswich Road, on the northern edge of Newton Flotman and 1.2 km south-east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church was built in the 15th century and includes evidence of 16th and 17th century additions and alterations. It is constructed of flint with ashlar and some brick dressing. The roofs are lead.

3.2.329 The setting of the church is informed by its attendant graveyard and by its location at the northern limit of the settlement. The graveyard is defined by mature tree lined hedgerows to the east, west and south, however, to the north the graveyard is open to Church Road and there are views of farmland beyond broken by a mature hedgerow on the northern flank of the road. Up until the latter half of the 20th century, the church had stood in isolation approximately 400 m north of the core of Newton Flotman, however, today the church is flanked by residential development to the west, south and east. The setting of the church, therefore, makes a minor

contribution to its value, and due to topography and a copse and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.330 The **high value** Grade I listed 'Church Of All Saints' (**1050651**) is located on the northern flank of Church Road in Wreningham, 1 km north-west of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church was built in the 13th century with additions and alterations made in the 14th and 15th centuries. It was restored in 1853 following the collapse of the tower the year before.

3.2.331 The setting of the church is informed by its association with the settlement it serves and by its attendant graveyard. The graveyard is defined by a low hedge and there are mature trees in the north. Its once isolated location has been eroded by post medieval development, particularly to the east and the establishment of Church Farm. The setting of the asset, therefore, makes a minor contribution to its value, and due to development, copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.332 The **high value** Grade II* listed 'Church of St Michael' (**1172235**) is located 100 m north of The Street, Flordon, and 840 m south-east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The nave of the church was built in the 11th or 12th centuries, and 14th and 15th additions and alterations are apparent. Some windows were replaced in the Victorian period and the roof was replaced and covered by pantiles.

3.2.333 The setting of the asset is informed by its location in the settlement it serves and its attendant graveyard. The graveyard boundary is discontinuous, sometimes defined by a low hedgerow or garden fences whilst there are mature trees to the south. Formally located at the eastern extent of Flordon, residential development of the settlement in the latter half of the 20th century has all but enclosed the asset. The setting of the asset, therefore, makes a minor contribution to its value, and due to the development of Flordon and mature tree cover, the setting does not extend to the Order Limits.

3.2.334 The **high value** Grade II* listed 'St Mary's Chapel' (**1373555**) is located on the western flank of Blacksmiths Lane 430 m east of Fundenhall and 430 m north-west of the Order Limits. The asset is of evidential, historical, and aesthetic value. Converted into a house probably in the 18th century, the building constitutes the 15th century remains of Ashwell Church, although the plan of the nave and chancel suggests 12th century origins. There are no medieval external features, however, the 15th century arch braced roof of the nave survives. It is constructed of plastered flint and brick and has a pantile roof.

3.2.335 The setting of the asset is defined by its location at the eastern edge of the dispersed settlement of Fundenhall and its relationship with the chantryhouse immediately to the north-west. The setting is also informed by the surrounding agricultural landscape with which the asset has a historical relationship. Due to its change of function and the encroachment of later development the setting of the asset makes a minor contribution to its value. The view to the east, although broken by fruit trees in the asset's garden, has the potential to include long views (c. 1 km) of the Project, but this is beyond the extent of the asset's setting.

3.2.336 The **high value** Grade I listed 'Church Of St Mary' (**1302231**) is located close to the western edge of Tasburgh on the southern flank of Church Hill, within the southern boundary of the likely Iron Age scheduled monument 'Camp in Village' (**1003984**),

and c. 2.3 km south-east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The round tower of the church likely has 11th century Anglo-Saxon origins whilst the rest of the fabric of the church is the result of 14th, 15th,16th and 19th century alterations and additions.

3.2.337 The setting of the asset is informed by its location within the settlement it serves, and its relationships the camp and with its associated graveyard and the rectory to the west. The graveyard is defined by mature tree lined boundaries largely screening the asset for 20th century residential development to the east and south-east, although roof tops visible from the graveyard. The setting of the asset, therefore, makes a moderate contribution to the value of the asset, but due to topology, development, mature copses, and tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits (Figure 7.12.F17_VP1.17 Viewpoint 1.17: Grove Lane / Boudicca Way, near Tasburgh Hill Fort; document reference 7.12).

3.2.338 The **high value** Grade I listed 'Church Of St Margaret' (**1179227**) is located on the southern flank of Holly Lane, on the northern edge of Hapton and 560 m south-east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church is mainly 14th century although the west tower was built in 1848. The church is built of flint with some stone dressing and a slate roof.

3.2.339 The setting of the church is informed by its relationships with the Grade II listed 19th century vicarage (**1373412**), with the settlement it serves and by its association with the attendant graveyard. The graveyard is defined by low mature tree lined hedgerows, which allows for broken views of post medieval residential development to the east. The setting of the asset instils feelings of peace and tranquillity and, therefore, it makes a considerable contribution to the asset's value. The mature trees that line Holly Lane to the north of the asset largely screen views from the asset to the Order Limits to the north-west and focus the asset's setting on the settlement to the south. The setting of the assets does not, therefore, extend to the Order Limits.

3.2.340 The **high value** Grade I listed 'Church Of All Saints' (**1170251**) is located on the northern flank of The Street, towards the eastern end of Ashwellthorpe and 1.7 m north-west of the Order Limits. The asset is of evidential, historical, and aesthetic value. The earliest element of the church's fabric is the late 13th century west tower and there is evidence of 14th, 15th and 18th century additions and alterations. The asset is built of partially rendered flint rubble and stone dressing with a slate roof.

3.2.341 The setting of the church is informed by its location within the settlement it serves and with its relationships with the parsonage to the west and its associated graveyard. The graveyard is defined by heavily wooded boundaries to the west, north and east that restrict views into and out of the graveyard. The view to the south, however, is more open and there is an attractive view of the church from The Street across a well maintained lawned area with a few mature trees. The setting of the asset instils feelings of peace and tranquillity and, therefore, it makes a considerable contribution to the asset's value. Due to the development of Ashwellthorpe and further development and mature tree lined hedgerows in the intervening landscape, however, the setting of the asset does not extend to the Order Limits.

3.2.342 The **high value** Grade I listed 'Church Of St Nicholas' (**1306126**) is located on the southern flank of Church Lane in the dispersed settlement of Fundenhall, 950 m south-east of Ashwellthorpe and 890 m west of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church was built in the 12th century and then maintained until it was heavily restored in 1869. It is built of flint rubble with stone dressing and has a machine tile roof.

3.2.343 The setting of the church is informed by its location within the parish, by its associated graveyard and by the surrounding agricultural landscape with which it has a historical relationship. The graveyard boundaries are defined by mature tree lines, a hedgerow along Church Lane and timber fencing, a mature copse around a body of water lies to the west. The timber fencing and sparce trees in the east of the graveyard allow for broken views to and from the asset across a large arable field. The setting of the church instils feelings of peace and tranquillity and, therefore, makes a considerable contribution to its value. Due to the mature grounds of the church and the development and mature tree lined hedgerows of the intervening landscape, the setting of the asset does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.344 Five medieval strip fields (**1029**) are apparent on an aerial photograph taken in 1946 that can also be seen on the Tithe Map of the area and the first edition Ordnance Survey map of 1887. This **low value** asset has evidential value and is located 1.2 km east of Fundenhall and partially within the Order Limits. Some of the boundaries are still apparent of recent satellite imagery.

3.2.345 Further evidence of medieval activity in the Flordon and Fundenhall area is represented by **low value** findspots, and artefacts recovered during fieldwalking and metal detector surveys. These assets of evidential value comprise:

- Medieval coins including one of silver and a 14th century copper alloy seal showing a rabbit sitting on a hound in a multi-period finds assemblage (**1133**) recovered from farmland 740 m east-south-east of Fundenhall and within the Order Limits
- A medieval copper alloy casket key, a strap-end, and a silver pendent cross; and a medieval/post medieval copper alloy buckle and button in a multi-period find assemblage (**1217**) recovered from farmland 750 m north-west of Flordon and largely within the Order Limits
- A silver medieval cruciform pendent inscribed AGLA (**1166**) recovered from farmland 700 m south-east of Fundenhall and within the Order Limits. The meaning of the inscription is unclear, but it has been suggested it is an abbreviation of the Yiddish phrase ‘Atā gībōr ləʿōlām ʾĂḏōnāy translated as ‘Thou, O Lord, art mighty forever.’
- Medieval coins (some of silver), padlocks, buckles, harness fittings and mounts, thimbles, seal matrices, a book fitting, a candle holder, and a lead sea matrix; a medieval/post medieval ring, dress accessories, weight, and a spindle whorl in a multi-period finds assemblage (**1130**) recovered from farmland 500 m south-east of Fundenhall, immediately south of Hapton Road partially within the Order Limits and situated on higher ground overlooking a tributary of the Tas Valley to the south-east
- Four silver medieval coins (**1138**) recovered from farmland 200 m east of Fundenhall and partially within the Order Limits
- A medieval silver brooch, a copper alloy buckle, and a lead weight; and a medieval/post medieval copper alloy spur rowel, a skillet or posnet fragment and lead weights in a multi-period finds assemblage (**1286**) recovered from farmland 650 m north-west of Flordon, immediately east of Flordon Road and partially within the Order Limits
- A medieval copper alloy harness mount in a multi-period finds assemblage (**1268**) recovered from farmland 610 m north-north-west of Flordon and partially within the Order Limits

- A medieval copper alloy harness mount and harness pendant, three buckles and two strap ends; and a medieval/post medieval spoon, thimble, copper alloy vessel fragment, crotal bell, badge and a hooked dress fastener in a multi-period finds assemblage (**1280**) found 600 m north-west of Flordon and partially within the Order Limits
- A medieval copper alloy buckle, a harness pendant, a strap-end, a harness mount, a purse bar, and a lead weight; and a medieval/post medieval copper alloy hooked book clasp in a multi-period finds assemblage (**1225**) recovered from farmland 930 m north of Flordon and partially within the Order Limits
- A medieval lead pot mend and a fragment of undatable copper alloy casting waste (**1300**) recovered from farmland 960 m north-north-west of Flordon and partially within the Order Limits
- A medieval copper alloy annular framed brooch, three buckles, a key a strap fitting, a copper alloy thimble, two crotals and a lead weight and a silver coin in a multi-period finds assemblage (**1265**) recovered from farmland 900 m north-west of Flordon, immediately east of Flordon Road and partially within the Order Limits
- Two medieval copper alloy buckles and a harness pendant; and a medieval/post medieval copper alloy harness mount and rowel spur and a lead weight in a multi-period assemblage (**1302**) recovered from farmland 600 m north-north-west of Flordon and just clipping the eastern edge of the Order Limits
- Seven medieval copper alloy buckles, strap-ends, scabbard chape fragments, dagger pommel fragments, a rotary key, a harness hook, a casket key, a seal matrix, weight, a clapper bell, a book fitting, a silver annular brooch and a lead weight and seal matrix; and a medieval/post medieval copper alloy cloth seal and buckle in a multi-period finds assemblage (**1289**) recovered from land around an unnamed farm 440 m north of The Street, Flordon and immediately east of the Order Limits
- Medieval coins including one of silver, a buckle, a finger ring, a harness pendent and a brooch in a multi-period finds assemblage (**1162**) 200 m south of Fundenhall and 10 m west of the Order Limits
- A medieval copper alloy buckle and a medieval/post medieval lead mount in a multi-period finds assemblage (**1285**) recovered from farmland 850 m north of Flordon and 20 m east of the Order Limits
- A medieval copper alloy finger ring, a strap loop, a thimble, two buckles and strap mounts possibly from a box or casket, along with a medieval/post medieval copper alloy button and dress hook, were recovered as part of a multi-period finds assemblage (**1273**) from farmland located 1.7 km north-east of Fundenhall, immediately west of Wymondham Road, adjacent to an access road of the Order Limits
- Medieval buckles, a belt mount, hinge plate, horse harness pendant, horse harness bar mount, part of a purse frame decorated with inlaid niello and silver coins in a multi-period finds assemblage (**1131**) recovered from farmland immediately north of Fundenhall Road, 980 m east-south-east of Fundenhall and 110 m east of the Order Limits
- Two medieval silver coins (**1202**) recovered from farmland 600 m east of Fundenhall and 140 m west of the Order Limits

- A medieval buckle and two tokens in a multi-period find assemblage (**1132**) 500 m south-east of Fundenhall and 70 m west of the Order Limits
- A 13th century seal matrix, the Seal of Finn, baron of the King of Norway, a 14th century silver cross shaped pendant and a bet fitting in a multi-period finds assemblage (**1151**) 1 km south-east of Fundenhall and 150 m east of the Order Limits
- A copper alloy harness pendant, a leash, z strap end, a strap fitting, a scabbard fitting, pottery sherds and a silver coin; and fragments of a medieval/post medieval cauldron and vessel in a multi-period finds assemblage (**1193**) recovered from farmland on the eastern outskirts of Fundenhall and 210 m north-west of the Order Limits
- A medieval silver coin in a multi-period finds assemblage (**1143**) recovered from farmland immediately east of Fundenhall and 60 m north-west of the Order Limits
- A medieval horse harness pendant belonging to the family of a Crusader, a seal matrix, coins, a buckle, strap fittings and pottery sherds in a multi-period finds assemblage (**1149**) recovered from farmland 720 m west-south-west of Flordon and 230 m south-east of the Order Limits
- A medieval copper alloy dagger scabbard chape, a dagger guard, a horse harness pendant and mount, a buckle, a button, a strap end, and a silver coin; and a medieval/post medieval copper alloy finger ring and buckle in a multi-period finds assemblage (**1269**) recovered from farmland 240 m north of Flordon and 220 m south-east of the Order Limits
- A medieval gilded disc-on-tongue brooch, the terminal of a small spur and a medieval/post medieval eight-pointed spur rowel (**1177**) recovered from farmland immediately south of Fundenhall and 90 m west of the Order Limits
- A medieval copper alloy buckle and bar mount in a multi-period finds assemblage (**1288**) recovered from farmland 300 m west of Flordon and 280 m south-east of the Order Limits
- A medieval buckle and strap fitting in a multi-period finds assemblage (**1180**) recovered from farmland 1 km north-east of Fundenhall and 240 m north-west of the Order Limits
- A medieval buckle and strap fitting of copper alloy and gold, a copper alloy furniture fitting, strap fitting, harness pendant and jetton, a lead seal matrix and two silver coins; a medieval/post medieval copper alloy jetton, a buckle, a leash, a swivel, and pottery sherds in a multi-period finds assemblage (**1251**) recovered from farmland 1.8 km south-west of Flordon and 150 m east of the Order Limits
    - A medieval bronze vessel leg (twisted) from wide-bottomed vessel in a multi-period finds assemblage (**1236**) recovered from farmland c. 240 m east of Wreningham and 170 m west of the Order Limits
    - Medieval buckles, harness fittings, a harness pendant and casket key in a multi-period finds assemblage (**1279**) recovered from farmland c. 850 m north-east of Toprow and clipping the Order Limits
    - Seven medieval coin, thimble, a brooch made from a jetton, a belt mount, buckles, a medieval/post medieval copper alloy ring, and a medieval/post

medieval coin in a multi-period finds assemblage (**1345**) recovered from farmland c. 750 m north-east of Wreningham and c. 250 m north of the Order Limits

- Eleven medieval coins, a cast copper alloy openwork dagger chape, a knob terminal, two buckles, a mount, a strap fitting, a lead weight, a medieval/post medieval button and buckle in a multi-period finds assemblage (**1346**) recovered from farmland c. 300 m east of Wreningham and partially within the Order Limits
- A medieval brooch, harness pendants, harness mounts, strap-ends, a swivel for a leash, buckles, a harness strap mount, a silver crucifix, a coin weight, a lead alloy papal bulla of Pope Boniface VIII, a pendent bell, a mount, and a mount or stud; and a medieval/post medieval writing lead, a crotal bell, buttons, a hooked book mounts, a hooked tag, lead weights, a copper alloy weight, and a hooked book fitting recovered as part of a larger finds assemblage (**1357**) from farmland immediately to the north of Wreningham and c. 200 m to the west of the Order Limits
- Nine medieval coins, a 15th century copper alloy finger ring with square setting, 13th century circular lead seal matrix, a bronze strap end buckle with integral plate in a multi-period finds assemblage (**1380**) recovered from farmland c. 1.1 km north-east of Wreningham and c. 220 m north-east of the Order Limits
- Four medieval coins in a multi-period finds assemblage (**1382**) recovered from farmland c. 600 m east of Wreningham and c. 80 m south-west of the Order Limits.

Forncett St Mary and Tacolneston

Designated Heritage Assets

3.2.346 The **high value** Grade I listed 'Church Of All Saints' (**1178820**) is located at the northern extent of Tacolneston at the junction of the B1113 Norwich Road and Hurn Lane and within the Tacolneston conservation area. The asset is of evidential, historical, and aesthetic value. The Order Limits lie 610 m to the east-south-east. The fabric of the church is mainly 14th and 15th centuries and there are 15th, 16th and 17th fixtures and fittings. The church is constructed of flint rubble with stone dressings, some brick and it has a pantile roof.

3.2.347 The setting of the church is informed by its location within the settlement and its relationship with the Grade II listed 18th century rectory (**1050045**) to the north and the Grade II* listed 16th to 18th century Old Hall complex to the south (**1373381** and associated Grade II outbuildings). The setting is also informed by the attendant graveyard, which includes the Grade II listed Tacolneston World War I war memorial (**1470006**) which is scoped out from assessment due to its restricted setting because of its building type. The tidy graveyard is defined by mature tree lined hedgerows to the west and north, however, the graveyard is largely open to the road to the south and east. The setting of the church instils a sense of peacefulness whilst the open boundaries visually strengthen its links to the settlement it serves. The church's setting, therefore, makes a considerable contribution to its value, and due to a clear view to the east, the setting of the church extends to the Order Limits.

3.2.348 The **medium value** Grade II listed '60 and 60a, Norwich Road' (**1373378**) is located on the eastern flank of the Norwich Road, south of the Tacolneston Conservation Area and 1 km west of the Order Limits. The asset has evidential and historical value. The asset is a 14th to 15th century hall house with later additions now split into

two dwellings. The asset comprises a plastered timber frame structure with a thatched roof and a large brick chimney stack at junction.

3.2.349 The setting of the asset is informed by its location within the settlement of Tacolneston and its relationship with a group of five 17th century Grade II listed buildings to the north. The setting is further informed by the agricultural landscape with which the asset has a historical relationship. There has been limited post medieval development encroaching from the south, west and north, but this is generally sympathetic, and so the setting of the asset makes a moderate contribution to its value. The asset has a garden area which is defined to the east by a low hedge allowing for open views towards the Project, but due to the restricted settlement setting of the asset, the setting does not extend to the Order Limits.

3.2.350 The **high value** Grade II* listed 'Yew Tree Farmhouse' (**1152706**) is located on the eastern flank of Low Road, at the northern edge of Forncett St Mary and 960 m east of the Order Limits. The asset has evidential and historical value. The farmhouse is a Wealden house constructed in the 15th century and comprises a plastered timber frame structure with a steep pantile roof.

3.2.351 The setting of the asset is informed by its location within a former farming complex and by its relationship with two Grade II listed 17th/18th barns (**1304630** and **1373220**) to the north. The setting is also informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The asset is situated within mature grounds that instil feelings of privacy and peacefulness and although the farm is no longer working the complex is still legible as former farm buildings. The setting of the farmhouse, therefore, makes a considerable contribution to its value, however, due to mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.352 The **high value** Grade I listed 'Church Of St Mary' (**1304627**) is located 90 m east of Low Road in Forncett St Mary, at the northern end of the Forncett Conservation Area and 960 km east of the Order Limits. The asset is of evidential, historical, and aesthetic value. It is situated on the western flank of the Tas Valley. The church has 13th century origins but was extensively restored in 1869. It is built of flint rubble with stone dressings and has a plain tile roof.

3.2.353 The setting of the church is informed by its location in the linear settlement, its attendant graveyard, and its relationship with the two-post medieval domestic residences to the west, both of which are recorded on the first edition OS map of 1884. The graveyard is defined by mature tree lined hedgerows to the south and west allowing for glimpsed, broken views outwards whilst there are open to the north and east over a low hedge. The setting of the asset, therefore, makes a considerable contribution to its value, however, due to screening topography, mature tree lined boundaries, copses and development, the setting does not extend to the Order Limits.

3.2.354 The **high value** Grade I listed 'Church Of St Peter' (**1152619**) is located 100 m east of Aslacton Road in Forncett St Peter, at the southern end of the Forncett Conservation Area and 1.1 km east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church is situated on the western flank of the Tas Valley. The western round tower, other than the Victorian parapet, dates to the 11th century whilst the remainder of the structure largely dates to the 14th and 15th centuries, although it was heavily restored in 1857. The church is built of flint rubble with stone dressings and has a slate roof.

3.2.355 The setting of the asset is informed by its location within the settlement, by its large attendant graveyard and by its relationship with the early 18th century rectory and outbuildings to the north-east and the church school built in 1848 to the west. The graveyard is defined by low hedges, timber fencing and iron fencing, and contains several mature trees making for broken views in and out. The setting of the church instils feeling of peacefulness and tranquillity and makes a considerable contribution to the asset's value. Due to screening topography, mature tree lined boundaries and development, however, the setting does not extend to the Order Limits.

3.2.356 The **high value** Grade I listed 'Church Of All Saints' (**1372999**) is located on the north-eastern flank of Church Road in Wacton and 3 km east-south-east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The western round tower, other than the later brick built recessed top, dates to the 12th century, whilst the remainder of the structure largely dates to the 14th century. It is built of flint and erratic rubble with stone dressings with a slate roof.

3.2.357 The setting of the church is informed by its location within the settlement and by its relationship with the former rectory to the north, the former schoolhouse to the west and the Wacton House complex to the south-east; assets that appear on the first edition OS map of 1884. The graveyard boundary is delineated to the north, east and south by a mature tree lined hedgerow, whilst the boundary to the west comprises a low timber fence allowing impressive views of the church from Church Road. The setting of the church instils a sense of peacefulness whilst the open boundary visually strengthens its links to the settlement it serves. The church's setting, therefore, makes a considerable contribution to its value, but due to topography, mature tree lined boundaries, copses, and later development the setting does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.358 The **medium value** sites of the deserted medieval/post medieval settlements of Rattongate and Haliards and a multi-period finds assemblage (**1089**) are located 400 m south-south-east of Tacolneston and within the Order Limits. These settlements are of evidential value, are recorded on a survey plan of 1565, and both are illustrated with streets and houses. Fieldwalking and metal detecting surveys conducted on the site has resulted in a multi-period finds assemblage that includes medieval pottery sherds, a gilt buckle and a strap fitting of evidential value.

3.2.359 The setting of the site of former settlements Rattongate and Haliards (**1089**) is informed by the routes of some of the settlements' streets being fossilised by extant trackways and boundaries. The setting is further informed by the surrounding agricultural landscape, which is likely reminiscent of the asset's contemporaneous landscape. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.2.360 The **low value** cropmarks of rectangular enclosures (**1043**) are apparent within Forncett St May, south of Cheney's Lane and 210 m south-south-east of the Order Limits. It has been suggested that the cropmarks of evidential value likely represent 15th century structures mentioned in 'old records', although this source is not recorded in the HER.

3.2.361 There are surviving **low value** earthworks (**1140**) of evidential value in a field on the northern edge of Forncett St Mary, immediately north of Cheney's Lane and 470 m south-east of the Order Limits. The earthworks likely represent **low value** medieval and post medieval clay pits and a hollow way that possibly marks the northern

boundary of 'Julion's Green', a green recorded in 1565. Ditched enclosures are likely post medieval in date following the enclosure of the green.

3.2.362 Further evidence of medieval activity in the Forncett St Mary and Tacolneston area is represented by **low value** findspots, and artefacts recovered during fieldwalking and metal detector surveys. These assets are of evidential value and comprise:

- A lead medieval Papal bulla of Benedict XII (1334 - 1342), a copper alloy vessel and thimble, and pottery sherds in a multi-period finds assemblage (**1103**) found on land partially within the Order Limits immediately south of the deserted medieval/post medieval settlement (**1089**) and 750 m south-south-east of Tacolneston
- A medieval silver finger ring with empty setting (**1176**) recovered from farmland 1.1 km north-east of Tacolneston and partially within the Order Limits
- A medieval copper alloy buckle, a silver coin and pottery sherds; and a medieval/post medieval jetton in a multi-period finds assemblage (**1263**) recovered from farmland 640 m north-east of Tacolneston and partially within the Order Limits
- Medieval pottery sherds in a multi-period finds assemblage (**1091**) recovered from farmland 990 m south of Tacolneston and partially within the Order Limits
- A medieval copper alloy brooch and six silver coins in a multi-period finds assemblage (**1192**) recovered from farmland 1.1 km north-west of Forncett St Mary and 10 m east of the Order Limits
- A medieval ampulla and a 12th or 13th century heraldic pendant in a multi-period find assemblage (**1137**) recovered from farmland 800 m east of Tacolneston and within the Order Limits
- A medieval copper alloy strap fitting in a multi-period finds assemblage (**1119**) recovered from farmland 1 km north-east of Tacolneston and partially within the Order Limits
- Medieval coins including two of silver, a silver pilgrim badge, a rivet, a seal matrix, a strap fitting and medieval/post medieval buckle and cauldron fragment in a multi-period finds assemblage (**1175**) recovered from farmland 1.1 km east of Tacolneston, immediately north of Cheney's Lane and partially within the Order Limits
- A copper alloy medieval buckle, pottery sherds and a silver coin in a multi-period finds assemblage (**1189**) 970 m south-east of Tacolneston, immediately south of Long Stratton Road and partially within the Order Limits
- A medieval strap fitting and a silver coin in a multi-period finds assemblage (**1158**) recovered from farmland 880 m east of Tacolneston and partially within the Order Limits. The survey site occupies slightly higher ground overlooking a shallow tributary of the Tas Valley to the north
- A medieval dagger, a lead pot mend, a sword or dagger pommel, a cauldron or pipkin fragment, a ring, strap fittings, buckles, coins including one of silver, a jetton and thimble; a medieval/post medieval copper alloy vessel fragment in a multi-period finds assemblage (**1168**) recovered from farmland 1.3 km north-east of Tacolneston and partially within the Order Limits
- Medieval rotary keys, a seal matrix, a thimble, harness mounts, a harness pendant, a writing lead, strap ends and fittings, a book fitting and a silver coin and brooch; medieval/post medieval buckles, buttons, a thimble, and a central swivel loop from a

purse frame in a multi-period finds assemblage (**1161**) recovered from farmland 250 m north-west of Forncett St Mary and partially within the Order Limits

- A medieval swivel from a leash, buckles, strap fittings, a dress fastener, coins including one of silver, a harness pendant, pottery sherds; and medieval/post medieval dress accessories copper alloy purse bar, rivet and cauldron fragment in a multi-period finds assemblage (**1155**) recovered from farmland 700 m north of Forncett St Mary, immediately north-west of High Road and immediately east of the Order Limits
- Medieval pottery sherds in a multi-period finds assemblage (**1093**) recovered from farmland 700 m south-south-east of Tacolneston, immediately south of the deserted medieval/post medieval settlement (**1089**) and partially within the Order Limits.
- Medieval pottery sherds in a multi-period finds assemblage (**1108**) found on land just clipping the north-western edge of the Order Limits immediately east of deserted medieval/post medieval settlement (**1089**) and 800 m south-east of Tacolneston
- A medieval copper alloy brooch, seven buckles, a strap fitting possibly from a box or casket, a hooked tag, a strap end, and pottery sherds, along with a medieval/post medieval copper alloy scabbard chape, buckle, spur rowel, and additional pottery sherds, were recovered as part of a multi-period finds assemblage (**1282**) from farmland located 190 m west of Forncett St Mary, immediately east of Stickfer Lane and adjacent to an access road of the Order Limits
- A medieval copper alloy chafing dish fragment and part of a mirror case, buckles, a harness mount, strap ends and fittings; a medieval/post medieval lead weight, coin weight, badge, scabbard chape, buckles, a thimble and chaffing dish handle fragment in a multi-period finds assemblage (**1164**) recovered from farmland on the floor and northern flank of a tributary valley of the Tas 1.5 km north-east of Tacolneston and within the Order Limits
- A copper alloy buckle and furniture fitting and a silver coin in a multi-period finds assemblage (**1170**) recovered from farmland 700 m east of Tacolneston and partially within the Order Limits
- Medieval coins and two padlocks in a multi-period find assemblage (**1139**) recovered from farmland immediately south of Forncett St Mary and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 150 m to the east
- Medieval pottery sherds in a multi-period finds assemblage (**1107**) recovered from farmland 990 m south-south-west of Forncett St Mary and 150 m east of the Order Limits
- A medieval silver finger ring with hexagonal bezel, a copper alloy furniture mount and pottery sherds in a multi-period finds assemblage (**1242**) recovered from farmland 320 m north of Forncett St Mary and 180 m east of the Order Limits
- A medieval copper alloy buckle and strap fitting and a silver coin in a multi-period finds assemblage (**1299**) recovered from farmland 760 m south-east of Tacolneston and 120 m north-west of the Order Limits
    - Sherds of medieval pottery were recovered as part of a multi-period finds assemblage (**1203**) during fieldwalking of farmland 420 m north-west of Forncett Saint Peter and 200 m east of the Order Limits

- Three medieval copper alloy buckles, three strap fittings, two strap ends and a medieval/post medieval lead weight in a multi-period finds assemblage (**1283**) recovered from farmland on the western edge of Forncett St Mary, immediately south of Cheney's Lane and 140 m east of the Order Limits
- Medieval pottery sherds in a multi-period find assemblage (**1112**) recovered from farmland 1.4 km south-east of Tacolneston and 180 m south-east of the Order Limits
- A medieval casket mount, a possible purse swivel loop, a padlock, a dagger, or sword chape, buckles, a fragment of a pewter annular brooch, three silver coins; a medieval/post medieval chest stud and dress accessories in a multi-period assemblage (**1128**) recovered from farmland 1.3 km south-south-west of Forcett St Mary and 240 m south-east of the Order Limits
- A copper alloy medieval brooch, buckles, a purse frame fragment, a seal matrix, a strap end, a fragment of a vessel and five silver coins; and a medieval/post medieval copper alloy jetton and a fragment of a pewter vessel in a multi-period finds assemblage (**1194**) recovered from farmland 650 m north-east of Tacolneston and 150 m west of the Order Limits
- A medieval copper alloy buckle, two jettons, a seal matrix a pottery; and a medieval/post medieval chafing dish and vessel fragment in a multi-period finds assemblage (**1226**) recovered from farmland immediately north of Forncett St Mary, 90 m north of Cheney's Lane and 320 m east of the Order Limits
- A possible medieval pilgrim badge and a mount possibly showing Christ in a multi-period finds assemblage (**1134**) recovered from farmland 840 m east of Tacolneston and 250 m west of the Order Limits
- A silver medieval coin and pottery sherds in a multi-period finds assemblage (**1074**) recovered from farmland 400 m east of Tacolneston and 210 m west of the Order Limits
- Medieval pottery sherds in a multi-period finds assemblage (**1116**) recovered from farmland 1.1 km south-west of Forncett St Mary and 400 m east of the Order Limits
- Five medieval silver coins in a multi-period finds assemblage (**1173**) recovered from farmland immediately east of Tacolneston and 180 m north-west of the Order Limits
- A medieval copper alloy buckle and jetton, six silver coins; and a medieval/post medieval copper alloy thimble and two jettons in a multi-period finds assemblage (**1253**) recovered from farmland 340 m north-east of Tacolneston, immediately east of Norwich Road and 450 m west of the Order Limits
- A medieval bell, part of a swivel for a leash, two seal matrixes and copper alloy vessel fragment, a strap fitting, a harness pendant and fittings and a silver coin; and a medieval/post medieval ring, book clasps and a lead spindle whorl or weight in a multi-period finds assemblage (**1187**) recovered from farmland 440 m north-east of Tacolneston and 460 m west of the Order Limits. These finds, along with artefacts from the late Iron Age, Roman, Saxon (possibly relating to a cemetery) and post medieval periods indicate that this could be a site of a multi-phase settlement site
- Medieval keys, harness mounts, brooches including a silver annular brooch, finger rings, a lead ampulla, a thimble, a toy, a holder for a lamp or censer, a harness pendant, a seal matrix and scale-tang knife or dagger end-cap; a medieval/post medieval dress accessories, leash swivels, harness mounts, a sword scabbard chape, candlestick fragment, purse bar fragment and a crotal bell in a multi-period

finds assemblage (**1145**) recovered from farmland 150 m east of Tacolneston and 600 m west of the Order Limits

- Seven medieval coins, a figurine of a dog, two harness mount, a buckle, a writing lead, and a medieval/post medieval weight and a token in a multi-period finds assemblage (**1350**) recovered from farmland immediately east of Tacolneston and c. 200 m north-west of the Order Limits.

Bunwell Hill and the Tas Valley

Designated Heritage Assets

3.2.363 The **high value** Grade I listed 'Church of St Michael' (**1373605**) is located on the northern flank of Old Turnpike, Bunwell and 940 m north-west of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church is largely of 15th century date and constructed of flint cobbles with stone dressing and some rendering.

3.2.364 The setting of the church is informed by its location within the settlement and its attendant graveyard. The graveyard is defined by hedgerows and contains mature trees in the east and south. A small mature copse lies immediately to the south of the church grounds, whilst Bunwell Primary School is immediately to the west. The main school building, though unlabelled, appears to be represented on the first edition OS map of 1884. The setting of the church makes a considerable contribution to its value, however, due to tree cover in the graveyard and the copse to the south and further copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.365 The **high value** Grade I listed 'Church of St Michael' (**1170344**) is located at the junction of Church Road and Steeple Lane, Aslacton and 1.9 km south-east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church has a circular 11th century tower, with a later embattled parapet, and the core of the nave and chancel is also of 11th century date. There has been additions and alterations over the subsequent centuries. The church is built of flint rubble with stone dressings and has led cladded and tiled roofs.

3.2.366 The setting of the church is informed by its roadside location within the settlement and by its attendant graveyard. The graveyard is defined by a low hedgerow allowing for a clear view of the asset from Church Road to the south, however, the boundaries to the west, north and east are also wooded allowing for glimpsed views in and out. The first edition OS map of 1884 records the church some 150 m north-north-east of the core of Aslacton along The Street, which was focused on and around the Manor House and Street Farm. The church's once isolated location has, however, been eroded during the 20th century as residential development has encroached along The Street, Church Road, Steeple Lane, and Pottergate Street. The setting of the church makes a moderate contribution to its value but due to the mature tree cover in the graveyard and the topography, development, copses, and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.367 The **high value** Grade I listed 'Church of All Saints' (**1305560**) is located at the junction of Church Road and Chapel Road, Carleton Rode, and 1.6 km north-west of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church dates to the 13th century and there is evidence of 14th, 15th and 16th century

additions and alterations. It is built of partially rendered flint rubble with stone dressings and has led clad, tiled, and slate roofs.

3.2.368 The setting of the asset is informed by its roadside location within the dispersed settlement, by its attendant graveyard and by its relationships with Grade II listed assets 'Church Farmhouse' to the west, the 'Old Rectory' to the north, 'Rectory Cottages' to the south-east (see post medieval section below) and the non-designated 19th century schoolhouse and next-door cottage on the southern flank of Church Road. The graveyard is defined by a low flint and brick wall to the south, by an iron railing fence to the west and north and by an iron railing fence and mature trees lining the driveway up the rectory to the east. There has been some small-scale 20th century residential development along Church Road to the south-east and Chapel Road to the west, but this is generally in keeping with the local vernacular and often screened from the church. The setting of the church, therefore, makes a considerable contribution to its value, but due to the mature tree lined driveway of the rectory and the topography, development, copses, and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.369 The **high value** Grade I listed 'Church of All Saints' (**1049992**) is located on the southern flank of Church Road, Tibenham, and 770 m west-north-west of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church has 11th century Norman roots and there is evidence of 13th, 14th, 15th and 17th century additions and alterations. It is built of flint rubble with stone dressings and has led clad and slate roofs.

3.2.370 The setting of the church is informed by its roadside location within Tibenham, by its attendant graveyard and by its relationship with the Grade II listed church cottages to the north, Church Farmhouse and associated buildings to the west and Limes Farmhouse to the east (see post medieval section below). The northern boundary of the graveyard is defined by a brick wall fronting on to the church cottage gardens and an evergreen hedge on the northern flank of the cottage gardens. The boundaries to the west, south and east comprise iron railing fences lined with mature trees. The expansion of Tibenham in the 20th and 21st centuries has been limited, and other than some small-scale infill residential development and additions to the Church Farm and Limes Farm complexes, the settlement retains many of the buildings recorded on the first edition OS map of 1884. The setting of the church, therefore, makes a considerable contribution to its value, and due to the open view across farmland to the north-west, the setting extends to the Order Limits.

3.2.371 The **medium value** Grade II listed asset 'Gower's Farmhouse' (**1373601**) is located on the southern flank of Low Road at the base of the Tas Valley and 750 m south-east of the Order Limits. The asset has evidential and historical value. The farmhouse is a 15th to 16th century hall house that was floored in the 17th century. It comprises a plastered timber frame structure with partial pargetting and a thatched roof.

3.2.372 The setting of the asset is informed by its roadside location at the base of the Tas Valley and its relationship with the Grade II listed 17th century 'Barn Immediately North-West of Gower's Farmhouse'. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The setting of the asset makes a considerable contribution to its value, but due to the topography of the Tas Valley and tree growth along Low Road and the riverbanks, the setting does not extend to the Order Limits.

3.2.373 When trees in Bunwell Wood were cleared in the 1950s, reports suggest that a medieval moat was found and filled in (**1003**). The **low value** site is located 1.7 km south-east of the village of Bunwell and 140 m north-west of an access road of the Order Limits and of evidential value.

3.2.374 The earthworks of a large, rectangular **medium value** medieval moat (**1056**) are preserved within the grounds of the Grade II listed post medieval Baryard's Hall (**1373609**). Sections of the feature survive up to 4 m in width and 3 m in depth. The site is of evidential and historical value and is located 2 km south-east of the village of Bunwell and 160 m north-west of the Order Limits. Fieldwalking within the grounds of the hall recovered a small **low value** assemblage of medieval and post medieval pottery (**1000**) of evidential value.

3.2.375 The setting of the moat (**1056**) is informed by its relationships with the Grade II 17th century Banyard's Hall (**1373609**) and with a farming complex to the east the majority of which is recorded on the first edition OS map of 1884. The setting is also informed by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset makes a considerable contribution to its value but due to it being focused on its farmyard location, the setting does not extend to the Order Limits.

3.2.376 Further evidence of medieval activity of evidential value in the Bunwell Hill and the Tas Valley area is represented by findspots, and artefacts recovered during fieldwalking and metal detector surveys. These assets are of **low value** unless stated otherwise and comprise:

- Two medieval silver coins, a key and a copper alloy seal matrix in a multi-period finds assemblage (**1070**) recovered from farmland south of Prince of Wales Road, 2.2 km south-east of the village of Bunwell and within the Order Limits
- A medieval harness pendant with gilding, a buckle, part of a candlestick, a key, purse frame, a copper alloy vessel fragment, pottery sherds and dress accessories including a strap end with niello cross-hatched inlay in a multi-period finds assemblage (**1062**) recovered from farmland on the Tas Valley floor and its southern flank, 3.3 km south-south-east of the village of Bunwell and partially within the Order Limits
- A late 13th or 14th century copper alloy medieval buckle in a multi-period finds assemblage (**1065**) recovered from farmland 2.8 km south-south-east of the village of Bunwell and within the Order Limits
- A medieval lead conical weight in a multi-period assemblage (**1111**) recovered from farmland 1.8 km south-east of the village of Bunwell within the Order Limits
- A medieval belt hook, buckle plate, a strap fitting, two copper alloy vessel fragments and a purse bar in a multi-period finds assemblage (**1087**) recovered from farmland 160 m east of the Grade II listed Banyard's Hall (**1373609**), 550 m east of Bunwell Hill and partially within the Order Limits
- Medieval coins including two of silver, buckles, a thimble, horse harness pendant, box padlock, an enamelled copper alloy plate, a personal ornament and pottery sherds; and medieval to post medieval dress accessories, a bell, a ring, buckles, a coin weight, copper alloy vessel fragments and lead spindle whorls or weights in multi-period finds assemblage (**1049**) recovered from farmland 3 km south-south-east of the village of Bunwell and partially within Order Limits

- A medieval gilded copper alloy leaf-shaped fragment of a pendant and two pottery sherds in a multi-period finds assemblage (**1156**) recovered from farmland 2.4 km south-east of the village of Bunwell and partially within the Order Limits
- A medieval/post medieval lead weight (**1213**) recovered from farmland 2 km south-south-east of the village of Bunwell and on the western flank of an Order Limits access road
- Medieval pottery sherds, a copper alloy buckle, a vessel fragment, a silver coin, and a lead seal matrix in a multi-period finds assemblage (**1188**) recovered from farmland 2.2 km south-south-east of the village of Bunwell, immediately east of Brick Kiln Lane and flanking the western edge of the Order Limits
- Medieval pottery sherds in a multi-period finds assemblage (**1053**) recovered from farmland 2.1 km south-east of the village of Bunwell and 70 m north-west of the Order Limits
- A medieval sheet bronze vessel handle escutcheon, buckles, a brooch, a button, a furniture fitting, a harness mount, a harness pendant, a jetton, a spur, a lace tag, a strap fitting, a silver coin, two possible conical lead weights and pottery sherds in a multi-period finds assemblage (**1118**) recovered from farmland on the Tas Valley floor, 3 km south-south-east of the village of Bunwell and 110 m from the Order Limits
- A medieval ferrule, two jettons, pottery sherds, a silver coin, harness pendant, furniture fitting and copper alloy vessel fragment; and medieval/post medieval bell, rowel spur and weights in a multi-period finds assemblage (**1058**) recovered from farmland on the Tas Valley floor, 3.1 km south-south-east of the village of Bunwell and partially within the Order Limits
- A scatter of medieval pottery sherds, bone fragments and lava millstone pieces (**1094**) recovered from farmland 2.7 km south-south-east of the village of Bunwell and 180 m west of the Order Limits. The asset is located on the southern flank of the Tas Valley, close to the valley floor, and likely represents the location of a medieval building. Two other scatters of medieval finds, (**1090**) and (**1096**), are in the same field a little closer (120 m) to the Order Limits, and these assets are also considered to represent the locations of former potentially **medium value** medieval buildings
- Medieval pottery sherds and a copper alloy strap end in a multi-period finds assemblage (**1191**) recovered from farmland 2.9 km south-south-east of the village of Bunwell, on the southern flank of the Tas Valley, close to the valley floor and 10 m west of the Order Limits. These assets were recovered just to the south of possible buildings (**1094**), (**1090**) and (**1096**)
- A silver coin of Eric of Pomerania (a part of Poland) minted between 1412 and 1438, a strap fitting and pottery sherds in a multi-period finds assemblage (**1063**) recovered from farmland 1.9 km south-east of the village of Bunwell and partially within the Order Limits access road
- Medieval pottery sherds (**1044**) recovered from farmland 3 km south of the village of Bunwell, on the southern flank of the Tas Valley and 90 m west of the Order Limits
- A medieval strap end, a silver coin, pottery sherds and a medieval/post medieval knife endcap in a multi-period finds assemblage (**1016**) recovered from farmland 3.6 km south of the village of Bunwell and on the southern flank of the Tas Valley 35 m east of the Order Limits

- Medieval unglazed pottery sherds in a multi-period finds assemblage (**1099**) recovered from farmland 2.9 km south-south-east of the village of Bunwell on the Tas Valley floor 230 m west of the Order Limits
- A medieval copper alloy vessel fragment, a copper alloy buckle with moulded frame and two late medieval or early post medieval pottery sherds in a multi-period finds assemblage (**1102** recovered from farmland 1.9 km south-east of the village of Bunwell and 210 m north-west of the Order Limits
- Medieval pottery sherds of 13th/15th century including one Grimston ware sherd (**1018**) recovered from a ploughed field 3.8 km south of the village of Bunwell and 160 m west of the Order Limits
- Medieval pottery sherds, two buckles, a brooch, and a stirrup in a multi-period assemblage (**1075**) recovered from farmland 2.4 km south-south-east of the village of Bunwell and 160 m west of the Order Limits
- A silver longcross cut halfpenny of Henry II (**1060**) recovered from farmland 3 km south of the village of Bunwell, on the southern flank of the Tas Valley and 240 m west of the Order Limits
- Medieval pottery sherds in a multi-period finds assemblage (**1052**) recovered from farmland 190 m south-east of the Order Limits and 2.6 km south-east of the village of Bunwell
- Medieval pottery sherds, a harness pendant, a copper alloy ring, a spindle whorl, a brooch, a buckle, a purse frame, two silver coins and a thimble; and a medieval/post medieval copper alloy vessel fragment in a multi-period finds assemblage (**1066**) recovered from farmland 2 km south-south-east of the village of Bunwell and 240 m north-west of the Order Limits in a field immediately south-east of the junction of Bunwell Hill and The Turnpike
- A medieval key and purse frame, buckles, a silver coin, a lava quern fragment; a medieval/post medieval copper alloy vessel fragments, a weight and dress accessories in a multi-period finds assemblage (**1129**) recovered from farmland 720 m south of the village of Bunwell and 260 m west of the Order Limits.

Winfarthing and Shelfanger

Designated Heritage Assets

3.2.377 The **high value** Grade I listed ‘Church of St Mary’ (**1180035**) is located immediately east of the junction of The Street and Church Lane, at the head of a shallow valley within the Winfarthing conservation area, 470 m north-west of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church is largely of 14th century date but with evidence of later maintenance and alterations. It is built of flint rubble with stone dressings and has a lead clad and slate roof.

3.2.378 The setting of the church is informed by its location within the settlement, by its attendant graveyard and by its relationship with the Grade II listed Old Rectory and Church Place on the norther flank of Church Lane. The setting is further informed by the agricultural landscape to the south and east with which the asset has a historical relationship. The graveyard contains scattered trees and is largely defined by a mature tree lined hedgerow, although there is an open view to the east towards the Order Limits. The setting of the church makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.2.379 The **high value** Grade I listed 'Church of St Mary' (**1152891**) is in the parish of Gissing, east of Lower Street within the Gissing Conservation Area and 2.6 km east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The round west tower and the nave of the church probably date to the late 11th century and are likely Norman. A chancel and north and south chapels were added in the 13th century whilst the north porch and nave roof are 15th century. The church is constructed of flint rubble with stone dressings and a tile roof.

3.2.380 The setting of the church is informed by its location within the settlement, by its attendant graveyard, by its relationships with the Grade II listed WWI/WWII war memorial in the graveyard, the 17th century Grade II listed Crown Public House and early 19th century Crown Cottage to the north, the 18th century Grade II listed 52, 53 and 54 Lower Street to the north-west and the non-designated 19th century school to the north-east. Minor residential development in the mid to later 20th encroached on the asset from the west and south but this is largely screen from the asset by mature tree lined hedgerows. The setting of the asset, therefore, makes a considerable contribution to its value, but due to development and mature hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.381 The **high value** Grade II* listed 'Church of St Mary' (**1305672**) is in the parish of Burston and Shimpling, north-west of the junction of Diss Road and Crown Cottages in Burston Conservation Area and 1.7 km east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church largely dates to the 15th century with replacement windows in the nave. The western tower collapsed in 1753 and the west wall of the nave is now supported by a large red brick buttress. The church is built of flint cobbles with stone dressings and slate and tile roofs.

3.2.382 The setting of the asset is informed by its location within the settlement, its attendant graveyard and by its relationship with the Grade II listed asset the 17th century Crown Public House to the north-east, the 17th/18th century Red House to the north and the early 20th century Strike School to the south-west. Twentieth century residential development has encroached on the church from all sides and the low boundary hedge with scattered trees of the graveyard allows for views to and from the asset. The setting of the church, therefore, makes a moderated contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.383 The **high value** Grade I listed Church of All Saints (**1373360**) is in the parish of Shelfanger, south-east of the junction of Church Road and Church Walk, Shelfanger and 590 m west of the Order Limits. The asset is of evidential, historical, and aesthetic value. The church has a 14th century tower, chancel and nave, a 15th century timber frame porch with flint infill and a 19th century chancel roof. The church is built of flint with stone dressings and slate roofs.

3.2.384 The setting of the church is informed by its location within the settlement, its attendant graveyard and by its relationship with the Grade II listed 19th century Church Farmhouse and its associated non-designated outbuildings immediately to the west. The 20th century residential development of Shelfanger has encroached upon the church from the north and is visible from the church grounds. The setting of the asset, therefore, makes a moderate contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.385 The site of Winfarthing Great Park (**1064**), a former deer park of evidential value owned by the Earl of Arundel and recorded as being 'full of deer' in 1604, is located 180 m east of Winfarthing and covering a large area of land that includes a 1.8 km long section of the Order Limits. The limits of the **low value** park are suggested by field boundaries recorded on first edition Ordnance Survey mapping.

3.2.386 Cropmarks of a medieval **low value** strip field system (**1072**) of evidential value are in farmland 1.8 km north-north-east of Winfarthing, immediately north of Long Row and partially within the Order Limits. The review of the available aerial imagery by the Project added two linear cropmarks to the complex, both of which are visible as field boundaries on the first edition OS map.

3.2.387 A **medium value** medieval moat and post medieval farmhouse (**1305**) of evidential value is recorded on the first edition OS map of 1884 1.4 km north-east of Winfarthing and immediately east of the Order Limits. The moat has been partially backfilled and associated earthworks noted on an aerial photograph of 1977 have been ploughed out.

3.2.388 A **medium value** moat (**1024**) of evidential value is recorded on a Tithe map of 1832 and the 1953 6in Ordnance Survey map 700 m east of Shelfanger and partially within the Order Limits. The moat has now been partially infilled. The site was fieldwalked in 1991 and this work recovered a variety of medieval pottery sherds including glazed and unglazed wares. The exact date of the moat has not been determined but is probably either medieval or early post medieval in date.

3.2.389 The setting of the moat (**1024**) is informed by its relationship with elements of the local landscape that likely have medieval or earlier origins such and the settlements of Shelfanger, Burston and Winfarthing, which are all recorded in the Domesday Book of 1086, and the road network that links them. The setting is further informed by other moated sites at St Martins Farm (**1028**) and Dairy Farm (**1012**) to the south-east, Oakmeadow Farm to the north-east and Willow Farm to the north-north-east; medieval findspots to the south-east (**1076**), east (**1077**), north-east (**1079**) and (**1126**) and north-north-east (**1038**), all of which elucidate the wider medieval landscape. The setting of the asset, therefore, makes a moderate contribution to its value, and as it is largely located within the Project, the setting extends to the Order Limits.

3.2.390 A **low value** medieval moat, or possible pond (**1012**) of evidential value, is recorded on 19th century OS mapping on the eastern flank of a dairy farm immediately east of Heywood Road, 1.3 km south-west of Shelfanger and 80 m south-east of the Order Limits. The HER records that the farmhouse may be of 16th century date and that medieval pottery has been recovered from the site.

3.2.391 A possible **low value** medieval moat of evidential value, visible as an earthwork on aerial photographs (**1026**), is located at Willow Farm immediately west of Heywood Road, 1.5 km north-east of Shelfanger and 190 m east of the Order Limits.

3.2.392 The earthworks of ridge and furrow and a moat with outworks (**1032**) of evidential value is recorded on 20th century aerial photographs immediately north of Long Row, 2.5 km north-north-east of Winfarthing and 200 m east of the Order Limits. The HER suggests these features may be of medieval date and the moated enclosure may represent a medieval manorial site. The Enclosure Award Map of 1820 shows a moat, possibly associated with the manor of West Hall. Ploughing in 1984 destroyed the asset and so it is of **low value**. The Grade II listed post medieval Tibenham

Farmhouse (**1179474**) is located 90 m west of (**1032**) and the farmyard complex (**1314**) includes the remains of another moat of evidential value likely of medieval date.

3.2.393 The **medium value** earthwork remains of a medieval moat and pond (**1027**) of evidential value survive on Oakmeadow Farm immediately east of Heywood Road, 1.4 km east-north-east of Shelfanger and 100 m south-west of the Order Limits.

3.2.394 The setting of the moat (**1027**) is informed by its relationship with elements of the local landscape that likely have medieval or earlier origins such and the settlements of Shelfanger, Burston and Winfarthing, which are all recorded in the Domesday Book of 1086, and the road network that links them. The setting is further informed by other moated sites at St Martins Farm (**1028**) and Dairy Farm (**1012**) to the south, moat (**1024**) to the south-west, and Willow Farm to the north (**1026**); medieval findspots to the south-west (**1076**) and (**1077**), west (**1079**) and (**1126**) and north (**1038**), all of which elucidate the wider medieval landscape. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being focused on its roadside farmyard location, the setting does not extend to the Order Limits.

3.2.395 The **medium value** earthwork remains of a medieval moated site with associated post medieval St Martins Farm buildings (**1028**) of evidential value are located immediately east of Heywood Road, 1.5 km south-east of Shelfanger and 280 m north-east of the Order Limits. The buildings include a 19th century brick farmhouse and an 18th century timber framed barn, which is a very late example of the timber framing tradition.

3.2.396 The setting of the medieval moat (**1028**) is informed by its relationship with elements of the local landscape that likely have medieval or earlier origins such and the settlements of Shelfanger, Burston and Winfarthing, which are all recorded in the Domesday Book of 1086, and the road network that links them. The setting is further informed by other moated sites at Dairy Farm (**1012**) to the south, moat (**1024**) to the south-west, and Willow Farm to the north (**1026**); medieval findspots to the north (**1076**), (**1077**), (**1079**), (**1126**) and (**1038**), all of which elucidate the wider medieval landscape. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being focused on its roadside farmyard location, the setting does not extend to the Order Limits.

3.2.397 Cartographic and documentary evidence of evidential value indicates the presence of a **low value** park (**1153**) located 500 m north of Winfarthing and 440 m south-west of the Order Limits. The illustrated asset is thought to have contained Winfarthing Manor.

3.2.398 Further evidence of medieval activity in the Winfarthing and Shelfanger area is represented by **low value** findspots, and artefacts of evidential value recovered during fieldwalking and metal detector surveys. These assets comprise:

- A medieval/post medieval copper alloy button in a multi-period finds assemblage (**1291**) recovered from farmland 700 m north-east of Shelfanger, immediately south of Heywood Road and partially within the Order Limits
- A medieval buckle and a silver coin in a multi-period finds assemblage (**1246**) and a twisted late medieval/transitional period pottery handle (**1085**) recovered from farmland 400 m north-east of Shelfanger and just clipping the western edge of the Order Limits

- A medieval/post medieval copper alloy buckle in a multi-period finds assemblage (**1298**) recovered from farmland 120 m east of Winfarthing and on the western flank of the Order Limits
- A medieval copper alloy buckle and a silver coin, and a medieval/post medieval copper alloy dress hook and stud (**1141**) recovered from farmland 1.1 km north-east of Shelfanger and on the eastern flank of the Order Limits
- A copper alloy medieval cauldron fragment, a brooch pin and a buckle in a large, multi-period finds assemblage (**1190**) recovered from farmland 110 m west of the Order Limits and 620 m north-east Shelfanger
- Four unglazed medieval body sherds of 13th to 14th century date (**1077**) recovered from farmland 1 km east of Shelfanger and 100 m east of the Order Limits
- A sherd of medieval glazed Grimston ware and a sherd medieval/post medieval transitional ware (**1207**) recovered from farmland 1.2 km north of Winfarthing and 120 m south of the Order Limits
- Three sherds of late medieval or early post medieval pottery (**1080**) recovered from farmland 950 m east of Winfarthing and immediately east of the Order Limits
- A medieval silver coin (**1023**) recovered from farmland 760 m south of Shelfanger and 80 m west of the Order Limits
- A medieval copper alloy buckle, two silver coins, and medieval/post medieval copper alloy coin weight, crotal bell and vessel fragment and a lead cloth seal in a multi-period finds assemblage (**1284**) recovered from farmland 2.2 km north-north-east of Winfarthing and 150 m east of the Order Limits
- A sherd of medieval pottery comprising a jug rim and handle stub (**1076** recovered form farmland 940 m east of Shelfanger and 700 m east of the Order Limits
- A medieval silver coin (**1038**) recovered from farmland 1.4 km north-east of Shelfanger and 170 m north-north-east of an Order Limits access road
- A sherd of medieval pottery comprising a fragment of the neck and handle of a Grimston green glazed jug (**1079**) recovered from farmland 1.2 km east-north-east of Shelfanger and 200 m east of the Order Limits
- Three body sherds of unglazed pottery and one Grimston green glazed base sherd of 13th to 14th century date (**1081**) recovered from farmland 1 km south-east of Winfarthing and 210 m east of the Order Limits
- A medieval silver coin in a multi-period finds assemblage (**1034**) recovered from farmland at the southern limit of Winfarthing, immediately north of Heywood Road and 190 m west of the Order Limits
- A 12th to 13th century medieval lead circular seal matrix and a copper alloy cauldron foot (**1126**) recovered from farmland 1.2 km east-north-east and 230 m east of the Order Limits
- A medieval silver coin in a multi-period finds assemblage (**1206**) recovered from farmland 560 m south-south-east of Winfarthing, immediately south of Heywood Road and 190 m west of the Order Limits
- Two medieval copper alloy buckles, a silver coin, and a fragment of a lead architectural mount; and a medieval/post medieval copper alloy thimble, knife guard,

buckle and dress hook in a multi-period finds assemblage (**1292**) recovered from farmland on the eastern flank of Winfarthing and 300 m west of the Order Limits

- A dense scatter of 13th and 14th century medieval pottery with a little dating to the 15th and 16th centuries (**1050**) recovered from farmland 1.2 km south-east of Winfarthing and 300 m north-east of an Order Limits access road
  - Six medieval coins in a multi-period find assemblage (**1358**) recovered from farmland located c. 1.3 km south-east of Shelfanger and adjacent to the Order Limits
  - A medieval coin (**1368**) was found by a metal detectorist on farmland c. 1.2 km south-east of Shelfanger and adjacent to a permanent access route of the Project.

Bressingham and the Waveney Valley

Designated Heritage Assets

3.2.399 The **high value** Grade I listed 'Church of St Andrew' (**1049662**) is in Firsfield in the parish of Bressingham, east of The Street and 3 km north-west of the Order Limits. The asset is of evidential, historical, and aesthetic value. The core of the church dates to c. 1300, but most of the surviving structure dates to the 15th century. The church is built of flint rubble with stone dressings and has led clad and tile roofs.

3.2.400 The setting of the asset is informed by its location within the settlement, its attendant graveyard and by its relationship with the Grade II listed 17th century Rectory to the north-west and Hall Cottages to the south-east and the Grade II listed 20th century war memorial in the graveyard to the north. The graveyard and grounds of the adjacent Hall Cottages contain scatter trees and are largely defined by mature tree lined hedgerows affording the asset privacy and seclusion. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the tree cover in the graveyard and development, further tree cover and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.401 The **high value** Grade I listed 'Church of St John The Baptist' (**1373587**) is in the parish of Bressingham, south of the A1066, east of Church Lane and 1.2 km west of the Order Limits. The asset is of evidential, historical, and aesthetic value. The fabric of the church is mainly late 13th century in date, but the church was refashioned in the early 16th century including the addition of a hammerbeam roof. The church is built of partially rendered flint rubble with stone dressings and lead clad and slate roofs.

3.2.402 The setting of the church is informed by its location within the settlement, its attendant graveyard and by its relationships with the Grade II listed 17th century assets Ye Olde Cheques, Parish Cottages, and Old Hall Farmhouse to the north-west, Church Farmhouse to the south-west and the Grade II listed 19th century Bressingham Lodge and associated stables and cart sheds to the east. Mature tree cover in the graveyard particularly to the south and east limits views out of the grounds affording the asset some seclusion. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the tree cover in the graveyard and development, further tree cover and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.403 The **high value** Grade I listed 'Church of St Remigius' (**1050237**) is in the parish of Roydon, on the south-west edge of Roydon, south of High Road and 200 m north of the Order Limits. The asset is of evidential, historical, and aesthetic value. The asset has a 12th century Norman nave, and round tower, a 13th/14th century chancel and a 13th century south aisle rebuilt in 1864. The south porch was added 1840 and further alterations were made in the Victorian period.

3.2.404 The setting of the church is informed by its association with its own graveyard, which includes a low value World War One memorial of evidential and historical value with World War Two additions (**1378**), and its location on the northern edge of the Waveney Valley with views over the valley to the south. Cartographic evidence indicates that the asset, for much of its history, was set within a rural landscape with Roydon Hall (**1373311**) to the north-west, dispersed farmsteads and a complex of moated sites and a manor house to the east-north-east. The moated and manor house sites have now been lost to the development of the modern town of Roydon in the latter half of the 20th century and the outskirts of the town now encroaches on the church to the north and east. The setting of the asset, therefore, makes a moderate contribution to its value, but due to open views to the south and south-west from the asset, the setting extends to the Order Limits.

3.2.405 The **medium value** Grade II listed medieval 'Roydon Hall' (**1373311**) is in the parish of Roydon, north of High Road, on the western outskirts of Roydon and 210 m east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The core of the asset is a three-storey red brick mansion built in the 13th century, which has been altered and added to in the centuries since, particularly in the 18th century.

3.2.406 The setting of the asset in informed by its location within its wooded and landscaped grounds. The grounds include paths and water bodies and are likely of post medieval origins. Its environs also include two east/west aligned post medieval building ranges apparent on the first edition OS map of 1884 and an 18th century **low value** coach house (**1210**) of evidential and historical value. A **low value** orchard of evidential and historic value is apparent to the north of Roydon Hall (**1756**) on the 1884 1:2500 OS map, as well as the similarly valued immediate estate grounds (**1757**) of Roydon Hall. The wooded grounds and attendant structures afford the asset enclosure and privacy, and so the setting of the asset makes a considerable contribution to its value. The mature grounds largely screen the asset from the Project and so the setting of the asset does not extend to the Order Limits.

3.2.407 The **high value** Grade I listed 'Church of St Andrew, Frenze' (**1050244**) is in parish of Scole, 800 m along an un-named single-track lane from Dark Lane in the south, approximately 600 m east of the eastern outskirts of Diss and 2.6 km south-east of the Order Limits. The asset is of evidential, historical, and aesthetic value. The asset dates to the early 14th century and has a 16th century brick built south porch. It is built of flint rubble with stone dressings and a tile roof.

3.2.408 The setting of the church is informed by its rural location, its attendant graveyard, and its relationship with the Grade II listed 17th century Frenze Hall immediately to the west. The graveyard is defined to the north, east and south is defined by a high evergreen hedge whilst the western side is open to the hall. The southern boundary screens the view to a largely derelict farming complex beyond. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the mature tree lined grounds of the hall, the setting does not extend to the Order Limits.

3.2.409 The **medium value** Grade II listed 'By The Potash' (**1154367**) is located on the southern flank of Potash Fen, 270 m south-west of the A1066 and 440 m north-east

of the Order Limits. The asset is of evidential and historical value, dates to the 13th century and comprises a plastered timber frame cottage with a steep pantile roof.

3.2.410 The setting of the asset is informed by its roadside village location and by its relationship with the residential dwelling and farm buildings immediately to the west, some of which are recorded on the first edition OS map of 1884. The setting is further informed by agricultural land to the south and west with which the asset has a historical relationship. The modest grounds of the asset contain numerous trees and are defined by mature tree lined hedgerows, which screen the asset from 20th century residential development to the north, affording the asset some privacy. The setting of the asset makes a considerable contribution to its value, but due to screening by its mature grounds, the dwelling and farm buildings to the west and mature tree lined boundaries and hedgerows in the intervening landscape, it does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.411 Roydon Hall, located north of High Road, on the western outskirts of Roydon and 220 m east of the Order Limits, is also associated with the remains of a **medium value** moat (**1015**) of evidential value. The north and east arms of the moat survive, although they are gradually filling in. The north arm is partly used as a swimming pool. This moat is not connected to the present Roydon Hall, Grade II listed (**1373311**) but to a previous, non-extant Hall.

3.2.412 The setting of the moat (**1015**) is informed by its relationship with the Grade II listed Roydon Hall (**1373311**) immediately to the south and the non-designated coach house at Roydon Hall (**1210**) and other 19th century buildings to the west. The setting is further informed by its location within its wooded and landscaped grounds of Roydon Hall which include paths and gardens. The wooded grounds and attendant structures afford the asset enclosure and privacy, and so the setting of the asset makes a considerable contribution to its value. The mature grounds largely screen the asset from the Project and so the setting of the asset does not extend to the Order Limits.

3.2.413 The **medium value** moated site of a former medieval house (Bush Hall) (**1013**) of evidential value in located in the Waveney Valley, to the north of the river, 1.1 km south-south-east of Bressingham and partially within the Order Limits. Excavations on the site in 1942 recovered medieval pottery fragments and a piece of a Roman pottery beaker. Oral evidence alleges that an ancient boat was found in the 19th century and that the timbers were destroyed, and decorative bronze work sold. The moat is recorded as largely complete on the first edition OS map of 1886 and the northern part of the moats remains in good condition, however, the southern portion was infilled in the 1960s.

3.2.414 The setting of the moat (**1013**) is informed by its situation within the shallow Waveney Valley and by its relationship with the non-designated Grove Farm to the north-east and the Grade I listed medieval Church of Saint Remigius (**1050237**) c. 440 m to the north-north-east. The setting is further informed by the agricultural land to the north and the valley pastures to the south, with which the asset has historical relationships. The setting of the asset makes a moderate contribution to its value and as the asset is situated partially within the Project, the setting extends to the Order Limits.

3.2.415 A complex of two **medium value** medieval moats (**1014**) of evidential value is recorded on the first edition OS map of 1884 immediately north-west of the junction of Snow Street and Darrow Lane, 3.5 km east of Bressingham and 40 m east of the

Order Limits. The site has been developed over the 20th century and now just the north and east arms of the southern moat remain, whilst only the western arm of the northern moat remains.

3.2.416 The setting of the moats (**1014**) is informed by their interrelationship and their relationships with the Grade II listed buildings The Gables (**1373310**) and Limetree Farmhouse (**1373273**) and the non-designated out-buildings associated with both of these assets. The setting is further informed by the agricultural land to the west and north with which the asset has a historical relationship. There has been some 20th century infill residential development along Snow Street and Darrow Lane are this has eroded the interrelationship between the moats. The setting of the asset, therefore, makes a minor contribution to its value and as it is situated partly within the Project, the setting extends to the Order Limits.

3.2.417 The alleged site of a possible medieval chapel (**1369**) is located on the northern flank of the Waveney valley c. 90 m south of the Grade I listed Church of St Remigius (**1050237**) and 210 m north of the Order Limits. The asset was a chantry site (Chapel of St. Mary) Founded in about 1282 and dissolved in 1547. Several sherds of medieval pottery have been recovered in the vicinity and a Roman coin was found in 2007. If the record is correct, any remains of the chapel would be of **medium value** based on its historical and evidential values.

3.2.418 The setting of asset (**1369**) is informed by its relationship with the Church of St Remigius (**1050237**) and its associated graveyard to the north, and its location on the northern edge of the Waveney Valley with views over the valley to the south. Cartographic evidence indicates that the asset, for much of its history, was set within a rural landscape with dispersed farmsteads and a complex of moated sites and a manor house to the east-north-east. The moated and manor house sites have now been lost to the development of the modern town of Roydon in the latter half of the 20th century and the outskirts of the town now encroaches on the asset and church to the north and east. The setting of the asset, therefore, makes a moderate contribution to its value, but due to open views to the south and south-west from the asset, the setting extends to the Order Limits.

3.2.419 Further evidence of medieval activity of evidential value in the Bressingham and the Waveney Valley area is represented by findspots, and artefacts recovered during fieldwalking and metal detector surveys. These assets **low value** comprise:

- A late Saxon/medieval copper alloy harness fitting and a medieval coin in a multi-period finds assemblage (**1294**) recovered from farmland 1.1 km east of Bressingham and 70 m south of the Order Limits
- A medieval buckle and a medieval/post medieval buckle and lead weight in a multi-period finds assemblage (**1159**) 2.1 km east of Bressingham and partially within an access road of the Order Limits
- A dispersed hoard of 14 medieval silver coins, two early post medieval silver coins and a copper alloy coin weight in a multi-period finds assemblage (**1252**) recovered from farmland 250 m east of Bressingham and partially within the Order Limits
- A medieval copper alloy strap end and a silver coin in a multi-period finds assemblage (**1293**) recovered from farmland 400 m east of Bressingham and partially within the Order Limits
- Three medieval silver coins in a multi-period finds assemblage (**1025**) recovered from farmland 570 m north-east of Bressingham and partially within the Order Limits

- A medieval key in a multi-period finds assemblage (**1335**) recovered from farmland on the northern bank of the river Waveney c. 600 m south-west of the outskirts of Diss and 5 m east of the Order Limits

- A copper alloy medieval buckle and pottery sherds in a multi-period finds assemblage (**1109**) recovered from farmland 1.3 km south-east of Bressingham on the northern flank of the Waveney Valley and 70 m north of the Order Limits
- A medieval buckle, a strap fitting, a lead ampulla, a silver coin and a medieval/post medieval copper alloy vessel fragment and purse frame in a multi-period finds assemblage (**1179**) recovered from farmland 870 m south-east of Bressingham and partially within the Order Limits
- Fragments of a medieval copper alloy vessel, of the base of candlestick and of a bell (**1105**) recovered from farmland 1.2 km south-south-east of Bressingham and within the Order Limits
- Three medieval silver coins in a multi-period finds assemblage (**1301**) recovered from farmland 480 m north-east of Bressingham and adjacent to an access road of the Order Limits.
- A medieval enamelled buckle plate, possibly a product of Limoges, France, two buckles and a silver coin in as multi-period finds assemblage (**1204**) recovered from farmland 2.3 km east of Bressingham, 110 m south of the Order Limits and east of Shelfanger Road
- Four medieval silver coins in a multi-period finds assemblage (**1224**) recovered from farmland 760 m east of Bressingham and 150 m north of the Order Limits
- Three medieval silver coins in a multi-period finds assemblage (**1205**) recovered from farmland 2.5 km east of Bressingham and 170 m east of the Order Limits
- Two medieval silver coins (**1157**) recovered from farmland 500 m south-east of Bressingham, immediately north of Baynard's Lane and 160 m south-east of the Order Limits
- Seven medieval pottery sherds including a base fragment of a saggy based jar in a multi-period finds assemblage (**1036**) recovered from within Bressingham, 50 m west of Common Road and 250 m west of the Order Limits
- Sherds of medieval/post medieval pottery sherds in multi-period finds assemblage (**111**) recovered during gardening and metal detecting in the grounds of the Grade II listed Gringle Cottage (**1154386**). The cottage is in Roydon, 690 m east of Bressingham and 250 m south-east of the Order Limits
- Medieval pottery fragments and a medieval seal in a multi-period finds assemblage (**1041**) recovered from farmland close to the southern extent of Section A, immediately north-west of Bressingham and 250 m west of the Order Limits. The survey area is on higher land with the Waveney Valley 500 m to the south
- A medieval/post medieval copper alloy spoon (**1135**) found in a garden area of Darrow Farm 1.4 km north-east of Bressingham and 260 m west of the Order Limits

- Four medieval buckles, six coins, a strap end, a lead pot mend, and two medieval/post medieval lead weights in a multi-period finds assemblage (**1352**) recovered from farmland on the northern outskirts of Diss and 250 m south-east of the Order Limits.

Post Medieval

3.2.420 The post medieval period within Section A is characterised by the introduction of large-scale infrastructure, principally for transport, communication, and drainage, alongside the continued agricultural development and management of the landscape. The post medieval assets comprise registered parks and gardens, listed buildings, conservation areas, non-designated buildings, excavated archaeological features and finds derived from metal detector and walkover surveys.

Dunston and Mangreen Hall Farm

Designated Heritage Assets

3.2.421 The **high value** Grade II* listed 'Intwood Hall' Registered Park and Garden (**1000320**) is located adjacent to the medieval Grade II* listed Church of All Saint (**1373136**) and 2.0 km north-west of the Order Limits. These assets are of evidential, historical, and aesthetic value. The parkland contains the non-designated Intwood Hall and its Grade II listed associated assets 'Garden Walls, Gazebo and Urn to North and North-West of Intwood Hall' (**1373137**), 'Gazebo Circa 60 Metres East of Intwood Hall' (**1306353**) and 'Lodge to Intwood Hall Circa 100 Metres North of Church of All Saints' (**1050543**). These assets are of evidential and historical value. Gardens surround Intwood Hall and comprise five walled garden compartments built of red brick with partly crenelated tops, constructed over four centuries from the mid-16th century onwards. The garden includes the listed assets (**1373137**) and (**1306353**) noted above. A walled kitchen garden lies to the west of the Hall defined by high red-brick walls to the north and east, a high flint wall to the west, and a low flint wall to the south. Glasshouses of 19th century date survive on the north wall, together with one early 20th century glasshouse. A 20th century Orangery also lies to the west of the hall. This is bordered on the south side by a low brick wall which runs west to connect to walled kitchen garden enclosures. The south facing façade of the hall leads onto a small terrace with steps down to a lawn bordered to the south by a ha-ha overlooking the park. Intwood Park is small, laid mainly to pasture and scattered with trees of mixed ages and species.

3.2.422 The setting of the registered park and garden is informed by the interrelationships of the assets described above and views between the built assets and from the park back to the buildings and gardens. The setting of the registered park and garden makes a considerable contribution to its value. There are limited views to the south across the Tas Valley interrupted by mature trees and hedgerows and it is possible the tops of pylons might be visible on the horizon. Tree plantation along the south-eastern edge of the parkland, however, illustrate that the view is not considered key and so the setting of the asset does not extend to the Order Limits.

Caistor St. Edmund and Bixley CP

3.2.423 There is a dispersed group of six post medieval listed buildings in the Markshall/ Caistor St Edmunds area comprising one Grade II* asset and five Grade II assets. The northernmost asset is the Grade II listed **medium value** 'Markshall Farmhouse at TG233 042' (**1050560**), 330 m north of Caistor St Edmunds and 1.6 km north-east of the northern extent of the Order Limits. The asset is of evidential and historical value. The farmhouse was built in c. 1730 for a member of the Pettus family, in colour washed brick, pantiles and black glazed pantiles. The structure has two storeys and a hipped roof. There is a wooded garden to the west of the asset and

further farm buildings to the east and north-east, which are apparent on the OS first edition of 1885. There are two large, 21st century sheds immediately north of the farmhouse garden.

3.2.424 The setting of the asset is informed by its location in the Tas Valley with the river 60 m to the south; the attendant farmyard and garden area and the surrounding rural landscape with which it has a historic and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to topography and intervening development and vegetation, the setting does not extend to the Order Limits.

3.2.425 The **medium value** Grade II listed 'Old Rectory' (**1050561**) is located at the northern edge of Caistor St Edmunds on the south-eastern flank of Stoke Road 1.8 km north-east of the northern extent of the Order Limits. The asset is of evidential and historical value. The house is a former parsonage and was built in the late 19th century with additions in the early 19th century. It is built in red brick with hipped roofs of black unglazed pantiles and slate. A single storey porch with a hipped roof of black glazed pantiles was added in the early 20th century.

3.2.426 The setting of the asset is informed by its location within its own grounds and gardens and with attendant structures in the complex apparent on the first edition OS map of 1885. The asset's grounds a has wooded boundaries as well as mature trees within creating a sense of enclosure and seclusion. The setting of the asset makes a considerable contribution to its value, but due to intervening development and vegetation, the setting does not extend to the Order Limits.

Swardeston CP

3.2.427 The **medium value** Grade II listed 'Wattle Cottage at TG 2130 0308 c. 230 m West-North-West of Mangreen Hall' (**1050519**) is located at the intersection of Mangreen and Mangreen Lane, c. 350 m north-west of the Order Limits. The asset is of evidential and historical value. Wattle Cottage was built in the early 16th century and has 18th and 19th century additions. The asset has a timber frame and brick structure that has been rendered and colour washed. It has a pantile roof.

3.2.428 The setting of Wattle Cottage is informed by its roadside location and by its intervisibility with two late 19th to early 20th century residential properties to the north c. 60 m to the north on the western flank of Mangreen. The grounds of the cottage contain mature trees and both Mangreen and Mangreen Lane are tree lined creating a sense of enclosure and seclusion. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the mature tree growth, topography, and further tree growth around the Mangreen Hall/Farm complex (see below) c. 200 m to the south-east, the setting does not extend to the Order Limits.

3.2.429 The **high value** Grade II* listed 'Mangreen Hall' (**1366150**) and the **medium value** Grade II listed 'Mangreen Lodge c. 50 m East of Mangreen Hall' (**1050518**) are located north of Mangreen with the **medium value** 'Barn at Hall Farm with Attached Cattle Shelters' (**1170403**) to the south of the thoroughfare, centred c. 290 m north of an Order Limits access road c. 230 m north of the National Grid Norwich Main Substation.

3.2.430 Mangreen Hall (**1366150**) has a façade-built c. 1700 in Flemish Bond bricks with coloured headers and a plain tile roof. The asset is of evidential and historical value. The asset has 18th century features and additions were made c. 1910. Mangreen Hall now functions as a country retreat and wedding venue (Mangreen Country

House) and is maintained by the Mangreen Trust. Mangreen Lodge (**1050518**) is located c. 45 m east-south-east of the Hall and originally functioned as the Hall stables. The asset is of evidential and historical value. The lodge was built c. 1700 of Flemish Bond bricks and has a pantile roof. The lodge now serves as two domestic dwellings. The assets are located within the Hall's ground, which also contain numerous mature trees.

3.2.431 The settings of Mangreen Hall and Mangreen Lodge are informed by their location within the hall's grounds, their intervisibility and their relationships with further, likely late 19th to early 20th century, outbuildings within the grounds. The setting is further informed by the earthwork remains of **medium value** enclosures and boundaries (**1241**) that may represent the remains of the former medieval hamlet of Mangreen, or perhaps outbuildings and paddocks associated with the medieval moated manor. The mature trees within the hall grounds create a sense of seclusion and block all views to the south and the northern limits of the Order Limits. This setting, therefore, makes a considerable contribution to the values of the assets, but due to mature tree cover in the hall grounds, a mature copse associated with Mangreen Hall Farm and intervening tree lined field boundaries, it does not extend to the Order Limits.

3.2.432 The listed asset 'Barn at Hall Farm with Attached Cattle Shelters' (**1170403**) to the south of Mangreen comprises a large north/south aligned barn with four continuous attached covered cattle shelters to the east. The asset is of evidential and historical value. The brick-built barn was constructed c. 1800 with the brick-built cattle shelters added in the mid-19th century. The barn and shelters all have pantile roofs, and the shelters have now been converted into domestic dwellings. The asset is located within the Hall Farm complex with the farmhouse, which is apparent on the first edition OS map of 1882, to the east and 20th century barns and outbuilding to the west. A mature copse is located 50 m to the south-east of the asset.

3.2.433 The setting of the barn and cattle shelters is informed by their relationship and by their place within the wider farming complex, and although the function of the asset has changed it is still legible as an element of a larger farming complex. The setting of the asset, therefore, makes a moderate contribution to its value, but due to 20th century farmyard development and the mature copse to the south-east, the setting does not extend to the Order Limits.

3.2.434 The **high value** Grade II* listed 'Gowthorpe Manor House' (**1050515**) and the associated **high value** Grade II* listed 'Barn c. 40 m West of Gowthorpe Manor House' (**1366141**), **medium value** Grade II listed 'Cowshed c. 10 m North-West of Barn at Gowthorpe Manor House' (**1050517**), and **medium value** Grade II listed 'Garden Walls and Gate Piers Immediately South-West of Gowthorpe Manor House' (**1170357**) and 'Gazebo C.10 m South Of Gowthorpe Manor House Q.V. 6/108' (**1050516**) are located within a farming complex on the north-eastern flank of Gowthorpe Lane, 550 m east of Swardeston and 390 m west of the Order Limits. These assets are of evidential and historical value.

3.2.435 Gowthorpe Manor House (**1050515**) includes a timber framed structure likely raised in the late medieval period around 1520 for the Styward family. Porches were added around 1574, and the structure was encased in brick. A T-shaped east range was added around 1630, and further alterations were made in the 17th and 18th centuries. An extensive service range was added in 1908 and the whole structure has a pantile roof. The barn to the west of the manor house (**1366141**) dates to the 17th century and is constructed of brick in Flemish bond with a pantile roof. The cowshed (**1050517**) was built in the 18th century of flint nodules and some brick with

a pantile roof. The garden walls and gate piers (**1170357**) date between the 16th and 18th centuries and are constructed of flint nodules and brick. The formal gardens within the manor grounds recorded on the first edition OS of 1882 are now lawned areas, but their boundaries survive. The Gazebo (**1050516**) dates from the early 17th century and is built in red brick in an English bond with some coloured headers and pantiles. The Gazebo comprises a single storey cell with shaped gables and rubbed brick-kneelers and the principal façade faces to the north. Four large barns have been added to the complex in the later 20th and 21st centuries. This group of assets likely occupy the site of the medieval Manor of Gowthorpe, and the surrounding farmland contains traces of the shrunken medieval settlement that was focussed on the Manor (see below).

3.2.436 The shared setting of the assets is informed by the relationships between the designated and non-designated elements of the complex and their coherence as a former working group. The surrounding agricultural landscape, with which the complex has a historic and functional relationship, also informs the setting. A small copse in the south of the Manor House grounds and mature tree lined boundaries allow glimpsed views of the agricultural land beyond but largely create a sense of exclusion and tranquillity. The setting of the assets, therefore, makes a considerable contribution to their values. Views towards the Order Limits to the east and south-east from the Gowthorpe complex are interrupted by mature tree growth in the manor grounds and by a large copse (The Grove) to the east, which also occupies an area of higher ground. The setting of the assets does not, therefore, extend to the Order Limits.

Stoke Holy Cross CP

3.2.437 The Grade II listed **medium value** 'Rummer Inn' (**1169688**) is located on the eastern flank of Norwich Road, at the northern limits of Stoke Holy Cross and c. 1.2 km east of the Order Limits. The asset is of evidential and historical value. The Inn, now a residential property, was built in c. 1700 of brick and has a pantile roof. The asset is now whitewashed, and 19th and 20th century additions and alterations are apparent.

3.2.438 The setting of Rummer Inn is informed by its roadside location and although its function has changed, this setting makes a minor contribution to its value. The setting of the asset does not, however, extend to the Order Limits due to mature tree cover, topography, and intervening development.

3.2.439 The **medium value** Grade II listed 'Stoke Mill' (**1373207**) is located on the western edge of the settlement of Stoke Holy Cross, along Mill Road, c. 1.2 km south-east of the Order Limits. The asset was built in 1776 as a flour water mill then converted to a paper mill. In 1814-45 it was enlarged by Colmans as their first mustard and blue mill. In 1962, the asset was stripped of its fittings and part converted into a restaurant. The ground floor is of brick, the upper floors are weatherboarded, and the roof is made of black glazed pantiles. To the left of the asset are sluice gates and an inlet from the mill pond.

3.2.440 The setting of the asset is informed by its location on the river Tas, and location key to the historical functional use of the asset and its relationship to the landscape. To east of the asset is the settlement of Stoke Holy Cross, to the north and south are open grass fields and to the west a golf course. The landscape is widely rural even with the small settlement to the east. The setting of the asset contributes considerably to its value due to its key positioning over the river Tas. The asset has historical and evidential value and the setting of the asset does not extend to the

Order Limits and instead is restricted to the mill location and the riverbanks surrounding the asset.

3.2.441 The Grade II listed **medium value** 'Dunston Hall' (**1373206**) is located within its own parkland c. 800 m west-north-west of Stoke Holy Cross and c. 500 m east of the Order Limits. The asset is of evidential and historical value. J. C. Buckler began the construction of the high Victorian Elizabethan style country house in 1859, and Edward Boardman took over the build in 1859. The main elevation is three stories high with numerous ornate chimney stacks with terracotta flues. The house is brick-built, has a tile roof, and now serves as Dunston Hall Hotel, Spa and Golf Course.

3.2.442 The setting of the house is informed by its location within its own grounds; however, these have been eroded by the addition of the hotel car park and the construction of the golf course. There are, however, surviving mature copses particularly to the east of the house through to the north. The approach to the front of the house creates a sense of grandeur and wealth, whilst the mature tree growth encloses the asset and restricts views to within the grounds. The setting of the asset, therefore, makes a moderate contribution to its value but due topography and vegetation, the setting does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.443 The route of a former 18th century turnpike road (**1385**) and a north-western spur (**1386**) is located between the Main Norwich Substation in the west and Dunston Park in the east. The spur (**1386**) crosses the Order Limits immediately to the east of the Main Norwich Substation. The asset is of **low value** based on its historical and evidential values.

3.2.444 A multi-period finds assemblage (**1022**), including a **low value** post medieval element comprising a symmetrical buckle frame, a stud chape of a shoe buckle, an 18th century ovoid buckle, an 18th to 19th century pastry jigger, harness mounts, buckle frames, a finger ring, a spoon and cutlery of evidential value, was found during a metal detector survey within the bounds of the scheduled monument Venta Icenorum: Roman Town and Associated Prehistoric, Anglo-Saxon and Medieval Remains (**1021463**). The survey area is located 150 m east of the Order Limits and within the Tas Valley to the west of the river.

3.2.445 Geophysical survey, fieldwalking and subsequent trial trenching and strip, map and sample excavation on land 300 m north-east of Mangreen Hall Farm and immediately north of the Order Limits identified multi-period archaeological remains and finds assemblage (**1182**) (Stone, 2011) that included a **low value** post medieval element comprising ditches and finds comprising copper alloys buckles, crotal bells, furniture fitting, harness mount, jetton and token, and scatters of pottery sherds and roof tile of evidential value.

3.2.446 Fieldwalking, metal detecting and subsequent trial trenching immediately east of Mangreen Farm and partially within the Order Limits identified multi-period archaeological features and finds assemblage (**1184**) including a **low value** post medieval element comprising an agricultural feature and finds comprising a gunflint, pottery sherds and roof tile of evidential value.

3.2.447 Fieldwalking, metal detecting and subsequent trial trenching immediately south of Mangreen Farm and partially within the Order Limits identified multi-period archaeological features and finds assemblage (**1185**) that included residual **low value** post medieval pottery sherds and roof tile of evidential value.

3.2.448 Metal detector survey of land 960 m south of Mangreen Hall Farm and partially within the Order Limits resulted in a multi-period finds assemblage (**1218**) that included a **low value** post medieval element comprising copper alloy coins, jetton, tokens, sword belt fitting, finger ring, buckle, crotal bells, strap fitting and harness mounts; a silver coin, and lead a token, cloth seal, weight and vessel fragment. Subsequent archaeological trial trenching identified multi-period archaeological features and finds assemblage (**1271**) that included post medieval **low value** linear features of evidential value.

3.2.449 Metal detector survey and archaeological excavations, partially within cropmarks area (**1261**), in advance of the construction of Dunton Hall golf course recovered a multi-period finds assemblage and identified archaeological remains (**1136**) of evidential value. Evidence of post medieval **low value** activity was restricted to a section of exposed turnpike road and finds comprising an iron horseshoe and knife, a bone knife handle, and a silver coin of evidential value. The site is situated on the western flank of Dunston, immediately east of Ipswich Road and 100 m south-east of the Order Limits.

3.2.450 Archaeological trial trenching (**1071**) identified a **low value** post medieval ditch within an area of ploughed out ridge and furrow earthworks (Bates 1996) of evidential value identified on 20th century aerial photography. The site is located immediately north of Dunston Park and 210 m east of the Order Limits.

3.2.451 Evidence derived from historic maps, documentary records and aerial photographs suggests an area of post medieval **low value** brick manufacture and clay extraction (**1209**) of evidential value to the north-east and south-west of Gowthorpe Lane, 1 km south-west of Mangreen Farm and on the north-western flank of an Order Limits access road.

3.2.452 The cropmarks of post medieval field boundaries (**1214**) of evidential value are visible on aerial photographs of land 430 m west of Dunston Hall (**1373206**), on the western flank of the A140 and 80 m east of the Order Limits. The **low value** cropmarks represent at least two phases of field boundaries, both probably broadly post medieval in date as no boundaries are recorded on the Tithe map of 1849. The cropmark assessment undertaken by the Project identified a further linear cropmark that has been included in asset (**1214**). The cropmark represents a **low value** field boundary of evidential value recorded on the first edition OS map. The HER polygon for asset (**1214**) has been extended slightly to include the cropmark.

3.2.453 The site of a former **low value** milestone (**1249**) of evidential value is located on the western flank of the A140, 600 m north-west of Dunston Hall (**1373206**) and 120 m east of the Order Limits. The milestone was originally beside the former Norwich to Scole Turnpike and marked Norwich 4 miles and Ipswich 39 miles. The asset was lost around 1998.

3.2.454 The cropmark of a **low value** field boundary (**1186**) of evidential value date is located to the north-west of the DMV of Gowthorpe (**1232**) and Gowthorpe Manor (**1050515**) and c. 120 m west of the Order Limits. The Norfolk HER suggests a post medieval date for the feature although the proximity of Gowthorpe suggests a medieval date is also possible.

3.2.455 The extant **low value** Eastern Union Railway Norwich Extension (Norwich to Diss) (**1383**) is of evidential and historical value and runs the full length of Section A and on into Section B (Suffolk). The railway linked Norwich to London and was complete in

1849. At its nearest point to the Project the railway lies adjacent to the Main Norwich Substation, just 20 m to the east of the Order Limits.

3.2.456 Further evidence of medieval activity in the Dunston and Mangreen Hall Farm area is represented by findspots, and artefacts recovered during fieldwalking and metal detector surveys. These **low value** assets are of evidential value and comprise:

- Two post medieval copper alloy coins, buckle, spur and strap end, a silver coin, a gold mourning ring, and a lead powder measure, token and weight in a multi-period finds assemblage (**1208**) recovered from farmland west of Mangreen Hall Farm and 20 m north-west of the Order Limits
- A post medieval, copper alloy coin, bell, knife, and spoon in a multi-period finds assemblage (**1110**) recovered from farmland 80 m north-west of Mangreen Hall Farm and 220 m north-west of the Order Limits
- A post medieval copper alloy coin and jetton, a silver coin and dress fastener and pottery sherds in a multi-period finds assemblage (**1196**) recovered from farmland 740 m south-south-west of Dunston Hall and 340 m east of the Order Limits. Geophysical survey and subsequent archaeological trail trenching of this field identified undated and post medieval /modern agricultural features (**1215**).

Cropmark and LiDAR Assessment

3.2.457 Linear cropmarks (**1539**) have been identified by the Project on the south-western outskirts of Swardeston and c. 50 m west of the Order Limits. The cropmarks partially fall within assets (**1231** - medieval to post medieval field boundaries and enclosure) and (**1209** - post medieval brick making and extraction site) and represent field boundaries recorded on the first edition OS map. The **low value** cropmarks are of evidential value.

3.2.458 **Low value** linear cropmarks (**1540**) of evidential value have been identified by the Project c. 900 m south-east of Swardeston and partially within the Order Limits. The cropmarks fall within an HER monument (**1271**) of excavated archaeological remains of largely Romano-British and medieval date and some of the cropmarks may date to these phases of activity. A clear east/west aligned cropmark, however, corresponds with a field boundary recorded on the first edition OS and is likely of post medieval date.

3.2.459 **Low value** linear cropmarks (**1800**) of evidential value have been identified within the Order Limits between Dunston and Swardeston, west of Ipswich Road. The cropmarks fall within assets (**1353** - Possible discrete features of uncertain date and nature) and (**1185** - Prehistoric and post medieval finds) and represent field boundaries.

Historic Mapping Assessment

3.2.460 A series of **negligible value** ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of nine ponds are located within the Order Limits (**1551**, **1552, 1554**, **1558**, **1559**, **1562**, **1564**, **1565**, **1566**)

- A total of four ponds are located within 250 m of the Order Limits (**1553**, **1554**, **1567**, and **1759**).

3.2.461 The edge of a **low value** gravel pit (**1561**) of evidential value can be observed on the fringe of the 1881 1:10560 OS map and 1882 1:2500 OS map within the northern-most corner of the Order Limits. It is possible that the quarry may be associated with modern quarry currently situated to the north of Mangreen (road).

3.2.462 Two **low value** parish boundaries (**1555** and **1560**) and a **low value** undefined boundary (**1556**), all of evidential and historical value, have been identified crossing the Order Limits and throughout the 250 m Study Area within this sub-section. These boundaries can all be observed on the 1881 1:10560 OS Map. It is unknown to what extent these boundaries may physically be extant within the landscape.

3.2.463 Two **low value** possible important hedgerow locations of evidential and historic value are located crossing the Order Limits (**1771**, **1772**) within this sub-section. The hedgerows are first observed on the 1882 1:2500 OS map. It is unknown how much these hedgerows pre-date the 1882 map edition.

3.2.464 The **low value** location of a former building, associated structures, and its garden/ yard boundary (**1563**) can be observed within the Order Limits on the 1881 1:10560 OS Map and is last observed on the 1882 1:2500 OS map. This asset is located approximately 200 m north of the Norwich Main Substation and 290 m south of Mangreen (road).

3.2.465 The **low value** 'Spray's/ Sprow's Pits', ponds and woodland copse area (**1557**) of evidential and historical value can be observed from the 1881 1:10560 OS map onwards. This asset can still be observed on current map editions and aerial imagery; however, its purpose is unknown.

3.2.466 The **low value** broadly north to south aligned line of the Great Eastern Railway (**1550**) of evidential and historical value can be observed from the 1881 OS map onwards adjacent to the Order Limits at its closest point.

Swainsthorpe and Mulbarton

Designated Heritage Assets

3.2.467 The following listed buildings are in the parish of Mulbarton, outside the Mulbarton Conservation Area.

3.2.468 The Grade II listed **medium value** 'The Old Forge' (**1050701**) is located on the eastern flank of Main Road 340 m south of Swardeston, 580 m north-east of Mulbarton and 1.3 km west of the Order Limits. The asset is of evidential and historical value. The building is a former smithy built around 1830 and likely part of the Bracon Hall Estate. It is built of red brick with some stone dressings and has a black pantile roof. The asset is part of a larger complex of buildings at the western end of a narrow strip of overgrown land with a disused corn mill at the eastern end. The National Heritage List states that the asset is now empty.

3.2.469 The setting of the asset is informed by its location within the complex of building associated within the former mill. However, the asset and mill are no longer in use and the other buildings appear to have undergone a change in function and now appear to be domestic in nature. Their coherence as a working group has, therefore, been eroded and so the setting of the asset makes a negligible contribution to the value of the asset. Due to the overgrown nature of the asset's grounds and mature

tree lined hedgerows in the intervening landscape, the setting of the asset does not extend to the Order Limits.

3.2.470 The Grade II listed **medium value** assets 'The Lodge' (**1373059**) and the 'Lodge Farmhouse Barn' (**1305159**) are located on the northern flank of Rectory Lane, 500 m east-north-east of Mulbarton and 490 m west of the Order Limits. The assets are of evidential and historical value. The Lodge was built as a house in the late 18th century of rendered masonry with scored in imitation of ashlar and a slate roof. The barn is an 18th century former threshing barn built of brick partly colour washed with a pantile roof. Both assets are part of the larger complex of Lodge Farm buildings recorded on the first edition OS map of 1882, however, subsequent OS mapping and satellite imagery record numerous loses, additions and alterations to the complex.

3.2.471 The setting of the lodge and barn is shared and informed by their relationship with each other and with the other elements of the former farm complex. The setting is further informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. Both assets have lawned areas with mature tree lined boundaries and a mature copse lies to the west creating a sense of privacy. The setting of the assets, therefore, makes on moderate contribution to their value, however, due to intervening mature tree growth providing screening, the setting does not extend to the Order Limits.

3.2.472 The Grade II listed **medium value** 'Kenningham Hall' (**1373056**) is located on the northern flank of Brickkiln Lane, 800 m east of Mulbarton and 90 m from the Order Limits, however, a permanent access route for the Project passes 18 m to the east of the asset. The asset is of evidential and historical value. The hall is a farmhouse built in the 17th century with additions and alterations made in the subsequent centuries. The farmhouse comprises a timber frame structure faced with colour-washed brick with a pantile roof. The asset is associated with the remains of the deserted medieval village of Kenningham represented by earthworks and house platforms (**1010**), the site of the former Kennington Church (**1067**) and geophysical anomalies (**1227**) likely representing medieval settlement activity (see medieval section above). The **low value** estate grounds boundary (**1593**) is of evidential and historical value and can be observed on the 1882 and 1905 1:2500 OS map within the Order Limits and immediately north of Brick Kiln Lane.

3.2.473 The setting of the hall is informed by its relationships with the non-designated assets representing the deserted medieval village of Kenningham and with the farm outbuildings, which except for a large modern barn to the north added in the late 20th and 21st centuries, are recorded on the first edition OS map of 1882. The setting is further informed by the surrounding agricultural landscape with which the asset has a functional and historical relationship. The setting of the hall makes a considerable contribution to its value, and due to open views to the south and east from the farm complex, the setting of the asset extends to the Order Limits.

Swainthorpe CP

3.2.474 The Grade II listed **medium value** 'Glebe Farmhouse' (**1050442**) is located on the northern flank of Church Road, on the western edge of Swainsthorpe and 55 m east of the Order Limits. The asset is of evidential and historical value. The farmhouse was built in the early 17th century and comprises a timber framed structure with plastered and whitewashed wattle and daub infill with a plain tile roof. The asset is situated in mature wooded grounds.

3.2.475 The setting of the farmhouse is informed by its location in Swainsthorpe, its wooded grounds and the agricultural land beyond with which it has a functional and historical relationship. The farmhouse now serves as a domestic dwelling and outbuildings apparent on 19th century OS mapping have gone, thereby reducing its coherence as a farmhouse. The setting of the asset, therefore, makes a minor contribution to its value. The Project lies just 130 m to the west and so the setting of the asset extends to the Order Limits.

3.2.476 The Grade II listed **medium value** assets 'Swainthorpe Hall' (**1373211**) 'Barn 30 Metres South-West Of Swainsthorpe Hall' (**1169732**) are located at the eastern end of an unnamed local road c. 780 m east of the A140 Ipswich Road and c. 1.5 km east of the Order Limits. These assets are of evidential and historical value. The Hall is an early 17th century farmhouse much rebuilt in the 18th and 19th centuries. It is brick-built in English bond and has a mixed pantile roof. The barn is an early 18th century three stead threshing barn. It comprises a timber framed structure with wattle and daub and later brick infill and a pantile roof. The assets are part of the larger Hall Farm complex on the western flank of the Tas Valley much of which is apparent on the first edition OS map in 1882 with additions recorded on early 20th century maps.

3.2.477 The setting of the hall and barn is shared and informed by their relationship with each other and with the other elements of the working farm complex. The setting is further informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. The farm grounds have lawned areas, mature trees and tree lined boundaries whilst the tree lined banks of the Tas lie to the east and south, where the river splits creating a small copse. This setting of the assets instils feelings of seclusion and privacy but also brings an understanding of rural farming practice, therefore, making a considerable contribution to the assets' value. Due to mature tree lined field boundaries, further small copses, topography and development in the intervening landscape, the setting of the asset does not extend to the Order Limits.

Stoke Holy Cross CP

3.2.478 The Grade II listed **medium value** 'The Old House' (**1373208**) is located on the western flank of Norwich Road at the southern limit of Stoke Holy Cross and c. 1.8 km east of the Order Limits. The asset is of evidential and historical value. The house was built in the 18th century and is a timber framed structure with whitewashed brick infill and a thatched roof.

3.2.479 The setting of the house is informed by its relationship with a barn and outbuildings apparent on the first edition OS map of 1882 and by its tree lined grounds and garden area. The mature trees and a small, mature copse to the west create feeling of enclosure and privacy and so its setting, therefore makes a considerable contribution to its value. Due to the copse to the west and further vegetation, development and topography in the intervening landscape, the setting of the asset does not extend to the Order Limits.

3.2.480 The **medium value** Grade II listed 'The Lodge' (**1487137**) is located on the southern edge of the settlement of Stoke Holy Cross along Norwich Road, c. 1.7 km east of the Order Limits. The asset was the lodge built as an entrance lodge for Stoke Hall, probably around 1852-53 when the Hall, stables and outbuildings were built for Henry Birkbeck by Anthony Salvin. The building is first present on the first edition OS map of 1882, shown in a wooded area, then map evidence from 1928 and 1971 show that an extension was built on the north side of the lodge. It is now one of the few

surviving buildings on the estate, as Stoke Hall was demolished around 1936. The lodge is built of red brick in English bonds with applied timber framing to the upper floor and infill panels of herringbone brickwork. The dressings are of rubbed brick and the roof covering of plain clay tiles. The asset is a distinctive and well-preserved example of an early Victorian entrance lodge in the Tudor style and was made by a sought-after architect who specialised in the Tudor style. The build uses asymmetrical elevations and features typically associated with the Tudor period and it is of high aesthetic quality.

3.2.481 The setting of the asset is that of a linear arm of settlement along the Norwich Road, extending from the main settlement of Stoke Holy Cross to the North. The roadside of Norwich Road is densely vegetated, and both sides of the road are lined by mature trees and hedgerows. The asset is set back from the roadside behind a small brick fencing and a trackway leads past the southern side of the asset, likely the old track way to Stoke Hall. The setting of asset has change over time with the addition of residential buildings along Norwich Road close to the asset and the removal of the Halll estate that the estate was designed and built for. The wider landscape either side of Norwich Road is agricultural, likewise to the south the landscape is also agricultural and to the north the centre of the settlement. The setting of the asset has changed greatly over time and as such the asset has lost its historical functional relationship to the landscape and the setting now contributes moderately to its value, indicating the former location and presence of the hall estate. The asset has aesthetic, historical and evidential value. The setting of the asset does not extend to the Order Limits and is restricted to the asset's property grounds.

Bracon Ash CP

3.2.482 The Grade II listed **medium value** assets 'Bracon Hall' (**1373093**) and 'Outbuildings To Bracon Hall' (**1050696**) are located within the hall grounds 280 m north of School Road, 860 m west of Mulbarton and 1.4 km north-west of the Order Limits. These assets are of evidential and historical value. The hall was built in 1833 (although the estate home page states 1820) for the Berney family. It is built in brick with some ashlar and has a black pantile roof. The outbuildings, now dwellings, were built in 1833 of brick with some stone dressings and a black pantile roof.

3.2.483 The setting of the hall and outbuildings is shared and is informed by their relationship and by their shared relationship with the estate grounds. The setting is further informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. The setting of the asset makes a considerable contribution to its value. The estate grounds include mature tree lined boundaries and copses and further tree lined boundaries, copses, and development of Mulbarton and Bracon Ash screen the Order Limits from the assets. The setting of the assets does not, therefore, extend to the Order Limits.

3.2.484 The Grade II listed **medium value** asset 'Bracon Lodge' (**1305225**) is located on the southern edge of Mulbarton 650 m north of the Order Limits. The asset is of evidential and historical value. The lodge is a former farmhouse built in the 18th century. It is constructed of brick with a gault brick façade and a pantile roof.

3.2.485 The setting of the lodge is informed by its relationship with the grounds of the lodge and other associated buildings. The setting is further informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. The lodge grounds include formal gardens, large lawned areas and mature tree cover, particularly to the north and south. The expansion of Mulbarton in

the 20th and 21st centuries has encroached on the assets from the north and east, however, the mature grounds do instil feelings of privacy and peace. The setting of the asset, therefore, makes a moderate contribution to their value. Due to mature tree growth in the south of the lodge grounds and mature tree lined hedgerows, copses and development in the intervening landscape, the setting of the asset does not extend to the Order Limits.

3.2.486 The Grade II listed **medium value** 'Home Farm House' (**1440926**) is in the south of Bracon Ash, 200 m east of the B1113, 230 m north of the Mergate Hall complex (see below) and c. 930 m north-west of the Order Limits. The asset is of evidential and historical value. The farmhouse was built in the early-mid 17th century and comprises a timber framed structure with rendered colour-washed walls and a black glazed pantile roof. The asset was refurbished as a private dwelling in the 1990s.

3.2.487 The setting of the farmhouse is informed by its former farmyard location and its relationship with associated outbuildings, some of which appear on the first edition OS map of 1882. The setting is further informed by the surrounding agricultural landscape with which the asset has a functional and historical relationship. The setting of the asset has been eroded by the loss of agricultural land to the north and east due to domestic development along Hawkes Lane. The mature tree lined hedgerows of the asset's grounds, however, restrict outward views and create a sense of privacy and seclusion. The setting of the farmhouse, therefore, makes a moderate contribution to its value. Due to the mature tree growth of the Bracon Ash Common and Country Wildlife Site to the south and south-east of the asset, its setting does not extend to the Order Limits.

3.2.488 The Grade II listed **medium value** 'Mergate Farmhouse' (**1050690**) is located on the eastern flank of Hawkes Lane close to the southern edge of Bracon Ash and 840 m north-west of the Order Limits. The asset is of evidential and historical value. The farmhouse was built in the 17th century and has 18th and 19th century alterations and additions. The building has a timber frame, rendered walls and pantile and thatched roofs.

3.2.489 The setting of the asset is informed by its associated grounds and by its neighbouring vernacular buildings to the north and south, most of which are recorded on the first edition OS map of 1882. The setting is further informed by the surrounding agricultural landscape with which the asset has a functional and historical relationship. The asset's grounds have mature tree lined boundaries creating a sense of enclosure and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it mature grounds and mature tree lined hedgerows, copses, and development in the intervening landscape, it does not extend to the Order Limits.

3.2.490 The Grade II* listed **high value** asset 'Mergate Hall' (**1050692**) and the **medium value** Grade II listed assets 'Mergate Hall Cottages' (**1373092**) and 'The Dower House, Mergate Hall' (**1050693**) are a group of assets located on the southern flank of Mergate Lane, at the southern extent of Bracon Ash and c. 840 m north-west of the Order Limits. These assets are of evidential and historical value. The hall (**1050692**) was built in the 17th century with 18th and 19th century additions and alterations. It is built of colour washed bricks and has plain tiled and pan tiled roofs. The pair of cottages (**1373092**) were once likely a single farmhouse built around 1700 with later alterations and additions. They are constructed of rendered brick and clay lump with a pantile roof. The Dower House (**1050693**) is a 17th century barn with

a dwelling above. Originally timber framed, the barn rebuilt in brick in 1789. The walls are now colour washed, and the barn has a pantile roof.

3.2.491 The setting of the assets is shared and is informed by the relationship between the designated assets and by their relationships with neighbouring vernacular farm buildings several of which are recorded on the first edition OS map of 1882. The setting is further informed by the surrounding agricultural landscape with which the assets have functional and historical relationships. The map regression and satellite imagery indicate that the farming complex has undergone only gradual small-scale change since 1882, however, what appears to be a yard and storage area can be seen to the east of the assets. The grounds of the assets are mature and comprise garden areas, lawns, and numerous trees, particularly on the boundaries. This creates a sense of enclosure and privacy and, therefore, the setting makes a moderated contribution to the value of the assets. Due to mature tree growth within the assets' grounds and mature tree lined hedgerows and copses in the intervening landscape, this setting does not extend to the Order Limits.

3.2.492 The Grade II* listed **high value** assets 'Church Farm House' (**1379811**), 'Barn And Attached Outbuildings At Church Farm' (**1379809**) and 'Cart Shed At Church Farm' (**1379810**) are located on the western flank of Rectory Lane 1.1 km north-west of the Order Limits. These assets are of evidential and historical value. The farmhouse (**1379811**) was built in the late 17th century and has a mid-18th century east wing and 19th century alterations. The asset comprises a rendered timber frame with a brick built east wind and a plain tile roof. The barn and stables (**1379809**) were built in the 17th century and underwent extension and remodelling in the 18th and 19th centuries. The core of the building is timber framed with wattle and daub infill whilst the 19th century additions are in clay lump with Flemish bond brickwork. The roof is of pantile. The 18th century cart shed (**1379810**) is timber framed with wattle and daub infill and a pantile roof. The Church House Farm assets are an important and little altered group of 18th and 19th century farm buildings in the vernacular tradition.

3.2.493 The setting of the assets is shared and is informed by the relationship between the designated assets and their relationship with other elements of the legible farming complex. The setting is further informed by the surrounding agricultural land with which the assets have a historic and functional relationship. The assets are situated in well-established grounds containing mature trees and defined by mature tree lined hedgerows, which creates a sense of privacy and enclosure. This setting makes a considerable contribution to the value of the assets; however, due to the mature grounds and copses, tree lined boundaries and the development of Bracon Ash in the intervening landscape, it does not therefore, extend to the Order Limits.

3.2.494 The **medium value** Grade II listed 'Little Potash' (**1050694**), is located down a private track off of Potash Lane, c. 1.8 km north-west of the Order Limits. The asset is a late 16th or early 17th century cottage with a lobby-entrance. The asset has a timber-frame with a brick plinth, rendered brick infill and a pantile roof. The asset comprises two storeys and attic, with a timber-framed lean-to on the north side.

3.2.495 The setting of the asset is set in private grounds, set back from Potash Lane, and is lined by dense mature vegetation, visually shielding it on all sides. There has been substantial development surrounding the property, immediately to the east is a large hanger style barn and to the north is a very large complex of buildings associated with the car company Lotus and a large test track for their cars, which is situated upon the former site of RAF Hethel. To the north-east is a large patch of dense woodland and to the west beyond the test track are large open fields. To the south,

there are more agricultural fields but also a more modern development. As such the setting of the asset contributes minorly to the value of the asset. The asset has historical and evidential value, and the setting of the asset is restricted to the grounds of the property and as such does not extend to the Order Limits.

3.2.496 The **medium value** Grade II listed 'Corporation Farmhouse' (**1373054**) is located on Wymondham Road c. 1.5 km north-west of the Order Limits. The asset is a lobby-entrance type farmhouse, 17th century or later in date. The asset is built in colour-washed brick and has a 19th century gault brick façade and black pantile roof.

3.2.497 The setting of the asset is informed by its farm complex setting which comprises multiple barn buildings and hanger-like barns. It appears to be that the asset is still part of a working farm, as well as housing a Bed and Breakfast, and as such has retained the historical function relationship with the landscape. The wider setting is an agricultural landscape with the Lotus Car Company site to the north of the asset, which is a dominating feature in the landscape. The setting of the asset contributes greatly to its value and the setting of the asset does not extend to the Order Limits, with the B1135 and B1113 dividing the agricultural landscape between the asset and the Order Limits. The asset has evidential and historical value.

Wreningham CP

3.2.498 The **high value** Grade II* listed 'High House Farmhouse' (**1373111**) is located along Wymondham Road, c. 2.8 km west of the Order Limits. The asset is a farmhouse built in c. 1640 of colour-washed bricks with corrugated tile roofing. The asset has an L shape plan, formed by a slightly lower service wing to the rear. The asset comprises two storeys and an attic.

3.2.499 The setting of the asset is informed by its position within the hard standing on the property and barn buildings associated with the farm. On the northern and eastern side of the asset are formal gardens and the driveway leading to the asset is lined by are row of careful planted trees either side of the trackway. The assets grounds are surrounded by agricultural fields and a dense patch of woodland to the north and north-east. To the north-west of the asset is a large poultry farm consisting of many large hanger-like barns which is a dominating feature in the landscape. The setting of the asset contributes considerably to its value with the formal gardens and farm complex intact and despite the addition of the large poultry farm to the north-west. The asset has aesthetic, historical and evidential value and the setting of the asset does not extend to the Order Limits, separated by distance, intervening settlements and roads.

Shotesham CP

3.2.500 The Grade II listed **medium value** 'The Mill House' (**1304779**) is in the western half of the two-part Shotesham Conservation Area (**CA53**) at its northern limit, 1.9 km south-east-east of the Order Limits. The asset is of evidential and historical value. The conservation area maps the extent of the formal parkland associated with Shotesham Hall. The mill is situated on the eastern bank of the Tas, and a leat runs to the south and east. The asset is the former miller's house built in the early 19th century of brick with a pantile roof.

3.2.501 The setting of the house is informed by the building's relationship with other structures of the mill complex, although the mill building itself has gone, and its location on the riverbank. The house is situated on the shallow valley floor with

mature tree growth all around and the river and leat in attendance creating a sense of peace and tranquillity. The setting of the asset, therefore, makes a considerable contribution to its value but does not extend to the Order Limits.

3.2.502 The Grade I listed **high value** 'The Hall' (**1304783**) and the Grade II **medium value** listed asset 'The Stables And Outhouses To The Hall' (**1373090**) are located at the heart of Shotesham Conservation Area, which maps the extent of the formal parkland associated with the hall complex. These assets are 2 km south-east of the Order Limits. These assets are of evidential and historical value. The hall (**1304783**) is a large country mansion built in 1784 by Sir John Soane in gault brick with stone dressings and slate roof. The asset comprises a square main block with a lower service block to the north. The stables, cart shed, and outhouse (**1373090**) are located immediately north-north-west of the hall and were also built in 1784 by Sir John Soane. The asset is built of gault brick and has a pantile roof. The cottage and is located 150 m north-east of the hall and stables. The asset is the former gardener's cottage with a contemporary walled garden built around 1970 and probably associated with Sir John Soane. It is red brick built and has a pantile roof.

3.2.503 The setting of the assets is shared and is informed by the relationship between the designated assets and with the parkland. The assets are largely surrounded by a mature copse with just the hall having an open view to the south-south-east and the parkland beyond. The park contains further copses, and the boundaries are thickly wooded creating a sense of privacy and open seclusion. The setting of the assets, therefore, makes a considerable contribution to their values, but due to the intervening topography and mature tree cover it does not extend to the Order Limits.

3.2.504 The **medium value** Grade II listed 'Lodge To Shotesham Park' (**1304883**) is located on the eastern flank of the A140 Ipswich Road at the south-western limits of the Shotesham parklands and c. 1.2 km south-east of the Order Limits. The asset is of evidential and historical value. It is located within the parish of Newton Flotman but is reported here due to its relationship with Shotesham Hall. In keeping with the hall, it dates to the late 18th century and is constructed of gault brick with a slate roof and is probably associated with Sir John Soane.

3.2.505 The setting of the lodge is informed by its roadside location at the south-western entrance to the Shotesham parklands and the hall beyond. The single storey asset is associated with an ornate wrought iron fence and gate with the view to the road broken by garden vegetation. Although the A140 now carries modern traffic resulting in noise and pollution, the asset is still very much legible as an element of the Shotesham estate complex and so its setting makes a considerable contribution to its value. The view to the west and north-west towards the Order Limits is interrupted by mature tree growth on the western flank of the A140, and by topography, mature tree lined hedgerows, development, and copses in the intervening landscape. The setting of the asset, therefore, does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.506 The geophysical survey of a field 1 km east of Mulbarton and partially within the Order Limits, identified a complex of anomalies (**1227**) of evidential value some of which likely represent an area of **medium value** medieval occupation, potentially associated with the adjacent deserted settlement of Kenningham (**1010**) immediately to the north and west. The survey also identified an extensive network of straight linear anomalies of evidential value that are likely to represent former **low value** boundaries of post medieval date.

3.2.507 The geophysical survey of a field 850 m east of Mulbarton and partially within the Order Limits identified a complex of anomalies (**1287**). The survey area lies immediately north of Brick kiln Lane and several of the anomalies have been interpreted as the possible remains of **low value** kilns and backfilled extraction pits. Linear anomalies are considered to represent the remains of **low value** post medieval field boundaries.

3.2.508 The geophysical survey of land 410 m south-south-west of Swainsthorpe and clipping the eastern flank of the Order Limits identified two **low value** linear anomalies (**1303**) of evidential value, which likely represent the remains of post medieval field boundaries.

3.2.509 A complex of cropmarks (**1222**) likely related to **low value** post medieval drainage features of evidential value is located 200 m north-west of Swainsthorpe and partially within the Order Limit.

3.2.510 A complex of cropmarks (**1223**) is located 680 m south-west of Swainsthorpe and clipping the easter flank of the Order Limits. The anomalies are interpreted as **low value** post medieval field boundaries of evidential value that predate 19th century Tithe and OS mapping.

3.2.511 The geophysical survey of a field 950 m east-south-east of Mulbarton and 10 m east of the Order Limits identified **low value** scattered linear and discrete anomalies (**1297**). Most of the anomalies are undated, but two linear features likely represent post medieval field boundaries of evidential value.

3.2.512 The geophysical survey of a field immediately south of Brick kiln Lane, 900 m east of Mulbarton and clipping the eastern flank of the Order Limits identified **low value** scattered linear and discrete anomalies (**1055**) of evidential value. Two of the discrete anomalies may represent brick kilns, whilst a former post medieval field boundary is recorded.

3.2.513 There are two **low value** timber frame barns and attached brick stables (**1336**) of historical and evidential value on Hill Farm c. 940 m north-east of Wreningham and c. 35 m north of the Order Limits. The barns likely date to the 18th century and were formally thatched, whilst the stables are 19th century with one in English bond and the other in Flemish bond.

3.2.514 The former **low value** Henstead Union Workhouse and Vale Hospital (**1312**) is located 240 m west of Swainsthorpe, north of Church Road and partially within the Order Limits. It holds evidential, historical and aesthetic values. Henstead Union Workhouse was built in 1836 to house a maximum of 250 inmates. The building was constructed on a double cruciform and bricks manufactured in the Swainsthorpe brickyard were used. In 1948 it became part of the NHS as Vale Hospital, providing care for the elderly mentally ill. The hospital was closed in 1984 and the buildings converted for residential use.

3.2.515 The geophysical survey of a field on the south-eastern outskirts of Mulbarton and c. 60 m north-west of the Order Limits identified **low value** anomalies comprising field boundaries and a possible kiln (**1033**) of evidential value. One of the field boundaries had previously been identified as a cropmark (**1150**). A subsequent archaeological excavation identified the heavily truncated remains of a handmade brick clamp kiln likely dating to the 17th or 18th centuries (Muldowney 2013). The identified anomalies and archaeological features are of **low value**.

3.2.516 A **medium value** 17th century timber-framed barn (**1306**) is located at Church Farm on the western edge of Swainsthorpe and 120 m east of the Order Limits. The barn is of evidential and historical value and has 17th century timber frames with arched braces supporting tie beams. There is a 19th century clay lump extension.

3.2.517 A geophysical survey of land immediately north of Brick Kiln Lane, 850 m south-south-west of Swainsthorpe and 390 m east of the Order Limits identified **low value** anomalies (**1011**) comprising undated features and a probable post medieval field boundary of evidential value.

3.2.518 Further evidence of post medieval activity of evidential value in the Swainsthorpe and Mulbarton area is represented by findspots, and artefacts recovered during fieldwalking and metal detector surveys. The assets are **low value** unless otherwise stated, and comprise:

- Post medieval pottery sherds and clay pipe fragments in a multi-period finds assemblage (**1229**) recovered from farmland 980 m east of Mulbarton, immediately south of Church Road and partially within the Order Limits
- A post medieval copper alloy clapper bell, two crotal bells, coin and buckle, a glass vessel fragment, pottery sherds, clay pipe fragments and ceramic building material in a multi-period finds assemblage (**1230**) recovered from farmland on the western flank of Swainsthorpe, immediately south of Church Road and partially within the Order Limits
- Post medieval pottery sherds and clay pipe fragments in a multi-period finds assemblage (**1234**) recovered from farmland 1.1 km south-south-west of Swainsthorpe, immediately south of Brick Kiln Lane and partially within the Order Limits
- Post medieval pottery sherds and clay pipe fragments in a multi-period finds assemblage (**1238**) recovered from farmland 610 m east of Mulbarton and partially within the Order Limits
- Post medieval pottery sherds and clay pipe fragments (**1239**) recovered from farmland 860 m east of Mulbarton and partially within the Order Limits
- A post medieval copper alloy buckle, dress hook, clapper bell, coin and token, a silver coin, and pottery sherds in a multi-period finds assemblage (**1233**) recovered from farmland 850 m south-west of Swainsthorpe, immediately north of Brick Kiln Lane and partially within the Order Limits
- Post medieval ceramic building material, pottery sherds, clay pipe fragments and glass vessel fragments in a multi-period finds assemblage (**1278**) recovered from farmland 1.6 km south-south-west of Swainsthorpe, immediately south of Mulbarton Lane and partially within the Order Limits
- Post medieval pottery sherds and clay pipe fragment in a multi-period finds assemblage (**1235**) recovered from farmland 1.6 km south-south-west of Swainsthorpe, immediately south-west of Mulbarton Lane and just clipping the eastern flank of the Order Limits
- Post medieval ceramic building material, pottery sherds, clay pipe fragments and glass vessel fragments in a multi-period finds assemblage (**1277**) recovered from farmland 1.3 km south-south-west of Swainsthorpe and clipping the eastern flank of the Order Limits

- A post medieval copper alloy harness mount, clay pipe fragments and pottery sherds including Glazed Red Earthenware and Staffordshire combed slipware in a multi-period finds assemblage (**1195**) recovered from farmland on the western limits of Swainsthorpe, immediately north of Church Street and just clipping the western flank of the Order Limits
- Fragments of post medieval ceramic building material, pottery sherds and a glass vessel fragment in a multi-period finds assemblage (**1275**) recovered from farmland 1.4 km south-south-west of Swainsthorpe, immediately north of Mulbarton Lane and 130 m east of the Order Limits
    - A post medieval book clasp, thimble, furniture drop handle, Jew's harp, hinged luggage fitting and cloth seal in a multi-period finds assemblage (**1304**) from farmland c. 500 m south-west of Bracon Ash and c. 25 m north-east of the Order Limits.

Cropmark and LiDAR Assessment

3.2.519 **Low value** linear cropmarks of evidential value have been identified by the Project between Church Road to the north and Brickkiln Lane to the south, both west (**1540**) and south-west (**1541**) of Swainthorpe and partially within the Order Limits. The cropmarks largely correspond with field boundaries recorded on the first edition OS map and are, therefore, likely later medieval to post medieval in date. There is, however, a partial circular cropmark with a large internal feature within the Order Limits immediately east of the Kenningham Hall farming complex, this asset, which is not recorded on OS mapping, may represent a former pond.

3.2.520 **Low value** linear cropmarks (**1542**) of evidential value have been identified by the Project north and south of Brickkiln Lane, c.820 m south-west of Swainsthorpe and partially within the Order Limits. The cropmarks correspond with a parish boundary and field boundaries recorded on the first edition OS map and are, therefore, likely later medieval to post medieval in date. The complex also includes three large (30 – 40 m in diameter) undated circular and subcircular cropmarks and one smaller (c. 10 m diameter) which is associated with a partial sub-circular enclosure.

3.2.521 **Low value** linear cropmarks (**1509**) of evidential value have been identified by the Project east of Long Lane, c. 300 m south of Mulbarton and partially within the Order limits. The cropmarks correspond with field boundaries recorded on the first edition OS map and are, therefore, likely later medieval to post medieval in date.

Historic Mapping Assessment

3.2.522 A series of **negligible value** ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of three ponds are located within the Order Limits (**1569**, **1581**, **1582**)
- A total of 15 ponds are located within 250 m of the Order Limits (**1570**, **1571**, **1572**, **1573**, **1574**, **1576**, **1578**, **1579**, **1585**, **1588**, **1589**, **1590**, **1591**, **1592**, **1594**).

3.2.523 A **low value** gravel pit (**1568**) of evidential value can be observed on the 1881 1:10560 OS map and 1882 1:2500 OS map approximately 90 m north-west of the Order Limits and 40 m north of Church Road.

3.2.524 Two **low value** parish boundaries (**1542** and **1781**) of evidential and historical value, has been identified crossing the Order Limits and throughout the 250 m Study Area within this sub-section. This boundary can all be observed on the 1881 1:10560 OS Map and is also partially visible as cropmarks. It is unknown to what extent the boundary may physically be extant within the landscape.

3.2.525 The **low value** 'Bloys Grove' woodland copse or plantation (**1575**) of evidential and historical value is located approximately 70 m east of the Order Limits and 420 m west of Shotesham Road. This woodland copse is first seen on the 1881 1:10560 OS map and is still extant within the landscape.

3.2.526 The **low value** 'Pages Plantation' woodland plantation (**1580**) of evidential and historical value is located immediately adjacent to the Order Limits and approximately 370 m north-west of Greenways. This woodland copse is first seen on the 1882 1:2500 OS map and is still extant within the landscape.

3.2.527 The **low value** 'Sheepwalk Plantation' woodland plantation (**1583**) of evidential and historical value is located partially within the Order Limits approximately north-west of Greenways. The woodland copse is first observed on the 1882 1:2500 OS map and is last observed on the 1951 1:2500 map.

3.2.528 The **low value** 'Ash Wood' woodland copse (**1584**) of evidential and historical value is located approximately 110 m west of the Order Limits and approximately 180 m east of Long Lane. The woodland copse was possibly a plantation and is first observed on the 1882 1:2500 OS map. The copse is last observed on the 1951 1:2500 map and is no longer extant within the landscape.

3.2.529 The **low value** 'Ten Acre Plantation' woodland copse (**1586**) of evidential and historical value is located approximately 115 m east of the Order Limits and 220 m west of Greenways. The woodland copse is first observed on the 1882 1:2500 OS map. The copse is last observed on the 1951 1:2500 map and is no longer extant within the landscape.

3.2.530 The **low value** 'Oak Plantation' woodland copse (**1596**) of evidential and historical value is located partially within the Order Limits and approximately 200 m east of Long Lane. The copse can only be observed on the 1882 and 1905 1:2500 OS map and is no longer extant within the landscape.

3.2.531 The **low value** 'Butchers Plantation' woodland copse (**1597**) of evidential and historical value is located partially within the Order Limits and immediately west of Long Lane. The plantation can first be observed on the 1882 1:2500 OS map and is still extant within the landscape.

3.2.532 The **low value** location of a former building (**1577**) of evidential and historical value is located approximately 120 m south-west of the Order Limits and immediately east of Shotesham Road. The building is first observed on the 1905 1:2500 OS map and last observed on the 1994 1:2500 OS map. The building is not visible on current aerial imagery.

3.2.533 A **low value** building recorded as 'Folly Lodge' (**1587**) of evidential and historical value has been observed approximately 160 m north of the Order Limits and 25 m west of Long Lane, can first be observed on the 1882 1:2500 OS map. A building can still be observed at this location; however, it is unknown if the current building is the same as the one observed on the 1882 map.

3.2.534 A **low value** building described as a 'ruin' (**1588**) of evidential and historical value has been observed approximately 80 m south-east of the Order Limits and 20 m north of Greenways. The building is only observed on the 1882 1:2500 OS map and is no longer extant within the landscape.

Flordon and Fundenhall

Designated Heritage Assets

Newton Flotman CP

3.2.535 The **medium value** Grade II listed 'Monks Farmhouse' (**1050705**) is located on the north-western flank of the Greenways, 800 m north-west of Newton Flotman and 400 m south-east of the Order Limits. The asset is of evidential and historical value. The former farmhouse was built in the 17th century and has 19th and 20th century alterations and additions. The core of the structure is of timber frame construction with the 19th century wing built in colour-washed brick. The roofs are of pantile and plain tiles. The asset is associated with a **medium value** large clay lump timber frame barn (**1201**) of evidential and historical value to the east.

3.2.536 The setting of the farmhouse and barn is informed by their relationships with the other buildings of the former farming complex, several of which are recorded on the first edition OS map of 1882. The setting is further informed by the surrounding agricultural landscape with which the assets have historical and functional relationships. The farmhouse has a lawned garden to the west and south defined by hedgerows and trees, and associated outbuildings to the east including the barn (**1201**). Beyond the garden and outbuildings are grassed paddocks defined by mature tree lined hedgerows. Due to the mature tree cover of the asset's grounds and paddocks, the setting of the assets does not extend to the Order Limits.

3.2.537 The **medium value** Grade II listed Hall Farmhouse (**1373060**) is located just beyond the north-eastern limit of Rainthorpe Hall Parkland (**1000292**) 1.6 km south-east of the Order Limits. The asset is of evidential and historical value. The building has 17th century origins and has a rendered timber frame with some brick re-facing. The building has been maintained and added to up until the 20th century.

3.2.538 Based on cartographic and satellite imagery evidence, the setting of the asset has become increasingly wooded, and much of the enclosed farmland, particularly to the north-east of the asset towards Newton Flotman and immediately to the north has been lost. It is, however, possible to understand the Farmhouse and attendant outbuildings as a farming complex through its rural location, its layout, and the interplay between the complex elements. The setting of the asset, therefore, makes a moderate contribution to its value, but due to intervening tree cover, the setting does not extend to the Order Limits.

3.2.539 The **medium value** Grade II listed 'The Firs' (**1050052**) is located within the settlement of Lower Tasburgh, along Low Road, c. 1.9 km south-east of the Order Limits. The asset is an early-mid 19th century stuccoed house, with a pantile roof with gabled ends.

3.2.540 The assets setting contributes moderately to its value, in a central village location, set back from the road behind medium height brick wall and a large, gravelled driveway. The asset is surrounded by other residential properties, some of which are modern. Opposite the property is a grassed trackway which leads to the agricultural fields to

the south. The wider landscape is rural with the Rive Tas to the north of the asset. The asset has historical, evidential and aesthetic value and the setting of the asset does not extend to the Order Limits and rather is restricted to the property grounds and its central village location.

3.2.541 The **medium value** Grade II listed 'Cottage Farmhouse' (**1302126**) is located within the settlement of Lower Tasburgh, along Low Road, c. 1.9 km south-east of the Order Limits. The asset is a 17th century or earlier timber-framed cottage which has been plastered and has a thatched roof. One end of the roof has brick gabling containing an internal stack and the other end is half-hipped. To the front of the house is a 19th/20th century single storey lean-to.

3.2.542 The assets setting contributes moderately to its value, in a central village location situated slightly back from the road by a gravel driveway. Low Road is lined with much mature vegetation, and the village has a rural leafy atmosphere. The asset is close to other listed characterful assets but also some modern builds. To settlement is surrounded by an agricultural landscape with patches of dense woodland and mature hedgerows close to the settlement, particularly to the north. The asset has historical and evidential value, and the setting of the asset does not extend to the Order Limits and rather is restricted to the property grounds and its central village location.

3.2.543 The **medium value** Grade II listed 'The Limes' (**1050053**) is located within the settlement of Lower Tasburgh, along Low Road, c. 2 km south-east of the Order Limits. The asset is a 17th century timber-framed and plastered house with a steep hipped pantile roof. The asset comprises two storeys and has a later brick lean-to on the east end and a one storey brick wing on the west end.

3.2.544 The setting of the asset contributes moderately to its value, set within a central village position, set back from the road behind a large gravel driveway. The roadside is lined by establish vegetation and there are some characterful and some modern property near the asset. To the south of the asset is a large agricultural field. The asset has evidential, aesthetic and historical value and the setting of the asset does not extend to the Order Limits but rather is contained within the grounds of the property and its central village location.

3.2.545 The **medium value** Grade II listed 'Water Mill and Mill House' (**1050051**) is located within the settlement of Lower Tasburgh and is situated over the river Tas, c. 1.8 km south-east of the Order Limits. The asset is a 18th-19th century water mill which has been converted into a house. The ground floor is made of brick which has been painted and above that is weatherboard. The asset has a pantile roof with gabled ends, and the asset comprises three storeys.

3.2.546 The setting of the asset contributes moderately to its value, located at the centre of the village of Lower Tasburgh and situated upon the river Tas which plays a key part of the historical and functional relationship between the asset, its historical purpose and the landscape. The asset is set back from Low Road by a mature hedge and grassed garden and opposite the asset are modern residential properties. The surrounding landscape is largely rural with some agricultural fields and many mature hedgerows crossing the landscape. The asset has evidential, aesthetic and historical value and the setting of the asset is confined to the property grounds containing the asset and as such the setting does not extend to the Order Limits.

Flordon CP

3.2.547 The **high value** Grade II* 'Flordon Hall' (**1050698**) and the **medium** value Grade II assets 'Piggery 60 Yards South of Flordon Hall' (**1172231**) and 'Barn to Flordon Hall' (**1373055**) are located in a former farmyard 600 m north-east of Flordon Road, 600 m north-north-west of Flordon and 160 m south-east of the Order Limits. These assets are of evidential and historical value. The former farm complex is accessed by a private road off Flordon Road. The Hall (**1050698**) bears arms on the porch of Robert Kemp and Dorothy née Harris and so was likely constructed between 1595 and 1612. The structure is underbuilt rendered timber frame with a brick porch and brick gables to the wings and plain and pantile roofs. There has been limited 19th and 20th century alterations and additions. The barn (**1373055**) was built in the 17th century and comprises a weather boarded timber frame structure with a corrugated asbestos roof. The piggery (**1172231**) was possibly built as a dower house to Flordon Hall around 1600. It is brick built and has a corrugated asbestos roof. The **low value** possible estate grounds and access of Flordon Hall (**1608**) of evidential and historic value can be observed on the 1882 1:2500 OS map, with the northern-most field also recorded as bog and latterly a woodland copse. A **low value** post medieval dovecote (**1370**) of evidential and historical value is located within the hall's ground. The dovecote has two floors and is constructed of timber with a tiled roof.

3.2.548 The setting of the assets is shared and is informed by the relationship between the designated assets and their relationship with the other later elements of the farmyard. This setting is further informed by the surrounding agricultural landscape with which the assets have a functional and historical relationship. The hall is situated to the north of the other farm buildings within mature, tree lined grounds with lawned areas and a kitchen garden. The setting of the assets instils a sense of seclusion and privacy and promotes an understanding of the farming industry. This setting, therefore, makes a moderate contribution to the value of the assets, and due to the proximity of the Project and inadequate screening, it extends to the Order Limits.

3.2.549 The **medium value** Grade II listed 'The Old Rectory' (**1305227**) is located along The Street on the western edge of the settlement of Flordon, c. 1.1 km south-east of the Order Limits. The asset is a former rectory dating from the 18th century with a 19th century rear pile. The asset is built of rendered clay lump with brick quoins and plinth with a thatched roof. The asset comprises to storeys and attic, and the roof of the asset is pantile and corrugated pantile.

3.2.550 The setting of the asset is informed by its location in the settlement of Flordon close to the village church, which the rectory would have historically been associated with. Good Maps imagery indicates that an extensive and well-manicured maze-like garden is located to the east of the Rectory, however it is unclear whether or not this garden is part of the Rectory grounds. There is much mature vegetation surrounding the Rectory as well as much of the rest of the small settlement, and to the south of the asset the dense woodland and vegetation extends into the agricultural landscape. There is some modern development within the village, but the leafy rural village atmosphere is still present. The wider landscape is predominantly an agricultural landscape with a railway line passes close-by to the east of the asset. The asset has aesthetic, historical and evidential value and the setting contributes considerably to its value. The setting of the asset does not extend to the Order Limits and rather is confined to the asset's grounds and its presence within the centre of the village and placement close to the village church.

3.2.551 The setting of the parkland 'Rainthorpe Hall' (**1000292**) is defined by internal views, its relationship with the Rainthorpe Hall complex and the Tas which forms the south-

eastern boundary of the parkland. In the direction of the Order Limits to the north-west, the park boundary is defined by the West and East Belts comprising 30-50 m wide strips of mature woodland that exclude external views and emphasise the insular nature of the park. There has been very limited 19th and 20th century residential development south and south-east of the park along Saxlingham Lane and the Taswood Lake fishery with its associated woodlands to the west of the park and the Hethersett and Tas Cricket Club to the north-west have been developed from the latter half of the 20th century. There has also been more considerable infill development of Newton Flotman and linear development along Flordon Road in the 20th and 21st centuries, which has encroached to within 600 m of the park's eastern boundary. The land between Flordon Road to the north-west and the Tas to the south-east is now a heavily wooded area, replacing the open farmland recorded on 20th century OS mapping. The woodland area to the east of the park and the lakes and woodland to the west are in keeping with a nature of the park and, therefore, create a sense of the park extending beyond its actual boundary. These landscape features, therefore, provided the park with a buffer zone greatly restricting the effect of external structural development on the setting of the park and allow the setting of the park to make a moderate contribution to its value. The insular nature of the parkland ensures its setting does not extend to the Order Limits.

Wreningham CP

3.2.552 The **medium value** Grade II listed 'Bird-in-Hand P.H.' (**1304733**) is located on the eastern edge of Wreningham at the junction of Church Road and the B1113 Norwich Road. The asset is of evidential and historical value. The Order Limits lies 730 m to the north-east. The public house was built in the early 19th century of brick with a pantile roof.

3.2.553 The setting of the asset is informed by its roadside location serving travellers on the Norwich Road. The view to the south-east is interrupted by topography and mature tree lined hedgerows and so the setting of the asset does not extend to the Order Limits.

3.2.554 The **medium value** Grade II listed 'The Old Homestead' (**1050652**) is located along river View within the settlement of Toprow, c. 630 m north-west of the Order Limits. The asset is a 17th century timber-framed cottage which has been rendered and weatherboarded, with one returned colour-washed brick gable-end. The roof is thatched, and the asset comprises one storey with an attic. There have been some 20th century alterations to the property including fenestration of metal casements on the windows and a gabled porch added.

3.2.555 The setting of the asset contributes moderately to its value, and it is informed by its central location within the small linear settlement of Toprow. The land surrounding Toprow is largely agricultural, with patches of dense woodland and mature hedgerows. There has been some modern development in the village but the rural leafy village atmosphere has been maintained. The asset has aesthetic, evidential and historical value. The setting of the asset is restricted to the grounds of the asset and its central village location and as such the setting of the asset does not extend to the Order Limits.

3.2.556 The **medium value** Grade II listed 'Glastonbury Cottage' (**1304706**) is located on the northern flank of High Road in Toprow, 890 m north-east of Fundenhall and 590 m north-west of the Order Limits. The asset is of evidential and historical value. The single dwelling was once two cottages, the first built in 1694 with the eastern half

added in the 18th century. The asset is a rendered timber framed structure with a thatched roof.

3.2.557 The setting of the asset is informed by its location within the settlement and its view out over open farmland to the south. The setting has been slightly eroded by 20th century development and so makes a moderate contribution to the asset's value. There are broken long range views to the south, but due to the restricted nature of the setting, it does not extend to the Order Limits.

Ashwellthorpe and Fundenhall CP

3.2.558 The **medium value** Grade II listed 'The Grange' (**1373562**) is located 230 m south of High Road in the southern limits of Toprow and 560 m north-west of the Order Limits. The asset is of evidential and historical value. The house was built in the 18th century with a rear wing added in the late 18th to early 19th centuries. The house is brick built and has a pantile roof.

3.2.559 The setting of the grange is informed by its location within its mature grounds and by glimpsed view of former farm buildings to the south, several of which are recorded on the first edition OS map of 1882. The setting instils feelings of privacy and seclusion and makes a considerable contribution to the value of the asset. The grounds of the asset and those of the former farm building to the south are heavily wooded and screen views south and south-westwards, the setting of the asset does not, therefore, extend to the Order Limits.

3.2.560 The **medium value** Grade II listed 'Walk Farmhouse' (**1049668**) is located on the Walk Farm complex 400 m south-east of Fundenhall and 310 m north-west of the Order Limits. The asset is of evidential and historical value. The house is probable 17th century in date and comprises a plastered Timber frame structure with a steep black glazed pantile roof.

3.2.561 The setting of the farmhouse is informed by its location within its grounds and its relationship with later elements of the farming complex. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. the setting of the asset, therefore, makes a considerable contribution to its vale, but due to its restricted nature, and mature tree cover in the asset's grounds, the setting does not extend to the Order Limits.

3.2.562 The **medium value** Grade II listed 'The Smithy' (**1049673**) is located immediately north of the junction of Wymondham Road and the B1113 Norwich Road, at the northern end of Fundenhall and 590 m north-west of the Order Limits. The asset is of evidential and historical value. The smithy, recorded on the first edition OS map of 1882, was built in the mid-19th century, and comprises roughcast clay lump on a brick plinth and a pantile roof. The asset is now two semi-detached cottages.

3.2.563 The setting of the asset is informed by its roadside location, however, due to its change in function, loss of contemporary structures and encroaching 20th century development, the setting does not contribute to its value. The asset is now located within the grounds of Anvil House, which are lined with mature trees. This tree cover, and development, mature tree lined hedgerows and a copse in the intervening landscape screen the asset from the Project and so the setting of the asset does not extend to the Order Limits.

3.2.564 The **medium value** Grade II listed 'King's Head Public House' (**1306389**) is in Fundenhall, on the western flank of the B1113 Norwich Road and 570 m north-west

of the Order Limits. The asset is of evidential and historical value. The asset was built in the 18th century with additions made in the 19th century. The walls are stuccoed, and it has a pantile roof.

3.2.565 The setting of the asset is informed by its roadside location serving travellers on the Norwich Road and by open views of agricultural land to the south-east. The public house has retained its function and 20th century development is screened from the asset by mature trees. The setting of the asset, therefore, makes a considerable contribution to the value of the asset, and due to its restricted roadside nature, the setting of the asset does not extend the Order Limits.

3.2.566 The **medium value** Grade II listed 'Ashwellthorpe Hall' (**1049674**) is located off a private road north of The Street, Ashwellthorpe and 1.5 km north-west of the Order Limits. The asset is of evidential and historical value. The hall is a brick-built house dating to around 1600, which was extended to the south in 1831 and north in 1845 in red brick in the Tudor style. It has a steep, slated roof. The asset and associated outbuildings are situated on a moated site, now partially dry.

3.2.567 The setting of the asset is informed by its relationship with the other buildings of the hall complex to the south-south-east and with the likely medieval moat. The grounds of the hall now extend beyond the moat and include vehicle access, boundaries defined by mature tree lined hedgerows, lawned areas and numerous mature trees. A second moat and associated pond lay at the south of the grounds. There has been some 20th century domestic development to the south and east of the asset, but the mature grounds ensure a sense of seclusion and privacy is maintained. The setting of the asset, therefore, makes a considerable contribution to its value, however, due to the mature grounds and development, mature tree lined hedgerows and a copse in the intervening landscape, the setting does not extend to the Order Limits.

3.2.568 The **medium value** Grade II listed 'Rectory Farmhouse' (**1049677**) is located on the north-western flank of Whipps Lane/Church Lane at the south-western extent of the dispersed settlement of Fundenhall and 1.2 km west of the Order Limits. The asset is of evidential and historical value. The farmhouse is a 17th century rendered timber frame structure with a thatched roof.

3.2.569 The setting of the asset is informed by its association with the other buildings within the former Rectory Farm complex, many of which are recorded on the first edition map of 1884. The setting is also informed by the surrounding agricultural landscape with which the farmhouse and farming complex have a historic and functional relationship. The Grange (**1373563** – see below) is located 90 m to the south-east, but intervening tree cover and mature hedgerows screens any intervisibility between the assets. Rectory Farm appears to be no longer working, and the outbuildings have been converted into dwellings/holiday homes. The loss of functionally obscures, to a degree, the legibility of the farming complex and so the setting of the assets makes a moderate contribution to its value. Due to the mature hedges and trees along Whipps Lane/Church Lane and development, copses and mature tree lined hedgerows in the intervening landscape, however, the setting of the asset does not extend to the Order Limits.

3.2.570 The **medium value** Grade II listed 'The Grange' (**1373563**) is located on the south-eastern flank of Whipps Lane/Church Lane at the south-western extent of the dispersed settlement of Fundenhall and 1.1 km west of the Order Limits. The asset is of evidential and historical value. The grange likely dates to the 17th century and comprises a roughcast, partly brick-faced timber frame structure with a steep pantile roof.

3.2.571 The setting of the grange is informed by its location within the Grange Farm complex and by its relationship with the other farm building, many of which are recorded on the first edition OS map of 1884. The setting is also informed by the surrounding agricultural landscape with which the asset and farm have a historical and functional relationship. The 1907 OS map suggests the grange was associated with a modest area of parkland to the east and whilst the boundaries have been maintained, the land appears to be now used for grazing. The grange still maintains an open view of this land. The setting of the asset, therefore, makes a considerable contribution to its value. Due to mature tree lined hedgerows and development in the intervening landscape, the setting of the asset does not, however, extend to the Order Limits.

3.2.572 The **medium value** Grade II listed assets 'Rattees' (**1170238**), located immediately north-east of the junction of the B113 The Turnpike and Rattees is an early 19th century built of red brick with a low-pitched hipped roof.

3.2.573 The setting of the asset is informed by its location on the southern edge of the small linear settlement of Fundenhall, within the associated property grounds, which encompass another building, lawned areas and mature tree lined hedgerow boundaries, which creates a sense of privacy. The surrounding landscape is that of an open agricultural setting, with The Turnpike, Norwich Road and Fundenhall Road dividing the rural landscape close to the asset (Figure 7.12.F6_VP1.06 Viewpoint 1.06: Fundenhall Road, Fundenhall; document reference 7.12). The setting of the assets, therefore, makes a moderate contribution to its values, but does not extend to the Order Limits.

3.2.574 The **medium value** Grade II listed 'Elm Farmhouse' (**1373558**) is located on the northern flank of Fundenhall Road c. 1 km west of Hapton, and 10 m south of the Order Limits. The asset is of evidential and historical value. Elm Farmhouse is a 17th century rendered timber frame house with a steep pantile roof.

3.2.575 The setting of the asset is informed by its agricultural and rural setting with which the asset has historical and functional relationships. It is unclear whether or not the asset still operates as part of a working farm, however, its presence within the working agricultural landscape indicates a level of continuity in the functional historic use of the landscape surrounding the asset. The setting is further informed by the asset's relationship with its surviving non-designated outbuildings, which are recorded on the first edition OS map of 1884. To the north of the asset is small triangular area of dense vegetation and the BB135 in directly to the south of the asset. The setting of the asset makes a considerable contribution to its value. The Order Limits are 10 m to the north of the asset and cross the agricultural landscape surrounding the asset. Therefore, because of the proximity of the Order Limits to the asset and within the agricultural landscape which immediately surrounds the asset, the setting of the asset does extend to the Order Limits.

Tharston and Hapton CP

3.2.576 The **medium value** Grade II listed White Horse Cottage (**1050023**) is located immediately south-west of the junction of Marsh Lane and Norwich Road, 350 m north of Hapton and 220 m south-east of the Order Limits. The asset is of evidential and historical value. The asset dates to the 17th century and comprises a plastered timber frame cottage with an 18th century brick extension to the north and a steep pantile roof.

3.2.577 The setting of the former public house is informed by its roadside location on which would have arrived its passing trade. The setting is further informed by the

surrounding agricultural landscape with which the asset has a historical relationship. The asset was developed as a residential dwelling in the latter half of the 20th century and its grounds now serve as a garden. The setting of the asset makes a moderate contribution to its value, but due to mature tree growth flanking March Lane and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.578 The **medium value** Grade II listed 'Hapton Hall' (**1302044**) is located within a larger farming complex, now the Redwings Horse Sanctuary, 700 m south-south-west of Flordon and 1.3 km south-east of the Order Limits. The asset is of evidential and historical value. The hall is an early 19th century house built of buff coloured brick with a low-pitched hipped slate roof.

3.2.579 The setting of the asset is informed by its relationship with the other buildings of the farming complex many of which are recorded on the first edition OS map of 1884. The setting is also informed by the surrounding farming landscape with which the hall and associated buildings have historical and functional relationships. Despite the change in function, the legibility of the complex has not been impacted and so the setting makes a considerable contribution to the value of the asset. Due to topography, mature tree lined hedgerows, development, and small copses, however, the setting does not extend to the Order Limits.

3.2.580 The **medium value** Grade II listed 'The Vicarage' (**1373412**), of evidential and historical value, is located south of Holly Lane on the northern edge the settlement of Hapton and 560 m south of the Order Limits. The **high value** Grade I listed Church of St Margaret (**1179227** – see medieval section) lies 15 m to the north-east. the vicarage is an early 19th century house built of red brick with a low-pitched roof with new tiles.

3.2.581 The setting of the vicarage is informed by its relationships with the church and with the settlement it serves. The asset has a lawned garden with mature tree lined hedgerow boundaries, which largely obscure outward views although the church is visible. This setting instils feelings of seclusion and peace and, therefore, it makes a considerable contribution to the assets value. Due to the asset's mature boundaries, and topology, a copse and mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.582 The **medium value** Grade II listed assets 'Hapton House' (**1373375**), 'Hapton Chapel' (**1302015**) and 'Barn Immediately South Of Hapton Chapel' (**1050028**) are located on the raised northern flank of The Street at the western edge of Hapton and 600 m south-east of the Order Limits. These assets are of evidential and historical value. The house (**1373375**) was built in the 16th century and comprises a timber frame structure plastered to rear with an 18th century red brick front. The roof is tiled. The small Presbyterian chapel (**1302015**), 16 m to the east, was built in 1741 and comprises a rendered timber frame structure with a steep pantile roof. The asset has been converted into a dwelling. The barn (**1050028**), 12 m to the south of the chapel, is a 17th century timber framed structure weatherboarded on a brick plinth with steep pantile roof.

3.2.583 The setting of the assets is shared and informed by their interrelationships and by their location on the edge of Hapton, although the isolated location recorded on the first edition OS map of 1884 has been eroded by 20th century development to the east. Based on the cartographic evidence, the three assets were part of a building complex contained within wider grounds, however, presumably as the chapel and barn were converted into domestic dwellings, the grounds have been divided

providing each asset with an individual garden area. The setting of the assets, therefore, makes a minor contribution to their values. Due to mature tree lined hedgerows on both flanks of Holly Lane and a copse and further mature treen lined hedgerows in the intervening landscape, the setting of the assets does not extend to the Order Limits.

3.2.584 The **medium value** Grade II listed 'Hillside Farmhouse' (**1050021**) is located on the northern flank of Fundenhall Road, 75 m east of Hapton Hall and 580 m south-east of the Order Limits. The asset is of evidential and historical value. The 17th century house comprises a plastered timber frame structure with a later tiled roof situated within a wider farming complex.

3.2.585 The setting of the farmhouse is informed by its location on the edge of the settlement and its relationship with the other buildings of the coherent farming complex, many of which are recorded on the first edition OS map of 1884. The setting further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, however, due to topography and a copse and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.586 The **medium value** Grade II listed 'Marsh View School Cottage' (**1050029**) is located on the northern flank of The Street at the heart of Hapton. The Order Limits lie 690 m to the north-west. The asset is of evidential and historical value. The asset is a 17th to 18th century house now divided into two. The structure comprises a plastered timber frame with a steep pantile roof.

3.2.587 The setting of the asset in informed by its village location and by its relationship with the adjacent school, which has resulted in its name. There has been some infill development in the 20th century, but this is largely sympathetic. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its enclosed location, the setting does not extend to the Order Limits.

3.2.588 The **medium value** Grade II listed 'Tharston Mill' (**1050024**) is located over the Tas, on the western flank of The Street 320 m south-south-east of Hapton and 1.3 km south-east of the Order Limits. The asset is of evidential and historical value. The 18th century mill, now a house, comprises a weatherboarded timber frame structure with a pantile roof.

3.2.589 The setting of the asset is informed by its situation over the Tas, which provided power for the mill, and its relationship with the small cluster of buildings around it, some of which are recorded on the first edition OS map of 1882. Despite its change of function, the legibility of the asset is largely intact, and so its setting makes a considerable contribution to its value. Due to the topography of its valley location and attendant mature tree cover, the setting of the asset does not extend to the Order Limits.

3.2.590 The **medium value** Grade II listed 'Watering Farmhouse' (**1302052**) is in the Tas Valley on the northern flank of Long Lane, 1.1 km south of Hapton and 1.3 km south-east of the Order Limits. The asset is of evidential and historical value. The asset is a 17th century farmhouse comprising a rendered timber frame structure with brick faced gables and a steep pantile roof.

3.2.591 The setting of the asset is informed by its farmyard location and its relationship with the farm outbuildings, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with

which the asset and other farm buildings have a historical and functional relationship. The introduction of the extant Great Eastern Railway to the east and the defunct Wymondham and Forncett Branch to the west has, however, changed the setting of the asset and so it makes a moderate contribution to the asset's value. The setting of the asset does not extend to the Order Limits due to the topography of its valley location and mature trees lining the route of the defunct branch line immediately to the west.

3.2.592 The Route of Wymondham to Forncett Railway Line (**1384**) crosses the Order Limits on the Ashwellthorpe and Fundenhall/Tharston and Hapton parish border. The line was constructed by Great Eastern to enable trains to reach the north coast without entering Norwich, and it opened in 1881. The asset is of **low value** based on its evidential and historical values.

Ashwellthorpe and Fundenhall CP

3.2.593 The **medium value** Grade II listed Lyndale (**1049671**) is located on the northern flank of The Street, at the eastern end of the settlement of Fundenhall Street and 1.4 km west-north-west of the Order Limits. The asset is of evidential and historical value. The asset comprises a 17th century plastered timber frame house with a steep pantile roof. The asset appears to have now been split into two dwellings with extensions built to the rear.

3.2.594 The setting of the house is informed by its isolated location on the eastern edge of the settlement, by its grounds defined by mature tree lined boundaries and by the surrounding agricultural landscape with which it has a historical relationship. The setting of the asset instils feelings of privacy and seclusion and, therefore, makes a moderate contribution to its value. Due to topography and mature tree lined boundaries, small copses and more recent development, the setting does not, however, extend to the Order Limits.

3.2.595 The **medium value** Grade II listed assets **'**Barn Immediately north of Manor Farmhouse' (**1049669**) and 'Manor Farmhouse' (**1373556**), are located down a private road on the northern edge of Fundenhall Street. The barn is a 17th century timber-framed, plastered and weather-boarded barn with a steep gable-ended roof clag in corrugated asbestos. Here are double doors to the central wagon entrance. The farmhouse is a 16th to 17th century timer-framed house, which is plastered, with a steep pantile roof with gabled end. The farmhouse comprises two storeys, with an extended wing to the rear forming an 'L'-shaped plan. The assets are located c. 1.9 km north-west of the Order Limits.

3.2.596 The setting of the assets is informed by their shared value within the farming complex setting of Manor Farm. To the north of the assets are a series of larger hanger like barns, as well as another large barn to the north-east. The assets appear to be a part of a working farm complex, and the farm is surrounded by agricultural and gras field, as well as a patch of woodland to the south between the assets and Fundenhall Street. The assets have historical and evidential value, and the setting of the assets contribute greatly to their value. The setting of the assets does not extend to the Order Limits, but rather in confined to the farm itself and the immediately surrounding fields.

3.2.597 The following tow assets are within the small settlement of Fundenhall Street

3.2.598 The **medium value** Grade II listed asset 'The Rookery' (**1049670**), is located within the settlement of Fundenhall Street, c. 1.8 km north-west of the Order limits. The

asset is a 17th century timer-framed and rendered house with a steep black glazed pantile roof with gable ends. The asset comprises two storeys and has a modern porch.

3.2.599 The **medium value** Grade II listed 'Dairy Farmhouse' (**1373557**) is a 17th century timber-framed house which is plastered and has a steep pantile roof with gabled ends and comprises two storeys. The asset is located 1.8 km north-west of the Order Limits.

3.2.600 The setting of the assets is informed by their location within the small linear settlement of Fundenhall Street. The settlement is set within a rural and agricultural landscape and the properties within the linear settlement are surrounded by much dense mature vegetation. To the north of the assets is a small area of dense woodland. The maturely vegetated and rural landscape surrounding the assets contributes considerably to their value. The assets have historical and evidential value, and the setting of the assets does not extend to the Order Limits and are confined to the small linear settlement of Fundenhall Street and the grounds of the properties.

Non-Designated Heritage Assets

3.2.601 It was noted that during its demolition, a barn had timber frames with solid arched brackets and straight braces, which appeared to be 16th to 17th century in date. South Norfolk District Council, however, believes the barn was a later structure reusing older timbers. The site of the **low value** former barn (**1047**) of evidential value is located 760 m east of Fundenhall, immediately south of Hapton Road and 30 m east of the Order Limits.

3.2.602 The **low value** Elm Tree Farm (**1313**) is located 940 m south-east of Fundenhall on the northern flank of Hapton Road and 20 m east of the Order Limits. The farmhouse is of evidential value and is a 16th century timber framed building with a large stone or brick rendered fireplace.

3.2.603 A 19th century milestone (**1379**) incorporating a benchmark and marking Norwich 7 miles, New Buckenham 8 miles and London 102 miles is located c. 940 m north-east of Wreningham and c. 140 m west of the Order Limits. The asset is of **low value** based on its evidential and historical values. the milestone is one of 14 surviving along the Norwich to New Buckenham turnpike. This turnpike was established in 1772 and was disturnpiked in 1870.

3.2.604 Further evidence of post medieval activity of evidential value in the Flordon and Fundenhall area is represented by **low value** findspots, and artefacts recovered during fieldwalking and metal detector surveys. These assets comprise:

- A post medieval copper alloy bell, book fitting, box, buckles, buttons, a cauldron fragment, a chain, coins, coin weight, furniture fitting, dress component, harness fitting, a jetton, a key, a knife, a padlock, a seal, a purse, spurs, strap fittings, a stud, tokens, a thimble, vessel fragments, a silver spoon, a pin, a gold finger ring, a lead cloth seal, a button, weights and pottery sherds in a multi-period finds assemblage (**1130**) recovered from farmland 500 m south-east of Fundenhall, immediately south of Hapton Road, partially within the Order Limits and situated on higher ground overlooking a tributary of the Tas Valley to the south-east
- A post medieval copper alloy apothecary weight, finger ring, jetton, coin, strap fitting, sword belt and token and a silver coin in a multi-period finds assemblage (**1133**)

recovered from farmland 740 m east-south-east of Fundenhall and within the Order Limits

- Two post medieval copper alloy harness mounts, two lead cloth seals and a Russian bale seal in a multi-period finds assemblage (**1280**) found 600 m north-west of Flordon and partially within the Order Limits
- Four post medieval copper alloy harness mounts in a multi-period finds assemblage (**1286**) recovered from farmland 650 m north-west of Flordon, immediately east of Flordon Road and partially within the Order Limits
- A post medieval copper alloy harness mount in a multi-period finds assemblage (**1217**) recovered from farmland 750 m north-west of Flordon and largely within the Order Limits
- A post medieval copper alloy buckle, button, coin and strap fitting, two lead weights, copper alloy harness mounts, a crotal bell and a silver coin in a multi-period finds assemblage (**1265**) recovered from farmland 900 m north-west of Flordon, immediately east of Flordon Road and partially within the Order Limits
- A post medieval copper alloy button and harness mount in a multi-period finds assemblage (**1266**) recovered from farmland 570 m north-west of Flordon and partially within the Order Limits
- A post medieval James I silver sixpence in a multi-period finds assemblage (**1268**) recovered from farmland 610 m north-north-west of Flordon and partially within the Order Limits
- Three post medieval copper alloy buckles, two harness mounts and a lead alloy buckle in a multi-period assemblage (**1302**) recovered from farmland 600 m north-north-west of Flordon and just clipping the eastern edge of the Order Limits
- A post medieval buckle, rotary key, harness mount, a sword belt fitting and a lead/iron steelyard weight in a multi-period finds assemblage (**1289**) recovered from land around an unnamed farm 440 m north of The Street, Flordon and immediately east of the Order Limits
- Two post medieval copper alloy crotal bells, a buckle and a lead cloth seal in a multi-period finds assemblage (**1119**) recovered from farmland 850 m north of Flordon and 20 m east of the Order Limits
- A medieval copper alloy finger ring, a strap loop, a thimble, two buckles, and strap mounts possibly from a box or casket; as well as a medieval/post medieval copper alloy button and dress hook, were recovered as part of a multi-period finds assemblage (**1273**) from farmland located 1.7 km north-east of Fundenhall, immediately west of Wymondham Road and adjacent to an access road of the Order Limits
- Two post medieval copper alloy buckles, harness mount, a fragment of a spur, and a lead cloth seal in a multi-period finds assemblage (**1131**) recovered from farmland immediately north of Fundenhall Road, 980 m east-south-east of Fundenhall and 110 m east of the Order Limits
- A post medieval, copper alloy coin and jetton, a silver coin and a lead cloth seal and token in a multi-period finds assemblage (**1132**) recovered from farmland 500 m south-east of Fundenhall and 70 m west of the Order Limits

- A post medieval copper alloy strap fitting in a multi-period finds assemblage (**1193**) recovered from farmland on the eastern outskirts of Fundenhall and 210 m north-west of the Order Limits
- A post medieval silver coin and copper alloy token and weight in a multi-period finds assemblage (**1143**) recovered from farmland immediately east of Fundenhall and 60 m north-west of the Order Limits
- A post medieval, copper alloy thimble, buckle, button, harness fitting, finger ring, strap fittings and a vessel fragment, and a silver thimble in a multi-period finds assemblage (**1149**) recovered from farmland 720 m west-south-west of Flordon and 230 m south-east of the Order Limits
- A post medieval copper alloy candlestick socket, crotal bell and a sword belt mount, a lead cloth seal, and a silver coin in a multi-period finds assemblage (**1269**) recovered from farmland 240 m north of Flordon and 220 m south-east of the Order Limits
- A post medieval copper alloy harness mount, jetton, token, and a hooked sword belt fitting in a multi-period finds assemblage (**1288**) recovered from farmland 300 m west of Flordon and 280 m south-east of the Order Limits
- A post medieval copper alloy buckle, button, dress hook, strap fitting and token and a silver coin in a multi-period finds assemblage (**1180**) recovered from farmland 1 km north-east of Fundenhall and 240 m north-west of the Order Limits
- Post medieval copper alloy harness mounts, crotal bells, thimbles, furniture fitting and a button, two silver coins, and a lead trade weight, cloth seal and a four-part seal in a multi-period finds assemblage (**1251**) recovered from farmland 1.8 km south-west of Flordon and 150 m east of the Order Limits
- A post medieval sword belt mount in a multi-period finds assemblage (**1236**) recovered from farmland c. 240 m east of Wreningham and 170 m west of the Order Limits
    - Post medieval dress accessories, harness fittings, and a crotal bell in a multi-period finds assemblage (**1279**) recovered from farmland c. 850 m north-east of Toprow and clipping the Order Limits
    - A medieval/post medieval copper alloy ring, a medieval/post medieval coin, nine post medieval coins, five jettons, a token, buttons, buckles, a belt mount, a blunt-hooked dress fastener, a strap fitting, a thimble, a furniture handle escutcheon, a spur, a lead cloth seal, a gilded silver object, possibly a decorative plaque, a harness mount, and a silver thimble in a multi-period finds assemblage (**1345**) recovered from farmland c. 750 m north-east of Wreningham and c. 250 m north of the Order Limits
    - Two medieval/post medieval buttons a medieval/post medieval buckle, a post medieval harness fitting, a harness mount and possible binding from a large box or item of furniture in a multi-period finds assemblage (**1346**) recovered from farmland c. 300 m east of Wreningham and partially within the Order Limits
    - A post medieval possible keyhole cover, harness mounts and buckle frames, including a shoe buckle frame, a Jew's harp, buttons, a strap fitting, a pendant from a sword belt hanger, harness mounts, a coin, a coin weight, a hinge plate from a box or casket, a fragment of possible balance arm, a hooked clasp, and a plate fragment from a sword belt recovered as part of a larger finds assemblage

(**1357**) from farmland immediately to the north of Wreningham and c. 200 m to the west of the Order Limits

- Five post medieval coins, two German jettons, a 17th century gilded copper alloy buckle or belt fitting fragment, a 17th/18th century gilded copper alloy cast fastener, a lead cast stud with rosette shaped head, a copper alloy hinge with trefoils on both terminals, a cast copper alloy openwork harness mount, a 17th century gilded copper alloy convex button decorated with punched annulets, a copper alloy topless thimble, and spur terminal with annulet disc on arm in a multi-period finds assemblage (**1380**) recovered from farmland c. 1.1 km north-east of Wreningham and c. 220 m north-east of the Order Limits
- A post medieval jetton in a multi-period finds assemblage (**1382**) recovered from farmland c. 600 m east of Wreningham and c. 80 m south-west of the Order Limits.

Cropmark and LiDAR Assessment

3.2.605 **Low value** linear cropmarks (**1508**) of evidential value have been identified by the Project c. 1.3 km west of Newton Flotman and partially within the Order Limits. The cropmarks correspond with field boundaries recorded on the first edition OS map and are, therefore, likely later medieval to post medieval in date.

3.2.606 **Low value** linear cropmarks (**1511**) of evidential value have been identified by the Project east of Flordon Road, c. 900 m north-west of Flordon and partially within the Order Limits. The cropmarks correspond with field boundaries recorded on the first edition OS map and are, therefore, likely later medieval to post medieval in date.

3.2.607 **Low value** linear cropmarks (**1512**) and a possible pond of evidential value have been identified by the Project west of Wymondham Road, c. 900 m west-north-west of Flordon and partially within the Order Limits. The cropmarks largely correspond with field boundaries recorded on the first edition OS map and are, therefore, likely later medieval to post medieval in date.

3.2.608 **Low value** linear cropmarks (**1507**) of evidential value have been identified by the Project immediately east of Fundenhall, north of Fundenhall Road and partially within the Order Limits. The cropmarks largely correspond with field boundaries recorded on the first edition OS map and so are likely of late medieval or post medieval date.

3.2.609 **Low value** cropmarks of evidential value were also recorded by the Project to the south of Fundenhall Road (**1506**) and these too largely correspond with field boundaries recorded on the first edition OS map. These are located within the Order Limits. The cropmarks in the east of this area, however, have no cartographic equivalents and so it is possible that they may relate to Romano-British settlement activity or Anglo-Saxon funerary activity suggested by metal detector finds in the area (**1130**).

3.2.610 **Low value** cropmarks (**1801**) of evidential value were recorded within the Order Limits, in a field north of Marsh Lane, between Flordon and Toprow.

Historic Mapping Assessment

3.2.611 A series of **negligible value** ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of seven ponds are located within the Order Limits (**1598**, **1599**, **1600**, **1601**, **1607**, **1619**, **1764**)
- A total of twelve ponds are located within 250 m of the Order Limits (**1602**, **1603**, **1609**, **1620**, **1760**, **1761**, **1762**, **1763**, **1765**, **1766**, **1767**, **1768**)

3.2.612 A **low value** east to west aligned undefined boundary (**1595**) of evidential and historic value has been identified crossing the Order Limits and within the 250 m Study Area within this sub-section approximately 300 m north of Fundenhall Road. The boundary can be observed on the 1882 and 1905 1:2500 OS Map. It is unknown to what extent the boundary may physically be extant within the landscape and the boundary also connects to a parish boundary (**1508**) at its eastern end.

3.2.613 The location of four **low value** potential important hedgerows (**1604**, **1615**, **1616**, **1773**) of evidential and historical value has been identified both within the Order Limits and 250 m Study Area immediately east of Long Lane, south of Marsh Lane and south of High Road. The hedgerows have first been observed on the 1882 1:2500 OS map although it is unknown how much these hedgerows pre-date this map edition.

3.2.614 The **low value** branch line of the Wymondham and Foncett Railway (**1617**) of evidential and historical value can be seen both within the Order Limits and 250 m Study Area, approximately 500 m south-east of the B1113. The north-west to south-east aligned line can be observed on the 1882 1:2500 OS map and appears to still be an active line on the 1974 1:2500 OS map. The 1995 1:2500 OS map suggests that the line is no longer active by this map edition.

3.2.615 A **low value** sand and gravel pit (**1613**) and gravel pit (**1614**) of evidential value can both be observed on the 1882 1:2500 OS map, with sand and gravel pit (**1613**) partially within the Order Limits approximately 180 m north of Marsh Lane, and gravel pit (**1614**) approximately 230 m east of the Order Limits south of Norwich Road. The sand and gravel pit (**1613**) is no longer extant by current arial imagery. Gravel pit (**1614**) is last observed as a dip in the ground on the 1995 1:2500 OS map and is currently visible as a wooded scrubland area on current aerial imagery.

3.2.616 The **low value** 'Upper Grove Wood' (**1605**) of evidential and historic value is located immediately west of the Order Limits and 450 m west of Flordon Road. The woodland copse represents a possible formal woodland or park area including footpaths and is first observed on the 1905 1:2500 OS map. The wooded area is still visibly extant on current aerial imagery; however, it is unknown if this area is now overgrown.

3.2.617 The **low value** 'Snapes Wood' (**1606**) of evidential and historic value is located approximately 200 m north-west of the Order Limits and 145 m west of Flordon Road. This woodland copse is only observed on the 1905 1:2500 OS map and is no longer extant within the landscape.

3.2.618 **Low value** buildings (**1610**) of evidential and historic value can be observed immediately south-east of the Order Limits, at the junction of The Street and Norwich Road. The buildings can be observed on the on the 1882 1:2500 OS map and is last observed on the 1974 1:2500 OS map. Similarly, further buildings (**1611** and **1612**) of the same value can also be observed approximately 40 m and 140 m south-east of **1610** on the same mapping.

3.2.619 A **low value** building and yard (**1618**) of evidential and historic value can be observed within the Order limits immediately south of Fundenhall Road. The

buildings are first observed on the 1882 1:2500 OS map and are last observed on the 1974 1:2500 OS map. It is unknown if the building is extant on the 1995 1:2500 OS map edition, however the building and yard are no longer extant by the current aerial imagery.

Forncett St Mary and Tacolneston

Designated Heritage Assets

Forncett CP

3.2.620 The **medium value** Grade II listed 'Bayes Farmhouse' (**1050367**) is located on the western flank of Bayes Lane, 250 m south of Hapton and 760 m south-east of the Order Limits. The asset is of evidential and historical value. The asset is a 17th century plastered and brick faced timber frame cottage with a steep pantile roof situated within a wider farming complex.

3.2.621 The setting of the asset is informed by its location on the southern flank of a shallow east/west aligned tributary valley of the Tas Valley to the east. The setting is further informed by its relationship with the other buildings of the farm complex, most of which are recorded on the first edition OS map of 1884. The asset and associated farm buildings have a functional and historical relationship with the surrounding agricultural landscape further informing the asset's setting. Other than the loss of some field boundaries and the line of a now defunct railway, the asset's setting has seen very little change and so it makes a considerable contribution to its value. Due to topography and mature tree lined hedgerows, however, the setting of the asset does not extend to the Order Limits.

3.2.622 The **medium value** Grade II listed 'The Chequers Public House' (**1373252**) is located south of the junction of High Road and Chequers Hill, 980 m north-north-east of Forncett St Mary and 775 m east-south-east of the Order Limits. The asset is of evidential and historical value. The 19th century building is constructed of plastered clay lump and has a hipped thatched roof. There are lean-to extensions to the north-east and south-east. The asset is now a private dwelling.

3.2.623 The setting of the former public house is informed by its roadside location and the thoroughfares that carried its patrons. This setting does not extend to the Order Limits.

3.2.624 The **medium value** Grade II listed assets 'Maryvale' (**1152708**) and 'The Old Post Office And Labunrum Cottage' (**1050378**) are located either side of Low Road in the Tas Valley, 560 m north-north-east of Forncett St Mary and 1.1 km east-south-east of the Order Limits. These assets are of evidential and historical value. Maryvale is an early 18th roughcast timber frame cottage with brick-faced end walls and a steep pantile roof. The Old Post Office and Labunrum Cottage are late 18th to early 19th century plastered timber frame cottages with a pantile roof.

3.2.625 The setting of the assets is shared and informed by their roadside location in the Tas Valley. The topography of the valley ensures this setting does not extend to the Order Limits.

3.2.626 The linear settlements of Forncett St Mary and Forncett St Peter lie to the east of the Order Limits and contain the following listed buildings.

3.2.627 The **medium value** Grade II listed assets 'Barn North-East of Yew Tree Farmhouse' (**1304630**) and 'Barn Immediately North-West of Yew Tree Farmhouse' (**1373220**) are associated with the medieval 15th century Grade II* Yew Tree Farmhouse (**1152706**). These assets are of evidential and historical value and are located on the eastern flank of Low Road, at the northern edge of Forncett St Mary on the western flank of the Tas Valley and 960 m east of the Order Limits. The barn (**1304630**) to the north-east dates to the late 17th to early 18th centuries and comprises a weatherboarded timber frame structure with a steep pantile roof. The asset has a projecting wing to the north of clay lump construction, also with a pantile roof. The north-western barn (**1373220**) is of a similar date and comprises a plastered timber frame structure with a steep pantile roof and a lean-to on the north side.

3.2.628 The setting of the assets is shared with Yew Tree Farmhouse and is informed by their location within a former farming complex and by their relationships with each other and the late medieval farmhouse. The setting is further informed by their relationships with the non-designated buildings of the former farming complex, and by the surrounding agricultural landscape with which the assets have historical and functional relationships. The assets are situated within mature grounds that instil feelings of privacy and peacefulness and although the farm is no longer working, the complex is still legible as former farm buildings. The setting of the barns, therefore, make a considerable contribution to their values, however, due to the mature grounds of the assets and the topography and mature tree lined hedgerows and copses of the intervening landscape, the setting does not extend to the Order Limits.

3.2.629 The **medium value** Grade II listed 'Riverside Farmhouse' (**1050377**) is located on the eastern flank of Low Road, on the western flank of the Tas Valley and 1 km east of the Order Limits. The asset is of evidential and historical value. The asset dates to the 17th century and comprises a plastered timber frame house with a steep pantile roof.

3.2.630 The setting of the asset is informed by its roadside location within the dispersed settlement. The setting is further informed by its garden and lawns defined by mature tree lined hedgerows. The setting of the asset, therefore, make a considerable contribution to its value, however, due to the mature grounds of the asset and the topography and mature tree lined hedgerows and copses of the intervening landscape, the setting does not extend to the Order Limits.

3.2.631 The **medium value** Grade II listed 'Kingsmuir and Adjacent Cottage' (**1050376**) is located on the eastern flank of Low Road, 40 m south of Riverside Farmhouse on the western flank of the Tas Valley and 1 km east of the Order Limits. The asset is of evidential and historical value and comprise a row of early 19th century cottages constructed of flint with a brick first floor and brick dressings. Kingsmuir, the southern cottage, was faced with red brick in the late 19th century and the cottages share a pantile roof.

3.2.632 The setting of the asset is informed by its roadside location within the dispersed settlement. The setting is further informed by its garden, lawn and pond to the rear defined by mature tree lined hedgerows and by its open aspect on to Low Road. The setting of the asset, therefore, make a considerable contribution to its value, however, due to the mature grounds of the asset and the topography and mature tree lined hedgerows and copses of the intervening landscape, the setting does not extend to the Order Limits.

3.2.633 The **medium value** Grade II listed 'Hannays' (**1152704**) backs straight on to Low Road, 40 m south of Kingsmuir on the western flank of the Tas Valley and 960 m

east of the Order Limits. The asset is of evidential and historical value and dates to the 17th century and comprises a plastered timber frame house with a pantile roof. It is adjoined to the south by a non-designated east/west aligned range.

3.2.634 The setting of the asset is informed by its roadside location within the dispersed settlement and by its relationship with its non-designated southern wing. The setting is further informed by its relationship with the likely 19th century non-designated buildings of the Forncett Industrial Steam Museum immediately to the north and the likely 19th century outbuildings of Old Hall Farm to the south. The setting of the asset, therefore, make a considerable contribution to its value, however, due to the topography and mature tree lined hedgerows and copses of the intervening landscape, the setting does not extend to the Order Limits.

3.2.635 The **high value** Grade II* listed 'Old Hall Farmhouse' (**1373219**) backs straight on to Low Road, 50 m south of Hannays on the western flank of the Tas Valley and 940 m east of the Order Limits. The asset is of evidential and historical value, dates to the late 16th century and comprises a plastered timber frame house with an early 17th painted brick wing to the south-west and a steep glazed black pantile roof. Also included in the listing is a plastered timber frame outbuilding with a pantile roof of probable 17th or 18th century date.

3.2.636 The setting of the asset is informed by its roadside location within the settlement and by its relationship with the non-designated elements of Old Hall Farm to the north. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The ground of the asset includes a lawned area and a copse and is defined along Low Road by a high, thick hedge. The setting of the asset, therefore, make a considerable contribution to its value, however, due to the topography and mature tree lined hedgerows and copses of the intervening landscape, the setting does not extend to the Order Limits.

3.2.637 The **medium value** Grade II listed 'Four Seasons' (**1373215**) is located on the northern flank of Cheney's Lane and 410 m east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a roughcast timber frame house with a thatched roof.

3.2.638 The setting of the asset is informed by its roadside location within the settlement and by its relationship with the non-designated Hill Farm to the west and the non-designated buildings on the southern flank of Cheney's Lane, which include the 19th century Forncett St Mary Methodist Chapel, all of which are recorded on the first edition OS map of 1884. The setting is further informed by the asset's relationship with associated non-designated outbuildings recorded on the first edition OS map, that indicate the complex has likely farming origins. The extensive grounds of the asset include decorative and kitchen gardens and are defined to the west, north and east by mature tree cover forming a large copse, which instils feeling of privacy and enclosure. The setting of the asset, therefore, makes a considerable contribution to its value, however, due to the mature grounds and mature tree lined hedgerows, copses and development in the intervening landscape, the setting does not extend to the Order Limits.

3.2.639 The **medium value** Grade II listed 'Springside' (**1373218**) is located off a private road 170 m west of Low Road and 690 m east of the Order Limits. The asset is of evidential and historical and comprises a 17th century roughcast timber frame cottage with a steep pantile roof.

3.2.640 The setting of the asset is informed by its location within the dispersed settlement and its relationships with the contemporary Grade II listed cottage to the south (see below) and the non-designated former school, now village hall, to the east, both of which are recorded on the first edition OS map of 1884. The asset is situated in a moderately large parcel of land with tree cover to the north and south and a large copse to the east. The setting of the asset, therefore, makes a moderate contribution to its value, however, the heavy tree cover screens the Project from the asset and so the setting does not extend to the Order Limits.

3.2.641 The **medium value** Grade II listed 'Cottage Approximately 75 Yards South of Springside' (**1304664**) is located as described by its designating and 720 m east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame structure with a thatched roof.

3.2.642 The setting of the asset is informed by its location within the dispersed settlement and by its relationship with the contemporary Grade II listed Springside to the north. The setting is further informed by its small grounds defined by mature tree lined hedgerows. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its mature grounds and further mature tree lined hedgerows and a copse in the intervening, the setting does not extend to the Order Limits.

3.2.643 The following listed buildings are in the Forncett Conservation Area (**CA23**).

3.2.644 The **medium value** Grade II listed 'The Croft' (**1152589**) is located at the north-western extent of the Forncett Conservation Area, on the southern flank of Cheney's Lane and 630 m east-south-east of the Order Limits. The asset is of evidential and historical value and comprises a 16th century plastered timber frame house with a thatched roof.

3.2.645 The setting of the asset is informed by its secluded location within the settlement and by its relationship with two nearby likely 19th century buildings (The Barns at the Croft) recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The barns are now residential properties and apparently now separate from the Croft. The asset's grounds are mature, defined by tree lined hedgerows and contain several mature trees. The setting of the asset affords it seclusion and privacy and, therefore, makes a considerable contribution to its value. Due to the mature grounds and copses, development and further mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.646 The **medium value** Grade II listed 'Rattles' (**1050375**) is located east of Low Road, on the western flank of the Tas Valley and 840 m east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame cottage with a thatched roof. There is later one storey plastered wings at either end of the cottage with pantile roofs.

3.2.647 The setting of the asset is informed by its roadside location within the settlement and by its relationship with the two buildings to the north-east that are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The asset's grounds include a lawned area to the south and a kitchen garden to the east and are defined by tree lined hedgerows. There is 20th century residential development to the south, and so the setting of the asset makes a moderate contribution it its value. Due to the topography of the Tas Valley and copses and mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.648 The **medium value** Grade II listed assets 'Street Farmhouse' (**1050380**) and 'Barn North-West of Street Farmhouse' (**1152772**) are located east of Low Road, on the western flank of the Tas Valley, 90 m south of Rattles and 880 m east of the Order Limits. These assets are of evidential and historical value. The farmhouse probably dates to the 17th century and comprises a rendered timber frame structure with a steep black lazed pantile roof. The barn likely dates to the 18th to 19th centuries and comprises a clay lump structure with a pantile roof. The barn is now a residential dwelling.

3.2.649 The setting of the assets is shared and informed by their roadside location, by their interrelationship, by their relationship with later buildings of the farm complex and by the surrounding agricultural landscape with which the assets have historical and functional relationships. The assets and later building are coherent as a farming complex and so the setting makes a considerable contribution to their values. Due to the topography of the Tas Valley and copses and mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.650 The **medium value** Grade II listed 'Sunny Acres' (**1050379**) is located west of Low Road, on the western flank of the Tas Valley and 900 m east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a pantile roof.

3.2.651 The setting of the asset is informed by its roadside location within the settlement and by its relationship with a building just to the north, recorded on the first edition OS map of 1884. The setting is also informed by mature tree growth on all sides of the asset. The setting of the asset affords it seclusion and privacy and, therefore, makes a considerable contribution to its value. Due to the to the mature copses to the west, however, the setting does not extend to the Order Limits.

3.2.652 The **medium value** Grade II listed 'Corner Farmhouse' (**1373221**) is located west of Low Road, on the western flank of the Tas Valley and 910 m east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a roughcast timber farm structure with a steep black glazed pantile roof.

3.2.653 The setting of the asset is informed by its roadside location in the settlement and by its relationship with other surviving non-designated buildings of the farming complex recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical and functional relationship. Several of the farm buildings recorded on the 1884 map are now lost and the function of the remaining buildings has changed. The grounds of the asset included several trees, and the boundaries largely consist of mature tree lined hedgerows. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the topography of the Tas Valley and copses and mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.654 The **medium value** Grade II listed assets 'The Homestead' (**1373242**) and 'Barn And Stables North-East of The Homestead' (**1050345**) are located west of Low Road, on the western flank of the Tas Valley and 920 m east of the Order Limits. These assets are of evidential and historical value. The Homestead dates to the 17th century and comprises a plastered timber frame house with a low pitched black glazed pantile roof. The barn is also of 17th century date and comprises a weatherboarded timber frame structure with a later low-pitched pantile roof.

3.2.655 The setting of the assets is shared and informed by their roadside location in the settlement, by their interrelationship and their relationships with other surviving non-designated buildings of the farming complex recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical and functional relationship. Much of the farming complex survives and is coherent as such despite the barn now serving as a domestic dwelling and minor 20th century residential development to the south. The grounds of the assets are defined by mature tree lined hedgerows and contain lawned areas and scattered trees. The setting of the assets, therefore, makes a moderate contribution to their value, but due to the topography of the Tas Valley and copses and mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.656 The **medium value** Grade II listed 'House Adjoining North-West of The Stores' (**1050344**) is located west of Low Road, on the western flank of the Tas Valley and 1 km east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame structure with a steep tiled roof.

3.2.657 The setting of the house is informed by its roadside location within the settlement and its relationship with the adjoining east/west aligned wing and former stores to the south. the large garden area to the west of the asset is defined by mature tree lined hedgerows and contains scatter mature trees. The setting of the asset has been encroached upon by 20th century residential development to the north and south and so makes a moderate contribution to its value. Due to the topography of the Tas Valley and copses and mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.658 The **medium value** Grade II listed 'Stone Cottage' (**1050343**) is located west of Low Road, on the western flank of the Tas Valley and 1 km east of the Order Limits. The asset is of evidential and historical value, dates to the early 19th century and is constructed of flint cobbles with buff coloured brick dressings and a black glazed pantile roof.

3.2.659 The setting of the asset is informed by its roadside location within the settlement and by its open view of arable land to the east. To the west and rear of the asset is a tree lined lawned area and beyond that a paddock defined by mature tree lined hedgerows. The setting of the asset has been encroached upon by 20th century residential development to the north and south and so makes a moderate contribution to its value. Due to the tree lined garden and paddock to the rear of the asset and the topography of the Tas Valley and copses and mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.660 The **medium value** Grade II listed assets 'Church Farmhouse' (**1050341**) and 'Barn Immediately South-West Of Church Farmhouse' (**1050342**) are located west of Low Road, on the western flank of the Tas Valley and 1 km east of the Order Limits. These assets are of evidential and historical value. The farmhouse comprises a 17th century plastered timber frame house with a steep tiled roof. The barn is of similar date and construction with a steep asbestos sheet clad roof.

3.2.661 The setting of the assets is shared and informed by their roadside location within the settlement, by their interrelationship and by their relationships with other non-designated buildings of the farming complex, several of which are recorded on the first edition OS map of 1884. The setting is further informed by the agricultural

landscape to the west and east with which the assets have historical and functional relationships. The lawned garden to the rear of the asset has scattered trees and is defined to the west by a mature hedgerow. Although several of the buildings are now residential properties, their coherence as a former farming complex is little diminished, and so the setting of the assets makes a considerable contribution to their values. Due to the asset's mature garden, the topography of the Tas Valley and mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.662 The **medium value** Grade II listed 'Clavers Cottage' (**1050340**) is located 20 m south of the Church Farm complex, west of Low Road, on the western flank of the Tas Valley and 1 km east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame structure with a thatched roof.

3.2.663 The setting of the asset is informed by its roadside location in the settlement and its relationship with the Church Farm complex to the north. The asset has a lawned garden to the rear with scattered trees, which is defined to the west by a mature hedgerow. The setting of the asset makes a considerable contribution to its value, but due to the asset's mature garden, the topography of the Tas Valley and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.664 The **medium value** Grade II listed '1, 2 and 3 Church Cottages' (**1050339**) is located along Low Road in the small settlement of Forncett Saint Peter, are c. 1 km east of the Order Limits. The asset is an early 17th century house with an L-shaped plan. The asset is almost entirely faced in brick with some areas partially painted. The asset has a steep gable-ended black glazed pantile roof, two storeys and an attic.

3.2.665 The setting of the asset contributes considerably to its value and its setting is informed its location at the centre of the village of Forncett Saint Peter and its proximity to the village church, to the east, which it is named after. The asset is surrounded by mature vegetation, creating visual screening around the asset. The village is surrounded by a rural agricultural landscape. The asset has historical and evidential value, and the setting of the asset does not extend to the Order Limits and is instead restricted to the grounds of the asset and its location within the village.

3.2.666 The **medium value** Grade II listed 'St Peters Rectory' (**1050371**) is located along a private track that leads off of Low Road within the small settlement of Forncett St Peter, c. 1.2 km south-east of the Order Limits. The asset is an early 18th century house, made of colour-washed brick with a steep pantile roof with shaped gabled ends. The asset comprises two storeys and an attic.

3.2.667 The setting of the asset contributes considerably to its value and its setting is informed by its location to the village church, the Church of St Peter (**1152619**). The asset is located close to the church due to its historical relationship with the church. Close to the asset are other buildings, which appear to be barns. Close to the asset are many mature trees, which shield views towards the asset from Low Road and providing visual screening out into the wider landscape. The asset has aesthetic, historical and evidential value and the setting of the asset does not extend to the Order Limits and is instead focused on the location of the asset in the Rectory grounds and the surrounding land which adjoins the Rectory to the church.

3.2.668 The following listed buildings are located within the settlement of Forncett St Peter but outside the Forncett Conservation Area.

3.2.669 The **medium value** Grade II listed 'Somerset Farmhouse' (**1152775**) is located south of Station Road on the eastern flank of the Tas Valley and 1.4 km east of the Order Limits. The asset is of evidential and historical value and comprises is a 18th to 19th century painted brick house with a possible earlier core and a pantile roof.

3.2.670 The setting of the asset is informed by its large grounds that include lawned areas, scattered trees, and a kitchen garden and defined by a high mature hedgerow. The asset is attached to the adjacent farmyard by a driveway to the south and much of the farming complex recorded on the first edition OS map of 1884 is extant, although modern, steel frame hanger style barns have been added. The setting of the asset makes a moderate contribution to its value, but due to its mature grounds and the topography, tree lined boundaries, copses and development of the intervening landscape, the setting does not extend to the Order Limits.

3.2.671 The **medium value** Grade II listed 'Alborough' (**1050381**) is located south of Mill Road, on the western flank of the Tas Valley and 850 m east-south-east of the Order Limits. The asset is of evidential and historical value, dates to the early 19th century and comprises a plastered brick and clay lump structure with low pitched slate roof.

3.2.672 The setting of the asset is informed by its relationship with the non-designated outbuildings of its former farming complex location, although most of the outbuildings recorded on the first edition OS map of 1884 are now gone. The setting is further informed by the asset's large grounds to the west which comprises lawned areas and paddocks with scattered trees and mature tree lined hedgerow boundaries. The setting of the asset makes a moderate contribution to its value, but due to its mature grounds and the topography, tree lined boundaries, copses and development of the intervening landscape, the setting does not extend to the Order Limits.

3.2.673 The **medium value** Grade II listed 'Orchard Cottage' (**1050348**) is located on the eastern flank of the Tas Valley, 1.4 km east-south-east of the Order Limits and accessed via a private road off Wash Lane. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame cottage with brick-faced end walls and a thatched roof.

3.2.674 The setting of the asset is informed by its secluded location along with two other properties, the nearest of which lies 40 m to the south and is recorded on the first edition OS map of 1884. The setting is further informed by its kitchen garden and paddocks to the north-east of the asset. The setting of the asset makes a considerable contribution to its value, but due to the topography, tree lined boundaries, copses and development of the intervening landscape, the setting does not extend to the Order Limits.

3.2.675 The **medium value** Grade II listed 'Walnut Cottages' (**1373251**) is located east of Aslacton Road, on the western flank of the Tas Valley and 1.1 km south-east of the Order Limits. The asset is of evidential and historical value and comprises a range of plastered clay lump constructed mid-18th century cottages, now a single dwelling, with a pantile roof.

3.2.676 The setting of the asset is informed by its roadside location within the settlement and by its grounds with scattered trees and mature tree lined hedgerow boundaries. The setting is further informed by an open view of arable land to the west; however, 20th century residential development has encroached on the asset from the north and south. The setting of the asset, therefore, makes a minor contribution to its value, but due to the topography, tree lined boundaries, copses and development of the intervening landscape, the setting does not extend to the Order Limits.

3.2.677 The **medium value** Grade II listed 'Sandpit Farmhouse' (**1152773**) is accessed off private road west of Overwood Lane and 810 m south-east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a rendered timber frame structure with a steep pantile roof.

3.2.678 The setting of the asset is informed by its relationship with the non-designated outbuildings of its former farming complex location, although most of the outbuildings recorded on the first edition OS map of 1884 are now gone. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The ground of the asset includes lawned areas and scattered trees and are defined by mature tree lined hedgerow boundaries. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its mature grounds and the topography, tree lined boundaries, copses and development of the intervening landscape, the setting does not extend to the Order Limits.

3.2.679 The settlement of Forncett End is located immediately south of Tacolneston and contains the following 13 Grade II listed buildings.

3.2.680 The **medium value** Grade II listed 'The Horse Shoes' (**1152659**) is located on the southern flank of Long Stratton Road, Forncett End, 880 m west and 350 m north of the Order Limits. The former inn, now a dwelling, is of evidential and historical value. and comprises an 18th century cottage with adjoining barn and stables. The buildings are of plastered timber frame construction with pantile roofs.

3.2.681 The setting of the asset is informed by its location within the settlement and by its mature, large garden. The large garden is defined by timber panel fencing with a 2.5 m high, thick evergreen hedge behind, which screens the asset from 20th century development to the north-west, north-east, and south-east. The setting of the asset, therefore, instils a feeling of privacy and makes a moderate contribution to its value. Due to the garden hedge, and 20th century development, tree cover and mature hedgerows to the east, and copses and mature tree hedgerows to the south, the setting of the asset does not extend to the Order Limits.

3.2.682 The **medium value** Grade II listed 'Chestnut View' (**1373216**) is located on the southern flank of Long Stratton Road, Forncett End, 810 m west and 340 m north of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame cottage with a thatched roof.

3.2.683 The setting of the asset is informed by its location within the settlement, its mature garden and its relationship with the Grade II listed Chestnut Tree Farmhouse and associated former farm buildings on the northern flank of Long Stratton Road. The narrow garden extends 180 m south of the asset, contains numerous modern trees and is defined by mature tree lined hedgerows. The asset is flanked to the west by a 20th century dwelling. The garden setting of the asset instils a sense of privacy and rural tranquillity and, therefore, it makes a moderate contribution to the asset's value. Due to the mature garden, and 20th century development, tree cover and mature hedgerows to the east, and copses and mature tree hedgerows to the south, the setting of the asset does not extend to the Order Limits.

3.2.684 The **medium value** Grade II listed 'Chestnut Tree Farmhouse' (**1152667**) is located on the northern flank of Long Stratton Road, Forncett End, 780 m west and 390 m north of the Order Limits. The asset is a large, late 16th to early 17th century house is of evidential and historical value and comprises a plastered timber frame structure with brick faced north and south ends and a thatched roof.

3.2.685 The setting of the farmhouse is informed by its location within the settlement, its large, mature grounds and by its relationships with it former associated farm building and with the Grade II listed Chestnut View on the southern flank of Long Stratton Road. The setting is further informed by the agricultural land to the north and south with which the asset has a historical and functional relationship. The associated farm buildings have been converted into domestic dwellings, but they and the farmhouse retain readable coherence as a former farming complex. The large, mature grounds of the farmhouse contain numerous mature trees and are defined by high, thick tree lined hedgerows, which instils feeling of seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature grounds, the setting does not extend to the Order Limits.

3.2.686 The **medium value** Grade II listed ‘'Limetree Farm Cottages’ (**1050372**) is on the eastern edge of Forncett End, on the southern flank of Long Stratton Road and 500 m west and 350 m north of the Order Limits. The asset is a 17th century house of evidential and historical value comprising a plastered timber frame structure with a pantile roof.

3.2.687 The setting of the asset is informed by its relationship with the Limetree Farm complex 90 m to the east-north-east and the agricultural landscape to the south with which it has a historical relationship. Twentieth century residential development along the northern flank of Long Stratton Road has, however, encroached on the asset and severed its links the agricultural land to the north. The asset has an associated garden containing a few mature trees and defined by high, thick evergreen hedges. The setting of the asset, therefore, makes a moderate contribution to its value and due to the proximity of the Project, the setting extends to the Order Limits.

3.2.688 The **medium value** Grade II listed assets ‘Limetree Farmhouse’ (**1152683**), ‘Barn East of Limetree Farmhouse’ (**1050373**), ‘Stables Immediately South-East of Limetree Farmhouse’ (**1152690**) and ‘Cart Shed and Hay Loft South-East of Limetree Farmhouse’ (**1373217**) are located on the northern flank of Long Stratton Road at the eastern limit of Forncett End and 270 m west of the Order Limits. These assets are of evidential and historical value. The farmhouse (**1152683**) is a 17th century house comprising a timber frame structure that was encased in red brick in the 19th century with a black glazed pantile roof. The barn (**1050373**) and stables date to the early 19th century and comprises a plastered clay lump structures with black glazed pantile roofs. The cart shed (**1373217**) is of similar date and construction but has a weatherboarded gable. The low value grounds surrounding Limetree Farmhouse (**1637**) of evidential and historic value are recorded as 'Home Farm' on the 1884 1:2500 OS map. The western-most field is recorded as an orchard on both the 1905 1:2500 OS map and 1950 1:10560 OS map. The land parcel is first recorded as Limetree Farm on the 1950 map edition.

3.2.689 The setting of the assets is shared and informed by the interrelationship between them, their relationship with the Grade II listed Limetree Farm Cottages to the west-south-west and the surrounding agricultural landscape with which the assets have a historical and functional relationship. Twentieth century residential development has encroached on the assets from the west but their coherence as a farming complex has not been diminished. The complex is located within grounds with lawned areas and paddocks and defined by tree lined high, thick mature hedgerows. The setting of the assets instils a feeling of privacy, but it also retains a sense of agricultural industry that makes a considerable contribution to their values. Due to the proximity of the Project, however, the setting of the asset extends to the Order Limits.

3.2.690 The **medium value** Grade II listed asset 'Corner Farmhouse' (**1050374**) and 'Barn Adjoining Corner Farmhouse on South-West' (**1152699**) are located on the eastern flank of Long Stratton Road on the eastern edge of Forncett End and 220 m west and north of the Order Limits. These assets are of evidential and historical value. The farmhouse was built in the 17th century and comprises a plastered timber frame structure with a steep black glazed pantile roof. The barn dates to the 17th century and comprises a weatherboarded timber frame structure fronted with 19th century painted brick on the west and a pantile roof.

3.2.691 The setting of the assets is shared and informed the assets' interrelationship, their relationships with non-designated elements of the farming complex, and the surrounding agricultural landscape with which they have historical and functional relationships. Much of the farming complex recorded on early 20th century mapping has, however, been demolished and several large, modern hanger-like barns now lie to the south of the assets. The setting of the assets, therefore, makes a minor contribution to their value, and due to proximity and very limited screening, the setting extends to the Order Limits.

3.2.692 The **medium value** Grade II listed 'Maltings Farmhouse' (**1152848**) is located on the southern flank of West Road at the western end of Forncett End and 280 m north of the Order Limits. The asset comprises a likely 17th century plastered timber frame house evidential and historical value front faced with 19th century red brick with a steep black glazed pantile roof.

3.2.693 The setting of the asset is informed by its location within the settlement and by its relationship with non-designated farm buildings recorded on 19th and early 20th century OS mapping. The asset has lawned areas to the north, east and south with paddocks further to the south. The grounds to the south have mature tree lined hedgerow boundaries to the east and west, whilst the southern boundary is a low hedgerow, providing a view of the agricultural land beyond with which the asset has a historical and functional relationship. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its settlement focus, the setting does not extend to the Order Limits.

3.2.694 The **medium value** Grade II listed 'Hill Farmhouse' (**1373245**) is located on the southern flank of West Road at the western end of Forncett End, 120 m west of the Maltings Farmhouse and 340 m north of the Order Limits. The asset is of evidential and historical value and has probable late 17th to early 18th century origins but was largely rebuilt in brick in the 19th century. The eastern wing comprises a plastered timber frame structure, which is now mostly brick faced. The asset has a pantile roof.

3.2.695 The setting of the asset is informed by its location within the settlement and by its relationship with the north/south aligned building to the south-east that is shown on the first edition OS map of 1884. The same map, and later editions, record what appears to be a large farming complex to the north-east of the asset, however, this appears to have been entirely replaced by 20th century residential development. The asset has a lawned area to the rear with a scatter of mature tree and a paddock and meadow further the to the south. The setting of the asset, therefore, makes a minor contribution to the value of the asset, but due to its settlement focus, the setting does not extend to the Order Limits.

3.2.696 The **medium value** Grade II listed 'Granville Farmhouse' (**1373243**) is located on the eastern flank of Tabernacle Lane at the southern edge of Forncett End and 85 m north of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house with a thatched roof.

3.2.697 The setting of the asset is informed by its location on the southern edge of the settlement and its relationships with the scattered properties to the north and south along the throughfare. The setting is further informed by the surrounding agricultural landscape with which the asset has historical and former functional relationships. The asset has a garden area to the front (west) and more garden and a large lawned area to the rear (east). The grounds are delineated by mature tree lined hedgerows to the west, north and east whilst the southern boundary comprises a high, thick evergreen hedge. A mature tree stands against the south-facing gable of the asset. The setting of the asset instils a sense of rural tranquillity and therefore, makes a moderate contribution to its value. Due to the mature boundaries of the asset and its settlement focus, its setting does not extend to the Order Limits.

Tacolneston CP

3.2.698 The **high value** Grade II* listed 'Tacolneston Hall' (**1050036**) is located within its own gardens and parklands, immediately north-west of Tacolneston and 1.7 km west-north-west of the Order Limits. The hall is of evidential and historical value and was built in the early 18th century around a 16th century core. Restoration and extension took place in the 19th century. It is built of red brick with blue brick dressings and has a hipped tile roof.

3.2.699 The setting of the asset is informed by its association with its formal garden and parkland and by its relationship with other structures in the estate complex. The boundary of the parkland is defined by mature copses that largely screen views in and out of the grounds and to the hall. The setting of the asset creates a sense of privacy and high status and, therefore, makes a considerable contribution to the asset's value. This setting, however, does not extend to the Order Limits due to the parkland's mature boundaries and further mature hedgerows, copses, and later development in the intervening landscape.

3.2.700 The **medium value** Grade II listed assets 'The Retreat' (**1050037**) and 'Lakes Farmhouse' (**1373377**) are located within a dispersed group of residential and farming buildings immediately south of Tacolneston Hall's parkland, south of Hall Road and 1.7 km west-north-west of the Order Limits. These assets are of evidential and historical value. The Retreat is a 17th century rendered timber frame cottage with a pantile roof. The farmhouse is a 17th century rendered timber frame cottage, fronted in red brick in the 20th century with a steep pantile roof.

3.2.701 The setting of the asset is shared and informed by their location within the small residential and farming community, many elements of which are recorded on the first edition OS map of 1884. Each of the elements of the community are located within their own grounds defined by mature tree lined hedgerows that restricts intervisibility and largely screens view in and out. The setting of the assets, therefore, instils feelings of privacy and tranquillity and makes a considerable contribution to their values. The mature grounds of the assets, however, and mature tree lined hedgerows and the post medieval and modern development of Tacolneston in the intervening landscape, ensures that the setting does not extend to the Order Limits.

3.2.702 The **medium value** Grade II listed 'Old Farmhouse' (**1050041**) is located on the eastern flank of Norwich Road, outside the southern limit of the Tacolneston Conservation Area and 1.1 km west of the Order Limits. The asset is a late 16th to early 17th century house of evidential and historical value comprising a plastered timber frame structure on a brick plinth with a steep tiled roof.

3.2.703 The setting of the asset is informed by its secluded location within the settlement of Tacolneston and by its associated grounds. The ground of the asset contains several mature trees and is defined by mature tree lined hedgerows that obscure views in and out. The assets setting instils feelings of privacy and seclusion and makes a considerable contribution to the assets value. Due to the mature grounds, however' the setting does not extend to the Order Limits.

3.2.704 The **medium value** Grade II listed assets 'Manor House' (**1302285**), 'Barn North-East Of Manor House' (**1178721**), 'Outbuilding Immediately East of Manor House' (**1373379**), 'Marshlands' (**1050040**), and 'The Dower House' (**1050039**) are located approximately 120 m east of the Norwich Road, 1 km west of the Order Limits, south of the southern extent of the Tacolneston Conservation Area and accessed via a private road. These assets are of evidential and historical value. The Manor House (**1302285**) is of late 16th to 17th century date and comprises a plastered timber frame structure with brick end walls and a steep tiled roof. The 17th century barn (**1178721**) is a part plastered, part corrugated iron clad timber frame structure with weatherboarding above and a pantile roof. The outbuilding (**1373379**) dates to the late 17th to early 18th century is a plastered timber frame structure with a pantile roof. The Marshlands (**1050040**) is a rendered timber frame structure of probable 17th century date with a steep pantile roof. The dower house is a 17th century house comprising a plastered timber frame structure with a steep pantile roof.

3.2.705 The setting of the assets is shared and is informed by their location within the settlement of Tacolneston, their cohesion as a group of 17th century assets, their relationship with the Grade II listed '60 and 60A, Norwich Road to the south and views of agricultural land to the east with which the assets have a historical relationship. The assets have their own garden areas defined by mature hedgerows, but that still allow for intervisibility within the group. This setting instils a feeling of communal seclusion and, despite 20th century residential development to the south and west, it makes a moderate contribution to the value of the assets. The Project lies c 1.2 km to the east, but due to the settlement-focussed nature of the setting, the intact link to the immediate agricultural landscape, and the mature garden boundaries of the assets, the setting does not extend to the Order Limits.

3.2.706 The **medium value** Grade II listed 'Oak Cottage' (**1050075**) is located on the southern flank of Cheney's Lane, south of the southern extent of the Tacolneston Conservation Area and 960 m west-north-west of the Order Limits. The cottage is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame structure with a thatched roof.

3.2.707 The setting of the asset is informed by its location within the settlement of Tacolneston and by the agricultural land to the east with which it has a historical relationship. The 20th century development of Tacolneston has encroached on the asset from the south, west and north, but its mature tree lined hedgerow garden boundaries and a small copse in the south help to maintain a sense of privacy. The setting of the asset, therefore, makes a minor contribution to its value. The eastern garden boundary comprises a tree lined timber fence allowing for broken views to the east and the Project, however, but due to the settlement-focussed nature of the asset's setting it does not extend to the Order Limits.

3.2.708 The **medium value** Grade II listed 'St Mary's Cottage' (**1178686**) is located on the northern flank of Cheney's Lane, 500 m east of Tacolneston and 460 m west of the Order Limits. The asset is an early 18th century house of evidential and historical

value comprising a plastered timber frame with a brick-faced south end and a thatched and pantile roof.

3.2.709 The setting of the cottage is informed by its location within its own enclosed grounds, by its relationship with non-designated buildings within its grounds and with the Grade II listed Mary's Farmhouse and associated barn (see below) 100 m to the east on the southern flank of Cheney's Lane. The setting is also informed by the surrounding agricultural land with which the asset has a historical relationship. The setting of the asset makes a considerable contribution to its value and due to its proximity, the setting extends to the Order Limits.

3.2.710 The **medium value** Grade II listed assets 'Mary's Farmhouse' (**1050076**) and 'Barn Immediately North-West Of Mary's Farmhouse' (**1302309**) are located on the southern flank of Cheney's Lane, 600 m east of Tacolneston and 360 m west of the Order Limits. These assets are of evidential and historical value. The farmhouse, dated to 1628 on the chimney stack, comprises a roughcast timber frame structure with a thatched and pantile roof. The plastered and tarred timber frame barn dates to the 17th century and has a thatched roof.

3.2.711 The setting of the assets is shared and is informed by their location in their grounds, by their interrelationship and by their relationship with St Mary's Cottage 100 m to the west. The asset's grounds comprise lawned areas with numerous dispersed trees to the east, paddocks to the south and are defined by low hedgerow boundaries with occasional trees. Their location beyond the bounds of the settlement affords the assets a sense seclusion and privacy whilst the coherence of the farming complex remains intact. The setting, therefore, makes a considerable contribution to the value of the assets, and, due to the limited screening and the proximity of the Project, the setting extends to the Order Limits.

3.2.712 The **medium value** Grade II listed 'Whitehouse Farmhouse Including Adjacent Outbuilding to South-West' (**1050074**) is located 90 m north of Bentley Road, Tacolneston and 730 m west-north-west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century timber frame house encased in red brick in the 19th century with a steep black glazed pantile roof. The listing includes an adjoining outbuilding to the south-west, probably a cottage, of early 18th century and constructed of red brick with a pantile roof.

3.2.713 The setting of the asset is informed by its former farmyard location on the south-eastern edge of Tacolneston and by its relationship with the non-designated Whitehouse farm buildings many of which are recorded on the first edition OS map of 1884. The setting is further informed by the building of the neighbouring Carpenter's Farm to the north and the agricultural landscape to the east with which the asset has a historical and functional relationship. The elements of Whitehouse Farm have now been developed as residential dwellings and Tacolneston to the west and Forncett End to the south have expanded encroaching of the farm buildings. The setting of the asset, therefore, makes a minor contribution to its value, however, due to screening by the non-designated farm buildings and mature tree cover and tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.714 The following listed buildings are located within the parish of Tacolneston and within Tacolneston Conservation Area.

3.2.715 The **medium value** Grade II listed 'The Rectory' (**1050045**) is located immediately to the north of the Grade I listed Church of All Saints (**1178820** - see medieval section),

in the north of the Tacolneston Conservation Area and 620 m west of the Order Limits. The asset is an 18th century house of evidential and historical value built of painted brick with a steep slated roof.

3.2.716 The setting of the asset is informed by its close historical relationship with the Church of All Saints. The large garden of the rectory is defined by mature tree lined hedgerows and there is a small copse to the east largely screen the Norwich Road from the asset. The setting of asset instils feelings of privacy and seclusion and makes a considerable contribution to the to the value of the asset. Unlike the church (see medieval section above), however, there is no clear view to the east and the Project due to the cops and mature garden boundaries, and so the setting of the asset does not extend to the Order Limits.

3.2.717 The **high value** Grade II* listed 'Old Hall' (**1373381**) and the medium value 'Old Hall Farmhouse' (**1050044**) and 'Barn Immediately East Of Old Hall Farmhouse' (**1373382**) are located on the southern flank of Norwich Road, south of the medieval Church of All Saints (**1178820**) in the north of Tacolneston and 550 m west-north-west of the Order Limits. These assets are of evidential and historical value. The east range of the hall is its oldest element and comprises a late 16th to early 17th century timber frame house. The house was remodelled and enlarged in the early 18th century when the parallel, red brick built west range was added. The hall has a pantile roof. The hall's grounds are defined to the north along Norwich Road by the listed garden wall. The 18th century eight-foot wall is built of red brick with blue brick headers with ramped coping. The gate piers are brick built with ball finials. The early 18th farmhouse is red brick built with blue brick headers and has a steep tiled roof. The early 18th century barn is also constructed of red brick with blue brick headers. The gable ends and south side are rendered, and it has a pantile roof.

3.2.718 The setting of the assets is largely shared and informed by the historical relationships between the designated elements of the hall and farming complex and with the non-designated former coach house and stables recorded on the first edition OS map of 1884. The hall has mature gardens to the east and west with high walled and hedged boundaries that restrict ground level views. A 20th century residential property has encroached on the complex to the east, but the single storey building is sympathetic and in keep with the vernacular and does not detract from the coherence of the hall and former farming complex. The setting of the assets instils a feeling of privacy, and in the case of the hall, high status. The setting, therefore, makes a considerable contribution to the value of the assets, however, due to mature tree lined boundaries within the complex, the adjacent development and further mature boundaries in the intervening landscape, the setting does not extend to the Order Limits.

3.2.719 The **high value** Grade II* listed 'The Manor Farmhouse' (**1050043**) and the **medium value** Grade II listed 'Barn Immediately South-West of The Manor Farmhouse' (**1302277**) are located on the south-east flank of Norwich Road south of the mid-point of the linear Tacolneston Conservation Area, and 1 km west-north-west of the Order Limits. They are of evidential and historical value. The farmhouse is a very fine house comprising a plastered timber frame structure with a brick plinth and red brick gable ends with a thatched roof. A plastered wing with a steep pantile roof was added in the 17th century. The timber frame barn dates to the late 17th to early 18th centuries and is plastered with a thatched roof. It has left and right projecting cart shed wing with low pantile roofs.

3.2.720 The setting of the assets is shared, and both assets appear to be elements of a farming complex recorded on the first edition OS map of 1884 much of which is

extant. The setting of the assets is informed by their farmyard location, by their interrelationship and their relationships with the non-designated assets of the complex. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical and functional relationship, and by the group of largely 17th century Grade II listed building immediately to the south accessed off The Green (see below). The setting of the assets instils a feeling of rural seclusion but also retains a sense of agricultural industry that makes a considerable contribution to their values. Views to the Project in the east are interrupted by the non-designated elements of the farming complex and by a large 21st century hanger barn. There are also mature copses and mature tree lined boundaries in the intervening landscape to the east that further screen the assets, and so the setting does not extend to the Order Limits.

3.2.721 The **medium value** Grade II listed assets 'Warren Cottage And 2 Adjoining Cottages' (**1050033**), 'Elm View' (**1050034**) 'Christmas Cottage' (**1050035**) and 'Cottage Immediately North of Christmas Cottage' (**1373376**) are located just to the south of Manor Farmhouse and barn in the Tacolneston Conservation Area and accessed off The Green. These assets lie 1.0 km west-north-west of the Order Limits. They asset are of evidential and historical value. Warren Cottage and the adjoining cottages were built in the early 17th century and comprise plastered timber frame structures. Warren Cottage is thatched whilst the adjoined cottages have pantile roofs. Elm View is a 17th century plastered timber frame cottage on a brick plinth with a thatched roof. Christmas cottage is a 17th century house comprising a timber frame structure with a thatched roof and porch. The cottage north of Christmas Cottage dates to the early 19th century and comprises a plastered clay lump structure with a pantile roof.

3.2.722 The setting of the assets is shared and is informed by their interrelationships, their relationships with the Manor Farmhouse complex to the north and their relationships with the non-designated assets of The Green complex. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical relationship. The assets have their own garden areas defined by mature tree lined hedgerows that partially screen views in and out of The Green complex. The setting of the assets, therefore, creates a communal feeling tempered by the tranquillity of the rural landscape, all of which makes a considerable contribution to the assets' value. Views to the Project in the east are interrupted by the non-designated elements of The Green complex, by its mature tree lined boundaries and by copses and further mature tree line hedgerows in the intervening landscape. The setting of the assets does not, therefore, extend to the Order Limits.

3.2.723 The **medium value** Grade II listed 'The Pelican Inn' (**1302268**) is located on the south-eastern flank of the B1113 Norwich Road towards the southern end of the Tacolneston Conservation Area and 1.1 km west-north-west of the Order Limits. The inn is a 19th century house of evidential and historical value, which comprises a stuccoed structure with a low-pitched pantile roof.

3.2.724 The setting of the asset is informed by its roadside location within Tacolneston and by its relationship with other elements of the settlement. The setting of the asset, therefore, makes a considerable contribution to its value. The eastern boundary of the inn's grounds is defined by a mature tree lined hedgerow, and there are further such boundaries and mature copses in the intervening landscape between the asset and the Project. The setting of the asset, does not, therefore, extend to the Order Limits.

3.2.725 The **medium value** Grade II listed assets 'Hill Cottage' (**1050042**) and 'Saffron Cottage' (**1302267**) are located on the south-eastern flank of the B1113 Norwich Road towards the southern end of the Tacolneston Conservation Area and 1.2 km west-north-west of the Order Limits. Hill Cottage is a 17th century plastered timber frame house of evidential and historical value with a thatched roof. Saffron Cottage is similarly constructed and dates to the late 17th century.

3.2.726 The setting of the assets is shared and is informed their interrelationship, their location within the settlement of Tacolneston and the agricultural landscape to the east with which they have a historical relationship. The assets have gardens with mature tree lined hedgerow boundaries, which allow for broken views of a 19th century terrace to the north and school to the south. The setting of the assets, therefore, makes a moderate contribution to the value of the assets. The cottages have garden areas and the shared eastern boundary in the direction of the Order Limits is screened by a mature hedgerow and thick tree cover. There is further screening mature tree lined hedgerows and copses to the east and so the setting of the assets does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.727 The sites of the **medium value** deserted medieval/post medieval settlements of Rattongate and Haliards and a multi-period finds assemblage (**1089**) is located 400 m south-south-east of Tacolneston and within the Order Limits. These settlements are of evidential value and are recorded on a survey plan of 1565 on which both are illustrated with streets and houses. Fieldwalking and metal detecting surveys conducted on the site has resulted in a multi-period finds assemblage that includes post medieval pottery sherds, and a copper alloy buckle of evidential value.

3.2.728 The fieldwalking of land immediately south of the deserted medieval/post medieval settlement (**1089**), 700 m south-south-east of Tacolneston and partially within the Order Limits resulted in a multi-period finds assemblage (**1093**) that included a **low value** post medieval element comprising a copper alloy thimble and buckle and pottery sherds of evidential value.

3.2.729 A multi-period finds assemblage (**1103**) recovered during further fieldwalking immediately south of the deserted medieval/post medieval settlement (**1089**), east of (**1093**), 750 m south-south-east of Tacolneston and partially within the Order Limits included **low value** post medieval asset comprising copper alloy button, knife strap fitting, thimble, token and vessel fragment and pottery sherds of evidential value.

3.2.730 Two **low value** post medieval cottages (**1307**) are located 1.3 km south-east of Tacolneston and 120 m north-north-east of an Order Limits access road. The cottages are of evidential and historical value, were built as a single property in the 18th century and the upper floor includes reused late medieval or 16th century timbers.

3.2.731 A **low value** post medieval farmhouse (**1309**) is located on the western edge of Forncett St Mary and 190 m south-south-east of an access road of the Order Limits. Elements of the carpentry suggest the structure may have an early 17th century core. The asset has evidential and historical value.

3.2.732 A **low value** former Calvinistic Methodist Chapel, the Tabernacle (**1376**), is of evidential and historical value and located on the western flank of Tabernacle Lane in the south of Forncett End, c. 240 m north-north-west of a Project permanent access road. The chapel was built in 1754 by James Wheatley who also built a Tabernacle in

Norwich. The chapel was later used by General Baptists, who formed the church of the New Connexion in 1814. The asset is now derelict.

3.2.733 Further evidence of post medieval activity in the Forncett St Mary and Tacolneston area is represented by **low value** findspots, and artefacts recovered during fieldwalking and metal detector surveys. These assets are of evidential value and comprise:

- A post medieval copper alloy button, a hooked tag, a jetton, a rivet and a token, and a lead cloth seal in a multi-period finds assemblage (**1175**) recovered from farmland 1.1 km east of Tacolneston, immediately north of Cheney's Lane and partially within the Order Limits
- A post medieval copper alloy buckle, German jetton and a token, a silver coin and pottery sherds in a multi-period finds assemblage (**1189**) recovered from farmland 970 m south-east of Tacolneston, immediately south of Long Stratton Road and partially within the Order Limits
- A post medieval copper alloy harness mount, hooked tag, hooked sword belt fitting, buttons, coin, jetton, token, rotary key and crotal bell, a silver coin and a lead button in a multi-period finds assemblage (**1263**) recovered from farmland 640 m north-east of Tacolneston and partially within the Order Limits
- A post medieval copper alloy cauldron fragment, jettons, coins, dress fitting, tokens, buckles, sword belt fitting, harness mount and furniture fitting; two silver coins, and a lead weight and two cloth seals in a multi-period finds assemblage (**1155**) recovered from farmland 700 m north of Forncett St Mary, immediately north-west of High Road and immediately east of the Order Limits
- Post medieval copper alloy harness mounts, buckles, key, pipe tamper, rowel spur, and token, a silver coins and a lead cloth seal, powder measure and weight in a multi-period finds assemblage (**1161**) recovered from farmland 250 m north-west of Forncett St Mary and partially within the Order Limits
- A post medieval copper alloy buckle and three silver coins in a multi-period finds assemblage (**1192**) recovered from farmland 1.1 km north-west of Forncett St Mary and 10 m east of the Order Limits
- A post medieval copper alloy token and a silver coin in a multi-period finds assemblage (**1167**) recovered from farmland on the western edge of Forncett St Mary immediately north of Cheney's Lane and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 980 m to the east
- Two post medieval copper alloy buckles, button, coin, coin weight, hooked tag, two jetton, strap fitting, sword belt hanger fragment and thimble, a silver coin and a lead weight in a multi-period finds assemblage (**1168**) recovered from farmland 1.3 km north-east of Tacolneston and partially within the Order Limits
- A post medieval, copper alloy seal and token and a silver coin in a multi-period finds assemblage (**1137**) recovered from farmland 800 m east of Tacolneston and within the Order Limits
- Post medieval silver coin in a multi-period finds assemblage (**1158**) recovered from farmland 880 m east of Tacolneston and partially within the Order Limits. The survey site occupies slightly higher ground overlooking a shallow tributary of the Tas Valley to the north

- A post medieval, copper alloy buckle, button, harness fitting and strap fitting and a silver coin in a multi-period finds assemblage (**1119**) recovered from farmland 1 km north-east of Tacolneston and partially within the Order Limits
- Several post medieval copper alloy harness mounts, buckles, a seal matrix, thimble, saddle pommel cap fragment, crotal bell, hinge and rotary key, a silver cuff link and a lead thimble in a multi-period finds assemblage (**1164**) recovered from farmland on the floor and northern flank of a tributary valley of the Tas 1.5 km north-east of Tacolneston and within the Order Limits
- A post medieval copper alloy buckle, jetton, knife, strap fitting and tap, a silver coin, and a lead cloth seal and weight in a multi-period finds assemblage (**1170**) recovered from farmland 700 m east of Tacolneston and partially within the Order Limits
- A post medieval, copper alloy coin, coin weight and token and a silver coin in a multi-period finds assemblage (**1139**) recovered from farmland immediately south of Forncett St Mary and partially within the Order Limits. The survey site is situated on higher ground with the Tas Valley floor 150 m to the east
- A post medieval musket ball and clay pipe fragments in a multi-period finds assemblage (**1107**) recovered from farmland 990 m south-south-west of Forncett St Mary and 150 m east of the Order Limits
- A post medieval copper alloy buckle in a multi-period finds assemblage (**1242**) recovered from farmland 320 m north of Forncett St Mary and 180 m east of the Order Limits
- A post medieval copper alloy buckle in a multi-period finds assemblage (**1299**) recovered from farmland 760 m south-east of Tacolneston and 120 m north-west of the Order Limits
- Three post medieval copper alloy buckles, a harness mount and a toy cannon, and a lead weight in a multi-period finds assemblage (**1283**) recovered from farmland on the western edge of Forncett St Mary, immediately south of Cheney's Lane and 140 m east of the Order Limits
- A post medieval copper alloy furniture fitting, coin and jetton, a silver coin, and a lead cloth seal (**1174**) recovered from farmland 360 m east of Tacolneston and 25 m west of the Order Limits
- A post medieval copper alloy candle snuffer, stud, and token and four silver coins in a multi-period assemblage (**1128**) recovered from farmland 1.3 km south-south-west of Forcett St Mary and 240 m south-east of the Order Limits
- A post medieval copper alloy buckle, button, crotal bell, harness mount, saddle pommel fragment, thimble, coin weight and vessel fragment; three silver coins and a pewter button in a multi-period finds assemblage (**1194**) recovered from farmland 650 m north-east of Tacolneston and 150 m west of the Order Limits. Asset (**1194**) overlaps asset (**1253**) to the west and assets (**1119**) and (**1263**) to the east
- A post medieval copper alloy buckle, crotal bell, harness mount and a strap fitting, three silver coins and a lead cloth seal in a multi-period finds assemblage (**1226**) recovered from farmland immediately north of Forncett St Mary, 90 m north of Cheney's Lane and 320 m east of the Order Limits

- A post medieval, copper alloy personal ornament and plaque in a multi-period finds assemblage (**1134**) recovered from farmland 840 m east of Tacolneston and 250 m west of the Order Limits
- Two post medieval silver coins in a multi-period finds assemblage (**1173**) recovered from farmland immediately east of Tacolneston and 180 m north-west of the Order Limits
- Post medieval copper alloy buckles, crotal bell, jettons, hooked sword belt mount and fitting, strap end, harness mount, padlock, vessel fragment, toy, and a spur fragment; three silver coins, button, and brooch; a lead weight, and pottery sherds in a multi-period finds assemblage (**1187**) recovered from farmland 440 m north-east of Tacolneston and 440 m west of the Order Limits. These finds, along with artefacts from the late Iron Age, Roman, Saxon (possibly relating to a cemetery) and medieval indicate that this could be a site of a multi-phase settlement site
- A post medieval copper alloy button, hooked tag, harness mounts, jetton, a drawer handle back plate from a piece of furniture, a knife whittle tang with a handle in the form of a male musician playing the bagpipes and a rumbler bell; five silver coins, two buttons, cuff link, and an 18th to 19th century compass face in a multi-period finds assemblage (**1253**) recovered from farmland 340 m north-east of Tacolneston, immediately east of Norwich Road and 450 m west of the Order Limits. Asset (**1253**) partially overlaps with asset (**1194**) to the east
- A post medieval, copper alloy strap fittings, barrel padlock, bell, book fitting, buckles, harness fittings, jettons, thimbles, token, a toy, a vessel fragment, key, weight and coin, a lead button, toy, weight and cloth seals, silver coins and a seal matrix, and pottery sherds in a multi-period finds assemblage (**1145**) recovered from farmland 150 m east of Tacolneston and 600 m west of the Order Limits.

Cropmark and LiDAR Assessment

3.2.734 **Low value** linear cropmarks (**1504**) and cropmarks of the former Puddingpoke Barn (**1544**) identified by the Project and of evidential value are located north and north-east of Hurn Lane, c. 1.3 km north-east of Tacolneston and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map.

3.2.735 **Low value** linear cropmarks (**1545**) of evidential value identified by the Project are located south of Hurn Lane, c. 760 m east of Tacolneston and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.736 **Low value** linear cropmarks (**1505**) of evidential value identified by the Project are located west of Stickfer Lane, c. 520 m east of Tacolneston and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.737 **Low value** linear cropmarks (**1502**) of evidential value identified by the Project are located north and south of Cheney's Lane, c. 600 m east of Tacolneston and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map.

3.2.738 **Low value** linear cropmarks (**1503**) of evidential value identified by the Project are located flanking Stickfer Lane, c. 200 m north-west of Forncett Saint Mary and

partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.739 **Low value** linear cropmarks (**1501**) of evidential value identified by the Project are located north of Long Stratton Road, flanking Stickfer Lane, c. 280 m east of Forncett End and c. 15 m west of the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.740 **Low value** linear cropmarks (**1515**) of evidential value identified by the Project are located between Stickfer Lane to the west and Low Road to the east, c. 170 m west of Forncett Saint Peter and c. 80 m west of the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.741 of evidential value identified by the Project are located north and south of Long Stratton Road, c. 300 m south-east of Forncett End and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.742 **Low value** linear cropmarks (**1516**) of evidential value identified by the Project are located flanking the Forncett/Bunwell parish boundary, c. 250 m south of Forncett End and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

Historic Mapping Assessment

3.2.743 A series of **negligible value** ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of four ponds are located within the Order Limits (**1625**, **1504**, **1630**, **1639**)
- A total of eight ponds are located within 250 m of the Order Limits (**1621**, **1622**, **1623**, **1626**, **1631**, **1634**, **1638**, **1643**).

3.2.744 Three **low value** parish boundaries boundary (**1781**, **1628**, **1644**) and one low value ‘4 ft Route of Hedge’ boundary (**1629**) of evidential and historic value have been identified crossing the Order Limits and within the 250 m Study Area within this sub-section. The boundary can be observed on the 1882 and 1884 1:2500 OS Maps. It is unknown to what extent the boundaries may physically be extant within the landscape.

3.2.745 The location of two **low value** potential important hedgerows (**1624**, **1635**) of evidential and historical value has been identified both within the Order Limits and 250 m Study Area immediately east of Hurn Lane, and 140 m east of the Order Limits and 60 m east of Stickfer Lane respectively. The hedgerows have first been observed on the 1882 1:10560 OS map although it is unknown how much these hedgerows pre-date this map edition.

3.2.746 The **low value** 'Stickfer Barn' (**1627**) of evidential and historical value can be seen partially within the Order Limits and immediately south-west of Stickfer Lane. Two buildings and a yard can be seen on the 1882 1:10560 OS map and is identified as 'Stickfer Sheds' on the 1995 1:2500 OS map. The buildings are no longer present on current aerial imagery.

3.2.747 Three **low value** buildings and yard (**1640**) of evidential and historic value have been identified within the Order Limits approximately 90 m west of Stickfer Lane and immediately west of two further low value buildings and a pond within a narrow land

parcel (**1641**) of evidential and historic value. The three **low value** buildings and yard (**1640**) are only observed on the 1884 1:2500 OS map. The two buildings and a pond within a narrow land parcel (**1641**), are also seen on the 1884 map but are last observed on the 1905 1:2500 OS map.

3.2.748 **Low value** former buildings and a yard (**1769**) of evidential and historic value have been observed approximately 35 m south-east of the Order Limits and immediately north of Stickfer Lane. The land parcel and buildings are first observed on the first seen on the 1907 1:10560 OS map and are last observed on the 1995 1:2500 OS map. The buildings are no longer observable on current aerial imagery.

3.2.749 A **negligible value** trigonometry point (**1632**) of evidential value is located within the Order Limits and 370 m north of Cheney's Lane. The trigonometry point is first observed on the 1882 1:10560 OS map and is last observed on the 1905 1:2500 OS map.

3.2.750 A **negligible value** orchard (**1633**) of evidential and historical value has been observed approximately 180 m south-east of the Order Limits and 100 m east of Stickfer Lane. The orchard is first observed on the 1882 1:10560 OS map and last observed on the 1953 1:10560 OS map.

3.2.751 A number of **low value** buildings, a yard, and a pond (**1636**) of evidential and historic value have been observed approximately 180 m west of the Order Limits and immediately north of Cheney's Lane. The assets are first seen on the 1882 1:10560 OS map, with the buildings last seen on the 1953 1:10560 OS map. The land plot is now occupied by trees, scrub and a yard.

3.2.752 The **low value** 'Puddingpoke Barn' buildings and yard (**1544**) of evidential and historical value has been identified approximately 230 m west of the Order Limits and 340 m north of Hurn Lane. The buildings and yard are first observed on the 1882 1:10560 OS map and are last seen on the 1995 1:2500 OS map. The location can also be seen as cropmarks.

3.2.753 **Low value** buildings and a land parcel labelled as 'Corn Mill' (**1642**) of evidential and historic value have been identified approximately 190 m south-east of the Order Limits, and immediately west of Long Stratton Road. The buildings and land parcel are first observed on the 1884 1:2500 OS map and are last observed on the 1953 1:10560 OS map.

Bunwell Hill and the Tas Valley

Designated Heritage Assets

Bunwell CP

3.2.754 The **medium value** Grade II listed 'Ebenezer Cottage' (**1171167**) is located off a private road on the south-eastern flank of The Turnpike in the dispersed settlement of Bunwell and 510 m north-west of the Order Limits. The cottage is of evidential and historical value, dates to the 17th to 18th centuries and comprises a plastered timber frame structure with a thatched roof. There is an attached plastered outbuilding to the north, topped by a pantile roof.

3.2.755 The setting of the asset is informed by its location within the dispersed settlement and by its relationship with the neighbouring non-designed buildings to the north recorded on the first edition map of 1884. The cottage's lawned garden to the south

and east is defined by a mature tree lined hedgerow that screens the asset from the agricultural land beyond creating a sense of enclosure. The setting of the asset, therefore, makes a moderate contribution to its value, and due to its proximity to the Project, the setting extends to the Order Limits.

3.2.756 The **medium value** Grade II listed 'Bunwell Manor Hotel' (**1049613**) is located on the eastern edge of Bunwell and Great Green, along a private road which leads from Rectory Lane, c. 1.9 km north-west of the Order Limits. The asset is a late 16th century house, formerly a Rectory, altered in the 19th century. The asset is built from a timber-frame and roughcast brick, with steep pantile roofs with gabled ends. The building comprises two storeys and an attic.

3.2.757 The setting of the asset contributes considerably to its value, set within private grounds, lined with mature vegetation and surrounded by agricultural fields to the north-east and south and a grassed area and Rectory Land to the west. The asset is situated on the northern edge of the small linear settlement of Bunwell and Great Green. The mature vegetation surrounding the property secludes the property from the surrounding settlement and screens it from view on all sides. The asset has historical and evidential value and the setting of the asset is restricted to the grounds of the property and as such does not extend to the Order Limits.

3.2.758 The **medium value** Grade II listed 'The Cottage' (**1171142**) is located down a private driveway which leads off of Rectory Lane in the linear settlement of Bunwell and Great Green, c. 1.9 km north-east of the Order Limits. The asset is a 17th century timber-framed house which is plastered and has a thatched roof with gabled ends. The asset comprises one storey and an attic.

3.2.759 The setting of the asset is informed by its location within the small linear settlement of Bunwell and Great Green, a rural settlement, close to other small settlements. The asset is set back from the road and the assets property is lined by mature vegetation visually screening it in all directions. There is some modern residential development close to the asset as the settlement has grown. Surrounding the settlement are open agricultural fields. The setting of the asset contributes moderately to its value and the asset has evidential and historical value. The setting of asset does not extend to the Order Limits and is restricted to the property and its grounds.

3.2.760 The **medium value** Grade II listed 'Green Farmhouse' (**1171114**) is located on the north-eastern flank of Bunwell Street, Little Green and 1.2 km north-west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century rendered timber frame house with a steep pantile roof.

3.2.761 The setting of the asset is informed by its roadside location in the Little Green settlement and by its relationship with the non-designated outbuildings of Green Farm located immediately to the south-east and recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and outbuildings have a historical and functional relationship. The outbuildings have now been converted into residential properties; however, they still retain much of their character and so them and the farmhouse are still moderately coherent as a former farming complex. The lawned grounds of the asset are defined by mature tree lined hedgerows and south-eastern boundary and the adjacent former outbuildings screen the asset from 20th century residential development beyond. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the asset's garden boundaries and the topology, development, copses, and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.762 The **medium value** Grade II listed 'Church Farmhouse' (**1049612**) is located on the eastern flank of Church Lane in the dispersed settlement of Bunwell and 860 m north-west of the Order Limits. The farmhouse is of evidential and historical value and comprises a plastered timber frame structure with a thatched roof. The south end was brick faced in the 18th century, and a brick chimney stack was added.

3.2.763 The setting of the farmhouse is informed by its roadside location, and by its relationship with the farm outbuildings immediately to the south. The outbuildings are now residential properties, but they and the asset retain coherence as a former farming complex. The setting is also informed by a view of the Grade I listed Church of St Michael to the south-west and by the surrounding agricultural landscape with which the asset and outbuildings have a historical and functional relationship. The lawned grounds of the asset are defined by a roadside flint and stone wall to the west and by a tree lined hedgerow to the north, east and south. The setting of the asset makes a moderate contribution to its value, but due to the asset's mature garden boundaries and the topology, development, copses, and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.764 The **medium value** Grade II listed 'Old Queen's Head' (**1049614**) is located at the junction of Old Turnpike and B1113 The Turnpike in the dispersed settlement of Bunwell and 820 m north-west of the Order Limits. The 18th century former inn is of evidential and historical value and constructed of painted brick with a steep pantile roof.

3.2.765 The setting of the asset is informed by its roadside location, which once had supplied the asset with its cliental. Outbuildings of the asset recorded on the first edition OS map of 1884 have largely been demolished and so the setting of the asset makes a minor contribution to the asset's value. The setting of the asset is restricted to its roadside location within the settlement and so it does not extend to the Order Limits.

3.2.766 The **medium value** Grade II listed 'Banyard's Hall' (**1373609**) is located off a private road 390 m north of Low Common Road, Bunwell Hill and 140 m north-west of the Order Limits. The asset is of evidential and historical value and comprises a probable 17th century timber frame house re-fronted during the 19th in buff brick with a steep black glazed pantile roof.

3.2.767 The setting of the asset is informed by its isolated location and its relationships with the remains of a medieval moat (**1056**) to the west, north and east and with a farming complex to the east the majority of which is recorded on the first edition OS map of 1884. The setting is also informed by the surrounding agricultural landscape with which the hall and farm buildings have a historical and functional relationship. The lawned grounds of the hall are defined to the west, north and east by the moat and associated tree cover, whilst to the south they are defined by a mature tree lined hedgerow. The boundaries largely restrict views in and out of the grounds creating a sense of privacy and enclosure. The setting of the asset makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.2.768 The **medium value** Grade II listed 'Wood Farmhouse' (**1049644**) is located south-west of the junction Bunwell Hill and Brick Kiln Lane and 170 m north-west of the Order Limits. The asset is of evidential and historical value and comprises a probably early 18th century plastered timber frame cottage with a steep pantile roof.

3.2.769 The setting of the asset is informed by its roadside location within the settlement and its relationship with the surviving non-designated elements of the farming complex recorded on the first edition OS map of 1884. The setting of the asset and outbuildings is further informed the surrounding agricultural landscape with which the farm buildings have a historical and functional relationship. The grounds of the farmhouse are defined by a low evergreen hedge affording an open view of agricultural land to the south-east. The setting of the asset has been encroached to the south, west and north by 20th century residential development and so makes a moderate contribution to its value. Due to the open view to the south-east and the proximity of the Project, the setting extends to the Order Limits.

3.2.770 The **medium value** Grade II listed 'Lion Cottage' (**1171123**) is located on the northern flank of the Tas Valley, north of Low Common Road, Low Common, Bunwell and 750 m south-east of the Order Limits. The asset is of evidential and historical value and comprises an early 19th century red brick house with a black glazed pantile roof.

3.2.771 The setting of the asset in informed by its roadside location within the settlement and by its relationship with other residential properties on the northern flank of Low Common Road, some of which are recorded on the first edition OS map of 1884. The lawned garden is defined to the north in the direction of the Order Limits is defined by a mature tree lined hedgerow. The setting of the asset makes a moderate contribution to its value, but due to the topography of the Tas Valley and the tree lined boundaries and copses of the intervening landscape, the setting does not extend to the Order Limits.

3.2.772 The **medium value** Grade II listed assets 'Park Farmhouse' (**1373607**) and 'Ochre Barns' (**1391985**) are located on the northern flank of the Tas Valley, north of Low Common Road, Low Common, Bunwell and 750 m south-east of the Order Limits. The farmhouse was built in 1812 and is constructed of red brick and has a steep slated roof. The barns are of evidential and historical value, date to the early 18th and early 19th centuries and were converted into residential dwellings in the early 21st century.

3.2.773 The setting of the assets is shared and is informed by their roadside location within the settlement, their interrelationship, and their relationships with the surviving non-designated elements of the former Park Farm complex recorded on the first edition map of 1884. The setting is further informed by the surrounding agricultural landscape with which the assets have historical and functional relationships. The grounds of the assets to the north and in the direction of the Project have been split relative to the now private dwellings and are defined by mature tree lined hedgerows. The setting of the asset makes a moderate contribution to its value, but due to the topography of the Tas Valley and the tree lined boundaries and copses of the intervening landscape, the setting does not extend to the Order Limits.

3.2.774 The **medium value** Grade II listed 'Cowgate Farmhouse' (**1171119**) is located on the northern flank of the Tas Valley, north of Low Common Road, Low Common, Bunwell and 730 m south-east of the Order Limits. The asset is of evidential and historical value and comprises a 17th century timber frame house encased in the mid-19th century with red brick and stone dressing, with a low-pitched pantile roof.

3.2.775 The setting of the asset is informed by its roadside location within the settlement and its relationship with the non-designated former Farrier's Arms Public House immediately to the east and recorded on the first edition OS map of 1884. The asset's lawned garden and paddock further north and defined by mature tree lined

hedgerows restricting views in and out affording the asset some privacy. The setting of the asset makes a considerable contribution to its value, but due to the mature boundaries of the asset's grounds, the topography of the Tas Valley and the tree lined boundaries and copses of the intervening landscape, the setting does not extend to the Order Limits.

3.2.776 The **medium value** 'Quakers Farmhouse' (**1373606**) is located at the junction of Hall, Road and Low Common, 1.4 km south-east of Bunwell and 210 m south-east of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame, two storey house with attics and a thatched roof. There is a later plastered, two storey wing to the south with a pantile roof.

3.2.777 The setting of the farmhouse is informed by its roadside location within a former farming complex and by its relationship with its former non-designated outbuildings, now mostly residential dwellings that are to the west and south of the asset, and are recorded on the first edition OS map of 1884. The setting is further informed by the immediate agricultural landscape with which the asset and its outbuildings have a historic and former functional relationship. Although the function of most of the outbuildings has changed, and the former farmyard has been broken up into garden areas for the separate dwellings, the asset and outbuildings retain some coherence as a former farming complex, and so the setting of the asset makes a moderate contribution to value. Due to an open view towards the Project to the north-west, the setting of the asset extends to the Order Limits.

3.2.778 The **medium value** 'Persehall Manor' (**1049610**) is located 250 m south-south-east of Quakers Farmhouse (**1373606**), 80 m west of Hall Road, 1.6 km south-east of Bunwell and 390 m south-east of the Order Limits. The asset is of evidential and historical value and comprises a 16th to 17th century timber frame house encased in red brick during the 18th century. The house is of two storeys, and it has a steep tiled roof with gabled ends. The HER records outbuildings and the remains of a possible medium value medieval moat (**1183**) of historical and evidential value associated with the asset.

3.2.779 The setting of the asset is informed by its location within a working farm complex and by its relationship with its non-designated outbuilding, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the immediate agricultural landscape, with which the asset and its outbuildings have a historical and functional relationship. The remains of a medieval moat (**1183**) lie just to the north of the house contributing to the setting of the asset and the time depth of the site. The setting of the asset, therefore, makes a considerable contribution to its value, but due to distance and partial screening by the farmyard's boundaries and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.780 The **medium value** Grade II listed 'Quaker Farm Cottage' (**1049611**) is located is located on the upper northern flank of the Tas Valley, north of Low Common Road, Low Common, Bunwell and 590 m south-east of the Order Limits. The asset is a probable early 18th cottage range of evidential and historical value, now a single dwelling, comprising a plastered timber frame structure with a steep pantile roof.

3.2.781 The setting of the asset is informed by its roadside location at the western limit of Low Common and by its relationship with Ruby House Farm 40 m to the north-east, much of which is recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable

contribution to its value. The view to the north is screened by rising ground and a mature, roadside hedgerow, whilst the view to the north-west and west is partially screened by associated outbuildings and a mature tree lined garden boundary. Due to the screening and its restricted roadside settlement location, the setting of the asset does not extend to the Order Limits.

3.2.782 The **medium value** Grade II listed 'Valley Farmhouse' (**1049604**) is located on the southern flank off Bridge Road at the base of the Tas Valley and 890 m south-east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a rendered timber frame structure. The roof was heightened in the 19th century and is of pantile.

3.2.783 The setting of the asset is informed by its roadside location in the base of the Tas Valley and by its relationship with the surviving non-designated elements of the Vally Farm complex that are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural with which the asset has a historical and functional relationship. the setting of the asset makes a considerable contribution to its value, but due to the topography of the Tas Valley and mature tree growth lining the river and Bridge Road, the setting does not extend to the Order Limits.

3.2.784 The **medium value** Grade II listed 'Barn Immediately North-West of Gower's Farmhouse' (**1049603**) is located on the southern flank of Low Road at the base of the Tas Valley and 760 m south-east of the Order Limits. The barn is of probable 17th century date, is of evidential and historical value and comprises a plastered and weatherboarded timber frame structure with corrugated iron roof.

3.2.785 The setting of the asset is informed by its roadside location at the base of the Tas Valley and its relationship with the Grade II listed medieval 'Gower's Farmhouse' immediately to the south-west. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The setting of the asset makes a considerable contribution to its value, but due to the topography of the Tas Valley and tree growth along Low Road and the riverbanks, the setting does not extend to the Order Limits.

3.2.786 The following listed buildings are located within the parish of Aslacton.

3.2.787 The **medium value** Grade II listed 'The Laurels' (**1373565**) is located on the western flank of Pottergate Street at the base of the Tas Valley and 1.4 km south-east of the Order Limits. The red brick cottage is of evidential and historical value, dates to 1821 and has a low pitched black glazed pantile roof.

3.2.788 The setting of the asset is informed by its roadside location in the Tas Valley and by its relationship with the cottages immediately to the north and south, both of which are also dated to 1821. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. There has been some 20th century residential infill development to the north and along Muir Street to the north-east, and so the setting of the asset makes a moderate contribution to its value. Due to the topography of the Tas Valley, tree growth along the riverbanks and mature tree lined hedgerows, however, the setting does not extend to the Order Limits.

3.2.789 The **medium value** Grade II listed 'Bridge Farmhouse' (**1170362**) is located north of Bunwell Road, at the base of the Tas Valley and 1.1 km south-south-east of the Order Limits. The asset is a mid-19th century brick cottage is of evidential and historical value with a pantile roof. To the rear is a 17th century plastered timber frame wing, also with a pantile roof.

3.2.790 The setting is informed by its roadside location at the base of the Tas Valley and its relationship with the non-designated elements of the Bridge Farm complex recorded on the first edition OS map of 1884. The setting is also informed by the surrounding agricultural landscape with which the asset and associated non-designated outbuildings have a historical and functional relationships. The asset has lawned areas to the south and west with large paddocks to the north with mature tree lined hedgerow boundaries. Immediately to the east of the Bridge Farm complex is a range large hanger style modern asbestos clad barns that encroach on the setting of the asset. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the topography of the Tas Valley and the mature tree lined paddock boundaries to the north, the setting does not extend to the Order Limits.

3.2.791 The **medium value** Grade II listed 'Eagle Farmhouse' (**1373564**) is located on the eastern edge of Low Common and accessed along the minor public right of way Eagle Farm Path 100 m north of Low Common Road and 810 m south-east of the Order Limits. The farmhouse dates to c. 1850 and comprises a red brick structure is of evidential and historical value with a low pitched black glazed pantile roof. It has a 17th century timber framed brick faced cross-wing at its eastern end.

3.2.792 The setting of the asset is informed by its location at the eastern edge of the settlement and its relationship with the non-designated East and West Barn immediately to the west and recorded on the first edition map OS of map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated non-designated barns have historical and functional relationships. The asset is situated in mature grounds with scattered trees and defined by tree lined hedgerows. The associated outbuildings have been converted into residential properties, but they and the asset retain their coherence as a former working farm complex. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature grounds and the topography of the Tas Valley and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.793 The **medium value** Grade II listed 'Pearl Farmhouse' (**1049678**) is located on the western flank of The Street, Aslacton, at the head of a shallow tributary of the Tas Valley and 2 km south-east of an Order Limits access road. The farmhouse dates to the 17th century, is of evidential and historical value and comprises a plastered timber frame structure with a steep modern tile roof.

3.2.794 The setting of the asset is informed by its roadside location within the settlement and by its relationship with non-designated buildings of the former farming complex recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and outbuildings have a historical and functional relationship. The associated outbuildings have been converted into residential properties, but they and the asset retain their coherence as a former working farm complex. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the topography, development, copses, and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.795 The **medium value** Grade II listed 'The Homestead' (**1170354**) is located within the small settlement of Aslacton, along Church Road, c. 1.9 km south-east of the Order Limits. The asset dating to 1806, was formerly known as the Bell Inn. The asset is built of red brick with a pantile roof and coped gabled ends.

3.2.796 The setting of the asset is informed by is central location in the village of Aslacton. The asset is located close to the roadside, opposite the village church and church yard. The village has a rural and leafy atmosphere and there is much mature vegetation around the western side of village close to the asset. There is some modern development in the eastern side of the village, but the rural village setting of the asset has been maintained. On the same property as the asset are some barn structures and there is much dense vegetation to the south of the asset. The setting of the asset makes a moderate contribution to its value. The asset has historical and evidential value, and the setting of the asset does not extend to the Order Limits, but rather is restricted to the property and its grounds and the central village location it occupies.

3.2.797 The medium value Grade II listed 'World's End Farmhouse' (**1049684**) located along a private drive which leads off of The Street, on the western edge of the small settlement of Aslacton, c. 1.9 km south-east of the Order Limits. The asset is a late 16th-early 17th century timber-framed, plastered house, with steep gable-ended roof with black glazed pantiles. The asset comprises two storeys and an attic, with a modern brick porch.

3.2.798 The setting of the asset that contributes considerably to its value, set within private ground, lined with mature vegetation on the southern and eastern edge of the property. to the north and west are open fields with views which extend far beyond the property into the surrounding agricultural landscape. It is unclear whether or not the asset is still part of an active farm and as such it is unclear whether or not that the functional historical relationship between the asset and the land has been lost. The asset has evidential and historical value and the setting of the asset in confined to the property and its grounds and the immediately surrounding agricultural field, and as such the setting of the asset does not extend to the Order Limits.

3.2.799 The **medium value** Grade II listed 'Hastings Hall' (**1049991**) located within the settlement of Tibenham, down a private track which leads off of Church Road is c. 800 m east of the Order Limits. The asset is a 16th century timber-framed building with close studding and black glazed pantile roof with gabled ends. The asset comprises two storeys and a jettied first floor. The southern end of the property had a matching modern timber framed wing. The original purpose of the Hall is unknown, but it was once known as the Poor House.

3.2.800 The setting of the asset contributes considerably to its value, located in a secluded space away from the main road through Tibenham set back from the road behind the village church (**1049992**) and other properties. There is dense mature vegetation to the north between the church and the asset and to the south open agricultural fields. The wider landscape is an open agricultural landscape. The asset has evidential and historical value, and the setting of the asset does not extend to the Order Limits and is instead confined to the property grounds and its village setting.

3.2.801 The **medium value** Grade II listed 'The Almhouses' (**1049994**) located within the village of Tibenham, along Church Road, are c. 880 m east of the Order Limits. The asset dates to 1846 and comprises a row of single storey almshouses. The houses are plastered and had brick plinths, as ell a black glazed pantile roofs with gabled ends.

3.2.802 The setting of the asset contributes considerably to its value located centrally to the village of Tibenham, where Church Road meets The Street. The asset was originally a charitable form of housing and their central village location is maintained in their current position within the village. They may have been associated with the church in

the village, however almshouses were not always associated with the church. The asset has evidential and historical value, and the setting of the asset does not extend to the Order Limits but is restricted to the grounds of the asset and the central village location.

Carleton Rode CP

3.2.803 The **medium value** Grade II listed 'Baptist Chapel' (**1373596**) is located on the eastern flank of Chapel Road, 700 m south of Bunwell and 1.7 km north-west of the Order Limits. The chapel dates to the late 18th century, has evidential and historical value and comprises a partly plastered colour washed brick structure with a black glazed pantile roof.

3.2.804 The setting of the asset is informed by its isolated roadside location, by its tree lined graveyard and by its relationship with the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset makes a considerable contribution to its value, but due to its mature tree lined graveyard and further mature tree lined hedgerows as well as copses and development in the intervening landscape, the setting does not extend to the Order Limits.

3.2.805 The **medium value** Grade II listed 'The Manor' (**1049595**) is located on the western flank of Flaxlands Road in the east of the dispersed settlement of Carleton Rode and 1.7 km north-west of the Order Limits. Formally Church Farmhouse, the asset dates to the 17th century, has evidential and historical value and comprises a plastered timber frame structure with a steep tiled roof.

3.2.806 The setting of the asset is informed by its roadside location in the dispersed settlement, by its relationship with the associated non-designated outbuildings of the former farming complex and by its relationship with the surrounding agricultural landscape with which the asset and outbuildings have a historical and functional relationship. There is 20th century residential development on the eastern flank of Flaxlands Road, and the farm buildings have been converted into dwellings, however, the asset and associated buildings are still coherent as a former farming complex. The setting of the asset, therefore, makes a moderate contribution to its value, but due to development in the intervening landscape, it does not extend to the Order Limits.

3.2.807 The **medium value** Grade II listed 'Church Farmhouse' (**1049590**) is located on the northern flank of Flaxlands Road in the south of the dispersed settlement of Carleton Rode and 1.6 km north-west of the Order Limits. The farmhouse is of evidential and historical value, probably dates to the 17th century and comprises a roughcast timber frame structure with a black glazed pantile roof. The asset has a later brick wing to the west.

3.2.808 The setting of the asset is informed by its roadside location in the dispersed settlement, by its relationship with the associated non-designated outbuildings of the former farming complex and by its relationship with the surrounding agricultural landscape with which the asset and outbuildings have a historical and functional relationship. There is 20th century residential development on Flaxlands Road and Chapel Road to the north and some of the farm buildings have been converted into dwellings, however, the asset and associated buildings are still coherent as a former farming complex. The setting of the asset, therefore, makes a moderate contribution to its value, but due to development in the intervening landscape, it does not extend to the Order Limits.

3.2.809 The **medium value** Grade II listed 'The Old Rectory' (**1305571**) is associated with the medieval Grade I listed Church Of All Saints (see medieval section above) and is located 130 m north Church Road and 1.5 km north-west of the Order Limits. The rectory is of evidential and historical value, dates to the 18th century and is built of red brick with a steep slated roof. To the rear (north) is a 16th to 17th century plastered timber frame wing with a black glazed pantile roof, whilst to the east is a large 19th century brick wing.

3.2.810 The setting of the former rectory is informed by its relationship with the church 60 m to the south-west, its location within the settlement and its large mature grounds. The grounds contain scattered trees and are defined by mature hedgerows intermittently lined by trees. The setting affords the asset some privacy and makes a considerable contribution to its value. Due to its mature grounds, however, and the topography, development, copses, and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.811 The **medium value** Grade II listed 'Churchyard Wall to South And West of Church' (**1373597**) defines the southern boundary of the graveyard of the medieval Grade I listed Church of All Saints along Church Road and located 1.6 km north-west of the Order Limits. The asset is of evidential and historical value, largely dates to the 18th century and is constructed of red brick and flint cobbles. The south-west corner was rebuilt in the 19th century in red brick.

3.2.812 The setting of the asset is informed by its roadside location and its relationship with the church and its graveyard. The setting makes a considerable contribution to the assets value, but due to its enclosed settlement location, the setting does not extend to the Order Limits.

3.2.813 The **medium value** Grade II listed 'Rectory Cottages' (**1049591**) is located on the north-east flank Church Road, on the eastern edge of Carleton Rode and 1.4 km north-west of the Order Limits. The comprises a 17th century range of plastered timber frame cottages of evidential and historical value with a steep pantile roof. The range is adjoined to the south by a 19th century buff brick crosswing with a pantile roof.

3.2.814 The setting of the asset is informed by its roadside location on the edge of the settlement and by its relationship with the non-designated building just to the north and recorded on first edition OS map of 1884. The setting is further informed by the asset's relationship with the surrounding agricultural landscape with which it has a historical relationship. Twentieth century residential development along Church Road to the west has, however, restricted the view from the asset and so the setting makes a moderate contribution to the asset's value. Due to the topography, development, copses, and mature tree lined hedgerows of the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.815 The **medium value** Grade II listed 'Emma's Lodge' (**1171514**) is located on the western flank of Church Road, 880 m south-south-east of Carleton Rode and 930 m north-west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century roughcast timber frame house with a thatched roof.

3.2.816 The setting of the asset is informed by its isolated roadside location and by its relationship with the associated non-designated outbuildings immediately to the north and recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The ground of the asset includes lawned areas and a mature copse and

is defined by mature hedgerows. The setting of the asset makes a considerable contribution to its value, but due to its mature grounds and the topography, development, copses, and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.817 The **medium value** Grade II listed 'Elms Farmhouse' (**1049599**) is located on the eastern flank of Rode Lane, in the south of the Carleton Rode dispersed settlement and 1.8 km west-north-west of the Order Limits. The farmhouse is of evidential and historical value, dates to the 17th century and comprises a rendered timber frame structure with a pantile roof and a later lean-to at the rear.

3.2.818 The setting of the asset is informed by its largely isolated roadside location and by its relationship with its associated non-designated outbuildings recorded on the first edition OS map of 1884 and on later editions. The setting is further informed by the surrounding agricultural landscape with which the asset and associated buildings have a historical and functional relationship. The current function of the outbuildings is unknown, but them and the asset form a coherent farming complex. The ground of the asset contains lawned areas and scattered trees and are defined by partially tree lined mature hedgerows. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature grounds and the topography, development, copses, and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.819 The **medium value** Grade II listed 'Laurels Farmhouse' (**1171603**) is located on the south-western flank of Rode Lane, in the south of the Carleton Rode dispersed settlement and 1.7 km north-west of the Order Limits. The farmhouse is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame structure with a thatched roof. There are later one storey wings to the north and west.

3.2.820 The setting of the asset is informed by its roadside location and by its relationship with its associated non-designated outbuildings recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated buildings have a historical and functional relationship. The current function of the outbuildings is unknown, but them and the asset form a coherent farming complex. The ground of the asset contains lawned areas and scattered trees and are defined by partially tree lined mature hedgerows. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature grounds and the topography, development, copses, and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.821 The **medium value** Grade II listed assets 'Yewtree Farmhouse' (**1049598**), 'Poplar Farmhouse' (**1049597**) and 'Barn Immediately South of Poplar Farmhouse' (**1305522**) are in a loose complex on the south-western flank of Rode Lane, in the south of the Carleton Rode dispersed settlement and 1.7 km west-north-west of the Order Limits. These assets are of evidential and historical value. Yewtree Farmhouse dates to the 17th century and comprises a plastered timber frame structure with a steep pantile roof. It has a later rendered wing to the west with a steep pantile roof. Poplar Farmhouse comprises a 17th century plastered timber frame structure with a steep pantile roof. The barn is also of 17th century date and comprises a plastered timber frame three bay structure with a steep pantile roof.

3.2.822 The setting of the assets is shared and informed by their roadside location, their interrelationship and their relationships with associated non-designated outbuildings

recorded on the first edition OS map of 1884. The setting is further informed by the surrounding landscape with which the assets and associated buildings have historical and functional relationships. The assets have lawned areas and paddocks to the west but the former open view to agricultural land to the east has been obscured by 20th century residential development. The setting of the assets, therefore, makes a moderate contribution to their values, but due to the 20th century development to the east, the setting does not extend to the Order Limits.

3.2.823 The **medium value** Grade II listed 'The Ashes' (**1373594**) is located on the north-eastern flank of Ash Lane, 740 m west-south-west of Hargate and 1.4 km west-north-west of the Order Limits. The asset is of evidential and historical value, dates to the 17th/18th centuries and comprises a timber frame house encased in buff coloured brick in the 19th century. There is a 17th century timber frame wing to the rear, also encased on buff brick.

3.2.824 The setting of the asset is informed by its roadside location and by its relationship with its associated non-designated outbuildings recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have historical and functional relationships. The Ashes is still a working farm and several large, hanger style barns have been added to the complex over the latter half of the 20th century. The setting of the asset makes a moderate contribution to its value, but due to the 20th century additions restricting views to the south and east, the setting does not extend to the Order Limits.

3.2.825 The **medium value** Grade II listed 'Whitehouse Farmhouse' (**1305585**) is located on the southern flank of Ash Lane, 660 m south-west of Hargate and 1.2 km west-north-west of the Order Limits. The asset comprises a 17th century plastered timber frame cottage of evidential and historical value with a steep pantile roof. Based on satellite imagery, farm building to the south of the asset mentioned on the Natural Heritage List entry were demolished sometime between 2006 and 2016 and replaced by a residential property.

3.2.826 The setting of the asset is informed by its roadside location and by its interrelationship with the Grade II listed 'South View and Adjoining Dwelling Occupied by Mr Newman' 50 m to the north-east and on the northern flank of Ash Lane. The setting is further informed by the surrounding agricultural landscape with which the asset has historical and functional relationships. Based on cartographic and satellite imagery, the asset and South View to the north were, until the later 20th and 21st centuries, isolated. Both, however, now have associated outbuildings and residential development along Ash Lane has encroached including a residential property immediately south of Whitehouse Farmhouse. The setting of the asset, therefore, makes a moderate contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.827 The **medium value** Grade II listed 'South View and Adjoining Dwelling Occupied by Mr Newman' (**1049587**) is located on the northern flank of Ash Lane, 590 m south-west of Hargate and 1.1 km west-north-west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a rendered timber frame house with a steep pantile roof.

3.2.828 The setting of the asset is informed by its roadside location and by its interrelationship with the Grade II listed 'Whitehouse Farmhouse' 50 m to the south-west and on the northern flank of Ash Lane. The setting is further informed by the

surrounding agricultural landscape with which the asset has historical and functional relationships. Largely isolated until the later 20th century, the asset now has associated outbuildings and residential development along Ash Lane has encroached from the east and south. The setting of the asset, therefore, makes a moderate contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.829 The **medium value** Grade II listed 'Ash Farmhouse' (**1171460**) is located on the southern flank of Ash Lane, 420 m south-west of Hargate and 910 m west-north-west of the Order Limits. The asset is of evidential and historical value, dates to the early 17th century and comprises a timber frame house encased in painted brick with steep pantile roof.

3.2.830 The setting of the asset is informed by its roadside location and its relationship with its associated non-designated outbuildings most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and its associated outbuildings have historical and functional relationships. The function of some of the outbuildings has changed but they and the asset are still coherent as a former farming complex. The setting of the asset, therefore, makes a considerable contribution to its value, but due to mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.831 The **medium value** 'Fen Farmhouse' Grade II listed 'Fen Farmhouse' (**1373595**) is located on the southern flank of Ash Lane 530 m south of Hargate and 790 m north-west of the Order Limits. The asset is of evidential and historical value, dates to the Early 17th century plastered timber frame house with a thatched roof.

3.2.832 The setting of the asset is informed by its roadside location and its relationship with its associated non-designated outbuildings most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and its associated outbuildings have historical and functional relationships. The asset and associated buildings are coherent as a working farm complex and further outbuildings comprising large hanger style barns were added in the later 20th century. The setting of the asset, therefore, makes a considerable contribution, but due to mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.833 The **medium value** Grade II listed 'White Lodge' (**1171517**) is located on the eastern flank of Fen Road, 210 m south-south-east of Hargate and 700 m west-north-west of the Order Limits. The asset is of evidential and historical value, was built in the 17th century and comprises a plastered timber frame house with a steep pantile roof.

3.2.834 The setting of the asset is informed its roadside location and its relationship with its associated non-designated outbuildings most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and its associated outbuildings have historical and functional relationships. The asset and associated buildings are coherent as a working farm complex and further outbuildings comprising large hanger style barns were added in the later 20th century as well as a small residential cottage immediately to the south. The setting of the asset makes a moderate contribution to its value, but due to the later development of the farm and mature tree

lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.835 The **medium value** Grade II listed 'Kilmurray' (**1049592**) is located on the north-eastern flank of Fen Road, 520 m south-south-east of Hargate and 450 m west-north-west of the Order Limits. The asset is of evidential and historical value, is of probable 17th or 18th century date and comprises a rendered timber frame cottage with a steep pantile roof.

3.2.836 The setting of the asset is informed by its roadside location and by its lawned grounds defined by mature tree lined hedgerows, which screen views of later 20th century residential properties to the north and west. The view to the Project in the east is broken by the asset's property boundary and by mature tree lined hedgerows and copses in the intervening landscape. The setting of the asset, therefore, makes a considerable contribution to its value but does not extend to the Order Limits.

3.2.837 The **medium value** Grade II listed assets 'Turnpike Cottage' (**1373620**) and 'Cottages Occupied by Mrs Blackburn and Mrs Greenwood Immediately East of Turnpike Cottage' (**1049561**) are located 130 m north of The Turnpike, 2.3 km west-south-west of Hargate and 1.9 km west-north-west of the Order Limits. These assets are of evidential and historical value. Turnpike Cottage dates to the 17th to 18th centuries and comprises a plastered timber frame cottage with a thatched roof. The other cottages, now Turnpike House, date to the 17th century and comprise a plastered timber frame and clay lump structure with a thatched roof.

3.2.838 The setting of the assets is shared and informed by their interrelationship and their relationships with associated outbuildings that have been constructed is the later 20th century. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical relationship. A farming complex recorded on the first edition OS map of 1884 lies immediately to the west further inform the setting, but an intervening mature tree lined hedgerow allow for only broken views. Residential properties have been built to the south and south-east in the 20th century. The setting of the assets makes a moderate contribution to their value, but due to development, mature tree lined boundaries and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.839 The following two assets and joined onto one another are share a group setting

3.2.840 The **medium value** Grade II listed 'Turnpike Farmhouse East' (**1049560**) is a 17th century timber-framed farmhouse framed in red brick in the mid-late 19th century. The asset is plastered at the rear and has a brick chimney stack and comprises two storeys. The roof is a later lower pitched pantile roof with gabled ends. A brick porch was added in the 19th century. The **medium** value Grade II listed 'Laurel Cottage' (**1373621**) is a 17th century plastered timber-framed house which has been divided into two dwellings. The asset has a steep gable-ended roof with modern interlocking tiles and comprises one storey and an attic. The assets are located c. 2 km west of the Order Limits, along the Turnpike Road, the small settlement of New Buckenham is c. 1.5 km to the south-east.

3.2.841 The setting of the assets is informed by its location within the hard-standing area located on the property, as well as the other buildings with the grounds of the asset which appear to be barn like buildings. The assets are set back from the road, down a long driveway, and the Turnpike Road is lined by mature vegetation limiting the views between the assets and the road. The surrounding area of the assets is rural,

with grass and agricultural fields surrounding the property to the north, west and south, and to the east more listed building and their grounds. The setting of the assets is confined to their grounds and the large, grassed area which surrounds them. It is not clear whether asset operates as part of a functional farm owing to the barn buildings on the northern edge of the property. The asset has historical and evidential value, and the setting of the asset does not extend to the Order Limits.

Tibenham CP

3.2.842 The **medium value** Grade II listed 'Shrubbery Farmhouse' (**1050031**) is located 380 m south-south-east of The Turnpike, 1.3 km south-west of Hargate and 1.5 km west-north-west of the Order Limits. The farmhouse is of evidential and historical value, was built c. 1700 and comprises a red brick house with a steep black glazed pantile roof. There is a late 19th century red brick wing to the rear.

3.2.843 The setting of the asset is informed by its relationship with farm outbuildings most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the topography, development and mature tree lined boundaries of the intervening landscape, the setting does not extend to the Order Limits.

3.2.844 The **medium value** Grade II listed 'Manor House' (**1179387**) is located on the western flank of Diss Road, 1.3 km west of Tibenham and 70 m west of the Order Limits. The farmhouse is of evidential and historical value, dates to the 17th or 18th centuries and comprises a plastered timber frame structure with a steep pantile roof.

3.2.845 The setting of asset is informed by its roadside location and by its relationship with associated farm outbuildings some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The asset and associated buildings are coherent as a farming complex and the setting makes a considerable contribution to the asset's value. The asset has a largely open view to the Project in the east and so the setting extends to the Order Limits.

3.2.846 The **medium value** Grade II listed 'Manor Farmhouse' (**1049998**) is located on the eastern flank of Diss Road, c. 1.1 km west of Tibenham and c. 20 m east of the Order Limits. The asset is of evidential and historical value, dates to the 17th or 18th centuries comprises a roughcast timber framed structure with a steep gable ended roof with pantiles.

3.2.847 The setting of the asset is informed by its relationship with associated farm outbuildings some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. Twentieth century residential development has, however, encroached on the asset to the west and south, and several of the outbuildings have changed function. Despite this, and the 20th century expansion of the farmyard to the east, the asset and associated buildings retain some coherence as elements of a farming complex and so the setting of the assets makes a moderate contribution to its value. Due to the proximity of the Project, however, the setting extends to the Order Limits.

3.2.848 The **medium value** Grade II listed 'Low Farmhouse' (**1373399**) is located on the eastern flank of Diss Road, 1.25 km west of Tibenham and 290 m west of the Order Limits. The farmhouse is of evidential and historical value, dates to the 17th or 18th centuries and comprises a timber frame structure faced in red brick with buff brick quins in the 19th century and with a steep black glazed pantile roof.

3.2.849 The setting of the asset is informed by its relationship with associated farm outbuildings some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. Due to the proximity of the Project, the setting extends to the Order Limits.

3.2.850 The **medium value** Grade II listed 'Old Hall' (**1373400**) is located 890 m north-west of Tibenham on the southern flank of the Tas Valley, 360 m east of Diss Road and 130 m east of the Order Limits. The asset is of evidential and historical value, probably dates to the early 18th century and comprises a plastered timber frame house with a steep black glazed pantile roof. The **low value** immediate estate grounds of Old Hall (**1656**) of evidential and historical value have also been observed to extend to the north-west as an orchard on the 1950 1:10560 OS map and the 1976 1:2500 OS map. Finds of **low value** Late Saxon, medieval and post medieval pottery, one Roman coin, one post medieval coin and medieval metalwork (**1021**) of evidential value have been made in the garden of the hall.

3.2.851 The setting of the asset is informed by its isolated location and by its relationship with its non-designated outbuildings most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The setting of the asset affords it privacy and peace and so makes a considerable contribution to its value. The grounds of the asset are defined to the west and south by mature tree lined hedgerows and by the wooded banks of the Tas to the north, allowing for broken views towards the Project. The setting of the asset, therefore, extends to the Order Limits.

3.2.852 The **medium value** Grade II listed 'Fairfield Kenhurst' (**1301982**) is located on the western flank of Cargate Common, 710 m north of Tibenham and 490 m east of the Order Limits. The asset is of evidential and historical value and comprises a pair of 18th century plastered and roughcast timber frame structure with a low-pitched pantile roof.

3.2.853 The setting of the asset is informed by its isolated roadside location and by the surrounding agricultural landscape with which the asset has a historical relationship. The grounds of the asset are lawned to the rear with paddocks beyond defined by a mature tree lined hedgerow to the west. The setting makes a moderate contribution to the value of the asset but due to the topography, mature tree lined boundaries and copses of the intervening landscape, the setting does not extend to the Order Limits.

3.2.854 The **medium value** Grade II listed 'Willow Farmhouse' (**1050030**) is located on the northern flank of Cargate Common Road, 800 m north of Tibenham and 550 m east of the Order Limits. The farmhouse is of evidential and historical value, dates to the late 17th to early 18th centuries and comprises a plastered timber frame structure front faced in painted brick in the 19th century. The asset has a pantile roof.

3.2.855 The setting of the asset is informed by its isolated roadside location and by its relationship with associated non-designated farm outbuildings several of which are recorded on the first edition OS map of 1884. The setting is further informed by the

surrounding agricultural landscape with which the asset and associated buildings have historical and functional relationships. Some of the outbuildings have been converted into dwellings, but they and the farmhouse retain coherence as a former farm complex. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature tree lined hedgerow boundaries, and the topography, the tree lined banks of the Tas, and further mature tree lined boundaries of the intervening landscape, the setting does not extend to the Order Limits.

3.2.856 The **medium value** Grade II listed 'Low Farmhouse' (**1179345**) is located on the northern flank of Cargate Common Road, 820 m, and 660 m east of the Order Limits. The farmhouse is of evidential and historical value, dates to the 17th to 18th centuries and comprises a brick faced timber frame structure with a steep black glazed roof.

3.2.857 The setting of the asset is informed by its roadside location and by its relationship with its associated non-designated outbuildings north and south of the road, several of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated buildings have historical and functional relationships. Some of the outbuildings have been converted into dwellings, but they and the farmhouse retain coherence as a former farm complex. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature tree lined hedgerow boundaries, and the topography, the tree lined banks of the Tas, and further mature tree lined boundaries of the intervening landscape, the setting does not extend to the Order Limits.

3.2.858 The **medium value** Grade II listed assets 'Church Farmhouse' (**1179356**) and 'Barn Approximately 100 Yards North of Church Farmhouse' (**1049990**) are in the Church Farm complex immediately south-west of the junction of Mill Road and Church Lane, Tibenham and 670 m east of the Order Limits. These assets are of evidential and historical value. The farmhouse dates to the 16th to 17th centuries and comprises a plastered timber frame with a steep peg-tile and pantile roof. The barn is a 17th century timber frame, weatherboard clad structure with a steep pantile roof.

3.2.859 The setting of the assets is shared and informed by their farmyard location, by their interrelationship and their relationship with the non-designated outbuildings of the farming complex, most of which are recorded on the first edition OS map of 1884. The setting is also informed by the surrounding agricultural landscape with which the assets and associated outbuildings have a historical and functional relationship. The barn has now been converted into a private dwelling or perhaps farm offices, whilst several of the of the other elements recorded on the OS map appear to have changed function. Twentieth century development of the farm complex has introduced modern hanger style barns into the setting in the west and south of the farm complex. The setting of the assets, therefore, makes a moderate contribution to their value. The view from the assets to the Project in the west is screened by mature tree lined hedgerows, whilst the view to the north is blocked by buildings of the farm complex. The setting of the assets, therefore, does not extend to the Order Limits.

3.2.860 The **medium value** Grade II listed 'Limes Farmhouse' (**1049996**) is located on the northern flank of Church Road, Tibenham and 860 m east-south-east of the Order Limits. The farmhouse is of evidential and historical value, dates to the mid-19th century and comprises a red brick structure with a black glazed pantile roof.

3.2.861 The setting of the asset is informed by is roadside location within the settlement, by its relationship with the Grade I listed Church of All Saints and by its relationship with

the non-designated outbuildings of the farming complex immediately to the south-east, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the assets and associated outbuildings have a historical and functional relationship. The setting of the asset has been encroached upon by a 20th century residential property to the west any by a large complex 20th century farm shed and barns to the north. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the intervening development and mature tree lined hedgerows the setting does not extend to the Order Limits.

3.2.862 The **medium value** Grade II listed 'Railtons' (**1179368**) is located within the small rural settlement of Tibenham, where Church Road meets The Street, c. 920 m east of the Order Limits. The asset is an 18th century house in rough cast brick with a hipped black glazed pantile roof.

3.2.863 The asset is located within the rural settlement of Tibbenham, at the heart of the settlement. The asset is set back from the road by a small well-maintained garden and opposite the house on the other side of road is mature vegetation, screening views to the eat. The village is surrounded by agricultural fields, and the garden of the asset backs onto an agricultural field. There are some modern developments within the village but overall, it has maintained a small rural settlement atmosphere. The asset has evidential and historic value, and the setting of the asset contributes considerably to its value. The setting of the asset does not extend to the Order Limits and is restricted to the property grounds and its position within the central village location.

3.2.864 The **medium value** Grade II listed 'Wheelwrights' (**1179404**) is located along Hill Road within the small settlement of Tibenham, c. 1 km east of the Order Limits. The asset is an early 18th century timber-framed cottage with a steep gable-ended roof with asbestos tiles. The north side of the asset facing the road is rough cast and reb brick and there is a brick lean-to at each end of the asset.

3.2.865 The asset is located within the rural settlement of Tibbenham, at the heart of the settlement. The asset is separated from the roadside by a mature dense hedgerow which partially screens the view to the asset from the roadside. Surrounding the asset is mature dense vegetation and the wider village streetscape includes much mature vegetation. The village has undergone some modern residential additions, but the atmosphere remains as a small rural village surrounded by agriculture fields. The asset has evidential and historical value, and the setting of the asset contributes moderately to its value. The setting of the asset does not extend to the Order Limits and is restricted to the property grounds and its position within the streetscape of the village. The **medium value** Grade II listed asset 'The Laburnums' (**1373397**) and 'Barn Immediately South-West of The Laburnums' (**1049995**) are located immediately north-west of the junction of The Street and Hill Road, Tibenham, on the western flank of the Tib Valley and 960 m east of the Order Limits. These assets are of evidential and historical value. The Laburnums dates to the 17th century or earlier and comprises a rendered timber frame house with a steep pantile roof. The barn dates to the 17th to 18th centuries and comprises a plastered timber frame structure with a steep pantile roof.

3.2.866 The setting of the assets is shared and is informed by their roadside location within the settlement and by their interrelationship. The setting is further informed by the surrounding agricultural landscape within which the assets have a historical relationship. The grounds of the assets are defined by a high, evergreen, tree lined

hedgerow affording the assets privacy and peace. The setting of the assets, therefore, makes a considerable contribution to their values, but due to the mature ground's boundaries and the topography of the Tib Valley, the setting does not extend to the Order Limits.

3.2.867 The **medium value** Grade II listed 'Tibenham Post Office' (**1049997**) is located on the western flank of the Tib Valley, east of The Street, Tibenham and 1.0 km east of the Order Limits. The now former Post Office is of evidential and historical value, dates to the 17th century and comprises a roughcast timber frame structure with a thatched roof.

3.2.868 The setting of the asset is informed by its roadside location in the settlement and its relationship with the former Primitive Methodist Chapel immediately to the north and recorded on the first edition OS map of 1884. The setting is furth informed by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset makes a considerable contribution to its value, but due to the topography of the Tib Valley, the setting does not extend to the Order Limits.

3.2.869 The **medium value** Grade II listed 'Coldstream Cottage' (**1301961**) is located east of The Street, Tibenham, on the western flank of the Tib Valley and 1 km east of the Order Limits. The asset is of evidential and historical value, is of probable 18th century date and comprises a plastered timber frame cottage with a pantile roof.

3.2.870 The setting of the asset is informed by its roadside location within the settlement and by the surrounding agricultural landscape with which the asset has a historical relationship. Once isolated, 20th century residential development has encroached on the asset from the north and so the setting of the asset makes a minor contribution to its value. Due to the topography of the Tib Valley and the mature tree lined boundary of a paddock on the western flank of The Street, however, the setting of the asset does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.871 The **low value** remains of a former brickworks (**1048**) are located 1.9 km south-east of the village of Bunwell, immediately east of Brick Kiln Lane and 50 m north-east of an Order Limits access road. The brickworks are recorded on the first edition OS map of 1884, but the site is now wooded with only a few walls and a well of evidential value surviving.

3.2.872 A **low value** 17th/18th century house (**1308**) is located 3.8 km south of the village of Bunwell, on the western flank of Diss Road and 270 m west of the Order Limits. The house is of evidential and historical value and has a timber-frame faced in late 19th century red brick with buff brick quoins. The steep gable ended roof has black glazed pantiles and there is a large brick chimneystack.

3.2.873 The site of a former windmill (**1039**) of evidential value is located 3.9 km south-south-east of the village of Bunwell and 240 m east of the Order Limits. The **negligible value** asset is recorded on the first edition OS map of 1885 and research recorded by the HER states that a post mill at this site was for sale in 1794 and that it was last used in 1883.

3.2.874 Further evidence of post medieval activity in the Bunwell Hill and the Tas Valley area is represented by **low value** findspots, and artefacts recovered during fieldwalking and metal detector surveys. These assets are of evidential value and comprise:

- A post medieval pewter bead and weight, a silver coin, a lead button, and a copper alloy button, a crotal bell, a knife, a thimble, a furniture fitting, pottery sherds and roof tile in a multi-period finds assemblage (**1062**) recovered from farmland partially within the Order Limits on the Tas Valley floor and its southern flank, 3.3 km south-south-east of the village of Bunwell
- A copper alloy Charles I Royal Farthing token (1634-6) and clay pipe fragments in a multi-period assemblage (**1111**) recovered from farmland 1.8 km south-east of the village of Bunwell within the Order Limits
- A post medieval copper alloy buckle, a spur, a thimble and token, a lead weight and token, and pottery sherds in a multi-period finds assemblage (**1087**) recovered from farmland 1.9 km south-east of the village of Bunwell, 160 m east of the Grade II listed Banyard's Hall (**1373609**) and partially within the Order Limits
- Post medieval crotal bells, buckles, buttons, coins, a jetton, a thimble, and lead cloth seal belonging to a dyer in multi-period finds assemblage (**1049**) recovered from farmland partially within Order Limits and 3 km south-south-east of the village of Bunwell
- A post medieval copper alloy buckle, finger ring, harness fitting, seal matrix, strap fitting and vessel fragment in a multi-period finds assemblage (**1188**) recovered from farmland 2.2 km south-south-east of the village of Bunwell, immediately east of Brick Kiln Lane and touching the western edge of the Order Limits
- Post medieval pottery sherds, a copper alloy coin, token and button and a silver coin in a multi-period finds assemblage (**1063**) recovered from farmland 1.9 km south-east of the village of Bunwell and partially within the Order Limits
- A George III sixpence (**1199**) and a copper halfpenny of William III (**1200**) recovered from farmland 2 km south-east of the village of Bunwell and 130 m north-west of the Order Limits
- A post medieval harness mount, a knife, a bell fragment, a punch, buckles, coins, buttons, tokens a thimble, pottery sherds and building materials in a multi-period finds assemblage (**1058**) recovered from farmland on the southern side of the Tas Valley, c. 1.3 km south of Bunwell Hill and partially within the Order Limits
- A post medieval, copper alloy rumbler bell, an apothecary weight, a book fitting, buckles, a button, a cauldron fragment, a coin, a coin weight, a crotal bell, a harness fitting, a jetton, a strap fitting, a stud, a thimble and two tokens: a silver pin and coin; and a lead button and cloth seal in a multi-period finds assemblage (**1118**) recovered from farmland on the Tas Valley floor, 3 km south-south-east of the village of Bunwell and 110 m from the Order Limits
- A very worn silver Elizabeth I fourpence (**1148**) recovered from farmland 3.9 km east-south-east of the village of Bunwell and 120 m south-east of an Order Limits access road
- A post medieval copper alloy rowel spur in a multi-period finds assemblage (**1191**) recovered from farmland 2.9 km south-south-east of the village of Bunwell, on the southern flank of the Tas Valley, close to the valley floor and 150 m west of the Order Limits
- A 16th century, post medieval copper alloy double-looped buckle in a multi-period finds assemblage (**1054**) recovered from farmland 3.2 km south-south-east of the Village of Bunwell and on the floor of the Tas Valley 210 m east of the Order Limits

- A small assemblage of medieval and post medieval pottery 5) recovered from the grounds of the Grade II listed post medieval Banyard's Hall (**1373609**) located 2 km south-east of the village of Bunwell and 160 m north-west of the Order Limits
- The sites of three possible medieval buildings (**1094**, **1090**, **1096**) are in a field 2.7 km south-south-east of the village of Bunwell and 140 m west of the Order Limits. As well as the medieval finds that have identified the sites, fieldwalking also recovered a post medieval, copper alloy button from site (**1090**)
- A post medieval lead alloy button (**1281**) recovered from farmland 3 km south-south-east of the village of Bunwell and 170 m west of the Order Limits
- Post medieval pottery sherds in a multi-period finds assemblage (**1016**) recovered from farmland 3.6 km south of the village of Bunwell and on the southern flank of the Tas Valley 35 m east of the Order Limits
- A post medieval, copper alloy bell and token, and pottery sherds and clay pipe fragments in a multi-period finds assemblage (**1102**) recovered from farmland 1.9 km south-east of the village of Bunwell and 110 m north-west of the Order Limits
- Two post medieval bells, a brooch, a buckle, a coin, a stirrup, a musket ball, a spindle whorl, and pottery sherds in multi-period finds assemblage (**1075**) recovered from farmland 160 m west of the Order Limits and 1.3 km south-south-west of the village of Bunwell
- A post medieval crotal bells, a cloth seal, a musket ball, a thimble, a hammer, a spur fragment, a buckle, a button, a coin, a strap fitting, a sword, clay pipe fragments and pottery sherds in a multi-period finds assemblage (**1066**) recovered from farmland 2 km south-south-east of the village of Bunwell and 240 m north-west of the Order Limits in a field immediately south-east of the junction of Bunwell Hill and The Turnpike
- A headstone to William Long (**1272**) was found on Quaker Farm on the eastern flank of Low Common, 2.6 km south-east of the village of Bunwell and 200 m south-east of the Order Limits. William is known to be a Quaker from Aslacton, and it has been suggested there may have a small, private burial ground associated with the farm
- A post medieval, copper alloy crotal bell, buckle, button, coins, furniture fitting, purse bar, thimble, strap fitting, token, and part of a suspension mount from a sword belt; two silver coins, an iron knife, a glass linen smoother and pottery sherds in a multi-period finds assemblage (**1129**) recovered from farmland 720 m south of the village of Bunwell and 260 m west of the Order Limits
    - A medieval/post medieval weight and a token, and four post medieval coins, a buckle, a crotal bell, a rotary key, and a sword belt fitting in a multi-period finds assemblage (**1350**) recovered from farmland immediately east of Tacolneston and c. 200 m north-west of the Order Limits.

Cropmark and LiDAR Assessment

3.2.875 **Low value** linear cropmarks (**1517**) of evidential value identified by the Project are located south of Hurn Lane, c. 760 m east of Tacolneston and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map, however, they also include an unrecorded roadside enclosure with an internal feature on the eastern side of the access road to the Grade II listed Banyard's Hall (**1373609**).

3.2.876 **Low value** linear cropmarks and cropmarks of ponds (**1518**) of evidential value identified by the Project are located south of Low Common, immediately east of Bunwell Hill and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map, although there are what appear to be earlier features north of the Grade II listed Persehall Manor (**1049610**).

3.2.877 **Low value** linear cropmarks (**1519**) of evidential value identified by the Project are located in the Tas Valley around the Grade II listed Old Hall (**1373400**) and partially within the Order Limits. Those to the west of the Hall represent field boundaries recorded on the first edition OS map, whilst those to the east of the Hall are likely associated with the Hall and represent earlier activity.

3.2.878 **Low value** linear cropmarks (**1520**) of evidential value identified by the Project are located west of Diss Road, c. 1.1 km west-north-west of Tibenham and c. 95 m west of the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.879 **Low value** linear cropmarks (**1546**) of evidential value identified by the Project are located east of Diss Road, c. 610 m west of Tibenham and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map.

3.2.880 **Low value** linear cropmarks and the cropmarks of ponds (**1521**) of evidential value identified by the Project are located between Mill Lane in the north and Blackbarn Road to the south, c. 400 m west of Tibenham and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

Historic Mapping Assessment

3.2.881 A series of **negligible value** ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of three ponds are located within the Order Limits (**1646**, **1647**, **1659**)
- A total of ten ponds are located within 250 m of the Order Limits (**1648**, **1649**, **1652**, **1658**, **1660**, **1661**, **1662**, **1663**, **1664**, **1770**).

3.2.882 A **low value** parish boundary (**1645**) of evidential and historic value has been identified crossing the Order Limits and within the 250 m Study Area within this sub-section. The boundary can be observed on the 1884 1:2500 OS Map and is still present. It is unknown to what extent the boundary may physically be extant within the landscape.

3.2.883 Two **low value** possible important hedgerow locations (**1650**, **1653**) of evidential and historic value are both located crossing the Order Limits and within the 250 m Study Area within this sub-section, immediately west of Cow Lane. Both of these hedgerows can be observed on the 1884 1:2500 OS map. Further **low value** possible important hedgerows (**1654**) have been identified on the 1884 map surrounding a known enclosed meadow also seen on the Bunwell Tithe Map (HNF36552). It is unknown how much these hedgerows pre-date the 1884 map edition.

3.2.884 The **low value** 'Old Hall Bridge' (**1657**) of evidential and historic value has been observed approximately 60 m north of the Order Limits linking Diss Road and Fen

Road. The bridge is first observed on the 1884 1:2500 OS map and is marked as Old Hall Bridge until the 1995 1:2500 OS map.

3.2.885 **Low value** buildings and a garden (**1655**) of evidential and historic value have been observed approximately 130 m west of the Order Limits, and 40 m north of Fen Road. The land plot and buildings are first observed on the 1884 1:2500 OS map, with the main building last seen on the 1950 1:10560 map. Both the 1976 and 1995 1:2500 OS maps show a small building within the south-west of the plot. It is unknown id this building survives as current aerial imagery shows the land plot is now masked by trees.

3.2.886 A **negligible value** trigonometry point (**1651**) of evidential value approximately 150 m west of the Order Limits and 190 m west of Brick Kiln Lane. The trigonometry point is first observed on the 1884 1:2500 OS map and is last observed on the 1905 1:2500 OS map.

Winfarthing and Shelfanger

Designated Heritage Assets

Tibenham CP

3.2.887 The **medium value** Grade II listed 'Home Farmhouse' (**1050003**) is located on the northern flank of Low Road, 2.9 km north of Winfarthing and 1.1 km west of the Order Limits. The asset is of evidential and historical value, of probably of 17th century date and comprises a timber frame house with plaster and red brick and a pantile roof.

3.2.888 The setting of the asset is informed by its roadside location and by its relationship with the non-designated modern buildings of the still working Home Farm complex. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its central location in the farmyard, the asset is screened from the Project and so the setting does not extend to the Order Limits.

3.2.889 The **medium value** Grade II listed 'Lilac Cottage' (**1050002**) is located on the southern flank of Low Road, 2.8 km north of Winfarthing and 1.4 km west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame cottage with a steep pantile roof. It has a probable early 19th century west wing constructed of plastered clay lump with a pantile roof.

3.2.890 The setting of the asset is informed by its isolated roadside location and its mature grounds containing scattered trees and defined by mature tree lined hedgerows. The setting affords the asset privacy and makes a considerable contribution to its value. Due to the mature grounds of the asset, however, the setting does not extend to the Order Limits.

3.2.891 The **medium value** Grade II listed 'Rosemary Cottage Well Cottage' (**1050032**) is located on the eastern flank of Cherry Tree Road, 2.6 km north of Winfarthing and 1.6 km west of the Order Limits. The asset is of evidential and historical value, comprises a pair of 18th century roughcast cottages with a steep black glazed pantile roof. Rosemary Cottage is adjoined to the north by a modern single storey wing.

3.2.892 The setting of the asset is informed by its roadside location and by its large garden area defined by a high, evergreen hedge. The setting is also informed by the surrounding agricultural landscape with which the asset has a historic relationship. Based on cartographic evidence, the asset stood in isolation until the latter half of the 20th century when a commercial premises was established on the opposite side of Cherry Tree Road, and a house and with associated commercial buildings were built to the south. The high hedge around the asset alleviates some of the visual impact of this modern development but there is likely to be intrusive noise, dust, and pollution. The setting of the asset, therefore, makes a minor contribution to its value, but due to the high hedge boundary of the asset, the setting does not extend to the Order Limits.

3.2.893 The **medium value** Grade II listed 'Yew Tree Farmhouse' (**1179528**) is located 190 m south of Low Road down a private drive, 2.6 km north of Winfarthing and 1.1 km west of the Order Limits. The core of the asset comprises a 16th century plastered timber frame house with a steep tiled roof. The asset is of evidential and historical value and adjoined to the north-west by a 17th century wing.

3.2.894 The setting of the asset is informed by its isolated location and by its relationship with the surviving non-designated buildings of the Yew Tree Farm complex, which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The asset has a lawned area to the east and there are several paddocks and fields to the south, west and north, with the perimeter defined by a mature tree lined hedgerow. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the mature boundaries of the asset's grounds, the setting does not extend to the Order Limits.

3.2.895 The **medium value** Grade II listed 'Orchard Farmhouse' (**1179347**) is located 80 m east of Cherry Tree Road, 2.3 km north of Winfarthing and 1.4 km west of the Order Limits. The asset is of evidential and historical value and comprises a timber frame house built in the 17th century. The structure is plastered to the rear (east) and was faced with red brick in the early 20th century to the north, west and south. the asset has a later, low-pitched pantile roof.

3.2.896 The setting of the asset is informed by its location set back from the road and by its relationship with the surviving non-designated elements of the farming complex recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The asset has large grounds with scattered trees and lawned and paddock areas, which are defined by mature tree lined hedgerows. There has been some small-scale 20th century residential development to the north and south, but this is largely screened, and so the setting of the asset makes a considerable contribution to its value. Due to the asset's boundaries and further mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.897 The **medium value** Grade II listed 'Longrow Farmhouse' (**1049999**) is located 230 m north of Long Row, 2.2 km north of Winfarthing and 510 m west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a roughcast timber frame house fronted with 19th century red brick. The roof is steep with modern interlocking tiles.

3.2.898 The setting of the asset is informed by its location set back from the road and by its relationship with the modern non-designated outbuildings of the working farm. The

setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The asset is the only surviving element of the farming complex recorded on 19th and 20th century mapping, which has been replaced by large modern barns to the north and east. The brutalism of modern barns is distracting, but they and the asset retain coherence as a working farm complex. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the modern barns screening the asset, the setting does not extend to the Order Limits.

3.2.899 The **medium value** Grade II listed 'Tibenham Farmhouse' (**1179474**) is located 320 m north of Low Road, 2.6 km north-east of Winfarthing and 320 m east of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house with a black glazed pantile roof.

3.2.900 The setting of the asset is informed by its location set back from the road and by its relationship with a large outbuilding to the west, which is probably the only surviving element of the large farming complex recorded on 19th and 20th century OS mapping. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The asset has a walled garden to the rear with the wider grounds beyond containing scattered trees, lawned areas and a copse to the south defined by a mature, partially tree lined hedgerows. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity to the Project, the setting extends to the Order Limits.

3.2.901 The **medium value** Grade II listed 'Dyson's Farmhouse' (**1050000**) is located 200 m north of Low Road, 2.7 km north-east of Winfarthing and 350 m east of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house with a steep pantile roof.

3.2.902 The setting of the asset is informed by its location set back from the road and by its relationship with its associated non-designated outbuildings, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The asset and outbuildings are situated in grounds with scattered trees, lawned areas and partially tree lined mature hedgerows. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature boundaries and the mature grounds of Tibenham Farmhouse in the intervening landscape, the setting does not extend to the Order Limits.

3.2.903 The **medium value** Grade II listed 'Pristow Green Farmhouse' (**1373404**) is located on the western flank of Pristow Green Lane, Pristow Green and 830 m east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a roughcast timber frame house with a steep pantile roof.

3.2.904 The setting of the asset is informed by its roadside location and by its relationship with the non-designated outbuildings of the working farm complex some of which are recorded on the first edition OS map of 1884. The setting is further informed by the immediate agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The farming complex lies immediately north of the asset, whilst there is a lawned area defined by a mature tree lined hedgerow to the south. The setting of the asset, therefore, makes a considerable contribution, but due to its restricted nature, the setting does not extend to the Order Limits.

3.2.905 The **medium value** Grade II listed 'Olde Walnut Tree Farm' (**1301874**) is located 60 m east of Pristow Green Lane, Pristow Green and 940 m east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a rendered timber frame house with a thatched roof.

3.2.906 The setting of the asset is informed its location set back from the road and by its relationship with the non-designated outbuildings of the former farm complex some of which may incorporate elements of the buildings recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The asset is set within large grounds which include stables and paddocks to the east and lawned areas to the west. The ground's boundaries are defined by mature tree lined hedgerows affording the asset privacy and seclusion. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the asset's mature boundaries and further mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.907 The **medium value** Grade II listed assets 'Walnut Tree Farmhouse' (**1050005**) and 'Courtyard Barn' (**1179603**) are located on the western flank of Pristow Green Lane, Pristow Green and 830 m east of the Order Limits. The farmhouse dates to the 17th century and comprises a plastered timber frame house with a thatched roof. The barn is of evidential and historical value, is of 17th to 18th century date and comprises a weatherboarded timber frame structure with a steep pantile roof, now converted into a residential dwelling. The east/west aligned barn is adjoined to the south by a red brick wing with a low-pitched pantile roof.

3.2.908 The setting of the assets is shared and informed by their roadside location within the settlement, their interrelationship, and their relationships with the non-designated buildings on the eastern flank of Pristow Green Lane recorded on the first edition OS map of 1884. The setting is further informed by the immediate agricultural landscape with which the assets have historical and functional relationships. The assets have lawned areas to the west with scattered trees and the farmhouse has paddocks beyond defined by mature hedgerows with dispersed trees. Although the barn is now a residential dwelling, it and the farmhouse retain coherence as a forming farming complex and so the setting of the assets makes a considerable contribution to their value. Due to the restricted nature of the setting, however, it does not extend to the Order Limits.

3.2.909 The **medium value** Grade II listed 'The Sycamores' (**1373405**) is located on the eastern flank of Pristow Green at the southern extent of the settlement and 860 m east of the Order Limits. The asset is of evidential and historical value and comprises a plastered timber frame house with a steep pantile roof.

3.2.910 The setting of the asset is informed by its isolated roadside location in the settlement, by its relationship with the non-designated buildings of the former farming complex recorded on the OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The asset has matured grounds with scattered trees and defined by mature tree lined hedgerows, which afford the asset privacy and seclusion. The setting of the asset, therefore, makes a considerable contribution to its value, but due to tree cover along Pristow Green Lane and tree growth in the grounds of Walnut Tree Farmhouse to the west, the setting does not extend to the Order Limits.

3.2.911 The **medium value** Grade II listed 'Waterloo Farmhouse' (**1179483**) is located immediately north-east of the junction of Pristow Green Lane and Long Row and 680 m east-south-east of the Order Limits. The asset is of evidential and historical value and comprises a 17th century pebbledash rendered timber frame house built on a brick plinth. The western gable was brick clad in the 19th century, and the steep thatched and corrugated iron roof described on the National Heritage List has been replaced by pantile.

3.2.912 The setting of the asset is informed by its roadside location and by its relationship with the associated non-designated former farm outbuildings, most of which have been converted into residential dwellings. Despite the change in function for several of the outbuildings, however, they and the asset retain coherence as a former farm complex. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The asset and associated outbuildings are situated in mature grounds that affords them privacy and seclusion and so the setting of the asset makes a considerable contribution to its value. Due to the mature copse in the grounds of Dyson's Farmhouse to the west and mature tree lined hedgerows in the intervening landscape, however, the setting of the asset does not extend to the Order Limits.

3.2.913 The **medium value** Grade II listed 'Bridgewater Farmhouse' (**1373401**) is located on the northern flank of Long Row, 2.9 km north-east of Winfarthing and 930 m east of the Order Limits. The asset is of evidential and historical value and comprises an 18th century painted brick house with a steep tiled roof.

3.2.914 The setting of the asset is informed by secluded location set back 30 m from Long Row and by its relationship with surviving non-designated outbuildings recorded on the first edition OS map of 1884. The setting is further informed by the mature tree cover of its grounds and the small copses associated with the properties to the west and east. The asset and associated outbuilding retain coherence as a former working farm complex and so the setting of the asset makes a considerable contribution to its value. Due to the extensive tree cover in its grounds and that of the property to the west the setting does not, however, extend to the Order Limits.

3.2.915 The **medium value** Grade II listed 'The Grange Farmhouse' (**1179515**) is located on the northern flank of Long Row, 50 m east of Bridgewater Farmhouse and 1 km east of the Order Limits. The asset is of evidential and historical value and comprises a 17th century roughcast timber frame house with a later low-pitched pantile roof.

3.2.916 The setting of the asset is informed by its roadside location and by its relationship with the surviving non-designated outbuildings of the former farming complex recorded on the first edition OS map of 1884. The setting is further informed by the mature tree cover of its grounds which forms a copse largely to the north and east. The asset and associated outbuilding retain coherence as a former working farm complex and so the setting of the asset makes a considerable contribution to its value. Due to the extensive tree cover in its grounds and that of the properties to the west the setting does not, however, extend to the Order Limits.

3.2.917 The **medium value** Grade II listed assets 'Yew Tree Farmhouse' (**1050001**) and 'Barn Approximately 100 Yards East Of Yew Tree Farmhouse' (**1373402**) are located 90 m north of Long Row, 500 m east of Grange Farmhouse and 1.7 km east of the Order Limits. The farmhouse is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a steep pantile roof. The barn is of similar date, but with later alterations, and comprises a plastered timber frame structure with a pantile roof.

3.2.918 The setting of the assets is shared and informed by their interrelationship, by their relationship with associated non-designated outbuilding several of which are recorded on the first edition map of 1884. The setting is further informed by the large grounds of the farm that includes lawned areas, scattered trees, a pond and are defined by mature tree lined hedgerows. The assets and associated buildings have a historical and functional relationships with the surrounding agricultural landscape, which also informs the setting. The setting of the asset, therefore, makes a considerable contribution to the value of the assets, but due to their mature grounds and further mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.919 The **medium value** Grade II listed 'Long Row Farmhouse (at Waverdene Kennels)' (**1179523**) is located 70 m north of Long Row, 340 m east-north-east of Yew Tree Farm and 1.9 km east of the Order Limits. The asset is of evidential and historical value, is of probable 17th century and comprises a timber frame house faced with 19th century red brick with a steep pantile roof.

3.2.920 The setting of the asset is informed by secluded location set back from the road, by its relationship with associated non-designated outbuilding several of which are recorded on the first edition map of 1884, and by its mature grounds, which contain lawned areas, scattered trees and a pond and are defined by mature tree lined hedgerows. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature grounds and development, copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.921 The **high value** Grade II* listed 'Channonz Hall' (**1179541**) is located within heavily treed extensive grounds 450 m west of Plantation Road, at the southern end of Tibenham Airfield and 2.4 km east of the Order Limits. The original hall was constructed in the second half of the 16th century and extensively remodelled, expanded and modernised in 1721. Only the east kitchen wing of the 16th century building now survives with the rest of the hall demolished in 1784. The asset is of evidential and historical value and is built of red brick with a tile roof.

3.2.922 The setting of the asset is informed by its extensive, heavily wooded grounds and its relationship with the large medieval moat which largely surrounds it. The setting is further informed by its relationship with the extensive non-designated farm complex 50 m to the east, most of which is recorded on the first edition OS map of 1884. The extensive grounds of the asset afford it seclusion and privacy; therefore, the setting of the asset makes a considerable contribution to its value. Due to the heavily wooded grounds of the hall, however, the setting does not extend to the Order Limits.

Winfarthing CP

3.2.923 The **medium value** Grade II listed assets 'Elizabethan Cottage' (**1373022**) and 'Tudor Cottage' (**1050788**) are located side by side on the northern flank of the B1132 Heath Road, 1.5 km north-north-west of the Order Limits. These assets are of evidential and historical value, The Elizabethan Cottage dates to the 17th century and comprises a plastered timber frame structure with a pantile roof. The western gable is faced with painted early 18th century brick. The Tudor Cottage is of similar date and comprises a roughcast timber frame structure with a thatched roof.

3.2.924 The setting of the assets is shared and informed by their roadside location, their interrelationship and by their relationship with the 18th century Heath Farm 100 m to the south, although views towards this asset are screened. The setting is further informed by the surrounding agricultural landscape with which the assets have a historical relationship. The setting of the assets makes a considerable contribution to their values, but due to development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.925 The **medium value** Grade II listed 'Heath Farmhouse' (**1373023**) is located on the southern edge of the Heath Farm complex, 120 m south of the B1132 Heath Road and 1.4 km west of the Order Limits. The asset is an 18th century red brick house with a probably earlier core and a steep black glazed pantile roof. The asset is of evidential and historical value is adjoined to the north by a plastered timber frame 17th century wing with a black glazed pantile roof. The asset is of evidential and historical value.

3.2.926 The setting of the asset is informed by its farmyard location and its relationship with the non-designated outbuilding of the farm complex, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.927 The **medium value** Grade II listed 'Green Oak Farmhouse' (**1180064**) is located on the western flank of Goose Green Lane, 1.5 km north of Winfarthing and 540 m west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a steep pantile roof.

3.2.928 The setting of the asset is informed by its isolated roadside location and by its relationship with the non-designated outbuildings of the farm complex, several of which are recorded on the first edition map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the mature trees lining Goose Green Lane and development and mature tree lined hedgerow in the intervening landscape, the setting does not extend to the Order Limits.

3.2.929 The **medium value** Grade II listed 'Woodthorpe Farmhouse' (**1301645**) is located on the eastern flank of Goose Green, 1.6 km north-north-east of Winfarthing and 280 m west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a black glazed pantile roof.

3.2.930 The setting of the asset is informed by its roadside location and its relationship with the non-designated outbuildings of the farm complex, several of which are recorded on the first edition map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The grounds of the asset contain lawned areas scattered trees and paddocks and are largely defined by a mature tree lined hedgerow affording the asset privacy and seclusion. The setting of the asset, therefore, makes a considerable contribution to its value, but due to mature tree lining Goose Green Lane and development and mature tree lined hedgerow in the intervening landscape, the setting does not extend to the Order Limits.

3.2.931 The **medium value** Grade II listed 'Rookery Farmhouse' (**1373002**) is located on the south-west flank of Goose Green Lane, 1.1 km north-north-east of Winfarthing and 190 m south-west of the Order Limits. The asset is of evidential and historical value and comprises two ranges. The south-west range dates to the late 17th to early 18th centuries and comprises a timber frame house encased in 19th century buff brick with red brick to the rear and a steep pantile roof. The north-east range dates to the late 16th century and comprises a timber frame house faced in buff brick with a pantile roof.

3.2.932 The setting of the asset is informed by its isolated roadside location and its relationship with the non-designated outbuildings of the farm complex, several of which are recorded on the first edition map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The asset's grounds contain a lawn area and scattered trees and are defined by mature tree lined hedgerows. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature grounds and development and mature tree lined hedgerow in the intervening landscape, the setting does not extend to the Order Limits.

3.2.933 The **medium value** Grade II listed 'White House' (**1050786**) is located on the eastern flank of Hall Road, 1.3 km north-north-east of Winfarthing, 210 m south-east of Rookery Farmhouse and 210 m west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house, fronted in 19th century buff brick and with steep black glazed pantile roof.

3.2.934 The setting of the asset is informed by its isolated roadside location and its relationship with the non-designated outbuildings of the farm complex, some of which are recorded on the first edition map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The grounds of the asset are defined by a low hedge and contain lawns and scattered trees, affording the asset seclusion and peace. The setting of the asset, therefore, makes a considerable contribution to its value, and due to partial views to the east and the proximity of the Project, the setting extends to the Order Limits.

3.2.935 The **medium value** Grade II listed 'Thatch Cottage' (**1050787**) is located on the eastern flank of Hall Road, 150 m south of White House and 320 m west of the Order Limits. The asset is of evidential and historical value and comprises an 18th century red brick cottage with blue brick headers and a thatched roof.

3.2.936 The setting of the asset is informed by its secluded roadside location and by its small, mature hedgerow defined garden with several mature trees. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The small mature garden affords the asset some privacy. The setting of the asset makes a considerable contribution to its value, but due to its mature garden screening view to the east, the setting does not extend to the Order Limits.

3.2.937 The **medium value** Grade II listed 'Jasmine Cottage and Adjoining Cottage' (**1373027**) is located 60 m north of Short Green, 1.2 km west-north-west of Winfarthing and 2 km west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house with a steep pantile roof.

3.2.938 The setting of the asset is informed by its secluded location and by its mature grounds defined by a mature tree lined hedgerow. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. Cartographic evidence indicates that there has been some residential in-fill development to the south and west of the asset and the asset likely has broken views of the properties. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its mature grounds and development, copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.939 The **medium value** Grade II listed 'Short Green Farmhouse' (**1157380**) is located 80 m north of Short Green, 1 km west-north-west of Winfarthing and 1.9 km west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century much restored rendered timber frame house with a steep pantile roof.

3.2.940 The setting of the asset is informed by its location set back from Short Green and by its relationship with the non-designated outbuildings of the farm complex, some of which are recorded on the first edition map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The grounds of the asset are defined by a high hedge and contain lawns and scattered trees, affording the asset some seclusion and peace. Cartographic evidence indicates that there has been some residential in-fill development to the east of the asset and the asset likely has broken views of the properties. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its mature grounds and development, copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.941 The **medium value** Grade II listed 'Walnut Tree Farmhouse' (**1050794**) is located 90 m south of Short Green, 1 km west-north-west of Winfarthing and 2 km west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house with a steep corrugated iron roof.

3.2.942 The setting of the asset is informed by its farmyard location and by its relationship with the non-designated outbuildings of the farm complex, some of which are recorded on the first edition map of 1884. Several of the older outbuildings have been converted into residential dwellings and modern barns have been added to the farm in the 20th century. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship, and by its relationship with the large house directly to the south and recorded on the first edition OS map. The grounds of the asset are defined by a mature, high tree lined hedgerow affording the asset privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature grounds and development, copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.943 The **medium value** Grade II listed 'Tudor Cottage' (**1050790**) is located on the western flank of High London Lane, 1 km west of Winfarthing and 1.9 km west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame cottage with a steep tiled roof.

3.2.944 The setting of the asset is informed by its isolated roadside location and by its historical relationship with the surrounding agricultural landscape. Its open view to the east has, however, been interrupted by the 21st century development of an ornamental lake with associated earthworks and planting in the field east of High

London Lane and south of Back Lane Farm. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the earthworks and planting of the lake, and development, copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.945 The **medium value** Shrubhurst Cottage (**1373024**) is located on the western flank of High London Lane, 1 km west of Winfarthing and 1.8 km west of the Order Limits. The asset is of evidential and historical value, dates to the 17th to 18th centuries and comprises a plastered timber frame cottage with a steep pantile roof.

3.2.946 The setting of the asset is informed by its secluded roadside location and by its mature grounds defined by high tree lined hedgerows. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset affords the asset privacy and peacefulness and, therefore, makes a considerable contribution to its value. Due to the earthworks and planting associated with installation of the lake south of Back Lane Farm, and development, copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.947 The **medium value** Grade II listed 'Back Lane Farmhouse' (**1050789**) is located 100 m east of High London Lane, 960 m west of Winfarthing and 1.8 m west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house with a thatched roof. The asset has been extended to the north and south in the 21st century.

3.2.948 The setting of the asset is informed by its farmyard location and by its relationship with the non-designated outbuildings of the faming complex, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The large grounds of the asset are defined by a high, mature tree lined hedgerow and contain scattered trees, lawned areas, and in the field to the south, an ornamental lake. The grounds afford the asset privacy and, therefore, the setting of the asset makes a considerable contribution to its value. Due to the mature grounds of the asset and development, further mature boundaries, and copses in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.949 The **medium value** Grade II listed 'Furze Farmhouse' (**1157377**) is located 80 m south of Short Green, 60 m east of Back Lane Farmhouse, 860 m west of Winfarthing and 1.7 km west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house with a steep black glazed pantile roof.

3.2.950 The setting of the asset is informed by its farmyard location and by its relationship with the non-designated outbuildings of the farm complex, some of which are recorded on the first edition map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The large grounds of the asset are defined by a low, mature hedgerow and contain scattered trees and lawned areas. The setting of the asset makes a considerable contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.951 The **medium value** Grade II listed 'Chapel House' (**1050793**) is located 40 m south of Short Green, 750 m west of Winfarthing and 1.6 km west of the Order Limits. The

asset is of evidential and historical value and comprises a restored 17th century plastered timber frame house with a thatched roof.

3.2.952 The setting of the asset is informed by its location set back from the road and by its relationship with the Grade II listed 17th century Conifers to the east and the non-designated property to the north-west, both of which are recorded on the first edition OS map of 1884. The setting is also informed by the surrounding agricultural landscape with which the asset has a historical relationship. The view to the agricultural land to the north, however, is interrupted by a late 20th century bungalow between the asset and Short Green. The setting of the asset, therefore, makes a moderate contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.953 The **medium value** Grade II listed 'Conifers' (**1301608**) is located on the southern flank of Short Green, 700 m west of Winfarthing and 1.6 km west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame long range with a pantile roof. Satellite images indicate the asset was remodelled in 2017 when four attic dormer windows were added to the northern elevation of the building and a wing was added to the rear. The walkover survey identified that the structure is now fronted with modern breeze blocks awaiting finishing.

3.2.954 The setting of the asset is informed by its roadside location and by its relationships with the 17th century Grade II listed Chapel House to the west and its associated outbuilding to the north-east, both of which are recorded on the first edition OS maps of 1884. The setting is also informed by the surrounding agricultural landscape with which the asset has a historical relationship. There are broken views to 20th century residential development to the east, through the mature tree lined hedgerow garden boundary of the asset. Due to the extensive reworking of the asset and the encroaching development, the setting of the asset makes a minor contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.955 The **medium value** Grade II listed 'Over Bridge' (**1301606**) is located on the northern flank of Short Green, 550 m west of Winfarthing and 1.5 km west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house with a steep pantile roof.

3.2.956 The setting of the asset is informed by its roadside location and by its relationships with the associated non-designated building immediately to the north and the 17th century Grade II listed Old Stores on the southern flank of Short Green. There are large 20th century poultry sheds 100 m to the north of the asset and a 20th century residential property immediately to the east. The setting of the asset makes a moderate contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.957 The **medium value** Grade II listed 'The Old Stores' (**1373026**) is located on the southern flank of Short Green, 540 m west of Winfarthing and 1.5 Km west of the Order Limits. The asset is of evidential and historical value, is of probable 17th century date and comprises a plastered timber frame house with a steep pantile roof.

3.2.958 The setting of the asset is informed by its roadside location and by its relationships with its associated non-designated buildings to the south and east and with the 17th

century Grade II listed Over Bridge on the northern flank of Short Green. The setting is further informed by the agricultural land to the south and east with which the asset as a historical relationship. There has been some 20th century infill residential development to the west, but it sympathetic and in the local vernacular. The setting of the asset, therefore, makes a moderate contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.959 The **medium value** Grade II listed 'Wilderness Farmhouse' (**1050792**) is located 40 m north of Short Green, 420 m west of Winfarthing and 1.4 km west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a steep pantile roof.

3.2.960 The setting of the asset is informed by its farmyard location and by its relationships with its associated non-designated buildings, some of which are recorded on the first edition OS map of 1884 but are generally of 20th century date. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The boundaries of the farmyard are defined by tree line hedgerows and fences, and it contains scattered trees, lawned areas to the south of the asset and outbuildings to the rear. The setting of the asset makes a considerable contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.961 The **medium value** Grade II listed 'Walnut Tree Farmhouse' (**1157406**) is located on the southern flank of Short Green, 300 m west of Winfarthing and 1.2 km west of the Order Limits. The asset is of evidential and historical value, dates to the late 16th century and comprises a rendered timber frame house with a tiled roof. The south-eastern gable is faced in red brick and the plastered wing to the rear has a modern pantile roof.

3.2.962 The setting of the asset is informed by its roadside location and by its relationship with the non-designated outbuildings of the former farm complex, some of which are recorded on the first edition map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. Several of the outbuildings appear to have been converted into residential dwellings, but they and the asset are still coherent as elements of a former farming complex. The setting of the asset, therefore, makes a considerable contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.963 The **medium value** Grade II listed 'Park Farmhouse' (**1050829**) is in a large farming complex 360 m north of Church Lane, Winfarthing and 470 m west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century timber frame house with a steep black glazed pantile roof. The asset was faced with red brick in the late 19th century. A large brick-built wing was added to the west was added in the late 19th century contemporary with the facing of the 17th century house.

3.2.964 The setting of the asset is informed by its farmyard location and by its relationship with the non-designated outbuildings of the former farm complex, many of which are recorded on the first edition map of 1884. The setting is further informed by the immediate agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The setting of the asset makes a

considerable contribution to its value, and due to its proximity to the Project, the setting extends to the Order Limits.

3.2.965 The **medium value** Grade II listed 'Eton's Farmhouse' (**1373025**) is located on the eastern flank of Winfarthing Road, 860 m south of Winfarthing and 740 m west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a steep pantile roof.

3.2.966 The setting of the asset is informed by its farmyard location and by its relationship with the non-designated outbuildings of the working farm complex, some of which are recorded on the first edition map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The setting of the asset makes a considerable contribution to its value, however, due to it being restricted to the farming complex and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.2.967 The following listed buildings and located within the Winfarthing Conservation Area.

3.2.968 The **medium value** Grade II listed 'Stocks Hill Farmhouse' (**1050797**) is located immediately north-east of the junction of Hall Road and The Street, Winfarthing and 750 m west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a steep pantile roof.

3.2.969 The setting of the asset is informed by its location in the small farmyard and by its relationship with the non-designated outbuildings of the farm complex recorded on the first edition map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. Twentieth century residential development has encroached on the asset from the north and south, replacing agricultural land. The setting of the asset, therefore, makes a moderate contribution to its value, but due to mature copses and tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.970 The **medium value** Grade II listed 'Holly Farmhouse' (**1050796**) is located on the western flank of The Street, Winfarthing and 760 m west of Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a steep black glazed pantile roof. The front elevation of the asset was faced with brick in the 18th century, now painted.

3.2.971 The setting of the asset is informed by its roadside location in the settlement and its relationship with its associated barn to the north-west, now converted into residential dwellings. The setting is further informed by the agricultural landscape to the west with which the asset and associated barn have a historical and functional relationship. Twentieth century residential development has encroached on the asset from the north, south, and on the eastern flank of The Street, replacing agricultural land. The setting of the asset, therefore, makes a moderate contribution to its value, but due to mature copses and tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.972 The **medium value** Grade II listed '1 and 2, The Street' (**1157400**) is located on the eastern flank of The Street, Winfarthing and 620 m west of the Order Limits. Number 1 is probably early 17th century in date and comprises a plastered timber frame house, partly faced in brick with a steep pantile roof. Number 2 adjoins to the east and is of probable late 17th century date. The asset comprises a painted brick house

with a steep pantile roof and a small modern brick wing to the rear. The asset is of evidential and historical value.

3.2.973 The setting of the asset is informed by its roadside location within the settlement and its relationship with the Grade II listed The Fighting Cocks Public House on the opposite side of The Street. The setting of the asset has been encroached upon by 20th century residential development from the north and south, but this housing is sympathetic and in the local vernacular. The setting of the asset, therefore, makes a considerable contribution to its value, but due to development along Church Lane to the east and mature copses and tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.974 The **medium value** Grade II listed 'The Fighting Cocks Public House' (**1157389**) is located on the western flank of The Street, Winfarthing and 650 m west of the Order Limits. The pub is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame structure with a modern brick front and a steep pantile roof.

3.2.975 The setting of the asset is informed by its roadside location within the settlement and its relationship with the Grade II listed 1 and 2, The Street on the opposite side of The thoroughfare. The setting of the asset has been encroached upon by 20th century residential development from the north and south, but this housing is sympathetic and in the local vernacular. The setting of the asset, therefore, makes a considerable contribution to its value, but due to development on the eastern flank of The Street and along Church Lane to the east, and mature copses and tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.976 The **medium value** Grade II listed assets 'The Clerk's Cottage' (**1180044**), 'The Old Rectory' (**1373001**), 'Church Place' (**1050828**) and 'Church Hill Farmhouse' (**1180050**) are located on the northern flank of Church Lane, Winfarthing and 500 m west of the Order Limits. These assets are of evidential and historical value. The Clerk's Cottage is a rendered timber frame 17th to 18th century cottage with a steep pantile roof and a modern, flat roofed wing to the south-west. The Old Rectory dates to the 17th century and comprises a plastered timber frame house with a thatched roof with a timber frame wing to the north with a lower thatched roof. Church Place comprises a terrace of three cottages the middle of which comprises a rendered timber frame structure dating to the 17th century. The two end cottages are of similar construction and of probable early 19th century date. The assets have a later pantile roof. Church Hill Farmhouse dates to the early to mid-19th century and comprises a red brick house with buff brick dressings and a low-pitched slated roof.

3.2.977 The setting of the assets is shared and informed by their location within the settlement, by their interrelationships and by their relationships with the non-designated outbuildings of Church Hill Farm, several of which are recorded on the first edition map of 1884. The setting is further informed by the assets relationships with the Grade I listed Church of St Mary to the south of Church Lane and their historical relationship with the agricultural landscape beyond the settlement's boundaries. The farm outbuildings have been converted into residential dwellings but they and the and the farmhouse and cottages retain their coherence as a former farming complex. The external garden boundary encircling the group of assets is largely defined by high, mature tree lined hedgerows affording the assets a shared privacy. The setting of the assets, therefore, makes a considerable contribution to their values, but due to the mature garden boundaries and further mature tree lined

hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.978 The **medium value** Grade II listed 'Church Farmhouse' (**1373028**) is located on the western flank of The Street, Winfarthing and 570 m west of the Order Limits. The farmhouse is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame structure with a steep pantile roof.

3.2.979 The setting of the asset is informed by its roadside location within the settlement and by its relationship with the associated non-designated form outbuildings several of which are recorded on the first edition map of 1884. The setting is further informed by later 20th century outbuildings to the west and beyond them, the agricultural landscape with which the asset and associated buildings have a historical and functional relationship. There has been some later 20th century residential development along The Street to the north and south, but it is largely sympathetic and in the local vernacular. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the development of the settlement to the east and associated tree cover, the setting does not extend to the Order Limits.

3.2.980 The **medium value** Grade II listed 'School House' (**1050791**) is located on the western flank of The Street, Winfarthing 500 m west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a steep pantile roof.

3.2.981 The setting of the asset is informed by its roadside location within the settlement and its relationship with the non-designated All Saints Primary School on the opposite flank of The Street. There has been later 20th century residential to the north and south and so the setting of the asset makes a moderate contribution to the assets value, but due to the school buildings to the east and mature trees beyond, the setting does not extend to the Order Limits.

Shelfanger CP

3.2.982 The **medium value** Grade II listed 'Manor Farmhouse' (**1050086**) is located a little to the north-west of the junction of Common Road and High London Lane on the north-western outskirts of Shelfanger, 1.2 km north-west of an Order Limits access road and 1.35 km west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century rendered timber frame, two storey house with a projection wing to the west and a steep pantile roof.

3.2.983 The setting of the asset is informed by its location within a former farming complex and by its relationship with its former outbuildings, now mostly residential dwellings, which are recorded on the first edition OS map of 1884. The setting is further informed by the immediate agricultural landscape with which the asset and former outbuildings have a historical and former functional relationship. The remains of a medieval moat also contribute to the setting and demonstrates the time depth of the site. The former farmyard has been divided by hedgerows to provide garden areas for the separate residences, but the buildings retain some coherence as a former farming complex. The setting of the asset, therefore, makes a moderate contribution to its value, but due to distance, its mature grounds and the development and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.984 The **medium value** Grade II listed assets 'Limetree Farmhouse' (**1156425**) and 'Barn Immediately East of Limetree Farmhouse' (**1050087**) are located on the southern

flank of Common Road, 250 m west of Manor Farmhouse (**1050086**), 1.5 km north-west of the Order Limits. The assets are of evidential and historical value. The farmhouse dates to the 17th century but has a 16th century wing to the north-west forming an L-shaped plan. The asset is a rendered timber frame structure with the 17th century section fronted with 19th century yellow brick. The farmhouse has two storeys, an attic and a steeply pitched black glazed pantile roof. The barn, now a residential dwelling, dates to 17th or 18th centuries and comprises a plastered timber frame structure with a steep gable ended pantile roof.

3.2.985 The setting of the assets is shared and informed by their roadside location within a former working farm complex, their interrelationship and by their relationships with surviving non-designated outbuildings recorded on the first edition OS map of 1884. The setting is further informed by the immediate agricultural landscape, with which the assets and outbuildings have a historical and former functional relationship. A third property is located just to the west of the listed assets is also recorded on the OS map ant and its associated outbuildings also makes a positive contribution to the setting of the assets. The former farmyard has been divided up to provided garden areas for the separate dwellings and so some cohesion as a framing complex has been eroded. The setting of the assets, therefore, makes a moderate contribution to their values, but due to their mature tree lined hedgerow boundaries and the development and mature boundaries of the intervening landscape, the setting does not extend to the Order Limits.

3.2.986 The **medium value** Grade II listed 'Hill Cottages' (**1050088**) is located on the southern flank of Heywood Road on the eastern outskirts of 30 m south-west of the Order Limits. The asset has evidential and historical value and comprises a 17th century plastered timber frame, two storey cottage with a pantile roof.

3.2.987 The setting of the asset is informed by its roadside location within and by its relationship with later adjoining cottages to the north and the property to the 30 m to the east, all of which are recorded on the first edition OS map of 1884. The setting is further informed by the immediate agricultural landscape with which the asset has a historical relationship. The asset has small, mature gardens to the east and south defined by hedgerows, fences and scattered tree affording the asset a small degree of privacy. There has, however, been some 20th century residential development along the southern and northern flanks of Heywood Road to the west of the asset, linking it and the associated buildings with Shelfanger. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the restricted roadside nature of its setting and screening by its boundaries and property to the east, the setting does not extend to the Order Limits.

3.2.988 The **medium value** Grade II listed assets 'Street Farmhouse' (**1302810**) is located on the north-eastern flank of Rectory Road within Shelfanger, 580 m west-north-west of the Order Limits. The asset has evidential and historical value. The farmhouse dates to the late 16th century and comprises a plastered timber frame structure with gable ends and a pantile roof.

3.2.989 The setting of the asset is informed by its roadside location within the settlement, its relationship with the surviving outbuildings of a large farming complex recorded on 19th and 20th century OS mapping. The asset is located at a crossroads in the village, and the post medieval and early modern properties around the junction add to the character of the settlement and positively contribute to the setting of the assets. The setting is further informed. The setting is further informed by the agricultural land to the east, with which the asset has a historical and former

functional relationship. Today, the asset serves as a residential dwelling and the farmyard has been divided to provide each property with gardens and drives. The setting of the asset, therefore, makes a moderate contribution to its value, but due to distance, some loss of integrity, and screening by copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.990 The **medium value** Grade II listed 'Cross Keys Garage' (**1156604**) is located immediately north of the four-way intersection of The Street, Winfarthing Road, Rectory Road and Church road in Shelfanger and 640 m west of the Order Limits. The asset has evidential and historical value and is recorded as a public house on 19th and early 20th century OS mapping. The asset comprises a 17th century plastered timber frame, two storey range with a gable-ended black glazed pantile roof. There is no indication the asset still serves as a garage, although there are two mid-20th century fuel pumps on the forecourt.

3.2.991 The setting of the asset is informed by its roadside, village location at the road junction. The setting is further informed by the assets relationships with the Grade II listed Street Farmhouse (**1302810**) to the south-east and with the post medieval and early modern properties around the junction that add to the character of the settlement. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its restricted settlement nature, the setting does not extend to the Order Limits.

3.2.992 The **medium value** Grade II listed 'Yew Tree Cottage' (**1373362**) on the south-western flank of Rectory Road, 70 m south-east of the four-way intersection of The Street, Winfarthing Road, Rectory Road and Church Road in Shelfanger and 600 m west of the Order Limits. The setting of the asset is informed by its roadside, village location and by its relationships with the Grade II listed Street Farmhouse (**1302810**) to the north and with the non-designated post medieval properties, which also flank Rectory Road. The asset's garden boundaries are defined by high fences and evergreen hedgerows that, despite, its village location, afford the asset a degree of privacy. The setting of the cottage, therefore, makes a considerable contribution to its value, but due to its restricted settlement nature, the setting does not extend to the Order Limits.

3.2.993 The **medium value** Grade II listed 'Shelfanger Hall' (**1373361**) at the western limit of Hall Lane, 570 m west of Shelfanger Road, 780 m south-west of Shelfanger, 1.2 km north-west of the Order Limits. The asset is of evidential and historical value and dates to the late 16th to early 17th centuries. It comprises a plastered timber frame, two storey house with a steep, gabled pantile roof. There is a likely 17th century wing to the south-east and a late 19th/early 20th century painted brick rear extension along entire length of building. Three sides of a moat survive to the west, south and east.

3.2.994 The setting of the asset is informed by its location within a working farm complex and by its relationship with its non-designated outbuildings, several of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical and ongoing functional relationship. The moat, likely of medieval date, informs on the considerable time depth of the site and makes a positive contribution to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to distance and the copses, development and mature tree lined

hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.995 The **medium value** Grade II listed 'Shelfanger Lodge' (**1302864**) is located at the junction of Lodge Lane and Shelfanger Road, 950 m south of Shelfanger, 430 m east-north-east of the Order Limits. The asset has evidential and historical value and comprises a stuccoed, two storey early 19th century house with a low-pitched, slated roof with lead rolls to the hips and ridge. The asset is adjoined to the rear (west) by a painted brick, two story wing (Lodge Farm Cottage) with a black glazed pantile roof, which appears to be a separate residence to the lodge.

3.2.996 The setting of the asset is informed by its roadside location and by its relationships with a small complex of buildings to the west and a residential property on the northern flank of Lodge Lane, most of which are recorded on the first edition OS map of 1884. The complex of buildings to the west appears to be former barns, now converted into residential properties. This suggests the lodge was once part of a working farm complex, although the coherence of such a complex is now largely lost. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its restricted roadside nature, and some screening by copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

Heywood CP

3.2.997 The **medium value** Grade II listed 'Heywood End' (**1373550**) is located off a private road 280 m west of Heywood End and 330 m south-east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a red brick faced timber frame structure.

3.2.998 The setting of the asset is informed by its isolated location within its own mature tree lined grounds and its relationship with a non-designated east/west wing recorded on the first edition OS map of 1884, and an outbuilding to the south-west first apparent on the 1928 OS map. The mature grounds afford the asset privacy and peacefulness, and so the setting of the asset makes a considerable contribution to its value. Due to the mature grounds and mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.999 The **medium value** Grade II listed 'Heywood Manor' (**1049736**) is located at the end of a private road 750 m east of Goose Green and 120 m east of the Order Limits. The house is of evidential and historical value, dates to the early 17th century and is a pebble dashed structure. Partly encircling the manor, to the north and west, with earthwork remains to the south-west, south and south-east, is a moat (**1305**). This adds evidential and historical value to the listed building. The **low value** immediate estate boundary of Heywood Manor (**1697**) of evidential and historic value is partially within the Order Limits, can be observed on the 1884 1:2500 OS map.

3.2.1000 The setting of the asset is informed by its secluded farmyard location and by its relationship with the associated non-designated outbuildings, several of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The asset is located within a partially surviving medieval moat (**1305**), which also informs the setting. The setting of the asset, therefore, makes a considerable contribution to the asset's value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.2.1001 The **medium value** Grade II listed 'Heywood Hall' (**1373551**) is located west of the junction of The Heywood and Boot Lane, 1.5 km east of Winfarthing and 680 m east of the Order Limits. The hall is of evidential and historical value, dates to the early 17th century and later and comprises a roughcast and brick structure with a black pantile roof.

3.2.1002 The setting of the asset is informed by its roadside location and with its relationships with the associated farming complex to the south, much of which appears on the first edition OS map of 1884 and the partially surviving remains of a medieval moat to the north. The setting is further informed by the immediate agricultural landscape with which the asset and associated farm buildings have a historical and functional relationship. The grounds of the asset contain mature tree growth and are defined by mature hedgerows. The setting of the asset, therefore, makes a considerable contribution to its value, but due its restricted nature, and to screening by the asset's grounds and mature hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1003 The **medium value** Grade II listed 'Willow Bough Farmhouse' (**1386527**) is located at the end of a private road 210 m west of The Heywood, 1 km east of Winfarthing and 250 m east of the Order Limits. The farmhouse is of evidential and historical value, dates to the early 17th century with the northern half rebuilt in the late 17th century and comprises a timber frame structure clad with rendered wattle and daub and some clay lump. The asset has a pantile roof. A **low value** orchard likely associated with Willow Bough Farmhouse (**1710**) of evidential and historic value has also been observed approximately 160 m south-east of the Order Limits and is first seen on the 1884 1:2500 OS map. The orchard appears to be half the size on both the 1981 and 1994 1:2500 OS maps with buildings observed in the east of the land parcel. The area is woodland on current aerial imagery.

3.2.1004 The setting of the asset is informed by its farmyard location and by its relationship with the associated non-designated outbuilding, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated farm buildings have a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value. The ground of the farmhouse includes a mature copse that screens the asset from the Project to the west and north-west, however, there are likely to be broken views of pylons to the south-west. The setting of the asset, therefore, extends to the Order Limits.

3.2.1005 The **medium value** Grade II listed 'Willows Farmhouse' (**1049737**) is located on the western flank of Heywood Road, 1 km south-east of Winfarthing and 240 m east of the Order Limits. The farmhouse is of evidential and historical value, dates to the 17th to 18th centuries and comprises a clay lump and timber frame structure with a pantile roof.

3.2.1006 The setting of the asset is informed by its farmyard location and by its relationship with the associated non-designated outbuilding, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated farm buildings have a historical and functional relationship. The asset is associated with the remains of a **low value** possible medieval moat (**1026**), and this too informs the asset's setting. A vehicle breaking yard and/or a garage workshop was established immediately to the south of the asset in the latter half of the 20th century as was a farming complex 90 m to the north-east. The setting of the asset, therefore, makes a moderate

contribution to its value. The grounds of the asset contain numerous trees, particularly to the west in the direction of the Project. It is possible, however, that there would be glimpsed views of the Project, and so the setting extends to the Order Limits.

3.2.1007 The **medium value** Grade II listed 'Hawthorn Cottage' (**1373552**) is located on the western flank of Heywood Road, 1.2 km south-east of Winfarthing and 170 m north-east of the Order Limits. The cottage is of evidential and historical value, dates to the 17th century and has a thatched roof. No details of the asset's construction are included on its National Heritage List, but it appears to be plastered and given the age of the asset, it is likely to be timber framed.

3.2.1008 The setting of the asset is informed by its roadside location, its relationship with the Grade II listed 18th century Vine Farmhouse 70 m to the south and the surrounding agricultural landscape with which the asset has a historical relationship. Once secluded, small scale residential development has encroached on the asset from the north and east and so its setting makes a moderate contribution to its value. The grounds of the asset contain numerous trees, particularly to the west in the direction of the Project and there is a large mature copse further to the west. It is possible, however, that there would be glimpsed views of the Project to the north-west, and so the setting extends to the Order Limits.

3.2.1009 The **medium value** Grade II listed 'Vine Farmhouse' (**1049738**) is located on the western flank of Heywood Road, 1.3 km south-east of Winfarthing and 1290 m east of the Order Limits. The farmhouse is of evidential and historical value, dates to the 18th century and comprises a plastered timber frame structure, partially on a plinth, with a black glazed pantile roof.

3.2.1010 The setting of the asset is informed by its roadside location and by its relationships with Grade II listed assets Hawthorn Cottage 70 m to the north and a formally associated barn immediately to the south. The setting is further informed by the surrounding agricultural landscape with which the asset and barn have a historical and functional relationship. Once parts of the same farming complex the farmhouse and barn are now separate private dwelling divided by a mature tree lined hedgerow. The setting of the asset, therefore, makes a moderate contribution to its value. There is mature tree growth to the rear (west) of the asset and beyond that, a large mature copse and further mature tree lined hedgerows. Due to the proximity of the Project, however, pylon tops are likely to be visible above the screening vegetation, and so the setting extends to the Order Limits.

3.2.1011 The **medium value** Grade II listed 'Barn Immediately South of Vine Farmhouse' (**1343675**) is located on the western flank of Heywood Road, immediately south of Vine Farmhouse, 1.3 km south-east of Winfarthing and 100 m north-east of the Order Limits. The barn is of evidential and historical value, dates to the early 17th century but it was lengthened and a midstrey (central porch) added in the 18th century. Further extensions were added in the 19th and 20th centuries. The eight-bay 17th century barn comprises a timber frame structure with wattle and daub and weatherboarded walls, although the building now appears to be faced in red brick. The whole barn complex has pantile roofs.

3.2.1012 The setting of the asset is informed by its roadside location and by its relationship with the Grade II listed Vine Farmhouse immediately to the north. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. Once parts of the same farming complex the barn and farmhouse are now separate private dwelling divided by a mature tree lined

hedgerow. The setting of the asset, therefore, makes a moderate contribution to its value. There is mature tree growth to the rear (west) of the asset and beyond that, a large mature copse and further mature tree lined hedgerows. Due to the proximity of the Project, however, pylon tops are likely to be visible above the screening vegetation, and so the setting extends to the Order Limits.

3.2.1013 The **medium value** Grade II listed 'Prospect Farmhouse' (**1049739**) is located on the eastern flank of Heywood Road, 1.5 km south-east of Shelfanger and 130 m south-east of the Order Limits. The farmhouse is of evidential and historical value, dates to the early 17th century and comprises a plastered timber frame structure with a pantile roof.

3.2.1014 The setting of the asset is informed by its farmyard location and by its relationship with associated non-designated outbuildings some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The asset and outbuildings are situated in heavily wooded grounds affording the asset privacy and peacefulness. The setting of the asset, therefore, makes a considerable contribution to its setting, but due to the mature grounds the setting does not extend to the Order Limits.

3.2.1015 The **medium value** Grade II listed 'Chestnut Tree Farmhouse' (**1170015**), formally Low Farm, is located on the eastern flank of Heywood Road, 2 km south-east of Shelfanger and 550 m south-east of the Order Limits. The farmhouse has a tablet set into the central chimney engraved with the date and initials '1574 EAB'. The asset is of evidential and historical value and comprises a plastered timber frame structure with a mid-19th century brick faced frontal elevation and a black glazed pantile roof.

3.2.1016 The setting of the asset is informed by its farmyard location and by its relationship with associated non-designated barns and outbuildings recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The remains of a medieval moat immediately to the south of the asset informs on the time depth of the setting indicated deeper historic roots. The farming complex contains 20th century steel frame hanger style barns to the north of the asset and its boundaries are defined by mature tree lined hedgerows. The barns and outbuilding are now converted to dwellings and commercial premises but they, the farmhouse and the 20th century buildings are coherent as a farming complex. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the development of the farm complex, its mature boundaries and copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

Burston and Shimpling CP

3.2.1017 The medium value Grade II listed 'Crown Farmhouse' (1049585), located on the northern edge of the small settlement of Burston, along Mill Road, c. 1.7 km north-east of the Order Limits. The asset is a 17th century timber-framed house faced in brick in the late 19th century. The asset comprises two storeys and attic and has a step pantile roof with gabled ends. On the north-east side of the asset is a projecting 19th century brick wing with a pantile roof and sashes.

3.2.1018 The setting of the asset is informed by its location within the rural settlement of Burston, and within the grounds of Crown Farm which appears to be a working farm. There are multiple barn buildings within the same property as the asset and the asset

is surrounded by agricultural land to the north, west and east, with the village located to the south. The setting of the asset contributes to the considerably to its value, with its functional relationship with the landscape maintained through its present use as a farm and its presence on the edge of the small village settlement. The asset has evidential and historical value, and the setting does not extend to the Order Limits, as it is confined to the farm itself and the agricultural land immediately surrounding the asset. The **medium value** Grade II listed 'High House Farmhouse' (**1049623**) is located on the western flank of Heywood End, 2.4 km north-east of Winfarthing and 570 m east of the Order Limits. The asset is of evidential and historical value, dates to the late 16th century and comprises a plastered timber frame house with a steep pantile roof.

3.2.1019 The setting of the asset is informed by its roadside location and its relationship with the associated non-designated outbuilding recorded on the first edition OS map of 1884, although the extensive recorded farm complex is very much diminished today. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuilding have a historical and functional relationship. The large grounds of the asset contain gardens, lawned areas and scattered and clumped trees and are defined by mature tree lined hedgerows. The ground of the asset affords is seclusion and privacy, but due to the loss of its farmyard the context, the setting of the asset makes a moderate contribution to its value. Due to the mature grounds and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1020 The **medium value** Grade II listed '43, Long Lane' (**1049582**) is located west of Long Lane, 860 m west of Gissing and 1.5 km east of the Order Limits. The asset is of evidential and historical value, dates to the 18th century and comprises a plastered timber frame cottage on a flint plinth with a pantile roof.

3.2.1021 The setting of the asset is informed by its roadside location, by its relationship with the non-designated residential property to the south and recorded on the first edition OS map of 1884 and by its historical relationship with the surrounding agricultural landscape. The grounds of the asset contain scattered trees and lawned areas and are defined by mature tree lined hedgerows affording the asset privacy and peacefulness. The setting of the asset, therefore, make a considerable contribution to its value, but due to its mature grounds and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1022 The **medium value** Grade II listed 'The Cottage and Higdons Cottage' (**1049583**) is nestled between the junction of Long Lane, Hall Road and Bridge Road within the settlement of Mill Green, c. 1.3 km south-east of the Order Limits. The asset is a 17th century house divided into two, built from a timber frame and rendered. The roof is thatched with gabled ends. The asset comprises two storeys and an attic and has a modern gabled porch.

3.2.1023 The setting of the asset is informed by its position with the garden of the property, which extends mainly to the south of the asset and includes some mature vegetation. The assets setting is also informed by its central location within the small settlement of Mill Green, a rural settlement surrounded by agricultural fields. The setting of the asset contributes moderately to its value, with some modern builds to the north and north-west of the asset, and the setting of the asset is limited to its garden and central village setting. The asset has aesthetic, historical and evidential value and the setting of the asset does not extend to the Order Limits.

3.2.1024 The **medium value** Grade II listed 'Culpher Farmhouse' (**1049581**) is located along Bridge Road on the western side of the small settlement of Mill Green, c. 1.5 km south-east of the Order Limits. The asset is a 17th century timber-framed and plastered house with a later lower pitched roof with gabled ends and black glazed pantiles. The asset has an 'L'-shaped plan and two storeys.

3.2.1025 The setting of the asset is informed by the large garden, and grounds make up the property as well as the other buildings present on the property. The asset doesn't appear to part of a working farm at the present and as such has lost the historical functional relationship with the landscape, but it is surrounded by an agricultural landscape with a large agricultural field directly to the north and south of the asset, as well as other fields surrounding the settlement. The asset has evidential and historic value, and the setting of the asset contributes moderately to its value. The setting of the asset is confined to the grounds of the asset and the small settlement of Mill Green, and as such the setting of the asset does not extend to the Order Limits.

3.2.1026 The **medium value** Grade II listed 'Grove Cottage' (**1373630**) is located on the north-eastern flank of Bridge Road, 750 m north of Burston and 1.8 km east of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house with a thatched roof.

3.2.1027 The setting of the is informed by its roadside location and by its relationship with the surrounding agricultural landscape with which the asset has a historical relationship. The asset is recorded in isolation on the first edition OS map of 1884 and remained so until the latter half of the 20th century when a residential property and commercial buildings were established to the north-west, encroaching on the asset's setting. The setting of the asset, therefore, makes a moderate contribution to its value, but due to development, mature tree lined hedgerows and copses in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1028 The **medium value** Grade II listed 'Far End' (**1373593**) is located off a private road 110 m north-north-west of Common Lane in Burston and 1.2 km east of the Order Limits. The asset is of evidential and historical value and comprises a small 17th century rendered timber frame house with a steep roof.

3.2.1029 The setting of the asset is informed by its isolated location on the western flank of the settlement and by its relationship with possibly related 20th century buildings to the south. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The grounds of the asset contain lawned areas and mature trees and are defined by mature tree lined hedgerows affording the asset privacy. The setting of the asset, therefore, make a considerable contribution to its value, but due to its mature grounds and development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

Gissing CP

3.2.1030 The **medium value** Grade II listed 'Simonds Farmhouse' (**1050352**) is located on the eastern flank of Common Road, 160 m south of Long Row Farmhouse and 2 km east of the Order Limits. The asset is of evidential and historical value, dates to the mid to later 19th century and comprises a house built of red brick with yellow brick dressings. There is a 17th century timber frame wing to the rear (east), which is now entirely encased in 19th century red brick.

3.2.1031 The setting of the asset is informed by its roadside location, by its relationship with associated non-designated outbuilding several of which are recorded on the first edition map of 1884, and by its mature grounds, which contain lawned areas, scattered trees and a pond and are defined by mature tree lined hedgerows. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to a mature tree lined hedgerow along Common Road and development, copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1032 The **medium value** Grade II listed 'Kite House' (**1152850**) is located immediately north-east of the junction of Bridge Road, Burston Road and Gissing Road 770 m north-north-east of Burston and 2 km east of the Order Limits. The asset is of evidential and historical value and comprises a probable 18th century plastered cottage with yellow brick dressing on a flint plinth with a thatched roof.

3.2.1033 The setting of the asset is informed by its roadside location and its relationship with further buildings to the north, one of which is recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuilding have a historical relationship. Infill development between the asset and the contemporary outbuilding to the north is sympathetic and in the local vernacular, as is the mid-20th century residential property to the south-west. The grounds of the asset are defined by hedgerows and there is a mature copse immediately to the north-east that screens the asset from a large complex of modern late 20th and 21st century hanger barns 150 m in the same direction. The setting of the asset makes a moderate contribution to its value, but due to development, and mature copses and tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

Non-Designated Heritage Assets

3.2.1034 The former **low value** Diss Heywood School (**1311**) is located on the eastern flank of Heywood Road 1.4 km north-east of Shelfanger and 80 m north of an Order Limits access road. The school is of evidential and historical value and was built in 1856 in a Gothic style from red brick with a blue decorative course in the walls and on top of the door. The slate roof is slotted with roll-top ridge tiles and a double-hole crested ridge. The school was closed by 1947 and has since been converted into a private dwelling.

3.2.1035 The **medium value** earthwork remains of a medieval moated site of evidential value with associated **low value** post medieval farm buildings (**1028**) are located immediately east of Heywood Road, 1.5 km south-east of Shelfanger and 280 m north-east of the Order Limits. The farm buildings are of evidential and historical value and include a 19th century brick farmhouse, and an 18th century timber framed barn, a very late example of the timber framing tradition.

3.2.1036 The **negligible value** site of a former windmill (**1045**) of evidential value is located 1.9 km north-east of Shelfanger and 350 m east of the Order Limits. The asset is recorded on Harling's 1821 OS drawing, and on Bryant's map of 1826 but not on subsequent OS mapping. The HER states that the mill fell out of use in 1878.

3.2.1037 Further evidence of post medieval activity in the Winfarthing and Shelfanger area is represented by **low value** findspots, and artefacts recovered during fieldwalking and metal detector surveys. These assets are of evidential value and comprise:

- A post medieval copper alloy jetton and harness mount in a multi-period finds assemblage (**1291**) recovered from farmland 700 m north-east of Shelfanger, immediately south of Heywood Road and partially within the Order Limits
- A post medieval copper alloy harness mount, spur fragment and two tokens in a large, multi-period finds assemblage (**1190**) recovered from farmland 110 m west of the Order Limits and 620 m north-east Shelfanger. The survey area is close to the head of a shallow tributary valley of the Tas with the floor of the valley just to the west and it is likely the extensive finds assemblage indicates the location of a Romano-British building or farmstead
- A post medieval silver coin and a lead weight in a multi-period finds assemblage (**1284**) recovered from farmland 2.2 km north-north-east of Winfarthing and 150 m east of the Order Limits
- A post medieval lead cloth seal in a multi-period finds assemblage (**1206**) recovered from farmland 560 m south-south-east of Winfarthing, immediately south of Heywood Road and 190 m west of the Order Limits
- A post medieval silver coin in a multi-period finds assemblage (**1292**) recovered from farmland on the eastern flank of Winfarthing and 300 m west of the Order Limits
- A post medieval copper alloy buckle and a silver coin (**1296**) were recovered from farmland within the former boundary Winfarthing Great Park (**1064**), 90 m north-east of Winfarthing and 340 m north-west of the Order Limits

Cropmark and LiDAR Assessment

3.2.1038 **Low value** linear cropmarks (**1522**) of evidential value identified by the Project are located between Blackbarn Road to the north and Long Row to the south, c. 1.3 km south-west of Tibenham and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map. Some of the recorded cropmarks to the south overlap with asset (**1072**), which constitutes the cropmarks of a medieval field system.

3.2.1039 **Low value** linear cropmarks (**1523**) of evidential value identified by the Project are located between Goose Green to the west and Boot Lane to the east, c. 920 m north-north-east of Winfarthing and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map.

3.2.1040 **Low value** linear cropmarks (**1525**) of evidential value identified by the Project are located north of the Grade II listed Willow Bough Farmhouse (**1386527**), c. 600 m east-north-east of Winfarthing and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map.

3.2.1041 **Low value** linear cropmarks (**1526**) of evidential value identified by the Project are located north-west of the Grade II listed Willows Farmhouse (**1049737**), c. 120 m east of Winfarthing and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.1042 **Low value** linear cropmarks (**1528**) of evidential value identified by the Project are located west of The Heywood, c. 680 m east-north-east of Shelfanger and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.1043 **Low value** linear cropmarks (**1529**) of evidential value identified by the Project are located north of Heywood Road, west of The Heywood, immediately east of

Shelfanger and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map, however, some appear to be associated with an adjacent **medium value** medieval moat (**1024**). Assets shown to be contemporary and associated with the moat would be of **medium value**.

3.2.1044 **Low value** linear cropmarks (**1531**) of evidential value identified by the Project are located between The Heywood to the east and Shelfanger Road to the west, c. 320 m south-east of Shelfanger and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.1045 **Low value** linear cropmarks (**1533**) of evidential value identified by the Project are located south of Lodge Lane, c. 780 m south of Shelfanger and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map.

3.2.1046 **Low value** linear cropmarks (**1532**) of evidential value identified by the Project are located east of Shelfanger Road, c. 1.2 km south-south-east of Shelfanger and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map and also include the site of an unnamed farm building (**1733**).

Historic Mapping Assessment

3.2.1047 A series of **negligible value** ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

3.2.1048 A total of 20 ponds are located within the Order Limits (**1665**, **1666**, **1670**, **1678**, **1680**, **1681**, **1682**, **1683**, **1684**, **1685**, **1686**, **1690**, **1694**, **1696**, **1699**, **1704**, **1708**, **1711**, **1715**, **1722**).

3.2.1049 A total of 36 ponds are located within 250 m of the Order Limits (**1667**, **1668**, **1669**, **1671**, **1672**, **1673**, **1674**, **1675**, **1676**, **1677**, **1679**, **1687**, **1688**, **1689**, **1693**, **1695**, **1700**, **1701**, **1702**, **1703**, **1705**, **1706**, **1709**, **1712**, **1713**, **1716**, **1718**, **1719**, **1720**, **1724**, **1725**, **1726**, **1727**, **1728**, **1729**, **1731**).

3.2.1050 **Low value** parish boundaries (**1691**) of evidential and historic value have been identified crossing the Order Limits and within the 250 m Study Area within this sub-section. The boundary can be observed on the 1884 1:2500 OS Map and is still present. It is unknown to what extent the boundary may physically be extant within the landscape.

3.2.1051 Six **low value** possible important hedgerow locations of evidential and historic value are located crossing the Order Limits and within the 250 m Study Area within this sub-section (**1692**, **1775**, **1776**, **1777**, **1778**, **1779**), immediately west of Boot Lane. The hedgerows are first observed on the 1884 1:2500 OS map. It is unknown how much these hedgerows pre-date the 1884 map edition.

3.2.1052 The **low value** 'Shelfanger Grove' woodland copse (**1723**) of evidential and historical value has been observed on a land parcel containing the Order Limit and 140 m north of Heywood Road. The woodland copse is first observed on the 1884 1:2500 OS map and is still extant within the landscape, however the copse has since shrunk to be contained outside of the Order Limits.

3.2.1053 A **low value** building and yard (**1733**) of evidential and historic value have been observed within the Order Limit approximately 160 m north-east of Shelfanger Road. The building and yard, possibly that of a farmhouse, is first observed on the 1884 1:2500 OS map and is last seen on the 1905 1:2500 OS map. The boundary of this land parcel can also be seen as a cropmark (**1532**).

3.2.1054 A **low value** orchard (**1714**) of evidential and historic value has been observed immediately south-east of the Order Limits and immediately south of Heywood Road. The orchard is first observed on the 1884 1:2500 OS map and appears to possibly have been associated with the 'Green Dragon B. H. (Beer House)' to east. Trees are still extant at this location on aerial imagery, however the buildings to the east appear to have been demolished and been replaced at some point after the 1994 1:2500 OS map.

3.2.1055 A likely **negligible value** modern feature (**1730**) of evidential value is adjacent to a former pond location (**1729**) and located 65 m west of the Order Limits and 520 m north-east of Shelfanger Road. This asset is not visible on historic mapping; however, it is potentially visible on aerial imagery.

3.2.1056 A **low value** building (**1707**) of evidential and historic value can be observed approximately 70 m east of the Order Limits and 700 m west of boot Lane. The building is first observed on the 1884 1:2500 OS map and is last observed on the 1994 1:2500 OS map. The building is no longer extant on current aerial imagery.

3.2.1057 A **low value** building (**1698**) of evidential and historic value can be observed approximately 180 m west of the Order Limits and 140 m east of Hall Road. The building is first observed on the 1884 1:2500 OS map and still appears to be extant on current aerial imagery surrounded by trees. The building is potentially in a state of disrepair.

3.2.1058 A **low value** building (**1721**) of evidential and historic value has been observed approximately 95 m west of the Order Limits and 210 m north of Heywood Road. The building is only observed on the 1884 1:2500 OS map and not seen on subsequent mapping.

3.2.1059 A **low value** woodland copse (**1717**) of evidential and historical value has been observed approximately 160 m east of the Order Limits and 100 m west of the Heywood. The woodland copse is first observed on the 1884 1:2500 OS map and is still extant within the landscape.

Bressingham and the Waveney Valley

Designated Heritage Assets

Bressingham CP

3.2.1060 The **medium value** Grade II listed ‘Lodge Farmhouse’ (**1049685**) is located on the eastern flank of Fersfield Road, 1.7 km north-west of Bressingham and 2 km north-west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame house with a steep pantile roof.

3.2.1061 The setting of the asset is informed by its roadside location, by its relationship with the Grade II listed Algar House on the western flank of Fersfield Road and by its relationship with the barns and outbuildings of the Lodge Farm complex most of which are recorded on the first edition OS map of 1884 as Bunn’s Farm. The setting

is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The asset now serves as a holiday let and the outbuildings are now residential properties and commercial premises, but the buildings are still coherent as a former farming complex. The grounds of the complex contain numerous mature trees and are defined by mature tree lined hedgerows affording the asset privacy. The setting of the asset makes a considerable contribution to its value, but due to its mature grounds and development, mature copses and tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1062 The **medium value** Grade II listed 'White Gates' (**1373585**) is located 250 m west of Common Road accessed by a private road, 400 m north-north-west of Bressingham Common and 910 m north-north-west of the Order Limits. The asset is of evidential and historical value and comprises a 17th century plastered timber frame structure with a pantile roof.

3.2.1063 The setting is informed by its off-road location and by its relationship with associated outbuilding and further properties to the south including Common Farm most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The asset has large grounds that include lawned areas, scattered mature trees and that are defined by mature tree lined hedgerows affording the asset peace and privacy. The setting of the asset makes a considerable contribution to its value, but due to its mature grounds and development, mature copses and tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1064 The **medium value** Grade II 'Jubilee Farmhouse' (**1049647**) is located on the northern edge of the small linear settlement of Bressingham Common, down a private drive that leads off of Common Road, c. 370 m north-west of the Order Limits. The asset is a two-storey 17th century timber-framed and plastered farmhouse with a thatched roof with gabled ends.

3.2.1065 The assets setting contributes considerably to its value, set within the grounds of the farm associated with the house which appears to still be in active use, maintaining the historical functional relationship between the asset and the landscape. The asset is set on the edge of the small settlement which is surrounded by an agricultural landscape. The asset is set back from Common Road, down a long private drive. Also within the property of the asset are other building, some of which appear to be barns, with some mature trees scattered around the perimeter of the buildings. The asset has evidential, aesthetic and historical value and the setting of the asset does not extend to the Order Limits. The setting of the asset extends to the agricultural land surrounding the asset and the farm which leads to the west and north. Whilst the agricultural land to the east and south is divided from the asset by Common Road and the other residential properties and their gardens within the linear settlement.

3.2.1066 The **high value** Grade II* listed 'Valley Farmhouse' (**1049665**) and the **medium value** Grade II listed 'Stables Immediately South-West Of Valley Farmhouse' (**1170651**) and 'Barn Approximately 60 Yards South-West Of Valley Farmhouse' (**1049666**) are located north-west and south-east of The Valley, 580 m west of Bressingham and 1.8 km west of the Order Limits. These assets are of evidential and historical value. The farmhouse comprises a 16th century and later plastered timber frame house on a brick plinth with a steep pantile roof. The stables probably date to the early 19th century and comprises a clay lump structure with a pantile roof. The

barn dates to the 17th/18th centuries and comprises a six bay, timber frame structure with a steep corrugated iron clad roof.

3.2.1067 The setting of the assets is shared and is informed by their roadside location and by the interrelationships of the designated assets and their relationships with the non-designated buildings of the farming complex, several of which are apparent on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the designated assets and associated non-designated buildings have a historical and functional relationship. The assets are situated within a working farm complex and so the setting of the assets makes a considerable contribution to their value. Due to the shallow valley location of the farming complex and the topography, development, copses, and mature tree lined hedgerows of the intervening landscape, however, the setting of the assets does not extend to the Order Limits.

3.2.1068 The **medium value** Grade II listed 'Fenners Farmhouse' (**1170546**) is located north-west of the junction of The Valley and Fersfield Road 1.3 km west-north-west of Bressingham and 1.8 km west-north-west of the Order Limits. The farmhouse is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame structure with a steep pantile roof.

3.2.1069 The setting of the asset is informed by its roadside location and by its relationship with the non-designated buildings of the former farming complex some of which are apparent on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated non-designated buildings have a historical and functional relationship. Some of the outbuildings have been converted in residential dwellings but the complex is still coherent as former farming complex and so the setting of the asset makes a considerable contribution to its value. Due to the topography, development, mature copses, and tree lined hedgerows of the intervening landscape, however, the setting of the assets does not extend to the Order Limits.

3.2.1070 The **medium value** Grade II listed 'High House' (**1049654**) is located on the north-eastern flank of Fersfield Road, 1.1 km west-north-west of Bressingham and 1.5 km west-north-west of the Order Limits. The asset is of evidential and historical value and comprises an early 17th century plastered timber frame house with a steep thatched roof.

3.2.1071 The setting of the asset is informed by its roadside location and by its relationship with residential properties to the north-west and south-east some of which are recorded on 19th and early 20th OS mapping. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The grounds of the asset and those of the neighbouring properties are large, mature, and heavily wooded affording the properties privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its mature grounds and development and mature tree lined hedgerows in the intervening landscape, it does not extend to the Order Limits.

3.2.1072 The **medium value** Grade II listed 'Poplar Farmhouse' (**1170541**) is located south-south-west of Fersfield Road, 980 m west of Bressingham and 1.4 km west of the Order Limits. The farmhouse is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame structure with a later low-pitched roof.

3.2.1073 The setting of the asset is informed by its roadside location and by its relationship with associated outbuildings recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated non-designated buildings have a historical and functional relationship. The farming complex is screened from small-scale 20th century residential to the to the north and south-east by mature tree growth, and so the setting of the asset makes a considerable contribution to its value. Due to the mature tree growth to the east and development and mature tree lined hedgerows in the intervening landscape, the setting of the asset does not extend to the Order Limits.

3.2.1074 The **medium value** Grade II listed assets 'Thatchers' (**1306020**) and 'Barn Approximately 30 Yards North-West of Thatchers' (**1049657**) are located on the southern flank of High Road, Bressingham and 880 m west of the Order Limits. These assets are of evidential and historical value. Thatchers dates to the late 16th century and comprises a plastered timber frame house with a thatched roof. The barn is of probable 17th century and comprises a timber framed, weather boarded structure with a thatched roof, now converted into a residential dwelling.

3.2.1075 The setting of the assets is shared and informed by their roadside village location, by their interrelationship and by their relationships with surviving elements of Potter's Farm to the north and the Moorings and other buildings to the east all recorded on 19th and early 20th century OS mapping. The setting is further informed by the surrounding agricultural landscape with which the former farming assets have a historical and functional relationship. The grounds of the assets contain lawned areas and scattered trees and are defined by mature tree lined hedgerows, however, small-scale 20th century has encroached from the west and north-west. The setting of the asset makes a moderate contribution to their value, but due to their mature grounds and development and mature tree lined hedgerows in the intervening landscape, it does not extend to the Order Limits.

3.2.1076 The **medium value** Grade II listed 'Moorings' (**1306006**) is located on the southern flank of High Road, Bressingham, 35 m east of Thatchers and 830 m east of Order Limits. The asset is of evidential and historical value, probably dates to the early 17th century and comprises a plastered timber frame house with a thatched roof. The front elevation of the asset faced with brick in the 19th century.

3.2.1077 The setting of the asset is informed by its roadside village location and its relationships with Thatchers and the associated barn to the west, the surviving elements of Potter's Farm to the north and Owl House and adjoining village shop the east, all of which are recorded on 19th and early 20th century OS mapping. Owl House and the adjoining shop and their grounds screen the asset from later 20th century development to the east, and so the setting of the asset makes a considerable contribution to its value. Due to development and mature line hedgerows in the intervening landscape, however, the setting of the asset does not extend to the Order Limits.

3.2.1078 The **medium value** Grade II listed 'The Highlands' (**1049655**) is located north of High Road, Bressingham and 850 m west of the Order Limits. The Highlands is of evidential and historical value, is of probable 17th century date and comprises a plastered timber frame structure with a steep peg tile roof. The asset is recorded on the first edition OS map of 1884 as part of the Potter's Farm complex and was likely the farmhouse.

3.2.1079 The setting of the asset is informed by its roadside village location and by its relationship with surviving elements of the farming complex, with Thatchers and

associated barn to the south-east and with The Moorings and Owl House and adjoining shop to the south. The setting is further informed by the surrounding agricultural landscape with which the former farmhouse and surviving outbuildings have a historical and functional relationship. The asset and a single storey east/west aligned range to the north are recorded on the 1884 OS map and these are now enclosed within their own grounds with the former associated barn, now village hall, outside the grounds to the east. Due to the erosion of this association, and the encroachment of later 20th century residential development immediately to the west, the setting of the asset makes a moderate contribution to the value of the asset, but due to development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1080 The **medium value** Grade II listed 'Village Hall' (**1049656**) is located on the north flank of High Road, Bressingham, 25 m east of The Highlands and 810 m west of the Order Limits. The asset is of evidential and historical value and is a converted probably 17th century barn comprising a plastered timber frame structure with a steep pantile roof.

3.2.1081 The setting of the asset is informed by its roadside village location and my its relationships with The Highlands to the west, the Mooring and Owl House and adjoining shop to the south. The setting is further informed by the surrounding agricultural landscape with which the former barn and other surviving elements of Potter's Farm have a historical and functional relationship. The village hall is situated in its own grounds with a garden area to the west, a driveway to the east and a parking are to the north. Due to the erosion of the asset's relationship with The Highlands, and the encroachment of later 20th century residential development immediately to the asset, the setting of the asset makes a moderate contribution to the value of the asset, but due to development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1082 The **medium value** Grade II listed 'Badgers, High Road' (**1170547**) is located 30 m north of High Road, Bressingham, 40 m east of the village hall and 760 m west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame structure with a thatched roof and brick faced end walls.

3.2.1083 The setting of the asset is informed by its roadside village location and by its relationship with the Methodist chapel immediately to the south, which was constructed in 1800. Later 20th century residential in-fill development has encroached on the asset from the west, east and south, and so the setting of the asset makes a moderate contribution to its value, but due to development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1084 The **medium value** Grade II listed 'Grange Cottage' (**1373553**) is located on the southern flank of High Road, Bressingham, 50 m south-east of Badgers and 720 m west of the Order Limits. The asset is of evidential and historical value and comprises a probable 17th century plastered timber frame cottage with a steep pantile roof.

3.2.1085 The setting of the asset is informed by its roadside village location and its relationships with the Methodist chapel to the north-west and the agricultural land to the south with which the asset has a historic relationship. Later 20th century residential in-fill development has encroached on the asset from the west, east and north, and so the setting of the asset makes a moderate contribution to its value, but

due to development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1086 The **high value** Grade II* listed 'Grange Farmhouse' (**1373591**) is located on the northern flank of High Road, Bressingham and 600 m west of the Order Limits. The asset is of evidential and historical value, dates to the 16th century and comprises a plastered timber frame house with steep roofs with plain tiles and black glazed pantiles.

3.2.1087 The setting of the asset is informed by its roadside village location and its relationship with its former outbuildings immediately to the north recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and its former outbuildings have a historical and functional relationship. The outbuildings have been converted into a residential dwelling and a high hedge separates it from the asset eroding the historical visual link between them. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1088 The **medium value** Grade II listed 'Pine Tree Cottage' (**1170621**) is located on the eastern flank of School Road on the southern edge of Bressingham and 1.1 km west of the Order Limits. The asset is of evidential and historical value, is of probable 17th century date and comprises a timber frame structure encased in red brick in the mid/later 19th century and with a pantile roof.

3.2.1089 The setting of the asset is informed by its roadside peripheral village location and by the surrounding agricultural landscape with which it has a historical relationship. There has been some 20th century in-fill residential along School Road and High Road to the north, but the asset is largely screened from this by the local topography and by mature trees and hedgerows. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1090 The **medium value** Grade II listed 'The Spinney' (**1049659**) is located on the western flank of School Road, Bressingham, 280 m south of Pine Tree Cottage and 1.1 km west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a steep pantile roof.

3.2.1091 The setting of the asset in informed by its secluded roadside location south of the settlement and by the surrounding agricultural landscape with which the asset has a historical relationship. The asset and its associated non-designated outbuilding are the last surviving elements of a small hamlet recorded on the first edition OS map of 1884, the extent of which is now defined be mature tree and shrub growth, affording the asset privacy and seclusion. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the local topography and the development and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.2.1092 The **medium value** Grade II listed 'Norbank Cottage' (**1305973**) is located on the western flank of School Road, 140 m north of the A1066 Low Road and 1.1 km west-north-west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a rendered timber frame structure with a steep roof with modern pantiles.

3.2.1093 The setting of the asset is informed by its roadside village location and by the agricultural land to the north with which the asset has a historical relationship. The first edition OS map of 1884 records the asset and its small outbuilding as a Post Office, and in a somewhat isolated location over 100 m east of buildings along Chequers Lane and over 180 m north-north-east of the church and rectory. During the latter half of the 20th century, however, there has been residential development along School Road to the south and east and beyond the properties to the east, a large nurseries and garden centre has been established. The asset is partially screened from this development by trees and mature hedgerows and so its setting makes a moderate contribution to its value. Due to the immediate development to the east and further development and mature tree lined hedgerows in the intervening landscape, however, the setting of the asset does not extend to the Order Limits.

3.2.1094 The **medium value** Grade II listed 'Rose Cottage' (**1373583**) is located at the northern extent of Chequers Lane, 130 m north of the A1066 Low Road and 1.2 km west-north-west of the Order Limits. The asset is of evidential and historical value, is of probable early 18th century date and comprises a plastered timber frame house with a thatched roof.

3.2.1095 The setting of the asset is informed by its secluded village location and by its relationship with the large Grade II listed 19th century house immediately to the south (see below). The setting is further informed by the agricultural landscape to the north with which the asset has a historical relationship. The grounds of the asset and the house to the south contain mature trees and are defined by mature hedgerows, affording the asset a degree of seclusion. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the mature grounds and development and mature tree lined hedgerows in the intervening landscape, it does not extend to the Order Limits.

3.2.1096 The **medium value** Grade II listed 'House immediately to north of Ye Olde Chequers at St James Plain' (**1049645**) is located on the eastern flank of Chequers Lane, immediately south of Rose Cottage and 1.2 km west-north-west of the Order Limits. The asset is of evidential and historical value and was built around 1840 in the Tudor Gothic style. It is of plastered clay lump construction with a steep pantile roof.

3.2.1097 The setting of the asset is informed by its secluded village location and by its relationship with Rose Cottage immediately to the north. The grounds of the asset contained lawned areas and scattered trees and are defined by mature tree lined hedgerows, which screen the asset from small-scale 20th century residential development to the east. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the mature grounds and development and mature tree lined hedgerows in the intervening landscape, it does not extend to the Order Limits.

3.2.1098 The **medium value** Grade II listed 'Old Hall Farmhouse' (**1049651**) is located on the northern flank of the A1066 Low Road, Bressingham and 1.3 km west-north-west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a steep tiled roof.

3.2.1099 The setting of the asset is informed by its roadside village location and by its relationship with the surviving outbuildings of the former farming complex immediately to the north-west. The setting is further informed by the agricultural land to the south and west with which the asset and former outbuildings have a historical and functional relationship. The outbuildings have been converted into residential dwellings and garden boundaries separate them from the asset eroding the historical

visual link between them. There is later 20th century residential development immediately to the east. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1100 The **medium value** Grade II listed 'Ye Olde Chequers' (**1170509**) is located on the northern flank of the A1066 Low Road, Bressingham and 1.2 km to the west of the Order Limits. The public house is of evidential and historical value, is of probable 17th/18th century date and comprises a plastered timber frame structure on a brick plinth with a thatched roof.

3.2.1101 The setting of the asset is informed by its roadside village location and by its relationship with the Grade I listed Church of St John the Baptist 60 m to the south. The setting of the asset and the retention of its functionality as an inn makes a considerable contribution to its value, and due to the development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1102 The **medium value** Grade II listed 'Number 1 St James Plain The Parish Cottages of Ye Olde Chequers' (**1049687**) is located immediately north-west of the junction of Chequers Lane and the A1066 Low Road, Bressingham and 1.2 km west-north-west of the Order Limits. Formally two 17th century cottages of evidential and historical value, the asset comprises a plastered timber frame house with a steep pantile roof.

3.2.1103 The setting of the asset is informed by its roadside village location but due its high evergreen hedgerow boundary, it has no intervisibility with the Church of St John the Baptist to the south and the largely contemporary Chequers Inn to the east. Later 20th century residential development has encroached on the asset from the west and south and so the setting of the makes a minor contribution to its value. Due to the high boundary hedge and the development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1104 The **medium value** Grade II listed 'The Cottage' (**1373584**) is located at the western limit of Church Lane, Bressingham, 160 m south of the A1066 Low Road and 1.4 km west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a timber frame house with modern rendering and a modern, steep tiled roof.

3.2.1105 The setting of the asset is informed by its roadside village location and by its relationship with its non-designated outbuildings immediately to the east and with the listed Church Farmhouse (see below) and the farmhouse's non-designated outbuildings 60 m to the east; all recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and probable functional relationship. The asset has an open view of farmland to the north but otherwise views are restricted by contemporary structures, copses and mature tree lined hedgerows. The setting of the asset, therefore, makes a considerable contribution to its value and does not extend to the Order Limits.

3.2.1106 The **medium value** Grade II listed 'Church Farmhouse' (**1049646**) is located on the southern flank of Church Lane, Bressingham, 60 m east of The Cottage and 1.3 km west of the Order Limits. The asset is of evidential and historical value, dates to the 17th century comprises a plastered timber frame house with a steep thatched roof.

3.2.1107 The setting of the asset is informed by its roadside village location and by its relationship with its non-designated outbuildings immediately to the west and with the listed Cottage and the cottage's non-designated outbuildings 60 m to the west; all recorded on the first edition OS map of 1884. The farm outbuildings have been converted into a residential dwelling and an intervening property boundary erodes the visual and historic links between the asset and its former outbuildings. Immediately to the east lies a mid-20th century dwelling, but it is sympathetic and in the local vernacular. The asset has an open view of farmland to the north but otherwise views are restricted by a modern structure, copses and mature tree lined hedgerows. The setting of the asset, therefore, makes a moderate contribution to its value and does not extend to the Order Limits.

3.2.1108 The **medium value** Grade II listed 'Three Gates Farmhouse' (**1170521**) is located at the end of a private road 130 m south of Fen Street, 650 m west-south-west of Bressingham and 1.9 km west of the Order Limits. The asset is of evidential and historical value, is of probable 17th century date and comprises a plastered structure with a steep pantile roof.

3.2.1109 The setting of the asset is informed by its farming complex location and by its relationship with its non-designated outbuildings several of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The asset has extensive grounds defined by mature tree lined hedgerows, which contain lawned areas, water bodies, and mature tree growth. The setting of the asset makes a considerable contribution to its value, but due to its mature grounds and development, copses and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1110 The **medium value** Grade II listed assets 'Bressingham Lodge' (**1049649**), 'Stables Immediately East of Bressingham Lodge' (**1373586**) and 'Stables and Cart Shed Immediately South-East of Bressingham Lodge' (**1049650**) are located 50 m south of Low Road, Bressingham, 80 m east of the Church of St John the Baptist and 1.1 km west of the Order Limits. These assets are of evidential and historical value. The lodge, formally the rectory, was built in 1842 in the Tudor style by architect S. S. Teulon. It is constructed of red brick with yellow brick dressings and a tiled roof. The stables to the east were also built the same year by Teulon of red brick in the Tudor style with a steep tiled roof. The stables and cart shed to the south-east has similar origins and are built of flint with red brick dressing and a tiled roof.

3.2.1111 The setting of the asset is shared and is informed by their interrelationships and by their relationships with the Church of St John the Baptist to the west. The setting is further informed by the large grounds of the Lodge, which are defined by mature tree lined hedgerows and contain lawned areas, a formal garden, and mature trees. The setting of the assets makes a considerable contribution to their values and but to the mature grounds and development and mature tree lined hedgerows in the intervening landscape, it does not extend to the Order Limits.

3.2.1112 The **medium value** Grade II listed 'Bressingham Hall' (**1049648**) is located 120 m south of Low Road, Bressingham and 910 m west of the Order Limits. The asset is of evidential and historical value, dates to the late 18th century and is constructed of yellow brick house with a hipped pantile roof.

3.2.1113 The setting of the asset is informed by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the extensive grounds of the hall, which are defined by

mature hedgerows and contain lawned areas, planting beds, formal gardens, a kitchen garden, and scattered trees. The house now serves as a wedding venue and holiday destination and the associated Bressingham steam museum is located immediately to the east. Further to the east is a large garden centre and nurseries complex. Despite the change of use and the proximity of the museum, the asset remains coherent as a country house and so its setting makes a moderate contribution to its value. Due to the adjacent museum and garden centre and further development and mature tree lined hedgerows in the intervening landscape, however, the setting does not extend to the Order Limits.

3.2.1114 The **medium value** Grade II listed 'Bluepump Farmhouse' (**1050238**) is located on the northern flank of the A1066 High Road in the east of Bressingham and 180 m west-north-west of the Order Limits. The asset is of evidential and historical value and comprises a mid-19th century roughcast house with a 17th century plastered timber frame wing to the rear. Both elements have pantile roofs.

3.2.1115 The setting of the asset is informed by its roadside location and its relationship with an outbuilding to the rear recorded on the first edition OS map of 1884. The setting is further informed by the wider modern farming complex and the surrounding agricultural landscape with which the asset has a historical and ongoing functional relationship. Twentieth century development along the A1066 to the west and south has, however, eroded the link to the agricultural landscape, and so the setting of the asset makes a moderate contribution to its value but due to the proximity of the Project, the setting extends to the Order Limits.

Roydon CP

3.2.1116 The **medium value** Grade II listed 'The Gables' (**1373310**) is located on the western flank of Darrow Lane, 630 m north-north-west of Roydon and 100 m east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a very steep tiled roof.

3.2.1117 The setting of the asset is informed by its roadside farmyard location and by its relationship with its outbuildings, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the agricultural landscape to the west, north and east with which the asset has a historical and functional relationship. The asset is also associated with the partial remains of a medieval moat (**1014**), which adds time depth to the asset's setting. The farming complex expanded to the eastern flank of Darrow Lane in 2016 when further outbuildings were added. The mature tree lined hedgerow boundaries of the farm complex screen the asset from 20th century residential development along Darrow Lane and Snow Street to the south and so the setting of the asset makes a considerable contribution to its value. Due to the proximity of the Project, however, pylons to the west and north would likely be visible above the tree cover and so the setting of the asset extends to the Order Limits.

3.2.1118 The **medium value** Grade II listed 'Limetree Farmhouse' (**1373273**) is located 50 m north of Snow Street and 90 m east of the Order Limits. The asset is of evidential and historical value, of probable 17th century and comprises a plastered timber frame house with a thatches roof.

3.2.1119 The setting of the asset is informed by its former farmyard location and by its relationship with its former non-designated outbuildings. The setting is further informed by the agricultural landscape to the west and north with which the asset and associated outbuildings have historical and functional relationships. The outbuildings

to the west of the asset have been converted into a domestic dwelling and a modern fence line now separates it from the asset, eroding the historic visual link between them. Residential development along Darrow Lane to the east and Snow Street to the south and south-east have encroached on the asset but its effect on the asset's setting is limited by mature tree cover and hedgerows. The setting of the asset, therefore, makes a moderate contribution to its value. Due to the proximity of the Project, however, pylons to the west and north would likely be visible above the tree cover and so the setting of the asset extends to the Order Limits.

3.2.1120 The **medium value** Grade II listed 'The Hermitage' (**1050271**) is located on the southern flank of Snow Street and 90 m east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and has 18th and 19th century additions to the north. The asset is of stuccoed timber frame construction with a black glazed pantile roof.

3.2.1121 The setting of the asset is informed by its grounds which contain lawns, scattered trees and small greenhouses and outbuilding. The grounds of the asset are defined by mature tree lined hedgerows, which largely screen inward and outward views. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the proximity of the Project, it is possible pylons to the east would be visible above the tree cover, and so the setting extends to the Order Limits.

3.2.1122 The **medium value** Grade II listed 'Thatch End The Haven' (**1154298**) is located on the eastern flank of Baynards Lane, 70 m south of Snow Street and 100 m south-east of the Order Limits. The asset is of evidential and historical value, dates to the 17th/18th centuries and comprises a plastered timber frame structure with a thatched roof.

3.2.1123 The setting of the asset is informed by its roadside village location and by the open view of agricultural land to the west with which the asset has a historical relationship. Later 20th residential development has encroached on the asset to the north and south, eroding its once largely isolated situation, and so the setting of the asset makes a moderate contribution to its value. The open view from the asset to the Project to the west results in its setting extending to the Order Limits.

3.2.1124 The **medium value** Grade II listed 'Firtree Farmhouse' (**1373274**) is located on the southern flank of Snow Street 50 m east of the Darrow Lane intersection and 200 m east-south-east of the Order Limits. The asset is of evidential and historical value, is probable early 18th century date with a possible earlier core. The house is plastered, has brick end walls with blue headers a steep pantile roof.

3.2.1125 The setting of the asset is informed by its roadside village location and by its relationship with modern non-designated outbuildings to the rear. Later 20th century residential development has encroached on the asset from the west, north and east and so the setting of the asset makes a moderate contribution to its value. Due to the development of the settlement and associated mature tree lined hedgerow property boundaries, however, the asset is screened from the Project, and so the setting does not extend to the Order Limits.

3.2.1126 The **medium value** Grade II listed '22 and 23, Snow Street' (**1154419**) is located on the southern flank of Snow Street, 90 m east of the Darrow Lane intersection and 200 m east of the Order Limits. The asset is of evidential and historical value, of probable 18th century date and comprises a plastered clay lump structure with a thatched roof. The asset now appears to be a single dwelling.

3.2.1127 The setting of the asset is informed by its roadside village location. Later 20th century residential development has encroached on the asset from the west, north and east and so the setting of the asset makes a moderate contribution to its value. Due to the development of the settlement and associated mature tree lined hedgerow property boundaries, however, the asset is screened from the Project, and so the setting does not extend to the Order Limits.

3.2.1128 The **medium value** Grade II listed '20 and 21, Snow Street' (**1050241**) is located on the southern flank of Snow Street, 140 m east of the Darrow Lane and 220 m south-east of the Order Limits. The asset is of evidential and historical value, of probable 18th century and comprises a plastered structure with a thatched roof. There are plastered 19th century extensions to the west and east with pantile roofs. The asset now appears to be a single dwelling.

3.2.1129 The setting of the asset is informed by its roadside village location and by its relationship with the Grade II listed Snow Cottage 15 m to the south. Later 20th century residential development has encroached on the asset from the west, north and east and so the setting of the asset makes a moderate contribution to its value. Due to the development of the settlement and associated mature tree lined hedgerow property boundaries, however, the asset is screened from the Project, and so the setting does not extend to the Order Limits.

3.2.1130 The **medium value** Grade II listed 'Snow Cottage' (**1050240**) is located 35 m south of Snow Street, 150 m east of the Darrow Lane intersection and 250 m south-east of the Order Limits. The asset is of evidential and historical value, of probable 17th century date and comprises a plastered timber frame structure with a thatched roof.

3.2.1131 The setting of the asset is informed by its roadside village location and by its relationship with the Grade II listed 20 and 21, Snow Street 15 m to the north. Later 20th century residential development has encroached on the asset from the west and east and so the setting of the asset makes a moderate contribution to its value. Due to the development of the settlement and associated mature tree lined hedgerow property boundaries, however, the asset is screened from the Project, and so the setting does not extend to the Order Limits.

3.2.1132 The **medium value** Grade II listed 'Gringle Cottage' (**1154386**) is located 30 m north of Snow Street, 210 m east-north-east of Darrow Lane intersection and 230 m south-east of the Order Limits. The asset is of evidential and historical value, of probable 17th century date and comprises a rendered timber frame structure with a thatched roof.

3.2.1133 The setting of the asset is informed by its roadside village location and by its relationship with the Grade II listed Glebe Farmhouse 10 m to the south-east. The setting is further informed by its grounds, which are defined by mature tree lined hedgerows and include lawns, scattered trees, and a walled kitchen garden. The agricultural land to the north and east with which the asset has a historical relationship also informs the setting. There is limited 20th century residential development to the west, but this is sympathetic and in the local vernacular. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by its mature grounds and the development of the settlement and associated mature tree lined hedgerow property boundaries, the setting does not extend to the Order Limits.

3.2.1134 The **medium value** Grade II listed 'Glebe Farmhouse' (**1050239**) is located on the western flank of Snow Street, 240 m east-north-east of Darrow Lane intersection and

250 m south-east of the Order Limits. The asset is of evidential and historical value, dates to the early 19th century and comprises a flint cottage with a red brick south-facing front elevation and a pantile roof.

3.2.1135 The setting of the asset is informed by its roadside village location and by its relationship with the Grade II listed Gringle Cottage 10 m to the north-west. The setting is also informed by its grounds defined by mature tree lined hedgerows and the agricultural landscape beyond to the north and east with which the asset has a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by its mature grounds, the grounds of Gringle Cottage and the development of the settlement and associated mature tree lined hedgerow property boundaries, the setting does not extend to the Order Limits.

3.2.1136 The **medium value** Grade II listed 'The Friary and Adjoining Outbuilding to West' (**1154410**) is located on the south-western flank of Snow Street, 260 m east of the Darrow Lane intersection and 350 m south-east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered timber frame house with a thatched roof. The asset is adjoined to the west by a one storey range of plastered timber frame construction with thatched and pantile roofs.

3.2.1137 The setting of the asset is informed by its roadside village location and by its grounds defined by mature tree lined hedgerows and containing lawns and a pond. The setting is further informed by the agricultural landscape to the south with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by its mature grounds, a copse to the north and the development of the settlement and associated mature tree lined hedgerow property boundaries, the setting does not extend to the Order Limits.

3.2.1138 The **medium value** Grade II listed 'White House Farmhouse' (**1154379**), formally Blackboard Farm, is located on the northern flank of Snow Street, 430 m west-north-west of the Darrow Lane and 430 m south of the Order Limits. The asset is of evidential and historical value, is of probable 17th century date and comprises a rendered timber frame house with a very steep pantile roof. The asset is adjoined to the east by an 18th or 19th century wing with a pantile roof.

3.2.1139 The setting of the asset is informed by its roadside village location and by its relationship with its formally associated non-designated outbuildings immediately to the east and recoded on the first edition OS map of 1884. The setting is further informed by modern farm buildings to the north constructed in the later 20th century and the agricultural landscape to the north, east and south with which the asset and former outbuildings have a historical and functional relationship. The former outbuildings appear to have been converted into a domestic dwelling, but they and the asset are still coherent as a farming complex. The large grounds of the asset are defined by mature hedgerows and contain lawns, ponds and numerous trees which largely screen the asset from small-scale 20th century residential development to the east and west. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by its mature grounds and the development of the settlement and associated mature tree lined hedgerow property boundaries, the setting does not extend to the Order Limits.

3.2.1140 The **medium value** Grade II listed 'Bethany' (**1050234**) is located 80 m north of Swamp Lane, accessed via a private road, 200 m north of Roydon and 450 m north-east of the Order Limits at the nearest point. The asset is of evidential and historical

value, dates to the late 17th century and comprises a roughcast timber frame house with a steep thatched roof.

3.2.1141 The setting of the asset is informed by its secluded, rural location, by its small hedgerow defined grounds and views to the east and west of agricultural land with which the asset has a historical relationship. Small copses lie to the north and south. The setting affords the asset privacy and makes a considerable contribution to its value. Due to the development of Snow Street, Roydon and along Baynard's Lane as well as associated copses and mature tree lined hedgerows, however, the setting does not extend to the Order Limits.

3.2.1142 The **medium value** Grade II listed 'The Poplars' (**1050233**) is located on the north-eastern edge of Roydon, along Brewers Green Lane, is c. 640 m east of the Order Limits. The asset is a 17th century timber-framed house which has been rendered and has brick end walls and a steep black glazed pantile roof with gabled ends. The asset comprises two storeys and an attic.

3.2.1143 The setting of the asset contributes moderately to its value, set back from the road down a gravelled driveway with some mature vegetation lining the properties border along the roadside. The southern side of Brewers Green Lane is made up of a very wide verge, populated by tall grasses and mature tree line. To the west, north and east of the asset are other residential properties. To the east is a large agricultural field then the larger settlement of Diss, to the south the A1066 and the eastern edge of Roydon, and to the west the north edge of Roydon. To the north of the asset is open agricultural land. The asset has evidential and historical value and the setting of the asset is restricted to the grounds of the property and as such does not extend to the Order Limits.

3.2.1144 The **medium value** Grade II listed 'Manor Farmhouse' (**1373309**) is located on the northern edge of the settlement of Roydon, located off of Crick's Walk, c. 450 m north-east of the Order Limits. The asset is a 17th century timber-framed and plastered farmhouse with a steep thatched roof and gabled ends. The asset comprises two storeys and attic and has a lean-to at the north end.

3.2.1145 The setting of the asset is informed by its peripheral settlement location on the northern edge of Roydon, with agricultural fields to the north of the asset. There have been significant modern developments around the asset as the settlement of Roydon has expanded. As such the asset now borders a residential and agricultural environment and as such has likely seen much change from a predominantly agricultural setting that once surrounded the asset. The asset is no longer part of a work farm complex and so the asset has lost its historical function relationship with the landscape. As such the setting of the asset contributes minorly to its value and the setting of the asset does not extend to the Order Limits and is restricted to the property of the asset. The asset has evidential and historical value.

3.2.1146 The following two assets are situated off of the same private trackway along Brewers Green Lane.

3.2.1147 The **medium value** Grade II listed 'North House' (**1050232**) and 'The Pheasantry' (**1373308**) are located on the eastern edge of Roydon, along Brewers Green Lane, is c. 730 m east of the Order Limits. North House is a 17th century cottage which is plastered in clay lump with a timber-frame and steep pantile roof with gabled ends. The asset comprises one storey with an attic. The Pheasantry dates to pre-1700 and is a timber-framed house altered in the late 19th century. The asset has a pantile roof

with gabled ends and comprises two storeys and has two later lean-to wings at the rear.

3.2.1148 The setting of the assets contributes moderately to their value, set back from the road down a large driveway with some mature vegetation around the properties. The roadside close to the property along Brewers Green Lane is made up of a very wide verge on either side, populated by tall grasses and mature tree line. Both properties contain other buildings alongside the assets, to the south of the Pheasantry is another property and to the south of the North House a large grass field. To the east is the larger settlement of Diss, to the south the A1066 and to the west the settlement of Roydon. To the north of the assets, beyond the residential properties along Brewers Green Lane, is open agricultural land. The assets have evidential and historical value, and the setting of the assets is restricted to the grounds of the properties and as such they do not extend to the Order Limits.

3.2.1149 The **medium value** Grade II listed 'The Old Post Office' (**1050272**) is located on the southern flank of Baynard's Lane at the north-western limit of Roydon and 350 m east-south-east of the Order Limits. The asset is of evidential and historical value, of probable 17th century date and comprises a plastered timber frame structure with a steep pantile roof. The asset is adjoined to the east by a mid-19th century roughcast clay lump wing with a pantile roof.

3.2.1150 The setting of the asset is informed by its secluded roadside location and by views of agricultural land to the north-east with which the asset has a historical relationship. The setting is further informed by its lawned grounds defined by high mature hedgerows. A roadside copse flanks Baynard's Lane to the north-west and a second copse to the south and east screens the asset from the 20th century development of Roydon. The setting of the asset makes a considerable contribution to its value, but due to development, copses and mature tree lined hedgerows in the intervening landscape, it does not extend to the Order Limits.

3.2.1151 The **medium value** Grade II listed 'Grove Farmhouse' (**1050236**) is located on the eastern flank of a private road 350 m south of the A1066 High Road, Roydon and 20 m north-east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and a roughcast timber frame house with a steep interlocking tile roof. There is a 17th century roughcast wing to the north with a steep pantile roof.

3.2.1152 The setting of the asset is informed by its farmyard location and by its relationship with its associated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The setting of the asset makes a considerable contribution to its value and due to the proximity of the Project, the setting extends to the Order Limits.

Diss CP

3.2.1153 The **medium value** Grade II listed 'Alger's Farmhouse' (**1049693**) is located on the eastern flank of Walcot Green, 550 m north-east of Diss and 1.5 km south-east of the Order Limits. The asset is of evidential and historical value, dates to the 17th century and comprises a plastered, colour-washed timber frame structure. The National Heritage List (NHL) entry states the asset is thatched, but all three of the dwellings in the complex have pantile roofs. Furthermore, the asset on which the NHL GIS point is located does not match the asset description. It is not clear, therefore, which of the dwelling is the listed asset; but the setting is, however, shared and so applicable.

3.2.1154 The setting of the asset is informed by its location within a small building complex comprising two other residential dwellings, a barn and a handful of smaller outbuildings several of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural and pastoral land with which the asset and associated buildings of the complex have a historical relationship. Each of the residential dwellings in the complex have garden areas defined by mixed boundaries, whilst the external boundary of the complex is defined by a mature tree lined hedgerows affording the complex privacy and seclusion. The setting of the asset makes a considerable contribution to its value, but due to the mature tree lined boundary and development and mature tree lined hedgerows in the intervening landscape, the setting does not extend to the Order Limits.

3.2.1155 The **medium value** Grade II listed 'Homestead' (**1373569**) is located within the small settlement of Walcot Green, which is a peripheral settlement extending from the north-eastern corner of the larger settlement of Diss. The asset is located down a short private drive which leads off of Walcot Road and is c. 1.8 km south-east of the Order Limits. The asset is a 17th century, thatched building with a brick base and plastered walls. The asset was formerly known as Magpie Inn.

3.2.1156 The setting of the asset is informed by is location down a long private drive leading off of Walcot Road. There is much dense vegetation surrounding the property, screening views to the property from the roadside and on the eastern border of the property is a mature hedge lining the grounds. There are multiple other buildings on the property, but their use is not clear. The asset is located in a largely agricultural environment on the edge of the small settlement of Walcot Green, which is on the periphery of the larger settlement of Diss. The setting of the asset contributes moderately to its value despite the modern residential developments to the south and south-west as the settlement of Diss is gradually expanding and beginning to encompass the smaller settlement of Walcot Green. The asset has aesthetic, evidential and historical value and the setting of the asset does not extend to the Order Limits but rather is restricted to the property grounds and its village location along Walcot Green.

3.2.1157 The **medium value** Grade II listed 'Summerly' (**1049694**) is located within the small settlement of Walcot Green, which is a peripheral settlement extending from the north-eastern corner of the larger settlement of Diss. The asset is located down a short private drive which leads off of Walcot Road and is c. 1.6 km south-east of the Order Limits. The asset is an early 19th century cottage, possibly formerly a keeper's cottage, comprising one storey and built in rick, with a slate hipped roof.

3.2.1158 The setting of the asset contributes moderately to its value, heavily secluded and shielded from Walcot Road, with the property liens by dense mature vegetation and being set back from the roadside. The asset is surrounded by some more modern properties however and to the south the growing settlement of Diss. The wider landscape to the north, east and west is agricultural, however. The asset has historical and evidential value, and the setting of the asset is confined to the property grounds and as such does not extend to the Order Limits.

3.2.1159 The **medium value** Grade II listed 'Home Farmhouse' (**1049695**) located within the small settlement of Walcot Green, which is on the outskirts of the larger settlement of Diss, c. 1.7 km south-east of the Order Limits. The asset is a 17th century timber-framed and plastered farmhouse with two storeys.

3.2.1160 The setting of the asset contributes moderately to its value, as the asset is still set within a working farm, maintaining its historical functional relationship between the

asset and the land. The immediate surrounding landscape around the asset and the settlement of Walcot Green is a rural landscape, except to the south, with the modern expansion of the settlement of Diss. The asset has evidential and historical value, and the setting of the asset is limited to the farm and the field around and between Walcot Road and Diss and as such the setting does not extend to the Order Limits.

3.2.1161 The **medium value** Grade II listed 'Thatch (Cottage)' (**1306104**) is located within the small settlement of Walcot Green, along Walcot Road, c. 1.7 km south-east of the Order Limits. The asset is an early 17th century timber-framed and thatched cottage, comprising two storeys.

3.2.1162 The setting of the asset is informed by its position with the centre of the rural village of Walcot Green. The asset is located down a long private track which leads off of Walcot Road and the asset is situated behind other residential properties visually screening it from the roadside. The property of the asset is surrounded on all sides by dense vegetation. The settlement is surrounded by agricultural fields and to the south-west of the settlement is the larger sprawling settlement of Diss without much modern residential development, which is moving northward nearly joining the two settlements. The setting of the asset contributes moderately to the setting of the asset and the assets setting does not extend to the Order limits and is restricted to the property's grounds. The asset has historical, aesthetic and evidential value.

Non-Designated Heritage Assets

3.2.1163 The site of a possible post medieval market or pipe making kiln is located on from farmland on the northern bank of the river Waveney c. 600 m south-west of the outskirts of Diss and 5 m east of the Order Limits. The identification of the site is based on a multi-period finds assemblage (**1335**) that includes over 500 clay pipe fragments including several complete bowls as well as post medieval buckles, cloth seals, coins, a ring, spurs, musket balls and pottery.

3.2.1164 The site of a **low value** brick kiln (**1040**) of evidential value is recorded on a Faden's Map of Norfolk (publ. 1797) located 1 km north-east of Bressingham and 160 m north of an Order Limits access road. There is no evidence of the asset on 19th century OS mapping.

3.2.1165 Further evidence of medieval activity in the Bressingham and the Waveney Valley area is represented by **low value** findspots, and artefacts recovered during fieldwalking and metal detector surveys. These assets are of evidential value and comprise:

- Two post medieval copper alloy jettons and two tokens in a multi-period finds assemblage (**1301**) recovered from farmland 480 m north-east of Bressingham and adjacent to the Order Limits
- A post medieval, copper alloy book clasp in a multi-period finds assemblage (**1293**) recovered from farmland 400 m east of Bressingham and partially within the Order Limits
- Two post medieval silver coins and a copper alloy coin weight in a multi-period finds assemblage (**1252**) recovered from farmland 250 m east of Bressingham and partially within the Order Limits
- A post medieval copper alloy book fitting, finger ring and dress fastener, a silver coin and a lead cloth seal in as multi-period finds assemblage (**1204**) recovered from

farmland 2.3 km east of Bressingham, 110 m south of the Order Limits and east of Shelfanger Road

- Post medieval pottery sherds in a multi-period finds assemblage (**1109**) recovered from farmland 1.3 km south-east of Bressingham on the northern flank of the Waveney Valley and 70 m north of the Order Limits
- A post medieval copper alloy buckle and two jettons, and a silver coin, dress stud and strap fitting in a multi-period finds assemblage (**1179**) recovered from farmland 870 m south-east of Bressingham and partially within the Order Limits
- A post medieval silver coin and a copper alloy dress fastener in a multi-period finds assemblage (**1224**) recovered from farmland 760 m east of Bressingham and 150 m north of the Order Limits
- A post medieval copper alloy buckle and coin weight, and a silver toothpick and coin in a multi-period finds assemblage (**1205**) recovered from farmland 2.5 km east of Bressingham and 170 m east of the Order Limits
- Two post medieval pottery sherds comprising one of Westerwald stoneware base and one of Ballarmine Stoneware, both of 17th century date, in a multi-period finds assemblage (**1036**) recovered from within Bressingham, 50 m west of Common Road and 250 m west of the Order Limits
- A post medieval, coppery alloy spoon and token in multi-period finds assemblage (**1117**) recovered during gardening and metal detecting in the grounds of the Grade II listed Gringle Cottage (**1154386**). The cottage is in Roydon, 690 m east of Bressingham and 230 m south-east of the Order Limits
- Post medieval pottery sherds and architectural fragment in a multi-period finds assemblage (**1041**) recovered from farmland close to the southern extent of Section A, immediately north-west of Bressingham and 250 m west of the Order Limits. The survey area is on higher land with the Waveney Valley 500 m to the south
    - Two medieval/post medieval lead weights, an asymmetrical 17th century mount, a coin weight, a cloth seal, five post medieval tokens, one coin, a crotal bell, and a furniture escutcheon plate in a multi-period finds assemblage (**1352**) recovered from farmland on the northern outskirts of Diss and 250 m south-east of the Order Limits
    - A **negligible value** sherd of post medieval pottery (**1375**) was found off Swamp Lane in Roydon c. 230 m north of a Project permanent access route.

Cropmark and LiDAR Assessment

3.2.1166 **Low value** linear cropmarks (**1535**) of evidential value identified by the Project are located east of Darrow Lane, immediately north of Snow Street and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.1167 **Low value** linear cropmarks (**1524**) of evidential value identified by the Project are located immediately west of Snow Street and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.1168 **Low value** linear cropmarks (**1537**) of evidential value identified by the Project are located immediately south of Snow Street and c. 160 m east of the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.1169 **Low value** linear cropmarks (**1513**) of evidential value identified by the Project are located immediately south-west of Roydon and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.1170 **Low value** linear cropmarks (**1514**) of evidential value identified by the Project are located immediately south of Roydon and 5 m east of the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.2.1171 **Low value** linear cropmarks (**1805**) of evidential value are identified north of Millway Lane and within the Order Limits.

Historic Mapping Assessment

3.2.1172 A series of negligible value ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both within 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of one pond is located within the Order Limits (**1737**)
- A total of 14 ponds are located within 250 m of the Order Limits (**1732**, **1734**, **1735**, **1736**, **1742**, **1744**, **1746**, **1747**, **1748**, **1749**, **1750**, **1751**, **1752, 1758**).

3.2.1173 A **low value** parish boundary (**1743**) of evidential and historic value have been identified crossing the Order Limits and within the 250 m Study Area within this sub-section. The boundary can be observed on the 1884 and 1885 1:2500 OS maps and is still present. The boundary deviates from the current parish boundary within west of this sub-section including the 1995 1:2500 map at some point after which the parish boundary has been amended to its current location. It is unknown to what extent the boundary may physically be extant within the landscape.

3.2.1174 The **low value** grounds and driveway/lane of 'Darrow Farm' (**1745**) of evidential and historic value have been observed partially within the Order Limits and immediately east of Darrow Lane. Darrow Farm is first observed on the 1884 1:2500 OS map and is still present on both the 1994 and 1995 1:2500 OS maps. Although the farmyard layout in plan has changed, the land parcel remains the same on all map editions.

3.2.1175 A **low value** water network associated with Westbrook Green (**1738**, **1739**, **1740**, **1741**) of evidential and historic value have been observed approximately 100 m east of the Order Limits, and 180 m east of Shelfanger Road. The water network at edge of Westbrook Green is first observed on the 1884 1:2500 OS map. Elements of this network may still be physically extant within the landscape, however the extant of this is unknown at this stage. It is also possible that this water network may have its origins in the medieval period.

3.2.1176 Four **low value** possible important hedgerow locations (**1754**, **1755, 1774, 1780**) of evidential and historic value is located crossing the Order Limits and within the 250 m Study Area within this sub-section, immediately north of High Road. The hedgerows are first observed on the 1884 1:2500 OS map. It is unknown how much these hedgerows pre-date the 1884 map edition.

3.2.1177 A **low value** woodland copse (**1753**) of evidential and historical value has been observed on a land parcel containing the Order Limit and approximately 120 m west of Hall Lane. The woodland copse is first observed on the 1884 1:2500 OS map and is still extant within the landscape, however it is unknown if trees have continuously occupied this spot.

Modern

3.2.1178 The modern period within Section A is characterised by an increase in industrial infrastructure, the advent of military sites and the continual agricultural management of the landscape.

Dunston and Mangreen Hall Farm

3.2.1179 The **low value** site of a probable WWII searchlight battery 40) of evidential value is located 500 m west-north-west of Dunston Hall (**1373206**) and partially within the Order Limits. The site consisted of an ovoid emplacement, assumed to be for a searchlight, a pillbox and a small number of other military operational structures and huts identified by the National Mapping Programme on 1940s aerial photographs. The site is now partially beneath the National Grid Norwich Main Substation.

Swainsthorpe and Mulbarton

3.2.1180 A fieldwalking survey of farmland on the western flank of Swainsthorpe, immediately south of Church Road and partially within the Order Limits resulted in a multi-period finds assemblage (**1230**) that included **low value** modern glass vessel fragments of evidential value.

3.2.1181 A fieldwalking survey of farmland 1.3 km south-south-west of Swainsthorpe and clipping the eastern flank of the Order Limits resulted in a multi-period finds assemblage (**1277**) that included **low value** modern glass, brick, and tile fragments of evidential value.

3.2.1182 A fieldwalking survey of farmland 1.6 km south-south-west of Swainsthorpe, immediately south of Mulbarton Lane and partially within the Order Limits resulted in a multi-period finds assemblage (**1278**) which included **low value** modern glass and ceramic building material fragments of evidential value.

3.2.1183 A fieldwalking survey of farmland 1.4 km south-south-west of Swainsthorpe, immediately north of Mulbarton Lane and 130 m east of the Order Limits resulted in a multi-period finds assemblage (**1275**) that included **low value** modern glass, brick, and tile fragments of evidential value.

Bunwell Hill and the Tas Valley

3.2.1184 A **medium value** Cold War bunker (**1310**) is in the grounds of Quaker's Farmhouse (**1373606**) 2.7 km south-east of the village of Bunwell and 170 m south-east of an access road of the Order Limits. The bunker is of evidential and historical value and was installed around 1968. It was bought as a prefabricated kit, presumably from WWII USA air force surplus. The bunker is covered by an earthen mound, with a brick-lined entrance, heavy duty main door, air inlet pipe and air filter mechanism, an escape shaft with an iron ladder in a separate compartment with half-height heavy duty door, water butts, sink and chemical toilet.

Winfarthing and Shelfanger

3.2.1185 The site of a **low value** WWI military airfield (**1037**) of evidential value is located 2.5 km north-north-east of Winfarthing and partially within the Order Limits. The HER states that a military airfield at this location was in use in 1916-18 and that it was used as a landing ground from which anti-Zeppelin patrols were launched. The site is

located 1.3 km to the west of the former World War II airfield RAF/USAAF Tibenham, which lies outside the Project Study Area.

3.2.1186 The HER holds very little information on the asset and so the Air Historical Branch of the RAF was contacted for more information enable an assessment of the archaeological potential of the site to me made. The following information was provided:

- Tibenham was a second-class landing ground, located in Norfolk, 2 ¾ miles from Tivetshall railway station. It was 30 acres in area, 500 yards by 400 yards, with light loam soil, in open and flat surroundings. In late 1918 it was linked with No 75 Squadron which was based at Elmswell, around 10 miles south-south-west of Tibenham. Elmswell was a Flight Station, at which 223 personnel were stationed. It was 750 yards by 600 yards, albeit in an irregular shape. The facilities there included four aeroplane sheds, an officers' mess, reception station, and regimental institute. Further construction at Elmswell of two sheds, regimental buildings, and roads and aprons was only just beginning (5-15% complete) as of October 1918
- Tibenham seems to have received little use, as the only records of landings there are:
  - Lt W. R. Gayner of No 51 Squadron Royal Flying Corps took off from Marham in an F.E.2b at 04:30 on 28 November 1916 to intercept a Zeppelin, but he suffered engine trouble and flew to Tibenham, where he crash-landed
  - On 19 October 1917, Lt H. C. Burdett took off from Mattishall in an F.E.2bs at 19:47 to locate Zeppelins. He landed at Tibenham at 21:40 because of poor weather conditions
- As a second-class landing ground, Tibenham (unlike Elmswell) was not somewhere that aircraft regularly operated from but rather was a large patch of flat open ground suitable for use if a pilot found that mechanical trouble, damage from enemy action, low fuel, etc., made a prompt landing necessary. There is no record of any buildings at Tibenham, either temporary or otherwise, and the facilities, if any, were likely very limited. For example, the record for Tibenham in October 1918 indicates that telephone communication was via 'Attleborough and New Buckenham (no number).'

3.2.1187 The site of a **low value** World War II pillbox and searchlight battery of evidential value is located 1.7 km south-east of Shelfanger and 280 m south-east of an Order Limits access road. The asset is apparent on RAF photography (1946), but 20th century satellite imagery suggests no above ground remains survive

Undated

Dunston and Mangreen Hall Farm

3.2.1188 Undated **low value** cropmarks (**1172**) of evidential value have been recorded on an aerial photograph of 1946 immediately south-east of Mangreen Farm and immediately north of an Order Limits access road. Although undated, it is possible the assets are related to the medieval to post medieval earthworks of enclosures and boundaries (**1241**) that may represent the remains of the former medieval hamlet of Mangreen, or perhaps outbuildings and paddocks associated with a medieval moated manor.

3.2.1189 Undated **low value** cropmarks (**1160**) of evidential value have been identified on an aerial photography taken in 1946 670 m south-south-east of Mangreen Farm and partially within the Order Limits. The cropmarks covered a relatively small area and now partially lie beneath the National Grid Norwich Main Substation.

3.2.1190 The placename 'Money Close' is recorded on an 18th century parish survey (**1178**) and the NHER locates the site 620 m north-west of Dunston Hall and partially within the Order Limits. The undefined **negligible value** site is now wooded and is not recorded on 19th century OS mapping. This asset has limited historical value.

3.2.1191 Magnetometer survey of a site on proposed route of Hornsea Project Three offshore wind farm onshore cable (Area 81) identified **low value** anomalies (**1353**) of evidential value likely representing a cluster of fairly large discrete features and a short slightly curvi-linear feature. The survey site is located almost entirely within the Order Limits adjacent to the Norwich Main Substation.

3.2.1192 The undated **low value** cropmarks of two ring ditches (**1354**) are of evidential value and located within the bounds of the probable site of the medieval village of Gowthorpe (**1232**) and the possible site of the Humbleyard Hundred moot, Swardeston (**1122**). The asset is located c. 650 m south-east of Swardeston and 35 m west of the Order Limits. It is possible that the marks are derived from relatively recent agricultural activity, as they appear to in part overlie the cropmarks of a medieval to post medieval bank.

3.2.1193 A geophysical survey of a site c. 940 m east of Swardeston and immediately north of the Order Limits has identified a group of linear anomalies at the northern edge of the field that appear to represent ditches forming a pair of rectilinear enclosures. Various discrete anomalies in this area suggest the presence of additional, potentially associated remains (**1362**). The asset is of **low value** based on its evidential value.

3.2.1194 The geophysical survey of a field c. 500 m north of Swainsthorpe and immediately south and east of the Order Limits was undertaken to investigates a section of the possible route of Hornsea Project Three offshore wind farm onshore cable. The survey identified a number of linear anomalies, two of which clearly correspond with former field boundaries depicted on 19th-century maps (**1363**). Very limited (four trenches) subsequent archaeological evaluation failed to identify any archaeological remains. The asset is of **low value** based on its evidential value.

Swainsthorpe and Mulbarton

3.2.1195 A small **low value** complex of cropmarks (**1258**) of evidential value is in a field south of Hickling Lane, 90 m south-west of Dunston Park and 490 m east of the Order Limits. Geophysical survey and subsequent archaeological trail trenching of this field identified undated and post medieval/modern agricultural features (**1215**) and it is possible the cropmarks relate to this activity.

3.2.1196 The cropmarks of undated **low value** ditches (**1248**) of evidential value have been identified 1.3 km east of Mulbarton and 250 m east of the Order Limits. The assets have been interpreted as the remains of field boundaries, however, a geophysical survey of the site (**1287**) did not identify corresponding anomalies.

3.2.1197 There are two incomplete HER records for this section of the Project (**1365** and **1366**). The records refer to two parcels of land c. 900 m south-east of Mulbarton, one (**1366**) partially within the Order Limits and the other (**1365**) immediately to the east. The referenced archaeological evaluation report (Estanga 2023) indicates there was

dispersed **low value** evidence of evidential value of Iron Age, Romano-British, medieval and post medieval activity on site as well as numerous undated archaeological remains.

Bunwell Hill and the Tas Valley

3.2.1198 The cropmark of a possible ring ditch (**1171**) is recorded by the NHER in a field 2.1 km south-east of the village of Bunwell and 70 m west of an Order Limits access road. The asset of evidential value and was identified on aerial photography of 1973. It was suggested it may represent a ploughed-out **medium value** Bronze Age barrow. More recently, this interpretation has been questioned, and a transient origin, such as caused by farm machinery, has been suggested. The latter explanation appears more likely as there is no evidence of the asset on maps, LiDAR data and 20th century satellite imagery. If an agricultural origin is confirmed, the asset would be of **negligible value**.

Winfarthing and Shelfanger

3.2.1199 The **low value** earthworks of a ditch, bank, trackway, and possible rectangular enclosure (**1169**) of evidential value are in a field 450 m south-east of Winfarthing and immediately adjacent to an access road of the Order Limits access road. The field is located within the Winfarthing Great Park (**1064**), a former deer park owned by the Earl of Arundel. It is unlikely the features relate to the deer park as LiDAR data suggests the earthworks extend to the west beyond the deer park boundary and outside their currently mapped area.

3.3 Section B: Mid Suffolk District Council

3.3.1 Known non-designated heritage assets and conservation areas identified in this Baseline Report are referenced using a consistent Project specific identification number. The preferred identification number from the originating organisations is provided in a gazetteer (Document reference – 6.11.A1 Annex B - Gazetteers) that accompanies this Baseline Report for cross reference. Designated assets are referenced by their National Heritage List Entry numbers. Descriptions of the heritage assets are provided in this Baseline Report, Section B.

Location

3.3.2 Section B is located in the County of Suffolk and entirely within the District of Mid Suffolk. Section B begins at the county border with Norfolk in the Waveney Valley, approximately 2.4 km west of the market town of Diss. From its northern limit, Section B heads generally south, by-passing the settlements of Gislingham, Finningham, Mendlesham and Stowmarket before terminating at Bramford Substation between Flowton and Burstall, c. 1.5 km west of the outskirts of Ipswich. Section B accounts for approximately 42 km of it the Project's overall length.

Topography

3.3.3 From the base of Waveney Valley at 25 m aOD, the Order Limits climbs through a gently undulating landscape formed by tributaries of the Waveney Valley to the A143 east of Wortham at 44 m aOD. From here, the Order Limits passes through an undulating landscape between 42 m and 63 m aOD before arriving at the Dove Valley 1 km east of Finningham at 40 m aOD. To the south of the Dove Valley the undulating landscape continues at 48 m to 67 m aOD until the Order Limits reaches the Gipping river valley at 23 m aOD c. 2.3 km south-east of Stowmarket. From the Gipping Valley to the Bullen Lane Substation between Flowton and Burstall the landscape is again undulating between 47 m to 77 m aOD with a tributary of the Gipping at 23 m aOD.

Geology

3.3.4 From north to south, the solid geology of Section B consists of: chalk of the Lewes Nodular, Seaford, Newhaven, Culver and Portsdown Formations between the Waveney Valley to 1.1 km north-west of Mellis; Sand of the Crag Group from 1.1 km north-west of Mellis to the Gipping Valley; chalk of the Newhaven Formation from the Gipping Valley to west of Somersham; sand of the Chillesford Church Sand Member from West of Somersham to north of Flowton; clay, silt and sand of the Thanet Formation and Lambeth Group between north of Flowton and north of Bullen Lane Substation, which itself is underlaid by clay, silt and sand of the Thames Group.

3.3.5 The superficial geology in Section B is dominated by glacial till of the Lowestoft Formation. The till has a high chalk and flint content and includes outwash sands, gravels, silts and clays. Deviations from this general deposit model are seen in the river valleys and tributaries crossed by the Order Limits. The superficial geology of the Waveney Valley at the northern limit of Section B comprise peat, head clay, river terrace sand and gravel, Croxton Member sand and gravel, Ingham Formation sand and gravel and alluvial clay, silt, sand and gravel. South of the Waveney Valley, the Order Limits crosses narrow bands of head and alluvium deposits in now dry

tributaries of the Waveney Valley. To the north and south of Gislingham, the Order Limits crosses bands of alluvium and sand and gravels of the Lowestoft Formation in tributaries of the Dove Valley. The Order Limits crosses deposits of glaciofluvial sand and gravel, alluvium, sand and gravel river terraces and sand and gravels of the Lowestoft Formation in the Gipping Valley and adjacent tributary south-east of Stowmarket. Finally, the Order Limits crosses a second tributary of the Gipping Valley west of Offton encountering bands of sand and gravels of the Lowestoft Formation, sand and gravel river terraces, alluvium, head and sand and gravel of the Kesgrave Catchment Subgroup.

Historic Landscape Characterisation

3.3.6 The historic landscape character of the Project described in this section of the report is shown on Figure A11.1.4: Historic Landscape Characterisation and Protected Lanes in Annex A. Section B is located in two National Character Areas; National Character Area 83: South Norfolk and High Suffolk Claylands to the north and National Character Area 86: South Suffolk and North Essex Claylands. National Character Area 83 is characterised by a relatively high and predominantly flat clay plateau, incised by numerous small-scale wooded river valleys creating complex slopes (Natural England accessed 17/03/2023). National Character Area 86 is characterised by a high, boulder clay central plateau dissected by small-scale undulating river valley topography.

3.3.7 The Suffolk landscape through which the Order Limits passes is further divided into Landscape Character Types (LCT) as defined by Suffolk County Council[1]. In the Waveney Valley, the Order Limits crosses LCT 31: Wooded Valley Meadowlands and Fens and LCT 19: Rolling Valley Farmlands and Furze before climbing up to and through LCT 3: Ancient Plateau Claylands. Just to the north of Gislingham, the Order Limits passes into LCT 10: Plateau Claylands and LCT 17: Rolling Valley Claylands. South of Mendlesham Green, the Order Limits returns to LCT 3 before passing through LCT 26: Valley Meadowlands and LCT 17: Rolling Valley Claylands in the Gipping Valley, before returning to LCT 3, which is crossed east/west by bands of LCT 18: Rolling Valley Farmlands.

3.3.8 Landscape Character Type 31 in the Waveney valley is characterised by a flat valley bottom with a history of poor drainage, which resulted in it being used predominantly for pasture with un-drainable areas left as fens or marshes or utilised as wet woodland or alder carrs. Landscape Character Type 19 occupies the river terraces of the valley and historically was characterised by heath and exploited as commons for grazing. Much of this landscape has, however, been enclosed and improved since the 18th century. South of the valley the Order Limits passes through ancient plateau claylands LCT 3, then plateau claylands (LCT 10) before entering a second band of LCT 3 north of the Gipping Valley. The ancient claylands (LCT 3) are characterised by partial survival of some ancient enclosure overlying a gently rolling, arable landscape dissected by small river with scattered Ancient Woodland and mature hedgerows with mature trees. The plateau claylands (LCT 19 are topologically similar but modern farming has resulted in the loss of tree cover and hedgerow loss leading to large arable prairies. As the Order Limits descends into the Gipping Valley it passes through a band of LCT 19 before crossing alternating bands of Valley Meadowlands (LCT 26) and Rolling Valley Claylands (LCT 17). The valley meadowlands are flat comprising of grassland divided by wet ditches with occasional

[1] Suffolk County Council[1] (https://suffolklandscape.org.uk/ - Accessed 24/03/2023).

reedbeds and carr woodland, whilst the rolling valley claylands occupy the steeper valley sides. Fields tend to be smaller and under pasture nearer the valley bottom before giving way to larger arable fields upslope. Hedgerows are generally substantial and long-established. The Order Limits then passes through alternating bands of LCT 3 and Rolling Valley Farmlands (LCT 18). The rolling valley farmlands are characterised by gentle valley sides with some complex and steep slopes, smaller fields than on the surrounding plateaus and small Ancient Woodlands and landscape parks.

3.3.9 The Historic Landscape Characterisation (HLC) data supplied by the Suffolk HER (Suffolk County Council Archaeological Service, 2012) indicates that the Section B from the Waveney Valley to Stowupland is dominated by a **negligible value** post-1950 agricultural landscape largely derived through boundary loss from irregular co-axial fields. Pre-18th-century enclosure is also well represented in the northern section by **low value** irregular co-axial fields. The Order Limits also passes through, or close to, parcels of heath or rough pasture and meadow or managed wetland.

3.3.10 To the south of Stowupland, the landscape is dominated by **low value** pre-18th-century enclosure comprising random fields without a dominant axis that may be of medieval date or earlier, and irregular co-axial fields where many of the boundaries share a common axis. The Order Limits also passes through, or close to, parcels of **low value** meadow, Ancient Woodland, a former medieval deer park and former common pasture.

Protected Lanes

3.3.11 A large part of the road network in the East Anglian countryside derives from as early as the medieval period. Some of it possibly existed in early medieval times and it is also possible that some roads and lanes were formed before that. These lanes are part of what was once a network of minor roads and trackways connecting villages, hamlets and scattered farms and cottages. Many were used for agricultural purposes, linking settlements to arable fields, grazing or pasture, heaths and greens; and other resources such as woodland and coastal marsh. Generally, these roads were not deliberately designed and constructed; written records of the establishment of roads during the medieval period are rare. Instead, they would have started life as trackways without a bearing surface, although often with defined boundaries including hedgerows, ditches and banks. The protected lanes of the Project described in this section of the report are shown on Figure A11.1.4: Historic Landscape Characterisation and Protected Lanes in Annex A.

3.3.12 The **low value** single track Millway Lane (**2065**) is of evidential and historical value, and it crosses the Order Limits to the west of Palgrave.

3.3.13 The **low value** single track Access Rd From U5214 to Eldens Lane/Hoggars Road (**2156**) is of evidential and historical value. It is located west and south-west of Mendlesham and is c. 120 m east of the Order Limits at its closest point.

3.3.14 The **low value** single track Tye Lane (**2163**) is of evidential and historical value, and it crosses the Order Limits between Flowton to the west and Bramford to the east.

Conservation Areas

3.3.15 The Palgrave Conservation Area (**CA46**), designated in 1975, is located 230 m east of the Order Limits. It is situated within the village of Palgrave and includes the main road such as Lion Road, Millway Lane and Priory Road. This village is situated about

one mile south of the Norfolk market town of Diss, in the far northern part of Mid Suffolk District. It is located on a spur of slightly higher ground between the southern bank of the river Waveney, which forms the county boundary, and a tributary joining the river from a south-westerly direction. The area is characterised by the 'High Suffolk' claylands, which were deposited in the Ice Ages over the underlying chalk, making it suitable for arable farming. Additionally, the village is intersected by the Ipswich to Norwich railway line, which passes to the south-east of the village, and the modern A143 road, which was formerly the Bury St Edmunds to Scole Turnpike Trust's road of 1762.

3.3.16 The conservation area holds historical value with a rich tapestry of archaeological remains. Indeed, the area is home to numerous archaeological sites, with over twenty sites of interest spanning various historical periods, including Neolithic flint axes, Iron Age pottery, Roman remains, and medieval sites such as the parish churchyard and the former St. John's Chapel. Positioned on 'High Suffolk' claylands, the village maintains a traditional aesthetic with a mix of building materials, from the iconic Suffolk red and white brick to the enduring thatched roofs and flintwork.

3.3.17 The heart of the conservation area is the village green, framed by significant structures like the Grade I listed Church of St Peter (**1032776**) and the Grade II* listed former guildhall, Brackendale (**1032778**). This central space, with a north-south aligned road and wide grassed areas on either side, is enriched by mature trees and protected by Tree Preservation Orders, contributing thus to the unique character of Palgrave. The hierarchy of spaces offers a balanced blend of suburban and rural atmospheres. Palgrave's historical roots as an agricultural community are evident in its field names and former industrial activities, particularly hemp cultivation. The village has successfully retained its cultural heritage, with 42 listed buildings, half of which are within the conservation area. The area's architectural diversity, from timber-framed structures to the more Grade I and II* listed buildings, adds to its value.

3.3.18 While Palgrave has embraced some modernisation with infill houses displaying contemporary features, there is a careful consideration of preserving its character. Indeed, Palgrave has retained its quintessential character, and ongoing efforts to protect its unique identity are evident in periodic reviews of its appraisal.

3.3.19 The conservation area holds an evidential, historical and aesthetic value and is of **medium value**. The setting of the conservation area makes a considerable contribution to its value, but due to screening by residential development on the outskirts of, the setting does not extend to the Order Limits.

3.3.20 The Thrandeston Conservation Area (**CA43**) is positioned approximately 270 m south-east of the Order Limits and encompasses nearly the entire village of Thrandeston, incorporating the main roads, Mellis Road, and Little Green. It is situated in Mid Suffolk District, near the Norfolk market town of Diss. It is situated on higher ground away from the river Waveney and is known for its arable farming. The village is conveniently located near the Ipswich to Norwich railway line and can be accessed via the A143 and A140 roads.

3.3.21 The area has a rich history dating back to medieval times, as evidenced by the presence of several archaeological sites and medieval buildings. The Domesday survey of 1086 listed six holdings in Thrandeston, indicating its long-standing presence as a settlement. The historical and aesthetic value of the Thrandeston conservation area lies in its collection of older buildings, many of which are listed and contribute to the overall character of the area. There are 25 listed buildings in the

parish, with fourteen located within the conservation area. These buildings are predominantly domestic in scale and are mostly timber-framed and plastered, with thatched or pantiled roofs. The grade I listed Church of St Margaret (**1032763**), with its flint rubble walls and slate and tiled roof, is a notable exception to this pattern. The church dates back to the 15th century and features a knapped flint west tower and a restored hammerbeam roof structure. Another significant building within the central area is the Grade II* listed Manor House (**1182711**), which is timber-framed and plastered with Renaissance carved detailing to the beams. Overall, the historical value of the Thrandeston Conservation Area is derived from its well-preserved and diverse collection of older buildings that reflect the architectural heritage of the area.

3.3.22 The Thrandeston Conservation Area has evolved over time with relatively minimal modern intrusion. The area has maintained its rural character and vernacular architecture. There have been a few infill houses constructed around Little Green, but most of them respect the local style, using red brick or render with clay tile roofs. However, some of these houses have roofs with inappropriate pitches or use concrete tiles, which are not in line with the conservation area's guidelines. The village has overhead wiring for telephone and electricity supplies and there are visual intrusions related to farming practices, such as the decaying barns at Chestnut Farm (**1182638**) and the concrete and asbestos roofed sheds at Church Farm (**1032765**). Overall, the Thrandeston Conservation Area has preserved its historic character and rural setting.

3.3.23 Therefore, this conservation area has a evidential, historical and aesthetic values and is of **medium value**. Moreover, the setting of this conservation area makes a considerable contribution to its value, but due to overall distance and the topography in the intervening landscape, the setting does not extend to the Order Limits.

3.3.24 Botesdale Conservation Area (**CA64**) largely encompasses the villages of Botesdale, Rickinghall Superior and Rickinghall Inferior, with the last two more commonly known as Rickinghall today. The villages are arranged around a c. 1.9 km long section of the north-east/south-west aligned Bury Road/The Street. Botesdale lies to the north-east with Rickinghall to the south-west. Traditionally, Rickinghall Superior was located to the south-east of The Street with Rickinghall Inferior to the north-west, however, this distinction appears to be discontinued today. The settlements lie along the south bank of a north-easterly flowing tributary of the Little Ouse River (MSDC 2011). The conservation area encompasses the medium value medieval street plan of the settlements (2384), which is of evidential value and is defined in the HER based on historic mapping and the location of listed buildings.

3.3.25 The conservation area contains 72 listed buildings which, for the most part, are arranged adjacent to and along The Street. The listed buildings include the 12th century Grade I Church of St Mary (**1097030**) and the 14th century Grade II* Chapel of St Botolph (**1352340**), with the remaining listed buildings predominantly domestic in nature and scale, with many having former commercial uses. They are mostly timber-framed in construction and either plastered or brick-fronted with plaintile, pantile or thatched roofs. Non-designated buildings which also line The Street are generally in the local vernacular and contribute positively to the character of the settlements and conservation area. There has been some 20th century residential development within the settlements, but this is largely to the rear of the properties on the south-eastern flank of The Street and omitted from the conservation area.

3.3.26 The setting of the conservation area is informed by attractive views along The Street, the interrelationships between the listed buildings, and their relationships with the

non-designated buildings which make a positive contribution to the conservation area's character. Views of the countryside are also important, and it can be glimpsed through many gaps between the buildings along The Street, particularly to the north-west where the settlements are largely one plot deep. The countryside here is designated as a Special Landscape Area. The Boteshall Conservation Area is of **medium value** based on its designation and its evidential, historical and aesthetic values, and the setting makes a considerable contribution to this value. however, due to the minimal impact of the Candle Street Order Limits, the overall distance to the Order Limits pylon corridor and the interruption caused by the A142 bypass, the setting of the Botesdale Conservation Area and the listed buildings within does not extend to the Order Limits.

3.3.27 The Mellis Conservation Area (**CA47**) is situated approximately 120 m south-east of the Order Limits and encompasses nearly the entire settlement of Mellis, along with the main road and all parallel roads and streets. This asset is located in Mid Suffolk District, about four miles south of Diss. The village sits on higher ground between two tributaries of the river Waveney. The Ipswich to Norwich railway line has passed through Mellis Common since 1849. The village of Mellis is also situated on the 'High Suffolk' claylands, which were deposited in the Ice Ages over the chalk that underlies most of Suffolk. This area is good for arable farming. Additionally, the village and conservation area lie about 2 km west of the main A140 Ipswich to Norwich trunk road, which was formerly part of the Ipswich to Scole Turnpike Trust's road of 1711, continuing from Scole on towards Norwich.

3.3.28 The conservation area offers views that contribute to its overall character and value. The open space of the common, a central green area, serves as a central focal point, with the majority of settlement aligned towards it. The area also features substantial ponds, which are important both visually and for flood protection. The preservation and maintenance of these ponds are crucial. Additionally, the conservation area benefits from the presence of trees, including Horse Chestnuts, hedgerow trees, and Poplars, which enhance the visual appeal and contribute to the landscape's quality. Away from the core of the settlement around the intersection of the railway and Mellis Road, the throughfare passes into the agricultural landscape to the south-east where it is flanked by sparce properties to the south-east and has open views of the farmland to the north-west. Thus, emphasising the settlement's rural nature and its longstanding historical relationship with the agricultural landscape.

3.3.29 The historical and aesthetic value of the conservation area lies in its traditional building materials, as many unlisted buildings in Mellis are of traditional form and grouping, featuring local red brick and flintwork. The village also has examples of 'Suffolk White' brick and scattered flintwork. The conservation area contains 30 listed buildings. Two of them are Grade II*, the Elm Tree Farmhouse (**1181795**) and the Church of St Mary the Virgin (**1181735**), predominantly dating back to the early 14th century, and which stands out with its knapped flint walls and slate and lead roof; the others are Grade II.

3.3.30 The conservation area in Mellis has evolved over time, with the more recent infilling around the eastern end of the Common likely starting when the railway cut through the village. The concentration of 19th century buildings around the level crossing, including the Steam Mill, industrial buildings, the Railway Tavern, and Sunnyside Terrace, all tell the story of the village's development. The area has seen the addition of modern houses and chalet-style bungalows, some of which do not complement the local vernacular. Additionally, the conversion of old mill buildings or barns has contributed to the overall picture of the conservation area's evolution.

3.3.31 The setting of the asset is informed by the dispersed nature of its building stock, which other than a small portion being more coalesced around the intersection of the railway and Mellis Road, is set well back from the throughfare beyond very broad, in places over 100 m, grassed verges. This means that even from the main road through the settlement a large proportion of its buildings appear almost removed and very rural in nature. Equally, the views of the agricultural landscape beyond the conservation area contribute to the open, dispersed quality of the settlement. The setting of the conservation area, therefore, makes a considerable contribution to its value, but due to the proximity of the Project within the agricultural landscape c. 120 m not the north-west, the setting extends to the Order Limits. The conservation area is of **medium value** based on its designation and its evidential, historical and aesthetic values.

3.3.32 Finningham Conservation Area (**CA48**) is located c. 650 m west of the Order Limits. This conservation area is bordered by Gislingham Road, Church Green and Wickham Road. It also includes Church Lane and the Church Green area. It is situated near the centre of Mid Suffolk District, about seven miles north of Stowmarket and a similar distance south of Diss. It lies in a slight valley on the 'High Suffolk' claylands and is traversed by a tributary of the river Dove. The area is characterised by a backdrop of trees and provides a hidden oasis within the larger, more open Suffolk countryside. The village of Finningham is about three miles west of the main A140 road from Ipswich, which continues from Scole onwards to Norwich. Approximately 250 m east is the Great Eastern Main Line, which connects to various destinations in East Anglia, including Ipswich and Norwich.

3.3.33 The conservation area in Finningham has little in the way of views out of the area, but many short intimate views across the area within. The churchyard within the centre of the conservation area provides green spaces surrounded by houses and trees, while Church Green, west side of the conservation area, offers longer view, just like the most south-easterly corner. The central core of the conservation area is well served with footpaths, and there are footpath links out into the wider countryside.

3.3.34 The conservation area in Finningham holds historical and aesthetic value due to its collection of older buildings, predominantly domestic in scale, and mostly timber-framed and plastered with roofs of thatch or pantiles. While there are 27 listings covering the parish of Finningham, 19 of which are within the conservation area. The area includes the Grade I listed Church of St Bartholomew (**1352056**), which is partly early 14th century decorated, and the Grade II* listed Yew Tree House (**1033143**), dating from the mid-16th century and the Grade II* Church Farmhouse (**1033145**).

3.3.35 The conservation area has evolved over time, with the original designation dating back to 1973 by East Suffolk County Council. The area was inherited by Mid Suffolk District Council in 1974. The conservation area has undergone changes and developments, including the protection of trees through Tree Preservation Orders (TPOs) and the review of its designations. The evolution of the conservation area has seen changes in its infrastructure and buildings. However, modern infill buildings generally respect the local vernacular using render and red brick, although some of the houses use rather dull modern bricks, not to very good effect. Most of the infill has plain tile or pantile roofs, although some of the latter are concrete. Additionally, the end of the terrace of white brick cottages in Gislingham Road has unfortunately had a render finish applied and modern windows inserted, thus destroying the visual unity of the block. Moreover, as indicated in the inaugural edition of the OS map from 1885, recent residences emerged along Westhorpe Road, situated just beyond the

periphery of the conservation area to the south-west. This alteration has had an effect on the close setting of the conservation area.

3.3.36 Overall, this conservation area has an evidential, historical and aesthetic value and is of **medium value**. Moreover, the setting of this conservation area makes a considerable contribution to its value but given the distance and the restricted scope of the conservation area to the Finningham settlement, its setting does not extend to the Order Limits (Figure 7.12.F243_HE34 Viewpoint HE34: Finningham, Mid Suffolk; document reference 7.12).

3.3.37 Wickham Skeith Conservation Area (**CA49**) is located within the north-west part of the settlement, c. 580 m east of the Order Limits. It encompasses The Broadway, The Green, The Entry and the northern part of Rose Lane. This conservation area is situated near the centre of Mid Suffolk District, on 'High Suffolk' claylands. The conservation area is centred around The Green, which is roughly triangular in shape with a large pond on the southern side. The north-eastern side is bounded by a single minor road passing through the village. The settlement pattern in Wickham Skeith consists of houses clustered around the green and along the approach roads, mostly one plot deep. This means that, although rarely visible, the countryside is never far away. There are also tracks and paths linking the village to the outlying hamlets and farms, providing easy access on foot into the countryside.

3.3.38 The conservation area in Wickham Skeith limits outward views primarily due to the proximity of surrounding houses and trees. However, notable vistas extend towards the north, south-west, and north-east, providing longer perspectives that open up to the picturesque countryside and expansive fields. The settlement pattern in Wickham Skeith, characterised by houses clustered around the green and along approach roads, remains mostly one plot deep, ensuring that even though such views are infrequent, the rural landscape is always in proximity.

3.3.39 This conservation area, designated in 1973 and inherited by Mid Suffolk District Council in 1974, is rich in both historical and archaeological value. The area boasts 18 listings covering the parish, including five Grade II listed buildings within the conservation area, predominantly timber-framed and plastered structures with thatch or pantile roofs. Archaeological importance is underscored by sites of interest listed in the Suffolk County Sites and Monuments Record, dating back to the Domesday survey of 1086 and encompassing Roman and medieval sites. Notably, these archaeological sites, along with the Church of St Andrew and Victorian Wickham Hall (**1352521**), are situated around the conservation area, contributing to the broader historical fabric of the region. The conservation area itself serves as an aesthetically pleasing oasis within the Suffolk countryside, featuring green spaces and trees.

3.3.40 The conservation area in Wickham Skeith has evolved over time with minimal modern intrusion. The area has resisted significant modern development, with few infill houses dotted around the Green, most of which respect the local vernacular using red brick or render with clay plain tile or pantile roofs. One historical intrusion onto the Green is the former Post Office and its driveway from the north, effectively cutting the area into two unequal halves. The area has also faced challenges such as a surfeit of overhead wiring, which is particularly intrusive along the northern edge of the green. Additionally, the motor car has had a detrimental effect, with dumped cars, informal parking areas, driveways, and fencing overrunning the green in places, leading to erosion of the grassed areas.

3.3.41 Overall, this conservation area has an evidential, historical and aesthetic value and is of **medium value**. Moreover, the setting of this conservation area makes a

considerable contribution to its value but given the distance and the restricted scope of the conservation area to the Finningham settlement, its setting does not extend to the Order Limits.

3.3.42 Mendlesham Conservation Area (**CA44**) is located in the middle of the settlement of Mendlesham and is c. 1.5 km east of the Order Limits. It encompasses Old Market Street, Front Street, Chael Road and the western part of Mill Road. This conservation area is surrounded by a mix of urban and rural landscapes. The conservation area has a fairly urban built-up character with listed buildings facing each other across narrow streets. Despite the urban feel, the countryside is close. There is easy access to the countryside through roads and parish footpaths, allowing access to the open countryside to the east, south-east, and west. Approximately 140 m south of the conservation area is the Mid Suffolk Light Railway which opened in 1908 and closed in 1952.

3.3.43 The views within the conservation area are quite limited due to the presence of buildings and trees but there are scenic views from the east, south-east and west of the conservation area towards the surrounding countryside. The conservation area of Mendlesham features predominantly domestic-scale, timber-framed, and plastered buildings with roofs made of plain tiles or pantiles. There are 45 listed buildings in the parish, 23 of which are within the conservation area. The Grade I listed Church of St Mary stands out with its flint rubble, stone-dressed walls, and leaded and plain tiled roof. Additionally, the Grade II* listed Elms Farmhouse in Old Station Road is a timber-framed and plastered 'wealden' type house with a crown post roof, dating back to the late 15th century. However, there are some instances of poor non-traditional colour choices, poor quality modern fascia, and illuminated signs on unlisted buildings, which detract from the area's historic character. Additionally, there are concerns about the presence of overhead wiring, and it is suggested that underground utility supply lines would greatly improve the appearance of the village.

3.3.44 The location of the conservation area in Mendlesham originated as an agricultural community and developed into a local marketplace. The historic settlement pattern, with houses clustered around the central area, was mostly one plot deep. Over time, the central area has been infilled, and more recent developments now abut the original area, creating a more complex pattern. Despite the urban feel of the centre, the countryside is never far away, and the village has resisted modern intrusion.

3.3.45 Overall, this conservation area has an evidential, historical and aesthetic value and is of **medium value**. Moreover, the setting of this conservation area makes a considerable contribution to its value but given the distance, the vegetation in the intervening landscape and the restricted scope of the conservation area to the Mendlesham settlement, its setting does not extend to the Order Limits.

3.3.46 Badley Church Green Conservation Area (**CA45**) is located c. 120 m from the Order Limits on Badley Walk. It was originally designated by Mid Suffolk District Council in 1998. The conservation area is surrounded by large rolling farmland views in most directions, and the undulating countryside is used to screen views, particularly towards the south-west where urbanisation is growing. The area is characterised by a hierarchy of spaces, including the Chantry (site of) (1006030), the Church of St Mary (**1231082**), Hall (**1231083**), and associated farm buildings (**1278291**, **1231085**, **1231084**), which define a space by themselves. The former avenue, Badley Walk (**2534**), is now largely defined by trees, but it is still a reminder of the procession required to approach the hall which faced down this axis in the 16th and 17th centuries. The most impressive space is perhaps the former avenue, which rises in

its central section to pass between two groups of trees known as Keyfield Groves. These two areas are now designated as County Wildlife Sites and sit on the northern edge of the Gipping Valley Special Landscape Area. The settlement seems to have been sited with the undulating countryside in mind, making the most of prominent areas of woodland to screen views.

3.3.47 The conservation area has historical value due to the presence of the five listed buildings such as the medieval eight-bay timber-framed barn adjoining Badley Hall (**1231085**) or the 16th century Hall itself (**1231083**), which is a Grade II*. Historically, the area is mentioned in the Domesday Book of 1086 as 'Badeleia', and it has been associated with notable figures such as Edmund Alcock and the Poley family. Aesthetically, the area features a variety of spaces, from small, enclosed yards in the farm group to the green adjoining the Church of St Mary, and the former avenue, Badley Walk, which still retains its historical value. Within a radius of 1 km from the conservation area are a large group of historical assets dating from Bronze Age to the medieval period.

3.3.48 The setting of the conservation area of Badley Church Green is rural and isolated, with no proper roads in the area. The seven paths that radiate from Church Green provide some idea of the settlement's former importance, with definitive footpaths remaining essentially field paths which extend beyond the bounds of the conservation area to the agricultural landscape beyond. The area is well-screened, with its 'secret' nature not being visible from any main road, but there are open views to the agricultural landscape to the south. However, the group of overhead power lines converging to a point north of Church Green continually contradicts the village's apparent isolation. The conservation area is surrounded by large rolling farmland views in most directions, and the undulating countryside is used to screen views, particularly towards the south-west where urbanisation is growing. The conservation area and its surroundings have likely undergone some evolution since its designation in 1998. Changes in land use, development, and environmental factors may have influenced the area's character and appearance over time.

3.3.49 Overall, the conservation area has evidential, historical and aesthetic value and is of **medium value**. The setting of the conservation area makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.50 The Needham Market Conservation Area (**CA50**) is located in the north-west part of the town of Needham Market, in Suffolk. It is situated c. 1 km east of the Order Limits. This conservation area runs mostly through High Street and encompasses some parallel streets such Hawks Mill Street, Bridge Street and the northern part of Coddenham Road. **CA50** is situated on a gently sloping hillside, with the High Street running along the ridge. The landscape around the conservation area is characterised by low-lying water meadows and pastures to the east, where the river Gipping flows. To the west, there are fields along the ridge that can be accessed by footpaths running parallel to the High Street.

3.3.51 The setting around the conservation area is predominantly rural, with farmland and open countryside visible from various points within the area. The nearby town centre is located to the south of the conservation area, while the A14 dual carriageway bypasses the town to the north. The railway tracks run to the east of the conservation area, with the Needham Market railway station located nearby. The topography and landscape of the surrounding area contribute to the rural character of the

conservation area and help to create a sense of separation from the nearby urban areas.

3.3.52 Within this conservation area, there are a total of 101 listed buildings. Amongst them, the 13th-century Church of St. John the Baptist (**1254254**) stands as the sole Grade I structure, accompanied by five Grade II* buildings, with the remainder designated as Grade II. This conservation area showcases a diverse architectural landscape, mirroring the town's historical evolution. With a notable emphasis on timber-framed structures, some dating back to the 15th and 16th centuries, the area highlights traditional framing techniques, adding historical and aesthetic significance. Alongside these, various brick and rendered buildings representing different historical periods further enrich the architectural tapestry. The listed buildings, including the Church of St. John the Baptist and the Old Town Hall, enhance the area's architectural diversity.

3.3.53 The views within the conservation area are primarily focus on the buildings and streets. However, there are notable exceptions in the north-eastern section of the conservation area, where views extend beyond the immediate surroundings, offering glimpses of agricultural fields. This specific vantage point allows for longer views, in contrast to the more confined perspectives within the central area.

3.3.54 The Conservation Area Appraisal for Needham Market acknowledges that the conservation area has changed over time. The document notes that the town has grown along a through road, with the building line moving in and out, creating both pinch points and wider spaces in-between. The effect of bomb damage during WWII is also noted, which resulted in the removal of part of the street just south of the old Town Hall. The presence of modern showrooms, a gym, and infill housing in the area just south of the old Town Hall replaced the space affected by the bomb damage.

3.3.55 Overall, the conservation area holds evidential, historical and aesthetic value and is of **medium value**. Moreover, the setting of this conservation area makes a considerable contribution to its value but given the distance, the vegetation in the intervening landscape and the restricted scope of the conservation area to the settlement of Needham Market, its setting does not extend to the Order Limits.

Baseline Introduction

3.3.56 The following cultural heritage baseline for Section B is presented by chronological archaeological period and from north to south. Section B is further broken down into geographic parcels to allow the reader to orientate and to locate where on the appropriate figure a particular heritage asset is illustrated. These geographic parcels are largely defined by current settlements, and parish boundaries but also occasionally by landscape features such as high points and valleys and by anthropogenic features such as roads and railways. To avoid repetition, each parcel of Section B is introduced and described only in the first archaeological period where it is appropriate to be used.

Prehistoric Period

Palaeolithic

3.3.57 The Palaeolithic period is represented in Section B by assets recovered in the Wortham, Mellis and Gislingham and Needham Market and Ringshall geographical parcels.

Wortham, Mellis and Gislingham

Non-Designated Heritage Assets

3.3.58 Wortham is a small village situated on high ground at c. 60 m aOD above the Waveney Valley to the north, which lies at c. 25 m aOD. Shallow, now dry, tributary valleys of the Waveney fall southwards from the higher ground, which is also occupied by the settlements of Magpie Green to the north-west and Palgrave to the north-east. Mellis is located 2.8 km south-east of Wortham and the settlements are linked by Mellis Road. The linear settlement of Mellis follows a narrow strip of higher ground at c. 55 m aOD with a tributary valley of the Waveney at c. 38 m aOD to the north-west and a tributary of the Dove at c. 42 m aOD to the south and south-east. The settlement of Gislingham is located close to the southern limit of this subsection on ground at c. 65 m aOD with a tributary of the Dove to the north at c. 50 m aOD. Cropmark analysis, archaeological fieldwork and metal detector surveys undertaken in the area, has produced a detailed archaeological record including evidence of Upper/Terminal Palaeolithic period activity as well as in subsequent periods.

3.3.59 The Upper/Terminal Palaeolithic to early Mesolithic period is represented by flintwork of evidential value including three long blades (**2001**) of the Ahrensburgian long blade industry (9700 - 9400 BC) found during fieldwalking land at Wortham Ling on the southern flank of the Waveney Valley and at the northern limit of Section B. The land parcel containing the assets is located c. 330 m south-west of the Order Limits. The blades are part of a larger **medium value** assemblage of lithics (**2002**) of evidential value located c. 290 m south-west of the Order Limits, and which also includes early and late Mesolithic material. A long blade (**1216**) of similar age was found c. 350 m to the north-west in Section A, within the Waveney Valley, and these combined assets likely represent the activities of hunter-gatherer communities exploiting the river valley for its resources and as routes through the landscape.

3.3.60 The setting of asset (**2002**), which includes (**2001**), is informed by its relationship with the Waveney valley just to the north. The long blade (**1216**) recovered from north of the river in Section A in conjunction with (**2002**) indicates the importance of the valley in early prehistory. The heavily wooded landscape of the early Mesolithic has, however, been removed and so the setting of the asset makes a moderate contribution to its value and due to the proximity of the Project the setting extends to the Order Limits.

Needham Market and Ringshall

Non-Designated Heritage Assets

3.3.61 Needham Market is situated within and on the south-western flank of the Gipping Valley, c. 2.4 km south-east of Stowmarket. The bottom of the valley lies at c. 21 m aOD whilst the Needham Market football ground on the south-western flank of

Quinton Road marks the high point of the settlement at c. 45 m aOD. Ringshall is located c. 4.5 km south-west of Needham Market and situated on the eastern edge of a plateau of higher ground at c. 82 m aOD. The plateau is also occupied by Great Bricett and Nedging Tye to the south-west, Wattisham Airfield to the west and Battisford Tye to the north-west. Tributary valleys of the Gipping Valley lie at c. 66 m to the north of Ringshall and at c. 58 m to the south. Cropmark analysis, archaeological fieldwork and metal detector surveys undertaken in the area, has produced a detailed archaeological record including evidence of Palaeolithic period activity as well as in subsequent periods.

3.3.62 The Lower Palaeolithic period is potentially represented by three **low value** Darmsden type worked flints (**2000**) of evidential value recovered from the backfill of an old sand pit on the north-western flank of Hascot Hill and 190 m west of the Order Limits. The HER record states that the validity of these assets is currently being assessed, but no further details are included.

3.3.63 A small, **low value** Acheulean hand axe (**2511**) of evidential value was found on riverbank in the Hascot Hill valley, c. 850 m south-east of Battisford and immediately north of the Order Limits.

3.3.64 The PAS holds a record for a patinated and stained long flake of possible Palaeolithic date, found as part of a larger **low value** assemblage of flintwork (**2007**) of evidential value and recovered from land north of Needham Road, 290 m north-east of Barking and 240 m east of the Order Limits.

Mesolithic

3.3.65 The Mesolithic period is represented in Section B by lithic scatters and findspots recorded by the Suffolk HER and by the Portable Antiquities Scheme.

Wortham, Mellis and Gislingham

Non-Designated Heritage Assets

3.3.66 As noted above, Upper/Terminal Palaeolithic to early Mesolithic activity is represented in the Waveney Valley by **low value** Ahrensburgian industry long blades (**2001**) of evidential value c. 370 m south-west of the Order Limits, c. 100 m north of Ling Road, and c. 1.3 km west of Diss. The larger **medium value** lithic assemblage of evidential value collected from this area (**2002**) also contained over 30 diagnostic late Mesolithic flints including backed, scalene and rod microliths.

3.3.67 Potential evidence of Mesolithic occupation comprising a possible hut site or ditch, worked deer antler and Mesolithic flintwork (**2003**) of evidential value was identified presumably ahead or during the construction of the A143 between Wortham and Stuston, within the Order Limits. In situ Mesolithic occupation remains would be of **high value**.

3.3.68 The setting of asset (**2003**) is informed by the local topography of the landscape within the Waveney Velly, and its location on the eastern flank of a shallow north/south aligned dry valley. Otherwise, the setting has been eroded to the extent that it makes only a minor contribution to the value of the asset. Due to its location within the Order Limits, its setting has been considered and assessed further in Chapter 11: Historic Environment (document reference 6.11).

3.3.69 There is a PAS record for a small **low value** narrow blade, which is roughly triangular in cross-section, of probable Mesolithic to Neolithic date (**2004**). The asset is of evidential value and was recovered from farmland near Gislingham and outside the Order Limits.

Finningham, Mendlesham and Old Newton

Non-Designated Heritage Assets

3.3.70 Finningham is located towards the upper reaches of a tributary valley of the Dove at c. 45 m aOD. The Dove tributary is fed by the higher ground to the north, west and south of Finningham from where it heads approximately east to discharge into the Dove 350 m west of Thorndon. Mendlesham is located on the north-western flank of the Dove Valley close to its upper reaches at c. 56 m aOD with the valley bottom at c. 46 m aOD. The Dove and its tributaries drain higher ground to the north, west and south of Mendlesham before heading approximately north-north-east and discharging into the Waveney approximately 5 km east of Diss. Old Newton is located on a strip of higher ground at c. 63 m aOD with north/south aligned tributaries of the Gipping to the east and west at c. 42 m aOD. Cropmark analysis, archaeological fieldwork and metal detector surveys undertaken in the area, has produced a detailed archaeological record including evidence of Mesolithic period activity as well as subsequent periods.

3.3.71 There are two PAS records for **low value** Mesolithic assets of evidential value found on land near Finningham and outside the Order Limits. Asset (**2005**) is a fragment of Mesolithic to early Neolithic flintworking debitage, or possibly a late Mesolithic microlith, whilst asset (**2006**) comprises two fragments of Mesolithic to Neolithic flint working debris. One is a blade-shaped secondary flake, and the other is a small, squat, tertiary flake.

3.3.72 A **low value** flint adze (**2292**) of evidential value was recovered from farmland c. 1.1 km to the east of Cotton and c. 170 m west of the Order Limits.

Needham Market and Ringshall

Non-Designated Heritage Assets

3.3.73 The **low value** mixed 46-piece mixed period lithics assemblage (**2007**) noted above and recovered from land near Barking and outside the Order Limits, contained a small number of flints of late Mesolithic to early Neolithic date of evidential value.

3.3.74 A **low value** scatter of over 120 lithics (**2047**) was recovered from farmland near Barking and within the Order Limits. The assemblage is multi-period and largely of later Bronze Age date, however, it includes a Star Carr Type blade and pyramid core of Mesolithic to Neolithic date and of evidential value.

Neolithic

3.3.75 The Neolithic period is represented in Section B by earthworks and cropmarks of possible ritual monuments and by several flint scatters and findspots recorded by the PAS. Due to the general rarity of Neolithic funerary monuments, where there is evidence of such within the 500 m Study Area they have been reported here.

Non-Designated Heritage Assets

3.3.76 The earthworks of a possible **medium value** Neolithic long barrow (**2011**) of evidential value are located in the north-west corner of Wortham Ling, 80 m north of Low Road, 2.5 km north of Wortham and 440 m south-west of the Order Limits. The monument is 49 m long, 14 m wide and attains a maximum height of 6 m. The asset has been disturbed by the presumably modern rifle butts of a former shooting range. The asset is situated in the Waveney Valley with the river immediately to the north and within a large, later Prehistoric (Neolithic to Iron Age) **low value** lithics scatter (**2012**) of evidential value, which demonstrates the time depth of human activity in the area.

3.3.77 The setting of asset (**2011**) is informed by its location on the southern flank of the shallow Waveney river valley. The valley would have been a source of fish, fresh water and would have attracted prey animals and so the siting of the asset may have served as a claim of tenue over the valley and resources. Additionally, the river may have also served as a tribal boundary marked by the monument. Other than what can be suggested by the local topography, the setting of the asset has been eroded over the millennia and so makes only a minor contribution to the value of the asset. due to overall distance, the setting does not extend to the Order Limits.

3.3.78 **Low value** worked flints, including a possible laurel leaf and five handmade potsherds including and Early Neolithic rim sherd (**2056**) of evidential value were recovered from land at Wortham Ling c. 20 m south of the Order Limits.

3.3.79 An Iron Age (**2069**) and Saxon settlement site (**2195**) was identified in 1955 during the excavation of a pipeline. The site is of evidential value and is situated 40 m south of the A143, 320 m east of Worthing and 180 m west of an Order Limits access road. A **low value** residual plano-convex flint knife of evidential value and likely of Neolithic date was recovered from a later feature during excavation.

3.3.80 A **low value** multi-period concentration of PAS artefacts (**2560**) of evidential value has been recovered from farmland largely within the Order Limits and east of Wortham. The early prehistoric artefacts comprise a flint core, a late Neolithic Tortoise type ovoid core, five late Neolithic to early Bronze Age oval scrapers, a retouched flake, a large, retouched flake ending in a hinge fracture, and a blade with parallel flake scars on dorsal face.

3.3.81 A Neolithic settlement (**2601**) was located partially within the Order Limits approximately 590 m north-west of Mellis. The settlement was situated on a south facing slope and discovered during the excavation of a pipeline trench in 1955. The excavations revealed a ‘hut site’ 15 feet in diameter with a central sunken, circular hearth containing three large burnt stones and filled with black earth, pottery and flints. The pottery included rim sherds and the flint included cores, scrapers and flakes. To the southern end of the ‘hut site’ was a ditch or pit filled with dark soil. To the north was a possible ‘furnace’ which was lined with burnt clay and filled with black earth and worked clay. This is potentially a multi period site as other assets from the Bronze Age and Iron Age were encountered but the HER does not specify what these were. This asset is of **medium value** and has evidential value.

3.3.82 The setting of asset (**2601**) is informed by its rural setting although there is no further evidence of Neolithic activity in the local area. The setting of the asset, therefore,

makes a minor contribution but as the asset is located within the Project the setting extends to the Order Limits.

3.3.83 A **low value** scatter of Neolithic and Bronze Age flints (**2390**) of evidential value has been recovered from a field to the north of St Mary's Church (**1241122**) in Candle Street and c. 140 m north-north-west of the Candle Street Order Limits.

Finningham, Mendlesham and Old Newton

Non-Designated Heritage Assets

3.3.84 The cropmark of a causewayed ring ditch (**2008**) of evidential value is located 1.2 km south-east of Finningham, 210 m south of Wickham Lane and 25 m west of the Order Limits. The asset is 25 m in diameter and has causeways to the east and west. The asset has not been investigated archaeologically, but based on morphology, it has been suggested (Harding and Lee 1987) the cropmark may represent the remains of a **medium value** Neolithic henge monument.

3.3.85 The setting of the possible henge monument (**2008**) is informed by its location on a shallow south-west facing slope and the direction of the rising sun. Otherwise, the setting has been eroded to the extent that it makes only a minor contribution to the value of the asset. Due to the proximity of the Project, however, the setting does extend to the Order Limits.

3.3.86 The following **low value** Neolithic assets of evidential value are recorded by the PAS:

- An assemblage of eight lithic implements (**2016**) including six flakes of late Neolithic to early Bronze Age date recovered from farmland near Wickham Road and outside the Order Limits
- A snapped flint long flake or blade with a triangular section and edge retouch (**2017**) of Neolithic date recovered from farmland near Wickham Road and outside the Order Limits
- A flint flake or blade with a sub-triangular section (**2018**) recovered from farmland near Wickham Road and outside of the Order Limits
- A complete Neolithic retouched secondary flake (**2019**) recovered from farmland near Wickham Road and outside the Order Limits
- A complete roughly conical shaped multi-platform flint core of Neolithic to early Bronze Age date (**2020**) recovered from farmland near Wickham Road and outside the Order Limits
- An assemblage of 27 Neolithic to early Bronze Age lithics (**2021**) including four scrapers, an awl, one retouched blade and four retouched flakes recovered from farmland near Wickham Road and outside the Order Limits
- A small assemblage of eight pieces of flint debitage Neolithic to early Bronze Age date (**2022**) recovered from farmland near Wickham Road and outside the Order Limits.

3.3.87 The butt end of a slender polished **low value** Neolithic flint axe (**2261**) of evidential value was recovered from farmland c. 470 m south-west of Mendlesham Green and c. 120 m east of the Order Limits.

Middlewood Green and Stowmarket

Non-Designated Heritage Assets

3.3.88 Middlewood Green is located on a plateau of high ground at c. 65 m aOD with Mendlesham Green to the north and Forward Green to the south. Tributary valleys of the Gipping valley lie to the north of the settlement at c. 41 m aOD and to the south at c. 40 m aOD. The market town of Stowmarket lies c. 5 km to the south-west and other than the city of Ipswich, it is the largest settlement in the Suffolk section of the Project. Stowmarket straddles the Gipping Valley and the Rat river tributary discharges into the Gipping from the west in the town. The confluence of the rivers lies at c. 28 m aOD with the settlement rising up on the valley sides to the south-west and north-east and attaining a maximum elevation of c. 61 m aOD on Union Street close to the Stowmarket High School. Cropmark analysis, archaeological fieldwork and metal detector surveys undertaken in the area, has produced a detailed archaeological record including evidence of Bronze Age activity as well as subsequent periods.

Needham Market and Ringshall

Non-Designated Heritage Assets

3.3.89 An archaeological evaluation then excavation of land adjacent to 96 Stowmarket Road, Needham Market, south of the B1113, and c. 240 m south-east of the Order Limits identified a range of archaeological features (**2378**), which included a **low value** Neolithic/Bronze Age pit of evidential value.

3.3.90 An oval cropmark (**2010**) of evidential value located c. 260 m north-north-west of Needham Market, 240 m north-east of the B1113 Stowmarket Road and 260 m east of the Order Limits. The asset has not been investigated archaeologically, but based on morphology, the Suffolk HER entry suggests the cropmark may represent the remains of a **medium value** Neolithic long barrow. The asset is associated with several cropmark ring ditches (**2034**, **2035** and **2036**) that may represent a Bronze Age barrow cemetery, which was likely located due to the presence of the earlier monument. The setting of asset (**2010**) is considered alongside the possible round barrows in the Bronze Age section below.

3.3.91 A fragment of a **low value** polished Neolithic flint chisel and a small axe (**2117**) of evidential value were recovered from farmland partially within the Order Limits, 630 m north-north-west of the B1078 and 1.6 km east-south-east of Ringshall.

Great Bricett and Bramford

Non-Designated Heritage Assets

3.3.92 Great Bricett is situated on the eastern edge of a plateau of high ground at c. 81 m aOD with Wattisham Airfield to the north-west and Nedging Tye to the south-west also on the high ground. The Channel Valley arises just north of Great Bricett at c. 70 m aOD from where it meanders in a south-eastern direction passing Offton, Somersham and Little Blackenham before discharging into the Gipping just to the north of Bramford. Bramford lies c. 8.3 km to the south-east of Great Bricett on the north-western edge of Ipswich and within and on the western flank of the Gipping Valley. The valley floor immediately to the east of the town lies at c. 6 m aOD whilst

the western edge of the settlement, defined by the A1113 Loraine Way lies at c. 24 m aOD. Cropmark analysis, archaeological fieldwork and metal detector surveys undertaken in the area, has produced a detailed archaeological record including evidence of Bronze Age activity as well as subsequent periods.

3.3.93 A **low value** fragment of a PAS recorded polished flint axe or knife (**2324**) of evidential value was found on land near Rook Hill Farm, south-east of Offton and outside the Order Limits.

3.3.94 A **low value** discoidal flint knife and a scraper (**2396**) were recovered from land at Rook Farm, off Ipswich Road and c. 160 m north-east of the Order Limits.

3.3.95 An oval cropmark (**2009**) of evidential value is located 1.6 km west of Bramford, immediately north of Bullen Lane and the Order Limits. Based on morphology, it has been suggested (Martin and Plouviez 1978) the cropmark may represent the remains Neolithic long barrow which would result in this asset being of at least **medium value**. Based on satellite imagery, the site was stripped in 2019/2020 and fell within a former works compound but there is no know record of archaeological investigation.

3.3.96 The setting of asset (**2009**) is informed by its location on the northern flank of a shallow east/west aligned dry valley. If the asset constitutes the remains of a funerary monument, it may have been located to be seen from the valley floor and so the valley may constitute an establish route through the landscape and/or a tribal boundary. Otherwise, the setting has been eroded to the extent that it makes only a minor contribution to the value of the asset. Due to the proximity of the Project, however, the setting extends to the Order Limits.

Bronze Age

3.3.97 The Bronze Age is represented in Section B by cropmarks of potential funerary monuments, scatters and findspots of lithics, pottery and metalwork recorded by the Suffolk HER and by the Portable Antiquities Scheme. Due to the general rarity of Bronze Age funerary monuments, where there is evidence of such within the 500 m Study Area they have been reported here.

Wortham, Mellis and Gislingham

Non-Designated Heritage Assets

3.3.98 The earthwork of a possible small, **medium value** Bronze Age barrow (**2037**) of evidential value is located 1.6 km south-east of Wortham and 180 m east of the Order Limits. The asset is situated within the bounds of the medieval asset ‘Moatyards’ (**2260**), which is described in the medieval section below.

3.3.99 The setting of asset (**2037**) is informed by its location on the south-eastern flank of a north-east/south-west aligned valley. If the asset constitutes the remains of a funerary monument, it may have been located to be seen from the valley floor and so the valley may constitute an establish route through the landscape and/or a tribal boundary. Otherwise, the setting has been eroded to the extent that it makes only a minor contribution to the value of the asset. Due to the proximity of the Project, however, the setting extends to the Order Limits.

3.3.100 A **low value** Bronze Age barbed and tanged flint arrowhead (**2027**) of evidential value was recovered from farmland partially within the Order Limits, 70 m north-east of Mellis Road and 1 km south-east of Burgate.

3.3.101 A **low value** concentration of 17 PAS findspots (**2202**) of evidential and historical value was recovered from farmland within Order Limits cable undergrounding works, near Mellis. The assemblage contains Bronze Age, early medieval and post medieval artefacts and an undated foreign silver coin.

3.3.102 A **low value**, very fine early Bronze Age barbed and tanged arrowhead (**2383**) of evidential value has been recovered from a field north of Upper Rectory Farm (**2391**) in Candle Street and c. 15 m north of the Candle Street Order Limits.

Finningham, Mendlesham and Old Newton

Non-Designated Heritage Assets

3.3.103 A complex of cropmarks comprising a concentric ring ditch c. 30 m in diameter and an overlapping irregular enclosure (**2038**) is of evidential value and is located 130 m north of Mendlesham Road, c. 2 km north-west of Mendlesham and 180 m west of the Order Limits. The concentric ring ditch has been interpreted as the possible remains of a **medium value** Bronze Age barrow.

3.3.104 The cropmark of a smaller c. 20 m diameter ring ditch within an irregular enclosure (**2039**) is of evidential value and located immediately north-east of (**2038**). The asset has not been archaeologically investigated and remains uncharacterised but is included here as the possible remains of a **medium value** Bronze Age barrow based on its morphology and its proximity to asset (**2038**).

3.3.105 The setting of assets (**2038**) and (**2039**) is shared and informed by their interrelationship. There are, however, no other surviving elements of the setting and the local largely flat topography provides to clues to the reasons for the siting of the monuments. The setting, therefore, makes a minor contribution to the value of the assets, but due to the proximity of the Project, the setting extends to the Order Limits.

3.3.106 Three **low value** Bronze Age lithics of evidential value were recovered from farmland in the Dove Valley and outside of the Order Limits. The flints are part of a much larger finds assemblage (**2043**) that includes Iron Age, Roman and Saxon finds and likely represents Romano-British settlement evidence (**2151**) as discussed in the Roman section).

3.3.107 The following **low value** Bronze Age assets of evidential value are recorded by the PAS:

- A late middle Bronze Age complete unlooped palstave (**2042**) was found by a metal detectorist on farmland near Mellis
- Four Bronze Age worked flints and five sherds of late Bronze Age pottery (**2050**) were recovered from farmland north of Wickham Road and outside the Order Limits
- A round Bronze Age flint scraper, two flint flakes and three body sherds, one with extensive flint inclusions (**2051**) were recovered from farmland near Wickham Road and outside the Order Limits
- A Bronze Age incomplete copper-alloy razor (**2052**) recovered from farmland near Wickham Road and outside of the Order Limits

- A body sherd from a handmade pottery vessel of probable later Bronze Age to Iron Age date (**2053**) recovered from farmland near Wickham Road and outside the Order Limits
- A fragment from the tip of a copper alloy Bronze Age spearhead (**2054**) recovered from farmland near Wickham Road and outside the Order Limits
- A notched and retouched flint flake, a flint retouched flake, a flake assemblage with mainly relatively thin flakes, most of which are retouched and a group of five flakes and a scraper (**2055**) were recovered from farmland near Wickham Road outside the Order Limits
- An incomplete copper-alloy Bronze Age axe and two low value probable Bronze Age body sherds of handmade ceramic with extensive white flint inclusions (**2058**) recovered from farmland near Wickham Road and outside the Order Limits
- A fragment of a copper alloy Bronze Age socketed axe (**2061**) recovered from farmland near Wickham Road and outside the Order Limits.

Middlewood Green and Stowmarket

Non-Designated Heritage Assets

3.3.108 The cropmarks of two **medium value**, ploughed out Bronze Age barrows (**2028**) of evidential value are located on farmland c. 430 m north-east of the Gipping river, c. 1.7 km south-east of Stowmarket and c.100 m north-west of the Order Limits. The eastern asset comprises a single ditch c. 33 m in diameter, whilst the western asset comprises concentric ring ditches, the outer c. 30 m in diameter and the inner c. 13 m.

3.3.109 The cropmark of a large, **medium value** ploughed out Bronze Age barrow (**2029**) of evidential value is located on farmland 290 m north-east of the Gipping river, 1.6 km south-east of Stowmarket and 120 m north-west of an Order Limits access road. The asset is 33 m in diameter and lies 100 m to the west of the two barrow cropmarks noted above (**2028**).

3.3.110 The setting of assets (**2028**) and (**2029**) are shared and informed by their interrelationship and by their location on the northern flank of the Gipping valley. This location suggests the Gipping river valley was of some importance in the Bronze Age and as well as providing fish, fresh water and being attractive to prey animals, it may have also served as an established route through the landscape and/or a territorial boundary which may have been communicated through the siting funerary monuments. The importance of the Gipping river valley in the area is further emphasised by the siting of a possible Neolithic long barrow (**2010**), two possible Bronze Age round barrows (**2034**) and (**2035**), and an oval enclosure (**2036**) also potentially related to funerary activity. Otherwise, the setting has been eroded to the extent that it makes only a minor contribution to the value of the asset. Due to overall distance from the Project, however, the setting does not extend to the Order Limits.

3.3.111 Cropmark (**2040**) is located 60 m east of the A14, 2.5 km south-east of Stowmarket and 480 m east of the Order Limits. The asset comprises the partial remains of a ring ditch approximately 14 m in diameter, which has been interpreted as the possible remains of a **medium value** Bronze Age barrow of evidential value.

3.3.112 Asset (**2040**) is located immediately north of the cropmark of a 15 – 20 m diameter ring ditch (**2095**). Although currently undated, asset (**2095**) is reported here as the remains of a possible **medium value** Bronze Age barrow of evidential value.

3.3.113 The cropmark of a partial ring ditch (**2033**) of evidential value is located 60 m north-west of Fen Lane, 1.6 km north-north-east of Needham Market and 410 m south-east of the Order Limits. It is thought to be the remains of a **medium value** barrow and is 31 m in diameter and has two internal, off-centre pits.

3.3.114 The setting of assets (**2040**), (**2095**) and (**2033**) is shared and informed by interrelationship and by their location on the western flank of a north/south aligned tributary of the Gipping Valley. As with assets (**2028**) and (**2029**) noted above, the siting of these monuments may have been concerned with a claim of tenure over land and the resources provided by the river network. Otherwise, the setting has been eroded to the extent that it makes only a minor contribution to the value of the asset. Due to overall distance from the Project, however, the setting does not extend to the Order Limits.

3.3.115 An incomplete **low value** copper-alloy basal-looped spearhead of evidential value and of the Middle Bronze Age, dating to 1500 BC -1150 BC (**2044**) was found on farmland near Stowmarket and outside the Order Limits.

3.3.116 A **low value** fragment of a copper alloy Bronze Age chisel (**2175**) of evidential value was recovered from farmland south of Creeting St Peter and outside the Order Limits.

Needham Market and Ringshall

Non-Designated Heritage Assets

3.3.117 A group of cropmarks comprising two circular assets (**2034**, **2035**) and an oval enclosure (**2036**) are of evidential value and are located 220 m south-west of the Gipping river, 270 m north of Needham Market and 340 m south-east of the Order Limits. The assets are thought to be the remains of **medium value** Bronze Age funerary monuments. The assets are located immediately to the south-east of the cropmark of a possible Neolithic long barrow (**2010**) and the cropmarks of three further potential Bronze Age barrows lie c. 230 m to the south-east (see below).

3.3.118 The setting of assets (**2010**), (**2034**), (**2035**) and (**2036**) is shared and informed by their interrelationship and by their location on the southern flank of the Gipping valley. This location suggests the Gipping river valley was of some importance in the Bronze Age and as well as providing fish, fresh water and being attractive to prey animals, it may have also served as an established route through the landscape and / or a territorial boundary which may have been communicated through the siting funerary monuments. The importance of the Gipping river valley in the area is further emphasised by the siting of two possible Bronze Age round barrows (**2028** and **2029**) noted above and those reported below (**2030**, **2031**, and **2032**). Otherwise, the setting has been eroded to the extent that it makes only a minor contribution to the value of the asset. Due to overall distance from the Project, however, the setting does not extend to the Order Limits.

3.3.119 A group of three cropmarks, likely representing **medium value** Bronze Age barrows of evidential and historical value (**2030**, **2031**, and **2032**), are located on the south-western bank of the Gipping river, 250 m north-north-east of Needham Market and 600 m south-east of the Order Limits. Although outside the 500 m Study Area, these

assets are noted here due to their proximity to the barrows noted above (**2010**, **2034**, **2035** and **2036**) and as they exemplify the importance of the river and valley to prehistoric communities.

3.3.120 The setting of assets (**2030**), (**2031**), and (**2032**), is shared and informed by their interrelationship and by the same parameters noted for assets (**2010**), (**2034**), (**2035**) and (**2036**) noted above. The setting of assets (**2030**), (**2031**), and (**2032**) makes a minor contribution to the value of the asset, and due to overall distance from the Project the setting does not extend to the Order Limits.

3.3.121 A **low value** early Bronze Age barbed and tanged flint arrowhead (**2025**) of evidential value was recovered from farmland within the Order Limits, and approximately 1.5 km east-south-east of Ringshall.

3.3.122 A **low value** scatter of PAS recorded Bronze Age metal detector finds (**2346**) of evidential value was recovered from land north-west of Needham Market and outside the Order Limits. The finds comprise a flat axe, a socketed axe, and two terret rings.

3.3.123 A **low value** Bronze Age hoard of 81 copper alloy artefacts (**2045**) of evidential value was found on farmland near Needham Market and just outside the Order Limits. The hoard includes socketed axe heads, winged axe heads, swords, sickles and a large amount of casting waste.

3.3.124 The following **low value** Bronze Age assets of evidential value are recorded by the PAS:

- The mixed 46-piece mixed period lithics assemblage (**2007**) noted above and recovered from land near Needham Road outside the Order Limits, contained a small number of flints of late Bronze Age date
- A scatter of over 120 lithics (**2047**) was recovered from farmland near Barking and outside the Order Limits. The assemblage is multi-period but largely of later Bronze Age date
- An incomplete copper-alloy fragment, possibly from the tip of a Bronze Age sword or dagger blade (**2060**) recovered from farmland near Ringshall and outside the Order Limits.

Great Bricett and Bramford

Non-Designated Heritage Asset

3.3.125 A **low value** fragment from the end of the blade of a Bronze Age bronze axe (**2049**) of evidential value was recovered from farmland (Field 2) at Rook Hill Farm c. 1.6 km north-west of Somersham and c. 190 m north-east of the Order Limits.

3.3.126 A fragment of a **low value** heavily corroded Bronze Age bronze blade (**2023**) of evidential value was recovered from farmland immediately west of Flowton, 135 m north of Tye Lane, 1.1 km south of Somersham and 290 m south-west of the Order Limits.

3.3.127 Four **low value** corroded bronze fragments (**2024**), possibly Bronze Age tool fragments of evidential value, recovered from farmland immediately east of Ipswich Road, approximately 930 m north-west of Lower Somersham, and 160 m north-east of the Order Limits.

3.3.128 A fragment of a **low value** Bronze Age socketed axe (**2328**) of evidential value was recovered from farmland c. 160 m north-west of Offton and c. 40 m north of the Order Limits.

3.3.129 A fragment of a **low value** late Bronze Age socketed axe (**2046**) of evidential value was recovered during a metal detector rally on farmland near Bramford and within the Order Limits.

3.3.130 The findspot of a **low value** Bronze Age cremation urn (**2333**) of evidential value is located on the north-western outskirts of Bramford and c. 120 m north-east of the Order Limits.

3.3.131 The cropmark of a large double ditched ring ditch crossed by a probable field boundary (**2349**) was located at Bramford c. 450 m north-east of the Order Limits. The ring ditch likely represented the remains of a round barrow of evidential value. The site has, however, been developed and so the asset is of **negligible value**.

3.3.132 Asset (**2349**) was associated with the cropmarks of two further ring ditches (**2350** and **2351**) of evidential value, suggesting a barrow cemetery was present in this location during the Bronze Age. Both these assets have also been destroyed by the expansion of Bramford and are so of **negligible value**.

Iron Age

3.3.133 The Iron Age is represented in Section B by scatters and findspots of pottery and metalwork recorded by the Suffolk HER and by the Portable Antiquities Scheme.

Wortham, Mellis and Gislingham

Non-Designated Heritage Assets

3.3.134 A small **low value** scatter of flint and sand tempered Iron Age pottery including a sherd of Belgic ware (**2062**) of evidential value was recovered from farmland c. 160 m north of the A143, c. 1.5 km east of Wortham and c. 70 m west of the Order Limits.

3.3.135 A small **low value** scatter of Iron Age flint tempered pottery (**2136**) of evidential value was recovered from land immediately south of the A143 c. 1.8 km east of Wortham and c. 50 m east of the Order Limits.

3.3.136 A potentially **medium value** Iron Age settlement site (**2068**) of evidential value was found in July 1955 during the excavation of a pipe trench located partially within the Order Limits, c. 60 m north-east of Mellis Road and c. 70 m north-west of Mellis. The pipeline revealed a roundhouse c. 4.6 m in diameter with central sunken circular hearth containing black earth, grit tempered Iron Age pottery and flints. To the south of the roundhouse was a ditch or pit filled with dark soil and to the north was a possible furnace, lined with burnt clay and filled with black earth and worked clay.

3.3.137 The setting of asset (**2068**) is informed by the surrounding agricultural landscape, which although now divided differently in later periods, likely echoes the asset's contemporary hinterlands. There are, however, no further other surviving elements of the setting and so it makes a minor contribution to the value of the asset. Due to being located within the Project, the setting extends to the Order Limits.

3.3.138 A second **medium value** Iron Age settlement site (**2069**) of evidential value was identified the same year and likely during the excavation of the same pipeline. The site is situated 40 m south of the A143, 320 m east of Worthing and 180 m west of an

Order Limits access road. The remains comprised those of a roundhouse and ditches that contained black earth, burnt stones, and brownish black pottery sherds some with finger tipping ornamentation. A second structure of possible Saxon date was also identified.

3.3.139 The setting of asset (**2069**) is informed by the surrounding agricultural landscape, which although now divided differently in later periods, likely echoes the asset's contemporary hinterlands. There are, however, no further other surviving elements of the setting and so it makes a minor contribution to the value of the asset. Due to distance from the Project, the setting does not extend to the Order Limits.

3.3.140 The following **low value** Iron Age assets of evidential value are recorded by the PAS:

- A handmade body sherd from a likely Iron Age pottery vessel (**2076**) recovered from farmland within the Order Limits near Wortham
- A cast copper-alloy object, possibly a mount of Iron Age date (**2077**) recovered from farmland outside the Order Limits near Wortham
- A fragment of a copper-alloy late Iron Age to early Roman Langton Down bow brooch (**2086**) recovered from farmland near Wortham and outside the Order Limits
- A cast copper alloy terminal or head, probably from a later Iron Age to Roman button and loop fastener or strap fitting (**2087**) recovered from farmland near Wortham and outside the Order Limits
- An incomplete cast copper-alloy Iron Age to Roman Rosette brooch (**2097**) recovered from farmland near Wortham and outside the Order Limits
- An incomplete cast copper-alloy Colchester bow brooch of late Iron Age to Roman date (**2098**) recovered from farmland near Wortham and adjacent to the Order Limits
- An incomplete cast copper-alloy Colchester bow brooch of late Iron Age to Roman date (**2099**) recovered from farmland near Wortham and adjacent to the Order Limits
- A **low value** incomplete cast copper alloy cosmetic mortar of Late Iron Age to Roman date (**2178**) recovered from farmland north of Thrandeston and outside the Order Limits.

Finningham, Mendlesham and Old Newton

Non-Designated Heritage Assets

3.3.141 A **low value** copper alloy terret (harness) ring (**2063**) of evidential value was found by a metal detectorist on land approximately 120 m south-east of Hill House Lane, 1 km south-west of Needham Market, 120 m south-east of the Order Limits.

3.3.142 A large **medium value** multi-period concentration of 1552 PAS artefacts (**2166**) of evidential and historical value has been identified partially within the Order Limits, around Wickham Street. The majority of the finds (1204) are of Romano-British but the assemblage contains the following Iron Age artefacts:

- An Iron Age coin (**2072**) was recovered from farmland near Finningham and outside the Order Limits

- A silver Iron Age coin (**2073**) and a copper alloy late Iron Age/Romano-British Colchester type brooch (**2074**) were recovered from farmland near Finningham and outside the Order Limits
- A copper alloy Iron Age coin (**2075**) of king Cunobeline (AD 9 - c. 40) of the Trinovantes recovered from farmland near Finningham and outside the Order Limits
- A body sherd from a handmade ceramic vessel of likely Iron Age date (**2078**) recovered from farmland near Finningham and outside the Order Limits
- A complete silver Iron Age half unit, dating to the period c. 40 BC to AD 20 (**2079**) recovered from farmland near Finningham and outside the Order Limits
- A complete silver Iron Age East Anglian inscribed unit of Antedios, dating to c. AD 10 - 30 (**2080**) recovered from farmland near Finningham and outside the Order Limits
- A fragment of a copper alloy Iron Age probable strap fitting (**2081**) recovered from farmland near Finningham and outside the Order Limits
- A copper alloy Langton Down brooch fragment (**2088**) recovered from farmland near Finningham and outside the Order Limits
- A copper alloy Colchester brooch (**2089**) recovered from farmland near Finningham and outside the Order Limits
- A probable fragment of an Iron Age copper alloy closed ring or terret (**2090**) recovered from farmland near Finningham and outside the Order Limits
- The worn incomplete wings and upper bow fragment of a copper-alloy Late Iron Age to early Roman Langton Down type bow brooch (**2091**) recovered from farmland near Finningham outside the Order Limits.
- The worn incomplete wings and upper bow fragment of a copper-alloy Late Iron Age to early Roman Langton Down type bow brooch (**2092**) recovered from farmland near Finningham and outside the Order Limits
- A copper-alloy Aucissa brooch of Late Iron Age to early Roman date (**2093**) recovered from farmland near Finningham and outside the Order Limits
- An Iron Age pottery body sherd with flint temper (**2094**) near Finningham and outside the Order Limits
- A very worn and corroded fragment of a copper-alloy late Iron Age to early Romano-British bow brooch (**2095**) recovered from farmland near Finningham and outside the Order Limits
- A body sherd from a Roman grey ware Belgic storage vessel (**2100**) with combed decoration on the exterior surface and of Late Iron Age to Roman recovered from farmland near Finningham and outside the Order Limits
- An incomplete copper-alloy Late Iron Age to Roman Langton Down brooch recovered from farmland (**2101**) near Finningham and outside of the Order Limits
- A worn and incomplete cast copper-alloy Rosette brooch of Iron Age to Roman date (**2102**) recovered from farmland near Finningham and outside of the Order Limits

- An incomplete copper alloy Iron Age to early medieval Type C penannular brooch (**2105**) recovered from farmland near Finningham and outside of the Order Limits
- An incomplete cast copper-alloy cosmetic mortar of Late Iron Age to Roman date (**2106**) recovered from farmland near Finningham and outside of the Order Limits
- An incomplete copper-alloy late Iron Age early Roman brooch of the Langton Down Type, dating to AD 25 - 60 (**2107**) recovered from farmland near Finningham and outside of the Order Limits
- A complete Iron Age to Roman copper-alloy penannular brooch dating to c. AD 1-100 (**2109**) recovered from farmland near Finningham and outside of the Order Limits.

3.3.143 It is possible that these finds are evidence of an area of Iron Age settlement that served as a precursor to the more intensive Romano-British activity indicated by the finds assemblage.

3.3.144 The setting of asset (**2166**) is informed by its relationship with the dispersed evidence of Iron Age activity in the wider landscape. The setting is further informed by the asset's relationship with the unnamed water course that runs approximately north-west/south-east just to the south of the main concentration of artefacts and would have provided fresh water for the settlement. The setting of the asset, therefore, makes a moderate contribution to its value, and as the asset is located partially within the Project, the setting extends to the Order Limits.

Middlewood Green and Stowmarket

Non-Designated Heritage Assets

3.3.145 A **low value** scatter of Iron Age pottery, including a small proportion of grog tempered wares and other probably Belgic forms (**2064**) of evidential value, was found approximately 245 m south-west of the Order Limits, 70 m south-east of Castle Road, and within the southern fringes of Offton.

3.3.146 A **low value** imported Iron Age gold stater (**2177**) of the Bellovaci tribe and dating to 200 BC- 80 BC was recovered from farmland south of Creeting St Peter and outside the Order Limits.

Needham Market and Ringshall

Non-Designated Heritage Assets

3.3.147 An archaeological evaluation then excavation of land adjacent To 96 Stowmarket Road, Needham Market, south of the B1113, and c. 240 m south-east of the Order Limits identified a range of archaeological features (**2378**), which included a **low value** late Bronze Age /early Iron Age field system and an Iron Age ditch.

3.3.148 Iron Age, Romano-British and early medieval (Anglo-Saxon) period metalwork (**2071**, **2085**, **2165**) has been identified within a land parcel partially within the Order Limits and west of Needham Market. These assets are of **low value** based on their evidential value. The PAS record a total of 89 records within this land parcel, the majority of which (69) are Romano-British, but the assemblage also contains Iron Age assets:

- A fragment of a probable knobbed terret (**2071**), which is heavily burnt and distorted, was recovered from farmland near Market Needham and within the Order Limits
- An incomplete copper-alloy late Iron Age to early Roman Nauheim derivative brooch (**2085**) recovered from farmland within the Order Limits near Needham Market
- An incomplete copper-alloy zoomorphic vessel mount of Late Iron Age to Roman date (**2103**) recovered from farmland within the Order Limits near Ringshall
- An incomplete copper-alloy centre-looped cosmetic mortar of late Iron Age to Roman date (**2104**) recovered from farmland near Ringshall and outside the Order Limits.

Great Bricett and Bramford

Non-Designated Heritage Assets

3.3.149 A **low value** Iron Age brooch (**2393**) of evidential value was recovered from farmland at Rook Farm off Ipswich Road and c. 170 m north-east of the Order Limits. The asset is possibly a La Tene type bow brooch dating to the 4th to 3rd century BC.

3.3.150 The following **low value** Iron Age assets of evidential value are recorded by the PAS:

- A copper-alloy Iron Age unit or a core for a plated silver unit of the North Thames region dating to 60 BC- 20 BC (**2083**) recovered from farmland near Great Bricett and outside the Order Limits
- A complete copper-alloy late Iron Age to early Romano-British cosmetic mortar (**2096**) recovered from farmland near Willisham Tye and outside the Order Limits
- An incomplete copper-alloy Iron Age to Roman brooch of the Colchester type, dating to AD 20 - 60 (**2108**) recovered from farmland near Great Bricett and outside the Order Limits.

3.3.151 A **low value** multi-period concentration of PAS artefacts (**2562**) of evidential value has been recovered from farmland c. 150 m from the Order Limits and west of Offton. The Iron Age artefacts an Iron Age coin and an Iron Age to Romano-British brooch.

General Prehistoric

3.3.152 The Suffolk HER and the Portable Antiquities Scheme hold the following records for assets attributed a general prehistoric date.

Wortham, Mellis and Gislingham

Non-Designated Heritage Assets

3.3.153 An evaluation and excavation within St Johns House Hospital grounds revealed a single Prehistoric pit, pottery and a single flint tool (**2600**). These were located approximately 60 m south-west of the Order Limits and approximately 1.3 km south-west of Palgrave village. The asset holds **low value** and has evidential value.

3.3.154 Sherds of **low value** prehistoric pottery (**2122**) of evidential value were recovered in 1955 from a pipeline trench out the eastern outskirts of Wortham, immediately south

of the A143 and 440 m west of an Order Limits access road. The same pipeline identified a **low value** prehistoric 'hut site' of evidential value with a hearth and flints (**2123**) immediately west of Mellis Road, 1.3 km south of Worthan and 280 m south of an Order Limits access road.

3.3.155 A small **low value** scatter of prehistoric flintwork (**2133**) of evidential value and including three scrapers and was recovered from land immediately south of the A143 c. 1.8 km east of Wortham and c. 50 m east of the Order Limits.

3.3.156 A substantial **low value** burnt patch with thousands of burnt flint fragment (**2070**) of evidential value has been identified on land c. 1.5 km south-west of Thrandeston and c. 100 m south-east of the Order Limits. The remains are considered to be those of a burnt mound, a feature class usually of Bronze Age or Iron Age date.

3.3.157 A low value multi-period finds assemblage (**2364**) of evidential value was recovered during fieldwalking ahead of the construction of the Scole – Stuston bypass c. 530 m south of Palgrave and c. 140 m south-east of the Order Limits. The assemblage was largely made up of undiagnostic worked flint and burnt flint, but also included a quern fragment, medieval pottery, Romano-British pottery, and post medieval tile and a gun flint.

Finningham, Mendlesham and Old Newton

Non-Designated Heritage Assets

3.3.158 A large multi-period concentration of 1552 PAS artefacts (**2166**) of evidential and historical value has been identified partially within the Order Limits, around Wickham Street on the northern flank of the valley of a tributary of the Dove river. The majority of the finds (1204) date to the Romano-British period, but also included are the following **low value** undiagnostic Prehistoric lithics:

- Three flint flakes and a squat flake (**2124**)
- An unpatinated long flake struck from a brown flint (**2125**)
- Three worked flint flakes (**2126**)
- An unpatinated flint flake, a long flint flake and a squat flint flake (**2127**)
- A squat flint flake (**2128**)
- A flint long flake or blade (**2129**)
- Six squat flint flakes, a primary flake and a flake (**2130**)
- Six fragments of flintworking debitage (**2132**).

Needham Market and Ringshall

Non-Designated Heritage Assets

3.3.159 A **low value** prehistoric lithics scatter (**2115**) of evidential value was recovered from farmland just outside the Order Limits, 600 m north-north-west of the B1078 and 1.35 km south-east of Ringshall.

3.3.160 A **low value** prehistoric flint scatter (**2116**) of evidential value was recovered from farmland largely within the Order Limits, 630 m north-north-west of the B1078, and 1.5 km east-south-east of Ringshall.

Great Bricett and Bramford

Non-Designated Heritage Assets

3.3.161 A **low value** thin scatter of multi-phase finds (**2118**) including a prehistoric flint flake of evidential value was recovered from farmland 160 m south of Bildeston Road, 1.8 km south-east of Great Bricett and 70 m west of the Order Limits.

3.3.162 A single **low value** prehistoric flint flake of evidential value was recovered as part of a multi-period finds assemblage (**2119**) during the fieldwalking of a pipeline route. The linear survey area extends from within the Order Limits immediately east of Offton Road to Blood Hill 240 m south of the Order Limits and 3.8 km south-east of Great Bricett. A second **low value** prehistoric flint flake of evidential value was recovered as part of a multi-period assemblage (**2120**) from another section of the pipeline running from Blood Hill to within the Order Limits 100 m north-west of Flowton Road.

3.3.163 A **negligible value** prehistoric flint flake of evidential value was recovered in a multi-phase finds assemblage (**2338**) during a fieldwalking survey ahead of the Bramford to Wattisham Gas Pipeline. The find site is located within the Order Limits c. 1 km north-east of Flowton.

3.3.164 A **low value** scatter of prehistoric flintwork (**2334**) of evidential value has been recovered from the garden of number 76 The Street, Bramford, c. 230 m east of the Order Limits.

Roman Period

3.3.165 The Roman period is represented in Section B by archaeological remains comprising evidence of domestic activity and agricultural practice, and scatters and findspots of pottery and metalwork recorded by the Suffolk HER and by the Portable Antiquities Scheme.

Wortham, Mellis and Gislingham

Non-Designated Heritage Assets

3.3.166 A **low value** bronze follis (Theodora AD 337 - 341) of the Trier mint (**2173**) and of evidential and historical value was recovered from land to the south of Oak Farm (**2366**) and c. 250 m south-east of the Order Limits.

3.3.167 A **low value** multi-period concentration of 17 PAS artefacts (**2176**) of evidential value has been recovered from farmland c. 160 m from the Order Limits and east of Wortham. The early Romano-British artefacts comprise three brooches and a denarius of Septimus Severus.

3.3.168 A **high value** Romano-British and Anglo-Saxon artefact scatter (**2164**) is of evidential and historical value. The artefact scatter is located c. 60 m from the Order Limits near Wortham. The metalwork artefact scatter is suggestive of a probable Romano-British and Anglo-Saxon period inhumation and cremation cemetery in this area. The HER

notes Romano-British artefacts include copper-alloy brooches (including a 1st century, a 2nd-century headstud, and also enamelled types), coins of 1st to late 4th century; a button-and-loop fastener, and a finger ring. Early medieval (Anglo-Saxon) artefacts include a copper-alloy 5th century Germanic supporting-arm brooch and a large group of early Anglo-Saxon objects including brooches, wrist clasps, pins, girdle hangers, bucket mounts, beads and pyramidal mounts suggestive of an inhumation cemetery. Some artefacts appear to have been burnt which also suggests that cremations could also be present. A total of 193 PAS records are recorded within this land parcel, of which 83 date to the Romano-British period, including five dating to the late Iron Age to Romano-British period comprising of one bead, eight brooches, one button and loop fastener, 69 coins, one ring, one mount, one spoon and one strap fitting. The remaining PAS artefacts date to other periods and are quantified as follows:

- A total of 44 early medieval (Anglo-Saxon) artefacts including one bead, one box catch, 15 brooches, five bucket pieces, 10 buckles, two girdle hangars, four mounts (one of which is a gilded bronze crescentic mount), two pins, three sleeve clasps and one strap fitting
- A total of 39 medieval artefacts including one badge, one balance, two buckles, one clasp, 19 coins, one jetton, one lamp hanger, five mounts, four stap ends, three strap fittings and one stud
- Seven medieval to post medieval artefacts have been identified including one strap fitting, one mount, one weight, one stud, one clasp, one ring and one bead
- A total of 13 post medieval artefacts including one bell, eight coins, one ring, one hooked tag, one jetton and one knife
- Four undated artefacts including an unidentified object and three beads.

3.3.169 The setting of asset (**2164**) is informed by its relationship with the dispersed evidence of Romano-British and Anglo-Saxon activity in the wider landscape including Roman road (**2144**) reported below. The setting of the asset, therefore, makes a minor contribution to its value, and due to the proximity of the Project the setting extends to the Order Limits.

3.3.170 A **medium value** stretch of possible Roman road (**2144**) has been identified running between Stoke Ash to the north and Morley to the south and is of evidential and historical value. The road crosses the Order Limits in a north-west to south-east alignment approximately 680 m east of Mellis Road and 2.1 km south-west of Thrandeston. The road can be seen as an agger (a Romano-British period linear mound or embankment) on aerial photography; however, the course of the road has not been observed conclusively south of New Buckenham. Although not mentioned by Norfolk HER, the road also crosses the Order Limits in a north to south alignment at two points within Section A within the Bressingham and the Waveney Valley sub-section. The first Order Limits crossing point within Section A is at Bressingham Road approximately 130 m west of Baynards Lane, and the second, to the south of this, is at Doit Lane c. 200 m south of the A1066. The road was also excavated in 1955 (**2154**) and is discussed further below.

3.3.171 The setting of the asset (**2144**) is informed by its relationship with the dispersed evidence of Romano-British activity in the wider landscape including asset (**2164**) reported above. The setting of the asset, therefore, makes a minor contribution to its value, and as the asset is located partially within the Project, the setting extends to the Order Limits.

3.3.172 A **medium value** large spread of 168 metal detected finds which have been recorded by the PAS (**2162**) south-south-east of Wortham which are of evidential value. Of these finds, 153 are dated to the Romano-British period. The artefacts have been identified near a Romano-British road (**2144**). The Romano-British period artefacts comprise of 139 coins, five brooches, two bracelets, one ring, two steelyard weights, one nail, one strap fitting and two pottery sherd locations. An Iron Age to Romano-British period brooch has also been recovered. The PAS artefacts dating to other time periods are listed as follows:

- A single Neolithic pottery sherd
- An early medieval (Anglo-Saxon) brooch
- Six medieval artefacts comprising of two coins, a weight, a strap fitting, a finger ring and a brooch
- A post medieval belt or strap mount
- Five further artefacts could not be dated and comprise of two unidentified objects, metal working debris, a pottery sherd and a strap fitting.

3.3.173 The setting of asset (**2162**) is informed by its interrelationship with the Roman road (**2144**), which bisects the asset and crosses the Order Limits immediately to the south-south-east, and by its relationship with the dispersed evidence of Romano-British activity in the wider landscape. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.174 Archaeological evaluation (trial trenching) of land for the A143 Scole-Stuston bypass identified **low value** assets comprising a Romano-British ditch, pottery, a coin and a brooch (**2138**) of evidential value approximately 1.1 km east of Wortham and 50 m north of the Order Limits.

3.3.175 **Low value** Romano-British pottery sherds with animal bone, calcined flints and ancient ditches (**2167**) of evidential value were identified during the excavation of a pipeline trench during October 1955. The finds site is located c. 340 m south of the A143 and is crossed by the Order Limits.

3.3.176 A small **low value** scatter of Romano-British grey ware pottery (**2131**) of evidential value was recovered from land immediately south of the A143 c. 1.8 km east of Wortham and c. 50 m east of the Order Limits.

3.3.177 A **low value** multi-period concentration of PAS artefacts (**2560**) of evidential value has been recovered from farmland partially within the Order Limits and east of Wortham. The Romano-British artefacts comprise brooches, brooch fragments, a bracelet fragment, a coin, a strap end, and a fragment of terracotta tile.

3.3.178 A **low value** scatter of Romano-British pottery (**2455**) and four coins (**2456**) of evidential value was recovered from farmland c. 860 m south of Little Green and c. 90 m south-east of the Order Limits.

3.3.179 A **low value** group of 40 PAS artefacts (**2174**) of evidential value has been identified outside the Order Limits, near Gislingham within the same location as early medieval activity (**2193**). Of the PAS artefacts, 23 date to the Romano-British period and comprise of 21 coins and two brooches. PAS artefacts from other time periods are outlined as follows:

- Four early medieval (Anglo-Saxon) artefacts comprising of two brooches, an unidentified copper-alloy object and a girdle hangar fragment
- Seven medieval artefacts comprising of four coins, one seal matrix, one buckle, and a lead pot mend, as well as two medieval to post medieval period artefacts comprising of a copper-alloy pottery rim fragment, and a lead cloth seal
- Three post medieval artefacts have also been recorded in the form of a uniface coin weight and two coins
- An undated collection of lead weights.

3.3.180 A small **low value** scatter of largely Romano-British finds (**2084**) of evidential value has been recovered from land c. 300 m south-west of Burgate and c. 220 m north of the Order Limits. The assemblage includes Romano-British pottery, coins brooches, a spoon and a ring as well as a medieval knife, ring and coin.

3.3.181 Archaeological evaluation and subsequent excavation on land at St John's House Hospital identified a series of **low value** Romano-British ditches, a possible palisade and a large rubbish pit (**2140**) of evidential and historical value, which contained a small finds assemblage comprising pottery, animal done, a ring and a coin. The site is located immediately south of Lion Road c. 1.3 km east-north-east of Wortham, 50 m south-west of the Order Limits.

3.3.182 A small scatter of **low value** Romano-British tile and pottery (**2114**) comprised mainly of grey wares and a small amount of late Romano-British shell-tempered pottery of evidential value was found on land north of Lion Road, c. 100 m north-west of the archaeological remains noted above (**2140**), approximately 1.3 km north-east of Wortham and 120 m west of the Order Limits.

3.3.183 **Medium value** Romano-British road-side activity (**2153**, **2155**) of evidential and historical value and has been noted between approximately 350 m and 600 m west of the Order Limits access route, 600 m west of the Order Limits, 50 m west of Romano-British road (**2144**, **2154**) and immediately south-east of Wortham. The evidence was identified by Basil Brown during pipelaying in 1955 to the west of Iron Age (**2069**) and Saxon (**2195**) activity identified during the same project to the east. The evidence comprised of a large multi period site on a field known as Croft Mead, between Honeypot Farm and Beans Lane. An east to west aligned Romano-British ditch runs the field to intersect with the north to south aligned Romano-British road (**2144** and **2154**). Smaller ditches were also found containing pottery sherds, including plain Samian ware, kiln roof debris and wasters, animal bones and oyster shell on a north to south alignment, with a complete deer skeleton also found at one of the ditch intersections. Medieval period evidence was also identified in the form of building debris and artefacts, particularly to the west of the site. (Heritage Suffolk and Smedley, 1956). Settlement activity has also been noted during evaluation trenching in 2016 (**2155**) comprising of ditches, pits and postholes dating to the Romano-British, medieval and post medieval periods and also comprised of a quantity of mid-1st to early 2nd century pottery in one of the ditches. Soot was visible on the exterior of the pottery suggesting possible nearby domestic activity. A number of medieval pits and ditches were also identified likely to relate to nearby building plots close to the medieval settlement core of Wortham (Heritage Suffolk).

3.3.184 The setting of assets (**2153**), (**2154**) and (**2155**) is shared and informed by their interrelationship and by their relationship with the dispersed evidence of Romano-British activity in the wider landscape. The setting of the assets, therefore, makes a

minor contribution to their values, but as the assets are located at some distance from the Project, the setting does not extend to the Order Limits.

3.3.185 A **low value** scatter of Romano-British pottery (**2182**) of evidential value was recovered from a field to the south of Ivy House Farm (**2257**) and c. 250 m south-west of the Order Limits.

3.3.186 A **low value** complete copper alloy nail (**2543**) is found within the Order Limits near Gislingham.

3.3.187 The **low value** findspot of a silver coated bronze coin and two bronze coins (**2352**) of evidential value is located partially within the Order Limits and c. 980 m south-west of Little Green.

3.3.188 A fieldwalking survey in advance of the construction of the A143 Rickinghall to Botesdale Bypass identified a concentrated scatter of Romano-British pottery, which was subsequently the focus of archaeological trenching. The excavations revealed **medium value** remains of evidential value comprising more pottery, ditches and a grave containing a decapitated female inhumation (**2382**). The site is located c. 250 m south of Rickinghall and 150 m north-west of the Order Limits.

3.3.189 The setting of the asset is informed by the sparse scatter of Roman-British finds in the area but outside the Study Area suggesting low level activity including possible pottery production. Due to the erosion of the Roman-British landscape through development since, the setting of the asset makes a minor contribution to its vale and does not extend to the Order Limits.

Finningham, Mendlesham and Old Newton

Non-Designated Heritage Assets

3.3.190 The **low value** site of a probable Romano-British building (**2151**) is of evidential and historical value. The site is located outside the Order Limits, near Wickham Street. The probable location of the building has been suggested by an artefact scatter identified by the PAS in the form of Iron Age, Romano-British and early medieval (Anglo-Saxon) metalwork, one sherd of a Samian type bowl, as well as some Bronze Age worked flints (**2043**) as reported above. The PAS artefacts include two further findspots not included under (**2043**) as follows:

- A worn and incomplete copper-alloy Rosette brooch of Iron Age to Romano-British date (**2102**)
- A copper-alloy fragment of an unidentified likely post medieval object in the form of a tapering sub-rectangular bar with a transverse break at the narrow end (**2152**).

3.3.191 A large multi-period concentration of 1552 PAS artefacts (**2166**) of evidential and historical value have been identified partially within the Order Limits, around Wickham Street. The asset includes a 1204 strong **medium value** assemblage of Romano-British artefacts comprising 907 coins; 122 jewellery pieces (brooches/ pendants/beads/rings/bracelets/hair pins); 85 pottery sherds; an architectural fragment; a bell; two boxes; CBM; two buckles; two cosmetic mortars; a figurine; four furniture fittings; a gaming piece; a harness fitting; two harness pendants; two knives; two keys; two locks; two pieces of metalworking debris; two mirrors; a small possibly votive axe; mortaria fragments; three mounts; two nail cleaners; 14 pins; a punch; a razor; a seal; four spoons; two steelyard arms; a steelyard hook; three steelyard

weights; three strap ends; a strap fitting; two studs; a tegula; a tile fragment; a toilet implement; three tweezers; two weights; four fragments of window glass and 11 unidentified objects. This concentrated assemblage of Romano-British artefacts likely represents an area of settlement and industrial activity and includes the site of a possible Romano-British building recorded by the HER (**2151**).

3.3.192 The setting of asset (**2166**) is informed by its relationship with the dispersed evidence of Romano-British activity in the wider landscape. The setting is further informed by the asset's relationship with the unnamed water course that runs approximately north-west/south-east just to the south of the main concentration of artefacts and would have provided fresh water for the settlement. The setting of the asset, therefore, makes a moderate contribution to its value, and as the asset is located partially within the Project, the setting extends to the Order Limits.

3.3.193 Asset (**2166**) also includes artefacts of other periods comprising:

- Four records of Mesolithic to Neolithic flint fragments and debitage
- One record of a Neolithic flint long flake, six records to Neolithic to Bronze Age flint flakes and debitage, and 18 records of Neolithic to Iron Age flint flakes and tools
- Seven Bronze Age records comprising of two flint flake assemblages, metal working debris, a socketed axe, an incomplete axe, a spearhead fragment and a razor. There are 10 further findspots of Bronze Age to Iron Age date comprising of seven records of flint flakes and tools, and three records of pottery sherd locations
- Eight Iron Age records comprising of five coins, two of pottery sherds and a strap fitting. Eight further Iron Age to Romano-British artefacts comprising of six brooches, a harness fitting and a cosmetic mortar have also been identified
- There are 62 early medieval (Anglo-Saxon and Viking Age) records comprising of a coin, 45 brooches, a buckle, a girdle hanger, a key, an ingot, a mount, four sleeve clasps, a spindle whorl, a strap fitting, and four pottery sherd locations
- There are 81 medieval records comprising of a box, a brooch, 12 buckles, 30 coins, a figurine fragment, two harness mounts, a jetton, a key, three mounts, a pendant, a pin, a purse hangar, four seal matrix', two strap ends, five strap fittings, two thimbles, three tokens, nine pottery sherd locations, and an unidentified object. There are 10 further medieval to post medieval artefacts recorded in the form of six pottery sherd locations, three buckles and a strap fitting
- There are 44 post medieval records comprising of a book fitting, three buckles, a button, two cloth seals, 16 coins, a coin weight, a dress hook, six jettons, a knife, a mount, a pin, a rivet, a spur, five strap fittings, a token and two unidentified objects
- A further 96 artefacts have been recorded where a date could not be confirmed and they broadly comprise of 43 pieces of metal working debris, 17 unidentified objects, three rings, four animal remain locations, six weights, six pottery sherd locations, three furniture fittings, two spindle whorls, two nails, a knife, a spoon, a brooch, a chain, a rivet, a possible sickle blade, a possible strap fitting mount, and a whetstone.

3.3.194 The HER includes an OUTLINE RECORD for a **low value** PAS recorded pit (**2377**) of evidential value, which contained two Roman coins, pottery (including samian and mortaria), animal bone and a metal object. The asset was located east of Dandy Corner and outside the Order Limits.

3.3.195 A **low value** Romano-British pottery scatter (**2157**) of evidential value were identified during a fieldwalking survey at Long Cooks. The artefacts are recorded within a parcel of land that crosses within the Order Limits, 500 m north of Mendlesham Road, and 1.5 km west of Cotton. A similar Romano-British period artefact scatter has also been identified at Mary's Field (**2158**) approximately 160 m to the south of **2157**, approximately 100 m west and 115 m east of the Order Limits.

Middlewood Green and Stowmarket

Non-Designated Heritage Assets

3.3.196 A **low value** bronze Sestertius of Nerva (AD 97) from the Rome mint (**2291**) of evidential value was recovered from farmland c. 550 m south-south-west of Saxham Street and c. 70 m west of the Order Limits.

3.3.197 A **low value** PAS findspot (**2180**) A copper-alloy coin of evidential value was located within the Order Limits south-east of Creeting St. Peter.

Needham Market and Ringshall

Non-Designated Heritage Assets

3.3.198 A **low value** Romano-British pottery vessel full of denarii of Antoninus Pius (AD 138-161) (**2296**) of evidential value was found during railway works on the outskirts of Needham Market and c. 150 m east of the Order Limits.

3.3.199 Iron Age, Romano-British and early medieval (Anglo-Saxon) period metalwork (**2071**, **2085**, **2165**) has been identified within a land parcel partially within the Order Limits and west of Needham Market. A series of undated field boundaries mapped by the NMP to the east have the potential to be associated with this period. These assets are of **low value** based on their evidential value. The Iron Age material is discussed in the appropriate section above. The PAS record a total of 89 PAS records within this land parcel, a majority of which are Romano-British artefacts including 62 coins, four brooches, two rings and an oval lead weight. Later period artefacts include:

- Two early medieval artefacts in the form of an incomplete sceate and an early medieval to medieval copper-alloy hooked tag
- A medieval silver farthing dating between AD 1227 and 1327
- Four post medieval artefact have also been recovered in the form of a worn silver threepence of Elizabeth I (AD 1561 to 1582), a copper-alloy shoe or knee-buckle frame, a copper-alloy mount or belt stiffener, and a copper-alloy Charles I rose farthing (AD 1625 to 1649).

3.3.200 Four **low value** PAS artefacts of evidential value were recovered from farmland outside Order Limits and near Needham Market. The finds comprise of a copper alloy lion head mount (**2170**), a blue greenish white enamelled brooch (**2185**), a silver denarius (**2205**) of Septimius Severus (AD 193-211), and an unidentified copper alloy object that may be a lock (**2186**).

3.3.201 A **low value** PAS findspot of a copper alloy coin (nummus) of Crispus dating to approximately AD 317 (**2168**) of evidential value has been recovered outside the Order Limits, south of Badley Hill (road) and north-east of findspot concentration (**2165**). Two **low value** coins (**2169**, **2172**) of evidential value are also recorded to the south-east of (**2168**)**,** as is a post medieval incomplete Elizabeth I silver sixpence (**2171**) to the south-west of (**2168**).

3.3.202 A **low value** Romano-British hoard (**2181**) of evidential and historical value was recovered from farmland outside the Order Limits near Needham Market. The hoard consists of a bronze bowl or vessel with zoomorphic handles, ornamented with enamel, a shallow bronze bowl, with pair of rings on each side for attaching the handles; and a pot of coin, broadly of Antonius Pius (AD 138 to 161).

3.3.203 A Roman pottery vessel full of silver denarii of Antoninus Pius (AD 138-161) (**2111**) possibly associated with early Saxon bronze vessels found during the 19th century construction of the railway at Gate Ford. Two possible locations for the findspot are suggested by the Suffolk HER; the first 160 m north-east of the B1113 Stowmarket Road, 500 m north-west of Needham Market and adjacent to the Order Limits; the second 100 m north-east of the B1113 Stowmarket Road, 170 m north-west of Needham Market and 260 m south-east of the Order Limits. The hoard is of **low value** based on evidential value.

3.3.204 A **low value** puddingstone quern (**2112**) of evidential value was found in a field to the north of Moat Farm in the 1960s. The findspot is approximately located 60 m north of the B1078, 1.7 km south-east of Ringshall and immediately north of the Order Limits.

3.3.205 A **low value** Romano-British enamelled trumpet brooch (**2388**) of evidential value was recovered from farmland c. 920 m north-west of Barking and within the Order Limits.

3.3.206 A widespread and dense scatter of Roman artefacts (**2134** and **2322**) of evidential value has been recovered from farmland within the Order Limits south-west of the centre of Barking. The asset is defined by numerous PAS records and also includes an HER record of a scatter of Romano-British pottery (**2135**). The individual assets are of **low** (**2322**) and **medium** (**2134**) **value**; however, the scale and density of the assemblage strongly suggests the presence of Romano-British settlement activity and the presence of below ground archaeological remains that could be of **medium value**. The finds assemblages (**2134**, **2322** and **2135**) were recovered from land to the south of a section of a **medium value** Roman road (**2113**) of evidential and historical value that represents Margary 34a road from Coddenham to north-east of Long Melford (Margary 1967). The presence of the road strongly supports the suggestion that the finds assemblages represent settlement activity, and given the amounts of coins, trade that was facilitated by the road. Of the 694 PAS findspots, 598 date to the Romano-British period in the form of 19 brooches, two bracelets, a buckle, a button, a button and loop fastener, a chain, 514 coins, a fastening, a zoomorphic (turtle/ tortoise) figurine, five finger rings, two furniture fittings, two keys, two locks, five metalworking debris locations, a lead miniature axe, a mount, two pins, a ring, a steelyard balance arm, a steelyard weight, two strap fittings, two tiles, 28 pottery sherd locations and two unidentified copper-alloy objects.

3.3.207 The setting of the Roman road (**2113**) and associated finds assemblage (**2134** and **2322**) are informed by the interrelationship of the assets and by the dispersed evidence of this Romano-British activity in the wider landscape. The setting of the assets, therefore, makes a moderate contribution to their values, and as the assets are located partially within the Project, the setting extends to the Order Limits.

3.3.208 PAS evidence within the land parcel (**2134**) also identified artefacts from other periods as follows:

- A Bronze Age incomplete copper-alloy sword or dagger blade fragment (**2060**)
- Two Iron Age to Romano-British incomplete copper-alloy artefacts, one zoomorphic vessel mount, and one centre-looped cosmetic mortar
- Four early medieval findspots including two strap fittings, a pottery sherd and a terminal collar from a cross-staff
- A total of 27 medieval findspots including a brooch, five buckles, seven coins, a harness pendant, three mounts, a ring, a strap end, three strap fittings and five pottery sherd locations. Five further medieval to post medieval artefacts have also been identified including a lead weight, a thimble, a ring, a bell and a mount
- A total of 21 post medieval artefacts including three buttons, seven coins, two mounts, a spur, a thimble, a tile, a token, three pottery sherd locations, and two weights
- A modern period lead food seal has also been identified
- A total of 36 further artefacts have been identified which could not be dated comprising of an architectural fragment, a copper-alloy blade, a coin, 20 metal working debris locations, two mounts, a pottery sherd location, a ring, an unidentified object, six weights, a whetstone, and a worked object.

3.3.209 A **low value** scatter of Romano-British metal detector finds (**2330**) of evidential value was recovered from land to the south-east of the finds noted above, south-west of Barking and outside the Order Limits. The finds include pottery, coins and a propellor-shaped late Roman belt mount.

3.3.210 A Romano-British artefact scatter (**2159**) of evidential and historical value has been identified during a metal detector survey. The scatter may possibly represent the site of a **medium value** house or farmstead. This asset groups together 67 PAS finds identified during the survey within the Order Limits, and near Barking. Broadly the metalwork were concentrated within the south-east of the land parcel and comprised of coins, brooches, a bracelet, a strap fitting. Pottery was also recorded including Samian ware. Broadly, 47 of the artefacts date to the Romano-British period and comprise of two brooches, a bracelet, 44 coins and a strap fitting. Further artefacts for other periods comprise:

- A prehistoric concentration of 47 stone implements
- Three medieval period coins and a medieval to post medieval candlestick holder
- Thirteen post medieval artefacts were also identified including seven coins, a pin, two pottery sherd locations, a purse, and two strap fittings
- A further unidentified and undated copper-alloy object was also identified.

3.3.211 The setting of the Romano-British element of asset (**2159**) is informed by its relationship with the dispersed evidence Romano-British activity in the wider landscape. The setting of the asset, therefore, makes a minor contribution to their values, and as the asset is located partially within the Project, the setting extends to the Order Limits.

3.3.212 A **low value** multi-period concentration of PAS artefacts (**2561**) of evidential value has been recovered from farmland c. 200 m from the Order Limits and north-east of

Barking. The Romano-British artefacts comprise an incomplete penannular brooch, and an incomplete trumpet derivative brooch.

3.3.213 A **low value** concentration of 12 PAS findspots (**2184**) of evidential value are located c. 180 m from the Order Limits south of Barking. Two of these artefacts date to this period and comprise of an incomplete brooch and a pottery sherd location. The following artefacts date to other periods as follows:

- Five medieval artefacts comprising three coins, a strap fitting and a buckle
- Three post medieval artefacts including two buckles and a jetton
- Two undated artefacts including a copper-alloy ring and metal working debris.

3.3.214 A **low value** PAS findspot (**2183**) of a coin of evidential value is located north-west of Order Limits east of Ringshall.

3.3.215 Two **low value** Roman coins of evidential value have been recovered from farmland south of Barking and outside the Order Limits. The coins comprise a silver mis-struck denarius of Gaius Marcius Censorinus, dating to AD 88 (**2567**), and a silver denarius of Gaius Caligula, dating to the period AD 37-41 (**2311**).

3.3.216 A further scatter of **low value** Romano-British metal finds and pottery (**2141**) of evidential value is recorded south of the Roman road (**2113**), east of finds assemblages (**2134**, **2135**), south-west of the centre of Barking and outside the Order Limits. The assemblage comprises 26 copper alloy coins, a complete copper alloy late Roman belt stiffener, a fragment of tile and over 100 pottery sherds. These may constitute further evidence of roadside settlement and/or trade.

3.3.217 A reputed assemblage of 200 Roman coins (**2390**) of evidential value was recovered from farmland c. 1 km south-west of the centre of Barking, just to the north of the Roman road (**2113**) noted above and 190 m east-north-east of an Order Limits access road. This siting of this **low value** asset appears to be unclear, but if valid, it provides more evidence of Romano-British roadside activity.

3.3.218 A **low value** scatter of Romano-British pottery (**2298**) of evidential value was recovered from land to the east of Barking Hall in Barking and c. 250 m east of the Order Limits.

3.3.219 A **low value** scatter of metalworking debris including an armlet and a butterfly mount dress fastener (**2137**) of evidential value were recovered by a metal detectorist from farmland 740 m north-west of the centre of Barking, 340 m south-south-west of Hascott Hill and 180 m south-east of the Order Limits.

3.3.220 A **low value** scatter of Romano-British pottery (**2139**) comprising one sherd of Oxford ware and six sherds of greyware of evidential value was recovered from farmland south-west of Barking and partially within the Order Limits. The large assemblage of metal and pottery finds (**2134**) is to the south-west, and it is possible that this small assemblage (**2139**) is the result of peripheral activity associated with the possible settlement site suggested by the larger assemblage.

3.3.221 A **low value** bronze handle from a wax spatula (**2160**) of evidential value was found by metal detector near Forward Green.

Great Bricett and Bramford

Non-Designated Heritage Assets

3.3.222 A **low value** concentration of 30 PAS findspots (**2187**) of evidential and historical value are located within the Order Limits south of Bildeston Road, west of Offton. Of these artefacts 13 date to this period and comprise of six coins, five brooches, a pendant and a stud or mount. The remaining artefacts date to other time periods as follows:

- One early medieval strap end
- A total of 13 artefacts including 10 coins, one buckle, one strap end and one seal matrix
- Two post medieval artefacts including a coin weight and a token.

3.3.223 A **low value** scatter of grey ware pottery sherds, four late third century BC coins, a fantailed brooch and fragment of a head stud brooch, a key, further coins and brooches and seal box lid (**2110**) of evidential value were found on disturbed soil along the route of the Bramford to Wattisham gas pipeline (the trench was not seen open). The site is located partially within the Order Limits, immediately south of Bildeston Road and 1.7 km south-east of Great Bricett.

3.3.224 A thin scatter of **low value** Romano-British pottery (**2142**) of evidential value was recovered from farmland during fieldwalking along the route of the Bramford to Wattisham pipeline c. 2.1 km south-east of Great Bricett and partially within the Order Limits.

3.3.225 Fieldwalking along the route of the Bramford to Wattisham pipeline identified a further **low value** pottery scatter with some tile fragments (**2143**) of evidential value c. 3 km south-east of Great Bricett and 10 m north-east of the Order Limits but crossed by a permanent access route.

3.3.226 During the same fieldwalking survey a **low value** sherd of Romano-British pottery and a sherd of medieval pottery (**2398**) were recovered from farmland c. 1 km south-west of Offton and within the Order Limits.

3.3.227 During the replacement of a gas pipeline along the route of the B1113 on the western flank of Bramford and c. 130 m south of the Order Limits, a **low value** metalled surface (**2341**) of evidential value was identified at a depth of c. 700 to 800 mm below the local ground level. It has been suggested the asset may be the remains of a Roman road surface.

3.3.228 A **low value** metal detected Romano-British period metalwork scatter (**2149**) of evidential value has been recovered from farmland outside the Order Limits south of Offton. Eighteen PAS artefacts are noted within this location, of which 16 date to this period comprising 14 coins, a copper-alloy mount and a pottery sherd location. A medieval period pendent loop and a post medieval coin have also been identified.

3.3.229 A **low value** PAS location of six artefacts (**2179**) dating to this period of evidential value have been recovered from farmland outside the Order Limits, near Willisham Tye and at the same location as the findspot of an Iron Age to early Romano-British cosmetic mortar (**2096**). The artefacts comprise of four coins, a strap stud or mount and a key.

3.3.230 A **low value** Romano-British artefact scatter (**2161**) of evidential value has been recorded as metal detector finds outside the Order Limits, near Offton.

3.3.231 A **low value** multi-period concentration of PAS artefacts (**2562**) of evidential value has been recovered from farmland c. 150 m from the Order Limits and west of Offton. The Romano-British artefacts comprise 26 coins, five brooches, three bracelets, one nail and an unidentified object.

3.3.232 A **low value** multi-period concentration of PAS artefacts (**2563**) of evidential value has been recovered from farmland within the Order Limits and west of Offton. The Romano-British artefacts comprise six coins, fragments of five brooches, a stud and a pendant.

3.3.233 A **medium value** area of Romano-British occupation is indicated south-east of Tollemach Hall (**2145**) south-west of the Order Limits and south-east of Great Bricett. Settlement activity has been identified through cropmark observations on aerial imagery, and 27 PAS finds (**2146**). Of the PAS finds, 24 date to the Romano-British period and comprise of 17 coins, one ring, one steelyard weight, one nail, one mirror, one harness fitting and two pottery sherd locations. Three further medieval to post medieval artefacts have also been identified comprising of a lead pot mend, a cooper-alloy pot fragment and a strap fitting.

3.3.234 The setting of the asset (**2145**) is informed by its relationship with the dispersed evidence Romano-British activity in the wider landscape. The setting of the asset, therefore, makes a minor contribution to its value, but as the asset is located at some distance from the Project, the setting does not extend to the Order Limits.

3.3.235 Two **low value** Roman brooch fragments (**2392**) of evidential value were recovered from farmland c. 950 m south-east of Offton and c 70 m north of the Order Limits.

3.3.236 The suspected route of the **low value** Roman Pye Road (**2320**) is of evidential value and locally links Sproughton in the south with Great Blakenham in the north. The route largely follows that of the current Loraine Way (B1113) and crosses the Order Limits.

3.3.237 A **low value** scatter of Romano-British PAS metal detector finds (**2323**) of evidential value was recovered from land west of Bramford and outside the Order Limits. The scatter included three bronze bow brooches and a bronze figurine.

3.3.238 A **low value** multi-period concentration of PAS artefacts (**2565**) of evidential value has been recovered from farmland partially within the Order Limits and west of Bramford. The Roman artefact comprises a dupondius of Claudius I (c. AD 43-66).

3.3.239 Two sherds of **negligible value** possibly Romano-British pottery of evidential value was recovered in a multi-phase finds assemblage (**2338**) during a fieldwalking survey ahead of the Bramford to Wattisham Gas Pipeline. The find site is located within the Order Limits c. 1 km north-east of Flowton.

3.3.240 A **low value** scatter of Romano-British artefacts (**2057**) of evidential value comprising 12 bronze coins, one silver coin, a Colchester type brooch and 13 pottery sherds was recovered from farmland (Field 2) at Rook Hill Farm c. 1.6 km north-west of Somersham and c. 190 m north-east of the Order Limits.

3.3.241 A **low value** multi-period concentration of PAS artefacts (**2564**) of evidential value has been recovered from farmland c. 10 m from the Order Limits and east of Candle Street. The Roman artefact comprises a copper alloy coin.

3.3.242 A **low value** artefact scatter of grey ware pottery (**3020**) was found along a footpath c. 60 m west of the Order Limits at Burstallhill. There was also an illegible coin from the 2nd or early 3rd century. These assets have evidential value.

Early Medieval

3.3.243 The early medieval period is represented in Section B by artefact scatters and findspots of pottery and metalwork recorded by the Suffolk HER and by the Portable Antiquities Scheme.

Wortham, Mellis and Gislingham

Non-Designated Heritage Assets

3.3.244 A **low value** multi-period concentration of ten PAS artefacts (**2558**) of evidential value has been recovered from farmland partially within the Order Limits and south-west of Palgrave. The early medieval artefacts comprise fragments of three brooches and a Viking Age ingot.

3.3.245 A **low value** multi-period concentration of six PAS artefacts (**2559**) of evidential value has been recovered from farmland partially within the Order Limits and south-west of Palgrave. The early medieval artefacts comprise two brooches, a pendent and a wrist clasp.

3.3.246 A **low value** multi-period concentration of PAS artefacts (**2560**) of evidential value has been recovered from farmland partially within the Order Limits and east of Wortham. The early medieval artefacts comprise a fragment of a saucer or disc brooch, a fragment of a cruciform brooch, and a finger ring.

3.3.247 Two **low value** PAS finds were recovered from farmland to the north-west of Thrandeston and outside the Order Limits. The finds comprise a complete copper-alloy finger ring (**2569**), and a weight or whorl of globular form with a central hole (**2568**).

3.3.248 A **low value** PAS find of evidential value comprising late Anglo-Saxon cast Borre-style copper alloy disc brooch (**2570**) was recovered from farmland west of Thrandeston and outside the Order Limits.

3.3.249 A **low value** multi-period concentration of 17 PAS artefacts (**2176**) of evidential value has been recovered from farmland c. 160 m the Order Limits and east of Wortham. The early medieval artefacts comprise six brooches, a wrist clasp and a pendent.

3.3.250 A small **low value** assemblage of PAS finds (**2198**) of evidential value has been recovered from farmland to the east of Gislingham. The finds comprise:

- An early medieval (Anglo-Saxon) coin, buckle and brooch
- A Romano-British brooch
- A medieval coin
- A post medieval coin and ring.

3.3.251 Archaeological evaluation (trial trenching) of land for the A143 Scole-Stuston bypass identified **low value** assets comprising early Saxon pottery and bow brooch and middle Saxon pottery and coin (**2150**) of evidential value approximately 1.1 km east of Wortham and 50 m north of the Order Limits.

3.3.252 A **low value** unstratified gold Saxon shilling (**2510**) of evidential value was found during an archaeological evaluation at Grange Farm, c. 1.8 km east of Wortham and c. 20 m south of the Order Limits.

3.3.253 A **low value** early medieval silver coin (**2199**) has been outside of the Order Limits, near Wortham. This artefact is of evidential value.

3.3.254 A **low value** small concentration of two early medieval PAS artefacts (**2203**) are recorded approximately 200 m north-west of the Order Limits, and 500 m north-east of Long Green. The artefacts comprise of an incomplete copper-alloy early Anglo-Saxon long brooch and the foot of second a copper-alloy long early Anglo-Saxon brooch.

3.3.255 A **low value** early medieval (Early Anglo-Saxon) inhumation (**2191**) was identified during an excavation at St. John's House Hospital, later disturbed by a modern period pit approximately 80 m south-west of the Order Limits, 60 m south of Lion Road, and 1.5 km south-west of Palgrave. This asset is of evidential and historical value.

3.3.256 A **low value** early medieval axe-shaped mount (**2204**) of evidential value has been recovered from farmland outside the Order Limits and near Palgrave.

3.3.257 A **low value** concentration of eight PAS artefacts (**2206**) of evidential value was recovered from farmland outside the Order Limits near Wortham. Five assets at this location date to this period and comprise of a silver ingot, a sleeve clasp, a whetstone and two brooches. Three further artefacts dating to different periods are also recorded as follows:

- One Bronze Age fragment of metal working debris
- An Iron Age fragment of pottery (**2076**)
- A medieval period key.

3.3.258 A **low value** PAS recorded Anglo-Saxon buckle (**2339**) of evidential value was recovered from land north-east of Wortham and outside the Order Limits.

3.3.259 A **low value** PAS recorded Anglo-Saxon gold pendant (**2340**) of evidential value was recovered from land east of Wortham and outside the Order Limits.

3.3.260 A **low value** scatter of seven PAS artefacts is recorded at this location of which five date to the early medieval period including two bronze stirrup terminals, a bridle fitting, a strap end and a brooch (**2196**) are noted near Mellis. This asset is of evidential value.

3.3.261 The archaeological monitoring of a pipeline in 1955 identified an Iron Age 'hut site' (**2069**) and another 'hut' of possible early medieval (Anglo-Saxon) date (**2195**). Ditches found on site were also found to contain 'black earth' deposits often found during this period as well as burnt stones, animal bones, worked flint and pottery sherds described as brownish black with some having fingertip ornamentation. It is likely these remains constitute the remains of **medium value** settlement activity of evidential and historical value.

3.3.262 The setting of asset (**2195**) is informed by its relationship with the dispersed evidence of Anglo-Saxon activity in the wider landscape, which likely includes the settlement of Wortham immediately to the west and that was recorded in the Domesday Book. The setting of the assets, therefore, makes a moderate contribution to its value, but as the

asset is located at some distance from the Project, the setting does not extend to the Order Limits.

3.3.263 A **low value** artefact scatter (**2193**) has been identified outside the Order Limits, near Gislingham and at the same location as a group of 40 PAS artefacts (**2174**) of which four early medieval artefacts have been recovered. The artefact scatter (**2193**) suggests this is the location of possible Anglo-Saxon domestic occupation identified by pits, postholes and pottery, as well as some evidence of medieval and post medieval activity.

3.3.264 A **medium value** scatter of PAS recorded multi-period metal detector finds (**2369**) of evidential value has been recovered from land to the north and outside the Order Limits. The finds assemblage includes Anglo-Saxon brooches and dress fittings suggestive of a cemetery site. The assemblage also includes Iron Age and Romano-British finds.

3.3.265 The setting of the possible cemetery suggested by the Anglo-Saxon finds (**2369**) by its rural location to the north of Gislingham and the Dove river. Gislingham is recorded in the Domesday Book of 1086, and it is possible the cemetery shares some contemporaneity with the settlement. The setting of the asset, therefore, makes a moderate contribution to its value, but it does not extend to the Order Limits.

3.3.266 A scatter of **low value** Middle Saxon Ipswich Ware pottery sherds (**2188**) of evidential value were recovered from farmland c. 500 m north-east of Gislingham and within the Order Limits.

3.3.267 A low value Middle Saxon pottery sherd with circular stamp decoration (**2200**) and of evidential value was recovered from a field to the north-easy of Ivy House Farm (**2257**) in Gislingham and c. 170 m south-west of the Order Limits.

Finningham, Mendlesham and Old Newton

Non-Designated Heritage Assets

3.3.268 A **low value** early medieval artefact scatter (**2281**) of evidential value is recorded at ‘Bratts Field’ approximately 10 m south of the Order Limits, immediately south of Mendlesham Road, and 1.3 km north-west of Mendlesham. A fieldwalking survey identified 12 early medieval pottery fragments.

Needham Market and Ringshall

3.3.269 A **low value** artefact scatter (**2190**) dating to this period and of evidential value are recorded approximately 250 m east of the Order Limits, and 350 m north-west of Needham Market at their closest point. The artefacts were identified via metal detector and include fragments of a possible mid. to late Anglo-Saxon period double-hooked fastener and a 9th century strap end. Later period artefact has also been identified as follows:

- Four medieval artefacts comprising of a token, strap end, buckle and a seal
- Eight post medieval artefacts comprising of two coins, two bells, a buckle, a strap fitting, a seal and a token.

3.3.270 A **low value** multi-period concentration of PAS artefacts (**2561**) of evidential value has been recovered from farmland c. 200 m from the Order Limits and north-east of Barking. The early medieval artefact comprises a probable strap fitting.

Great Bricett and Bramford

Non-Designated Heritage Assets

3.3.271 A **low value** multi-period concentration of PAS artefacts (**2562**) of evidential value has been recovered from farmland c. 150 m from the Order Limits and west of Offton. The early medieval artefact comprises an Anglo-Scandinavian buckle frame.

3.3.272 A **low value** multi-period concentration of PAS artefacts (**2563**) of evidential value has been recovered from farmland within the Order Limits and west of Offton. The early medieval artefact comprises a strap end.

3.3.273 A **low value** metal detected early medieval (early Anglo-Saxon) wrist clasp (**2197**) has been identified within a metal detected scatter (**2285**) near Somersham and outside the Order Limits. This asset is of evidential value.

3.3.274 A **low value** early medieval (Anglo-Saxon) artefact scatter of bronze bowls (**2194**) has been identified during the construction of the railway in the 19th century at `Gate Ford', within the Order Limits overhead line route, 160 m south-east of the Order Limits, 100 m north-east of Badley Hill, and 550 m north-west of Needham Market. This asset is of evidential value.

3.3.275 A **low value** concentration of artefacts (**2192**) has been identified approximately 160 m north-east of the Order Limits, 5 m north-east of Ipswich Road, and 730 m north-west of Little Somersham. Of the artefacts two sherds of earl-medieval pottery have been recovered, as well as undated burnt flint and post medieval pottery, brick and clay pipe. These artefacts are of evidential value.

3.3.276 A **low value** scatter of Late Saxon coins and a bronze mount (**2325**) of evidential value was recovered from land along Bullen Lane, c. 950 m west of Bramford and partially within the Order Limits.

3.3.277 The Essex HER holds two OUTLINE RECORDS for this section which represent the geophysical survey and subsequent archaeological evaluation trenching of two parcels of land close to the southern limit of Section B. It is believed that the work was carried out in support of an application to construct a solar farm and battery. The first parcel (**2316**) covers a large area between Somersham to the north-east and Flowton to the south-west and incorporate a portion of the Order Limits. The second parcel (**2319**) lies immediately to the north-east of Burstall hill and partially within the Order Limits. Following the geophysical survey, seven areas of interest were identified, and 175 evaluation trenches were excavated to investigate the remains. The evaluation identified only small-scale evidence of Bronze Age, Iron Age, Romano-British, Early and Middle Anglo-Saxon periods. Most activity, however, appears to have its origins in the Late Anglo-Saxon period, with subsequent evidence from throughout the high medieval period (11th-14th centuries) suggestive of the presence of a number of small to moderately sized farmsteads. There was evidence for crop processing, small-scale industrial activity/metalworking, cattle, sheep/goat and pig rearing, and perhaps trade with coastal communities suggests by marine shells. After the 14th century, activity appears to have been scaled back, coinciding with a wider trend during this period of settlement shrinkage and abandonment. There was some evidence of ongoing agricultural and pastoral management of the landscape on into the post medieval period. The late Anglo-Saxon into the medieval period remains of a settled landscape are of **medium value** based on their evidential value. The identified archaeological remains from other periods are of **low value** based on their evidential value.

3.3.278 The setting of the assets (**2316**) and (**2319**) has been eroded through boundary loss, although much of the land remains in agricultural production informing the setting to a degree. The nearby settlements of Flowton, Somersham, (Little) Blakenham and Bramford are recorded in the Domesday Book of 1086, however, help to define the late Anglo-Saxon although none contain surviving structural remains. The setting of the assets, therefore, makes a moderate contribution to their values and due to the Proximity of the Project, the setting extends to the Order Limits.

3.3.279 A **low value** PAS recorded metal detector find of a silver continental series sceat from Domburg in Frisia, minted c. AD 700-715 (**2332**) and of evidential value is recorded within Bramford outside the Order Limits. A **low value** Anglo-Saxon urn (**2489**) of evidential value is recorded by the HER as originating from the same location.

3.3.280 A **low value** multi-period concentration of PAS artefacts (**2564**) of evidential value has been recovered from farmland c. 10 m from the Order Limits and east of Candle Street. The early medieval artefacts comprise a complete copper alloy late Anglo-Saxon stirrup strap mount and an incomplete Late Anglo-Saxon lead model for a strap end.

Medieval

3.3.281 The medieval period is represented in Section B by archaeological remains comprising evidence of domestic activity, agricultural practice, a moated site, and scatters and findspots of pottery and metalwork recorded by the Suffolk HER and by the Portable Antiquities Scheme.

Wortham, Mellis and Gislingham

Designated Heritage Assets

Wortham CP

3.3.282 The Grade I listed ‘Church of St Mary the Virgin’ (**1032741**) is located c. 1.6 km north of the centre of Wortham, immediately north of Wigwam Hill and c. 1.3 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The asset has a 12th, possibly 11th century round tower, whilst the nave, aisles and chancel date to the mid to late 14th century. The clerestory was added in the early 15th century with alterations c. 1790 and restoration in 1856 and 1891-3. The church is constructed of flint rubble with some herringbone coursing in tower. The dressings are of ashlar and red brick, the aisles are cement rendered and it has glazed pantile roofs. The three-stage west tower, which is derelict, has a diameter of 29 feet, is 62 feet high and is said to be the largest Norman round tower in England.

3.3.283 The setting of the asset is informed by its surrounding graveyard, which is defined by high, tree lined hedgerows largely obscuring views in and out. The setting is further informed by the asset’s relationship with the scoped out Grade II listed Wortham War Memorial (**1470613**), which is located at the southern edge of the graveyard. There are some broken views to the Hall Farm complex to the north, which includes two post medieval Grade II listed assets further informing setting, as does the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but

due to distance, its mature graveyard and screening in the intervening landscape by development and mature tree lined hedgerows and copses, the setting does not extend to the Order Limits.

3.3.284 The Grade II listed 'Willow Corner Cottage' (**1032772**) is located on the western flank of Church Lane, at the northern limits of Wortham and c. 1 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, and historical values. The asset dates to the early 16th century and comprises a plastered timber frame, two storey house. A chimney stack and floor were inserted, and a parlour bay added in the early 17th century with further alterations occurring in the 20th century.

3.3.285 The setting of the asset is informed by its roadside village location and by its mature tree lined grounds. The setting is further informed by the asset's relationships with two post medieval Grade II listed buildings in the village to the south and by the surrounding agricultural landscape with which the asset has a historical relationship. twenty-first century residential development to the east has slightly eroded the asset's link to the agricultural land, but the buildings are sympathetic and are of the local architectural vernacular. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its restricted village nature, the setting does not extend to the Order Limits.

3.3.286 The Grade II listed 'La Chaume' (**1352262**) is located on the north-western flank of an unnamed road in Wortham to the south-west of Church Road, and c. 1.1 km to the west of the Order Limits. The asset is **medium value** based on its designation and its evidential, historical and aesthetic values. The asset comprises a plastered timber frame structure with a thatched roof originally built in the 15th century, with a floor and chimney stack added in the 16th century and further alterations in the 19th century.

3.3.287 The setting of the asset is informed by its village location, by its relationship with the village green to the south-east, and by its relationships with other listed assets within the settlement and with non-designated buildings, which positively contribute to the character of Wortham. The setting is further informed by the agricultural landscape to the north-west, with which the asset has a historical relationship. Formally moderately isolated on the unnamed road, there has been some later 20th century infill development, although the asset remains uncrowded with views to the green and the farmland. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the village and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.288 The Grade II listed 'House at Rogers Corner Immediately East of Oakcroft' (**1182882**) is located at the southern limit of an unnamed trackway off the southern flank of Wash Lane in Wortham, and c. 1.5 km west of the Order Limits. The asset is **medium value** based on its designation and its evidential, historical and aesthetic values. The asset comprises a plastered timber frame structure with a thatched roof dating to the early 16th century with alterations made in the 17th and 20th centuries.

3.3.289 The setting of the asset is informed by its village location and by its relationships with other listed assets within the settlement and with non-designated buildings, which positively contribute to the character of Wortham. The setting is further informed by the agricultural landscape to the south, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the village and immediate agricultural landscape, the setting does not extend to the Order Limits.

Palgrave CP

3.3.290 The Grade I listed 'Church of St Peter' (**1032776**) is located at the heart of the settlement of Palgrave, within the Palgrave Conservation Area (**CA46**) and c. 450 m north-east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church has 14th century origins, a 15th century nave and south porch, an early 18th century cancel and was restored in 1861. The church is constructed of flint rubble, largely knapped, some squared, with flushwork in the south porch. There are ashlar dressings, and the chancel sits on a red brick plinth. The steeply pitched roof is topped with plain tiles.

3.3.291 The setting of the asset is informed by its location at the centre of the settlement of Palgrave, which itself was recorded in the Domesday Book. The setting is further informed by its situation of the fossilised medieval street plan and by its relationship with several medieval and post medieval listed buildings arranged around the core of the settlement. The setting is further informed by the church's graveyard, which includes mature trees and is defined by a low flint and red brick wall. There has been some limited 20th century residential in-fill development, but this is largely sympathetic to the local architectural vernacular. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its enclosed situation within the settlement, the setting does not extend to the Order Limits.

3.3.292 The Grade II listed 'Bridge Farm House' (**1182078**) is located on the southern edge of Diss, 910 m north-north-west of the centre of Palgrave and 800 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, and historical values. The asset comprises a 15th century timber frame house, which was partially rebuilt and altered in the 16th century and a chimney stack was inserted in the 17th century. The roughcast asset was reroofed with pantiles and partly encased in colourwashed bricks during the 19th century.

3.3.293 The setting of the asset is informed by its location within the wider former Bridge Farm complex and by its river valley location with the Waveney river c. 80 m to the north. The setting is further informed by the asset's relationship with the post medieval Grade II listed elements of the faming complex Bridge Farm Cottages (**1032785**) and Denmark Bridge House (**1352269**), which are reported in the appropriate section below. The surrounding agricultural landscape, with which the asset has a historical and former functional relationship, also informs the setting. The former farming complex has, however, been divided up in to separate residences with associated property boundaries. The setting of the asset, therefore, makes a moderate contribution to the value of the asset, but due to its setting being restricted to its former farmyard location and the immediate agricultural landscape, it does not extend to the Order Limits.

3.3.294 The Grade II listed 'Fairways' (**1284640**) is located off the south-eastern flank of Priory Road in Palgrave, and c. 340 m east of the Order Limits. The asset is **medium value** based on its designation and its evidential and historical values. The house dates to the early 16th century and comprises a plastered timber frame structure. A floor and chimney stack were added in the 17th century.

3.3.295 The setting of the house is informed by its village location and by its relationships with non-designated buildings within the settlement, which positively contribute to the character of Wortham. The setting is further informed by the agricultural landscape to the south-east, with which the asset has a historical relationship. There has been some infill development within the village, particularly in the latter half of the 20th

century, but the asset remains uncrowded. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the village and immediate agricultural landscape, the setting does not extend to the Order Limits.

Stuston CP

3.3.296 The Grade II* listed 'Church of All Saints' (**1032794**) is located to the east of Stuston Lane within the dispersed settlement of Stuston, and c. 2.2 km east of the Order Limits. The asset is **high value** based on its designation and its evidential, historical, aesthetic, and communal values. The church's tower dates to the 12th or 13th centuries, with the nave, south porch and chancel rebuilt in the 15th century. the chancel was restored in 1860-2 when the north transept and north vestry were added. The asset is constructed of flint rubble with ashlar dressings and has a Staffordshire tiled roof.

3.3.297 The setting of the church is predominantly informed by its associated graveyard, and its relationships with the non-designated rectory immediately to the west and Stuston House to the north. The grounds of the church, rectory and house are now heavily wooded and none of the buildings can be seen from the external road network and likewise there are no views from the church to the surrounding landscape. The secluded setting of the church makes a considerable contribution to its value, but due to the tree cover and because the Project is located in neighbouring parishes, the setting does not extend to the Order Limits.

Thrandeston CP

3.3.298 The Grade I listed parish 'Church of St Margaret' (**1032763**) is located on the eastern outskirts of Thrandeston, within the Thrandeston Conservation Area (**CA43**), on the north flank of the unnamed east/west aligned road that runs through the settlement and c. 1.6 km east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The church predominantly dates to the 15th century, although a 13th century chancel survives. The asset was restored c. 1870-80. The asset is built of knapped flint with ashlar dressings and all but the tower is rendered with cement.

3.3.299 The setting of the asset is informed by its location on the eastern edge of the settlement of Thrandeston, which itself is mentioned in the Domesday Book. The setting of the asset is further informed by its location on the fossilised medieval street plan of the settlement, although views to the built elements of the village to the west are obstructed by the mature hedged boundary and tree cover of the church's graveyard. There is a more open view to the south, which takes in elements of the Church Farm complex and agricultural land with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its enclosed location within the settlement, the setting does not extend to the Order Limits.

3.3.300 The Grade II listed 'Rectory Farm House' (**1352256**) is located 140 m west of an unnamed road, 170 m south-south-west of New Road, c. 820 m north-east of Thrandeston and c. 990 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the early-to-mid 16th century, it had a chimney stack inserted in the 17th century, was altered and extended in the 19th century and was further altered in the 20th century. The asset comprises a plastered timber frame structure with brick extensions and some brick casing.

3.3.301 The setting of the asset is informed by its secluded farmyard location and by its relationship with its non-designated outbuilding. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and functional relationship. The outbuildings, however, appear to be largely later 20th century in date and have replaced the farming complex recorded on the first edition OS map of 1885. The boundaries of the farming complex are defined by mature tree belts affording the asset seclusion and privacy. Due to the loss of the earlier farm buildings, the setting of the asset makes a moderate contribution to its value, but due to overall distance and screening by the farmyard boundaries and the topography, development, vegetation and infrastructure of the intervening landscape, the setting does not extend to the Order Limits.

3.3.302 The Grade II listed 'Wood Hall Manor' (**1032762**) and 'Abbey Farm House' (**1182515**) are located to the south-west of Abbey Close, between 1.1 km and 1.2 km to the east of the Order Limits. The assets are **medium value** based on their designations and their evidential and historical values. Wood Hall Manor dates to the late 15th or early 16th centuries, a chimney stack was added in the late 16th century and was further altered and extended in the 17th century. The timber frame structure was encased in colourwashed bricks in the 19th century when it was also reroofed with pantiles. Abbey Farmhouse has early 16th century origins, it had a floor and chimney inserted and was raised in the 17th century with further alterations carried out in the early 19th century. The asset comprises a plastered timber frame structure with a pantile roof.

3.3.303 The setting of the assets is shared and informed by their interrelationship and by their relationships with the non-designated buildings within the farming complex. The setting is further informed by the surrounding agricultural landscape with which the assets have historical relationships and in the case of the farmhouse, an ongoing functional relationship. The assets are associated with large, wooded gardens and paddocks defined by tree lined hedgerows which diminish outward views and contribute to a secluded setting. The setting of the assets, therefore, makes a considerable contribution to their values, but as it is restricted to their associated grounds and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.304 The Grade II listed 'Styles Piece' (**1032764**) is located towards the northern extent of Thrandeston c. 430 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the early 16th century, was probably extended in the 17th century and was altered in the 20th century. The asset comprises a timber frame structure, part exposed and part plastered, with a thatched roof.

3.3.305 The setting of the asset is informed by its village location on the flank of Little Green and by the asset's relationship with other listed buildings arranged around the village green and non-listed buildings which positively contribute to the character of the small settlement. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The asset is situated within a mature garden defined by hedgerows with some tree cover, as are most of the properties within the village. The mature vegetation screens most external views from out of the settlement creating a compact and secluded setting. The setting of the asset, therefore, makes a considerable contribution to the value of the asset, but as it is restricted to the village and immediate agricultural landscape, the setting does not extend to the Order Limits.

Burgate CP

3.3.306 The scheduled monument 'Burgate Hall moated site' (**1017331**) is located in Burgate, c. 1.5 km south of Wortham, 300 m west of the Church of St Mary (**1032797**), 470 m north of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The moat surrounds a sub-rectangular central platform which has maximum internal dimensions of 95 m north/south by 65 m east/west and is raised approximately 0.5 m above the prevailing ground level except at the southern end. The western, northern and eastern arms of the moat range between 9 m and 13 m in width and remain open containing water up to a depth of up to 1.75 m. The southern arm has been partly infilled allowing access to the interior.

3.3.307 The Grade II* listed 'Hall Farm House' (**1352234**) stands just inside the inner edge of the southern arm of the scheduled moat. The asset is of **high value** based on its designation and its evidential and historical values. The farmhouse is likely to be part of a former larger house or, possibly, a court hall built around 1400, potentially for Sir W. Burgate. The larger building was probably part demolished and reordered in 1587 and then altered and extended in the 19th century. The house is plastered timber frame structure with red brick additions and a steeply pitched plain tiled roof. The house is excluded from the scheduling, although the ground beneath is included. The farmhouse is situated within the 19th century Burgate Hall Farmstead (**2362**), which due to its moderate survival is of **medium value** based on its historical and evidential values.

3.3.308 The setting of the scheduled monument and listed building is shared and informed by their long historical relationship, their location within the bounds of Burgate deer park (**2354**), by their relationship with the scheduled monument 'Medieval ringwork in Burgate Wood' (**1016699**) 150 m to the east, by their relationships with the Grade II* listed Church of St Mary (**1032797**) 300 m to the east and the Grade II listed, post medieval 'Barn About 70 m South East of Hall Farm House' (**1032798**). The setting is further informed by their relationships with the non-designated buildings of the working farm complex, several of which are recorded on the first edition OS map of 1885 (**2362**). Although there has been some small-scale residential development 320 m to the east along the western flank of sycamore view north of the church, the surrounding agricultural landscape also contributes to the assets' setting (Figure 7.12.F25_VP2.04 Viewpoint 2.04: Burgate Road, Burgate; document reference 7.12). The setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance and partial screening by mature tree lined hedgerows, the setting does not extend to the Order Limits.

3.3.309 The scheduled monument 'Medieval ringwork in Burgate Wood' (**1016699**) is located within Burgate Wood, 150 m west of the Burgate Hall moated site scheduled monument (**1017331**), 390 m north of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The ringwork survives as a sub-circular enclosure with maximum overall dimensions of approximately 76 m north-south by 70 m east-west, surrounded by a ditch and inner bank. The ditch, which ranges between 8 m and 15 m in width and occasionally contains water, has become partly infilled, but remains open to a depth of up to 2.2 m, measured from the external ground surface. The bank, constructed of earth quarried from the ditch, is up to 10 m wide at the base and still stands to a height of around 1 m, although originally it would have been higher and surmounted by a timber palisade. The ringwork is believed to be the site of a medieval manor house, probably dating from soon after the Norman Conquest, and fragments of pottery

found on the site provide evidence of occupation during the 11th and 12th centuries. According to the Domesday survey of 1086, there was a substantial manor in Burgate before 1066, held by a free man named Wulfwin. After the Conquest the tenant was Adelhelm under the overlordship of Aubrey de Vere, and by the 13th century it was held by the de Burgate family, thought to be descendants of Adelhelm, in whose hands it remained until the early 15th century. The ringwork was probably abandoned when the moated manor house to the east of it was constructed.

3.3.310 The setting of the asset would have been informed by its relationships with the Grade II* listed Church of St Mary (**1032797**) and the Burgate Hall moated site scheduled monument (**1017331**) and the Grade II* listed Hall Farm House (**1352234**), which likely constitute its manorial successor. Its location within the wood, however, has completely removed its links to the historic landscape, and so the setting of the asset does not contribute to its value and does not extend to the Order Limits.

3.3.311 The scheduled monument 'Moated site at Stubbing's Entry' (**1016700**) is located c. 1.4 km south-west of the centre of Mellis, immediately south and west of Slough Road and c. 540 m west of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The monument comprises a moated site located at the western end of Stubbing's Green, against the parish boundary between Burgate and Botesdale to the north. It is identified as the home of the De Stebbing family who are documented in local records of the 13th century. An early 14th century document refers to `land called Stubbynge' belonging to Bury St Edmund's Abbey. The moat, which contains water, ranges in width from about 5 m on the north side to 12.5 m on the south and remains open to an average depth of 1.8 m, surrounding all but the south-western part of a sub-rectangular central area with overall internal dimensions of approximately 117 m east / west by 85 m north / south. It is thought that the moat continues as a buried feature around the south-western part of the enclosure, where the line of the infilled southern half of the western arm is marked by a shallow, east facing scarp. The central area is divided into two enclosures by an internal extension of the moat approximately 11 m wide and originally continuous, which runs northward from the southern arm for a distance of about 50 m, with a shorter length of about 15 m, offset to the west, running southward from the northern arm. Between the two is an infilled section, marked by a depression about 0.5 m deep in the ground surface and shown as still largely open on a map made in 1840. Within the eastern and slightly smaller of the two enclosures is a sub-rectangular pond, connected by a short channel to the eastern arm of the moat and by the dry remains of a partly infilled ditch to the central dividing arm. Excavations within the western enclosure in the 1930s and found evidence of medieval occupation in the form of building materials, including roof tile, fragments of medieval pottery, and a layer of oyster shells described as a 'pavement' about 0.45 m below the present surface. The present Grade II listed 17th century house, Stubbing's Entry (**1181712**), stands in the south-eastern corner of the moated site and is excluded from the scheduling, together with all associated and later additions, although the ground beneath all these features is included.

3.3.312 The setting of the asset is informed by its relationship with the later farmyard assets and outbuildings both within the monument and immediately to the south. The setting is further informed by the now wooded parcel of land immediately to the east and labelled 'Studding's Green' on the first edition OS map of 1885. The surrounding agricultural landscape, with which the asset has historical and functional relationship, also contributes to the coherence of the setting. The modern hanger style barns to the south of the asset are, however, intrusive and detract from the setting. The setting of the asset, therefore, makes a moderate contribution to value of the asset,

but due to screening by the modern farmyard element and the tree cover of Studding's Green, the setting does not extend to the Order Limits.

3.3.313 The Grade II* listed 'Church of St Mary' (**1032797**) is located in the dispersed settlement of Burgate, to the north and west of Sycamore View and c. 580 m north-west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church dates to the mid to late 14th century whilst the windows were replaced in the 15th century when the south porch was added. The nave and chancel were restored in 1864-5. The church is constructed of flint rubble with ashlar dressing and has some cement rendering. The nave is stone tiled whilst the chancel is covered by Welsh slate.

3.3.314 The setting of the church is informed by its settlement location and by its situation within the attendant graveyard, which is defined by mature, tree lined hedgerows. The setting is further informed by the asset's relationship with the Hall Farm Farmstead to the west which includes the Grade II* farmhouse (**1352234**) and a Grade II barn (**1032798**). The surrounding agricultural landscape, with which the asset has a historical relationship, also informs the setting (Figure 7.12.F25_VP2.04 Viewpoint 2.04: Burgate Road, Burgate; document reference 7.12). The setting of the church, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.315 The Grade II listed '61, Great Green' (**1032800**) is located c. 1 km south-west of the centre of Wortham, on the southern edge of Burgate Great Green south of Shepherds Lane, c. 1 km north of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The plastered, part brick cased, timber frame house was built around 1520, and a chimney stack was added in the 17th century when a floor was also inserted, and the asset was reroofed. The thatched house was further extended and altered in the 19th and 20th centuries.

3.3.316 The setting of the asset is informed by its location within the dispersed settlement around the Burgate Great Green to the north. The setting is further informed by surrounding agricultural landscape with which the asset has a historical relationship. The asset has a large garden that includes mature trees and is defined by mature hedgerows, which restrict views of the green to the north and the farmland to the south. The peaceful rural setting makes a considerable contribution to the value of the asset, but due to its restricted village focus, the setting does not extend to the Order Limits.

Botesdale CP

3.3.317 Grade I listed 'Church of St Mary' (**1241122**) is located on the western flank of the B1113 Finningham Road, c. 500 m south-south-east of Rickinghall and c. 70 m west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The now redundant church dates to the mid-to-late 14th century with mid-15th century work including the rebuilding of the nave and the addition of the south porch. The asset was thoroughly restored in 1868 by W.C. Fawcett. The church is built of flint rubble with ashlar and red brick dressings and slated and plain tiled roofs. Excavations in the south-west corner of the nave and outside the main structure were carried out by Basil Brown in 1953. The internal excavation revealed a clay floor and 13th century pottery, whilst externally a chapel measuring 15.5 feet x 8 was identified attached to the church by an archment. A tomb within the chapel was considered to that of William Hovell (AD 1492). The

archaeological remains (**2259**) are of **medium value** based on their evidential and historical values.

3.3.318 The setting of the archaeological remains (**2259**) is informed by their relationship with the extant church and the surrounding churchyard. This setting makes a moderate contribution to value of the asset, but as it is restricted to the bounds of the churchyard, the setting does not extend to the Order Limits. The setting of the church is informed by its roadside location within its associated graveyard, which contains several trees and is defined by a mature tree lined flint and brick wall affording the asset seclusion and privacy. The setting is further informed by the surrounding landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and screening by its graveyard boundaries and the topography, mature vegetation and development of the intervening landscape, the setting does not extend to the Order Limits.

Rickinghall Superior CP

3.3.319 The Grade I listed 'Church Of St Mary' (**1097030**) is located on the western flank of the B1113 Finningham Road in Candle Street, c. 320 m south of Rickingshall and c. 640 m north-west of an outlying section of the Order Limits, with the Project pylon corridor c. 2.9 km to the east-south-east. The church is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The church largely dates to the late 13th and early 14th centuries although the lower section of the round tower is of 12th century date. Alterations were made in the 15th century, and the church was refitted by J. D. Wyatt in 1859-60. The church is constructed of flint rubble, has ashlar and red brick dressings with some knapped flintwork, is part rendered in cement, and has machine tiled and plaintiled steeply pitched roof.

3.3.320 The setting of the asset is informed by its isolated roadside location within its associated graveyard, which is defined by a flint and red brick wall, mature hedgerows and mature trees. The mature vegetation, when in leaf, affords only occasional glimpses of the asset from the streets and properties in the immediate area, although the church is more apparent in the winter months. The A143, which bypasses Rickingshall lies just c. 100 m to the north, and this has introduced traffic noise, movement and pollution into the setting of the church and also separates the church form much of the residential properties within the Rickinghall Superior parish. The setting of the asset, therefore, makes a moderate contribution to the value of the asset, and due to the proximity of the Project, the setting extends to the Order Limits.

Mellis CP

3.3.321 The Grade II* listed 'Church of St Mary the Virgin' (**1181735**) is located on the eastern edge of Mellis, 80 m north of Mellis Road, 510 m south-east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church dates to the early 14th century, it was re-fenestrated in the 15th century and altered around 1735 when the west tower collapsed. The church was restored in 1859 and 1900. The asset is constructed of largely knapped flint nodules with ashlar dressings, some red brick repair and cement rendering. The nave roof is slated whilst the chancel roof is leaded. The Suffolk HER records that a church (**2148**) is mentioned in the Domesday Book as being located in Mellis and it is possible the current church was built on the site of its Anglo-Saxon predecessor. As, however, there are no physical remains of

the Anglo-Saxon church (**2148**), the asset is of **low value** based on its historical value.

3.3.322 The setting of the asset is informed by its location within the settlement of Mellis, which itself is recorded in the Domesday Book. The setting is further informed by the asset's relationships with other listed assets within the settlement and with non-designated buildings, which positively contribute to the character of Mellis. Due to the asset's mature tree lined graveyard, however, intervisibility between the church and other buildings within the settlement are broken and only very occasional. The setting of the asset is also informed by the surrounding agricultural landscape with which it as a historical relationship. The mature graveyard of the church instils a sense of privacy and peacefulness and so the setting of the asset makes a considerable contribution to its value. Due to proximity of the Project the setting of the asset extends to the Order Limits.

3.3.323 The Grade II* listed 'Elm Tree Farmhouse' (**1181795**) is located to the north of Thrandeston Road in the north of Mellis and c. 830 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The former farmhouse dates to the 15th century, has a 16th century crosswing, and has mid-17th and 19th century alterations. The asset comprises a plastered timber frame structure with steeply pitched plaintiled roofs.

3.3.324 The setting of the asset is informed by its village location and by its interrelationship with its formally associated early 18th century Grade II listed barn (**1032815**) immediately to the north. The setting is further informed by the asset's relationships with non-designated buildings within the settlement, which positively contribute to the character of Mellis. The surrounding agricultural landscape, with which the asset has historical and former functional relationships, also contributes to the setting of the asset. The setting of the asset, therefore, makes a considerable contribution to its value but as it is restricted to the settlement and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.325 The Grade II listed 'The Old Forge' (**1032809**) is located within the settlement of Mellis, within the Mellis conservation area 50 m north of Mellis Road, c. 250 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The plastered timber frame thatched house was built in the early 16th century, with a chimney stack and second floor added in the 17th century when a parlour bay was added. Further alterations were made in the 19th and 20th centuries.

3.3.326 The setting of the asset is informed by its village location and by its open view to the south across a large green space. The setting is further informed by the asset's relationships with other listed assets within the settlement and with non-designated buildings, which positively contribute to the character of Mellis. The rural village location of the asset is largely peaceful only occasionally interrupted by noise from the railway c. 200 m to the south-east. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its village roadside focus, the setting does not extend to the Order Limits.

3.3.327 The Grade II listed 'Rosetree Cottage (Including Part of Rose Cottage)' (**1032807**) is located on the western edge of Mellis, 100 m west of Mellis Road, 120 m north of the Grade II* listed Church of St Mary the Virgin (**1181735**) and c. 380 m south of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The plastered timber frame thatched house was built in the 15th century, with a chimney stack and second floor added in

the 17th century when a parlour bay was added. The asset was further altered in the 19th century and was extended and reroofed in the 20th century.

3.3.328 The setting of the asset is informed by village location and by its relationships with other listed assets within the settlement and with non-designated buildings, which positively contribute to the character of Mellis. The asset has a garden with trees and mature hedged boundaries, which partially obscure views of the green space in the middle of the settlement immediately to the east. The peaceful, rural village setting of the makes a considerable contribution to its value, but due to its village roadside focus, the setting does not extend to the Order Limits.

3.3.329 The Grade II* listed 'Yaxley Manor House' (**1352106**) is located at the eastern limit of Mellis, on the northern flank of Mellis Road and c. 1.3 km east of the Order Limits. The asset is of **high value** based on its designation, and its evidential, historical and aesthetic values. The farmhouse was built around 1520, probably for J. Fanner. A service wing was added c. 1600 and the asset was altered in the mid-17th century for the Felgate family, with further alterations made c. 1910. The asset comprises a timber frame structure encased by colourwashed Fletton brick on the ground floor with roughcast and sham timber framing on first floor. The roof is steeply pitched covered in pantiles.

3.3.330 The setting of the former manor house is informed by its location on the edge of the settlement and by its relationship the surviving non-designated outbuilding of the manor complex some of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationship with the non-designated property and associated outbuildings immediately to the east, some of which are also recorded on the 19th century OS mapping. The surrounding agricultural landscape, with which the asset has historical and former functional relationships, also contributes to the setting of the asset. The setting of the asset, therefore, makes a considerable contribution to its value but as it is restricted to the settlement and immediate agricultural landscape, the setting does not extend to the Order Limits.

Yaxley CP

3.3.331 The Grade I listed 'Church of St Mary' (**1033114**) is located in the southern half of Yaxley, immediately south of the junction of Old Ipswich Road and Church Lane and 2.7 km east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church dates to the 14th century but was largely rebuilt in the 15th century. The church was restored by E. L. Blackburne in 1868 when the chancel was rebuilt, and a south porch was added. The church is built of flint rubble with stone dressings and is partially cement rendered. The roof is largely tiled, but the south aisle roof is leaded.

3.3.332 The setting of the asset is informed by its location within the core of the settlement on the fossilised medieval street plan. The setting is further informed by the asset's relationships with other listed assets within the settlement and with non-designated buildings, which positively contribute to the character of Yaxley. The graveyard of the church contains a few mature trees and is largely defined my mature hedgerows with occasional trees, which allow for some intervisibility between the church and the built heritage around. The setting of the asset retains its links to the surrounding settlement and so it makes a considerable contribution to its value, but due to overall distance and the settlement focus of the setting, it does not extend to the Order Limits.

3.3.333 The Grade II* listed 'Guildhall Cottage' (**1033115**) is located on the western flank of a slip road off the Old Ipswich Road central to the settlement of Yaxley, 200 m north of the Grade I listed Church of St Mary (**1033114**) and 2.6 km east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The former guildhall, now a house, dates to the early 16th century and was built for the Guild of St Thomas Martyr. The asset was extended and converted mid to late 16th century, probably for F. Sherman, and it was altered in the 18th and 20th centuries. The house is a plastered timber frame structure, partially encase in brick and with a black glazed pantile roof.

3.3.334 The setting of the asset is informed by its location within the core of the settlement on the fossilised medieval street plan. The setting is further informed by the asset's relationships with other listed assets within the settlement and with non-designated buildings, which positively contribute to the character of Yaxley. The asset has a large garden to the rear (west), which contains several trees and is defined by high mature, tree lined hedgerows and trees to the front (east) which screens the asset from the Old Ipswich Road. This private rural village setting makes a considerable contribution to the asset's value, but due to its restricted settlement focus, the setting does not extend to the Order Limits.

3.3.335 The Grade II* listed 'Bull's Hall and Attached Outbuildings' (**1033119**) is located at the southern extent of the settlement of Yaxley, 150 m south-south-west of the junction of the Old Ipswich Road and the A140, 2.7 km south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. Formally a farmhouse, the asset was constructed between 1530 and 1580, and it was altered and sub-divided in the 19th and 20th centuries before being restored in the early 21st century. The rendered, timber frame two storey building has a steeply pitched pantile roof.

3.3.336 The setting of the asset is informed by the asset's relationship with a complex of former farm buildings c. 30 m to the south that largely appear on the first edition OS map of 1885 and now serve as a residential dwelling. The setting is further informed by the surrounding agricultural landscape with which the asset and the associated former farming complex have a historical and former functional relationship. The large garden of the asset contains several trees and is defined by mature tree lined hedgerows. Due to the loss of function of the outbuildings, 20th century residential development to the south, and the introduction of the A140 to the east, the setting of the asset makes a moderate contribution to the value of the asset. The setting of the asset does not extend to the Order Limits due to overall distance.

Thornham Parva CP

3.3.337 The Grade I listed 'Church of St Mary' (**1285113**) is located centrally to the dispersed settlement of Thornham Parva c. 660 m west-north-west of the A140, 2.4 km south-east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church dates to the 12th century with the nave raised, with the chancel rebuilt and the tower added in the 14th century. The asset was restored in 1883 and is built of flint rubble with ashlar dressings, some red brick repair and thatched roofs.

3.3.338 The setting of the asset is informed by its location within the dispersed settlement and by its relationships with listed buildings to the north and west and with non-designated buildings within Thornham Parva that contribute to the character of the settlement. The setting is further informed by the surrounding agricultural landscape

with which the asset has a historical landscape. The church is accessed via a 100 m long path from an unnamed road to the north and is situated within a graveyard, which contains several trees and is defined by mature tree lined hedgerows. This peaceful, secluded setting makes a considerable contribution to its value but due to overall distance and a limited viewshed, the setting does not extend to the Order Limits.

Gislingham CP

3.3.339 The Grade II* listed 'Manor House' (**1033163**) is located north of Mill Street towards the northern edge of Little Green, c. 800 m west of Gislingham and c. 1 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The large house dates to the late 15th century and was extended around c. 1500, probably all for the Garland family. The asset had a chimney stack and floor inserted in the 16th century and was extended in the 17th century for the Smeare family. The asset comprises a plastered timber frame structure with some colourwashed 19th century white brick casing and slate roofs.

3.3.340 The setting of the asset is informed by its interrelationship with the scoped-out Grade II listed 'Barn and attached Outbuildings Immediately South East of Manor House' (**1180868**) immediately to the south-west and by its relationship with the non-designated buildings within the complex, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationship with other designated and non-designated within the small settlement that positively contribute to the character of the settlement. The surrounding agricultural landscape, with which the asset has historical and likely former functional relationships, also contributes to the asset's setting. The setting of the asset, therefore, makes a considerable contribution to its value but as it is restricted to the settlement and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.341 The Grade I listed 'Church of St Mary' (**1033123**) is located in the north-eastern quarter of Gislingham on the southern flank of Thornham road, c. 300 m west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church has a 14th century chancel and a late 15th century nave and north porch. The tower collapsed in 1598 and has rebuilt in 1638-40 by the bricklayer E. Petto. The nave and cancel are built of flint rubble with red brick and ashlar dressings with the nave rendered. The tower is built of red brick in English bond with reused ashlar dressings, whilst the chancel roof is tiled, and the nave roof is green slated. The asset is set within a churchyard (**2147**), which is of **high value** based on its association with the church and its evidential and historical values.

3.3.342 The archaeological monitoring of the excavation of a new toilet drain within the grounds of the church identified a medieval wall stub of the original tower and post medieval brick burial vaults (**2237**).

3.3.343 The setting of the asset and associated below ground remains and churchyard (**2147**) is informed by its location on the fossilised medieval street plan of Gislingham, which itself is recorded in the Domesday Book. The asset's setting is further informed by its relationships with listed buildings, including the 15th century Grade II* Ivy House Farmhouse (**1180705**) 70 m to the north-north-east, and with non-designated buildings within Gislingham that contribute to the character of the settlement. The associated graveyard is large, contains several mature trees and is defined by hedgerows and a low wall of mixed materials. There has been some 20th and 21st

century residential development, which has largely enclosed the asset, and so the setting of the asset makes a moderate contribution to its value. There is the possibility of broken views of pylons to the east and north-east from the church, and so the setting extends to the Order Limits. The setting of the churchyard (**2147**) is restricted to the settlement and so does not extend to the Order Limits. The setting of the associated below ground archaeological remains is restricted to the church grounds and so does not extend to the Order Limits.

3.3.344 The Grade II* 'Ivy House Farmhouse' (**1180705**) is located on the western flank of Mellis road close to the northern limit of Gislingham and c. 200 m south-west of the Order Limits. The former farmhouse is of **high value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 15th or early 16th centuries and it was extended, and a floor inserted in the early 17th century. Alterations were made in the 19th and 20th centuries. The plastered timber frame house has a steeply pitched machine tiled roof. The farmhouse forms part of a historical farmstead known as Ivy Tree Farm. The Suffolk HER has recognised the farmstead as a non-designated heritage asset (**2488**). The farmstead dates to the 15th century with later 19th century alterations and additions. The farmstead has historical and evidential value and is of **low value** based on its association with the listed building countered by the loss of the other buildings of the complex.

3.3.345 The setting of the farmhouse is informed by its relationships with listed buildings, including the 14th/15th century Grade I Church of St Mary (**1033123**) 70 m to the south-south-west, and with non-designated buildings within Gislingham that contribute to the character of the settlement. The setting is further informed by the surrounding of agricultural landscape with which the asset has a historical and former functional relationship, but 20th century residential development has largely diminished this link. The setting of the asset, therefore, makes a moderate contribution to its values, but despite the proximity of the Project, the setting does not extend to the Order Limits due to screening by intervening residential development and mature vegetation.

3.3.346 The Grade II listed 'Spring Farmhouse' (**1180592**) is located immediately south of Coldham Lane at the eastern extent of Gislingham and c. 30 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse date to the late 15th or early 16th centuries and was extended in the late 16th century. The house was raised in the 17th century when it was also extended, and floor was inserted. Further alterations made during the 18th and 19th centuries. The asset is plastered timber frame structure with a steeply pitched pantile roof. The farmhouse forms part of a historical farmstead known as Spring Farm. The Suffolk HER has recognised the farmstead as a non-designated heritage asset (**2487**). The farmstead dates to the 15th century with later 19th century alterations and additions. The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.347 The setting of the farmhouse is informed by its location within a working farm complex and by its relationship with its non-designated outbuildings most of which are recorded on the first edition OS map of 1885 (**2487**). The setting of the asset is also informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship, although the asset's heavily wooded grounds has diminished this link. A small, **medium value** medieval moat (**2226**) is located just to the north of the asset and informs the setting as a likely contemporary asset. The mature grounds of the asset creates privacy and seclusion and the setting of the

asset, therefore, makes a considerable contribution to its value. Despite screening by the mature grounds, the proximity of the Project means the setting of the asset extends to the Order Limits.

3.3.348 The Grade II listed 'The Little House' (**1033157**) is located on the northern flank of High Street towards the southern extent of Gislingham and c. 680 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the mid to late 15th century with a chimney stack added and a floor inserted in the late 16th century and further extended in the mid-17th century. Further alterations were made in the 18th and 19th centuries. The asset comprises a plastered timber frame house with a thatched roof.

3.3.349 The setting of the asset is informed by its roadside village location and by its relationships with listed buildings and non-designated buildings within Gislingham that contribute to the character of the settlement. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical landscape. Small scale 20th century residential development has encroached on the asset to the west, north and east and so the setting of the asset makes a moderate contribution to its value, but due to the settlement focus of the setting it does not extend to the Order Limits.

3.3.350 The Grade II listed 'Holm Oak House' (**1285277**) is located 30 m west of High Street at the southern extent of Gislingham and 680 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset has 15th century origins with additions made in the mid-16th century and further extensions and alterations c. 1600 and then again in the 19th century. The asset comprises a plastered timber frame house with a thatched roof.

3.3.351 The setting of the asset is informed by its roadside village location and by its relationships with the post medieval Grade II listed assets 'Service Building Immediately South West of Holm Oak House' (**1033121**) and 'Two Barns And Attached Sheds at Rush Green Farm About 50 Metres West of Holm Oak House' (**1352107**). The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and former functional relationship. The grounds of the asset contain trees and are defined by high, mature tree lined hedgerows that screens the asset from the High Street to the east. The three listed assets are now separate residential properties and this change of function for the barns and the associated property boundaries means the setting of the asset makes a moderate contribution to its value. Due to the restricted settlement focus of the setting and screening by roadside vegetation, the setting does not extend to the Order Limits.

3.3.352 The Grade II listed 'Stanwell House and Rose Cottage' (**1033155**) is located at the intersection of High Street and Morleys Lane close to the southern extent of Gislingham and c. 580 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, now two residences, dates to the early-to-mid 16th century and it was extended and reroofed in the 17th century when a floor and chimney stack were also inserted. The asset was again altered and extended in the 20th century, when it was also partially Fletton brick encased. It comprises a plastered timber frame structure with a steeply pitched pantiled roof.

3.3.353 The setting of the asset is informed by its roadside village location and by its relationships with other listed and non-designated buildings in the vicinity, which are

recorded on the first edition OS map of 1885, and contribute positively to the character of Gislingham. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. the setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its village location, the setting does not extend to the Order Limits.

Thornham Magna CP

3.3.354 The Grade II* listed 'Church of St Mary Magdalene' (**1033129**) is located on the western flank of Major Lane at the northern extent of Thornham Magna and c. 1.8 km east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church dates to the 14th century and it was raised and altered in the 15th century when it was also re-fenestrated and a south porch added. The asset was thoroughly restored in 1851 when a vestry was also added. The church is constructed of flint rubble with ashlar dressings and a slate roof. The asset is located within the southern extent of the former post medieval Thornham Park, which is associated with the non-designated post medieval Thornham Hall (**2407**) 410 m north-north-west of the asset.

3.3.355 The setting of the asset is informed by its rural settlement location and by its relationships with listed buildings and with non-designated buildings within Thornham Magna that contribute to the character of the settlement. The setting is further informed by the asset's relationship with the former Thornham Park with which the asset has a historical relationship. The church has an associated graveyard which is defined by a roadside bank to the east and mature tree lined hedgerows to the west, north and south. The setting of the asset, therefore, makes a considerable contribution to its value, but due to mature tree growth in Thornham Park and the intervening landscape beyond, the setting does not extend to the Order Limits.

3.3.356 The Grade II listed 'Laundry Cottage' (**1285166**) is located 140 m south of an unnamed road that defines the southern extent of the former Thornham Park (**2407**) and c. 1.3 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built around 1500, and it was extended, partly rebuilt and had a floor inserted around 1600. The house was raised in the late 17th century, extended or part rebuilt in the 19th century and was further altered in the 20th century. The house comprises a plastered timber frame house with a steeply pitches glazed pantile roof.

3.3.357 The setting of the asset is informed by its secluded location within a large garden area defined by mature tree lined hedgerows that prevent views in and out of the grounds. The setting makes a considerable contribution to its value, but due to its very secluded nature, the setting does not extend to the Order Limits.

3.3.358 The Grade II listed 'Lambs Farmhouse' (**1285148**) is located on the western flank of The Street in the dispersed settlement of Thornham Magna c. 1.9 km east-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset dates to the early 16th century and had a chimney stack inserted in the early 17th century. The farmhouse was then extended in the early 19th century and was altered in the 20th century. The asset comprises a plastered timber frame structure with a half hipped thatched roof.

3.3.359 The setting of the asset is informed by its village location, by its interrelationship with the post medieval Grade II listed 'Post Office' (**1352114**) on the opposing side of The Street, and by its relationship with its associated non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further

informed by the surrounding agricultural landscape with which the asset has a historical and former functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the village and the immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.360 The Grade II listed 198, 'The Street' (**1352113**) is located at the heart of Thornham Magna on the western flank of The Street and c. 1.9 km east of the Order Limits. The asset is of **medium** value based on its designation and its evidential, historical and aesthetic values. The house was constructed in the early 16th century but largely rebuilt in the late 17th century. It was then altered and extended in the 20th century. The asset comprises a plastered timber frame structure with a thatched roof.

3.3.361 The setting of the asset is informed by its roadside village location and by its relationships with nearby non-designated buildings that contribute positively to the character of the settlement. The setting is further informed by the surrounding garden plots and paddocks associated with properties within the settlement that create a buffer between the buildings and the agricultural land beyond. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the village location and the associated gardens and paddocks, the setting does not extend to the Order Limits.

3.3.362 The Grade II* listed 'The Four Horseshoes Public House' (**1033134**) is located at the southern end of Thornham Magna at the junction of The Street and Clay Street, c. 2 km east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The former house was built in the mid-to-late 15th century, had a floor and chimney stack inserted in the late 16th century, was extended in the 17th century, before being altered and again extended in the 20th century. The asset comprises a plastered timber frame structure with a thatched roof.

3.3.363 The setting of the asset is informed by its roadside village location and by its relationships with nearby designated and non-designated buildings that positively contribute to the character of the settlement. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the village location and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.364 The Grade II listed 'Corner House' (**1033127**) is located immediately to the south of the junction of Clay Street and Wickham Road at the southern limit of Thornham Magna and 1.8 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset dates to the late 15th or early 16th centuries and a chimney stack and a parlour were added in the late 16th century. A floor was inserted in the 17th century, and it was further altered and extended in the 19th century. The house comprises a plastered timber frame structure with a thatched roof. The small 19th century extension is brick built and had a pantile roof.

3.3.365 The setting of the asset is informed by its roadside location in the dispersed settlement. The setting is further informed by the asset's relationships with listed buildings and with non-designated buildings within Thornham Magna that contribute to the character of the settlement, although intervisibility is limited due to mature vegetation. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes positively to the setting. The setting of the

asset, therefore, makes a considerable contribution to its value, but due to the village focused nature of the setting and mature vegetation in the intervening landscape, it does not extend to the Order Limits.

Non-Designated Heritage Assets

3.3.366 **Low value** medieval masonry (**2420**) of evidential value has been identified reused in a post medieval roadside wall near Valley Farm, and c. 120 m east-south-east of the Order Limits.

3.3.367 A **low value** multi-period concentration of 17 PAS artefacts (**2176**) of evidential value has been recovered from farmland c. 160 m from the Order Limits and east of Wortham. The medieval artefacts comprise a brooch, a finger ring and a strap loop.

3.3.368 A **medium value** medieval L-shaped moated area known as moatyards (**2260**) of evidential and historical value is recorded on a parcel of land including the Order Limits within its western and south-eastern edges. The northern terminal end of Dam Lane is located c. 140 m south-east of the asset, with Great Green settlement located c. 1.2 km to the west of the asset. The moated area occupies a 55 m by 98 m area near a spring on a meadow known as Moatyards. An investigation by Basil Brown between 1934 and 1935 identified 13th century medieval pottery as well as a large part of a plate. There has been a suggestion that excavations by the landowner in the 1890s also identified burials, these may have been associated with the possible small Bronze Age barrow (**2037**) located within the moated site. Linear ditches can be observed on 1937 aerial imagery as a large rectangular depression with extensions to the west and south. A small mound can also be observed to the north-east partially enclosed by a dry stream bed. An 88 m by 68 m homestead moat beside a stream can also be observed with the western arm cut into a slope and the eastern arm likely formerly connected to the stream.

3.3.369 The setting of asset (**2260**) is informed by its location on the south-eastern flank of a north-east/south-west aligned valley. There is very little else remaining of the medieval landscape and so the asset's setting makes a minor contribution to its value. However, due to the proximity of the Project, the setting extends to the Order Limits.

3.3.370 A **low value** multi-period concentration of ten PAS artefacts (**2558**) of evidential value has been recovered from farmland partially within the Order Limits and south-west of Palgrave. The medieval artefacts comprise a purse bar, a brooch, a strap end and pottery sherds.

3.3.371 A **low value** multi-period concentration of six PAS artefacts (**2559**) of evidential value has been recovered from farmland partially within the Order Limits and south-west of Palgrave. The medieval artefacts comprise a brooch and a lead seal matrix.

3.3.372 A **low value** possible moat (**2254**) of evidential and historical value is recorded on parcel of land known to be occupied by the post medieval 19th century Procters Barn (**2501**), which is reported in the post medieval section below. The possible moat is located within the fringes of the Order Limits, 100 m west of Burgate Road, and 1 km south-west of Mellis. The moat is no longer extant with the HER record indicating the moat is '*now gone*'. Any associated buildings and field boundaries appear to have been ploughed out, however cropmarks are visible on aerial imagery from 1973. Later post medieval coins have also been suggested in this location of Edward VI, Philip and Mary, Elizabeth I within the garden in front of the existing house.

3.3.373 A **low value** PAS find of evidential value comprising a medieval lead seal matrix (**2571**) was recovered from farmland south-west of Thrandeston and outside the Order Limits.

3.3.374 A **medium value** medieval moat (**2253**) of evidential and historical value is recorded approximately 10 m north of the Order Limits, 230 m west of Mellis Road, and 270 m south-west of Mellis. The square moat was investigated by Basil Brown in 1938, when a probe was used to define site. It is suggested that this moated manor was likely the location of the 13th century site of Heigham Hall which once belonged to the de Belliecampo family.

3.3.375 The setting of asset (**2253**) is informed by its relationship with the Grade II listed West End Farm House (**1181793**) and its associated farmstead (**2454**) to the east and the Grade II listed Pountney Hall (**1352239**) and its grounds (**2424**) to the north-east. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and possible former functional relationship. The setting of the asset makes a moderate contribution to its value but as it is focused on its immediate surroundings, the setting does north extend to the Order Limits.

3.3.376 A **medium value** asset recorded as medieval clamp kiln floors (**2255**) of evidential and historical value are located partially within the Order Limits, 145 m south of Mellis Road, and 920 m south of Mellis. Basil Brown identified this land parcel as the possible site of Swatshall or Swattisfield Hall, also noting an old bridge which was demolished by 1935 when a large earthwork, remains of a moat and part of an old bridge were observed. Black soil patches and kiln sites have been observed within the land parcel suggestive of kiln site locations with findspots including 12th and 13th century unglazed pottery sherds including Grimston ware. Early medieval sherds have also been noted nearby. The HER reports that the building also appears on aerial imagery as cropmarks, however, none are visible on the available imagery.

3.3.377 The medieval setting of the asset is somewhat diminished, however, the settlement of Gislingham, which is recorded in the Domesday Book, lies c. 600 m to the south-west. The setting is also informed by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset makes a minor contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.378 The **low value** Thrandeston Green (**2066**) is of evidential value and located in and to the north-west of Thrandeston and partially within the Order Limits. The asset is recorded on Hodskinson's map of 1783.

3.3.379 The **low value** location of Mellis Village Green (**2222**) of evidential and historical value is noted by the HER to date to the medieval period. This asset is located approximately 150 m south-east of the Order Limits, contains Mellis Road and is within and associated with Mellis itself. This asset suggests the settlement of Mellis at least dates to this period, with a north-west/south-east aligned Roman road (**2144**) also running through the asset.

3.3.380 A **low value** metal detected findspot of a gold angel of Henry VI (AD 1422 to 1461) (**2223**) of evidential value is located north of the Order Limits and is 1.3 km east of Wortham.

3.3.381 A **low value** medieval green recorded as Burgate Little Green (**2305**) of evidential and historical value is located approximately 140 m north-west of the Order Limits, and also contains Bugg's Road, Burgate Road and Little Green settlement. The

green dates to the medieval to post medieval period and the HER notes that the green is visible on Hodskinson's map of 1783.

3.3.382 The former Burgate deer park (**2354**) is located c. 250 m north of Little Green, adjacent to an Order Limits permanent access route and c. 500 m north-west of the Order Limits pylon corridor. The asset is associated with scheduled monuments 'Medieval ringwork in Burgate Wood' (**1016699**) and 'Burgate Hall moated site' (**1017331**), the Grade II* listed 'Hall Farm House' (**1352234**), and is recorded on Hodskinson's 1783 map. The deer park is of **medium value** based on its historical and evidential value.

3.3.383 Th setting of Burgate deer park (**2354**) is informed by its interrelationship with the medieval assets noted above. The setting of the asset makes a considerable contribution to its value but as the setting of the asset is focussed internally, it does not extend to the Order Limits.

3.3.384 Within the Order Limits near Gislingham were located three artefacts: a buckle, a padlock and another buckle (**2307**). All that was recovered of the first buckle was the front half of a folded copper alloy plate. The rest of the buckle plate is missing due to an old break. It is square in shape. The padlock was incomplete and made out of copper alloy with a barb spring locking mechanism. The case of the padlock is circular in cross section. The second buckle was complete by very worn. It was square in shape. These assets are of **low value** and have evidential value.

3.3.385 A crude lead pendant, a fragment of a coper alloy rotary key and a copper alloy bell (**2304**) were located c. 170 m from the Order Limits and north of Gislingham. The pendant was bottle shaped with a narrow neck and rim pierced for a suspension hole. The front of the pendant has a flat oval plate which was decorated or carved with abstract flowing curvilinear design. The key had a hollow shaft with a circular section with an elegant bit consisting of an upper cross bar and a pair of 'L' shaped projections. The bell was beehive shaped with pierced suspension knop. The outer surface of the bell was decorated with concentric grooves. The clopper was missing. These assets are all of **low value** and have evidential value. They were reported as a PAS find.

3.3.386 A **medium value** small, moated site (**2226**) has been identified at Spring Farm of evidential and historical value. This asset is located approximately 40 m north of the Order Limits, 115 m south of Thornham Road, and 100 m east of Gisslingham. The HER indicates that the moat is shown as complete and rectangular on the tithe map of 1839, with an entrance via a causeway to the south but unoccupied. The 1904 OS map 1: 2500, 1904 marks that the east and west sides of the moat are filled with water. The current OS map edition marks the southern and eastern moat sides. The site is overgrown, with a spring in the north-eastern corner currently covered by a modern period structure.

3.3.387 The setting of asset (**2226**) is informed by its relationship with the working farm complex (**2487**) immediately to the south which is associated with the Grade II listed Spring Farm (**1180592**). The setting of the asset is also informed by the surrounding agricultural landscape with which the asset has a historical and likely functional relationship, although the asset is within a wooded which has diminished this link. The mature tree cover creates privacy and seclusion and the setting of the asset, therefore, makes a moderate contribution to its value. Despite screening by the tree cover the proximity of the Project means the setting of the asset extends to the Order Limits.

3.3.388 The **low value** Stubbing's Green (**2014**) is of evidential value and located c. 230 m north-west of the Order Limits. The green is recorded on Hodskinson's map of 1783 but not named.

3.3.389 The **low value** site of the Chapel of St. John (**2240**) is of evidential and historical values and located approximately 250 m west of the Order Limits, immediately south of Lion Road and 1.5 km east of Wortham. The asset is located within parkland (**2402**) associated with the post medieval period Grade II Park House (**1032787**). The site of the Chapel of St. John (**2240**) is recorded by the HER as being mentioned in the Domesday Book of 1086, as well as the taxation of 1256 and a will in 1433. The lands belonging to chapel were granted in 1545 to Francis Boldero and Robert Parker with a chantry certificate of 1546 stating that St. Johns was a free chapel described as '…*no parish church, but a chapel now decayed, half a mile from the parish church'*. No clear evidence for the presence of the chapel site approximately 250 m west of the Order Limits has been identified, with a 2004 investigation suggesting the chapel was more likely to have been located within the grounds of The Priory and may be within the south-east of Park House walled garden.

3.3.390 A moated site (**2227**) of evidential and historical value is noted on aerial imagery and may date to this period, approximately 110 m east of the Order Limits, immediately east of Burgate Road, and 1 km south of Little Green. The asset is entirely ploughed out and only survives as a cropmark and so is of **low value**. The site comprises of a sub-square enclosure/moat. Modern mapping indicates an east to west aligned field boundary running thought the site.

3.3.391 The **medium value** medieval moat at Ivy House Farm (**2257**) of evidential and historical value is recorded approximately 160 m south-west of the Order Limits, 90 m west of Mellis Road, and immediately north of Gislingham. The remains of a likely rectangular moat are marked by the HER to the west and north-west of Ivy House Farmhouse (**1180705**). Two carved stones including one from a window have been found within the moat, as well as evidence of chalk floors and spreads of gravel.

3.3.392 The setting of the moat (**2257**) is informed its location within the medieval core of Gislingham and by its relationship with the Grade II listed Ivy House Farmhouse (**1180705**) and its associated farmstead (**2488**). The setting is further informed by the agricultural landscape to the north with which the asset has a historical and likely former functional relationship. The setting of the asset makes a moderate contribution to its value, but as it is focused on its settlement location, the setting does not extend to the Order Limits.

3.3.393 The **medium value** location of a portion of moat (**2256**), formerly surrounding Swattesfield Hall of evidential and historical value is mostly located on the same land parcel once occupied by the no demolished post medieval 19th century Swattesfield Hall Farmstead (**2502**) discussed in the post medieval section below. The moat and associated medieval evidence is located approximately 200 m north-east of the Order Limits, 210 m north of Major Lane, and 1.8 km south-west of Thornham Parva. Two sides of the likely square moat are recorded by the HER as extant and around the site of the former Swattesfield Hall, seen on Hodskinson's map of 1783 as a range of buildings and named 'Swatsal Hall' and also present on OS mapping until the 1920s. Further buildings are marked to the north and north-east of the moat on aerial imagery, although no buildings are present by 1950s OS mapping. 'Swatshall Hall Manor' is recorded as held by William de Gislingham in the 13th century, with the hall potentially rebuilt in the 18th century. The base of walls and a well are

marked as extant in 2008. Further cropmarks can also be observed to the north which may also date to this period.

3.3.394 The setting of asset (**2256**) is informed by its relationship with the now demolished Swattesfield Hall and associated farmstead (**2502**). The setting of the asset is further informed by the surrounding agricultural landscape with which the asset has a historical and likely former functional relationship. Due to the loss of Swattesfield Hall and its associated farmstead, however, and the erosion of the medieval landscape, the setting of the asset makes a minor contribution to its value. As the setting of the asset is focused on its immediate environment it does not extend to the Order Limits.

3.3.395 A **low value** medieval silver half-groat of Edward III (AD 1327-1377) coin (**2318**) was found in Gislingham outside the Order Limits. It has evidential and historical value.

3.3.396 East of Gislingham and inside the Order Limits was found a **low value** cut silver voided short cross halfpenny of John, Class 5b, c. 1205-1210 AD (**2314**). This asset has evidential and historical value.

3.3.397 A **low value** multi-period concentration of ten PAS artefacts (**2560**) of evidential value has been recovered from farmland partially within the Order Limits and east of Wortham. The medieval artefacts comprise two strap end, a silver badge, a fragment of a silver coin, a buckle plate, a jetton, a strap hook, a silver coin, a cut quarter of John, a brooch and a harness pendant.

3.3.398 A **low value** concentration of 17 PAS findspots (**2202**) of evidential value was recovered from farmland to the c. 60 m east of the Order Limits, near Mellis. One artefact dates to this period comprising of a complete cast copper-alloy stirrup terminal. The remaining artefacts date to other time periods as follows:

- A Bronze Age palstave (**2042**)
- Nine medieval artefacts including four coins, two buckles, one clasp, one thimble and one lead ampulla
- Five post medieval artefacts including four coins and a buckle
- One undated foreign silver coin

3.3.399 A fieldwalking survey in advance of the construction of the A143 Rickinghall to Botesdale Bypass identified a concentrated scatter of medieval pottery, which was subsequently the focus of archaeological trenching. The excavations revealed **low value** remains of evidential value comprising more pottery a 16th century token, ditches and pits (**2386**). The site is located c. 350 m south-east of Rickinghall and c. 130 m north-east of the Candle Street Order Limits.

3.3.400 A thin, **low value** scatter of medieval pottery and an undated ditch (**2516**) of evidential value were identified during fieldwalking survey and evaluation trenching c. 60 m south of Rickinghall and c. 110 m north of the Candle Street Order Limits.

Finningham, Mendlesham and Old Newton

Designated Heritage Assets

Finningham CP

3.3.401 The Grade I listed ‘Church of St Bartholomew’ (**1352056**) is located in the core of Finningham, within the Finningham Conservation Area (**CA48**), south of Church Lane

and 860 m west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The church was built in the early 14th century and then in the 15th century it was re-fenestrated and the south porch was added. It was restored in 1886 when the chancel was rebuilt. The church is built of flint rubble with ashlar dressings, is partially cement rendered and the north porch is built of red brick. The nave has a slate roof whilst the porches and chancel have plain tile roof.

3.3.402 The setting of the asset is informed by its location at the core of the medieval settlement, which itself is recorded in the Domesday Book. The setting is further informed by the asset's relationships with listed buildings and with non-designated buildings within Finningham that contribute positively to the character of the settlement. Based on the evidence of the first edition OS map of 1885, there has been some 20th century residential infill development, but this has been sympathetic and in the local architectural vernacular. The church sits within a large graveyard which is define by mature tree lined boundaries that partially restrict views in and out. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by the settlement and by mature treelined hedgerows and infrastructure in the intervening landscape, the setting does not extend to the Order Limits.

3.3.403 The Grade II* listed Church Farmhouse (**1033145**) and the Grade II listed 'Barn about 15 Metres north-west of Church Farm House' (**1352078**) are located on the eastern flank of Gislingham Road on eastern edge of Finningham and within the Finningham Conservation Area (**CA48**), 160 m east of the Church of St Bartholomew (**1352056**) and c. 670 m west of the Order Limits. The barn is of post medieval date and reported in the appropriate section below. The farmhouse is of **high value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 15th century and a floor, a chimney stack and a parlour were added in the early 17th century. Further alterations were made in the 19th and 20th centuries. The asset comprises a plastered and partly exposed timber frame structure with a machine tiled roof.

3.3.404 The setting of the farmhouse (**1033145**) is informed by its village edge location, by its relationship with its Grade II listed former barn (**1352078**) and by its relationships with further listed buildings and with non-designated buildings within Finningham that contribute positively to the character of the settlement. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The barn has been converted into a residential dwelling with associated property boundaries and there is now very little evidence of the former farmyard. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its restricted settlement focus and screening by its property boundary and by mature treelined hedgerows and infrastructure in the intervening landscape, the setting does not extend to the Order Limits.

Wickham Skeith CP

3.3.405 The Grade II* listed 'Street Farmhouse' (**1352524**) and associated Grade II listed 'Barn 20 Metres east of Street Farmhouse' (**1182741**) are located in Wickham Street on the southern flank of Wickham Road and 630 m and 660 m north-east of the Order Limits. The barn is post medieval in date and reported in the appropriate section below. The farmhouse is of **high value** based on its designation and its evidential, historical and aesthetic values. The core of the asset comprises a 15th

century hall range with alteration and additions made in the 16th, 17th and 19th centuries. The farmhouse is a rendered timber frame structure with a pantile roof.

3.3.406 The setting of the asset is informed by its working farmyard location and by its interrelationship with the associated barn and by its relationships with further listed buildings and with non-designated buildings within Wickham Street that contribute positively to the character of the settlement. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and ongoing functional relationship. the setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by buildings and mature tree cover and hedgerows in the settlement, the setting does not extend to the Order Limits.

3.3.407 The Grade II listed 'Summerseat' (**1032202**) is located in Wickham Street on the northern flank of Wickham Road and 730 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house has a late 15th/early 16th century core with 17th and 18th century additions and alteration. The asset was renovated in the 20th century and comprises a rendered timber frame structure with a thatched roof.

3.3.408 The setting of the asset is informed by its roadside village location and by its relationships with further listed buildings and with non-designated buildings within Wickham Street that contribute positively to the character of the settlement. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. the setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by buildings and mature tree cover and hedgerows in the settlement, the setting does not extend to the Order Limits.

3.3.409 The Grade II listed 'The Old Swan' (**1284400**) is located in Wickham Street on the southern flank of Wickham Road and 790 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. Built as a house, then formally a pub which closed in 1966, the asset has a 15th century core with 17th and 18th century additions and alterations and a 19th century roof. The asset comprises a plastered timber frame structure with a shallow pitched pantile roof.

3.3.410 The setting of the asset is informed by its roadside village location and by its relationships with further listed buildings and with non-designated buildings within Wickham Street that contribute positively to the character of the settlement. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. the setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by buildings and mature tree cover and hedgerows in the settlement, the setting does not extend to the Order Limits.

3.3.411 The Grade II listed 'Great Oak Farmhouse' (**1182620**) is situated in a moderately isolated location 130 m north of Oak Farm Lane, c. 710 m south-west of the core of Wickham Skeith, and 550 m south-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse forms part of a historical farmstead known as Great Oak Farm. The Suffolk HER has recognised the 19th century farmstead as a non-designated heritage asset (**2482**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.412 The setting of the farmhouse is informed by its location within an isolated working farmyard and by its relationships with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1885 (**2482**). The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and ongoing working relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance, and it being restricted to the farmyard location and immediate landscape, the setting does not extend to the Order Limits.

3.3.413 The Grade I listed 'Church of St Andrew' (**1352521**) is located 440 m east of the medieval core of Wickham Skeith, 1.1 km north-east of and 1.1 km east-north-east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The massive square tower of the church dates to the 14th century, whilst the nave, chancel and north porch date to the 15th century. There is evidence of ongoing maintenance since the 15th century and the asset was restored in 1857. The church is built of flint rubble with stone dressings whilst the nave has a slate roof and the chancel has a pantile roof. The location of the church beyond the limits of the modern settlement suggests Wickham Skeith may be a shrunken medieval village.

3.3.414 The setting of the asset is informed by its relationship with the non-designated Wickham Hall and associated outbuildings c. 70 m to the south-west and by its otherwise secluded rural location. The attendant graveyard is defined by mature tree lined hedgerows, which contribute to the seclusion of the asset, and despite its large tower, due to development and mature vegetation in the village, it is not visible at street level. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the screening by its graveyard boundaries and by the topography, development and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

Thwaite CP

3.3.415 The Grade II* listed 'Church Of St George' (**1032261**) is located within the dispersed settlement of Thwaite immediately south-east of the of Church Lane and Wickham Road and 2.5 km east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The asset largely dates to the 14th and 15th centuries and was restored in 1870 and 1904. The west end of the church was largely rebuilt in 1870 when a bell turret was added. The church is built of flint rubble with stone dressings, with a brick-built porch and a pantile roof with ridge tiles.

3.3.416 The setting of the asset is informed by its location within Thwaite and by its relationships with the surrounding non-designated buildings that that contribute positively to the character of the settlement. The attendant graveyard is defined by high, mature tree lined hedgerows that largely excludes views to and from the asset. The moderately secluded setting of the asset makes a considerable contribution to its value, but due to its mature graveyard boundary and screening by the topography, development and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

Westhorpe CP

3.3.417 The scheduled monument 'Westhorpe Hall moated site and associated fishponds' (**1016697**) is located at the eastern edge of Westhorpe on the northern flank of The

Street and c. 2.4 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The monument includes a moated site and adjacent fishponds bordering the north side of The Green at the eastern end of Westhorpe village. The moated site contains the remains of a great house built in the early 16th century by Charles Brandon, Duke of Suffolk and husband of Mary Tudor, the sister of Henry VIII and dowager Queen of France. There is also some documentary and archaeological evidence for an earlier manor house on the site. The moat is approximately 16 m wide, though slightly narrower on the east side, surrounds a rectangular central platform raised about 1 m above the level of the prevailing ground surface and measuring approximately 70 m east/west by 52 m north/south. The eastern half of the southern arm of the moat has been infilled, although the line of the inner edge is marked here by a gentle, south-facing scarp. The outer walls of the 16th century house rose directly above the inner edge of the moat, and the footings of these walls, constructed of coursed flint faced with brick, survive as a revetment of the central platform. Other surviving elements of the house have been identified during the dredging of the moat over the years and the bridge across the western arm of the moat, which is Listed Grade II and is included in the scheduling, still survives. The current Grade II listed 'Westhorpe Hall' (**1033105**) predominantly dates to the 18th century but has 16th and 17th century elements. The hall and all associated structures and garden features are excluded from the scheduling, though not the ground beneath, and both it and the listed bridge are scoped out of the baseline.

3.3.418 The setting of the asset is informed by its location on the edge of the settlement, which is recorded in the Domesday Book, and as a replacement of an early medieval manor. The setting is further informed by its relationship with the post medieval hall within the bounds of the moat and the farm buildings immediately to the west, some of which are recorded on the first edition OS map of 1885. The surrounding agricultural landscape, with which the asset has a historical and former functional relationship, also makes a positive contribution to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the topography, development, infrastructure and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

Bacton CP

3.3.419 The scheduled monument 'Russell's Hill moated site' (**1006000**) is located 750 m south-east of Cow Green, 320 m north of Hundred Lane, and 2.1 km west of Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The scheduled monument record for this asset is generated from an 'old county number' and as such details of the asset are extremely limited. The only available information states the asset is: 'An enclosure c. 50yds sq. formed by a 15 ft wide ditch. 7-10 ft deep with a 4-6 ft counterscarp. Causeway on N side may be modern.' The moated site is likely to be the remains of the location of a high-status residence, possibly a manorial site, and one of several such feature visible on the first edition OS map of 1885 and, for the most part, still apparent today with the closest, Cotton Hall, 950 m to the north-east.

3.3.420 The setting of the asset is informed by its location within the fossilised medieval landscape represented by the surrounding moated sites, some settlement and the routeways linking them. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and likely former working relationship. The former medieval field systems have now been replaced by post medieval and

modern, large open fields and there has been some small-scale post medieval and modern development in the landscape. The setting of the asset, therefore, makes a moderate contribution to its value, but due to overall distance and the focus of the setting being on the immediate landscape, it does not extend to the Order Limits.

3.3.421 The Grade II listed 'Walnut Tree Farmhouse' (**1180730**) is located c. 600 m south of Ford's Green on the eastern flank of Swilltub Lane and c. 2 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The farmhouse was built c. 1530-50 and went through alterations in the 19th and 20th centuries. The asset comprises a timber frame structure with the southern elevation encased in 19th century brick and the rest plastered.

3.3.422 The setting of the asset is informed by its roadside location within a former farmstead and by its relationship with its gardens and non-designated outbuilding. The setting is further informed by the surrounding agricultural landscape with which the asset has historical and former functional relationships. The setting of the asset, therefore, makes a moderate contribution to its value, but as it restricted to the asset's grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.423 The Grade I listed 'Church of St Mary' (**1032755**) is located in Bacton 2.8 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church mainly dates to the 14th and 15th centuries with 16th century additions and alterations, although the 14th century mid tower incorporates a doorway of possible 12th century date. The church is constructed of flint rubble with freestone dressings and has mainly slated roofs with the low-pitched aisle roofs leaded.

3.3.424 The setting of the asset is informed by its location at the north-eastern limits of the linear settlement of Bacton recorded on the first edition OS map of 1885. Since the publication of the map, however, the later 20th century development of Bacton has advanced eastwards along Pound Hill up to the railway and a short distance beyond. The setting is further informed by the asset's relationships with the surrounding listed and non-designated buildings that that contribute positively to the character of Bacton. There has been some 20th century infill development around the church and a modern primary school lies immediately to the south of the asset. These developments are, however, largely sympathetic and in keeping with local architectural vernacular, whilst the less sympathetic residential estate to the east is screened from the asset by thick tree cover. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the development, infrastructure and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

3.3.425 The Grade II* listed 'Fords Green' (**1032724**) is located in the small hamlet of Ford's Green on the western flank of Swilltub Lane c. 900 m south of Bacton and 2.2 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The asset comprises a house built in two stages; the first long range was built in the early 16th century with the eastern block added c. 1550. The house is a plastered timber frame structure with s plain tile roof. the asset and associated outbuildings are identified as Cherrytree Farm on the first edition OS map of 1885.

3.3.426 The setting of the asset is informed by its location within a possibly still working farm complex and by its relationships with the non-designated farm outbuildings most of which are recorded on the first edition OS map of 1885. The setting is further

informed by the agricultural landscape with which the asset and its associated outbuildings have a historical and possibly an ongoing functional relationship. The large grounds of the asset contain numerous trees and are defined by mature tree lined hedgerows. The evergreen hedge and tree line which runs alongside Swilltub Lane is thick and high eliminating any view in to and out from the asset affording it privacy and seclusion. The setting of the asset, therefore, makes a considerable contribution, but due to overall distance and screening by the asset's boundaries, the setting does not extend to the Order Limits.

Cotton CP

3.3.427 The Grade I listed 'Church of St Andrew' (**1352478**) is located within the historic core Cotton, which itself is recorded in the Domesday Book. The asset is situated immediately to the west of the junction of Church Road, Mendlesham Road and Stonham Road and c. 1.3 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church largely dates to the 14th century comprising an aisled nave, chancel, west tower and south porch with a 15th century clerestory. The asset was restored in 1890 and again in 1903 and is constructed of flint rubble with stone dressings and the roofs are leaded and tiled.

3.3.428 The setting of the asset is informed by its location at the medieval core of Cotton, which itself is recorded in the Domesday Book, and by its relationships with the surrounding listed and non-designated buildings that contribute positively to the character of settlement. The attendant graveyard is defined by a low iron fence supplemented my mature trees and shrubs. There has been some 20th century infill residential development within the settlement core and more substantial development along Mill Lane extending the settlement over 700 m to the north. The development is, however, largely sympathetic in the local architectural vernacular and is well screened by the mature trees of the graveyard. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the development, infrastructure and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

Mendlesham CP

3.3.429 The Grade I listed 'Church of St Mary' (**1032241**) is located at the western end of the medieval core of Mendlesham, as recorded on the first edition OS map of 1885, on the eastern flank of Church Road within the Mendlesham Conservation Area (**CA44**), and 1.8 km east of Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The nave and aisles have 13th century origins whilst the chancel dates to the 14th century. The four-stage square tower dates to the 15th century and the whole structure was restored in 1864-6. The nave and aisle roofs are leaded whilst the chancel has a plain tile roof.

3.3.430 The setting of the asset is informed by its location at the eastern extent of medieval Mendlesham, which itself is recorded in the Domesday Book. The setting is further informed by the asset's relationships with the surrounding listed and non-designated buildings that contribute positively to the character of Mendlesham. The remains of the Church Farm moat lie to the east of the asset contributing to the medieval origins of the church's setting. The agricultural landscape to the east, with which the asset has a historical relationship, also contributes positively to the setting. There has, however, been some residential development of Mendlesham expanding the settlement's boundaries particularly to the north, west and south. The setting of the

asset, therefore, makes a considerable contribution to its value, but due to overall distance and screening by the medieval, post medieval and modern development of Mendlesham, the setting does not extend to the Order Limits.

3.3.431 The Grade II listed 'Hunters Moon' (**1352481**) is located at the northern limit of Hobbies Lane at its intersection with an unnamed road c. 830 m north-west of the centre of Mendlesham, and 900 m east of the Order Limits. The asset, now identified as Moat Farm House, is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse has a core of perhaps late 15th century with 16th and 17th century in-line additions and comprises a plastered timber frame structure with a thatched roof.

3.3.432 The setting of the asset is informed by its relationship with its former non-designated outbuilding and by its relationships with the Grade II Poplar Farmhouse (**1032282**) and its non-designated outbuildings on the opposite side of the road 30 m to the east. the setting is further informed by the surrounding agricultural landscape with which the asset and its former outbuildings have a historical and former functional relationship. The associated outbuildings have, however, been converted into a residential dwelling and a property boundary now separates the asset from the new dwelling. Due to the loss of function and separation from its former outbuildings, the setting makes a moderate contribution to its value, but because of screening by the former outbuildings and the topography of the intervening landscape, the setting does not extend to the Order Limits.

3.3.433 The Grade II listed 'Whitings Farmhouse' (**1180535**) is located in a secluded parcel of land at the end of a 470 m long track east of an unnamed road linking Mendlesham to the east with Mendlesham Green to the south. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The Order Limits lie c. 1.8 km to the west of this asset. The former farmhouse dates to the 15th century, has 16th and 17th alterations and additions and comprises a plastered timber frame structure with a mixed thatched and pantile roof.

3.3.434 The setting of the asset is informed by its isolated location and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and probable former functional relationship. The grounds of the asset contain several trees and are defined by mature tree lined hedgerows, which obscure views in to and out from the asset. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and screening by the asset's grounds, the setting does not extend to the Order Limits.

3.3.435 The Grade II* listed 'Elms Farmhouse' (**1352508**) is located on the eastern flank of Old Station Road at the southern edge of Mendlesham and c. 1.7 km east of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The former farmhouse dates to the late 15th century, it was altered in the 16th century, and a north wing was added in the 19th century.

3.3.436 The setting of the asset is informed by its former farmyard location and by its relationship with associated outbuildings, several of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset and associated outbuildings have a historical and former functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the

former farmyard and the immediate agricultural landscape, the setting does not extend to the Order Limits.

Gipping CP

3.3.437 The Grade I listed 'Chapel of St Nicholas' (**1352278**) is located in Gipping, 2.4 km north-west of the centre of Old Newton, and c. 1.1 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential, and historical values. The asset is a free chapel, built as a private chapel around 1474-80 for Sir James Tyrell of Gipping Hall. Since 1743 it has been administered by trustees. The nave, chancel and north vestry were added soon after, with the west tower built in the late 16th century. The walls of the asset are of a chequerboard pattern comprising squared limestone rubble and knapped flint with freestone dressings. The tower appears to be cement rendered and the asset has plain tiled roofs.

3.3.438 The setting of the asset is informed by its location within its secluded grounds and by its relationship with the Grade II Chapel Farmhouse (**1285268**) and its associated outbuildings. The setting is further informed by the site of Gipping Hall, seat of the Tyrell family, immediately to the east, which was demolished in the 1850s. Part of the hall's moat survives immediately to the east of the chapel, and it is surrounded by mature trees, which obscure views from the asset to the east. Due to the loss of the hall, the setting of the asset makes a moderate contribution to its value, but due to the restricted nature of the asset's setting due to the loss of the estate it served, it does not extend to the Order Limits.

3.3.439 The Grade II listed 'Chapel Farmhouse' (**1285268**) is located in Gipping 30 m west of the Chapel of St Nicholas (**1352278**), 2.4 km north-west of the centre of Old Newton, and 1.2 km west of Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset was built in the early-to-mid 16th century with 17th century and later alterations and comprises a plastered timber frame structure with a plain tile roof and a jettied first floor on the front, east-facing elevation.

3.3.440 The setting of the asset is informed is informed by its location within a working farm complex and by its relationships with its post medieval Grade II listed dovecot (**1032728**) and its non-designated outbuildings, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationship with the Grade I Chapel of St Nicholas (**1352278**) and by the surrounding agricultural landscape with which the asset and its outbuildings have a historical and ongoing functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and screening by the chapel and its associated tree growth, the setting does not extend to the Order Limits.

3.3.441 The Grade II* listed 'Gipping Lone' (**1180773**) is located in its secluded grounds 590 m north of Gipping, and c. 880 m south-west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The asset was built in two stages; the north/south range dates to the late 15th century with the east/west range added around 1600. The house is a plastered timber frame structure with a concrete pantile roof. The asset is labelled Old Vicarage Coppings on the first edition OS map of 1884.

3.3.442 The setting of the asset is informed but it secluded location within its grounds and by its relationship with its non-designated outbuildings. The setting is further informed by the surrounding agricultural landscape with which the asset and its associated non-

designated buildings have a historical relationship. The grounds of the asset are defined by mature tree lined hedgerows, which largely obscure views into and from the asset. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the screening of the asset's grounds, the setting does not extend to the Order Limits.

3.3.443 The Grade II listed 'Rookery Farmhouse' (**1352279**) and 'Barn, 40 Metres South West Of Rookery Farm' (**1180903**) are located in a former farming complex 1.6 km south-east of Gipping and c. 75-100 m and c. 100-150 m west of the Order Limits. The barn is post medieval in date and reported in the appropriate section below. The farmhouse is of **medium value** based on its designation and its evidential, historical and aesthetic values. The Farmhouse was built around 1530, and alterations were made in the early 17th and early 19th centuries. the asset comprises a plastered timber frame structure the ground storey and south facing gable were clad in red brick in the 19th century. The once thatched roof is now concrete tiled.

3.3.444 The setting of the asset is informed by its location within the former farming complex and by its relationship with its surviving outbuildings recorded on the first edition OS map of 1884, some of which are now residential dwellings. The setting is further informed by the surrounding agricultural landscape with which the asset and its former outbuildings have a historic and former functional relationship. The large garden of the asset contains trees and shrubs and is defined by a brick wall and by mature, tree lined high hedgerows. Due to the loss of the working farm and the repurposing of some of the outbuildings, the setting of the asset makes a moderate contribution to its value. Despite the mature vegetation of the asset's garden, the mature trees lining the roads to the east and the constriction of the asset's setting due to loss of function, the proximity of the Project means the setting extends to the Order Limits.

Old Newton with Dagworth CP

3.3.445 The scheduled monument 'Rookyard Farm Moats' (**1451408**) is located on the western flank of the B1113 on the northern outskirts of Old Newton, and 2.7 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The asset comprises the earthworks of a double moat surrounding the Grade II listed farmhouse of Rookyard Farm, which is scoped out of assessment. It comprises a small, medieval moat to the north and a larger, probably 16th century garden moat to the south. The northern of the two moated platforms is rectangular in plan and the platform measures 55 m east/west by 40 m north/south. The platform is enclosed on the south and west sides by a water-filled moat, 7 m wide on the south side, and 11 m on the west, to a depth of at least 2 m. The moat platform is approximately 0.5 m higher than the land to the west. The southern moated platform is rectangular in plan, and measures 110 m north/south by 95 m east/west. The platform is enclosed on the west, south and east sides by a seasonally water-filled moat measuring up to 10 m in width and 2 m deep. The moat is steep sided, with a U-shaped profile. The foundations of the demolished barn are visible on the southern moat platform.

3.3.446 The setting of the asset is informed by its roadside location to the north of the medieval settlement of Old Newton, which itself is recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationship with the Grade II Rookyard Farmhouse and its non-designated outbuildings, which are also recorded on 19th century OS mapping. The surrounding agricultural landscape, with which the asset and associated listed and non-designated buildings have a historical

and functional relationship, also positively contributes to the asset's value. Due to the encroaching modern expansion of Old Newton and the erosion of the medieval landscape, the setting of the asset makes a moderate contribution to its value, but due to overall distance and its now more local focus, the setting does not extend to the Order Limits.

3.3.447 The Grade I listed 'Church of St Mary' (**1181693**) is located towards the eastern extent of Old Newton on the eastern flank of a shallow river valley, and c. 2.5 km south-west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The church comprises of a chancel, north vestry, nave, south porch and west tower, which date mainly to the 14th century with evidence of 16th, 17th and 18th century alterations and maintenance. The asset is built of flint rubble with freestone dressings, whilst the nave roof is slated and the chancel roof is plain tiled.

3.3.448 The setting of the asset is informed by its location at the eastern extent of the medieval linear settlement of Old Newton, as recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationship with the listed and non-designated buildings in its vicinity which positively contribute to the character of Old Newton. The church's graveyard is open to the Church Road to the south but otherwise defined by a mature tree lined hedgerow. There has been some 20th century residential development along Chapel Road to the east, extending the bounds of settlement, but this is largely screened from the asset by its graveyard boundaries and further mature vegetation to the east. The setting of the asset, therefore, makes a considerable contribution but due to the topography of the river valley and the screening by the asset's boundaries, the setting does not extend to the Order Limits.

3.3.449 The Grade II* listed 'Ward Green Farmhouse' (**1032689**) is located in the small hamlet of Ward Green, c. 1.4 km north and the centre of Old Newton, and c. 3 km west of Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The asset comprises an early 15th century east/west aligned three-cell open hall house with an early 17th century north/south aligned two-cell block to the east. Both blocks comprise plastered timber frame structures with pantile roofs.

3.3.450 The setting of the asset is informed by its location within a working farm complex and by its relationships with its outbuildings which include a Grade II listed barn as well as several non-designated structures, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationships with the listed and non-designated buildings in its vicinity which positively contribute to the character of Ward Green. The farmyard's boundaries are, however, defined by high, tree lined evergreen hedges, which allow for only glimpsed view into or out from the asset. The surrounding agricultural landscape, with which the farmhouse and its outbuildings have a historical and ongoing functional relationship, also makes a positive contribution to the setting of the asset. The secluded setting of the asset, therefore, makes a considerable contribution to the value of the asset but due to its secluded nature and overall distance, the setting does not extend to the Order Limits.

3.3.451 The Grade II listed 'Ivy Cottage' (**1352296**) is located on the eastern flank of Brown Street in the small hamlet of Brown Street, c. 1.7 km north-east of the centre of Old Newton, and 2 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house

dates to the 15th century, was remodelled in the 17th century and later and comprises a roughcast timber frame structure with a pantile roof.

3.3.452 The setting of the asset is informed by its roadside settlement location and by its relationships with the listed and non-designated buildings in its vicinity which positively contribute to the character of Brown Street. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its insular settlement focus, the setting does not extend to the Order Limits.

3.3.453 The Grade II listed 'Mayhews Farmhouse' (**1032677**) is located in a former farmyard on the eastern flank of Brown Street close to the southern extent of the Brown Street linear hamlet, and 1.8 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the early 16th century with an extension added around 1550-70 and comprises a plastered timber frame structure with a thatched roof.

3.3.454 The setting of the asset is informed by its location within a former farmyard and by its relationship with the surviving non-designated outbuildings, which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape with which the asset and its outbuildings have a historical and former functional relationship. Due to the loss of function and the majority of its former outbuildings the setting of the asset makes a moderate contribution to the asset's value, but due to its restricted settlement focus and overall distance, the setting does not extend to the Order Limits.

Non-Designated Heritage Assets

3.3.455 A **low value** scatter of medieval pottery (**2457**) of evidential value was recovered from farmland within the Order Limits and c. 900 m east of Dandy Corner.

3.3.456 A **low value** medieval artefact scatter (**2268**) of evidential value is recorded at 'Stack Pightle' within the Order Limits, with Mendlesham Road within the south of the land parcel, and 1.2 km south-east of Cotton. A fieldwalking survey identified 87 late 13th century pottery fragments and iron shears near a pond location.

3.3.457 A **low value** medieval pottery scatter (**2269**) of evidential value is recorded at 'Burnt House Field' 100 m east of the Order Limits, 220 m east of Oak Farm Lane, and 1.2 km west of Mendlesham. A fieldwalking survey identified 36 medieval pottery fragments. Five post medieval 18th century pottery fragments have also been recovered.

3.3.458 A **low value** medieval artefact scatter (**2265**) of evidential value has been recorded at 'Garden Pightle', Wicks Farm immediately west of the Order Limits and Potters Lane, and 1.6 km west of Mendlesham. A total of 41 13th and 14th century pottery sherds were identified during a fieldwalking survey, with an unknown quantity of early medieval pottery sherds also identified.

3.3.459 A **low value** medieval artefact scatter (**2288**) of evidential value is recorded at 'Little Mendlesham Field' within the Order Limits, immediately west of Lambert's Lane, and 1.1 km north-west of Cay Hill. A fieldwalking survey identified 41 pottery fragments, six of which were datable to the 13th to 14th centuries.

3.3.460 A **low value** medieval artefact scatter (**2289**) of evidential value is recorded at 'Middle Catts' within the Order Limits, immediately west of and including Lambert's Lane within its eastern boundary, and 890 m north-west of Cay Hill. A fieldwalking survey identified 106 pottery fragments, five of which were datable to the 13th century, and 93 of which were 13th to 14th centuries. One early medieval pottery fragment was also identified.

3.3.461 A concentration of three assets **low value** were noted at Wickham Abbey Farm, at the same site as Abbey Farmhouse (**1182599**), approximately 300 m from the Order Limits tower corridor to the west, and 800 m south-west of Wickham Street. A medieval silver coin of Edward III dating between 1369-1377 and minted in York (**2082**) has also been recorded by the PAS south-west of the moat island. The assets are of evidential and historical value and are as follows:

- Wickham Abbey Farm (**2208**) is marked as the site of a Benedictine cell of four monks associated with Colchester Priory c. 1135 to 1164 during the early reign of King Stephen. This cell was likely associated with the Church at St. Johns. The Wickham lands remained with St. Johns until the Reformation where the land was granted to Sir Richard Freston of Mendham in 1542. The Abbey had a grant of free warren in their demesne lands with the lands likely run as a grange of the Abbey. Sherds of medieval pottery have been found to the north of the farm buildings by Basil Brown; however, no monastic remains have been identified on site and it is considered unlikely that any potential associated archaeological remains extend to the Order Limits
- Wickham Abbey Farm Farmstead (**2209**), which comprises the Grade II listed Abbey Farmhouse (**1182599**) and the post medieval non-designated working agricultural buildings
- A small moat island (**2207**) was excavated by Basil Brown c. 1937 and identified a footbridge as well as a 3' (.90 m) floor of greenish clay. The island may represent the site of a moated dovecote, with the island also noted on the OS first edition mapping. The HER indicates the site has since been levelled and partly covered by agricultural buildings (piggeries). A scatter of medieval peg tile was also found on the site of the dovecote in 1976.

3.3.462 A **low value** medieval moat site and artefact scatter (**2263**) of evidential and historical value is recorded at Potter's Farm (**2519**), which is discussed in the post medieval section below. The moat and artefacts are recorded approximately 5 m west of the Order Limits, 300 m south of Mendlesham Road, and 1.8 km west of Mendlesham. The moat is recorded by the HER as square, with an artefact scatter found within the moat island during a fieldwalking survey. Irregular water features associated with the post medieval farm shown on the 1958 OS mapping are recorded as infilled c. 1965.

3.3.463 A **low value** medieval artefact scatter (**2276**) of evidential value is recorded at 'Church Meadow' approximately 5 m east of the Order Limits, immediately east of Potter's Lane, and 1.5 km west of Mendlesham. A fieldwalking survey identified 47 pottery fragments, four of which were datable to between the 13th and 14th centuries.

3.3.464 A **low value** medieval artefact scatter (**2277**) of evidential value is recorded at 'Carters' approximately 10 m west of the Order Limits, 15 m west of Potter's Lane, and 1.6 km west of Mendlesham. A fieldwalking survey identified 32 pottery fragments of which three were datable to between the 13th and 14th centuries. One

lava quern fragment was also identified. A further **low value** medieval artefact scatter (**2278**) of evidential value is also recorded at 'Carters' approximately 40 m to the south. The fieldwalking survey at this location identified 33 pottery fragments, of which eight were datable to between the 14th and 15th centuries. One post medieval 17th century pottery fragment and one undated lava quern fragment was also identified.

3.3.465 A **low value** medieval artefact scatter (**2262**) of evidential value has been recorded at Old Farm (**2517**), with the post medieval farm discussed in the appropriate section below. The artefact scatter is recorded approximately 40 m east of the Order Limits, immediately west of Hoggars Road, and 1.3 km south-west of Mendlesham. A fieldwalking survey undertaken between 1969 and 1970 identified medieval pottery adjacent to the north-west of a medieval moated site at Old Farm.

3.3.466 A **low value** medieval artefact scatter (**2271**) of evidential value is recorded at 'Little Barn Meadow' approximately 80 m west of the Order Limits, immediately west of Eldens Lane, and 1.3 km north-west of Cay Hill. A fieldwalking survey identified 92 medieval pottery fragments, including 17 13th to 14th century rim sherds.

3.3.467 A **low value** medieval artefact scatter (**2273**) of evidential value is recorded at 'Bruses' approximately 130 m north-east of the Order Limits, immediately east of Hoggars Road, and 1.2 km south-west of Mendlesham. A fieldwalking survey identified four pottery fragments, one possibly dating to the 12th century and three to the 13th to 14th century. A further 20 post medieval pottery fragments comprising one 17th century fragment and 19th century fragments have also been identified.

3.3.468 A **low value** medieval artefact scatter and possible moat (**2282**) of evidential and historical value is recorded at 'Pond Meadow' approximately 80 m west of the Order Limits, 230 m north of Mendlesham Road, and 1.5 km north-west of Mendlesham. The land parcel marks the location of a small flattened possible moat, identified by a cropmark. Aerial imagery suggests the moat may be oblique in plan. A fieldwalking survey of the location identified 86 13th to 14th century pottery fragments.

3.3.469 A **low value** medieval artefact scatter (**2275**) of evidential value is recorded at 'Further Barn Close' approximately 20 m west of the Order Limits, immediately south of Mendlesham Road, and 1 km south-east of Cotton. A fieldwalking survey identified 77 pottery fragments, four of which were datable between the 13th and 14th centuries.

3.3.470 A **low value** medieval artefact scatter (**2283**) of evidential value is recorded at 'Cottage Meadow' approximately 200 m east of the Order Limits, immediately south of Mendlesham Road, and 1.1 km north-west of Mendlesham. A fieldwalking survey identified 32 predominantly 13th and 14th century pottery fragments. Three early medieval pottery sherds have also been identified.

3.3.471 A **low value** medieval artefact scatter (**2284**) of evidential value is recorded at 'Little Carrs approximately 240 m east of the Order Limits, 10 m north of Hoggars Road, and 1.2 km west of Mendlesham. A fieldwalking survey identified 60 pottery fragments, three of which were identified to be 13th to 14th century in date, and one dating to the 15th century. Three post medieval 17th century pottery sherds have also been identified, as well as five lava quern fragments. The HER also indicates this land parcel also contains two L-shape ponds of unknown date.

3.3.472 The **low value** location of a medieval deer park site (**2238**) is marked by the HER as a point approximately 50 m west of the Order Limits, 100 m north-east of Willow Lane, and 500 m east of Dandy Corner. The deer park is first recorded in 1466 and is

associated with the Grade II moated site of Hempnalls Hall (**1180451**) to the south-west. The extent of the deer park has not been noted by the HER; however, it is possible that the deer park may have extended to within the Order Limits. This asset is of evidential and historical value.

3.3.473 A **medium value** medieval moat at Hempnalls Hall (**2252**) of evidential and historical value is recorded surrounding the 16th to 17th century Grade II Hempnalls Hall (**1180451**) approximately 160 m south-west of the Order Limits, immediately north of Willow Lane, and 280 m south-east of Dandy Corner. The land was originally situated within the settlement of Caldecota (*Kaldecotes, Caldecoten, Caldencotan*) mentioned in the Domesday Book of 1086. Garden works have identified a cragstone retaining wall underpinning a revetment on the south-western side of the moat island, with traces of mortared flint and brick revetment on the southern, western and eastern sides. A scoped-out Grade II bridge (**1032280**) crosses the northern side of the moat. The setting of the moat is considered in conjunction with Hempnalls Hall (**1180451**) in the post medieval section below.

3.3.474 Medieval phases of a dwelling have been found surrounding and under the existing hall including foundations of a wall extending southward from the south of the house in the garden. Two 14th century tiles and two terracotta architectural fragments possibly reclaimed from the scheduled Westhorpe Hall (**1016697**) have also been identified.

3.3.475 The **low value** moated mound, likely that of a windmill mound (**2250**) of evidential and historical value is recorded c. 75-100 m south-west of the Order Limits, 90 m south-east of Hill Farmhouse (**1032730**), and 890 m east of Gipping. The HER indicates the mound was approximately 5’ (1.5 m) high, surrounded by a 40’ (12 m) diameter moat. Pottery has been identified dating between the 13th and 14th centuries from a buried turf line below the mound as well as the surface. The HER indicates that the mound may have been destroyed by ploughing, however OS mapping suggests that the mound may still be present, though this has not been confirmed. Two possibly associated ponds surrounding the windmill mound (**2815**) have also been observed on the 1884 1:2500 and 1:10560 OS map and are last observed on the 1957 1:10560 OS map.

3.3.476 A **medium value** possible moat and artefact scatter (**2267**) of evidential and historical value are recorded at ‘Berry’s Meadow’ approximately 20 m south-west of the Grade II Lodge Cottage (**1352504**). The moat and artefacts are recorded approximately 350 m east of the Order Limits, 50 m south-west of Oak Farm Lane, and 1.2 km north-west of Mendlesham. Cropmarks at this land parcel suggests a square possible moat enclosure, with a fieldwalking survey identifying five 12th century pottery fragments and twelve 13th to 14th century pottery fragments. Post medieval pottery comprising of five 16th century pottery fragments, a number of 17th century fragments have also been identified, as well as Romano-British artefacts, an undated bronze sheet fragments and seven lava quern fragments from within the enclosure bounds.

3.3.477 The setting of the asset is informed by its rural location, by its relationship with the Grade II Lodge Cottage to the north-east, and by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a minor contribution to its value, but as it is focused on its immediate location, the setting does not extend to the Order Limits.

3.3.478 A **low value** moated site and artefact scatter (**2266**) of evidential and historical value has been recorded at ‘Backhouse Field’, Wicks Farm 75 m west of the Order Limits,

75 m west of Potters Lane, and 1.7 km west of Mendlesham. The HER records the land parcel comprises of a large square moat, the eastern arm of which is extant. A total of forty 13th to 14th century pottery fragments and a lava quern fragment have also been recovered during a field walking survey.

3.3.479 A medieval moat site and artefact scatter (**2264**) of evidential and historical value are recorded at Eldens partially within the Order Limits, 10 m west of Eldens Lane, and 1.8 km south-west of Mendlesham. The square moat is recorded by the HER as being 'ploughed out' but potentially visible as a **low value** cropmark. Six 13th to 14th century unglazed pottery sherd have also been identified here during a fieldwalking survey.

3.3.480 A **medium value** medieval square moat with outlying pond (**2251**) is recorded at Cotton Lodge of evidential and historical value, approximately 280 m west of the Order Limits, 500 m east of Stonham Road, and 1.9 km west of Mendlesham. The moat occupies the south-eastern portion of the post medieval Cotton Lodge Farmstead (**2443**), with the early post medieval Cotton Lodge (**1285476**) currently occupying the moat island. The setting of the moat (**2251**) is considered in conjunction Cotton Lodge (**1285476**) in the post medieval section below.

3.3.481 In a field near Cay Hill and outside the Order Limits was found a **low value** worn and damaged mid-14th century silver medieval halfpenny of Edward III's 'florin' coinage (**2310**). This asset has evidential and historical value.

Middlewood Green and Stowmarket

Designated Heritage Assets

Stowupland CP

3.3.482 The Grade II* listed 'Columbine Hall' (**1352322**) is located within a moat at the northern end of a private road north of Gipping Road on the northern outskirts of Stowupland, and 1.8 km west-north-west of Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The asset comprises a major fragment of a manor house, now a farmhouse, of late 14th century date with alterations made around 1600. The asset is constructed of flint rubble up to the first floor with quoins and 18th and 19th century red brick patching. The upper storey is of plastered timber frame construction, which is jettied to the north and west over the moat.

3.3.483 The setting of the asset is informed by its location inside the moat and by its relationships with its non-designated outbuilding within the moat and the farming complex immediately south of the moat, the majority of which are recorded on the first edition OS map of 1886. The setting is further informed by the surrounding agricultural landscape with which the asset, its outbuilding and the associated farm complex have a historical and ongoing functional relationship. The moat island is now a garden and lawn area associated with the asset and beyond the moat is a surrounding belt of trees, which is particularly dense to the east. The setting of the asset is private and secluded and unaffected by the 20th and 21st urban expansion of Stowupland to the south. The setting, therefore, makes a considerable contribution to the value of the asset, but due to screening by the mature trees of the asset's grounds and overall distance, the setting does not extend to the Order Limits.

3.3.484 The Grade II listed 'Pasture Cottage' (**1182022**) is located on the western flank of Gipping Road c. 1.3 km north-east of the centre of Stowupland and c. 1.2 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the early 16th century with 17th, 18th and 19th century alterations and is a fragment of a larger house which has otherwise been demolished. The house comprises a plastered timber frame structure with a pantile roof.

3.3.485 The setting of the asset is informed by its roadside location within its large garden and by its relationship with it non-designated out buildings, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationship with the post medieval Gipping Farm complex immediately to the east, which includes the Grade II listed 17th century Gipping Farmhouse. The surrounding agricultural landscape, with which the asset and its outbuildings have a historical relationship, also positively contributes to the setting. The grounds of the asset, and the farmyard to the east, are defined by mature tree lined hedgerows very much limiting intervisibility between the assets and, along with the farmhouse and its outbuildings, entirely screen views eastwards from the cottage. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its restricted settlement focus and by its garden boundaries and the farm complex, the setting does not extend to the Order Limits.

3.3.486 The Grade II listed 'Orchard House' (**1032659**) is located on the eastern flank of Mill Street on the southern edge of Stowupland and 1.6 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built in the early-to-mid 16th century and comprises a plastered timber frame structure with a thatched roof.

3.3.487 The setting of the asset is informed by its roadside location within its own grounds and by its relationship with the non-designated property immediately to the south, which is recorded on the first edition OS map of 1885. Its once semi-rural setting has, however, been eroded by 20th century residential development along Mill Street to the north and south, by the imposition of large industrial units immediately to the north and by the construction of the A1120 55 m to the east, which has introduced noise and pollution into the setting. The setting of the asset, therefore, makes a minor contribution to the asset's value and due to its restricted roadside nature, the setting does not extend to the Order Limits.

3.3.488 The Grade II listed 'Old Farmhouse' (**1032658**) is located on the western flank of Mill Street c. 380 m south of the southern edge of Stowupland and 1.5 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset was built in the late 15th century and comprises a plastered timber frame three cell open hall farmhouse with a thatched roof.

3.3.489 The setting of the former farmhouse is informed by its roadside location within dispersed settlement along Mill Street and by its relationships with the listed and non-designated buildings that contribute positively to the character of the throughfare. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and former functional relationship. The garden of the asset is defined by mature tree lined hedgerows allow for glimpsed views into and out of the asset's grounds affording it some privacy. Due to the loss of the working farm, the setting of the farmhouse makes a moderate contribution to value, and because the

restricted roadside settlement nature of the setting, it does not extend to the Order Limits.

Earl Stonham CP

3.3.490 The Grade I listed 'Church of St Mary the Virgin' (**1033223**) is located on the northern flank of the A1120 in the hamlet of Earl Stonham, c. 1.4 km south-east of Forward Green and c. 1.9 km east of the Order Limits. The asset is situated on the western flank of a shallow tributary valley of the Gipping river c. 3.4 km to the south-west. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church comprises a nave, chancel, north and south transepts, south porch and west tower of largely 14th and 15th century date, although there is some evidence of 13th century fabric in the chancel. The church was restored in 1874 and constructed of flint rubble with freestone dressings. The nave roof is slated, the chancel roof is concrete plain tiled whilst the remaining roofs are leaded.

3.3.491 The setting of the asset is informed by its roadside location within its large graveyard and by its relationships with the listed and non-designated post medieval buildings of the Church Farm complex to the west and the Whitehouse Farm complex to the east, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship, although this link has been partially eroded by the imposition of a large intrusive industrial complex immediately to the north of the graveyard. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the topography, development and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

3.3.492 The Grade II listed 'Larters' (**1033185**) is located on the northern flank of Larters Lane near the northern extent of the linear settlement of Middlewood Green and c. 630 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The core of the asset dates to the 15th century but it was majorly remodelled in c. 1550-70. The asset comprises a plastered timber frame house with a slated 19th century roof.

3.3.493 The setting of the asset is informed by its semi-rural roadside location and by its relationship with its non-designated outbuilding immediately to the north-west, which is recorded on the first edition OS map of 1884. The setting is further informed by the asset's relationships with later small-scale 20th residential development along Laters Lane and by the surrounding agricultural landscape with which the asset and its outbuilding have a historical relationship. The later development is not intrusive and so the setting of the asset makes a considerable contribution to its value, but due to its restricted settlement focus, the setting does not extend to the Order Limits.

3.3.494 The Grade II listed 'Cherry Tree Farmhouse' (**1352036**) is located on the eastern flank of Blacksmiths Lane towards the southern extent of the linear settlement of Middlewood Green and 680 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse is of early-to-mid 16th century date with a late 16th century extension and comprises a plastered timber frame structure with a plain tile roof.

3.3.495 The setting of the asset is informed by its roadside semi-rural location and by its relationship with the non-designated buildings to the south, which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship, although this

link has been partially eroded by the imposition of 20th century residential development along the western flank of Blacksmiths Lane. Due to the encroaching development, the setting of the asset makes a moderate contribution to its setting, but due to its restricted settlement focus, the setting does not extend to the Order Limits.

3.3.496 The Grade II listed 'Spalls Farmhouse' (**1033192**) is located near the western extent of the linear settlement of Forward Green, at the northern end of Mill End Lane and c. 230 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The core of the former farmhouse probably dates to the 15th century with an extension added in the late 16th or early 17th centuries. The asset comprises a plastered timber frame structure with a thatched roof. The farmhouse forms part of a historical farmstead known as Spalls Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2523**). The farmstead dates to the 15th century with later 19th century alterations and additions. The farmstead has historical and evidential value and is of **low value** based on its association with the listed building countered by the loss of the other buildings of the complex.

3.3.497 The setting of the farmhouse is informed by its isolated location within its overgrown grounds, which largely obscure views into and out from the asset. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and former functional relationship. Due to its loss of function and the dereliction of its outbuildings the setting of the asset makes a minor contribution to its value, however, due to the proximity of the Project, the setting extends to the Order Limits.

3.3.498 The Grade II listed 'Weylands Cottages' (**1182917**) is located on the eastern flank of Wicks Lane in Forward Green and c. 830 m east-north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The asset was built in the early 16th century, and it was remodelled in c. 1550. The asset comprises a plastered timber frame structure with some C18 cable-pattern pargetting thatched roof.

3.3.499 The setting of the asset is informed by its village location and by its relationships with the nearby non-designated later buildings which positively contribute to the character of the settlement. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The later development is not intrusive and so the setting of the asset makes a considerable contribution to its value, but due to its restricted settlement focus, the setting does not extend to the Order Limits.

3.3.500 The Grade II listed 'Sunnyside' (**1352037**) is located on the northern flank of an unnamed trackway in Forward Green and c. 1.3 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The asset was built in the early 16th century, has 17th century alterations and comprises a plastered timber frame structure with a thatched roof.

3.3.501 The setting of the asset is informed by its village location and by its associated large, mature garden. The setting is also informed by the asset's relationships with nearby listed and non-designated buildings which contribute positively to the character of the settlement. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the village and immediate landscape, the setting does not extend to the Order Limits.

3.3.502 The Grade II* listed 'Yewtree House' (**1033226**) is located on the western flank of Blacksmiths Lane in Forward Green and c. 1.1 km east-north-east of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The asset was built in the early 15th century, was altered around c. 1600 and comprises a plastered timber frame structure with some cable-pattern pargetting and a thatched roof.

3.3.503 The setting of the asset is informed by its village location and by its associated large, mature garden. The setting is also informed by the asset's relationships with nearby listed and non-designated buildings which contribute positively to the character of the settlement. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the village and immediate landscape, the setting does not extend to the Order Limits.

3.3.504 The Grade II listed 'Green Farmhouse' (**1182829**) is located on the southern flank of an unnamed trackway in Forward Green, to the east and adjacent to the green, and c. 1.3 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The former farmhouse was built in the late 15th century, was extended in the 17th and 18th centuries and comprises a plastered timber frame structure with a thatched roof.

3.3.505 The setting of the asset is informed by its village location, by its associated large, mature garden, and its relationship with the village green immediately to the west. The setting is also informed by the asset's relationships with nearby listed and non-designated buildings which contribute positively to the character of the settlement. The surrounding agricultural landscape, with which the asset has historical and former functional relationships, also contributes to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the village and immediate landscape, the setting does not extend to the Order Limits.

3.3.506 The Grade II listed 'Forrold Cottage' (**1352061**) is located south of School Lane in Forward Green and c. 1.4 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The house dates to the early to mid-16th century, had a chimney stack inserted in the 17th century and had minor alterations in the 19th and 20th centuries. it comprises a plastered timber frame structure with a hipped thatched roof.

3.3.507 The setting of the asset is informed by its village location and by its associated large, mature garden. The setting is also informed by the asset's relationships with nearby listed and non-designated buildings which contribute positively to the character of the settlement. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the village and immediate landscape, the setting does not extend to the Order Limits.

3.3.508 The Grade II listed 'The Rookery' (**1182556**) is located on the north-western flank of Fen Lane 560 m west of Earl Stonham and c. 1.4 km north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the early 16th century with alterations made around 1600 and comprises a plastered timber frame structure with a concrete tiled roof.

3.3.509 The setting of the asset is informed is informed by its location within a working farm complex, however, the farm outbuildings recorded on the first edition OS map of 1884 has been replaced by modern hanger style barns. The setting is further informed by the wider agricultural landscape with which the asset has a historical and functional relationship. The modern farm outbuildings, whilst functional and appropriate in a farming complex, architecturally clash with the farmhouse and so the setting of the asset makes a moderate contribution to its value. Due to its focus on the farmyard and its immediate agricultural landscape, the setting of the asset does not extend to the Order Limits.

3.3.510 The Grade II listed 'Chapel Farmhouse' (**1033220**) is located on the south-eastern flank of Fen Lane c. 820 m south-west of Earl Stonham and c. 1.2 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The core of the former farmhouse date to the late 15th of early 16th centuries but was remodelled in the early 17th century when a crosswing was also added. The asset comprises a plastered timber frame structure with a plain tiled roof.

3.3.511 The setting of the asset is informed by its roadside rural location and by its relationship with its non-designated outbuildings to the north-east and the non-designated residence to the south-west, most elements of which are recorded on the first edition OS map of 1884. The setting is further informed by the wider agricultural landscape with which the asset has a historical and former functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value but due to overall distance and the focus of the setting being restricted to the immediate rural landscape, it does not extend to the Order Limits.

3.3.512 The Grade II listed 'Fen House' (**1182656**) is located on the south-eastern flank of Fen Lane c. 650 m north-west of Creeting St Mary and c. 60 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the late 15th to early 16th centuries with alterations and extensions made in the 20th century. the asset comprises a plastered timber frame three-cell open hall house with s thatched roof.

3.3.513 The setting of the asset is informed by its roadside location and by its relationship with the farming complex c. 140 m to the north-east, which includes the Grade II listed post medieval Fen Farmhouse. The setting is further informed by the early 20th residential dwelling on the opposite side of Fen Lane and by the wider agricultural landscape with which the asset has a historical and former functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value but due to overall distance and the focus of the setting being restricted to the immediate rural landscape, it does not extend to the Order Limits.

Stonham Parva CP

3.3.514 The Grade I listed 'Church of St Mary' (**1352062**) is located at the western extent of Little Stonham west of Church Lane and c. 2.4 km east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The medieval parish church comprising a nave, chancel, west tower, south chapel and south porch, was majorly remodelled in the early 16th century. The church is largely plastered stone rubble with freestone dressing whist the tower is of flint rubble with freestone dressing.

3.3.515 The setting of the asset is informed by its village location and by its relationship with the scoped-out Grade II listed post 17th century Little Stoneham Hall and its two Grade II listed 16th/17th century barns to the north. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. the graveyard of the church is open to the east allowing for an attractive view of the church whilst a mature tree lined hedgerow defines its boarder to the south, west and north partially obscuring views to and from the asset. the setting of the asset, therefore, makes a considerable contribution to its value, but due to the screening by its boundaries and by the topography, development and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

3.3.516 The Grade II* listed 'Clock House' (**1284270**) is located on the western flank of Clockhouse Lane c. 1 km north of Little Stoneham and c. 2.4 km east of the Order Limits. is of **high value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse date to the mid-to-late 15th century with major alterations undertaken in c. 1600. The asset comprises an open hall house with the parlour remodelled and extended around 1600 to form a crosswing. The house is a plastered timber frame structure with plain tiled roofs.

3.3.517 The setting of the asset is informed by its former farmyard location and by its relationship with its non-designated outbuildings on either side of Clockhouse Lane, although those to the east have been converted into a separate residence. The setting is further informed by the surrounding agricultural landscape with which the asset and its outbuildings have a historical and former functional relationship. The asset has a large garden and lawned area, which contains scattered trees and is defined by a high, tree lined hedgerow likely in place to screen the asset from pylons in the landscape c. 300 m to the east. the setting of the asset, therefore, makes a moderate contribution to its value, but due to the screening by the asset's boundaries and by the topography, development and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

Creeting St Peter CP

3.3.518 The Grade I listed 'Church of St Peter' (**1352072**) is located to the north of Mill Lane c. 630 m south-south-east of the centre of Creeting St Peter and c. 300 m west-north-west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The asset largely dates to the 14th and 15th centuries but with evidence of later maintenance and alterations including largely 19th century roofs. The church is constructed of flint rubble with freestone dressings with the nave largely plastered and has plain tiled roofs.

3.3.519 The setting of the asset is informed by its largely secluded location within its grounds and by its relationship with the Grade II listed post medieval former rectory to the east and the former rectory's outbuildings. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The church serves the parish of Creeting St Peter, which comprises dispersed farmsteads, hamlets and villages. The largest population centre is the small village of Creeting St Peter to the north-north-west. There is, however, no intervisibility between the settlement and the church due to the imposition of the A14 and its now mature planting. The setting of the asset, therefore, makes a moderate contribution to its value and due to the proximity of the Project within the parish, the setting extends to the Order Limits.

3.3.520 The Grade II listed 'Willow Green Farmhouse' (**1182367**) is located on the western flank of Pound Road within Creeting St Peter, and c. 100 m south-west of the Order Limits. The former farmhouse is of probable 15th century date with 17th century alterations and comprises a roughcast timber frame structure with a thatched roof.

3.3.521 The setting of the asset is informed by its roadside village location and by its relationships with the scatter of non-designated, post medieval building which contribute to the character of Creeting St Peter. The setting is also informed by the agricultural land to the west with which the asset has a historical and former functional relationship. There has been some small-scale 20th century expansion of the settlement and some infill development, not all of it architecturally sympathetic. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its restricted settlement focus, the setting does not extend to the Order Limits.

Non-Designated Heritage Assets

3.3.522 A **low value** medieval barrel lock (**2403**) of evidential value was recovered from farmland within the Order Limits and c. 1 km north of Saxham Street.

3.3.523 The **medium value** medieval partial remains of a moated manor at Roydon Hall (**2241**) of evidential and historical value is located within the Order Limits, 560 m east of Creeting Road, and 900 m south-west of Broad Green. The site is also recorded as the **medium value** late medieval to early post medieval location of the 16th century Roydon Hall farmstead complex and garden (**1033215**, **1284584**, **1352074**) of aesthetic, evidential and historical value. The setting of the moat is considered relative to the listed buildings in the post medieval section below.

3.3.524 A **medium value** medieval circular moat with associated 13th to 14th pottery and mortar (**2249**) of evidential and historical value is recorded by the HER within the Order Limits approximately 40 m north of the river Gipping, and 500 m east of Badley Hill. The moat is recorded by the HER on the alluvial floodplain of the river Gipping. The asset was levelled by bulldozer in November 1959. The site currently appears within the landscape as an oval soil mark with an approximately 8 m wide ditch. A further scatter of red brick and tile fragments are also noted by the HER at this location in 1979. Aerial imagery of the moated site (**2249**) marks the moated enclosure as an earthwork in 1946 and as a cropmark on later photography. Aerial imagery also shows a smaller and narrower curvilinear ditch forming an attached enclosure to the north.

3.3.525 The setting of asset (**2249**) is informed by its location in the Gipping river valley and by its relationship with the Grade II listed Creeting Hall (**1352073**) and associated farming complex (**2448**). The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and possibly former functional relationship. The setting of the asset makes a considerable contribution to its value and as the asset is located within the Project the setting extends to the Order Limits.

3.3.526 The **low value** Ipswich and Stowmarket Navigation (**3245**) bisects the Order Limits c. 215 m north of Badley Hill and snakes its way west to east in a south-west direction as part of the river Gipping. The date the canal was opened in unknown, but it links the two towns together and makes the river Gipping navigable. The fifteen locks on the 16-mile canal were closed in 1934. This asset has historical and evidential value.

3.3.527 A **low value** scatter of 13th to 14th century pottery (**2272**) of evidential value has been recovered from farmland c. 550 m south-south-west of Saxham Street and largely within the Order Limits.

3.3.528 A second **low value** scatter of 13th to 14th century pottery (**2279**) of evidential value has been recovered from farmland c. 850 m south of Saxham Street and c. 40 m east of the Order Limits.

3.3.529 A third **low value** scatter of medieval pottery (**2290**) has been recovered from farmland c. 640 m south of Saxham Street and c. 30 m east of the Order Limits.

3.3.530 A **low value** findspot of a lava quern fragment (**2242**) of evidential value has been identified approximately 140 m east of the Order Limits, 360 m west of Mill Lane, and 1 km south of Broad Green.

3.3.531 A findspot of a medieval seal matrix (**2287**) has been recorded as a PAS find. It was found outside the Order Limits near Broad Green village. The copper alloy artefact dates to the 14th century and is inscribed with '*LE CONTRE . SEAV. DE MELERE*' meaning 'the counter deal of Melere'. The item is of **low value** and has evidential value.

3.3.532 Hodskinson's Map of 1783 records Wicks Green (**2380**), which comprises a narrow strip of east/west aligned land extending 1.16 km from the western edge of Forward Green to within the Order Limits. The asset is of **low value** based on its historical value.

3.3.533 Hodskinson's Map of 1783 also records a green at Broad Green (**2379**), c. 780 m south-west of Forward Green, and c. 75 m north-east of the Order Limits at the nearest point. The asset is of **low value** based on its historical value.

3.3.534 A **low value** medieval quern (**2387**) of evidential value was recovered from farmland c. 580 m east of Creeting St Mary and c. 160 m west of the Order Limits.

Needham Market and Ringshall

Designated Heritage Assets

Creeting St Mary CP

3.3.535 The Grade II* listed 'Church of St Mary' (**1033245**) is located at the south-western extent of the linear settlement of Creeting St Mary, c. 780 m east of an Order Limits access road and c. 1 km east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. There is evidence of 12th century origins, but the fabric of the church largely dates to the 14th and 15th centuries with much remodelling in 1884-7. The church is constructed of flint rubble with freestone dressing and plain tiled roofs.

3.3.536 The setting of the asset is informed by its moderately isolated location just beyond the settlement and by its relationship with the non-designated building immediately to the north, which may be the rectory recorded on the first edition OS map of 1884. The setting further informed by its relationships with the scatter of non-designated, post medieval building at the south-western end of Creeting St Mary, which contribute to the character of the settlement. The surrounding agricultural landscape, with which the asset has a historical relationship, also positively contributes to its setting. The setting of the asset, therefore, makes a considerable contribution to its

value, but as the Project is contained within other parishes to the west, the setting does not extend to the Order Limits.

3.3.537 The Grade II listed 'Gooserye Farmhouse' (**1033212**) is located at the southern limit of an unnamed road c. 270 m south-east of St Marys Road, c. 370 m north-east of the centre of Needham Market, 1.3 km north-east, and 1.5 km south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse is of late 15th or early 16th century date with mid-16th century alterations. The asset comprises a plastered timber frame structure with s concrete plain tiled roof.

3.3.538 The setting of the former farmhouse is informed by its location within the Gipping valley, its relationship with the post medieval Alder Carr Farm complex 60 m to the north, and by its relationship with the largely post medieval outskirts of Needham Market, which line the southern bank of the Gipping river to the south-west. The setting of the asset is further informed by the surrounding agricultural landscape with which the asset has a historical and former functional relationship. The erosion of the rural landscape by the post medieval and modern expansion of Needham Market and the introduction of railway and highway infrastructure means that the setting of the asset makes a minor contribution to its value, but due to the focus of the setting being restricted to the immediate river valley, it does not extend to the Order Limits.

Badley CP

3.3.539 The scheduled monument 'Chantry (site of)' (**1006030**) is located towards the south-western end of the Badley Conservation Area (**CA45**) at the western end of Badley Lane, Badley, and c. 750 m south-west of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. A chantry is recorded in Badley at the Reformation, which was founded by Edmund Rafeman alias Alcoke of Bradley Hall to run for a period of fifty years after his death. Several flints, including at least two that were dressed as quoins, were found in 1968 during excavation for electricity post and these were interpreted as evidence of the structure.

3.3.540 The Grade II* listed 'Barn 100 Metres South East of Badley Hall' (**1231085**) is located within the bounds of the scheduled monument, whilst the Grade II* listed 'Badley Hall' (**1231083**), the Grade II listed 'Bakehouse 15 Metres South Of Badley Hall' (**1278291**), the Grade II* listed 'Dovecote 60 Metres East of Badley Hall' (**1231084**), and the Grade I listed redundant 'Church of St Mary' (**1231082**) are in proximity. The barn, dovecote, and redundant church are of **high value**, whilst the Grade II assets are of **medium value**, based on their designations and their evidential, historical and aesthetic values. The weatherboarded timber frame barn (**1231085**) dates to the 15th or early 16th centuries with a single-bay stable added to the west end in 17th century. The barn stands on a large plinth of flint rubble with dressings mainly of red brick. Badley Hall (**1231083**), now a farmhouse is the surviving service range of an early 16th century manor house, probably built for Sir Edmund Poley (d. 1548) with the remainder of the house demolished in c. 1759. The asset comprises a plastered timber frame structure with a plain tiled roof. The bakehouse (**1278291**), now known as The Cottage, was built as a bakehouse for Badley Hall in the early to mid-16th century. the asset comprises a pebble-dashed timber frame structure with a plain tiled roof and partly underbuilt in 19th century red brick. The timber-framed dovecote (**1231084**) dates to the 16th century and is rare example of its type, with a pair of 18th to 19th century stable doors later attached to the western side. Assessment of the dovecote is not taken further due to the asset's restricted setting due to its

building type. The church (**1231082**) comprises a nave, chancel, west tower and south porch largely of 15th century date but much of the fabric is now 15th century but with evidence of 16th and 17th century alterations and maintenance. The asset is largely constructed of flint rubble with freestone dressing, whilst the tower is of flint and brick rubble, with the belfry stage rebuilt in 16th century orange brick.

3.3.541 The setting of the church (**1231082**) is informed by its relationships with the scheduled monument, the listed and non-designated elements of the Badley Hall Farm complex and with the non-designated elements of the conservation area (**CA45**), particularly the tree lined avenue Badley Walk (**2534**), which links the complex to the B1113 Stowmarket Road to the north-east. Based on its association with the listed buildings and the scheduled monument, Badley Walk (**2534**) is of **medium value** and holds evidential and historical value. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes positively to the setting. The setting of the church, therefore, makes a considerable contribution to its value and, as the Project crosses the parish to the north-east of the asset, the setting extends to the Order Limits. The setting of Badley Walk (**2534**) is comparable to that of the church, and as the asset is partially within the Project, its setting extends to the Order Limits.

3.3.542 The setting of the scheduled monument (**1006030**), the hall (**1231083**), barn (**1231085**), dovecote (**1231084**), and bakehouse (**1278291**) is shared and informed by the interrelationship between the designated assets and by their relationships with the non-designated buildings of the Badley Hall Farm complex, which are largely apparent on the first edition OS map of 1884. The setting of the Badley Hall Farm buildings and the chantry is also informed by their relationships with the non-designated elements of the conservation area (**CA45**) as noted above, and their relationships with the listed church (**1231082**). The surrounding agricultural landscape, with which the elements of the Badley Hall Farm complex have a historical and ongoing functional relationship, also contributes positively to the setting. The assets are contained within a wider area including numerous trees and defined in part by tree belts effectively screening the assets from the byways of the surrounding landscape. The setting of the assets, therefore, makes a considerable contribution to their values, but due the focus of the setting being on the former manorial site, the farming complex and the immediate agricultural landscape, it does not extend to the Order Limits.

3.3.543 The Grade II listed 'The Dower House' (**1231088**), formally Doveshill Farmhouse, is located on the north-eastern flank of the B1113 Stowmarket Road at the north-western extent of Needham Market, c. 90 m west and south of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the late medieval period, but with complex 16th and 17th century alterations, and comprises a plastered timber frame structure with a crosswing and a plain tiled roof.

3.3.544 The setting of the asset is informed by its roadside location and by its relationship with its former outbuildings immediately to the south-east, which are now a separate residence. The setting is further informed by the surrounding agricultural landscape with which the asset and its outbuildings have a historical and former functional relationship. There has, however, been some 20th century infill development to the north and south of the asset and the railway, 80 m to the north-east, was imposed onto its setting during the 19th century. The setting of the asset, therefore, makes a moderate contribution to its value and due to the proximity of the Project, the setting extends to the Order Limits.

Combs CP

3.3.545 The Grade I listed 'Church of St Mary' (**1033001**) is located off Church Approach, c. 870 m north-east of the centre of Combs, on the southern outskirts of Stowmarket, 2 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church is largely 14th and 15th century in date and comprises a nave, chancel, north and south aisles, west tower, and north and south porches. The asset is built of flint and septaria rubble with reused limestone blocks and leaded and plain tiled roof. The church was restored in 1867 by H. J. Green of Norwich.

3.3.546 The setting of the asset is informed by its largely isolated location within its graveyard and by its relationship with the non-designated Comps Hall 50 m to the south. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship, although this link has been partially eroded by the 20th and 21st century expansion of Stowmarket to the north. The expansion of Stowmarket has also subsumed the settlement of Combs Ford, further eroding the asset's links to its historic environment. The setting of the church, therefore, makes a moderate contribution to its value, but due to the Project being located within the neighbouring parishes, the setting does not extend to the Order Limits.

3.3.547 The Grade II listed assets 'Holyoak Farmhouse' (**1183126**), 'Barn About 50 Metres North West of Holyoak Farmhouse' (**1032956**), 'Granary/Cartlodge Aligned East West 30 Metres North of Holyoak Farmhouse' (**1183144**) and 'Stable Aligned North South 40 Metres North West of Holyoak Farmhouse' (**1033002**) are located at the southern extent of Church Road c. 670 m east of Combs, and c. 1.9 km north-west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The barn, granary and stable are of post medieval date and reported in the appropriate section below. The farmhouse dates to the early and mid-16th century and comprises a roughcast timber frame structure with a thatched roof.

3.3.548 The setting of the assets is shared and informed by their interrelationships and by their relationships with the non-designated outbuildings of the farming complex, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the assets and outbuildings have historical and ongoing functional relationships. The setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance and the setting being restricted to the farmyard location and the immediate landscape, it does not extend to the Order Limits.

3.3.549 The Grade II* listed 'Ponderosa Post Office Cottage' (**1284144**) is located on the north-western flank of Tannery Road in Combs, and c. 2.6 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The asset comprises two properties built as a single farmhouse. The north/south range comprises an open hall of late 14th century and the east/west parlour crosswing to the south in the late 16th century. The asset comprises a roughcast timber frame structure with a pantiled roof.

3.3.550 The setting of the asset is informed by its roadside village location and by its relationships with the scoped out listed and non-designated buildings that contribute positively to the character of Combs. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the settlement focus of the setting it does not extend to the Order Limits.

Barking CP

3.3.551 The Grade I listed 'Church of St Mary' (**1231756**) is located of Parsons Lane 630 m north-east of Barking, and c. 210 m north of the Order Limits access route and c. 380 m east of the Order Limits main corridor. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church dates largely to the 14th and 15th centuries and comprises a nave, chancel, west tower, north and south aisles, a sacristy north of the chancel, and a south porch. It was restored in the 1880s when the upper stage of the 14th century tower was rebuilt, with further restoration works undertaken in 1905.

3.3.552 The setting of the asset is informed by its detached location away from the settlement core and by its relationship with the post medieval Grade II listed former rectory to the north and the site of Barking Hall, which was demolished in 1826 and now occupied by Barking Hall Care Home, to the south. The care home likely incorporates elements of an outbuilding of the hall. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.553 The Grade II listed 'Timberleys' (**1231442**) is located on the south-eastern flank of the B1078 Barking Road in Barking, and c. 340 m south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset is a former farmhouse built in two stages in the 15th century and then around 1600. The house is a plastered timber frame structure with a plain tiled roof.

3.3.554 The setting of the asset is informed by its roadside location within the settlement and by its relationship with the Grade II listed Walnut Tree Cottage post medieval residence immediately to the south-west and which is recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and former functional relationship. There has been 20th century residential development on both flanks of Barking Road which has subsumed the asset into the village. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the roadside village focus of the setting, it does not extend to the Order Limits.

3.3.555 The Grade II listed 'The Old School House' (**1231465**) is located 40 m north-west of the north-western flank of Barking Road at the northern extent of Barking Tye, and c. 460 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse, which served as the village school in the 19th century, comprises a 15th or early 16th century open hall house with 16th and 19th century alterations. The asset is a plastered timber frame structure with a plain tiled roof.

3.3.556 The setting of the asset is informed by its village location set back from the main road and by its relationships with the Grade II listed 17th century Rectory Farmhouse to the east and the non-listed elements of the Rectory Farm complex to the north, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and former functional relationship. Residential development along Barking Road in the 20th century has annexed the asset into the village and coupled with its loss of function means the setting of the asset makes moderate contribution to its value. Due to the focus of the setting being its village setting, however, it does not extend to the Order Limits.

3.3.557 The Grade II listed 'Lower Farmhouse' (**1231364**) is located within a working farm complex, 560 m north-west of Barking Tye, and c. 40 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the 15th century with late 16th and late 19th alterations and comprises a pebble dashed timber frame three-cell open house with a concrete tiled roof. The farmhouse forms part of a historical farmstead known as Lower Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2439**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.558 The setting of the farmhouse is informed by its location within a working farmyard and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884 (**2439**). The setting is further informed by the asset's relationships with more farms to the west and residential dwellings to the south-east. the surrounding agricultural landscape, with which the asset has a historical and ongoing functional relationship also positively contributes to the asset's value. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.559 The Grade II listed 'Mullets Farmhouse' (**1231757**) is located on the eastern flank of the B1078 Barking Road at the southern extent of Barking Tye, and c. 480 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse is dates to the 16th century or earlier and comprises a roughcast timber frame structure with a plain tiled roof.

3.3.560 The setting of the asset is informed by its roadside village location and by its relationship with its former outbuildings to the south, which is now a residential dwelling. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and former functional relationship. There has been some 20th century residential infill development to the north of the asset, but this is sympathetically in the local architectural vernacular and well screened by the asset's mature garden boundaries. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its village and immediate landscape focus, the setting does not extend to the Order Limits.

Needham Market CP

3.3.561 The Grade I listed 'Church of St John The Baptist' (**1254254**) is located on the north-eastern flank of High Street in Needham Market with King William Street immediately to the north-east. The Order Limits lie c. 1.2 km to the west. The asset is of **medium value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church was largely rebuilt between c. 1470 and 1500 but retains some earlier 13th and 14th century elements. The church comprises a nave, chancel, and south porch with a bell-turret constructed of flint and limestone rubble with freestone dressings and plain tiled and leaded roofs.

3.3.562 The setting of the asset is informed by its roadside settlement location within the medieval core of Needham Market and by its relationships with the numerous largely post medieval listed buildings which line the High Street, King William Street and Bridge Street. The 20th century development of the settlement has detached the High Street and its assets from the surrounding agricultural landscape, but this has not diminished the church's dominant presence in the settlement. The setting of the

asset, therefore, makes a considerable contribution to its value, but due to the urban expansion of Needham Market and the Order Limits passing through neighbouring parishes, the setting does not extend to the Order Limits.

Battisford CP

3.3.563 The Grade I listed 'Church of St Mary' (**1033018**), and the Grade II listed 'Church Cottage and Parish Room' (**1352139**) are located within the graveyard of the church in the historic core of the dispersed settlement of Battisford, c. 940 m north-west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church (**1033018**) comprises a nave, chancel, west bell turret, south porch, north chapel and north vestry and is largely of 14th century date, but with evidence of 12th century origins and 15th, 16th and 18th century alterations including the late 18th century brick and flint bell turret, which may be on the site of a medieval tower. The church is constructed of flint rubble with stone dressings and a plain tiled roof. The church cottage (**1352139**) is a rare example of a medieval priest's house and dates to the mid-14th century with evidence of remodelling in c. 1520 and again in the early 19th century. The asset comprises a plastered timber frame structure with a slated early 19th century roof.

3.3.564 The setting of the church is informed by its location on the fossilised medieval street plan at the core of the village and by its relationship with and priest's house immediately to the north. The setting is further informed by the asset's relationships with the early post medieval Grade II listed Church Cottages to the south, the mid-16th century Grade II listed Battisford Hall and the 17th century Grade II listed Rose Farmhouse to the west. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and as the Project crosses the parish to the south-east of the asset, the setting extends to the Order Limits.

3.3.565 The setting of Church Cottage is informed by its restricted graveyard location and by its intrinsic relationship with the church. The mature trees of the graveyard enclose the asset screening views into and out from the cottage creating a sense of privacy and seclusion. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its graveyard focus, the setting does not extend to the Order Limits.

3.3.566 The Grade II listed 'Vale Farmhouse' (**1033020**) is located off an unnamed road 320 m north of Hascot Hill (road), c. 670 m south-east of St Mary's Church in Battisford, and 270 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the early 16th century with an extension added around 1600. The asset comprises a plastered timber frame structure with a Roman pantile roof.

3.3.567 The setting of the asset is informed by its farmyard location and by its relationship with its Grade II listed late 17th century barn to the north-east. The setting is further informed by the asset's relationship with its **low value** non-designated outbuildings (**2494**) of evidential and historical value, most of which are recorded on the first edition OS map of 1884. The surrounding agricultural landscape, with which the asset has a historical and functional relationship, also contributes positively to the setting. The former fields to the east and south-east, however, have clearly not been worked for several decades and now appear to be wooded rough grazing. The mature vegetation affords the asset seclusion and privacy and so the setting makes a

considerable contribution to its value. Due to the proximity of the Project, the setting extends to the Order Limits.

3.3.568 The Grade II listed 'Valley Cottage' (**1284392**) is located on the northern flank of Valley Road, c. 750 m south-east of the historic core of Battisford and c. 400 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the early 16th century and was extended in the late 16th century. It comprises a plastered timber frame structure with a pantile roof.

3.3.569 The setting of the asset is informed by its largely isolated rural location, although a 20th century residence now lies to the east. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its roadside and immediate landscape focus, the setting does not extend to the Order Limits.

Ringshall CP

3.3.570 The scheduled monument 'Chapel Farm moated site' (**1006050**) is located adjacent to Chapel Farm, 140 m north of Lower Farm Road, Ringshall Stocks and 480 m west of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The asset comprises an irregular, broad moat, which once included remains of a chapel, apparently destroyed in a rebuilding of c. 1910. The chapel was tended by a monk of Hoxne, who had a cell there, probably on the moated area, which has earthworks likely representing buildings. A quarter of a mile to the west, levelling revealed much medieval pottery, early and late, but no structural remains.

3.3.571 The setting of the asset is informed by its location within the medieval landscape defined by the cores of surrounding settlements, scattered moated sites and the routes and roadways linking them. This setting has, however, been greatly eroded by field boundary loss, the expansion of many of the settlements including Ringshall Stocks, and by the domineering modern buildings of Chapel Farm. The setting of the asset, therefore, makes a minor contribution to its value, and due to the focus of the setting being much reduced through the loss of the medieval landscape, it does not extend to the Order Limits.

3.3.572 The Grade I listed 'Church Of St Catherine' (**1283864**) is located 130 m east of Stowmarket Road, on the northern edge of Ringshall and 1.3 km north-east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church contains 11th and 12th century walling, there is evidence of 13th, 14th and 16th century additions and alterations and restorations were undertaken in the 19th century. The asset is built of flint rubble with freestone dressings, several 16th century red brick patches and a plain tiled roof.

3.3.573 The setting of the asset is informed by its isolated location separated from the buildings to the south, which includes the 16th century Grade II listed Ringshall Hall and Grade II* listed associated barn, by a small mature copse. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by the copse, and Muckinger Wood in the intervening landscape, the setting does not extend to the Order Limits.

3.3.574 An archaeological evaluation then excavation of land adjacent To 96 Stowmarket Road, Needham Market, south of the B1113, and c. 240 m south-east of the Order Limits identified a range of archaeological features (**2378**). These features included **low value** medieval remains comprising eight discrete pits, a well, two medieval ditches low, and a night-soil deposit which contained 23 small finds including medieval coins, tokens, buckle plates, buckles, and jewellery.

3.3.575 A **low value** medieval artefact scatter (**2211**) of evidential value has been identified on a plot of land c. 230 m north-west of the Order Limits, immediately north-east of Stowmarket Road (B1113), and within Badley Hill. The evidence comprises of 13th to 14th century pottery including a sherd from shallow dish and 13 courseware body sherds.

3.3.576 A **low value** metal detected findspot of a short cross penny and bronze token (**2229**) of evidential value have been identified within the Order Limits, approximately 95 m south-west of Hascote Hill (road), and 900 m north-west of Barking.

3.3.577 A **low value** complete copper-alloy medieval buckle frame with integral cast plate (**2542**) was found in a field along B1078, outside the Order Limits.

3.3.578 A **low value** scatter of medieval pottery (**2297**) of evidential pottery was recovered from farmland on the eastern outskirts of Barking and c. 170 m east of the Order Limits.

3.3.579 A **low value** concentration of medieval pottery fragments (**2220**) of evidential value have been identified approximately 15 m south-west of the Order Limits, 390 m north of the B1078, and 1.4 km south-east of Ringshall.

3.3.580 The **low value** location of Barking Tye Green (**2232**) of evidential value dates to this period. This asset partially contains the Order Limits within its western edge, extends along the route of the B1078 Barking Road and meets the south-western edge of Barking.

3.3.581 A **low value** PAS find of evidential value comprising an extremely worn silver farthing of uncertain ruler but probably of c.1279-1377 AD (**2572**) was recovered from farmland south-west of Barking and outside the Order Limits.

3.3.582 A **low value** concentration of medieval pottery fragments (**2219**) of evidential value have been identified approximately 55 m east of the Order Limits, 280 m west of Barking Road, and 950 m south-west of Barking.

3.3.583 A **low value** scatter of medieval pottery (**2300**) of evidential value was recovered from land north on the B1078, c. 1.2 km south-west of Barking and c. 150 m east of the Order Limits.

3.3.584 A **low value** scatter of medieval pottery (**2303**) of evidential value was recovered from land north on the B1078, c. 1.1 km south-west of Barking and c. 15 m south-west of the Order Limits.

3.3.585 A **low value** scatter of medieval pottery (**2309**) of evidential value was recovered from land to the north of the B1078, c. 1 km south-west of Barking and partially within the Order Limits.

3.3.586 A **low value** concentration of medieval pottery fragments (**2221**) of evidential value have been recorded during a fieldwalking exercise approximately 80 m north-east of the Order Limits, 760 m north-west of Needham Road, and 900 m north of Barking.

3.3.587 A **low value** concentration of medieval pottery fragments (**2216**) of evidential value have been identified approximately 95 m south-west of the Order Limits, 10 m south of Barking Road, and within Barking.

3.3.588 A **low value** multi-period concentration of PAS artefacts (**2561**) of evidential value has been recovered from farmland c. 200 m from the Order Limits and north-east of Barking. The medieval artefact comprises a cast lead cruciform pendant.

3.3.589 A number of **low value** eroded medieval furrows (**2233**) were identified during a watching brief associated with the construction of a 1.75 km water main to the south of Willisham in 2007. The furrows are noted by the HER to the south of the water main route, approximately 100 m north-east of the Order Limits at its closest point. The water main route was located broadly north/south along the western edge of Ipswich Road. The exact location of the furrows could not however be determined from the watching brief report (AS, 2008).

3.3.590 A **low value** concentration of medieval pottery fragments (**2213**) of evidential value have been identified approximately 100 m south-west of the Order Limits 'dismantle assets', 45 m north-east of Hascot Hill (road), and 530 m north of Barking.

3.3.591 A **low value** concentration of medieval pottery fragments (**2217**) of evidential value have been identified approximately 170 m south-west of the Order Limits 'dismantle assets', immediately south of Barking Road, and within Barking.

3.3.592 A **low value** concentration of medieval pottery fragments (**2214**) of evidential value have been identified approximately 130 m south-west of the Order Limits 'dismantle assets', 10 m north-east of Hascot Hill (road), and 350 m north of Barking.

3.3.593 A **medium value** medieval moat (**2248**) of evidential value is located at Moat Farm immediately south of the B1078 and the Order Limits, and c. 580 m north-east of Ringshall Stocks. The asset is associated with the Grade II listed Moat Farmhouse (**1231305**) and former stable range (**1278293**), which is within c. 25 of the Order Limits and the post medieval 17th century farmstead (**2441**), which are discussed in the post medieval section below. The setting of the moat is considered in conjunction with Moat Farmhouse (**1231305**) in the post medieval section below.

3.3.594 A **low value** concentration of medieval and post medieval pottery fragments (**2239**) of evidential value have been identified approximately 170 m south-east of the Order Limits, 85 m south-east of Hill Lane, and 600 m north-west of Barking. The artefacts comprised of five medieval pottery fragments. Artefacts from other periods are also recorded as follows:

- Six post medieval pottery and roof tile fragments
- An undated stone fragment.

3.3.595 A **low value** medieval seal matrix (**2389**) of evidential value was recovered from farmland c. 920 m north-west of Barking and within the Order Limits. The asset comprises a very fine bronze seal matrix, pointed oval with Virgin and Child above a kneeling figure, and inscribed + RENOVABITUR : UTAQUILE : IUVENTUS : TUA (Your youth will be renewed like the eagle's).

3.3.596 A **low value** concentration of medieval pottery fragments (**2215**) of evidential value have been identified approximately 230 m north-east of the Order Limits, 200 m west of Parsons Lane, and 170 m north of Barking Hall.

3.3.597 A **low value** concentration of medieval pottery fragments (**2218**) of evidential value have been identified approximately 230 m east of the Order Limits, 170 m west of Barking Road, and 850 m south-west of Barking.

3.3.598 Three **low value** PAS finds of evidential value have been recovered from farmland south-west of Barking and outside the Order Limits. The finds comprise a silver penny of Edward III, c.1361-1369 AD (**2577**), a silver halfpence of Edward III, c.1335-1343 AD (**2578**), and an incomplete cast copper-alloy mount or stud (**2579**).

3.3.599 A **low value** concentration of medieval pottery fragments (**2221**) of evidential value have been identified approximately 240 m south of the Order Limits, 30 m north of the B1078, and 1.2 km south-west of Barking.

3.3.600 A **low value** scatter of medieval pottery sherds (**2212**) of evidential value has been found on land immediately north of the Order Limits and the Grade II listed Moat Farmhouse (**1231305**) on the western outskirts of Barking Tye.

Great Bricett and Bramford

Designated Heritage Assets

Great Bricett CP

3.3.601 The scheduled monument 'Great Bricett moated site' (**1006048**) is located on the western edge of Great Bricett and 1.7 km west of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The asset is an Augustinian priory founded in 1110, and comprises domestic buildings possibly situated on a circular moated area west of the 12th century Grade 1 listed Church of St Mary and St Lawrence. The moat is appended to the east by a pentagonal enclosure bounded by a dry ditch, and which probably contained outbuildings. The moated part of site is c. 75 m in diameter, whilst the moat is c. 13 m wide and 0.8 - 2.5 m deep. The enclosure to the east of the moat is ploughed and shows a scatter of building debris.

3.3.602 The setting of the asset is informed by its location on the edge of the settlement and by its relationships with the 12th century Grade I listed Church of St Mary and St Lawrence, which is adjoined by the scoped-out 13th century Grade I listed Great Bricett Hall, to the east. The setting is further informed by the remnants of its contemporary medieval landscape comprising the cores of surrounding settlements, scattered moated sites and the routes and roadways linking them. This setting has, however, been greatly eroded by field boundary loss, development of many of the settlements and the construction of wartime infrastructure at RAF Wattisham c. 500 m to the north-west. The setting of the asset, therefore, makes a minor contribution to its value, and due to the focus of the setting being much reduced through the loss of the medieval landscape, it does not extend to the Order Limits.

3.3.603 The Grade I listed assets 'Church of St Mary and St Lawrence' (**1352160**) and 'Great Bricett Hall' (**1032976**) are located west of Pound Hill towards the northern limits of Great Bricett and c. 1.5 km west of the Order Limits. The assets are of **high value** based on their designations and their evidential, historical, aesthetic and communal values. The parish church (**1352160**) has a 12th century core but there is evidence for additions and alterations in the 13th, 14th and 15th centuries and well as 19th century restorations. Originally, the asset was the church of the priory of St. Leonard, founded in 1110 for Augustinian canons from St. Leonard de Noblat. The priory was

dissolved in 1444 and granted by Henry VI to his college in Cambridge. The asset is constructed of flint rubble with freestone dressings and a pantiled roof. The Hall (**1032976**) was built as the hall of the Augustinian Priory of St. Leonard and attached to the north side of the church. It dates to the 13th century and has alterations dating to the early 14th, late 16th, late 18th and mid-19th century alterations. It comprises a plastered timber frame structure with a hipped plaintiled roof.

3.3.604 The setting of the assets is shared and informed by their location within the medieval core of Great Bricett and its fossilised medieval street plan. The setting is further informed by their interrelationship with the scoped out contemporary 12th century scheduled Great Bricett moated site. The assets' relationship with the non-designated post medieval buildings, which contribute to the character of Great Bricett, also positively contributes to the setting. The setting of the church and hall, therefore, makes a considerable contribution to their values, but due to screening by other elements of Great Bricett and considerable tree cover, and as the Project is located in an adjacent parish, the setting does not extend to the Order Limits.

Willisham CP

3.3.605 The Grade II listed 'Long Meadow' (**1251602**) is located on the western flank of Holly Road, c. 480 m north of the centre of Offton, and c. 180 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the early 16th century, has early 17th and mid-20th century alterations and comprises a plastered timber frame structure with a thatched roof.

3.3.606 The setting of the asset is informed by its isolated roadside location and by the surrounding agricultural landscape, with which it has a historical relationship. The asset is situated in moderately large grounds, which are defined by mature tree lined hedgerows, affording it privacy and seclusion. The setting of the asset, therefore, makes a considerable contribution to its value and due to the proximity of the Project, the setting extends to the Order Limits.

Offton CP

3.3.607 The scheduled monument 'Offton Castle' (**1006049**) is located on the southern flank of an unnamed road c. 380 m south of the centre of Offton, and c. 80 m north of the Order Limits. The asset is of **high value** based on its designation and its evidential and historical values. The asset is a quadrangular moated site, standing on high ground, but with the moat still wet. The enclosed area rises at least 3 m above the surrounding ground level. The Victoria County History for Suffolk (1911) states the asset is 'an early befossed moat adapted to later defence', and it is much more of a stronghold than the ordinary homestead moat. Fragments of early tile have been recovered from the site, but no masonry or more conclusive dating evidence has been identified.

3.3.608 The setting of the asset is informed by its relationship with Offton Castle Farm to the north, which includes the early 16th century Grade II listed 'Barn 50 Metres East Of Castle Farmhouse' (**1251594**). The asset's location within the medieval landscape as defined by the cores of surrounding settlements, scattered moated sites and the routes and roadways linking them also positively contribute to the setting. This element of the setting has, however, been greatly eroded by field boundary loss, the expansion of many of the settlements including Offton to the north. The setting of the

asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.609 The Grade II listed 'Barn 50 Metres East of Castle Farmhouse' (**1251594**) is located on the northern flank of an unnamed road c. 330 m south of the centre of Offton, and c. 210 m north of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The barn dates to the early 16th century, has late 16th and early 19th century alterations, and comprises a weatherboarded timber frame structure with a tiled roof. The asset has been converted into a dwelling. The barn is part of the historical Castle Farm farmstead, which is recognised by the Suffolk HER as a non-designated heritage asset (**2418**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its coherence as a historical farming complex.

3.3.610 The setting of the barn is informed by its location within the former farming complex (**2418**) and by its relationships with the non-designated post medieval farmhouse and further former outbuilding, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationship with the scheduled Offton Castle to the south and with the surrounding agricultural landscape, with which the asset has a historical and former functional relationship. Due to its loss of function and the conversion of associated outbuildings into dwellings, the setting of the asset makes moderate contribution to its value, and due to the proximity of the Project the setting extends to the Order Limits.

3.3.611 The Grade I listed 'Church of St Mary' (**1263030**) is located in the north-east of the medieval core of Offton, c. 50 m south of the Order Limits cable undergrounding works and c. 770 m north-east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The asset comprises a nave, chancel, west tower and south porch and largely dates to the 14th and 15th centuries with later alterations and additions and 19th century restorations. The asset is built of plastered flint rubble with freestone dressings with a plain tiled roof.

3.3.612 The setting of the asset is informed by its location in the medieval core of Offton and by its relationships with the listed and non-designated buildings of Offton that contribute positively to the character of the settlement. These buildings include the Grade II listed 18th century Old Vicarage immediately to the south. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The graveyard of the church has no boundary features to the north and east affording clear views of the church from the road and, thereby, retaining it as a visual focus of the village. The setting of the church, therefore, makes a considerable contribution to its value, and due to the proximity of Project cable undergrounding works to the north and east, the setting extends to the Order Limits.

3.3.613 The Grade II listed 'Mount Pleasant Farmhouse' (**1251598**) is located at the western end of an unnamed road at the south-eastern edge of Offton, and c. 150 m south-west of Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse as an early 16th of possibly 15th century core and 17th and 18th century alterations and additions. The asset comprises a plastered timber frame structure with a plain tiled roof. The farmhouse forms part of a historical farmstead known as Mount Pleasant Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage

asset (**2467**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.614 The setting of the farmhouse is informed by its location within a potentially still working farm complex and by its relationship with its non-designated post medieval outbuildings, most of which are recorded on the first edition OS map of 1885 (**2467**). The setting is further informed by the surrounding agricultural landscape with which the asset and its outbuildings have a historical and functional relationship. There has been some rather unsympathetic residential development in Offton, but this is screened from the asset by topography and mature tree cover within the asset's grounds. The setting of the farmhouse, therefore, makes a considerable contribution to its value, and due to the proximity of Project undergrounding works to the north-east, the setting extends to the Order Limits.

3.3.615 The Grade II listed 'Valley Farmhouse' (**1250948**) is located on the northern flank of Bildeston Road, c. 1.1 km west of the centre of Offton, and 70 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The crosswing of the farmhouse was built in the early 16th century, whilst the main range was rebuilt in around 1800. The asset comprises s plastered timber framed structure with a plain tiled roof. The farmhouse forms part of a historical farmstead known as Valley Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2463**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.616 The setting of the as farmhouse set is informed by its roadside situation and by its location within a potentially still working farm complex. The setting is also informed by the asset's relationships with its non-designated post medieval outbuildings most of which are recorded on the first edition OS map of 1885 (**2463**). The surrounding agricultural landscape, with which the asset and its outbuildings have a historical and functional relationship, also makes a positive contribution to the setting of the asset. The setting of the farmhouse, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.617 The Grade II listed assets 'Poplar Farmhouse' (**1250949**) and 'Barn, 10 Metres West of Poplar Farmhouse' (**1251588**) are located on the southern flank of Bildeston Road, c. 1.4 km west on Offton, and c. 420 m and 440 m west of the Order Limits. The assets are of **medium value** based on their designation and its evidential, historical and aesthetic values. The farmhouse was built in two stages, in the early 16th and then late 16th century. There have also been 19th and 20th century alterations and additions. The asset comprises a plastered timber frame structure with mid-20th century pargetting panels and a plain tiled roof. The barn dates to the early-to-mid 16th century and has 18th century alterations. The asset comprises a weather boarded timber frame structure with s corrugated iron roof. The assets forms part of a historical farmstead complex known as Poplar Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2461**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed buildings and its cohesion as a historical farming complex.

3.3.618 The setting of the assets is shared and informed by their location within a former farming complex, their interrelationship and by their relationships with the non-designated outbuildings of the complex, most of which are recorded on the first edition OS map of 1885 (**2461**). The setting is further informed by the assets'

relationships with the Hillhouse Farm complex to the west, which includes the Grade II listed farmhouse and barn, and with the non-designated Shortings Farm Cottage to the north. The surrounding agricultural landscape, with which the assets have a historical and former functional relationship, also contributes positively to the setting of the assets. The setting of the assets, therefore, makes a considerable contribution to their values, but due to its focus on the former farmyard and the immediate landscape, the setting does not extend to the Order Limits.

3.3.619 The Grade II listed 'Barn 10 Metres West of Hill House Farmhouse' (**1251591**) is now a residence and located in the former Hillhouse Farm complex on the southern flank of Bildeston Road, c. 1.5 km west of the centre of Offton, and 510 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The barn dates to the early-to-mid 16th century with some evidence of 18th century maintenance and comprises a weatherboarded timber frame structure with a modern pantile roof.

3.3.620 The setting of the asset is informed by its roadside situation and by its relationship with the other elements of the farm complex, which have also been converted into residences, and with the Grade II listed early 17th century Hill Farmhouse reported in the post medieval section below. The setting is further informed by the asset's relationship with the buildings of the Poplar Farm complex to the east and the non-designated Shortings Farm Cottage to the north-east. The surrounding agricultural landscape, with which the assets have a historical and former functional relationship, also contributes positively to the setting of the assets. Due to the residential conversion of the farm outbuildings and the division of the farming complex into separate properties, the setting of the asset makes a moderate contribution to its value, and because the setting is now restricted to the former farmyard location and immediate surroundings, the setting does not extend to the Order Limits.

3.3.621 The Grade II listed 'Court Farmhouse' (**1251595**) is located at the end of a private access track, c. 1 km south-west of the centre of Offton and c. 40 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the 15th century with alterations made around 1600, then around 1700 and again in the 19th century. the asset comprises a plastered timber frame structure, partly encased in 19th century brick and with a plain tiled roof. The farmhouse forms part of a historical farmstead known as Court Farm or Lost Farm. The Suffolk HER has recognised the farmstead complex as a **medium value** non-designated heritage asset (**2464**). The farmstead has evidential and historical value.

3.3.622 The setting of the farmhouse and associated farmstead is informed by its secluded location within the former Lost Farm complex and by its relationship with its surviving non-designated outbuildings, which are recorded on the first edition OS map of 1885 (**2464**). The setting is further informed by the surrounding agricultural landscape with which the asset and its outbuildings have a historical and functional relationship. The grounds of the asset are large, contain numerous trees and are defined by high, tree lined hedgerows affording the asset and outbuildings seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution, and due the proximity of the Project, the setting extends to the Order Limits.

Nettlestead CP

3.3.623 The Grade I listed 'Church of St Mary' (**1263028**) is located on the southern flank of Hall Lane, c. 2.3 km east of the centre of Offton, and c. 1.4 km north-east of the

Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church is largely dates to around 1500 but there is evidence of a 12th century and later core. The asset is built of flint rubble with freestone dressings and a plain tiled roof. The asset is rendered other than the tower.

3.3.624 The setting of the asset is informed by its location in the hamlet of Nettlestead and by its relationships with its former rectory, with the Grade II listed 19th century Nettlestead Chace to the south-east and with the unnamed non-designated former farming complex to the south, all of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The small graveyard of the church is defined by mature trees and shrubs allow only glimpses into and out from the asset, thereby affording it seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the asset's graveyard boundaries, the topography, settlement and vegetation of the intervening landscape and the Project being located outside of the parish, the setting does not extend to the Order Limits.

3.3.625 The Grade II listed 'Westleygreen Farmhouse' (**1251467**) is located in its working farmyard, c. 390 m north-east of the Church of St Mary in Nettlestead, c. 2.6 km east of the centre of Offton, and c. 1.7 km north-north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the early 16th century with evidence of alterations and additions in the ongoing centuries. The asset comprises a plastered timber frame structure with a plain tiled roof.

3.3.626 The setting of the asset is informed by its roadside location within the working farm complex and by its relationship with its outbuildings several of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical and functional relationship. The farming complex has open views of agricultural landscape to the north, east and south-south-east whilst Nettlestead Road and High Hall Lane are belted by trees and hedgerows, which restrict the views to west and south. The setting of the asset makes a considerable contribution to its value, but due to the mature tree cover of the country lanes and the topography, development and infrastructure of the intervening landscape, the setting does not extend to the Order Limits.

Somersham CP

3.3.627 The Grade I listed 'Church of St Mary' (**1251599**) is located 70 m east of Church Lane close to the eastern edge of Somersham, c. 720 m north-east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The nave has features that date to around 1300 and there are 14th, 15th and 16th century additions and alterations. The church is constructed of rendered flint rubble with limestone dressings, whilst the tower is of un-plastered flint, septaria and limestone rubble. The asset has plain tiled roofs.

3.3.628 The setting of the asset is informed by its location within the medieval core of Somersham, which itself is recorded in the Domesday Book of 1086. The setting is further informed by the asset's relationship with the 17th century Grade II listed Church Farmhouse to the south as well as views of the agricultural landscape in the same direction, with which the asset has a historical relationship. The link with the

agricultural landscape has, however, been eroded by the 20th century residential development of Somersham. The setting of the asset, therefore, makes a moderate contribution to its value, and even though the Project crosses the parish, due to the topography, development and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

Little Blakenham CP

3.3.629 The Grade I listed 'Church of St Mary' (**1251408**) and the Grade II listed 'The Old Rectory' (**1263027**) are located on the north-eastern flank of Valley Road in the small settlement of Little Blakenham and c. 1.9 km north-east of the Order Limits. The church is of **high value** and the rectory is of **medium value** based on their designations and their evidential, historical, aesthetic and communal values. The parish church has 13th century origins but is largely 14th and 15th century in date with evidence of 16th and 19th century alterations and maintenance. The church is constructed of plastered rubble with freestone dressings, whilst the tower has exposed rubble walls of flint with brick and limestone inclusions. The roofs are plain tiled with the exception of the leaded tower roof. The former rectory was built in three stages: in the 15th century, the mid-17th century and in the early 19th century and comprises a 15th century timber frame core with brickwork of the 17th and 19th centuries with slated roofs.

3.3.630 The setting of the assets is shared and informed by their location within Little Blakenham, which itself is recorded in the Domesday Book. The setting is further informed by the assets' interrelationship and their relationships with a non-designated barn to the south, which is recorded on the first edition OS map of 1885. The surrounding agricultural landscape, with which the assets have historical relationships, also makes a positive contribution to the setting. The link with the agricultural landscape has, however, been eroded by the 20th century residential development of Little Blakenham. The setting of the assets, therefore, makes a moderate contribution to their values, and even though the Project crosses the parish, due to the topography, development and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

Flowton CP

3.3.631 The Grade I listed 'Church of St Mary' (**1251233**) is located north and east of Flowton Road at the western end of Flowton c. 550 m south-east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The asset is an unusually complete example of an early 14th century parish church, with a little alteration in the later 14th century and again around 1500. The church is mainly constructed of flint rubble with freestone dressings, massive buttressing and plain tiled roofs.

3.3.632 The setting of the asset is informed by its location within the medieval core of Flowton, which itself is recorded in the Domesday Book. The setting is further informed by the non-designated post medieval buildings of the settlement that contribute positively to the character of Flowton. The surrounding agricultural landscape, with which the asset has a historical relationship, also makes a positive contribution to the setting. The graveyard contains mature trees and is defined by mature tree lined hedgerows, which afford only glimpsed view into and out from the asset affording the asset a degree of privacy. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project it extends to the Order Limits.

Bramford CP

3.3.633 The Grade I listed 'Church of St Mary the Virgin' (**1208235**) is located on the western bank of the Gipping river at the southern end of Bramford and c. 710 m north-east of Order Limits undergrounding cable mitigation works. The asset is of **high value** based on its designation and its evidential, historical, aesthetic and communal values. The parish church has 13th century origins but is largely of 14th century date including the tower which was built around 1370 and extensively remodelled in the 15th century. The church is constructed of flint rubble with freestone dressings and has leaded roofs.

3.3.634 The setting of the asset is informed by its location at the southern end of the medieval core of Bramford and by its relationships with the scoped out medieval and post medieval listed and non-designated buildings lining Church Green and Mill Lane to the north. The setting is further informed by the river valley meadows to the east and south, with which the asset has a historical relationship. The link to the agricultural landscape has, however, been eroded by the post medieval and modern development of Bramford to the north and west, Ipswich to the east and the imposition of the railway and the A14 into the Gipping valley to the east and south. The setting of the asset, therefore, makes a moderate contribution to its value, and even though the Project crosses the parish, due to the topography, development and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

3.3.635 The Grade II listed 'Sycamore House' (**1250920**) is located on the south-western flank of Somersham Road, c. 1 km south-south-east of Little Blakenham, and c. 1.6 km north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the 15th century with alterations and additions made in the 16th century and later. The asset comprises a plastered timber frame structure with areas of 18th or early 19th century pargetting and a pantile roof.

3.3.636 The setting of the asset is informed by its roadside location within a farmyard complex and by its relationship with the outbuildings, although the building recorded on the first edition OS map of 1885 have been largely replaced by modern structures. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and former functional relationship, although this link has been partially eroded by industrial development to the north-east. The setting of the asset, therefore, makes a minor contribution to its value, but due to the focus of the setting being restricted to the farmyard and immediate landscape, it does not extend to the Order Limits.

3.3.637 The Grade II listed 'Dairy Farmhouse' (**1263016**) is located to the north-east of Somersham Road, c. 1.4 km north-north-west of Bramford, and c. 1.6 km north-north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The house, formally a farmhouse, dates to the early 16th century, had a crosswing added in the early 18th century and another wing added in the 19th century. The asset comprises a plastered timber frame structure with a plaintiled roof.

3.3.638 The setting of the asset is informed by its location within its mature, large garden which is defined by large tree lined hedgerows. The mature garden screens the asset from the landscape beyond and affords it seclusion. There is, however, a large industrial business to the east, which is likely to introduce noise into the garden setting. The former farmhouse is the only element of the farming complex recorded

on 19th century OS mapping and so the setting of the asset makes a minor contribution to its value. Due to the setting of the asset being entirely restricted to the garden's bounds, it does not extend to the Order Limits.

3.3.639 The Grade II listed 'Runcton House' (**1250911**) is located on the eastern flank of the B1113 Loraine Way, c. 800 m south-west of the centre of Bramford and c. 390 m east of the Order Limits undergrounding cable works. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset comprises a 15th century range open hall that is now attached to an early 19th century wing. The 15th century wing is a timber frame structure plastered to the south and encased in 19th century brick to the north. The farmhouse is situated within the 19th century Runcton Farm Farmstead (**2358**), which due to its poor survival is of **low value** based on its historical and evidential values.

3.3.640 The setting of the asset is informed is informed by its roadside location and by its relationship with the outbuildings of the farmyard immediately to the north, although the building recorded on the first edition OS map of 1885 (**2358**) have been largely replaced by modern structures. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and functional relationship. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the focus of the setting being on the farmyard and the immediate landscape, the setting does not extend to the Order Limits.

Great Bricett and Bramford

Non-Designated Heritage Assets

3.3.641 A small **low value** scatter of unglazed medieval pottery (**2121**) of evidential value was recovered from land immediately south of the A143 c. 1.8 km east of Wortham and c. 50 m east of the Order Limits.

3.3.642 A **low value** concentration of medieval metal-detected artefacts (**2224**) of evidential value are located partially within the Order Limits, immediately north of Bildeston Road, and within Offton. The artefacts comprise of a small group of objects including two long-cross pennies of Edward I and Henry III, a 13th to 14th century gilded harness pendant, two buckles, a late medieval to post medieval rowel spur fragment, and a post medieval gilded spherical knob.

3.3.643 A **low value** medieval artefact scatter of 13th to 14th century pottery, including sherds of coarse ware as well as a strap end, buckle and a coin (**2210**) of evidential value have been identified at the same location as a Romano-British period artefact scatter (**2110**) reported in the Roman section above. The site is located partially within the Order Limits, immediately south of Bildeston Road and 1.7 km south-east of Great Bricett.

3.3.644 A **low value** multi-period concentration of PAS artefacts (**2562**) of evidential value has been recovered from farmland c. 150 m from the Order Limits and west of Offton. The medieval artefacts comprise four coins, one harness fitting and pottery fragments.

3.3.645 A **low value** multi-period concentration of PAS artefacts (**2563**) of evidential value has been recovered from farmland within the Order Limits and west of Offton. The medieval artefacts comprise nine coins, a seal matrix, a strap end, a seal matrix, and a buckle.

3.3.646 A **low value** medieval pottery scatter of 22 sherds (**2235**) of evidential value has been noted within the Order Limits, approximately 60 m north-west of Flowton Road, and 590 m south-west of Somersham. The artefacts were identified during fieldwalking over a 50 m length on the Bramford to Wattisham gas pipeline works in 1989. Further **low value** medieval evidence of evidential value has also been identified along the same gas pipeline works as follows:

- Approximately 2.9 km to the north-west in the form of further pottery sherds (**2236**) also located just outside the Order Limits, and approximately 30 m south of Bildeston Road at its closest point
- A medieval pottery scatter of 13 sherds (**2234**) approximately 40 m north-west of the Order Limits, and 65 m north of Bildeston Road.

3.3.647 The **low value** land parcel location of the medieval period Bullen Green, (**2244**) of evidential and historical value is located within the Order Limits Zone for Permanent Assets (NGET), with Bullen Lane located within the land parcel along its southern boundary and is also approximately 1 km north-east of Burstallhill. The green associated with this settlement is recorded on Hodkinson's map of 1783.

3.3.648 The **low value** Bulling Green (**2336**) is of evidential value and is appended to the north-western extent of Bullen Green (**2244**) noted above. The green located between Bushy Grove and Foregrove and it too is recorded on Hodkinson's map of 1783.

3.3.649 The **low value** land parcel location of a possible medieval park (**2245**) of evidential and historical value is located immediately north-east of the Order Limits Zone for Construction, Operation and Maintenance (NGET), between Bullen Lane and Tye Lane to the north, and 500 m east of Bramford. The park is visible on Hodskinson's Map of 1783.

3.3.650 A **low value** rectangular bronze top of a stirrup mount with a gilded gryphon or wyvern animal design (**2189**) has been identified approximately 60 m south-west of the Order Limits, 160 m west of Elmsett Road and 130 m west of Lower Somersham. The artefact dates to the late 11th century and is of evidential value.

3.3.651 A **low value** 14th century bronze seal matrix (**2468**) of evidential value was recovered from farmland on the northern edge of Offton and within the Order Limits. The decorated side of the seal matrix depicts two figures above a trefoil headed compartment containing a demi figure facing. The left figure is winged with a flame on his forehead and carried a sword. This is presumed to be a depiction of an archangel. The right figure is kneeling with his arms raised in prayer, above his head is a cross in a circle. The inscription reads + ORATERIMATVOMII/ ISSVCCVRRERICOO 'Pray…all…succour..I strike(ico)'?

3.3.652 Partly within the Order Limits near Offton, was a collection of metal detecting finds (**2286**). Close by artefact scatter (**2285**) to the north-east was recovered by metal detecting survey outside the Order Limits. The HER does not contain any information on what was recovered. The assets are, therefore, of **unknown value**.

3.3.653 A **low value** concentration of medieval artefacts (**2225**) of evidential value are located approximately 115 m north-east of the Order Limits, 270 m north-west of Offton Road, and 760 m south-east of Offton. The artefact scatter included a coin, strap end, annular brooch, a thimble and a pottery bunghole. Post medieval artefacts including a coin, ring, token, balance, weight, bell and an unidentified object were also identified.

3.3.654 Medieval features (**2230**) suggestive of settlement activity have been identified approximately 140 m east of the Order Limits, 10 m south of Tye Lane, and within the south-western fringes of Willisham Tye. Similarly, Willisham Tye Green (**2231**) is visible on Hodskinson's map of 1783 immediately to the north of (**2230**) and is likely to also date to this period. Both assets are of **low value** and evidential and historical value.

3.3.655 A **low value** concentration of medieval pottery (**2228**) of evidential value have been identified during a watching brief approximately 240 m south-west of the Order Limits, 80 m south-east of Castle Road, and within Offton.

3.3.656 The location of the medieval former Little Bricett Church (**2247**) of **medium value** and evidential and historical value is located approximately 240 m west of the Order Limits, 400 m north of Bildeston Road and 850 m south-east of Great Bricett. The location can be observed as the site of a church on Hodgkinson's Map of 1783. The HER notes that the church was annexed to Offton in 1503, with the location being ploughed between 1939-1945.

3.3.657 The setting of asset (**2247**) is informed its relationship with the Grade II listed Tollemache Hall (**1262668**), formally the manor house of Little Bricett, to the west and extensive Project mapped cropmarks (**2755**), which may partially relate to the asset itself. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.658 A **low value** scatter of PAS recorded metal detector finds (**2327**) was recovered from land at Rook Hill Farm, south-east of Offton and outside the Order Limits.

3.3.659 A **low value** thin scatter of medieval metalwork and a pottery sherd (**2394**) was recovered from farmland at Rook Farm, off Ipswich Road and c. 220 m north-east of the Order Limits. The metal finds included a coin, a strap end, an annular brooch, and a thimble.

3.3.660 A scatter of **low value** 13th and 14th century pottery with building rubble (**2335**) of evidential value has been recovered from land c. 780 m north-west of Flowton and c. 150 m west of the Order Limits.

3.3.661 Within the Order Limits near Flowdon was found a **low value** silver gilt mount (**2317**). This asset has evidential and historical value.

3.3.662 Between two sections of the Order Limits near Offton, was found a **low value** fragment of a silver medieval finger ring (**2315**). It has evidential and historical value.

3.3.663 In a field near Flowton and outside the Order Limits was found a **low value** silver medieval penny of Alexander III of Scotland, c. 1280-1286 AD (**2312**). This asset has evidential and historical value.

3.3.664 A **low value** medieval lead papal seal (**2326**) of Pope Gregory IX (1227-1241) of evidential value was recovered from land along Bullen Lane, c. 950 m west of Bramford and partially within the Order Limits.

3.3.665 A **low value** scatter of medieval PAS recorded metal detector finds (**2329**) of evidential value was recovered from land west of Bramford and outside the Order Limits.

3.3.666 A small assemblage of **low value** unstratified pottery sherds (**2444**) of evidential value was recovered during an archaeological watching brief on the western flank of Bramford and c. 180 m south-south-east of the Order Limits.

3.3.667 A **negligible value** sherd of late medieval pottery (**2492**) of evidential value was found during an archaeological evaluation to the rear of The Angel Inn, Bramford, and c. 170 m east of the Order Limits.

3.3.668 A **low value** multi-period concentration of PAS artefacts (**2566**) of evidential value has been recovered from farmland partially within the Order Limits and west of Bramford. The medieval artefacts comprise two silver pennies, a jetton and fob-seal matrix.

3.3.669 A **low value** multi-period concentration of PAS artefacts (**2565**) of evidential value has been recovered from farmland partially within the Order Limits and south-west of Bramford. The medieval artefacts comprise two silver coins and copper alloy finger ring.

3.3.670 The HER has supplied an OUTLINE RECORD for two **low value** medieval enclosures (**2493**) of evidential identified during an archaeological excavation immediately north of the Order Limits and Bullen Road, and c. 1.5 km West of Bramford.

3.3.671 A **low value** multi-period concentration of PAS artefacts (**2564**) of evidential value has been recovered from farmland c. 10 m from the Order Limits and east of Candle Street. The medieval artefacts comprise A lead probable trial piece, a silver penny of Henry II, a silver cut halfpenny of Richard I, a lead avoirdupois pan weight bearing the arms of England, two medieval or post medieval lead weights, and a medieval or post medieval cast copper alloy button with integral drilled loop.

Post Medieval

Wortham, Mellis and Gislingham

Designated Heritage Assets

Wortham CP

3.3.672 The Grade II listed 'Hill Barn' (**1284289**) is located on the southern flank of Low Road, c. 2.5 km north-north-west of Wortham and c. 1.3 km south-west of the Order Limits. The asset was once likely part of the Manor House complex, but the asset now serves as a residence and mature garden boundaries ensure there is no intervisibility. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset is a former manorial barn, dates to the mid-16th century and comprises a partly plastered, partly weatherboarded timber frame structure with a thatched roof.

3.3.673 The setting of the asset is informed by its roadside location on the southern flank of the Waveney Valley and by its relationship with the Manor House complex, although there is no intervisibility. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and former functional relationship. Dues to its loss of function and its detachment from the wider manorial complex, the setting of the asset makes a minor contribution to its value, and due to

its now more restricted focus and the topography and mature woodland of the Waveney Valley, the setting does not extend to the Order Limits.

3.3.674 The Grade II listed assets 'Ling Farm House' (**1182947**) and 'Forecourt Walls and Gatepiers Immediately South of Ling Farm House' (**1352285**) are located on the northern flank of Low Road, c. 2.5 km north of Wortham and c. 850 m south-west of the Order Limits. The wall and gatepiers is scoped out due to its restricted setting. The farmhouse is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse (**1182947**) dates to the early 17th century, was altered in the early 19th century and comprises a plastered timber frame structure, refronted in white brick and a plain tiled roof.

3.3.675 The setting of the asset is informed by its roadside location, its interrelationship with the listed wall and gatepiers and its relationships with the non-designated farm outbuildings immediately to the west, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and the associated outbuildings have a historical and former functional relationship. Although the complex no longer functions as a farm, its elements including the listed assets are still coherent as a former working unit, and so the setting of the farmhouse makes a considerable contribution to its value. Due to its now more restricted focus and the topography and mature woodland of the Waveney Valley, the setting does not extend to the Order Limits.

3.3.676 The Grade II listed assets 'Willow Lodge' (**1032773**) and 'The Hemplands' (**1032743**) are located in the scattered settlement of Wortham Ling, close to the junction of Rectory Road and The Ling (road), c. 2.3 km north-north-east of Wortham and c. 550 m and c. 490 m west of the Order Limits. west of the Order Limits. The assets are of **medium value** based on their designations and its evidential, historical and aesthetic values. Willow Lodge is a 16th or 17th century house, latterly three residences, that was altered and extended in the 19th and 20th centuries. The asset comprises a partly plastered, partly brick encased timber frame structure with steeply pitched pantiled roofs. The Hemplands is a 16th century house, latterly two or three residences, which was extended and had a floor and chimney stack inserted in the 17th century. Further alterations were carried out in the 19th and 20th centuries. The asset comprises a plastered timber frame structure with exposed studding and a thatched roof.

3.3.677 The setting of the assets is shared and informed by their roadside locations with a small hamlet, their interrelationship, and their relationships with the non-designated building in the vicinity which positively contribute to the character of the hamlet. The setting is further informed by the surrounding mixed agricultural and heathland landscape with which the assets have a historical relationship. The setting of the assets, therefore, makes a considerable contribution to their values, but due to its restricted focus on the hamlet and immediate landscape, and the topography and mature woodland of the Waveney Valley, the setting does not extend to the Order Limits.

3.3.678 The Grade II listed 'Beehive Cottage' (**1284409**) is located at the southern limit of a private track off The Ling (road) c. 260 m to the north, c. 100 m west of the small hamlet that includes Willow Lodge and the Hemplands, c. 2.3 km north-north-east of Wortham and c. 640 m south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the 16th century then extended in the 17th century and altered in the 20th

century. the asset comprises a partly plastered, partly weatherboarded timber frame structure with a thatched roof.

3.3.679 The setting of the asset is informed by its isolated location within its mature grounds and by its relationship with an outbuilding, which is recorded on the first edition OS map of 1886. The setting is further informed by the surrounding agricultural landscape with which the asset and its outbuilding have a historical relationship. The grounds of the asset are defined by mature tree lined hedgerows, which afford the asset seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its restricted focus on the asset's grounds, the setting does not extend to the Order Limits.

3.3.680 The Grade II listed 'Pollard Tree Farm House' (**1182754**) is located c. 180 m south of an unnamed road c. 200 m south-east of the small hamlet that includes Willow Lodge and the Hemplands, c. 2 km north-north-east of Wortham and c. 600 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the 17th century, or possibly earlier, and was extended and refronted in brick during the late 19th century. It comprises a plastered, colourwashed largely brick encased timber frame structure with a thatched roof.

3.3.681 The setting of the asset is informed by its secluded location within its mature grounds and by its relationship with its outbuildings, some of which are recorded on the first edition OS map of 1886. The setting is further informed by the asset's relationship with the unnamed, non-designated former farm complex to the north, which is also recorded on the OS map; although the mature grounds boundaries of the asset and the former far complex very much limit intervisibility. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its restricted focus on the asset's grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.682 The Grade II listed 'Beech Tree Farm Cottage' (**1183135**) is located on the eastern flank of Rectory Road, c. 420 m south-south-west of the small hamlet that includes Willow Lodge and the Hemplands, c. 1.9 km north-north-east of Wortham and c. 770 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the mid-17th century, was extended and altered in the 19th century and comprises a plastered clay lump structure with brick additions and steeply pitched plain tiled and pantiled roofs.

3.3.683 The setting of the asset is informed by its roadside location within the former farming complex and by its relationship with its former non-designated outbuildings, most of which are recorded on the first edition OS map of 1886. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuilding have a historical and former functional relationship. The large weatherboarded former stable range to the north of the asset has, however, been converted into seven residences with associated property boundaries and so the setting of the asset makes a minor contribution to its value. Due to the loss of function and division of the former working complex, the setting is restricted to the asset's grounds and immediate landscape, and so it does not extend to the Order Limits.

3.3.684 The Grade II listed 'Pond Cottage' (**1183120**) is located c. 85 m south of Beech Tree Farm Cottage, c. 1.6 km north of Wortham and c. 790 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical

and aesthetic values. The house dates to the mid-to-late 17th century, was altered in the 19th century and comprises a plastered timber frame structure with a thatched roof.

3.3.685 The setting of the asset is informed by its largely secluded roadside location within the dispersed settlement of Wortham Ling and by the surrounding agricultural landscape with which the asset has a former historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but as the setting is restricted to the asset's grounds and immediate landscape, it does not extend to the Order Limits.

3.3.686 The Grade II listed assets 'Hall Farm Cottages' (**1032744**) and 'Barn About 50 Metres South of Hall Farm Cottages' (**1183148**) are located within the Wortham Hall Farm complex, c. 110 m north of the Grade I listed Church of St Mary the Virgin, c. 1.75 km north of Wortham and 1.3 km north-west of the Order Limits. The assets are of **medium value** based on their designations and its evidential, historical and aesthetic values. The cottages are a former farmhouse which is now three residences. It dates to the early-to-mid 17th century, was altered and extended on the early 19th century and comprises a plastered timber frame structure with steeply pitched plain tiled roofs. The barn is of mid-to-late 19th century and comprises a clay lump structure on a brick base with a corrugated iron roof.

3.3.687 The setting of the assets is shared and informed by their working farm complex location, their interrelationships, their relationships with the church to the south, and their relationships with the non-designated buildings of the complex, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape with which the assets and outbuildings have a historical and ongoing functional relationship. The setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance and it being restricted to the working farmyard and surrounding landscape, the setting does not extend to the Order Limits.

3.3.688 The Grade II listed assets 'Wortham House' (**1284216**) and 'Wellhead Gear to West of Wortham House' (**1032742**) are located north-west of the junction of Wigwam Hill and Rectory Road in the dispersed settlement of Wortham Ling, c. 1.4 km north of Wortham and c. 880 m west of the Order Limits. The wellhead gear is scoped out due to its restricted setting. The house is of **medium value** based on its designation and its evidential, historical and aesthetic values. Wortham House is a former rectory built in the 16th century and extended in the 17th century. The asset was further extended and altered in 1827-8 for the Reverend R. Cobbold. The asset comprises a plastered timber frame structure with white brick extensions and slated and pantiled roofs.

3.3.689 The setting of the house is informed by its location within the house's large, mature grounds, by its relationship with the listed wellhead gear, and by its relationships with the non-designated residences to the west and north, which are recorded on the first edition OS map of 1886. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The grounds of the house contain several trees and are defined by mature tree lined hedgerows affording the asset seclusion and privacy. The setting, therefore, makes a considerable contribution to the houses value, but due its restricted focus on the grounds of the asset and the immediate landscape, the setting does not extend to the Order Limits.

3.3.690 The Grade II listed 'Thatched Cottage' (**1284204**) is located on the north-western flank of Union Street in a small hamlet of the dispersed settlement of Wortham Ling, c. 1.7 km north-east of Wortham and c. 340 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The cottage dates to the late 17th or early 18th centuries, was extended in the 19th century and altered in the 20th century. The asset comprises a plastered timber frame structure with a thatched roof.

3.3.691 The setting of the asset is informed by its roadside location within the small hamlet and by its relationships with the neighbouring non-designated, post medieval and modern buildings, which positively contribute to the character of the hamlet. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. There is a large industrial unit to the north-east, but this is low-lying and screened from the asset by mature tree cover in the hamlet. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its restricted focus on the small hamlet and the surrounding landscape, the setting does not extend to the Order Limits.

3.3.692 The Grade II listed 'Ellesmere House' (**1182751**) is located on the eastern flank of Church Road close the northern extent of Wortham, and c. 1.1 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The large house dates to the late 16th century with extensions and alterations made in the late 17th and mid-19th centuries. the asset comprises a plastered timber frame structure with some pargetting, extensions of red and white brick and plain and glazed pantiled roofs.

3.3.693 The setting of the asset is informed by its location set back from the road within its large grounds and by its relationships with its non-designated outbuildings and a farming complex to the north, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The outbuildings and farm have, however, been developed as residences and this has led to some small-scale division of the asset's grounds to provide garden spaces to the other properties, thereby eroding the historic link between the buildings. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its restricted focus being on the grounds of the asset and the immediate landscape, the setting does not extend to the Order Limits.

3.3.694 The Grade II listed assets 'The Willows' (**1032747**) and 'Two Cottages Approximately 60 Metres North of The Willows' (**1183181**) are located on the western flank of Church Lane, at the northern limits of Wortham, and c. 1 km north-west of the Order Limits. The assets are of **medium value** based on their designations and its evidential, historical and aesthetic values. The Willows dates to the 17th century, it was extended in the 19th century and altered in the 20th century. The asset comprises a partly plastered, partly weatherboarded timber frame structure with clay lump extension and thatched and pantiled roofs. The cottages date to the early 17th century with 19th century extensions and alterations. The asset comprises a plastered, partially brick encased timber frame structure with a clay lump extension and thatched and pantiled roofs.

3.3.695 The setting of the assets is shared and informed by their roadside village location and their relationships with the medieval and post medieval listed and non-designated buildings of the village, which contribute positively to the character of the settlement. The setting is further by the surrounding agricultural landscape with which

the assets have a historical relationship. Some small scale 21st century residential development to the north-east has slightly eroded the assets' link to the agricultural land, but the buildings are sympathetic and are in the local architectural vernacular. The setting of the assets, therefore, makes a considerable contribution to their values, but due to its restricted village nature, the setting does not extend to the Order Limits.

3.3.696 The Grade II listed 'Cottage Approximately 30 Metres West South West of The Willows' (**1032746**) is located in a large garden to the west of Church Road in the north of Wortham and c. 1 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 16th or early 17th centuries and was extended in the 19th century. The asset comprises a plastered timber frame structure with a thatched roof.

3.3.697 The setting of the asset is informed by its village location, although views to and from the asset are limited by the mature vegetation of its large garden. The setting is further informed by the asset's relationship with other listed and non-designated buildings of the village, which contribute positively to the character of Wortham; but again, intervisibility is restricted by the asset's garden. The agricultural landscape to the west of the asset, with which the asset has a historical relationship, also informs the setting. The setting of the asset, therefore, makes a considerable contribution to the value of the asset, but due to it being restricted to its village location and immediate landscape, the setting does not extend to the Order Limits.

3.3.698 The Grade II listed 'Lime Tree Farm House' (**1284359**) is located off Harts Lane 100 m north-east of Church Road in Wortham, and c. 800 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset dates to the early 17th century, was refronted and altered in the mid-to-late 19th century and extended in the 20th century. The asset comprises a plastered timber frame structure with a red brick casing with white brick dressings, tile hung gables and a glazed pantiled roof.

3.3.699 The setting of the asset is informed by its village location and by the surrounding agricultural landscape with which the asset has a historical and former functional relationship. The farm outbuildings recorded on the first edition OS map of 1886 have, however, been demolished and there is 20th century residential development to the north, east and south of the asset. The setting of the asset, therefore, makes a minor contribution to its value, and due to its focus being restricted to its village location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.700 The Grade II listed 'South View' (**1032774**) is located to the north of Wash Lane in Wortham and c. 1.4 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The house dates to the mid-to-late 16th century, was extended in the 17th century and comprises a roughcast timber frame structure with a thatched roof.

3.3.701 The setting of the asset is informed by its village location and by its associated mature garden. Formally relatively isolated within the settlement, the setting of the assets has now been encroached upon by 20th century residential development to the west and the expansion of the White House farmstead complex to the east to included a camping site and caravan storage yard. The setting of the asset, therefore, makes a moderate contribution to its value, and due to its focus being

restricted to its village location and garden, the setting does not extend to the Order Limits.

3.3.702 The Grade II listed 'White House Farm House' (**1182788**) is located to the north of Wash Lane in Wortham and c. 1.3 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The farmhouse dates to the mid-16th and early 17th centuries, was altered in the 20th century and comprises a roughcast timber frame structure with steeply pitched pantiled roofs.

3.3.703 The setting of the asset is informed by its village location and its situation within a former farmstead. The setting of the asset is further informed by the agricultural land to the north, with which the asset has historical and ongoing functional relationships. The non-designated outbuildings of the current property appear to have replaced the farmstead complex recorded on 19th and early 20th century OS mapping and the property now includes a campsite and caravan storage yard. The asset is, however, still coherent as a farmhouse within a working farm and so the setting of the asset makes a moderate contribution to its value. As, however, the setting of the asset is restricted to its farmstead location and the immediate agricultural landscape, it does not extend to the Order Limits.

3.3.704 The Grade II listed 'Honeypot Farm House' (**1032734**) is located south of Bury Road in Wortham and c. 690 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The former farmhouse dates to the 17th century, was altered in the 20th century, and comprises a plastered timber frame structure with a steeply pitched pantiled roof.

3.3.705 The setting of the former farmhouse is informed by its village location and by its associated garden. The asset is the only surviving element of a farmstead complex recorded on 19th century OS mapping and there has been 20th century residential development to the east, west and south enclosing the asset. The setting of the former farmhouse, therefore, makes a minor contribution to its value, and due it being restricted to its immediate surroundings, the setting does not extend to the Order Limits.

3.3.706 The Grade II listed 'Grey Cottage' (**1032735**) and 'The Old Stores' (**1284344**) are located on the western flank of an unnamed road to the south of Wash Lane in Wortham and c. 1.1 km west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The cottage dates to the 16th century, or perhaps earlier, it was raised, altered and extended in the 17th century, and was altered and extended in the 20th century. The asset comprises a plastered timber frame structure with a thatched roof. The former old stores now a house, dates to the mid-17th century, and was extended and part rebuilt in the 18th and 19th centuries. The asset comprises a plastered timber frame structure with clay lump and brick extensions and a thatched roof.

3.3.707 The setting of the assets is shared and informed by their village location and by their open views to the east over a large, open village green. The setting is further informed by their interrelationship and by their relationships with non-designated neighbouring buildings that contribute to the character of the settlement and share the view across the open green. The setting of the assets, therefore, makes a considerable contribution to their values, but due to the setting being restricted to the bounds of the village, it does not extend to the Order Limits.

3.3.708 The Grade II listed 'Southmore Cottage' (**1032736**) Wortham is located south of Wash Lane in Wortham and c. 1.3 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the mid-to-late 17th century, was extended and altered in the 20th century and comprises a plastered timber frame structure with a thatched roof.

3.3.709 The setting of the asset is informed by its village location and by its relationship with the neighbouring non-designated buildings that contribute to the character of Wortham. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the setting being restricted to the bounds of the village, it does not extend to the Order Limits.

3.3.710 The Grade II listed 'Walnut Tree Farmhouse' (**1251791**) and 'Outbuilding Immediately South East of Walnut Tree Farmhouse' (**1032749**) are located at the southern end of a private driveway south of Wash Lane in Wortham and c. 1.5 km west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The farmhouse, now a house, dates to the mid-to-late 16th century, a crosswing was added c. 1600, it was raised and re-roofed in the mid-19th century and was restored in 1989. The outbuilding dates to the early-to-mid 18th century and comprises a plastered timber frame structure. The NHL entry states that the asset has a corrugated iron roof, but recent satellite imagery suggests the iron has been released, perhaps with pantiles.

3.3.711 The setting of the asset is shared and informed by their interrelationship and by their relationships with other non-designated of the former farming complex, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the assets' relationships with neighbouring listed and non-designated buildings that contribute positively to the character of Wortham. The agricultural land to the south, with which the assets have historical and former functional relationship also informs the setting. Although no longer a working farm, the assets and the non-designated buildings of the complex are still coherent as a former working farmstead and so the setting of the assets makes a considerable contribution to their values. As the setting is, however, restricted to the village and the immediate agricultural landscape, it does not extend to the Order Limits.

3.3.712 The Grade II listed 'Brook House' (**1284268**) and 'Brook Cottage' (**1352287**) are neighbours and located on the western flank of Mellis Road, south of the A143 Bury Road in Wortham, and c. 830 m and 800 m west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. Brook House dates to the early 19th century, was extended and altered in 1928 and comprises a red brick structure with painted dressings and a shallow hipped glazed pantiled roof. Brook Cottage dates to the 17th century, was altered in the 20th century and comprises a plastered timber frame structure with a thatched roof.

3.3.713 The setting of the assets is shared and informed by its village location, by the interrelationship between the listed assets and their relationships with neighbouring non-designated buildings that contribute positively to the character of Wortham. The setting of the assets, therefore, make a considerable contribution to their values, but due to the setting being restricted to the bounds of the village, it does not extend to the Order Limits.

3.3.714 The Grade II listed 'Ivy House Farm House' (**1352284**) is located at the southern end of a private driveway off Wash Lane in Wortham, and c. 1.7 km west of the Order

Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the late 16th century, was extended in the mid-17th century, was raised and further extended c. 1810, extended again in the later 19th century, and altered in the 20th century. The asset comprises a plastered timber frame structure with some red brick and a hipped tiled roof.

3.3.715 The setting of the asset is informed my its village location and by its situation within a working farm complex. The setting is further informed by the asset's relationship with its non-designated outbuildings and by its relationship with neighbouring non-designated buildings some of which are recorded on 19th century OS mapping and that contribute positively to the character of Wortham. The agricultural land to the south, with which the asset has historical and functional relationships, also informs the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the village and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.716 The Grade II listed 'House Approximately 80 Metres West of Ivy House Farm House' (**1284291**) is located at the southern end of a private driveway off Wash Lane in Wortham, and c. 1.8 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the 17th century, was altered in the 20th century and comprises a plastered timber frame structure with a thatched roof.

3.3.717 The setting of the asset is informed by its village location within it mature garden which is defined by treelined hedgerows. The setting of the asset is further informed by the asset's interrelationship with the listed Oak Wood House (**1032737**) to the west and with Ivy House Farm House (**1352284**) and its associated non-designated outbuildings. The agricultural land to the south, with which the asset has a historical relationship, also informs the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the village and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.718 The Grade II listed 'Oak Wood House' (**1032737**) is located at the southern end of a private driveway off Wash Lane in Wortham, and c. 1.9 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to c. 1600, was altered in the 19th and 20th centuries, and comprises a largely plastered timber frame structure partially part brick cased and with a steeply pitched patterned machine tiled and pantiled roof.

3.3.719 The setting of the asset is informed by its village location within it mature garden which is defined by treelined hedgerows. The setting of the asset is further informed by the asset's interrelationship with the listed 'House Approximately 80 Metres West of Ivy House Farm House' (**1284291**) to the east. The agricultural land to the south, with which the asset has a historical relationship, also informs the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the village and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.720 The Grade II listed 'Tarragon Cottage' (**1284343**) is located on the south-eastern flank of Bury Road in Wortham, and c. 990 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to c. 1700, was altered and extended in the 19th and 20th centuries, and comprises a plastered timber frame structure with a red brick wall to the south-west and a thatched roof.

3.3.721 The setting of the asset is informed by its village location within it mature garden which is defined by mature hedgerows. the setting is further informed by the asset's relationship with neighbouring non-designated buildings that contribute positively to the character of Wortham. The setting of the asset, therefore, make a considerable contribution to its value, but due to the setting being restricted to the bounds of the village, it does not extend to the Order Limits.

3.3.722 The Grade II listed 'The Post Office and Shop House' (**1032775**) is located on the northern flank of Long Green, Wortham, 50 m north of the A143, and 590 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The shop with attached house dates to the early 19th century and comprises a plastered clay lump structure with a glazed pantiled roof.

3.3.723 The setting of the asset is informed by its roadside village location and by its relationships with listed and non-designated buildings in the vicinity, which contribute positively to the character of the settlement. The setting is further informed by the agricultural land to the north, with which the asset has a historical relationship. The introduction of the A143 Bury Road to the south has, however, introduced noise and movement into the setting of the asset, and so the setting makes a moderate contribution to its value. Due to the setting being focused on the roadside village location, it does not extend to the Order Limits.

3.3.724 The Grade II listed 'The Old Queens' (**1284339**) is set back 35 m north of the A143 Bury Road close to the eastern edge of Wortham, and 480 m west of the Order Limits. The former public house is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset dates to around 1600, was partly rebuilt in the later 17th century and was altered and extended in the 20th century. the now house comprises a plastered timber frame structure with a steeply pitched machine tiled roof.

3.3.725 The setting of the asset is informed by its roadside village location and by its relationships with listed and non-designated assets in the vicinity, which contribute positively to the character of the settlement. The setting is further informed by the agricultural land to the north, with which the asset has a historical relationship. The introduction of the A143 Bury Road to the south has, however, introduced noise and movement into the setting of the asset, and so the setting makes a moderate contribution to its value. Due to the setting being focused on the roadside village location, it does not extend to the Order Limits.

3.3.726 The Grade II listed 'Hill Top Cottages' (**1352259**) is set back 60 m south of the A143 Bury Road close to the eastern edge of Wortham, and c. 540 m west-south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, now two residences, dates to the mid-16th century and was extended and altered in the 19th and 20th centuries. the asset comprises plastered timber frame structure with a steeply pitched pantiled roof.

3.3.727 The setting of the asset is informed by its roadside village location and by its relationships with listed and non-designated buildings in the vicinity, which contribute positively to the character of the settlement. The setting is further informed by the agricultural land to the south, with which the asset has a historical relationship. The introduction of the A143 Bury Road to the north has, however, introduced noise and movement into the setting of the asset, and it has been further eroded by residential development to the east and west. The setting of the asset, therefore, makes a minor

contribution to its value, but due to the setting being focused on the roadside village location, it does not extend to the Order Limits.

3.3.728 The Grade II listed 'The Rookery' (**1182737**) is located at the southern end of a private road 250 m south-south-east of the A143 Bury Road, and 80 m east and south of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The large farmhouse dates to the 17th century and was remodelled and extended in 1815 for the Harrison family. The asset comprises a roughcast timber frame structure with a white brick façade and a steeply hipped plain tiled roof. The asset forms part of a historical farmstead known as The Rookery. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2486**). The farmstead dates to the 17th century with later 19th century alterations and additions. The farmstead has historical and evidential value and due to significant loss of outbuildings, of **low value**.

3.3.729 The setting of the asset is informed by its location within a working farm complex and by its relationship with the surrounding agricultural landscape, with which the asset has a historical and ongoing functional relationship. The wider farming complex recorded on the first edition OS map of 1885 (**2486**) appears, however, to have been entirely replaced and expanded by 20th century hanger style barns and outbuildings. Due to the loss of contemporary buildings the setting of the asset makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.730 The Grade II listed assets 'Prospect Farm House' (**1352260**) and 'Lockleys' (**1284403**) are located in a small dispersed group of buildings/hamlet on the western flank of Chapel Lane, Wortham, c. 250 m south of the AS143 Bury Road, c. 1.4 km west of an Order Limits access road and 1.45 km west of an Order Limits main compound. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The former farmhouse (**1352260**) dates to the 17th century and comprises a plastered timber structure with a thatched roof. Lockleys (**1284403**) is an early 17th century house, which was altered in the 20th century and comprises a plastered timber frame structure with a painted sham timber frame and a machine tiled and pantiled roof.

3.3.731 The setting of the assets is shared and informed by their location in their large mature, wooded grounds, their interrelationships and their relationships with non-designated outbuildings and other residences in the small hamlet. The thickly wooded nature of the hamlet, however, ensures that intervisibility between the assets and other built elements is extremely restricted, as are views out and into the small community. The setting of the assets, therefore, affords them seclusion and privacy and makes a considerable contribution to their values, but due to its restricted, enclosed nature, the setting does not extend to the Order Limits.

3.3.732 The Grade II listed assets '1, Brook Road' (**1182727**) and '2, Brook Road' (**1032770**) are located on opposing flanks of Mellis Road c. 135 m north-north-west of the junction of Mellis Road and Brook Lane, c. 620 m south of Wortham, and c. 870-900 m west of the Order Limits. The assets are of **medium value** based on their designations and its evidential, historical and aesthetic values. One Brook Road, on the south-western flank of Mellis Road, is of early 17th century date, was altered around 1900 and comprises a plastered timber frame house, refronted in red brick and with a pantiled, formally thatched roof. Two Brook Road, on the north-eastern flank of Mellis Road, dates to the 17th century, was extended in the 19th century,

altered in the 20th century and comprises a plastered timber frame house with a thatched roof.

3.3.733 The setting of the assets is shared and informed by their rural roadside locations, by their interrelationship and by their relationships with further buildings around the road junction, which include the Grade II listed Brookside Farm House c. 200 m to the east. The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical relationship. the setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance and the setting being restricted to the roadside locations and immediate landscape, it does not extend to the Order Limits.

3.3.734 The Grade II listed 'Brookside Farm House' (**1183056**) is located on the northern flank of Brook Lane, c. 690 m south of Wortham, and 720 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the late 17th century, which was altered in the 19th and 20th centuries and comprises a plastered timber frame structure with a steeply pitched pantile roof.

3.3.735 The setting of the asset is informed by its roadside rural location and by its relationships with further buildings around the road junction, which include the Grade II listed 1 and 2 Brook Road c. 200 m to the west. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. the setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the setting being restricted to the roadside location and immediate landscape, it does not extend to the Order Limits.

Palgrave CP

3.3.736 The Grade II listed 'Bridge Farm Cottages' (**1032785**) is located on the southern edge of Diss, c. 910 m north-north-west of the centre of Palgrave and c. 770 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, and historical values. The asset dates to the 16th century, was extended in the 17th century, altered in the 20th century and comprises a roughcast timber frame house with a steeply pitched pantiled roof.

3.3.737 The setting of the asset is informed by its location within the wider former Bridge Farm complex and by its river valley location with the Waveney river c. 80 m to the north. The setting is further informed by the asset's relationship with the medieval Grade II listed element of the faming complex Bridge Farm House (**1182078**) reported above, and the post medieval and Denmark Bridge House (**1352269**). The surrounding agricultural landscape, with which the asset has a historical and former functional relationship, also informs the setting. The former farming complex has, however, been divided up in to separate residences with associated property boundaries. The setting of the asset, therefore, makes a moderate contribution to the value of the asset, but due to its setting being restricted to its former farmyard location and the immediate agricultural landscape, it does not extend to the Order Limits.

3.3.738 The Grade II listed 'Denmark Bridge House' (**1352269**) is located on the southern edge of Diss, c. 910 m north-north-west of the centre of Palgrave and c. 850 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, and historical values. The house dates to the mid-to-late 17th century, was extended in the 18th century, reroofed in the 19th century, altered in the 20th

century, and comprises a roughcast timber frame structure with black glazed and red pantiled roofs.

3.3.739 The setting of the asset is informed by its location within the wider former Bridge Farm complex and by its river valley location with the Waveney river c. 80 m to the north. The setting is further informed by the asset's relationship with the medieval Grade II listed element of the faming complex Bridge Farm House (**1182078**) reported above, and the post medieval and Bridge Farm Cottages (**1032785**). The surrounding agricultural landscape, with which the asset has a historical and former functional relationship, also informs the setting. The former farming complex has, however, been divided up in to separate residences with associated property boundaries. The asset also has a large, industrial yard immediately to the north, which introduces noise, movement and pollution into the asset's setting. The setting of the asset, therefore, makes a moderate contribution to the value of the asset, but due to its setting being restricted to its former farmyard location and the immediate agricultural landscape, it does not extend to the Order Limits.

3.3.740 The Grade II listed 'Elm Vale Farm House' (**1032792**) is located on the eastern flank of Denmark Hill, c. 760 m north-north-west of the centre of Palgrave and c. 810 m north of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the around 1700 and was altered in the 19th century and again around 1970. It is built of red brick it Flemish bond with flared headers with a steeply pitched pantiled roof.

3.3.741 The setting of the asset is informed by its former farm complex location and by its relationship with the non-designated farm outbuildings, most of which are recorded on the first edition OS map of 1886. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have a historical and former functional relationship. The farming complex appears to have been developed as a number of residences, but with limited associated divisions, and so the complex retains some cohesion as a former farm. The western boundary of the farming complex along Denmark Hill is heavily wooded obscuring views into and out from the asset and outbuildings affording them seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance, and the focus of the setting being on the former farmyard and immediate landscape, it does not extend to the Order Limits.

3.3.742 The Grade II listed assets 'Wood Cottage' (**1182225**) and 'Peanut Cottage and Hill Cottage' (**1352270**) are located adjacent to each other on the western flank of Denmark Hill, c. 760 m north-north-west of the centre of Palgrave and c. 770 m north of the Order Limits. The assets are of **medium value** based on their designations and its evidential, historical and aesthetic values. Wood Cottage dates to the mid-16th century, had a floor and chimney stack inserted in the 17th century, was altered and extended in the 20th century and comprises a plastered timber frame structure with a steeply pitched pantile roof. Peanut and Hill Cottages dates to the 16th century and it was extended in the 17th century when a floor and chimney stack were inserted. It was further extended in the 18th century and altered in the 20th century. The asset comprises a plastered timber frame structure with extensions in clay lump and a steeply pitched pantiled roof.

3.3.743 The setting of the assets is shared and informed by their interrelationship and by their relationship with outbuildings to the south, some of which are recorded on the first edition OS map of 1886. The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical relationship. The

eastern boundaries of the assets along Denmark Hill are heavily wooded obscuring views into and out from the assets and outbuildings affording them seclusion and privacy. The setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance, and the focus of the setting being on the assets and immediate landscape, it does not extend to the Order Limits.

3.3.744 The Grade II listed 'Longs Farm House' (**1182159**) is located on the northern flank of Millway Lane close to the western edge of Palgrave and c. 360 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the early 17th century, has evidence of 19th and 20th century maintenance and comprises a roughcast timber frame structure with thatched and pantiled roofs.

3.3.745 The setting of the asset is informed by its roadside location, by its interrelationship with the Grade II listed 17th century Ivy Cottage on the opposite flank of Millway Lane and by its relationship with its outbuildings to the north, which are recorded on the first edition OS map of 1886. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and former functional relationship. The visual link with the agricultural landscape has, however, been eroded by residential development immediately to the north and east of the asset and its outbuilding. The setting of the asset, therefore, makes a moderate contribution to its value, but due to overall distance, and the focus of the setting being on the asset and immediate landscape, it does not extend to the Order Limits.

3.3.746 The Grade II listed 'Ivy Cottage' (**1032790**) is located on the southern flank of Millway Lane close to the western edge of Palgrave and c. 340 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the 17th century, was extended and altered in the 20th century and comprises a roughcast timber frame structure with steeply pitched thatched and pantiled roofs.

3.3.747 The setting of the asset is informed by its roadside location, by its interrelationship with the Grade II listed 17th century Longs Farm House on the opposite flank of Millway Lane. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and former functional relationship. The visual link with the agricultural landscape has, however, been slightly eroded by residential development immediately to the south and east of the asset and its outbuilding. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance, and the focus of the setting being on the asset and immediate landscape, it does not extend to the Order Limits.

3.3.748 The Grade II listed assets 'Park House' (**1032787**) c. 90 m south of the Order Limits, 'Former Stable Block at St Johns Farm About 15 m North of Park House' (**1032788**) c. 40 m south of the Order Limits 'Former Groom's House and Coach House About 30 m East of Park House' (**1182135**) c. 60 m south of the Order Limits and 'Crinkle Crankle Walls to North West of Park House' (**1284698**) c. 100 m south-west of the Order Limits, are located on the southern flank of Lion Road, c. 1.9 km south-west of the centre of Palgrave. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. Park House (**1032787**) was built as a country residence before it served as a school, and it is now part of a care home complex. it has 17th century origins but was greatly extended s altered in the early19th century for the Harrison family. The 19th century main block is constructed of yellow brick with earlier roughcast timber frame elements to the rear, now largely encased in whitewashed brick. The 19th century block has a shallow hipped slate

roof with steeper glazed pantiled roofs to on the elements to the rear. The former stable block (**1032788**) was built in the early 19th century for the Harrison family and is built of white brick to the front (south) with the rest of red brick. The asset has a slated roof. The former groom's house (**1182135**) was also built in the early 19th century for the Harrison family and is built of white brick to the front (west) with the rest of red brick. The asset has a slated roof. The crinkle crankle walls (**1284698**) were also built in the early 19th century for the Harrison family and are or red brick in Flemish bond on a flint rubble base and are about 4 m in height. Three lengths of wall remain to the north, east and west of rectangular garden measuring 70 m by 50 m and to the west of the house.

3.3.749 The setting of the assets is shared and informed by their interrelationships as elements of a former country estate. The setting is further informed by their relationship with the small landscape park (now disparked) of St John's (**2402**) defined by Lion Road and Old Bury Road to the north, west and south and by a thick tree belt to the east. The subsequent repurposing of the assets as elements of a school and now a care home as resulted in alterations and the addition of further buildings including two large T-shaped residential blocks for the care home resident. The setting of the assets, therefore, makes a minor contribution to their values. Due to the proximity of the Project the setting of the house, stable and groom's house extends to the Order Limits, however, due to the setting of the wall being focused very much on its immediate location, its setting does not extend to the Order Limits (Figure 7.12.F43_VP2.22 Viewpoint 2.22: Lion Road near St John's House / Goodrich Park; document reference 7.12).

3.3.750 The Grade II listed 'Valley Farm House' (**1032791**) is located on the northern flank of the A143 Old Bury Road, c. 1 km south-south-west of the centre of Palgrave and c. 55 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built in the 17th century, was extended in the late 18th or early 19th centuries and comprises a plastered, timber frame structure with a steeply pitched thatched roof. The extensions to the rear (north) are of clay lump with pantiled roofs. The farmhouse is situated within the 19th century Valley Farm Farmstead (**2372**), which due to its moderate survival is of **medium value** based on its historical and evidential values.

3.3.751 The setting of the asset is informed by its former working farm complex location and by its relationship with its former outbuildings (**2372**), most of which are recorded on the first edition OS map of 1886. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and former functional relationship. The former outbuildings have been converted into residences, and the farmyard has been divided by property boundaries, reducing the cohesion of the former farming complex. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.752 The Grade II listed 'Ivy House' (**1182167**) is located on the northern flank of Old Bury Road, c. 45 m north of the A143, c. 1.4 km south-west of the centre of Palgrave and c. 50 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the mid-to-late 17th century and comprises a plastered, timber frame structure with a thatched roof.

3.3.753 The setting of the asset is informed by its location within its large grounds which are scattered with numerous small, modern sheds and outbuildings and defined by

mature tree lined hedgerows. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The large Grange Farm complex lies c. 150 m to the west and comprises a non-designated farmhouse and several large, modern hanger style barns and outbuildings. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its focus being restricted to the grounds of the asset and immediate landscape, the setting does not extend to the Order Limits.

3.3.754 The Grade II listed 'Barn About 35 m West of Spring Farm House' (**1284658**) is located at the southern end of a private road c. 125 m south-south-east of the A143, c. 1.5 km south-west of the centre of Palgrave and c. 130 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The barn dates to the 17th century and has recently been converted into residences. The asset comprises a rendered timber frame structure with wattle and daub infill and a steeply pitched modern pantiled roof. The asset is situated within the 19th century Spring Farm Farmstead (**2373**), which due to its poor survival is of **low value** based on its historical and evidential values.

3.3.755 The setting of the asset is informed by its location within the former Spring Farm complex and by its relationship with the non-designated Spring Farmhouse and a second barn (**2373**). The setting is further informed by the surrounding agricultural landscape, with which the asset and associated non-designated buildings have a historical and former functional relationship. The conversion of the barn has resulted in its separation from the farmhouse and the introduction of property boundaries and so the setting of the asset makes a minor contribution to its value. Due to the proximity of the Project the setting of the asset extends to the Order Limits.

Stuston CP

3.3.756 The Grade II listed 'Town Meadow Cottage' (**1352293**) is located on the edge of Stuston Common, south of the south-eastern edge of Diss, and 1.8 km east-north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house comprises a plastered timber frame structure with a thatched roof.

3.3.757 The setting of the asset is informed by its isolated location within its mature garden and by its relationship with its non-designated outbuildings. The setting further informed by Stuston Common land to the to the north and east and agricultural land to the south and west, with which the asset has a historical relationship. The setting of the asset makes a considerable contribution to its value, but as it is restricted to the garden location and immediate landscape, the setting does not extend to the Order Limits.

3.3.758 The Grade II listed 'Rosemary Farm House' (**1352292**), 'Tyrells Farm House' (**1182352**), 'The Nuthatch' (**1352273**), and 'Old Swan House' (**1032758**) are neighbouring assets on the western flank of an unnamed to the north of Old Bury Road in Stuston, and c. 1.7 km east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. Rosemary Farm House dates to the early 19th century and comprises a red brick structure with a pantile roof; Tyrells Farm House dates to the 17th century, was altered in the 19th and 20th centuries and comprises a plastered timber frame structure with a thatched roof; the former public house Old Swan House dates to the mid-to-late plastered timber frame structure with a thatched roof; the Nuthatch, formally an outbuilding of Tyrells Farm House and probably a brewhouse to the Swan

Public House dates to the 18th century and comprises a plastered clay lump/timber frame structure with a thatched roof.

3.3.759 The setting of the assets is shared and informed by the village location, by the interrelationships between the listed assets and by their relationships with the neighbouring non-designated buildings that contribute positively to the character of Stuston. The setting is further informed by the agricultural landscape to the west, east and south, with which the assets have a historical relationship, and in the case of the two farmhouses, former functional relationships. The setting of the assets, therefore, makes a considerable contribution to their values, but as the setting is restricted to the village location and the immediate landscapes, it does not extend to the Order Limits.

3.3.760 The Grade II listed buildings 'Cardrews' (**1032756**), 'Stuston Place Farm House' (**1352254**), 'Endon House' (**1032757**), 'Hauntons Farm House' (**1032796**), 'Talbot Cottage' (**1284606**), and 'Willow Farm House' (**1032795**) are located variously to the north and south of Old Bury Road in Stuston, and between 1.6 and 2 km to the east of the Order Limits. Cardrews dates to the late 16th or early 17th centuries and comprises a roughcast timber frame structure with a thatched roof; Stuston Place Farm House dates to c. 1600 and comprises a timber frame structure that was extended and brick encased in red brick with some plastering and with a machine tiled roof; Endon House dates to c. 1600, was extended in the late 17th century, was raised and altered in the 20th century, and comprises a roughcast timber frame structure with pantile and slate roofs; Hauntons Farm House dates to the 17th century, was extended in the 18th century, was altered in the 20th century, and comprises a plastered timber frame structure with plaintiled and pantiled roofs; Talbot Cottage dates to the 17th century, was extended in the 20th century and comprises a roughcast timber frame structure with some brick casing and with a thatched roof; Willow Farm House dates to the early-to-mid 17th century, was extended in the 19th century and comprises a plastered timber frame structure with a glazed pantile roof.

3.3.761 The settings of the assets are similar in that they are informed by their village locations and, where visibility allows, by the interrelationships between the listed buildings and by their relationships with non-designated building that contribute positively to the character of the settlement. The setting is further informed by the surrounding agricultural landscape with which the assets have historical relationships, and in the case of the two farmhouses, former functional relationships. The peaceful village settings of the assets make considerable contributions to their values, but as they are restricted to their village locations and immediate agricultural landscape, the settings do not extend to the Order Limits.

Brome and Oakley CP

3.3.762 The Grade II* listed 'Park Farmhouse' (**1032524**) is located on the northern flank of Rectory Road in Brome and almost 3 km east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the mid-16th century, was modernised in 1978-9, and comprises a plastered timber frame structure with pantiled and thatched roofs.

3.3.763 The setting of the farmhouse is informed by its farmyard location and by its relationships with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting of the asset is further informed by the surrounding agricultural landscape with which the asset and its outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore,

makes a considerable contribution to its value, but as it is restricted to the farmyard location and associated agricultural land, the setting does not extend to the Order Limits.

Redgrave CP

3.3.764 The Grade II* listed 'Folly Lodge Known as Dove House' (**1261272**) is located at the western corner of a small copse, c. 470 m north-east of the B1113 Bury Road, c. 2.1 km south-east of the centre of Redgrave, and c. 2.2 km north-west of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The asset was likely built by Capability Brown for R. Holt in c. 1765-70 as a lodge to house the Redgrave Park Estate Carpenter. The asset is located on what was the south-eastern edge of Redgrave Park, which was associated with the now demolished country house of Redgrave Hall. The octagonal structure is of grey brick with white brick and timber dressings and a leaded domical roof.

3.3.765 The setting of the asset is informed by its location on the south-eastern edge of the former Redgrave Park, and it was designed to be an eyecatcher viewed from within the park. The parkland is, however, now disparked and the hall is demolished. The setting is further informed by the asset's relationships with the landscaped serpentine lake to the west, a building at the eastern extent of the lake labelled 'Kennel' on the First edition OS map of 1886, and surviving copses and tree belts of the parkland. Due to loss of the cohesion of the parkland and the hall, the setting of the asset makes a minor contribution to its value, but because of overall distance the setting does not extend to the Order Limits.

Thrandeston CP

3.3.766 Grade II Listed 'Hawthorn Farm House' (**1182479**) is located 100 m north-north-east of New Road, c. 1.1 km north-east of the centre of Thrandeston and c. 1.1 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built around 1600, was extended and raised in the late 17th or early 18th centuries and was altered in the 19th and 20th centuries. The asset comprises a cement rendered timber frame structure with a clay lump extension and a steeply pitched pantiled roof.

3.3.767 The setting of the asset is informed by its secluded location within its mature grounds and by its relationship with its non-designated outbuildings, a farming complex to the north-east and two properties to the south-east, most of which were recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have a historical and former functional relationship. The setting of the farmhouse, therefore, makes a considerable contribution to its value, but due to overall distance and screening by the asset's boundaries and the topography, development, vegetation and infrastructure of the intervening landscape, the setting does not extend to the Order Limits.

3.3.768 The Grade II listed 'Rose Cottage' (**1182494**) is located on the western flank of an unnamed road c. 900 m east of the centre of Thrandeston and c. 1.1 km east-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 17th century and comprises a cement rendered timber frame structure with a thatched roof.

3.3.769 The setting of the asset is informed by its roadside location within its small garden and by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the farmhouse, therefore, makes a considerable contribution to its value, but due to it being restricted to its garden location and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.770 The Grade II listed 'Marsh Farm House' (**1032768**) is located off an unnamed road c. 490 m north-west of the centre of Thrandeston and c. 60 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the 17th century, or possibly earlier, and was altered and extended in the 19th and 20th centuries. The asset comprises a roughcast timber frame structure with a steeply pitched red and black glazed pantiled roofs. The farmhouse is situated within the 19th century Marsh Farm Farmstead (**2370**), which due to its moderate survival is of **medium value** based on its historical and evidential values.

3.3.771 The setting of the asset is informed by its working farm complex location and by its relationship with its non-designated outbuildings (**2370**), most of which are recorded on the first edition OS map of 1885. The setting further informed by the surrounding agricultural landscape with which the asset and outbuildings have a historical and functional relationship. The introduction of the railway in the 19th century and c. 100 m to the south-east has, however, slightly eroded the asset's link to the rural landscape. The setting of the farmhouse, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.772 The Grade II listed properties 'Home Farm House' (**1352257**) and 'Malting Farm House' (**1284501**) are located to the north and south respectively of an unnamed road c. 1.4 km east of Thrandeston and c. 1.7 km east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. Home Farm House dates to the mid-16th century, was partially rebuilt in the 17th century, and was raised and altered in the 19th century. It comprises a plastered timber frame structure with a slated roof. Malting Farmhouse dates to the late 16th century, was partially rebuilt in the 17th century, and was altered in the 19th century. It comprises a plastered timber frame structure with a thatched roof. Both assets are now private residences and are no longer working farms.

3.3.773 The settings of the assets are similar as they are both located within large mature grounds defined by mature tree lined hedgerows and containing mature tree cover. The settings are further informed by the surrounding agricultural land, with which the assets have historical and former functional relationships. Due to the change in function and the loss of many of the former outbuildings recorded on 19th century OS mapping, the settings of the assets make moderate contributions to their values, but as they are restricted to their mature grounds and the immediate agricultural landscape, the settings do not extend to the Order Limits.

3.3.774 The Grade II listed 'Chestnut Farm House' (**1182638**) is located in the north-western portion of the Thrandeston Conservation Area (**CA43**), and c. 350 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse was built c. 1700 and possibly earlier to the north-west, had a front range added in the 19th century, and comprises plastered timber frame structure with some red brick encasing and a machine pantiled roof.

3.3.775 The setting of the asset is informed by it secluded location within its large grounds, which are defined by mature tree lined hedgerows and contain mature tree cover. The setting is further informed by the asset's relationship with several non-designed outbuildings, most of which are recorded on the first edition OS map of 1885. The surrounding agricultural landscape, with which the asset has historical and former functional relationships, also informs the setting. As the farm is now defunct and the former outbuildings appear to have been converted into dwellings, the setting of the asset makes a moderate contribution to it value. The setting of the asset is restricted to its grounds and the immediate agricultural landscape and so it does not extend to the Order Limits.

3.3.776 The Grade II listed 'Ampners' (**1182611**) is located to the north of an unnamed road within the Thrandeston Conservation Area (**CA43**), and c. 500 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house likely dates to the 16th century, was extended in the mid-to-late 17th century, was part raised and altered in 19th century and was altered again in the 20th century. The asset comprises a plastered timber frame structure with a pantiled roof.

3.3.777 The setting of the asset is informed by its village location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationship with the Grade II listed The Old Rectory (**1352258**) 40 m to the south-east and by its relationships with the listed and non-designated buildings arranged around Little Green to the south-west. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to its village location, the setting does not extend to the Order Limits.

3.3.778 The Grade II listed 'The Old Rectory' (**1352258**) is located towards the eastern edge of the Thrandeston Conservation Area (**CA43**), c. 55 m west of the Grade I listed medieval parish Church of St Margaret (**1032763**), on the northern flank of the unnamed east/west aligned road that runs through the settlement, and c. 550 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset is a large house that has an early 18th century core, which was greatly extended and altered around 1840. An early range has a reset 15th century stone door surround, probably from a monastic site.

3.3.779 The setting of the asset is informed by its location on the eastern edge of the settlement of Thrandeston, which itself is mentioned in the Domesday Book. The setting of the asset is further informed by its location on the fossilised medieval street plan of the settlement, although views to the church to the east are obstructed by the mature hedged boundary and tree cover of the church's graveyard. There is a more open view to the west, which takes in two post medieval residential properties, which are recorded on the first edition OS map of 1885 and include the Grade II listed 'Ampners' (**1182611**). The setting is further informed by the surrounding agricultural land, with which the asset has a historical relationship. The setting of the former rectory, therefore, makes a considerable contribution to its value, but due to its enclosed situation within the settlement, the setting does not extend to the Order Limits.

3.3.780 The Grade II listed 'Old Queens Head Cottages' (**1182667**) is located on the south-eastern flank of Mellis Road within the Thrandeston Conservation Area (**CA43**), to the south-west of Little Green, and c. 350 m south-east of the Order Limits. The

asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former public house is now three dwellings and dates to the mid-17th century, was extended in the 18th and 19th centuries, and was altered in the 20th century. The asset comprises a plastered timber frame structure with clay lump extensions and thatched roofs.

3.3.781 The setting of the asset is informed by its roadside village location and by its relationships with the listed and non-designated buildings that contribute to the character of the settlement and that are arranged around Little Green to the north-east and along Mellis Road. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to its village location, the setting does not extend to the Order Limits.

3.3.782 The Grade II listed 'Honeysuckle Cottage and Adjoining Dwelling' (**1032767**) is located on the southern flank of Little Green, within the Thrandeston Conservation Area (**CA43**), and c. 420 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the mid-to-late 16th century, was altered in the 19th century, and comprises a plastered timber frame structure with some brick casing and a steeply pitched thatched roof.

3.3.783 The setting of the asset is informed by its roadside village location and by its relationships with the listed and non-designated buildings that contribute to the character of the settlement and that are arranged around Little Green to the north-east. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to its village location, the setting does not extend to the Order Limits.

3.3.784 The Grade II listed 'The Old Cottage' (**1032766**) is located on the southern flank of Little Green, at the heart of the Thrandeston Conservation Area (**CA43**), and c. 460 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the 16th century, had a chimney stack and floor inserted in the 17th century, was altered in the 20th century, and comprises a plastered timber frame structure with a thatched roof.

3.3.785 The setting of the asset is informed by its roadside village location and by its relationships with the listed and non-designated buildings that contribute to the character of the settlement and that are arranged around Little Green to the north. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to its village location, the setting does not extend to the Order Limits.

3.3.786 The Grade II listed 'Church Farm House' (**1032765**) is located within the Thrandeston Conservation Area (**CA43**), to the east of Little Green, and c. 550 m south-east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The house dates to c. 1580, was part demolished and altered in the 20th century, and comprises a plastered timber frame structure with a steeply pitched plaintiled roof.

3.3.787 The setting of the asset is informed by its sheltered village location within its large garden, which is defined by mature treelined hedgerows and contains mature tree cover. The setting of the asset is further informed by its interrelationship with the Grade II listed 'The Old Cottage' (**1032769**) on the opposing flank of Mellis Road, and by its relationships with non-designated residential buildings lining Mellis Road that

contribute to the character of Thrandeston. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to its village location, the setting does not extend to the Order Limits.

3.3.788 The Grade II listed 'The Old Cottage' (**1032769**) is located on the south-eastern flank of Mellis Road, within the Thrandeston Conservation Area (**CA43**), and c. 310 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house probably dates to the late 17th century, was extended in the 19th century, and comprises a plastered timber frame structure with a clay lump extension and a thatched roof with pantiles on the additions.

3.3.789 The setting of the asset is informed by its sheltered village location within its large garden, which is defined by mature treelined hedgerows and contains mature tree cover. The setting of the asset is further informed by its interrelationship with the Grade II* listed 'The Manor House' (**1182711**) on the opposing flank of Mellis Road, and by its relationships with non-designated residential buildings lining Mellis Road that contribute to the character of Thrandeston. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to its village location, the setting does not extend to the Order Limits.

3.3.790 The Grade II listed assets 'Goswold Hall' (**1032759**) and 'Dovecote About 120 m East South East Of Goswold Hall' (**1352255**) are located at the western limit of a private road linking the property to the A140, and c. 1.7-1.8 km to the south-east of the Order Limits. The hall dates to the 16th century, was partially rebuilt in the mid-to-late 17th century, was extended c. 1820, was altered in the 20th century, and comprises a plastered timber frame structure with steeply pitched plaintiled roofs. The dovecote is located in the large lawned area to the east of the hall and comprises an 18th century red brick structure in English bond.

3.3.791 The setting of the assets is shared and informed by their interrelationship and by their relationships with outbuildings and a working farm complex to the north of the hall. Some of the buildings appear to be recorded on the first edition OS map of 1885, although much of the farming complex appears to have been replaced, likely in the 20th century. The setting is further informed by the assets' relationship with a scoped-out medieval moat, within which the hall is located, and which informs on the considerable time depth of the site. The surrounding agricultural landscape, with which the assets have historical and ongoing functional relationships, also informs the setting. The setting of the assets, therefore, makes a very considerable contribution to their values, but as it is focused on the farming complex and the surrounding agricultural landscape, and due to development and infrastructure in the intervening landscape, the setting does not extend to the Order Limits.

Burgate CP

3.3.792 The Grade II listed 'Barn About 70 m South East of Hall Farm House' (**1032798**) is located c. 1.5 km south of Wortham, 300 m west of the Church of St Mary (**1032797**), and c. 490 m north of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The barn dates to the 17th century, which was extended in the 19th century, and comprises a weatherboarded timber frame, five bay structure with a steeply pitched pantile roof.

3.3.793 The setting of the asset is shared with and informed by its relationship with the scheduled monument 'Burgate Hall moated site' (**1017331**), the Grade II* listed 'Hall Farm House' (**1352234**), and the Burgate deer park (**2354**), which are surviving

medieval elements of the working farm complex and hinterland. The setting is further informed by its relationships with the non-designated buildings of the farm complex, several of which are recorded on the first edition OS map of 1885. The asset's setting is further informed by its relationship with the scheduled monument 'Medieval ringwork in Burgate Wood' (**1016699**) 180 m to the east, and by its relationship with the Grade II* listed Church of St Mary (**1032797**) 300 m to the east. Although there has been some small-scale residential development 320 m to the east along the western flank of Sycamore View to the north of the church, the surrounding agricultural landscape also contributes to the assets' setting (Figure 7.12.F25_VP2.04 Viewpoint 2.04: Burgate Road, Burgate; document reference 7.12). The setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance and partial screening by mature tree lined hedgerows, the setting does not extend to the Order Limits.

3.3.794 The Grade II listed 'Oak Tree Farm House' (**1032801**) is located on the south-eastern flank of Oak Tree Farm (road), 100 m west of Shepherds Lane, Burgate Great Green, and c. 1.3 km north of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the 17th century and was raised, part rebuilt and red brick encased in the 18th century. It was refronted in white brick and extended in the early 19th century. The asset has a timber frame core with some plasterwork to the rear and slated and pantiled roofs.

3.3.795 The setting of the asset is informed by its working farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the Burgate Great Green to the east and the otherwise surrounding agricultural landscape, with which the asset and its outbuildings have historical and functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the mature vegetation and development of the intervening landscape, the setting does not extend to the Order Limits.

3.3.796 The Grade II listed 'Ivy Cottage' (**1032802**) is located on the eastern flank of Shepherds Lane at the north-west edge of Burgate Great Green, c. 70 m east of the Oak Tree Farm complex, and c. 1.2 km north of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 17th or early 18th centuries and it was extended in the 19th and 20th centuries. The asset comprises a plastered timber frame structure with a thatched roof.

3.3.797 The setting of the asset is informed by its location on the north-western edge of Burgate Great Green, by its relationships with the Oak Tree Farm complex to the west and with further residential properties on the edge of the Green to the south-south-west and including the Grade II listed post medieval Oak Tree Cottage. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the mature vegetation and development of the intervening landscape, the setting does not extend to the Order Limits.

3.3.798 The Grade II listed 'Oak Tree Cottage' (**1352236**) is located on the western flank of Shepherds Lane at the western edge of Burgate Great Green, c. 90 m south of the Oak Tree Farm complex, and c. 1.2 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic

values. The house dates to the 17th century, or possibly earlier, and comprises a plastered timber frame structure with some red brick and a thatched roof.

3.3.799 The setting of the asset is informed by its location on the western edge of Burgate Great Green, by its relationships with the Oak Tree Farm complex to the north and with further residential properties on the edge of the Green to the south and the Grade II listed post medieval Oak Tree Cottage to the north-north-east. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the mature vegetation and development of the intervening landscape, the setting does not extend to the Order Limits.

3.3.800 The Grade II listed 'The Willows and Lilac Cottage' (**1352235**) is located on the southern flank of Brook Lane on the south-eastern edge of Burgate Great Green, and c. 1.2 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the early 18th century and it was extended in the 19th century. The asset comprises a plastered timber frame structure with a clay lump extension, a thatched roof and pantiled roof on the extension.

3.3.801 The setting of the asset is informed by its location on the south-eastern flank of Burgate Great Green, by its relationships with its outbuildings, some of which are recorded on the first edition OS map of 1885, and with residential dwellings to the east, which include the Grade II listed post medieval Green Farm House. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the mature vegetation and development of the intervening landscape, the setting does not extend to the Order Limits.

3.3.802 The Grade II listed 'Green Farm House' (**1032799**) is located on the eastern flank of Brook Lane on the eastern edge of Burgate Great Green, and c. 1.2 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the early 17th century, was altered in the 19th century and comprises a roughcast timber frame structure with a thatched roof.

3.3.803 The setting of the asset is informed by its location on the southern flank of Burgate Great Green, by its relationships with its outbuildings, some of which are recorded on the first edition OS map of 1885, and with residential dwellings to the west, which include the Grade II listed post medieval Willows and Lilac Cottages. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the mature vegetation and development of the intervening landscape, the setting does not extend to the Order Limits.

3.3.804 The Grade II listed 'Hill House' (**1352238**) is located on the eastern flank of Mellis Road, 640 m north-east of Burgate, and 670 m north of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house is of probable 17th century and comprises a plastered timber frame structure with some early 19th century red brick casing when it was also partly reroofed. The asset was extended in the late 19th century and has a steeply pitched black glazed and machine pantiled roofs. The house forms part of a historical

farmstead complex, Hill House. The farmstead dates from the 17th century and has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.805 The setting of the asset is informed by its former farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical and former functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value but as the Project tower corridor is over 650 m to the east, the setting does not extend to the Order Limits.

3.3.806 'The Old Rectory' (**1181701**) is located on the eastern flank of Mellis Road, c. 620 m east of Burgate, and 500 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former rectory was built in 1827 for the Reverend W. Pemberton and comprises a large red brick house with a slated roof.

3.3.807 The setting of the asset is informed by its secluded location within its mature grounds and by its relationship with its non-designated outbuildings, which are recorded on the first edition OS map of 1885. The setting is further informed by surrounding agricultural landscape, with which the asset and its outbuildings have a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the focus of the setting being restricted to the asset's grounds and immediate landscape, it does not extend to the Order Limits.

3.3.808 The Grade II listed 'Glebe Farm House' (**1032804**) is located at the end of a private driveway 130 m east of Mellis Road, c. 800 m east of Burgate, and c.230 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, formally a rectory, dates to the late 16th or early 17th centuries, but was it was reduced in size, raised and altered around 1830 when it ceased to be a rectory. The asset comprises a plastered timber frame structure with a clay lump extension and a shallow pitched slated roof. The farmhouse forms part of a historical farmstead known as Glebe Farm and the Suffolk HER has recognised the farmstead complex as a **low value** non-designated heritage asset (**2442**). The farmstead is partially defined by the remains of a **medium value** medieval moat (**2246**) of evidential value, which suggests an earlier phase of occupation. Excavations within the bounds of the farmstead ahead of a pipeline identified a **low value** road surface, and the skeleton of a horse and two iron horseshoes (**2426**) of evidential value in a flanking ditch.

3.3.809 The setting of the farmhouse is informed by its location within its large, mature grounds, partially defined by the moat (**2246**), and which affords the asset seclusion and privacy. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and former functional relationship. Several further, likely contemporary, buildings to the west of the asset and recorded on the first edition OS map of 1885 (**2442**) have, however, been demolished and so the setting of the asset makes a moderate contribution to its value. The focus of the setting is restricted to the asset's grounds and the immediate landscape and so it does not extend to the Order Limits.

3.3.810 The Grade II listed 'Willow Cottage' (**1352237**) is located on the northern edge of Little Green, 100 m north-east of Bugg's Road, and c. 270 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 17th or early 18th

centuries and it was altered and extended in the 20th century. The asset comprises a plastered timber frame structure with a thatched roof.

3.3.811 The setting of the asset is informed by its location within its mature grounds on the northern flank of Little Green. The setting is further informed by the asset's relationships with other characterful residences that flank the Green, and which include the Grade II listed Green Farm House and Green Farm Cottage to the south. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes positively to the setting. There has been some small-scale 20th century residential development to the west of the asset, but it is sympathetic being in the local architectural vernacular. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by the asset's grounds and the mature vegetation and development of the intervening landscape, the setting does not extend to the Order Limits.

3.3.812 The Grade II listed assets 'Green Farm House' (**1181676**) and 'Green Farm Cottage' (**1032803**) are located on the southern flank of Little Green, c. 50 km south-west of Bugg's Road, and c. 300 and 380 m north-west of the Order Limits. The assets are of **medium value** based on their designations and its evidential, historical and aesthetic values. The farmhouse dates to the mid-17th century, was altered in the 19th century and comprises a plastered timber frame structure with a steeply pitched black glazed pantiled roof. The cottage dates to the late 17th or early 18th centuries, was altered in the 20th century and comprises a plastered timber frame structure with a thatched roof. The farmhouse is situated within the 19th century Green Farm Farmstead (**2361**), which due to its poor survival is of **low value** based on its historical and evidential values.

3.3.813 The setting of the assets is shared and informed by their locations on the south-western flank of the Green, by their interrelationship and their relationships with the non-designated outbuildings of the Green Farm complex (**2361**). The setting is further informed by the assets' relationships with other characterful residences that flank the Green, and which include the Grade II listed Willow Cottage to the north. The surrounding agricultural landscape, with which the assets have a historical and functional relationship, also contributes positively to the setting. The setting of the assets, therefore, makes a considerable contribution to their values, but due to screening by the assets' grounds and the mature vegetation and development of the intervening landscape, the setting does not extend to the Order Limits.

3.3.814 The Grade II listed 'Gibsons Farm House' (**1181694**) is located off Furze Way on the southern edge of Little Green, and c. 170 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built in 1791 and comprises a red brick structure with a pantiled roof. The farmhouse is situated within the 19th century Gibson's Farm Farmstead (**2359**), which due to its complete loss is of **negligible value** based on its historical and evidential values.

3.3.815 The setting of the asset is informed by its location within a working farm complex, by its relationship with its modern era outbuildings, and by its relationship with the surrounding agricultural landscape, with which the asset has a historical and ongoing functional relationship. The modern outbuildings have replaced the likely contemporary buildings (**2359**) recorded on the first edition OS map of 1885, and so the setting of the asset makes a moderate contribution to its value. Due to the proximity of the Project, however, the setting extends to the Order Limits.

3.3.816 The Grade II listed 'Stubbings Entry' (**1181712**) is located in the south-east corner of the scheduled monument 'Moated site at Stubbing's Entry' (**1016700**) but is excluded from the scheduling. The asset is located c. 1.4 km south-west of the centre of Mellis, immediately south and west of Slough Road and c. 560 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the early-to-mid 17th century, was extended in the late 18th or early 19th centuries and was altered in the 20th century. The asset comprises a brick encased, plastered timber frame structure with a steeply pitched machine tiled roof.

3.3.817 The setting of the asset is informed by its relationship with the earlier scheduled medieval moat, within which it is located. The setting is further informed by the now wooded parcel of land immediately to the east and labelled 'Studding's Green' on the first edition OS map of 1885. The surrounding agricultural landscape, with which the asset has historical and functional relationship, also contributes to the coherence of the setting. The modern hanger style barns to the south of the asset are, however, intrusive and detract from the setting. The setting of the asset, therefore, makes a moderate contribution to value of the asset, but due to screening by the modern farmyard element and the tree cover of Studding's Green, the setting does not extend to the Order Limits.

Botesdale CP

3.3.818 The Grade II listed 'Jacobites' (**1213214**) is located at the north-eastern end of a private driveway 180 m off Mill Road South, c. 1.4 km west-north-west of Little Green and 1.7 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built around 1600, was extended and altered in the 20th century and comprises a plastered timber frame structure with thatched and pantiled roofs.

3.3.819 The setting of the asset is informed by its secluded location within its grounds and by its relationship with a second residence immediately to the south and recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and neighbouring residence have a historical relationship. The grounds of the asset and neighbouring residence contain trees and are defined by mature tree lined hedgerows affording the buildings a shared privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its being focused and the asset's grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.820 Grade II listed 'Botesdale Lodge' (**1032642**) is located at the south-eastern end of a private driveway 270 m off Common Road, c. 1.5 km west of Little Green, and c. 1.4 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The large house was built in the mid-16th century in two phases and was extended around 1810. It comprises a plastered timber frame structure with white brick additions and a steeply pitched plain tiled roof.

3.3.821 The setting of the asset is informed by its location within its large, landscaped grounds and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical relationship. The large grounds of the asset contain formal gardens and tree cover and its boundaries are defined by mature tree lined hedgerows, largely

obscuring views in to and out from the asset. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its being focused and the asset's grounds and immediate landscape, the setting does not extend to the Order Limits.

Rickinghall Superior CP

3.3.822 The Grade II listed 'Highways' (**1241179**) associated with Highways (Upper Rectory) Farmstead (**2391**) are located south of Finningham Road, within Candle Street, and c. 40 m south the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The single-storey timber-framed rectory is now a dwelling as part of a wider farmstead, and originally dates to the early 17th century, with the building converted not a dwelling c.1960. The farmstead (**2391**) dates to the 17th century, and the rectory to the 19th century. The farmstead comprises of a single building plan formed by working agricultural buildings, with the farmhouse set away from the yard. The farmstead is still extant and operational.

3.3.823 The setting of this asset is informed by its presence as post medieval farmhouse and former rectory within a semi-rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with its original farmstead context despite a period of time as a rectory, with which it also retains a historic relationship with. Overall, the asset's location within its broadly original functional setting means the setting of the asset makes a considerable contribution to its value. There is likely to be intervisibility between the building and the Order Limits, highly restricted by established treelines lining the roadside. The setting of the asset extends to the Order Limits.

3.3.824 The Grade II listed 'Suggenhall Farm House' (**1260663**) is located north of Church Lane and the eastern fringes of Candle Street, and c. 540 m east the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The two-storey timber-framed farmhouse dates to the late 17th century with a 19th century extension.

3.3.825 The setting of this asset is informed by its presence as post medieval farmhouse within a rural agricultural landscape. The asset broadly remains within its original setting, with the asset retaining a historical relationship with its original context. Overall, the asset's location within its broadly original setting means the setting of the asset makes a considerable contribution to its value. There is likely to be no intervisibility between the building and the Order Limits, restricted by established treelines, hedgerows, and associated latter farm buildings to the south. The setting of the asset does not extend within the Order Limits.

3.3.826 The Grade II listed 'Kiln Farm House' (**1241170**) is located north of Kiln Farm Lane and the western fringes of Candle Street, and c. 190 m west the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The single storey timber-framed and thatched dwelling also contains an attic and dates to the mid. to late 17th century with 20th century alterations.

3.3.827 The setting of this asset is informed by its presence as post medieval dwelling within a semi-rural agricultural landscape and was latterly a public house. The building has since returned to being a dwelling, and the asset broadly remains within its original setting, with the asset retaining a historical relationship with its original context. Overall, the asset's location within its broadly original setting means the setting of the

asset makes a considerable contribution to its value. There is likely to be no intervisibility between the building and the Order Limits, restricted by established treelines, hedgerows, and a woodland copse to the east. The setting of the asset does not extend within the Order Limits.

3.3.828 The Grade II listed 'Waterwell Cottage and 4, Kiln Farm Cottage' (**1241178**) is located south of Kiln Farm Lane and the western fringes of Candle Street, and c. 260 m west the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The two-storey timber-framed and thatched dwelling was built in the mid. 1600s, with 17th century and 18th century extensions, and 20th century alterations.

3.3.829 The setting of this asset is informed by its presence as post medieval dwelling within a semi-rural agricultural landscape. Although the dwelling has since become two dwellings, the asset broadly remains within its original setting and the asset retains a historical relationship with its original context. Overall, the asset's location within its broadly original setting means the setting of the asset makes a considerable contribution to its value. There is likely to be no intervisibility between the building and the Order Limits, restricted by established treelines, hedgerows, and a woodland copse to the east. The setting of the asset does not extend within the Order Limits.

3.3.830 The Grade II listed 'Kiln Farm House' (**1260662**) associated with Brick Kiln Farmstead (**2399**) is located south-east of Summer Lane, west of Kiln Farm Lane, and is on the western fringes of Candle Street, c. 300 m west the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The two-storey timber-framed farmhouse dates to the 17th century, with 18th, 19th and 20th century extensions and alterations and also contains an attic. The farmstead (**2399**) description also suggests that approximately 50% of the traditional farm buildings associated with the farmhouse (**1260662**) have been lost.

3.3.831 The setting of this asset is informed by its presence as post medieval farmhouse within a semi-rural agricultural landscape. The asset broadly remains within its original setting and the asset retains a historical and functional relationship with its original context despite the presence of later period livestock pens located to the south. Overall, the asset's location within its broadly original functional setting means the setting of the asset makes a considerable contribution to the asset's value. There is likely to be no intervisibility between the building and the Order Limits, restricted by established treelines, hedgerows, as well as buildings and a woodland copse to the east. The setting of the asset does not extend within the Order Limits.

3.3.832 The Grade II listed 'Kiln Farm Cottage' (**1260619**) is located north-west of Kiln Farm Lane and the western fringes of Candle Street, and c. 250 m west the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The single storey timber-framed dwelling also contains an attic and was built in c.1600, with a mid. to late 17th century and 20th century extensions.

3.3.833 The setting of this asset is informed by its presence as post medieval dwelling within a semi-rural agricultural landscape. Although the dwelling has since become two dwellings, the asset broadly remains within its original setting and the asset retains a historical relationship with its original context. Overall, the asset's location within its broadly original setting means the setting of the asset makes a considerable contribution to the asset's value. There is likely to be no intervisibility between the building and the Order Limits, restricted by established treelines, hedgerows, and a woodland copse to the east. The setting of the asset does not extend within the Order Limits.

3.3.834 The Grade II listed building of 'Falcon's Hall' (**1241180**), and its associated 'Barn about 25 Metres South East of Falcon's Hall' (**1241208**), and 'Barn about 80 Metres East South East of Falcon's Hall' (**1241210**) are located south-west of Finningham Road, approximately 1.3 km north-north-west of Allwood Green, and between c. 870 m south the Order Limits. The three assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The two-storey timber-framed Falcon's Hall (**1241180**) also contains an attic, and dates to the early 17th century, with a possible 16th century origin, as well as 19th and 20th century alterations and extensions. A plan of 1599 shows a five bay triple gable fronted house which bears no resemblance to the current building and was formerly known as 'Facon's Hall'. The list entry also notes that this is a partly moated site. The associated timber-framed and weatherboarded 'Barn about 80 Metres East South East of Falcon's Hall' (**1241210**) also dates to the early to mid-17th century. The red brick, aisled, 'Barn about 25 Metres South East of Falcon's Hall' (**1241208**) was constructed more recently in the 19th century.

3.3.835 The setting of these assets is shared and informed by their presence as post medieval partially moated manorial hall complex located within a rural agricultural landscape. The assets broadly remain within their immediate original setting, with the assets retaining a historical relationship with each other as part of a manorial complex, however, farm buildings to the south of these assets have resulted in these buildings appearing within more of a rural agricultural farmstead context rather than their manorial hall origins. The surrounding agricultural landscape, with which the assets have an historical ongoing functional relationship, further informs the setting. The assets' setting, therefore, makes a considerable contribution to their values. There is likely to be no intervisibility between the building and the Order Limits, restricted by established treelines, hedgerows, and associated latter farm buildings to the south. The setting of the asset does not extend within the Order Limits.

Rickinghall Inferior CP

3.3.836 The Grade II listed 'West Hall and attached Garden Wall' (**1260673**) is located east of West Street, c. 1.5 km south-south-west of Rickinghall, and c. 1.6 km south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The two-storey timber-framed and red-bricked fronted hall was built in the early mid-17th century, with late 17th century and 19th century extensions, and was refronted in the 19th century.

3.3.837 The setting of this asset is informed by its location within a working farmstead complex and the surrounding agricultural landscape. The setting of the asset is further informed by its relationship with farm buildings to the west and east, some of which are recorded on the first edition OS map of 1885. Overall, the asset's setting makes a considerable contribution to its value. There is likely to be no intervisibility between the building and the Order Limits, restricted by established treelines and hedgerows and the rolling topography. The setting of the asset does not extend within the Order Limits.

Mellis CP

3.3.838 The following 23 Grade II listed buildings are located within the Mellis Conservation Area (**CA47**).

3.3.839 The Grade II listed 'Barn About 40 m North Of Elm Tree Farmhouse' (**1032815**) is located at the northern end of a private c. 100 m long driveway to the north of

Thrandeston Road, and c. 820 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The barn dates to the early 18th century and comprises a red brick structure with a steeply pitched plaintiled roof. The asset is now a residential property.

3.3.840 The setting of the asset is informed by its location within a former farming complex and by its interrelationship with the Grade II* listed Elm Tree Farmhouse (**1181795**) immediately to the south. The setting is further informed by the asset's relationships with other listed and non-designated buildings within the vicinity that contribute positively to the character of the settlement of Mellis. The surrounding agricultural landscape, with which the asset has historical and former functional relationships, also contributes to the setting of the asset. The setting of the asset, therefore, makes a considerable contribution to its value but as it is restricted to the settlement and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.841 The Grade II listed assets 'The Laurels' (**1352242**) and 'The Cottage' (**1181803**) are located adjacent to each other on an unnamed road, north of Mellis Road and c. 650 m and c. 670 m east of the Order Limits respectively. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The Laurels dates to the late 17th or early 18th centuries, was extended in the early 19th century, altered in the 20th century, and comprises a plastered timber frame structure with clay lump extensions and thatched and pantiled roofs. The cottage dates to c. 1600, was altered in the 20th century and comprises a plastered timber frame structure with a steeply pitched pantiled roof.

3.3.842 The setting of the assets is similar and informed by their village location, their interrelationship, and by their relationships with other listed and non-designated buildings within the vicinity that contribute positively to the character of the settlement of Mellis. The agricultural land to the north, with which the assets have historical relationships, also informs the setting. The setting of the assets, therefore, makes a considerable contribution to their values but as it is restricted to the settlement and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.843 The Grade II listed assets '85 and 86, Mellis Green' (**1032816**) and 'Mead Cottage' (**1284831**) are located adjacent to each north of Thrandeston Road, and c. 780 m east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. Numbers 85 and 86 dates to 1841 and comprise plastered clay lump or timber frame structures on brick plinths and with black glazed pantiled roofs. The cottage dates to the late 17th century, was altered and extended in the 19th and 20th centuries, and comprises a plastered timber frame/part red brick structure, with clay lump extensions and a steeply pitched black glazed pantiled roof.

3.3.844 The setting of the assets is similar and informed by their village location, their interrelationship, and by their relationships with other listed and non-designated buildings within the vicinity that contribute positively to the character of the settlement of Mellis. The agricultural land to the north, with which the assets have historical relationships, also informs the setting. The setting of the assets, therefore, makes a considerable contribution to their values but as it is restricted to the settlement and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.845 The Grade II listed 'The Glebe' (**1352241**) is located south-east of Thrandeston Road and c. 1 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The Glebe, formally Limetree Farmhouse, dates to the early 17th century, was altered in the 19th and

20th centuries and comprises a plastered timber frame/part brick cased structure with a thatched roof.

3.3.846 The setting of the asset is informed by its former farmyard location and by its relationship with its former outbuildings, which appear to have been converted into residential properties. The asset and associated structures are enclosed within large grounds defined by mature treelined hedgerows and which contain mature tree cover and areas of formal garden. The buildings are still coherent as a former farming complex and the grounds provide a secluded and private setting. Beyond the grounds, the agricultural landscape with which the asset and former outbuilding have historical and former functional relationships, also inform the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it restricted to the grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.847 The Grade II listed assets 'White House Farm House' (**1181766**) 'Barn About 35 m East Of White House Farm House' (**1032810**) are located close to the northern edge of Mellis on opposing flanks of an unnamed road 70 m north of Mellis Road, and c. 350-390 m south-east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The former farmhouse dates to the late 16th century, was altered and extended in the 19th and early 20th centuries and comprises a plastered timber frame structure with a plain tiled roof. The barn dates to the 18th century and based on satellite imagery, was converted into a residential dwelling in the 21st century. The asset comprises a rendered and weatherboarded timber frame structure with a pantiled roof. The farmhouse and barn are situated within the 19th century White House Farm Farmstead (**2365**), which due to its fair survival is of **medium value** based on its historical and evidential values.

3.3.848 The setting of the assets is shared and informed by their roadside village location, by their interrelationship, and by their relationships with the non-designated surviving elements of the White House Farm Farmstead (**2365**). The setting is further informed by the assets' relationships with other listed buildings and non-designated buildings in the vicinity that contribute positively to the character of the Mellis Conservation Area. The agricultural land to the north, with which the assets and associated non-designated elements of the former farmstead have historical and former functional relationships, also informs the setting. The assets are situated within large gardens defined by mature tree lined hedgerows, and which screens the assets from 20th century infill residential development further to the west. Due to the loss of the farming complex and the encroachment of 20th development, the setting of the assets makes a moderate contribution to their values; but because of screening by the assets' boundaries and by the development and mature vegetation of the intervening landscape, the setting does not extend to the Order Limits.

3.3.849 The Grade II listed 'Ash Tree Farm House' (**1284851**) is located close to the north-western edge of the Mellis Conservation Area, 50 m north of Mellis Road, c. 230 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the early 17th century, was altered and part reroofed in the 20th century and comprises a plastered timber frame structure with a steeply pitched machine tiled and pantiled roofs. The assets forms part of a historical farmstead known as Ash Tree Farmstead. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2458**). The farmstead has historical and evidential value

and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.850 The setting of the asset is informed by its village location and by its open view to the south across a large open village green. The setting is further informed by the asset's relationships with surviving elements of the former farmstead (**2458**), and with other listed assets within the settlement and with non-designated buildings, which positively contribute to the character of Mellis Conservation Area. The asset appears now to be a residential dwelling detached from its farmyard setting, and so the setting of the asset makes moderate contribution to its value, but due to its village roadside focus, the setting does not extend to the Order Limits.

3.3.851 The Grade II listed asset 'Home Farm House' (**1284850**) and 'Barn About 20 m East of Home Farm House' (**1032808**) are located in a former farming complex on the western edge of the Mellis Conservation Area c. 55 m west of Mellis Road, and c. 250 m and 260 m south of the Order Limits. The assets are of **medium value** based on their designations and its evidential, historical and aesthetic values. The farmhouse dates to around 1600, was extended and altered in the 19th century and comprises a plastered timber frame structure with a steeply pitched plain tiled roof. The barn also dates to around 1600 and now appears to have been converted into a workspace. It comprises a weatherboarded timber frame structure with a modern pantiled roof. The assets forms part of a historical farmstead known as Home Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2459**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.852 The setting of the assets is shared and informed by their former farmyard location, their interrelationship, and their relationships with surviving farm outbuildings, some of which are recorded on the first edition OS map of 1885 (**2459**). The setting is further informed by the assets' relationship with other listed assets and non-listed building in the settlement, which positively contribute to the character of the Mellis Conservation Area. The surrounding agricultural landscape, with which the assets have a historical and former functional relationship, also positively contribute to the setting, as does the village green to the east. Despite changes in function, the listed assets and non-designated outbuildings are coherent as a former farming complex and so the setting makes a considerable contribution to their values, but due to its focus being restricted to the village location and immediate landscape, the setting does not extend to the Order Limits.

3.3.853 The Grade II listed 'The Granary' (**1032814**) is located on the western flank of the railway, to the east of the Mellis village green, and c. 430 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset was built as a steam mill in the mid-19th century and now serves as a warehouse and flats. It is constructed of stock brick and has a slated roof.

3.3.854 The setting of the asset is informed by its location on the railway siding at the core of Mellis. The setting is also informed by the village green to the west, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to its focus being restricted to the railway siding location, the setting does not extend to the Order Limits.

3.3.855 The Grade II listed assets 'Hall Farm House' (**1181726**) and 'Barn About 30 m West of Hall Farm House' (**1032806**) are located in the Hall Farm complex on the north-

western flank of the Mellis Conservation Area, the farmhouse just within, the barn just outside. The farmyard lies c. 90 m north-west of Mellis Road, and c. 620-640 m south-east of the Order Limits. The assets are of **medium value** based on their designations and its evidential, historical and aesthetic values. The farmhouse is situated within an extant medieval moat and dates to the mid-to-late 16th century, was extended in the 17th century and altered and extended in the 19th century. The asset comprises a plastered timber frame structure with a steeply pitched pantile roof. The barn dates to the late 16th century, was extended in the 19th century and comprises a rendered/weatherboarded/corrugated sheet clad timber frame structure on a red brick base with a corrugated sheet roof. The farmhouse forms part of a scoped out, non-designated historical farmstead known as Moat Hall Farm or Mellis Hall.

3.3.856 The setting of the farmhouse assets is shared and informed by their working farm complex location, by their interrelationship and by their relationships with the non-designated farm buildings, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the medieval moat, within which the farmhouse is located, and which is indicative of the time depth of the site. The surrounding agricultural landscape, with which the assets have a historical and ongoing functional relationship, also positively contribute to the setting, as does the village green to the east. Much of the farming complex recorded on the OS has, however, been replaced by modern, hanger style barns, and so the setting of the assets makes a moderate contribution to their values, and due to the proximity of the Project, the setting extends to the Order Limits (Figure 7.12.F26_VP2.05 Viewpoint 2.05: Mellis Road, Mellis Green; document reference 7.12).

3.3.857 The Grade II listed 'Rectory Farm House' (**1352240**) is located on the western flank of Rectory Road at the south-eastern edge of Mellis Conservation Area, c. 70 m north-west of the railway, and c. 670 m south of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse is of probable 16th century date with a floor and chimney stack inserted in the 17th century, extensions added in the 18th or 19th centuries, and alteration made in the 20th century. The asset comprises a plastered timber frame structure with a steeply pitched pantiled roof.

3.3.858 The setting of the asset is informed by its location within a former farming complex and by its relationships with former outbuildings, now residences, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationships with other listed assets and non-designated buildings in its vicinity, which positively contribute to the character of the conservation area. The surrounding agricultural landscape, with which the asset has a historical and former functional relationship, also positively contributes to the setting, but the link to this land has been partial eroded by the imposition of the railway and the construction of modern barns to the south-east and south-west respectively. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its focus being on its former farmyard location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.859 The Grade II listed assets 'Cowspasture Farm House' (**1032813**) and 'Barn About 30 m South West of Cowpasture [sic] Farm House' (**1181777**) are located on the south-eastern flank of the Mellis Conservation Area c. 120 m south-south-east of Mellis Road, and c. 720-770 m south of the Order Limits. The assets are of **medium value** based on their designations and its evidential, historical and aesthetic values. The farmhouse dates to the mid-17th century, was altered in the 19th century, and

comprises a plastered timber frame structure with a steeply pitched pantiled roof. The barn, now a residence(s), dates to the 17th century but it was largely rebuilt in late 18th century or early 19th century reusing 16th century timbers. The asset comprises a weatherboarded timber frame structure with a modern tiled roof. The assets forms part of a historical farmstead known as Cowspasture Farm. The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.860 The setting of the assets is shared and informed by their location within a former farm complex, by their interrelationships and by their relationships with former outbuildings, most of which are recorded of the first edition OS map of 1885. The setting is further informed by the assets' relationships with other listed assets and non-designated buildings in their vicinity, which positively contribute to the character of the conservation area. The agricultural landscape to the south and south-east, with which the assets have a historical and former functional relationship, also positively contributes to the setting, as does the village green to the north-west. The link to the agricultural landscape has, however, been partially eroded by the imposition of the railway. Due to the loss of function and the introduction of infrastructure, the setting of the assets, makes a moderate contribution to their values, but because of its focus being on its former farmyard location and immediate landscape, the setting does not extend to the Order Limits.

3.3.861 The Grade II listed 'Walnut Tree Farm House' (**1032812**) is located on the south-eastern flank of Mellis conservation area, 120 m south-east of Mellis Road, and c. 830 m south-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the 16th century, was extended and a floor and chimney stack inserted in the 17th century and altered and extended in the 19th and 20th centuries. The asset comprises a plastered timber frame structure with some red brick casing and a steeply pitched pantiled roof. The asset is the former home of author and environmentalist Roger Deakin and is where his book *Notes from Walnut Tree Farm* was written.

3.3.862 The setting of the asset is informed by its secluded location within its grounds, which contain trees, are defined by mature tree belts and afford the asset almost privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but because of its focus being on the asset's immediate grounds, the setting does not extend to the Order Limits.

3.3.863 The Grade II listed 'Willow Farm House' (**1181772**) is located on the south-eastern flank of Mellis Conservation Area, 140 m south-east of Mellis Road, and c. 760 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the late 17th century, was altered in the 20th century and comprises a plastered timber frame structure with a steeply pitched machine tiled roof. The farmhouse forms part of a historical farmstead known as Willow Farm or Willow Lodge. The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.864 The setting of the farmhouse is informed by its location within a former farm complex and by its relationship with its former outbuildings, now a residence(s). The setting is further informed by the asset's relationships with other listed assets and non-designated buildings in its vicinity, which positively contribute to the character of the conservation area. The agricultural landscape to the south and south-east, with

which the asset has a historical and former functional relationship, also positively contributes to the setting, as does the village green to the north-west. Despite the change of function for the outbuildings, they and the listed farmhouse retain some visual cohesion as former farming complex, and so the setting of the asset makes a considerable contribution to its value. Due to the focus of the setting being restricted to the asset's farmyard location, its grounds and immediate landscape, however, it does not extend to the Order Limits.

3.3.865 The Grade II listed '96, The Common' (**1032811**) is located towards the south-eastern flank of Mellis Conservation Area, 150 m south-east of Mellis Road, and c. 670 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the 17th century, was extended in the 18th century, altered in the 20th century and comprises a plastered timber frame structure with a thatched roof.

3.3.866 The setting of the asset is informed by its secluded location within its grounds and by its historical relationships with the agricultural land to the south and the village green to the north. The setting is further informed by the asset's relationships with other listed assets and non-designated buildings in its vicinity, which positively contribute to the character of the conservation area. The setting of the asset, therefore, makes a considerable contribution to its value, but because of its focus being on the asset's immediate grounds, the setting does not extend to the Order Limits.

3.3.867 The Grade II listed assets 'Pountney Hall' (**1352239**) and 'Barn About 40 m North East of Poutney [sic] Hall' (**1032805**) are located at the south-western extent of Mellis Conservation Area c. 50 m north-west of Mellis Road, and c. 530 m south of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the late 16th or early 17th centuries, was altered and reduced in size around 1810, and comprises a plastered timber frame structure with clay lump additions and steeply pitched plain tiled roof. The barn is a former stable block, and the king post is marked 'I. C. May 4, 1743'. The asset is built of red brick and has a steeply pitched pantiled roof. The assets are located within a historical farmstead known as Pountney Hall. This dates to the 16th century with later 18th century additions and alterations. The Suffolk HER has recorded the farmstead complex as a non-designated heritage asset (**2424**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed buildings and its cohesion as a historical farming complex.

3.3.868 The setting of the assets is shared and is informed by their location within a working farm complex, by their interrelationship and their relationships with the non-designated outbuildings of the farm, some of which are recorded on the first edition OS map of 1885 (**2424**). The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical and ongoing functional relationship. The setting of the assets, therefore, makes a considerable contribution to their values and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.869 The Grade II listed 'West End Farm House' (**1181793**) is located at the south-western extent of the Mellis Conservation Area c. 55 m west of Mellis Road, and c. 300 m north of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse forms part of a historical farmstead known as West End Farm or West Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2454**). The

farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.870 The setting of the farmhouse is informed by its location within a working farm complex and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1885 (**2454**). The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and ongoing functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value but because of its focus being on the asset's farmyard location and immediate landscape, the setting does not extend to the Order Limits.

3.3.871 The Grade II listed 'Potash Farm House' (**1284856**) is located on the south-eastern edge of the Mellis Conservation Area c. 350 m south-east of Mellis Road, and c. 680 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse is of probable 16th century origins, was added to in the 17th century, altered in the 19th century and comprises a plastered timber frame structure with a thatched roof. The asset is associated with a **medium value** medieval moat (**2201**) of evidential value indicating a possible early phase of the farming complex.

3.3.872 The setting of the asset is informed by its location within a working farm complex and by its relationship with its non-designated outbuilding, most of which are recorded on the first edition OS map of 1885, and the medieval moat (**2201**). The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical and ongoing functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value but because of its focus being on the asset's farmyard location and immediate landscape, the setting does not extend to the Order Limits.

Thornham Parva CP

3.3.873 The Grade II listed 'Ar-Den' (**1033139**) is located on the northern flank of Chapel Farm Lane c. 640 m north-west of Thornham Parva, and c. 1.9 km south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the early 18th century, was extended and altered in the 19th century and comprises a plastered timber frame structure with a thatched and pantiled roofs.

3.3.874 The setting of the asset is informed by its roadside location within its mature large garden and by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value but because of its focus being on the asset's roadside location, its garden and immediate surrounding landscape, the setting does not extend to the Order Limits.

3.3.875 The Grade II listed 'Chapel Farmhouse' (**1181247**) is located 30 m south-west of Chapel Farm Lane, c. 1 km north-west of Thornham Parva, and c. 1.6 km north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the 17th century or possibly earlier, was extended in the 18th or 19th centuries and comprises a plastered timber frame structure with a steeply pitched pantiled roof.

3.3.876 The setting of the asset is informed by its former farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the

first edition OS map of 1885, and which are now converted into a residence(s). The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings has a historical and former functional relationship. Despite the change of function for the outbuildings, they and the listed farmhouse retain some visual cohesion as former farming complex, and so the setting of the asset makes a considerable contribution to its value. Due to the focus of the setting being restricted to the asset's farmyard location, its grounds and immediate landscape, however, it does not extend to the Order Limits.

Gislingham CP

3.3.877 The Grade II listed assets 'Clare Cottage' (**1033153**) and 'Coldham House' (**1180610**) are located side-by-side on the southern flank of Coldham Lane, Gislingham and c. 300-320 m south-west of the Order Limits. The assets are of **medium value** based on their designations and its evidential, historical and aesthetic values. Clare Cottage, to the east, dates to 1622 based on a date carved into the fireplace bressummer, was altered in the 20th century and comprises a weatherboarded timber frame structure with plastered panels and a thatched roof. Coldham House, to the west, dates to the 17th century and possibly earlier, was extended in the 18th or 19th centuries and comprises a plastered timber frame structure with a steeply pitched pantiled roof.

3.3.878 The setting of the assets is shared and informed by their roadside locations, their interrelationship, and their mature gardens to the rear. The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical relationship. The link to the agricultural landscape has, however, been eroded by the 20th century residential development of Gislingham along Coldham Lane. The setting of the asset, therefore, makes a moderate contribution to their values, but due to its roadside village location, the setting does not extend to the Order Limits.

3.3.879 The Grade II listed 'The Farm and Adjoining Premises' (**1033156**) is located on the western flank of Hight Street towards the southern edge of Gislingham and c. 570 m south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the mid-to-late 16th century, was altered in the 19th and 20th centuries and comprises a plastered timber frame structure with a thatched roof.

3.3.880 The setting of the asset is informed by its roadside village location and by its relationships with other listed and non-designated buildings in its vicinity that positively contribute to the character of the settlement. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship, but this link has been largely eroded by 20th century residential along High Street and to the rear (west) of the asset. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its focus on the roadside village location, the setting does not extend to the Order Limits.

3.3.881 The Grade II listed 'Suryodaya with Attached Garden Wall' (**1033158**) is located at the northern end of a private road c. 110 m north-north-west of Finningham Road, Gislingham, and c. 740 m south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The large former rectory was built in 1791, was altered in c. 1975 and comprises a red brick structure with a shallow hipped glazed pantiled roof. The asset once served as a medical centre but now appears to be a residence again.

3.3.882 The setting of the asset is informed by its secluded location within its large, mature grounds that are defined by high, mature tree lined hedgerows and which afford the asset privacy. The setting is further informed by its village edge location, but the asset's boundaries ensure views into and out from the asset are very limited. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the grounds and village edge, the setting does not extend to the Order Limits.

3.3.883 The Grade II listed assets 'Jasmine Cottage' (**1285378**) and 'Hidcote House' (**1180621**) are located on opposite sides of High Street in the south of Gislingham, and c. 590 m north-west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. Jasmine Cottage, to the west, dates to the mid-to-late 17th century, it was extended and altered in the 19th century and altered again in the 20th century. The asset comprises a plastered timber frame structure with thatched and black glazed pantiled roofs. Hidcote House, to the east, dates to the early 17th century, was altered and extended in the 19th and 20th centuries and comprises a plastered timber frame structure with a steeply pitched pantiled roof.

3.3.884 The setting of the assets is shared and informed their roadside village location, by their interrelationship and their relationships with other listed and non-designated building in the vicinity, which positively contribute to the character of Gislingham. The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical relationship, although this link has been slightly eroded by 20th century infill residential development. The setting of the assets, therefore, makes a considerable contribution to their values, but due to its restricted village focus, the setting does not extend to the Order Limits.

3.3.885 The Grade II listed 'Service Building Immediately South West of Holm Oak House' (**1033121**) and 'Two Barns And Attached Sheds at Rush Green Farm About 50 Metres West of Holm Oak House' (**1352107**) are located c. 30 m west of High Street at the southern extent of Gislingham, and c. 690 m and 750 m west-north-west of the Order Limits respectively. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The service building is the former kitchen/dairy range to the medieval Holm Oak House (**1285277**), and it dates to the late 16th century with 19th century alterations. The asset comprises a plastered timber frame structure with a steeply pitched plain tile roof. The barns and sheds date to the late 17th or early 18th centuries and comprise weatherboarded timber frame structures on brick plinths. The northern barn is thatched whilst that to the south has a pantile roof.

3.3.886 The setting of the assets is informed by their roadside village locations and by their relationship with the medieval Grade II listed asset Holm Oak House (**1285277**). The setting is further informed by the surrounding agricultural landscape with which the assets have a historical and former functional relationship. The grounds of the assets contain trees and are defined by high, mature tree lined hedgerows that screen the assets from the High Street to the east. The three listed assets are now separate residential properties and this change of function for the barns and the associated property boundaries means the setting of the assets makes a moderate contribution to their values. Due to the restricted settlement focus of the setting and screening by roadside vegetation, the setting does not extend to the Order Limits.

3.3.887 The Grade II listed 'Rush Green Cottage' (**1033122**) is located 60 m south of Back Street at the southern extent of Gislingham, and c. 730 m west-north-west of the

Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 16th or early 17th centuries, was extended in the later 17th and 20th centuries and comprises a plastered timber frame structure with a thatched roof.

3.3.888 The setting of the asset is informed by its moderately secluded location within its large, mature garden, and by its relationships with the listed buildings of the Holm Oak House complex to the north and non-designated buildings flanking Finningham Road to the east, which positively contribute to the character of Gislingham. The setting is further informed by the agricultural land to the south and west, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the asset's grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.889 The Grade II listed 'Orchard Cottage' (**1033126**) is located on the northern flank of Back Street, c. 1.2 km south-west of Gislingham and c. 1.4 km west-north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset dates to the mid-16th century, had a chimney stack inserted in the 17th century and was reduced in size and altered in the 19th and 20th centuries.

3.3.890 The setting of the asset is informed by its roadside location within its large, mature garden and by its relationship with non-designated buildings on the southern flank of Back Street, most of which are recorded on the first edition OS map of 1885, and which positively contribute to the character of the thoroughfare. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the asset's grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.891 The Grade II listed assets 'Ivy Lodge Farmhouse' (**1352109**) and 'Barn About 25 Metres South East of Ivy Lodge Farmhouse' (**1033125**) are located in a former farm complex on the southern flank of Back Street, c. 1.1 km south-west of the centre of Gislingham and c. 1.1 km west-north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the early-to-mid 17th century, was altered in the 20th century and comprises a plastered timber structure with a steeply pitched pantiled roof. The barn dates to the early-to-mid 17th century, was extended in the early 18th century and comprises a partially weatherboarded, partially rendered timber frame structure. The asset has recently been converted into a residence with a new roof.

3.3.892 The setting of the assets is shared and informed by their former farmyard location, by their interrelationship and by their relationships with several non-designated outbuildings, although these are largely of 20th century date. The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical and former functional relationship. Despite the change of function, the assets retain some cohesion as elements of a former working farm complex, and so the setting of the assets makes a moderate contribution to their values, but as it is restricted to the former farmyard and the immediate landscape, the setting does not extend to the Order Limits.

3.3.893 The Grade II listed 'Red House Farmhouse' (**1352086**) is located at the southern end of Morleys Lane at the southern extent of Gislingham and c. 450 m west-south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the mid-to-late 18th century and comprises a red brick structure with a hipped pantiled roof.

3.3.894 The setting of the asset is informed by its location within a working farm complex and by its relationship with its largely modern outbuildings, although some may retain elements of the buildings recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical and ongoing functional relationship. The railway bisects the landscape between the asset and Order Limits thereby restricting the asset's setting to the west of the infrastructure. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the working farmyard and the arable land west of the railway, the setting does not extend to the Order Limits.

Thornham Magna CP

3.3.895 The Grade II listed assets 'The Stables' (**1285123**) and 'Water Tower About 40 Metres West of The Stables' (**1033132**) are located within the Thornham Hall complex, c. 500 m north-north-west of Thornham Magna, c. 1.7 km east-north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former stable of the non-designated Thornham Hall is now five residences. It was built in 1837-8 by S. Smirke for the 4th Lord Henniker, was altered in the 20th century and comprises a rendered red brick structure with ashlar dressings and a slate roof.

3.3.896 The setting of the assets is shared and informed by their location within the Thornham Hall complex, by their interrelationship and their relationships with the non-designated elements of the complex. The setting is further informed by the assets' situation within, and relationship with, the non-designated Thornham Park (**2407**). The setting of the assets, therefore, makes a considerable contribution to their values, but due to it being restricted to the Thornham Hall complex and the immediate parkland, the setting does not extend to the Order Limits.

3.3.897 The Grade II listed 'Red House Farmhouse' (**1181071**) is located on the northern flank of Thornham Road at the south-west corner of Thornham Park (**2407**), c. 750 m north-west of Thornham Magna, and c. 20 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse was built as part of Home Farm to Thornham Estate in the mid-18th century. it was extended in the 19th century, altered in the 20th century and comprises a red brick structure with a hipped plain tiled roof.

3.3.898 The setting of the asset is informed by its location within a large working farm complex, by its relationships with the extensive complex of non-designated outbuildings, most of which are recorded on the first edition OS map of 1885, and by its relationship with the Thornham Estate Parkland to the north and east. The setting is further informed by the agricultural landscape to the west and south, with which the asset and its outbuildings have a historical and ongoing functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the farmyard and surrounding agricultural landscape and extensive screening by mature trees and shrubs, the setting does not extend to the Order Limits.

3.3.899 The Grade II listed 'The Old Laundry' (**1352112**) is located 240 m south of Thornham Road, c. 720 m west-north-west of Thornham Magna, and c 1.2 km east-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, formerly Spalding's Farm House, dates to the early 17th century or perhaps earlier, was altered and extended

in the 19th century and comprises a plastered timber frame structure with a thatched roof.

3.3.900 The setting of the asset is informed by its secluded location within its large garden, which is defined by mature tree lined hedgerows affording the asset privacy. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and former functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the asset's garden and immediate landscape, the setting does not extend to the Order Limits.

3.3.901 The Grade II listed asset '191 and 192, Gull Lane' (**1033128**) is located flanking Gull Lane 210 m and 110 m south of Thornham Road respectively. Thornham Magna lies c. 410 m to the south-east whilst the Order Limits is located c. 1.5 km to the west-north-west. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic value. The adjoined Gull Lane properties were built as a house in the 17th century, which was altered in the 19th and 20th century and comprises a plastered timber frame structure with a thatched roof.

3.3.902 The setting of the asset is shared and informed by its secluded roadside locations off Gull Lane, its gardens and a mature copse which extends west and southwards. The setting is further informed by the agricultural land to the east and beyond the copse, with which the assets have a historical relationship. the setting of the asset, therefore, makes a considerable contribution to its values, but as it is restricted to the gardens of the assets and immediate landscape, the setting does not extend to the Order Limits.

3.3.903 The Grade II listed asset the 'Post Office' (**1352114**) is located on the eastern flank of The Street in Thornham Magna, and c. 1.9 km east of the Order Limits. The asset is of **medium value** based on its designations and its evidential, historical and aesthetic values. The Post Office, now a house, dates to 1745, was extended in c. 1800 and again in the 19th century, and comprises a plastered and colourwashed red brick structure with a timber framed wall to rear, timber frame extensions, and a steeply pitched plaintiled roof.

3.3.904 The setting of the asset is informed by its roadside village location within a garden and its relationship with other listed and non-designated buildings in the vicinity that contribute positively to the character of Thornham Magna. The setting is further informed by the agricultural land to the north and east, with which the asset has historical relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the assets roadside garden location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.905 The Grade II listed 'Street Farmhouse' (**1033131**) is located at the eastern end of a private driveway to the east of The Street in Thornham Magna, and c. 2 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the early 17th century, was altered in the 20th century, and comprises a plastered timber frame structure with steeply pitched pantiled roof.

3.3.906 The setting of the farm is informed by its village location, its associated garden, and by its relationship with non-designated buildings within the vicinity that contribute positively to the character of Thornham Magna. The setting is further informed by the agricultural land to the east, with which the asset has historical and former functional

relationships. Based on 19th century OS mapping, the farmhouse is the only surviving element of the mapped Street Farm complex and the asset has been encroached upon by 20th century residential development. The setting of the asset, therefore, makes a minor contribution to its value, and as it is restricted to the garden and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.907 The Grade II listed 'Claremont Cottage / Honeysuckle Cottage' (**1181104**) is located on the western flank of The Street in Thornham Magna, and c. 2 km east of Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset is now a pair of dwellings, was built in the early 19th century, and comprises a plastered timber frame structure on a brick plinth and with a pantiled roof.

3.3.908 The setting of the asset is informed by its village location, its associated garden, and by its relationship with other listed and non-designated buildings within the vicinity that contribute positively to the character of Thornham Magna. The setting is further informed by the agricultural land to the east and west, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to the value of the asset, but as it restricted to the roadside garden and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.909 The Grade II listed 'Sunnyside' (**1033135**) is located on the southern flank of Clay Street in Thornham Magna, and c. 2 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, now two dwellings, dates to the mid-to-late 17th century, was extended and altered in the 19th and 20th centuries, and comprises a plastered timber frame structure with a thatched roof.

3.3.910 The setting of the asset is informed by its village location, its associated garden, and by its relationship with other listed and non-designated buildings within the vicinity that contribute positively to the character of Thornham Magna. The setting is further informed by the agricultural land to the north and west, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to the value of the asset, but as it restricted to the roadside garden and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.911 The Grade II listed '183 And 184, Clay Street' (**1285200**) is located on the northern flank of Clay Street, c. 910 m south-south-west of Thornham Magna and c. 1 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, now two residences, dates to the early-to-mid 17th century, was altered in the 20th century and comprises a plastered timber frame structure with a thatched roof.

3.3.912 The setting of the asset is informed by its rural roadside location, its moderately large garden and its relationship with a quadrangle of now converted non-designated barns immediately to the west, which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the asset's roadside garden and the immediate landscape, the setting does not extend to the Order Limits.

3.3.913 The Grade II listed 'Starhouse Farmhouse' (**1352111**) is located at the western limit of Clay Street, c. 2 km south-west of Thornham Magna and c. 190 m south-east of

the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse was built around 1600, was altered in the 19th and 20th centuries and comprises a plastered timber frame structure with a steeply pitched plain tiled roof. The farmhouse forms part of a historical farmstead known as Starhouse Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2481**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.914 The setting of the farmhouse is informed by its location within a working farm complex and by its relationship with its non-designated modern outbuildings, and the one or two surviving outbuildings recorded on the first edition OS map of 1885 (**2481**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical relationship and ongoing functional relationship. The setting of the asset makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.915 The Grade II listed 'Grove Farmhouse' (**1181174**) is located on the north-western flank of Wickham Road, c. 840 m south-south-west of Thornham Magna and c. 1.7 km east-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset dates to the early 19th century, or possibly earlier, and comprises a plastered timber frame structure on a brick base with a black glazed pantiled roof.

3.3.916 The setting of the asset is informed by its location within the former Grove Farm complex and by its relationship with its now converted, non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical relationship and ongoing functional relationship. Due to the division of the farming complex into separate residences and the introduction of property boundaries, the setting of the asset makes a moderate contribution to its value, but due to it being restricted to the former farmyard and the immediate landscape, the setting does not extend to the Order Limits.

3.3.917 The Grade II listed 178 'Wickham Road' (**1033136**) is located on the eastern flank of Major Lane at the southern edge of Thornham Magna, and c. 1.9 km east-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, now two dwellings, dates to the 17th century, was extended and altered in the 19th century, and comprises a plastered timber frame structure with a thatched roof.

3.3.918 The setting of the asset is informed by its isolated village edge location, its garden, and by the surrounding agricultural land, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to the value of the asset, but as it restricted to the roadside garden and immediate agricultural land, the setting does not extend to the Order Limits.

Non-Designated Heritage Assets

3.3.919 Palgrave Common (**2367**) is a 3.3 km long narrow strip of land aligned east/west on the southern bank of the Waveney river, c. 520 m north of Palgrave and with its western extent within the Order Limits. The **low value** asset has evidential value and is recorded on Hodskinson's Map of 1783.

3.3.920 A **low value** multi-period concentration of PAS artefacts (**2560**) of evidential value has been recovered from farmland partially within the Order Limits and east of Wortham. The post medieval artefact comprises a possible mount fragment. The assemblage also contains three undated metal objects.

3.3.921 A **low value** multi-period concentration of 17 PAS artefacts (**2176**) of evidential value has been recovered from farmland c. 160 m from the Order Limits and east of Wortham. The post medieval artefact comprises a hooked tag.

3.3.922 The **low value** Oak Farm Farmstead (**2366**) of evidential value is located south of Ling Road, c. 660 m south-west of Diss and c. 260 m east of the Order Limits. The asset is a 19th century farmstead with a regular courtyard L-shaped plan formed by working agricultural buildings.

3.3.923 The **low value** Millway Farm Farmstead (**2373**) of evidential value is located on the southern flank of Millway Lane, c. 1.1 km west of Palgrave and 180 m east of the Order Limits. The asset is a 19th century farmstead and farmhouse with converted buildings arranged in a loose courtyard three-sided plan formed by working agricultural buildings. The farmhouse is set away from the yard.

3.3.924 The remains of a **low value** post medieval tile kiln (**2243**) of evidential value were identified in Thrandeston Meadow on the bank of a stream. The asset is located c. 1.1 km west of Thrandeston and within the Order Limits.

3.3.925 A **low value** PAS find of evidential value comprising a cast copper-alloy dagger guard of probable post medieval date (**2573**) was recovered from farmland north of Thrandeston and outside the Order Limits.

3.3.926 Two **low value** PAS finds of evidential value comprising two post medieval iron horseshoes (**2574**) were recovered from farmland west of Thrandeston and outside the Order Limits.

3.3.927 The **medium value** small landscape park at St Johns (**2402**) was once part of a larger estate, situated across Palgrave and Wortham. While it was depicted on historical maps such as the OS 1:10560 map and the OS first edition map of 1837, but not on J. Hodskinson's Map of Suffolk in 1783. This asset, now disparked, holds evidential and historical value as a remnant of a past landscape design and land use. Within its bounds are four **medium value** listed buildings Grade II (**1284698, 1032787**, **1182135** (c. 50-100 m south of the Order Limits) and **1032788** (c. 25- 50 m south of the Order Limits)) and the archaeological remains of the post medieval St John's House Hospital (**2415**). The archaeological remains of St John's House Hospital (**2415**) are located 70 m south-west of the Order Limits and hold evidential and historical value. Archaeological evaluations and excavations conducted at the site revealed post medieval features, including a wall foundation, a brick culvert, and a clay-lined tank or pit of uncertain function. These findings provide insight into the historical activities and structures associated with St John's House Hospital during the post medieval period, contributing to the overall understanding of the site's historical context. However, given its limited extent and the absence of detailed historical documentation, the asset is considered to have **low value**. The setting of St Johns (**2402**) is considered above in conjunction with the four listed buildings (**1284698, 1032787**, **1182135** and **1032788**).

3.3.928 The site of a **negligible value** former outfarm (**2371**) of evidential value is located c. 1 km south-west of Thrandeston and c. 30 m south-west of the Order Limits. The asset has been completely demolished.

3.3.929 The **medium value** Waveney Lodge Farmstead (**2360**) is of evidential and historical value and is located on the eastern edge of Little Green c. 140 m south-west of the Order Limits. The farmstead dates to the 19th century and the farmhouse is set away from the outbuildings, which are now converted into private dwellings. The farmstead is associated with a partially surviving **low value** medieval moat (**2258**) of evidential and historic value, which suggests an earlier phase of occupation on the site.

3.3.930 The setting of Waveney Lodge Farmstead (**2360**) is informed by the interrelationships between the former built elements of the farmstead and by their relationships with the medieval moat (**2258**). The setting is further informed by the surrounding agricultural landscape with which the farmstead as historical and former functional relationships. As the outbuilding have been converted to private dwellings the cohesion of the farmstead has been eroded, and so the setting makes a moderate contribution to the value of the asset. As the setting is restricted to the farmstead boundaries and immediate landscape, it does not extend to the Order Limits.

3.3.931 During the monitoring of spoil disposal works located partially within the Order Limits and c. 810 m north-west of Thrandeston, two **low value** pits containing post medieval brick and tile (**2353**) of evidential value were identified. A sherd of possible Iron Age pottery and several prehistoric flints were recovered from unstratified deposits.

3.3.932 The Haughley to Norwich railway line (**2498**), crosses the Order Limits 670 m east of Gislingham and is assessed as having **low value**. Erected in December 1849 as an extension to the Ipswich and Bury Railway, this stretch of track served the now-closed Norwich Victoria station. Despite its historical role in expanding railway connectivity in the region, the line's limited survival of original features and its status as part of a larger rail network contribute to its overall lower heritage value. The line, now part of the Great Eastern Main Line Service, played a historical role in transportation but lacks the distinct characteristics or preserved elements that would elevate its value to a higher category.

3.3.933 The **low value** outfarm of Bullocks Ley (**2308**) of evidential and historical value is located approximately 200 m north-east of the Order Limits, 50 m south-east of Burgate Road, and 880 m south of Great Green. The outfarm dates to the 19th century with a regular covered courtyard plan formed by agricultural buildings. The outfarm is recorded by the HER as extant and in an isolated position.

3.3.934 The **low value** The Grange Farmstead (**2375**) is of evidential and historical value and is located straddling Old Bury Road c. 2 km east of Wortham and c. 70 m east of the Order Limits. The farmstead is first recorded on 19th century OS mapping but some elements of the complex may be older. There has been significant loss (over 50%) of the traditional farm buildings recorded on the OS mapping. An archaeological evaluation was carried out at Grange Farm ahead of the construction of an agricultural building and a **low value** field boundary ditch (**2337**) of evidential value was identified. The feature was apparent on 19th and 20th century OS mapping.

3.3.935 Located partially within the Order Limits, approximately 640 m south-west of Gislingham, is the site of a former outbarn (**2500**). The single, unnamed barn dated to the 19th century. It is not clear which of the surrounding farms this outbarn belonged to. It appears in the first edition OS map 1885 of the area. It has evidential value and historical value. It is of **negligible value**.

3.3.936 Partially within the Order Limits, approximately 1.15 km north-west of Gislingham, is the site of the former Proctors Barn (**2501**). The barn dated to the 19th century and

was non-extant by the first edition OS map 1885. It has evidential value and historical value. It is of **negligible value**.

3.3.937 To the north-east of the Order Limits, by approximately 190 m, is the site of the former Swattesfield Hall (**2502**). This historical farmstead dated to the 19th century and is recorded on the first edition OS map of 1885. It has evidential and historical value. It is of **low value**.

3.3.938 Within Gislingham, located approximately 225 m west of the Order Limits, is the non-extant Church Farm farmstead (**2503**). It appears in the first edition OS map 1885 of the area. It has evidential value and historical value. It is of **negligible value**.

3.3.939 The **medium value** Thornham Park and Hall (**2407**) asset has evidential and historical value and is located approximately 245 m north-east of the Order Limits, and 750 m north-east of Gislingham. All, if not all the hall is now lost, but two listed Grade II elements of the estate complex survive: a stable (**1285123**) and a water tower (**1033132**). The hall was a 16th-century 'E' shaped house extensively modernised in the late 17th and 19th centuries. The accompanying park likely dates to the 17th or early 18th centuries. The estate was linked to Mellis Road by the 'Old Drive' prior to the introduction of the railway. The setting of asset (**2407**) is considered above in conjunction with the two listed buildings.

3.3.940 Within the Order Limits near Gislingham was found a 16th to 17th centuries complete copper alloy sword belt fitting (**2546**), roughly rectangular with a slight flare at the terminal end, featuring two rivet holes in the centre. The plate ends with a hook, still attached to a copper alloy loop, designed to fit onto a scabbard strap. It has evidential and historical value but is of **low value**.

3.3.941 Within Gislingham, c. 210 m south-west of the Order Limits is Ivy House Farm, on Mellis Road. The monitoring of the excavation of foundation trenches for a new dwelling on the site of the former garage and dairy house identified two undated archaeological features and a possible floor (**2417**) of **low value** based on their evidential value.

3.3.942 Located c. 240 m north of the Order Limits is the site of Swattesfield Brickworks (**2491**) including kiln, drying sheds, and pit. This site has historical value, but it is now gone and is of **low value**.

3.3.943 A 2015 archaeological evaluation took place on land opposite Ivy Farm, Mellis Road, Gislingham, c. 180 m west-north-west of the Order Limits. The evaluation revealed a **low value** foundation wall and a nearby ditch and posthole (**2495**) of evidential value. based on a brick sample, the foundation wall is of 18th-century date and likely represents a structure depicted on Hodkinson's map from 1783.

3.3.944 A post medieval silver sixpence of Charles I (AD 1625-1649) (**2538**) was found within Gislingham and outside the Order Limits. It has historical and evidential value but is of **low value**.

3.3.945 A **low value** Henry VIII silver penny (**2557**) of evidential value was immediately east of the Church of St Mary (**1241122**), in Candle Street and c. 100 m north of the Candle Street Order Limits.

Cropmark and LiDAR Assessment

3.3.946 **Low value** linear cropmarks (**2780**) of evidential value identified by the Project have been identified by the Project c. 860 m west of Palgrave and partially within the Order

Limits. The cropmarks correspond with field boundaries recorded on the first edition OS map and are, therefore, likely later medieval to post medieval in date.

3.3.947 **Low value** linear cropmarks (**2733**) of evidential value identified by the Project are located on the western outskirts of Palgrave and partially within the Order Limits. Some of the cropmarks correspond with field boundaries recorded on the first edition OS map and are, therefore, likely later medieval to post medieval in date.

3.3.948 **Low value** linear cropmarks (**2734**) of evidential value identified by the Project are located to the north of Lion Road, c. 980 m east-north-east of Wortham and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.3.949 **Low value** linear cropmarks (**2735**) of evidential value identified by the Project are located to the north of the A143 Old Bury Road, c. 780 m east Wortham and partially within the Order Limit. The cropmarks are visible as field boundaries on the first edition OS map.

3.3.950 **Low value** linear cropmarks (**2736**) of evidential value identified by the Project are located east of Mellis Road, c. 920 m to the south-east of Wortham and adjacent with the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.3.951 **Low value** linear cropmarks (**2737**) and the cropmarks of Seethings Barn (**2729**) are of evidential value and identified by the Project are located flanking Dam Lane, c. 300 m north of Mellis and c. 0 - 25 m from the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map.

3.3.952 **Low value** linear cropmarks and a possible ring ditch (**2738**) identified by the Project are of evidential value and located flanking Dam Lane, c. 300 m north of Mellis and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map, but the possible ring ditch may be of prehistoric or Romano-British date.

3.3.953 The Project has identified a complex of **low value** cropmarks of evidential value representing ditches, enclosures, trackways and ponds or possible extraction pits (**2739**) as well as the site of the former Procter's Barn (**2730**). The complex is located to the west of Burgate Road, c. 480 m south-west of Little Green and partially within the Order Limits. Some of the cropmarks correspond to field boundaries identified on the first edition OS map, however, several of the assets likely represent earlier activity.

3.3.954 **Low value** linear cropmarks (**2781**) of evidential value have been identified by the Project located to the east of Burgate Road on the south-western outskirts of Mellis and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map.

3.3.955 **Low value** linear cropmarks including a parish boundary (**2740**) of evidential value have been identified by the Project located immediately to the north of Gislingham and partially within the Order Limits. Most of the cropmarks are visible as field boundaries and ponds on the first edition OS map.

3.3.956 **Low value** linear cropmarks (**2742**) of evidential value have been identified by the Project located immediately to the south-east of Gislingham and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map.

Historic Mapping Assessment

3.3.957 A series of **negligible value** ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of 10 ponds are located within the Order Limits (**2606**, **2607**, **2625**, **2631**, **2633, 2642, 2670**, **2680, 2961**, **2965**)
- A total of 44 ponds are located within 250 m of the Order Limits (**2602**, **2604**, **2610**, **2611**, **2612**, **2626**, **2628**, **2629**, **2632**, **2638**, **2639**, **2640**, **2641**, **2644**, **2645**, **2646**, **2647**, **2648**, **2649**, **2651**, **2652**, **2653**, **2654**, **2655**, **2657**, **2658**, **2659**, **2660**, **2662**, **2664**, **2665**, **2671**, **2672**, **2675**, **2676**, **2679**, **2681**, **2682**, **2960**, **2962**, **2963**, **2964**, **2966**, **2967**)

3.3.958 **Low value** parish boundaries (**2603**, **2678**) of evidential and historic value have been identified crossing the Order Limits and within the 250 m Study Area within this sub-section. The boundary can be observed on the 1884 and 1885 1:2500 and 1:10560 OS maps and are still present. It is unknown to what extent the boundaries may physically be extant within the landscape.

3.3.959 Twelve **low value** possible important hedgerow locations of evidential and historic value are located crossing the Order Limits (**2555**, **2622**, **2636**, **2674**, **2986**) and within the 250 m Study Area (**2608**, **2609**, **2618**, **2623**, **2663**, **2669, 2677**) within this sub-section. The hedgerows are first observed on the 1885 1:2500 OS map. It is unknown how much these hedgerows pre-date the 1884 map edition.

3.3.960 **Low value** buildings and their associated yard (**2605**) of evidential and historic value have been observed partially within the Order Limits approximately 45 m north of Lion Road. The buildings and yard are first observed on the 1885 1:2500 OS map and are last observed on the until 1950 1:10560 OS map. The 1977 1:2500 OS map indicated one building remains within the north of the land parcel, however no other building or the yard itself are observable by this point. The remaining building is no longer observed by the 1994 and 1995 1:2500 OS map editions.

3.3.961 The **low value** broadly north-east to south-west aligned line of the Great Eastern Railway (**2666**) of evidential and historical value can be observed from the 1885 1:2500 OS map onwards. The line is located both within the Order Limits and 250 m Study Area.

3.3.962 A **low value** woodland copse (**2617**) of evidential and historic value is located c. 90 m north-west of the Order Limit, and approximately 460 m west of Dam Lane. The woodland copse is first observed on the 1885 1:2500 OS map and the copse is extant on current aerial imagery.

3.3.963 The **low value** 'Whitmore's Wood' woodland copse (**2634**) of evidential and historic value has been observed approximately 10 m west of the Order Limits, approximately 500 m north of Mellis Road. The woodland copse is first observed on the 1885 1:2500 OS map and the copse is still extant on current aerial imagery.

3.3.964 The **low value** 'Stonebridge Plantation' woodland copse (**2635**) of evidential and historic value has been observed immediately north of the Order Limits, approximately 450 m south-east of Mellis Road. The woodland copse is first observed on the 1885 1:2500 OS map and the copse is extant on current aerial imagery.

3.3.965 The **low value** 'Big Wood' woodland copse (**2637**) of evidential and historic value has been observed approximately 25 m south of the Order Limits, approximately 400 m north of Mellis Road. The woodland copse is first observed on the 1885 1:2500 OS map and the copse is still extant on current aerial imagery, with a latter extension of the woodland within its north-eastern corner.

3.3.966 A **low value** building (**2619**) of evidential and historic value has been observed approximately 10 m east of the Order Limits and Dam Lane. The building is first observed on the 1885 1:2500 OS map and is last observed on the 1927 1:2500 OS map. Another **low value** possible ancillary building (**2621**) of evidential and historic value is only observed on the 1927 map edition to the rear of building **2619**.

3.3.967 A **low value** building (**2620**) of evidential and historic value has been observed approximately 5 m east of the Order Limits and 10 m west of Dam Lane. The building is first observed on the 1885 1:2500 OS map, is last observed on the 1957 1:10560 OS map, and after which appears to have been demolished. The land parcel appears to be occupied by trees on current aerial imagery.

3.3.968 **Low value** buildings and their associated yard or garden (**2627**) of evidential and historic value have been observed approximately 10 m west of the Order Limits and 355 m north-east of Mellis Road. The asset is first observed on the 1885 1:2500 OS map, with a majority of the buildings demolished by the 1927 1:2500 OS map with one building remaining. The remaining building and land parcel can still be observed on the 1957 1:10560 OS map, however the remaining building and land parcel appear to have been removed by the 1977 1:2500 OS map.

3.3.969 The **low value** 'Coldham Grove' woodland copse (**2673**) of evidential and historic value has been observed approximately 10 m north-east of the Order Limits, approximately 415 m south-east of Major Lane. The woodland copse is first observed on the 1885 1:2500 OS map and the copse is still extant on current aerial imagery. The copse also appears to have expanded to the north-east by current aerial imagery.

3.3.970 A **low value** woodland copse (**2661**) of evidential and historic value has been observed partially within the Order Limits, and approximately 160 m north of Major Lane. The woodland copse is first observed on the 1885 1:2500 OS map and is extant on current aerial imagery.

3.3.971 The **low value** building of 'Imple House' (**2643**) of evidential and historic value has been observed approximately 30 m south-east of the Order Limits and 10 m west of Burgate Road. The building is first observed on the 1885 1:2500 OS map and is last observed on the 1903 1:2500 OS map.

3.3.972 A **low value** woodland copse (**2650**) of evidential and historic value has been observed approximately 30 m west of the Order Limits and approximately 365 m west of Burgate Road. The woodland copse is first observed on the 1885 1:2500 OS map and the copse is still extant on current aerial imagery.

3.3.973 A **low value** woodland copse (**2630**) of evidential and historic value has been observed approximately 60 m north of the Order Limits, approximately 200 m south-west of Mellisash Road. The woodland copse is first observed on the 1885 1:2500 OS map and the copse is still extant on current aerial imagery.

3.3.974 **Low value** buildings and an associated yard or garden (**2624**) of evidential and historic value have been identified partially within the Order Limits and approximately 500 m north-north-west of Mellis. The buildings and yard are first observed on the

1885 1:2500 OS map, with the buildings last observed on the 1927 1:2500 OS map. The boundary of the land parcel can be observed on the 1950 and 1957 1:10560 OS maps with no buildings remaining extant within the landscape.

3.3.975 The **low value** 'Collyer's Wood' woodland copse (**2656**) of evidential and historic value has been observed approximately 200 m north-east of the Order Limits, approximately 260 m west of Mellis Road. The woodland copse is first observed on the 1885 1:2500 OS map and the copse is extant on current aerial imagery.

3.3.976 A **low value** quarry (**2667**) of evidential and historic value has been observed approximately 190 m north-east off the Order Limits and 200 m north of Major Lane. The quarry is first observed on the 1885 1:2500 OS map and is last noted on the 1957 1:10560 OS map. It is likely that the quarrying activity was associated with Swattesfield Brickworks (**2491**) to the north of this asset.

3.3.977 The **low value** building of 'Nightingale Hall' (**2668**) of evidential and historic value has been observed approximately 235 m west of the Order Limits, and 210 m west of Coldham Lane. The building can only be observed on the 1885 1:2500 OS map and appears to have been demolished prior to the 1903 1:2500 OS map edition.

Finningham, Mendlesham and Old Newton

Designated Heritage Assets

Finningham CP

3.3.978 The Grade II listed ‘Barn about 15 Metres North West of Church Farm House’ (**1352078**) and the Grade II* listed Church Farmhouse (**1033145**) are located on the eastern flank of Gislingham Road on the eastern edge of Finningham and within the Finningham Conservation Area (**CA48**), 160 m east of the Church of St Bartholomew (**1352056**) and c. 690 m west of the Order Limits. The farmhouse is of medieval date and reported in the appropriate section above. The barn is of **medium value** based on its designation and its evidential, historical and aesthetic values. The barn dates to the 19th century and comprises a clay lump structure on a brick base with a pantile roof.

3.3.979 The setting of the barn is informed by its village edge location, by its relationship with the Grade II* listed farmhouse (**1033145**) and by its relationships with further listed buildings and with non-designated buildings within Finningham that contribute positively to the character of the settlement. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and functional relationship. The barn has been converted into a residential dwelling with associated property boundaries and there is now very little evidence of the former farmyard. The setting of the asset, therefore, makes a moderate contribution to its value, but due to its restricted settlement focus and screening by its property boundary and by mature treelined hedgerows and infrastructure in the intervening landscape, the setting does not extend to the Order Limits.

3.3.980 The Grade II listed ‘Green Lane Farm’ (**1033149**) is located at the junction of Station Road and Green Lane in Finningham, and c. 1.2 km to the south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the 18th century and comprises a colourwashed, cement rendered red brick structure with a plaintiled roof.

3.3.981 The setting of the asset is informed by its roadside village location, its associated garden and by its and by its relationship with other listed and non-designated buildings within the vicinity that contribute positively to the character of Finningham. The setting is further informed by the agricultural land to the west and south, with which the asset has historical and former functional relationships. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to the garden and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.982 The Grade II listed 'Mill Cottage' (**1352081**) is located at the eastern end of the byway Mill Road, c. 870 m south-south-east of Finningham and c. 1 km south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the mid-to-late 18th century and comprises a clay lump structure encased in 19th century brick and with a thatched roof.

3.3.983 The setting of the asset is informed by its location within its large garden, by its relationship with its post medieval and early modern outbuildings, which are recorded on 19th and 20th century OS mapping. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have a historical relationship. The railway lies 110 m to the west, which introduces occasional noise into the setting, but overall, it makes a considerable contribution to its value. Due to the setting, however, being restricted to the asset's grounds and immediate landscape, it does not extend to the Order Limits.

Wickham Skeith CP

3.3.984 The Grade II listed 'Willow House' (**1182748**) is located on the northern flank of Wickham Road, Wickham Street, and c. 590 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the 16th century with an 18th century addition to the north and comprises a plastered timber frame structure with a thatched roof.

3.3.985 The setting of the asset is informed by its roadside village location within its garden, by its relationship with its non-listed outbuildings and by its relationships with other non-listed buildings flanking Wickham Road that positively contribute to the character of Wickham Street. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical and former functional relationship. There has been some earlier 20th century residential infill development along Wickham Road, but this is largely sympathetic and in the local architectural vernacular. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to its village location, its grounds and the immediate landscape, the setting does not extend to the Order Limits.

3.3.986 The Grade II listed 'Barn 20 Metres East of Street Farmhouse' (**1182741**) and the Grade II* listed 'Street Farmhouse' (**1352524**) are located in Wickham Street on the southern flank of Wickham Road, and c. 670 m north-east of the Order Limits. The farmhouse is medieval in date and reported in the appropriate section above. The barn is of **medium value** based on its designation and its evidential, historical and aesthetic values. The barn dates to the late 16th century and comprises a timber frame structure the lower portion of which is rendered and tarred with weatherboarding above. The roof is clad in corrugated iron.

3.3.987 The setting of the barn is informed by its working farmyard location and by its interrelationship with the associated farmhouse and by its relationships with further listed buildings and with non-designated buildings within Wickham Street that contribute positively to the character of the settlement. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical and ongoing functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by buildings and mature tree cover and hedgerows in the settlement, the setting does not extend to the Order Limits.

3.3.988 The Grade II listed 'Kisumu' (**1352523**) is located 30 m south of Wickham Road in Wickham Street, and c. 830 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the 16th century, was extended in the 17th century and comprises a rendered timber frame structure with a pantiled roof.

3.3.989 The setting of the asset is informed by its partially secluded location within its large garden, which is defined by mature tree lined hedgerows. The setting is further informed by its relationship with its outbuildings, one of which is recorded on the first edition OS map of 1885. The setting is further informed the surrounding agricultural landscape, with which the asset and its outbuilding have a historical and former functional relationship. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to the mature grounds of the assets and the immediate landscape, the setting does not extend to the Order Limits.

3.3.990 The Grade II listed 'Abbey Farmhouse' (**1182599**) is located in a large working farm complex c. 300 m south of an unnamed road linking Wickham Street and Cotton, c. 1.2 km west-south-west of Wickham Skeith, and c. 90 m north-north-east of the Order Limits. The asset dates to the 16th century or earlier, has a later 16th century extension, a 17th century wing to the north-west and comprises a roughcast rendered timber frame structure with a concrete pantiled roof. The asset is of **medium value** based on its designation, and its evidential, historical and aesthetic values. The farmhouse forms part of a historical farmstead known as Wickham Abbey Farm. The Suffolk HER has recognised the farmstead complex as a **low value** non-designated heritage asset (**2209**). The farmstead has historical and evidential value.

3.3.991 The setting of the asset is informed by its location within a large working farm complex and by its relationship with its numerous non-listed outbuildings, although those recorded on the first edition OS map of 1885 (**2209**) appear to have been replaced by modern hanger style structures. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have a historical and ongoing functional relationship. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.992 The Grade II listed 'Place Farm Cottage' (**1352522**) is located in a large garden north of The Broadway in Wickham Green, and c. 760 m north-east of the Order Limits. The asset is of **medium value** based on its designation, and its evidential, historical and aesthetic values. The house date to the 16th to 17th centuries, was altered in the 20th century, and comprises a plastered timber frame structure with a thatched roof.

3.3.993 The setting of the asset is informed by its garden location and by its relationships with other listed and non-designated buildings within the vicinity that contribute positively to the character of Wickham Green. The setting is further informed by the

village green to the south and agricultural land to the north, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the garden and immediate village location, the setting does not extend to the Order Limits.

3.3.994 The Grade II listed 'Wickham Place' (**1182701**) is located in large grounds north of The Broadway in Wickham Green, and c. 790 m north-east of the Order Limits. The asset is of **medium value** based on its designation, and its evidential, historical and aesthetic values. The former farmhouse dates to the early-to-mid 19th century and comprises a red brick structure with a hipped slated roof.

3.3.995 The setting of the asset is informed by its grounds, which include lawns, formal gardens, a possible orchard, mature tree cover, and is defined by mature treelined hedgerows. The setting is further informed the asset's relationship with its former outbuildings, which have now been converted into residential properties, and with other listed non-designated buildings within the vicinity that contribute positively to the character of Wickham Green. The village green to the south and the agricultural land to the north, with which the asset has historical, and in the case of the agricultural land, a former functional relationship, also informs the setting. Due to the loss of function for the asset and former outbuildings, the setting makes a moderate contribution to the value asset, but as it is restricted to the grounds and immediate land, the setting does not extend to the Order Limits.

3.3.996 The Grade II listed 'Green Farmhouse' (**1032200**) is located off the western flank of The Green in Wickham Green, and c. 630 m north-east of the Order Limits. The asset is of **medium value** based on its designation, and its evidential, historical and aesthetic values. The farmhouse dates to the 16th century, has presumably been updated since, and comprises a plastered timber frame structure with a thatched roof.

The setting of the asset is informed by its large garden location, and by its relationship with its surviving outbuildings some of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationships with other listed and non-listed buildings in the vicinity that contribute to the character of Wickham Green. The agricultural land to the west, with which the asset has historical and possible ongoing relationships, also informs the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the village and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.997 The Grade II listed 'Hall Farmhouse' (**1182725**) is located off the eastern flank of The Broadway in Wickham Green, and c. 850 m north-east of the Order Limits. The asset is of **medium value** based on its designation, and its evidential, historical and aesthetic values. The farmhouse dates to the 16th century with possible earlier work at the service end, was updated in the late 19th century, and comprises a rendered timber frame structure with a pantiled roof.

The setting of the asset is informed by its farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationships with other listed and non-listed buildings in the vicinity that contribute to the character of Wickham Green. The agricultural land to the north, east and south, with which the asset has historical and ongoing relationships, also informs the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is

restricted to the village and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.998 The Grade II listed 'Mill House' (**1284427**) is located on the southern flank of The Green in Wickham Green, and c. 630 m north-east of the Order Limits. The asset is of **medium value** based on its designation, and its evidential, historical and aesthetic values. The house dates to the early 19th century incorporating earlier work, and comprises a plastered timber frame structure with an imitation ashlar façade and a slated roof.

The setting of the asset is informed by its garden location immediately south of the village green, and by the asset's relationships with other listed and non-listed buildings in the vicinity that contribute to the character of Wickham Green. The agricultural land to the south, with which the asset has a historical relationship, also informs the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the village and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.999 The Grade II listed 'Pear Tree Cottage' (**1032201**) is located on the southern flank of Rose Lane in Wickham Green, and c. 530 m north-east of the Order Limits. The asset is of **medium value** based on its designation, and its evidential, historical and aesthetic values. The house dates to the 17th century re-using earlier timbers, remodelled in the 18th century, renovated in the mid-20th century, extended to the rear in the 1970s, and comprises a rendered timber frame structure with a pantiled roof.

3.3.1000 The setting of the asset is informed by its secluded garden location, and by the asset's relationships with other listed and non-listed buildings in the vicinity that contribute to the character of Wickham Green. The agricultural land to the south and west, with which the asset has a historical relationship, also informs the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the village and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.1001 The Grade II listed 'Walnut Farmhouse' (**1032199**) is located on the northern flank of Daisy Green Lane, c. 500 m south-west of the centre of Wickham Skeith, and c. 220 m east-north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the late 16th century, was extended in the 17th century and comprises a plastered timber frame structure with brick cased gables and a pantiled roof. The farmhouse forms part of a historical farmstead known as Walnut Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2484**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1002 The setting of the farmhouse is informed by its secluded location within its garden area and by its relationship with its outbuilding, which is likely the structure recorded on the first edition OS map of 1885. The setting is further informed the surrounding agricultural landscape, with which the asset and its outbuilding have a historical and former functional relationship; however, this link has been eroded by the development of the large Hollybank Farm complex to the west and the growth of a mature copse to the south. The setting of the asset, therefore, makes a moderate contribution to its value, but due to screening by mature tree cover and the Hollybank Farm complex, the setting does not extend to the Order Limits.

3.3.1003 The Grade II listed 'Allfield Farmhouse' (**1182668**) is located on the southern flank of Daisy Green Lane, c. 420 m south-west of Wickham Skeith, and c. 290 m east-north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the mid-16th century, has an 18th century extension and was extended again in the 1970s. the asset comprises a rendered timber frame structure with pantiled roofs. The farmhouse forms part of a historical farmstead known as Allfield Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2483**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1004 The setting of the farmhouse is informed by its location within the former farmyard and by its relationship with its non-designated outbuildings, which are recorded on the first edition OS map of 1885 (**2483**). The setting is further informed by the asset's relationship with the surviving non-designated elements of the Knoll Farm complex also recorded on the OS map, and located on the opposite, northern flank of the throughfare. The surrounding agricultural landscape, with which the asset and its outbuildings have a historical and a former functional relationship, also contributes positively to the setting, although the farm to the north and the mature grounds of the asset have partially eroded this link. The setting of the asset, therefore, makes a moderate contribution to its value, but due to screening by mature tree cover and the Hollybank Farm complex to the west, the setting does not extend to the Order Limits.

3.3.1005 The Grade II listed 'Elm Farmhouse' (**1032198**) is located on the northern flank of an unnamed road between Grange Road to the west and the A140 to the east, c. 1.2 km south-south-east of Wickham Skeith and c. 550 m south-east of the Order Limits access route and c. 940 m east of the Order Limits main corridor. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the late 16th to early 17th centuries and comprises a plastered timber frame structure with a thatched roof. The front elevation is decorated with closely spaced diagonal battens forming a broad herringbone design.

3.3.1006 The setting of the asset is informed by its roadside farmyard location and its relationships with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1885, and with the working farm complex on the southern flank of the throughfare. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have a historical and ongoing functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and it being restricted to the farmyard and surrounding landscape, the setting does not extend to the Order Limits.

Cotton CP

3.3.1007 The Grade II listed 'Park Farmhouse' (**1285497**) is located on the northern flank of Brook House Road in Dandy Corner, c. 1.2 km north-north-east of Cotton and c. 730 m west-south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset dates to the late 16th to early 17th centuries and comprises a plastered timber frame structure with a concrete pantiled roof. The asset is located within a historical farmstead known as Park Farm. This dates to the 16th century with later 19th century additions and alterations. The farmstead has historical and evidential value and is of **medium**

value based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1008 The setting of the asset is informed by its roadside former farmyard location and by its relationships with its non-designated, now converted outbuildings, several of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationships with other listed and non-designated buildings in the vicinity, which are also recorded on the OS map, and that positively contribute to the character of the small settlement. The surrounding agricultural landscape, with which the asset and its outbuildings have a historical and former functional relationship, also contributes positively to the setting (Figure 7.12.F30_VP2.09 Viewpoint 2.09: PRoW Dandy Corner (Cotton 18); document reference 7.12). The outbuildings now serve as dwellings and the farmyard has been divided accordingly to provide garden and parking for each, although the complex still retains some cohesion as a former working complex. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to the farmyard and immediate landscape, the setting does not extend to the Order Limits.

3.3.1009 The Grade II listed 'Cotton Hall' (**1180383**) is located within its large garden 20 m south of Brook House Road in Dandy Corner, c. 1.2 km north-north-east of Cotton and c. 660 m west-south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The manor farmhouse dates to the mid-17th century, has a late 19th century façade of red brick and a 20th century pantiled roof.

3.3.1010 The setting of the asset is informed by its location within its large garden and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationships with other listed and non-designated buildings in the vicinity, which are also recorded on the OS map, and that positively contribute to the character of the small settlement. The surrounding agricultural landscape, with which the asset and its outbuildings have a historical and former functional relationship, also contributes positively to the setting (Figure 7.12.F30_VP2.09 Viewpoint 2.09: PRoW Dandy Corner (Cotton 18); document reference 7.12). The asset's grounds are defined by mature tree lined hedgerows, which allow for occasional view into and out from the asset, affording the asset a degree of privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the farmyard and immediate landscape, the setting does not extend to the Order Limits.

3.3.1011 The Grade II listed 'Poplar Farmhouse' (**1032277**) is located on the eastern flank of Brook House Road in Dandy Corner, c. 940 m north-east of Cotton and c. 540 m north-west of the Order Limits access route and c. 690 m west-south-west of the Order Limits main corridor. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse date to the late 16th to 17th century, with 19th century alterations and comprises a rendered timber frame structure with a concrete pantiled roof. The farmhouse forms part of a historical farmstead known as Poplar Farm or Cotton Hills. The farmstead has evidential and historical value.

3.3.1012 The setting of the farmhouse is informed by its roadside location within the former farmyard and by its relationships with its non-designated, now converted outbuildings, several of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationships with other listed and non-designated buildings in the vicinity, which are also recorded on the OS map, and that

positively contribute to the character of the small settlement. The surrounding agricultural landscape, with which the asset and its outbuildings have a historical and former functional relationship, also contributes positively to the setting. The outbuildings now serve as holiday lets and residences and the farmyard has been divided accordingly to provide garden and parking for each, although the complex still retains some cohesion as a former working complex. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to the farmyard and immediate landscape, the setting does not extend to the Order Limits.

3.3.1013 The Grade II listed 'Sunnyview' (**1180395**) is located on the western flank of Brook House Road in Dandy Corner, c. 920 m north-east of Cotton and c. 580 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the 17th century with evidence of 19th and 20th century maintenance and comprises a roughcast-rendered timber frame structure with a 21st century pantiled roof.

3.3.1014 The setting of the asset is informed by its roadside location within the former farmyard and by its relationships with its non-designated, several of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationships with other listed and non-designated buildings in the vicinity, which are also recorded on the OS map, and that positively contribute to the character of the small settlement. The surrounding agricultural landscape, with which the asset and its outbuildings have a historical and former functional relationship, also contributes positively to the setting. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to the farmyard and immediate landscape, the setting does not extend to the Order Limits.

3.3.1015 The Grade II listed 'Hempnalls Hall' (**1180451**) is located 60 m off the north-western flank of Willow Lane, c. 1.2 km north-east of Cotton, c. 80 m north-west of the Order Limits and c. 420 m west of the pylon corridor. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The manor house dates to the late 16th century, has a small 18th century rear wing, was restored in the 1980s and comprises a plastered timber frame structure with pantiled roof. The hall is located within a medieval moat (**2252**). The Hall forms part of a historical farmstead known as Hempnalls Hall. The Suffolk HER has recognised the farmstead complex as a non-designated **medium value** heritage asset (**2445**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1016 The setting of the hall is informed by its secluded location within the earlier medieval moat (**2252**), by its relationship with its non-designated outbuildings, which are recorded on the first edition OS map of 1885, and by its relationship with the non-designated former farming complex beyond the bounds of the moat to the north-east, which is also recorded on the OS map (**2445**). The setting is further informed by the surrounding agricultural landscape, with which the asset, its outbuildings and the associated farming complex have historical and former functional relationships. The moat, asset and all non-designated buildings are largely enclosed by a small copse, which affords the group seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1017 The Grade II listed 'Willow Farmhouse' (**1352480**) is located at the eastern end of the southern folk of Willow Lane, c. 800 m east-north-east of Cotton, and c. 480 south-

west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the late 16th century, has evidence of 19th and 20th century maintenance and comprises roughcast-rendered timber frame structure with a thatched roof.

3.3.1018 The setting of the asset is informed by its working farm complex location and by its relationship with its non-designated outbuildings, several of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1019 The Grade II listed 'Lime Tree Farmhouse' (**1180436**) is located on the western flank of Parkers Road, in the south of Cotton, and c. 1.5 km west-south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the 16th century, was remodelled in in the early 19th century (possibly 1812), and comprises a rendered timber frame structure with a slated roof with fishscale bands.

3.3.1020 The setting of the asset is informed by its secluded garden location and by its relationship with its former outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the agricultural land to the west, south and east, with which the asset and its former outbuildings have historical and former functional relationships. The outlying barn complex appears to have been converted into a residential dwelling and property boundaries have been introduced into the former farmyard. Due to this separation and change in function, the setting of the asset makes a moderate contribution to the asset's value, and as it is restricted to the garden and immediate agricultural land, the setting does not extend to the Order Limits.

3.3.1021 The Grade II listed 'Boundary Farmhouse' (**1032244**) is located on the norther flank of Mendlesham Road, c. 1.2 km south-east of Cotton, and c. 210 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the 16th or early 17th centuries and comprises a rendered, pebble-dashed timber frame structure with a glazed black pantiled roof. The farmhouse forms part of a historical **medium value** farmstead known as Boundary Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2431**). The farmstead has historical and evidential value.

3.3.1022 The setting of the farmhouse is informed by its location within the former farming complex (**2431**) and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the asset's relationship with the modern Boundary Farm complex which lies c. 90 m to the east. The surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships, also contributes positively to the setting. The setting of the asset and farmstead (**2431**), therefore, makes a considerable contribution to their values, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1023 The Grade II listed 'Cotton Lodge' (**1285476**) is located at the end of an unnamed track 620 m east of Stonham Road, c. 1.6 km south-east of Cotton, and c. 350 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the late

16th century, was restored in the 1970s and comprises a plastered timber frame structure with red brick cladded gable ends and a plain tiled roof. The lodge is associated with a medieval moat (**2251**). The property forms part of a historical farmstead known as Cotton Lodge. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2443**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1024 The setting of the lodge is informed by its location within the medieval moat (**2251**) and by its relationships with its non-designated outbuildings including the farm buildings beyond the moat to the north-west, some of which are recorded on the first edition OS map of 1885 (**2443**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. The large grounds of the asset extend out beyond the moat in all directions, but particularly to the north where they include several paddocks, and to the east where ornamental and kitchen gardens are included. Other than the area of the paddocks and the asset's lawns, the grounds are heavily wooded affording the asset seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the Project being located in the neighbouring parish, the intervening landscape in that parish being occupied by the buildings and infrastructure of Wick's and Cotton Farms, and screening afforded by the asset's heavily wooded grounds, the setting does not extend to the Order Limits.

Bacton CP

3.3.1025 The Grade II listed 'The Forge' (**1352274**) is located on the northern flank of an unnamed road in the hamlet of Ford's Green, c. 100 m east of the B1113 Broad Road, and c. 2 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The cottage dates to the 17th century with a possible medieval core, was altered in the 17th, 19th and 20th centuries, and comprises a plastered timber frame structure with a thatched roof.

3.3.1026 The setting of the asset is informed by its garden location and by the asset's relationships with other listed and non-listed buildings in the vicinity that contribute to the character of Ford's Green. the setting is further informed by the surrounding agricultural land, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the garden and immediate agricultural land, the setting does not extend to the Order Limits.

Mendlesham CP

3.3.1027 The Grade II listed 'Lodge Cottage' (**1352504**) is located at the southern extent of Oak Farm Lane, 1.5 km west-north-west of the centre of Mendlesham, and c. 350 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 16th or early 17th centuries, has evidence of 20th century maintenance and comprises a rendered timber frame structure with a concrete pantiled roof.

3.3.1028 The setting of the asset is informed by its isolated location within its garden, by its relationship with the non-designated elements of Mendlesham Lodge farm complex 200 m to the north-east, and by the surrounding agricultural landscape, with which

the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Order Limits, the setting extends to the Order Limits.

3.3.1029 The Grade II listed 'Poplar Farmhouse' (**1032282**) is located on the northern flank of Chapel Road immediately north-east of its intersection of it and Hobbies Lane, c. 830 m north-west of the centre of Mendlesham, and c. 940 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the late 16th century, with evidence of later work to the rear, an early-to-mid 19th century white brick façade and comprises a plastered timber frame structure with a concrete plain tiled roof.

3.3.1030 The setting of the asset is informed by its location within a working farm complex, by its relationship with its non-designated outbuildings and with other listed and non-designated buildings in the vicinity, which contribute positively to the character of the small unnamed hamlet. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the working farmyard and the immediate landscape, and screening by the mature trees of the hamlet and the buildings of the Hunters Moon complex to the west, the setting does not extend to the Order Limits.

3.3.1031 The Grade II listed 'Barn at Park Farm, 70 Metres North West of Mendlesham Manor' (**1180548**) is located within a small unnamed hamlet accessed by a private road, c. 500 m east-north-east of the centre of Mendlesham, and c. 2 km east of the Order Limits. The barn dates to the 17th century and comprises a weatherboarded timber frame structure. The Listing dates to July 1988 but satellite imagery suggests the asset has been developed as a residential property since then.

3.3.1032 The setting of the barn is informed by its large, mature garden location and by its relationship with non-designated elements of the former Park Farm complex that survive and are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and associated non-designated assets have historical and former functional relationships. Due to the loss of function and the division of the farmyard and buildings into separate dwellings, the setting makes a moderate contribution to the value of the asset. As the setting is, however, restricted to the hamlet and immediate agricultural land, it does not extend to the Order Limits.

3.3.1033 The Grade II listed 'Friary Cottage Thatched Cottage' (**1032249**) is located on the southern flank of Mill Road, c. 570 m west of the centre of Mendlesham and c. 1.2 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse, now two residences, dates to the 16th century (Friary Cottage), was extended in the early 17th century (Thatched Cottage) and comprises a rendered timber frame structure with a thatched roof.

3.3.1034 The setting of the asset is informed by its isolated roadside location and by its relationship with the surrounding agricultural landscape, with which the asset has historical and former functional relationships. Due to the division of the asset into two dwellings and the loss of farm buildings to the west as shown on the first edition OS map of 1885, the setting of the asset makes a moderate contribution to its value, but as it is restricted to the asset's small grounds and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1035 The Grade II listed ‘Mendlesham Hall’ (**1180527**) is located 80 m south of an unnamed road, c. 1.5 km west of Mendlesham and c. 400 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The manor farmhouse dates to the 16th century, was renovated in the 1980s and comprises a rendered timber frame structure with a hipped plan tiled roof. The hall forms part of a historical farmstead known as Mendlesham Hall. The farmstead has historical and evidential value. A **medium value** rectangular medieval moat (**2274**) of evidential and historical value is also noted surrounding the hall.

3.3.1036 The setting of the asset is shared with the moat (**2274**) and informed by their interrelationship and by their relationships with the non-designated outbuilding in the farmyard immediately to the north of the moat. The setting is further informed by the surrounding agricultural landscape, with which the assets and outbuildings have historical and ongoing functional relationships. The setting of the assets, therefore, makes a considerable contribution to their values, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1037 The Grade II listed assets ‘Hawkins Farmhouse’ (**1032281**) and ‘The Barn, Cartlodge and Granary at Hawkin's Farm’ (**1413421**) are located on the south-eastern flank of an unnamed road, c. 2.1 km south-west of Mendlesham, c. 920 m north-west of Mendlesham Green and c. 830 m and 860 m east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The farmhouse dates to the 16th century, with a service cell was added in 1729 and a rear wing added in the 18th century. The asset comprises a timber frame farmhouse that was encased in grey brick around 1900 and has a pantiled roof. The rear wing is partially rendered. The barn dates to 1822, and before it was converted into a residence, comprised a threshing barn with an adjoining contemporary cart lodge with granary above to the west. The asset comprises a weatherboarded softwood timber frame structure on a brick plinth and a modern pantiled roof.

3.3.1038 The setting of the assets is shared and informed by their location within a former working farm complex, by their interrelationship and by their relationships with the non-designated outbuildings of the former farming complex, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the assets’ relationships with the non-designated Kersey’s Farm complex c. 180 m to the north-east, also apparent on the OS map, and with the surrounding agricultural landscape, with which the assets and their outbuildings have historical and former functional relationships. Due to the repurposing of the barn and the associated division of the former farmyard, the setting of the assets makes a moderate contribution to their values, but due to it being restricted to the former farmyard and immediate landscape, the setting does not extend to the Order Limits.

3.3.1039 The Grade II listed ‘Green Farmhouse’ (**1285352**) is located on the south-western flank of Green Road, on the south-western edge of Mendlesham Green and c. 540 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the 16th century, was extended in the 17th century and comprises a plastered timber frame structure with a concrete pantiled roof. The farmhouse is located within a historical farmstead known as Green Farm. This dates to the 16th century with later 19th century additions and alterations. The Suffolk HER has recorded the farmstead complex as a non-designated heritage asset (**2425**). The farmstead has historical

and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1040 The setting of the asset is informed by its working farm location on the north-western flank of the shallow Gipping Valley and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884 (**2425**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the farmyard and the surrounding landscape, the setting does not extend to the Order Limits.

3.3.1041 The Grade II listed 'Fir Tree Farmhouse' (**1032248**) is located on the eastern flank of a Mendlesham Green unnamed road linking the settlement with Mendlesham to the north and c. 1.1 km north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the late 16th century, has a 17th century service crosswing to the east and comprises a rendered timber frame structure with a common brick encase northern façade dating to 1916 and a pantiled roof.

3.3.1042 The setting of the asset is informed by its location within its former farmyard and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. The large grounds of the asset and its outbuildings are quite heavily wooded and defined by mature tree lined hedgerows affording the buildings within seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the former farmyard and the immediate landscape, the setting does not extend to the Order Limits.

Gipping CP

3.3.1043 The Grade II listed assets 'Grange Farmhouse' (**1032727**) and 'Barn And Attached Cartshed, 50 Metres North of Grange Farmhouse' (**1180790**) are located on the south-eastern flank of an unnamed road c. 850 m north-north-east of the centre of Gipping, and c. 540-590 m west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The farmhouse dates to the mid-16th century, was extended in the late 16th, remodelled in the early 19th century, and comprises a plastered timber frame structure, which was encased in red brick in the 19th century, and has a concrete pantiled roof. The barn dates to the mid-17th century, whilst the attached cartshed dates to the early 18th century. The asset comprises a timber frame structure with tarred plaster cladding and asbestos sheet roofs. The farmhouse forms part of a historical farmstead known as Grange Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2451**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1044 The setting of the farmhouse and barn is shared and informed by their location with the working farm complex, their interrelationship and their relationships with other non-designated outbuildings of the complex, most of which are recorded on the first edition OS map of 1885 (**2451**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and

former functional relationships. The setting of the assets, therefore, makes a considerable contribution to their values, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1045 The Grade II listed 'Dovecote, 130 Metres West of Chapel Farmhouse' (**1032728**) is located within the grounds of the medieval Grade II listed Chapel Farmhouse (**1285268**) in Gipping and c. 1.3 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential and historical values. The dovecote dates to the early 18th century and comprises a plastered timber frame octagonal structure with wattle and daud infill and a plaintiled pyramid roof.

3.3.1046 The setting of the dovecote is informed by its location within the Chapel Farm working farmstead and by its relationship with the listed and non-designated element of the farmstead, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the agricultural land to the north, west and south with which the asset has a historical relationship. The asset is, however, located within a small copse within the farming complex that partially screens it from the rest of the farming complex and landscape beyond. The setting of the asset, therefore, makes a moderate contribution to its value but due to it being restricted to the farming complex and immediate agricultural landscape, the setting does not extend to the Order Limits.

3.3.1047 The Grade II listed 'Park Villa' (**1285278**) is located on the western flank of a north/south aligned unnamed road in Gipping, and c. 1.2 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The cottage dates to the late 16th to early 17th centuries, has 19th to 20th century red brick chimneys and comprises a plastered timber frame structure with a pantiled roof.

3.3.1048 The setting of the asset is informed by its semi-rural roadside location in the dispersed linear village and by its relationships with the Grade I medieval Chapel of St Nicholas and the Grade II listed Chapel Farmhouse to the north and the Grade II listed post medieval Gate Farmhouse to the south. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the roadside location, the asset's garden and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1049 The Grade II listed 'Gate Farmhouse' (**1032729**) is located north-east of the junction of two unnamed roads in Gipping, and c. 1.1 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to around 1600, was majorly remodelled in the 19th and early 20th centuries and comprises a plastered timber frame structure with a colourwashed brick hall range and a parlour encased in gault brick with red brick dressing in the 19th century. It has a tiled roof.

3.3.1050 The setting of the asset is informed by its location within its large garden which contain numerous trees, a pond and lawns and is defined by hedgerows with occasional trees. The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and former functional relationship. The farmhouse is now detached from the large working farm complex to the north and almost all of the farm outbuildings recorded on the first edition OS map of 1885 have gone. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to the asset's grounds and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1051 The Grade II listed 'Hill Farmhouse' (**1032730**) is located on the southern flank of an unnamed road between Gipping to the west and Mendlesham Green to the east and 90 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset dates to around 1600, was remodelled around 1900 and comprises a timber frame structure with north, east and west elevations encased in gault brick with red brick bands and dressings. The farmhouse forms part of a historical farmstead known as Hill Farm. The Suffolk HER has recognised the farmstead complex as a **low value** non-designated heritage asset (**2452**). The farmstead has historical and evidential value.

3.3.1052 The setting of the farmhouse and the associated farmstead is informed by its working farm complex location and by the surrounding agricultural landscape with which the asset has a historical and ongoing functional relationship. the setting is further informed by the asset's relationship with its non-designated outbuildings, although these are of the modern era with no trace of the complex recorded on the first edition OS of 1885 (**2452**) remaining. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1053 The 'Barn, 40 Metres South West Of Rookery Farm' (**1180903**) and the Grade II listed 'Rookery Farmhouse' (**1352279**) are located in a former farming complex 1.6 km south-east of Gipping and 100 m south-west of the Order Limits. The farmhouse is medieval in date and reported in the appropriate section above. The barn was built in the late 16th or early 17th centuries and comprises a weatherboarded timber frame structure with a pantile roof. The barn forms part of a historical farmstead known as Rookery Farm. The Suffolk HER has recognised the farmstead as a non-designated heritage asset (**2453**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1054 The setting of the barn is informed by its location within the former farming complex and by its relationship with the medieval farmhouse and other non-designated outbuildings, which are recorded on the first edition OS map of 1884 (**2453**). The setting is further informed by the surrounding agricultural landscape with which the asset, farmhouse and non-designated outbuildings have a historic and former functional relationship. The large garden of the asset contains trees and shrubs and is defined by mature, tree lined hedgerows. Due to the loss of the working farm and the repurposing of some outbuildings, the setting of the asset makes a moderate contribution to its value. Despite the mature vegetation of the asset's garden, the garden of the farmhouse to the north-east, the mature trees lining the roads to the east and the constriction of the asset's setting due to loss of function, the proximity of the Project means the setting extends to the Order Limits.

3.3.1055 The Grade II listed 'Wood Farmhouse' (**1180887**) is located on the north-western flank of Gipping Road, c. 1.6 km south-east of Gipping and c. 620 m south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the mid-16th century, with an early 17th century red brick chimney and comprises a plastered timber frame structure with a concrete tiled roof.

3.3.1056 The setting of the asset is informed by its location within its moderately large grounds and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape with which the asset, farmhouse and non-

designated outbuildings have a historic and former functional relationship. The grounds of the asset contain formal gardens, large lawns, water bodies and trees and are defined by high, mature tree lined hedgerows, which afford the asset seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the asset's grounds and the immediate landscape, the setting does not extend to the Order Limits.

Old Newton with Dagworth CP

3.3.1057 The Grade II listed 'Yew Tree Farmhouse' (**1032678**) is located on the western flank of Brown Street, c. 1.3 km north-west of Gipping, and c. 2 km west-south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to late 16th or early 17th centuries and comprises plastered timber frame structure with a plain tiled roof.

3.3.1058 The setting of the asset is informed is informed by its location within a working farm complex and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape with which the farmhouse and its outbuildings have a historical and ongoing functional relationship. There has been 20th century expansion of the farm complex to the north and there are residential properties on the eastern flank of Brown Street. The residential development is, however, sympathetic, in the local architectural vernacular and does not detract from the asset's setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the working farm complex and the surrounding landscape, the setting does not extend to the Order Limits.

3.3.1059 The Grade II listed 'Browns Place Farmhouse' (**1181658**) is located on the western flank of Brown Street, c. 1.2 km west-north-west of Gipping, and c. 1.9 km west-north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to around 1600 and comprises a plastered timber frame structure with a slated roof.

3.3.1060 The setting of the asset is informed by its working farm complex by its interrelationship with the medieval Grade II listed Ivy Cottage on the opposing flank of Brown Street and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the farmhouse and its outbuildings have historical and ongoing functional relationships. There is small-scale residential development to the north, but it is unintrusive, sympathetic, in the local architectural vernacular and does not detract from the asset's setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the working farm complex and the surrounding landscape, the setting does not extend to the Order Limits.

3.3.1061 The Grade II listed 'Brown Street Farmhouse' (**1181632**) is located on the southern flank of Brown Street, c. 980 m west of Gipping, and c. 10 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the mid-16th century, has a 19th century red brick chimney and comprises a plastered timber frame structure with areas of 18th century cable-pattern pargetting and a thatched roof.

3.3.1062 The setting of the asset is informed by its location within its grounds and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding

agricultural landscape, with which the farmhouse and its outbuildings have historical and former functional relationships. The grounds of the asset contains lawns, gardens, a kitchen garden and trees and are defined by high, mature tree lined hedgerows affording the asset seclusion and privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its grounds and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1063 The Grade II listed 'Hope Cottage' (**1181610**) is located on the western flank of Brown Street, c. 710 m south-west of Gipping, and c. 1.8 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house is of probable 17th century date or earlier and comprises a plastered timber frame structure with a thatched roof and two thatched gabled casement dormers.

3.3.1064 The setting of the asset is informed by its rural roadside location and by its relationships with non-designated buildings that positively contribute to the character of the thoroughfare. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the roadside location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1065 The Grade II* listed 'Old Newton Hall' (**1181768**) is located c. 160 m east of Rendall Lane, c. 1.8 km south-east of Old Newton, and c. 2 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The hall, now a farmhouse and formally a manor house, dates to c. 1600 – 1630, has 17th century additions to the rear (east) and comprises a plastered timber frame structure with a 19th century gault brick western façade and a plain tiled roof.

3.3.1066 The setting of the asset is informed is by its association with a medieval moat and by its relationship with the non-designated assets of the working farm complex, several of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and ongoing functional relationships. The setting of the assets, therefore, makes a considerable contribution to its value, but due to it being restricted to the farming complex and the surrounding agricultural landscape, the setting does not extend to the Order Limits.

Non-Designated Heritage Assets

3.3.1067 Located on the edge of the Order Limits, approximately 920 m north-west of Wickham Skeith are the non-extant remains of Lower Eastlands Barn (**2505**). The barn dated to the 19th century was extant by the first edition OS map 1885. The barn has evidential value and is of **negligible value**.

3.3.1068 To the east of the Order Limits, by approximately 110 m and 1.2 km to the south-west of Wickham Skeith, is the non-extant Chase Farm (**2506**). The farm dated to the 19th century and appears on first edition OS map 1885. The farm has evidential value and is of **low value**.

3.3.1069 The extant historical farmstead of Surwood Farm (**2507**) is located approximately 150 m to the east of the Order Limits and 850 m south-west of Wickham Skeith. It was constructed on the 19th century, but its present layout is largely altered compared to

that depicted on the first edition OS map 1885. Most of the historical buildings, with the exception of the farmhouse, have been replaced with modern agricultural buildings. The farm has historical value and limit evidential value, overall, the farm is of **low value**.

3.3.1070 The findspot of a copper alloy cast scabbard chape with a mostly missing backplate, top damage, and slight left-side deformation (**2544**) is located near Cotton outside the Order Limits. It features a central rib between rectangular and two circular holes, concluding with a flat-backed knob terminal. It has evidential and historical value but is of **low value.**

3.3.1071 The **low value** Mid Suffolk Light Railway (**2499**) crosses the Order Limits c. 1.7 km west-south-west of Mendlesham and has evidential and historical **value**. Originally opened in 1908 and closed in 1952, the railway aimed to alleviate agricultural depression and improve coastal access in Mid Suffolk. Despite its historical significance in the early 20th century, the line faced challenges with construction and financial viability, leading to bankruptcy in 1907. Although it briefly reopened, it ultimately closed in 1952, and the track was lifted. The railway now operates as a volunteer-run heritage railway and preservation museum.

3.3.1072 Old Farm (**2517**) is located c. 190 m east of the Order Limits, c. 1.3 km west of Mendlesham. It has evidential and historical value but is of **low value**. It is a 19th-century outfarm featuring a full regular courtyard plan with working agricultural buildings. The exact position of the farmhouse is uncertain, and it's unclear if one exists. The farm has experienced partial loss, with less than 50% of the traditional farm buildings remaining.

3.3.1073 The **low value** Batt's Farm Farmstead (**2512**) is located partially within a permanent access route of the Order Limits on the northern flank of Mendlesham Road c. 1.5 km north-west of Mendlesham. The asset has evidential and historical value. The 19th-century farmstead, located in Mendlesham, features a regular courtyard U-shaped plan with agricultural buildings. The farmhouse is situated away from the yard. Unfortunately, there has been significant loss, with over 50% of traditional farm buildings no longer present. The farmstead is positioned in an isolated location. The assessment is based on a desk-based study, and no site visits were conducted. While dating reflects the presence of the farmstead on historic maps, the potential for earlier origins exists.

3.3.1074 Located partly within an Order Limits permanent access route and approximately 1.7 km to the west of Mendlesham is the historical farmstead of Potters Farm (**2519**). The farmstead dates to the 19th century. The present-day configuration of the buildings and those that are seen on the first edition OS map 1884 shows that most of the historical buildings are now non-extant. The asset has historical and limited evidential values and is of **low value**.

3.3.1075 To the west of the Order Limit, by approximately 20 m and to the west of Mendlesham by approximately 1.6 km, is the extant farmstead of Wicks Farm (**2518**). The farmstead dates to the 19th century and appears on the first edition OS map 1884. A comparison between this map and the present-day Google Earth Pro shows that little has changes within the farm complex, but the farmhouse is now larger. The asset is of historical value and is of **low value**.

3.3.1076 The site of the former Palgrave Farm Farmstead (**2513**) is located almost adjacent to the Order Limits, c. 550 m south of Cay Hill and is of **low value**. Palgrave Farm was a 19th-century farmstead featuring an L-shaped courtyard plan with working

agricultural buildings. The farmhouse is intentionally positioned away from the yard. Only the farmhouse has endured the passage of time. The farmstead is found in an isolated location. It has evidential and historical value.

3.3.1077 The site of the former Redhouse Farm Farmstead (**2363**) is located south of Lambert's Lane, c. 2.5 km south-west of Mendlesham and c. 220 m west of the Order Limits. It was a **low value** 19th century farmstead with a regular courtyard multi-yard plan formed by working agricultural buildings. The farmhouse is set away from the yard. Only the farmhouse survives. It has evidential and historical value.

3.3.1078 The site of the former Redhouse Farm Farmstead (**2514**) is located along Lambert's Lane, c. 190 m east of the Order Limits, north of Cay Hill and is of **low value**. It was a 19th-century farmstead with an L-shaped, three-sided courtyard plan comprised of working agricultural buildings. The farmhouse is deliberately situated away from the yard. Only the farmhouse stands today, situated in an isolated position. This asset holds evidential and historical value.

Cropmark and LiDAR Assessment

3.3.1079 **Low value** linear cropmarks (**2741**) of evidential value have been identified by the Project located north and south of Wickham Road, c. 400 m east of Finningham and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map, whilst some elements suggest an earlier phase of activity.

3.3.1080 The Project has identified a large **low value** cropmark complex (**2743**) of evidential value, which includes the site of the former Chase Farm (**2731**) and an unnamed building and grounds (**2756**) between Daisy Green in the north-east and Dandy Corner and to the south-west, and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map, whilst some elements suggest an earlier phase of activity.

3.3.1081 The Project has identified a **low value** cropmark complex (**2744**) of evidential value in the fields south of Willow Lane, north of Mendlesham Road, c. 500 m east of Cotton and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map, however, a small rectangular enclosure and two linear features to the south-east of Willow Lane are likely of an earlier date.

3.3.1082 The Project has identified a **low value** cropmark complex (**2745**) of evidential value flanking Potter's Lane/Elden's Lane c. 1.3 km west of Mendlesham and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map, whilst some elements suggest an earlier phase of activity.

3.3.1083 The Project has digitally mapped cropmarks (**2771**) recorded on image 29812_029 available at Historic England's online Aeriel Photo Explorer. The cropmarks are located east of Hoggars Road, to the north and south of the Grade II listed Mendlesham Hall (**1180527**), c. 900 m west of Mendlesham and c. 30 m east of the Order Limits. Some of the cropmarks are visible as field boundaries on the first edition OS map, however, much of the complex does not correspond to cartographic features. Given the proximity of the moated Mendlesham Hall, a moat at Old Farm (**2262**), a third moated site to the south, and further scatters of medieval artefacts, the unmapped assets may represent medieval or early post medieval activity, possibly associated with the listed building. The cropmarks are of evidential value, and should they represent settlement activity associated with the hall, they could be of **medium value**.

3.3.1084 The setting of asset (**2771**) is informed by further evidence of medieval activity in the local landscape comprising two medieval artefact scatters within its bounds but outside the Project Study Area, a third artefact scatter and associated moat at Old Farm (**2262**) a (**2274**) associated with the Grade II listed Mendlesham Hall (**1180527**), again within its bounds. The surrounding agricultural landscape, with which the asset has a historical and likely former functional relationship, also informs the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but it does not extend to the Order Limits.

3.3.1085 The Project has identified a **low value** cropmark complex (**2746**) of evidential value between Gipping in the west and Cay Hill in the east and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.3.1086 The Project has digitally mapped **low value** cropmarks (**2772**) of evidential value recorded on image 29812_004 available at Historic England's online Aeriel Photo Explorer. The cropmarks are largely visible as field boundaries on the first edition OS map.

Historic Mapping Assessment

3.3.1087 A series of **negligible value** ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of five ponds are located within the Order Limits (**2690**, **2691**, **2970**, **2972**, **2799**)
- A total of 35 ponds are located within 250 m of the Order Limits (**2683**, **2685**, **2686**, **2687**, **2688**, **2689**, **2692**, **2693**, **2694**, **2695**, **2699**, **2743**, **2783**, **2786**, **2788**, **2789**, **2790**, **2791**, **2792**, **2803**, **2804**, **2807**, **2813**, **2814**, **2816**, **2817**, **2818**, **2819**, **2968**, **2969**, **2971**, **2973**, **2974**, **2975**, **2976**). One further pond of the same values is also recorded as a 'Fish Pond' (**2944**) on the 1885 1:2500 OS map, last seen on the 1957 1:10560 OS map.

3.3.1088 **Low value** parish boundaries (**2741**, **2820**) of evidential and historic value have been identified crossing the Order Limits and within the 250 m Study Area within this sub-section. The boundaries can be observed on the 1884 1:2500 and 1:10560 OS Maps and are still present. It is unknown to what extent the boundaries may physically be extant within the landscape.

3.3.1089 Seven **low value** possible important hedgerow locations of evidential and historic value are located crossing the Order Limits (**2697**, **2698**, and **2985**) and four within the 250 m Study Area (**2684**, **2696**, **2698**, **2785**) within this sub-section. The hedgerows are first observed on the 1884 1:2500 OS map. It is, however, unknown how much these hedgerows pre-date the 1884 map edition.

3.3.1090 Twenty **negligible value** possible important hedgerow locations of evidential and historic value are located within (**2984**, **2988**, **2989**, **2992**, **2995**, **2997**, **2999**), and nine within the 250 m Study Area (**2809**, **2810**, **2983**, **2984**, **2985**, **2986**, **2987**, **2990**, **2991**, **2993**, **2994**, **2996**, **2998**) within this sub-section. The hedgerows are first observed on the 1884 1:2500 OS map. It is, however, unknown how much these hedgerows pre-date the 1884 map edition.

3.3.1091 The **low value** 'Deal Plantation' woodland copse (**2812**) of evidential and historic value has been observed partially within the Order Limits 500 m east of Gipping. The

copse is first seen on the 1884 1:2500 and 1:10560 OS map. The copse is still extant within the landscape; however, trees are no longer present along the route of the Order Limits.

3.3.1092 Two **low value** buildings (**2797**, **2798**) of evidential and historic value have been observed 80 m east of the Order Limits and immediately south of Wimble Lane. One of these buildings (**2797**) can only be observed on the 1884 1:2500 OS map, with the second building (**2798**) first observed on the 1884 map and is last recorded on the 1995 1:2500 OS map. Heavy tree cover on current aerial imagery makes it unclear if this building is extant.

3.3.1093 The **low value** woodland copse 'The Thicket' (**2808**) of evidential and historic value has been observed approximately 15 m south-west of the Order Limits and 220 m south-west of Lambert's Lane. The woodland copse is first observed on the 1884 1:2500 and 1:10560 OS maps and is still extant within the landscape.

3.3.1094 **Low value** buildings, two ponds and an associated yard (**2787**) of evidential and historic value have been recorded approximately 45 m west of the Order Limits, 10 m east of Potter's Lane. The buildings have only been observed on the 1884 1:2500 and 1:10560 OS maps, with the ponds and yard last observed on the 1957 1:10560 OS map.

3.3.1095 A **low value** parcel of land immediately surrounding 'Old Farm' (**2794**, **2517**) of evidential and historic value has been observed approximately 50 m east of the Order Limits, immediately west of Hoggars Lane. The land parcel is first observed on the 1884 1:2500 OS map and appears to be enclosed by a pond and a possible moat along its southern boundary, which could in turn date this asset to the medieval period and therefore be considered of medium value if found to be the case.

3.3.1096 A group of three **low value** buildings (**2800**, **2801**, **2802**) of evidential and historic value have been observed approximately 50 m east and 100 m west of the Order Limits and approximately 5 m east of Lambert's Lane. Buildings **2800** and **2801** are first observed on the 1884 1:2500 OS map and last observed on the 1957 1:10560 OS map. Building 2802 is first seen on the 1884 map and last seen on the 1903 1:2500 OS map.

3.3.1097 A **low value** orchard (**2784**) of evidential and historic value has been observed approximately 85 m west of the Order Limits, immediately north of Mendlesham Road. The orchard is first observed on the 1884 1:2500 OS map and appears to still be extant on current aerial imagery.

3.3.1098 A **negligible value** trigonometry point (**2811**) of evidential value approximately 215 m east of the Order Limits and 180 m south-west of Hoggars Road. The trigonometry point is first observed on the 1884 1:2500 and 1:10560 OS maps and is last observed on the 1903 1:2500 OS map.

Middlewood Green and Stowmarket

Designated Heritage Assets

Stowupland CP

3.3.1099 The Grade II listed 'Poplar Farmhouse' (**1182121**) is located on the eastern flank of an unnamed road 1 km north-west of Middlewood Green, 60 m north of an Order Limits permanent access route and c. 210 m west of the Project pylon corridor. The

asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates around 1600 with evidence of 19th and 20th century maintenance and comprises a roughcast timber frame structure with a concrete tiled roof. The farmhouse forms part of a historical farmstead known as Poplar Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2477**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1100 The setting of the farmhouse is informed by its location within a working farm complex and by its relationship with its outbuildings, although these are of the modern era having replaced the complex recorded on the first edition OS map of 1885 (**2477**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1101 The Grade II listed 'Doles Farmhouse' (**1352325**) is located at the northern end of Debenham Lane, c. 480 m west of Middlewood Green, and c. 40 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the early 17th century and comprises a plastered timber frame structure with a thatched roof.

3.3.1102 The setting of the asset is informed by its isolated former farmyard location and by its relationship with its non-designated outbuildings, which may include elements of the small complex recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1103 The Grade II listed 'Star Orchard' (**1032663**) is located at the northern edge of Saxham Street, c. 900 m west-south-west of Middlewood Green and c. 80 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the 17th century or earlier and comprises a plastered timber frame structure with a thatched roof.

3.3.1104 The setting of the asset is informed by its isolated location within its roadside garden and by its relationship with the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1105 The Grade II listed 'Gipping Farmhouse' (**1032656**) is located on the eastern flank of Gipping Road, c. 2.1 km north-north-east of the centre of Stowupland and c. 1.1 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the 1625, was remodelled in the mid-19th century and comprises a plastered timber frame structure with a mid-19th century red brick western façade and a plain tiled roof.

3.3.1106 The setting of the asset is informed by its working farmyard location, by its interrelationship with the Grade II listed medieval Pasture Cottage on the opposite flank of Gipping Road and by its relationship with its complex of outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further

informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its farmyard location and the local landscape, the setting does not extend to the Order Limits.

3.3.1107 The Grade II listed 'Upland Cottage' (**1182111**) is located on the western flank of an unnamed road in Saxham Street c. 160 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former house, now two dwellings, dates to the 17th century or earlier with evidence of 19th and 20th century maintenance and comprises a roughcast plaster timber frame structure with a thatched roof.

3.3.1108 The setting of the asset is informed by its roadside location within its garden by its relationship with the non-designated buildings of the Stowupland Town Farm to the north and the buildings of the Firtree Farm to the east, which includes the Grade II listed Firtree Farmhouse (**1032662**). The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the asset's grounds and the immediate landscape and screening by the asset's property boundaries and the Firtree Farm complex to the east, the setting does not extend to the Order Limits.

3.3.1109 The Grade II listed 'Firtree Farmhouse' (**1032662**) is located on the eastern flank of an unnamed road in Saxham Street c. 150 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the late 16th and early 17th centuries reusing 15th century elements and comprises a plastered timber frame structure with a concrete pantiled roof. The farmhouse forms part of a historical farmstead known as Firtree Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2478**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1110 The setting of the farmhouse asset is informed by its location within a working farm complex, by its relationship with its non-designated outbuilding, most of which are recorded on the first edition OS map of 1885 (**2478**) and by its relationship with the Grade II listed Upland Cottage (**1182111**) to the west. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1111 The Grade II listed 'Upland House' (**1182102**) is located on the eastern flank of an unnamed road in Saxham Street c. 260 m west of Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse largely dates to the 17th century with a possible earlier core and was majorly remodelled in the early 19th century. the asset comprises a T-shaped 17th century house to the rear (south-east) with an early 19th century gault brick range added to front (north-west). The roofs are slated. The house forms part of a historical farmstead known as Upland Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2479**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1112 The setting of the house is informed by its location with its roadside grounds and by its relationship with its non-designated outbuildings, although these are a very small proportion of the large farming complex recorded on the first edition OS map of 1885 (**2479**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. Due to the loss of the farming complex, the setting of the asset makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1113 The Grade II listed 'Water Run Farmhouse' (**1032660**) is located immediately to the north-west of the intersection of Rendall Road and Gipping Road, c. 350 m north-east of the northern extent of Stowupland, and c. 1.4 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse, now two cottages, dates to the early 17th century with a possible earlier core and comprises a plastered timber frame structure with a pantiled roof.

3.3.1114 The setting of the asset is informed by its roadside garden location and by the surrounding agricultural landscape, with which the asset has a historical relationship. Due to the loss of the farming complex recorded on the first edition OS map of 1885, the setting of the asset makes a moderate contribution to its value, but because it is restricted to it roadside location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1115 The Grade II listed 'Grange Farmhouse' (**1032661**) is located on the eastern flank of an unnamed road in Saxham Street c. 230 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the mid-16th century, with a 17th century chimney, evidence of 19th century maintenance an comprises a plastered timber frame structure with a pantiled roof. The farmhouse forms part of a historical farmstead known as Grange Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2480**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex. A **low value** pottery sherd and iron knife with an antler handle (**2270**) of evidential value have been found within the farmstead suggesting an earlier phase of occupation on the site.

3.3.1116 The setting of the farmhouse is informed by its location within its working farm complex and by its relationship with its non-designated outbuildings, some of which is recorded on the first edition OS map of 1885 (**2480**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1117 The Grade II listed 'Grange Cottage' (**1284686**) is located on the eastern flank of an unnamed road in Saxham Street c. 350 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 16th to early 17th century and comprises a plastered timber frame structure with a thatched roof.

3.3.1118 The setting of the asset is informed by its roadside garden location and by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting is further informed by the asset's relationship with the non-designated buildings flanking the road to south, which contribute positively to the character of the

thoroughfare. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the asset's grounds and the immediate landscape, the setting of the asset does not extend to the Order Limits.

3.3.1119 The Grade II listed 'Stowupland Hall' (**1182013**) is located on the north-western flank of the A1120 Church Road at the southern limit of Saxham Street, and c. 540 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The large square plan farmhouse dates to the early 19th century and comprises a gault brick structure with a slated roof and a service wing to the rear (north-west). The non-designated farmstead (**2026**) includes a regular **low value** multi-yard courtyard formed by agricultural buildings of evidential and historical value with the farmhouse set away from the yard. The **low value** immediate grounds (**2843**) can be observed from the 1884 1:2500 and 1:10560 OS maps onwards. The farmstead has evidential and historical value.

3.3.1120 The setting of the asset is informed by its location within a working farm complex and by its relationship with its non-designated out-buildings, some of which are recorded on the first edition OS map of 1885 but now augmented by 20th century additions to the complex. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1121 The Grade II listed assets '1-3 Barn Cottages and Foxglove Barn' (**1352324**), 'The Thatch and Two Flanking Cottages' (**1181992**) and 'Pendle Cottage and Appleton' (**1032655**) are located in a small unnamed hamlet on the northern flank of the A1120 Church Road, c. 240 m north-east of outskirts of Stowupland, and between 790 m and 860 m west-south-west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The first asset (**1352324**) was built as a barn in the late 16th or early 17th centuries and now serves as four residences. The barn was extended to the west and converted to a terrace of cottages in the mid-19th century, and the block was renovated in the early1970s. The asset comprises a plastered timber frame structure with a pantiled roof. The second asset (**1181992**) was built as a single house in the 16th century but now serves as three residences. There are 17th, 18th and 19th century alterations and the asset comprises a plastered timber frame structure with a thatched roof. The third asset (**1032655**) was built as a single house in the mid-17th century and now serves as two residences. There are 19th and 20th century alterations, and the asset comprises a plastered timber frame structure with a thatched roof.

3.3.1122 The setting of the assets is shared and informed by their roadside locations by their interrelationships and by their relationships with non-designated outbuildings and other residence that positively contribute to the character of the hamlet, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical relationship. The setting of the assets, therefore, makes a considerable contribution to their values, but due to it being restricted to the bounds of the hamlet and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1123 The Grade II listed 'Holy Trinity Church' (**1352323**) is located on the north-western flank of Church Road on the north-eastern outskirts of Stowupland, and c. 1.2 km west-south-west of the Order Limits. The asset is of **medium value** based on its

designation and its evidential, historical, aesthetic and communal values. The parish church was built in 1843 by T. M. Nelson in the gothic style. It is constructed of gault brick with slender buttresses, a copper clad spire atop a square tower and a slated roof.

3.3.1124 The setting of the asset is informed by its roadside settlement location and by its relationship with the non-designated former post office to the south-west and the vicarage and schoolhouse to the north-east. The vicarage, however, no longer serves as such and is a private dwelling, whilst the schoolhouse was extended unsympathetically, likely in the 1960s to 1980s. The setting is further informed by the asset's historical relationship with the agricultural landscape, although this has been eroded by the 20th and 21st century development of Stowupland. The asset is still, however, a focus for the community and a landmark within it. The setting of the church, therefore, makes a considerable contribution to its value, but due to overall distance, screening by village development and associated tree cover, and the development and mature vegetation of the intervening landscape, the setting of the asset does not extend to the Order Limits.

3.3.1125 The Grade II listed The Grade II listed 'Elm Farmhouse' (**1352326**) is located on the southern flank of the B1115 on the southern edge of Stowmarket and c. 1.7 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the mid-16th century and has early 16th and early 19th century additions and alterations. The front (northern) section is constructed of 19th century plastered brick with gault brick gable chimneys and a slated roof. The southern range comprises a plastered timber frame structure built in two stages, mid-16th and early 17th centuries, and with a thatched roof.

3.3.1126 The setting of the asset is informed by its roadside farmyard location, although the large farming complex recorded on the first edition OS map of 1886 is entirely lost, with the exception of the farmhouse. The arable land to the south and west, with which the asset has a historical and former functional relationship, further informs the setting, but the 20th century development of Stowupland to the north and east has eroded this link. The setting of the asset, therefore, makes a minor contribution to its value, but due to overall distance, and it being restricted to its roadside settlement location, the setting of the asset does not extend to the Order Limits.

3.3.1127 The Grade II listed 'The Thatched Cottage' (**1284713**) is located on the eastern flank of Mill Street at the southern edge of Stowupland and c. 1.5 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 16th century, has early 19th and mid-20th century alterations and comprises a roughcast timber frame structure with a thatched roof and a 19th century clay lump extension.

3.3.1128 The setting of the asset is informed by its mature garden, which are defined by high, evergreen tree lined hedgerows that afford the asset some seclusion and privacy. The setting is further informed by the asset's relationships with non-designated post medieval and early modern buildings that flank Mill Street and positively contribute to the character of the thoroughfare. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes to the setting. The setting of the asset, therefore, makes a considerable contribution, but as it is restricted to its settlement location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1129 The Grade II listed 'Mill Green Farmhouse' (**1032657**) is located on the western flank of Mill Street at the southern edge of Stowupland and c. 1.5 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the late 17th century, has evidence of 19th and 20th century maintenance and comprises a pebble-dashed timber frame structure with a pantiled roof.

3.3.1130 The setting of the asset is informed by its location within its former farmyard and by its relationship with its former non-designated outbuilding, which is recorded on the first edition OS map of 1886. The setting is further informed by the asset's relationships with the non-designated post medieval and early modern buildings that flank Mill Street and that positively contribute to the character of the thoroughfare. The surrounding agricultural landscape, with which the asset and former outbuildings have historical and former functional relationships, also makes a positive contribution to the asset's setting. The former outbuilding has, however, been converted into residence(s) and the farmyard has been divided to provide parking and gardens for the properties, which has reduced the cohesion of the historic group. The setting of the asset, therefore, makes a moderate contribution to its value, but due to overall distance and it being restricted to its roadside settlement location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1131 The Grade II listed '17, Mill Street' (**1182033**) is located at the southern extend of Mill Street just before it terminates at the A14 and 1.3 km west-south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house is of 17th century or earlier date, has evidence of 19th and 20th century maintenance and comprises a plastered timber frame structure with a thatched roof.

3.3.1132 The setting of the asset is informed by its large garden location and the southern tip of the linear settlement at the termination of Mill Street and by its relationships with the non-designated post medieval and early modern buildings that flank Mill Street and that positively contribute to the character of the thoroughfare. The surrounding agricultural landscape, with which the asset has a historical relationship, also makes a positive contribution to the asset's setting. The construction of the A14 c. 60 m to the south-west has, however, introduced noise, movement and pollution into the setting, but it also resulted in the termination of Mill Street and, therefore, the cessation of passing traffic. The large garden of the asset is, however, defined by high tree lined hedgerows, which afford the asset some privacy. The setting of the asset, therefore, makes a moderate contribution to its value, but due to overall distance and it being restricted to its roadside location and immediate landscape, the setting does not extend to the Order Limits.

Earl Stonham CP

3.3.1133 The Grade II listed 'Whitehouse Farmhouse' (**1352059**) is located at the northern end of Whitehouse Lane, on the northern extend of Middlewood Green and c. 460 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the mid-16th century, has 17th and 20th century alterations and comprises a plastered timber frame structure with a concrete tiled roof. The farmhouse forms part of a historical farmstead known as Whitehouse Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2471**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1134 The setting of the farmhouse is informed by its location with its working farmyard and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884 (**2471**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to the Project being in the neighbouring parish, the setting being restricted to the farmyard and immediate landscape, and screening by outbuildings and mature vegetation, it does not extend to the Order Limits.

3.3.1135 The Grade II listed assets 'Venns Farmhouse' (**1352058**) and 'Barn 20 Metres South West of Venns Farmhouse' (**1033187**) are located immediately south of an intersection of two unnamed roads at the north-eastern edge of Middlewood Green and c. 870 m and 850 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse has a mid-16th century core, has 17th, 19th and 20th century alterations, and comprises a plastered timber frame 16th century rear range, with a plastered brick 17th century front wing and a slated roof. The barn dates to the 16th or early 17th centuries and comprises a weatherboarded timber frame structure with a modern pantiled roof.

3.3.1136 The setting of the assets is shared and informed by their interrelationship and by their location within the former farmyard. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. A third property has been added to the complex since 2017, and the former farmyard has been split to provided parking and gardens for the residences. The setting of the assets, therefore, makes a minor contribution to their values, but as it is restricted to the former farmyard and immediate landscape, the setting does not extend to the Order Limits.

3.3.1137 The Grade II listed 'Driftway' (**1033188**) is located at the end of a private driveway 80 m east of a north/south aligned unnamed road in Middlewood Green and c. 600 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the early 17th century, has 18th century alterations, a 20th century addition and comprises a plastered timber frame structure with a thatched roof.

3.3.1138 The setting of the asset is informed by its secluded location within its garden set back from the road. The setting is further informed by its relationships with the Grade II listed medieval Larters and the non-designated post medieval buildings that contribute to the character of Larters Lane to the south. The surrounding agricultural landscape, with which the asset has a historical relationship, also positively contributes to the setting. the setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to its garden and immediate landscape, the setting does not extend to the Order Limits.

3.3.1139 The Grade II listed 'Hines Farmhouse' (**1033186**) is located in a secluded parcel of land c. 800 m east of Middlewood Green and c. 1.3 km east-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse was built in two stages in the mid-16th century and c. 1570, has evidence of 20th century maintenance and comprises a plastered timber frame structure with a pantiled roof and a red brick chimney.

3.3.1140 The setting of the asset is informed by its isolated location in a tree lined parcel of land accessed via a farm track from Moat Farm to the north, and by its relationship with its non-designated outbuildings, which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. Due to its change of function and the loss of several outbuildings, the setting of the asset makes a moderate contribution to its value, but due to it being focused on its grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.1141 The Grade II listed 'Jockeys Farmhouse' (**1182438**) is located on the eastern flank of Blacksmiths Lane c. 690 m north of Forward Green and c. 770 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse probably dates to c. 1576 and comprises a plastered timber frame structure with a plain tiled roof and a red brick chimney.

3.3.1142 The setting of the asset is informed by its roadside former farmyard location and by its relationship with its surviving non-designated outbuildings, although most of the farming complex recorded on the first edition OS map of 1884 has been demolished. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. Due to its change of function and the loss of several outbuildings, the setting of the asset makes a moderate contribution to its value, but due to it being focused on the roadside location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1143 The Grade II listed 'Water Run Farmhouse' (**1352035**) is located on the eastern flank of Blacksmiths Lane c. 690 m north of Forward Green and c. 850 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to around c. 1600, incorporates elements of a late 15th to early 16th century house and comprises a plastered timber frame structure with a thatched roof.

3.3.1144 The setting of the asset is informed by its roadside former farmyard location and by its relationship with the surrounding agricultural landscape, with which the asset has a historical relationship. Due to its change of function and the loss of the farm outbuildings recorded on the first edition OS map of 1884, the setting of the asset makes a moderate contribution to its value, but due to it being focused on the roadside location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1145 The Grade II listed 'Weylands' (**1182749**) is located east of Blacksmiths Lane, within Forward Green, and c. 1.2 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The two-storey timber-framed building was constructed in the late 16th century with an early 17th century parlour wing, with 19th and 20th century alterations.

3.3.1146 The setting of this asset is informed by its presence as a post medieval dwelling within a rural village landscape within Forward Green. The asset is situated within a village setting however the asset is that of a former farmhouse, with the asset retaining a historical relationship with its village dwelling context as well as the wider rural-agricultural landscape. The surrounding village further informs the assets setting. Overall, the asset's location within Forward Green means the setting of the asset makes a moderate contribution to the assets value. There is likely to be no

intervisibility between the building and the Order Limits, restricted by surrounding buildings and established trees which broadly cut-off the asset from its wider setting. The setting of the asset does not extend to the Order Limits.

3.3.1147 The Grade II listed 'Oak Cottage' (**1033225**) is located on the south-western flank of the A1120 in Forward Green opposite its junction with Blacksmiths Lane, and c. 1.2 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built in two stages in the mid-16th century and c. 1600, had chimney stacks added in the 16th/17th and 19th centuries, and comprises a plastered timber frame structure with a pantiled roof.

3.3.1148 The setting of the asset is informed by its roadside village location, within a garden area, and by its relationship with other listed and non-designated buildings in the vicinity that positively contribute to the character of Forward Green. The setting is further informed by the agricultural land to the south, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the garden and the immediate village streetscape, the setting does not extend to the Order Limits.

3.3.1149 The Grade II listed 'Red Gates and Adjacent Cottage' (**1033224**) is located on the south-western flank of the A1120 in Forward Green, and c. 1.3 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The pair of cottages, probably built as a single house, dates to the 16th or early 17th centuries, has 17th and 19th century alterations, and comprises a plastered timber frame structure with a concrete tiled roof.

3.3.1150 The setting of the asset is informed by its roadside village location, within a garden area, and by its relationship with other listed and non-designated buildings in the vicinity that positively contribute to the character of Forward Green. The setting is further informed by the agricultural land to the south, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the garden and the immediate village streetscape, the setting does not extend to the Order Limits.

3.3.1151 The Grade II listed 'Little Thatch and Linden' (**1182911**) is located north-west of School Lane, within the eastern fringes of Forward Green, and c. 1.4 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The single-storey timber-framed building was originally constructed as one three- cell house in the 17th century, although it may have older origins than the 1722 dated gable, with 19th and 20th century alterations. The dwelling is now comprised of two houses.

3.3.1152 The setting of this asset is informed by its presence as a post medieval dwelling within a semi-rural village landscape on the south-eastern fringes of Forward Green. The asset broadly remains within its original village setting, with the asset retaining a historical relationship with its village dwelling context despite now comprising of two dwellings rather than one. The surrounding village this building lies within further informs the assets setting. Overall, the asset's location within its village setting means the setting of the asset makes a considerable contribution to the assets value. There is likely to be no intervisibility between the building and the Order Limits, restricted by surrounding buildings. The setting of the asset does not extend within the Order Limits.

3.3.1153 The Grade II listed 'Cricketers' (**1284428**) is located on the south-eastern flank of an unnamed road c. 430 m south-west of Forward Green, and c. 820 m east-south-east

of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, previously the Cricketers Public House, but now signposted Mollands Hall, dates to the 1630 and comprises a roughcast timber frame structure with plain tiled roofs.

3.3.1154 The setting of the asset is informed by its location within its large grounds, and by its relationships with other buildings in the complex, although these have largely been added this century. The grounds contain gravel driveways, trees, lawned areas, several formal gardens of various styles, a kitchen garden and are defined by moderately high hedgerow affording the asset seclusion and privacy. The setting of the asset, therefore, makes considerable contribution its value, but due to it being focused on the asset's grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.1155 The Grade II listed 'The Limes' (**1033218**) is located on the north-western flank of an unnamed road c. 830 m south-west of Forward Green, and c. 630 east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse of around 1600, has a rear service wing of 1831 and comprises a plastered timber frame structure with a thatched roof.

3.3.1156 The setting of the asset is informed by its location within a group of non-listed buildings several of which are recorded as being elements of the large Welham's Farm complex recorded on the first edition OS map of 1884. The setting is further informed by the asset's relationship with the Grade II listed Limes Cottage c. 80 m to the north-east and with the non-designated buildings to the south-west, which were also part of the Welham's Farm complex recorded on the OS map, and which are still signposted 'Welhams' from the road to the south-east. Due to division of the former farm complex and the residential development of several of the non-designated outbuildings, the setting of the asset makes a moderate contribution to its value, but due to it being restricted to the asset's grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.1157 The Grade II listed 'Limes Cottage' (**1246208**) is located on the north-western flank of an unnamed road c. 750 m south-west of Forward Green, and c. 670 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 17th century and comprises a plastered colourwashed timber frame structure with a straw thatched roof.

3.3.1158 The setting of the asset is informed by its location within its secluded, moderately large grounds, and which are defined by high occasionally tree lined hedgerows affording the asset privacy. The setting is further informed the group of buildings to the south-west that once formed the Welham's Farm complex and are mostly recorded on the first edition OS map of 1884. The buildings include the Grade II listed The Limes but have now been largely developed and broken up into separate residences. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes positively to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the asset's grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.1159 The Grade II listed 'Yewtree Farmhouse' (**1182522**) is located on the western flank of an unnamed road c. 1 km south-west of Forward Green and c. 410 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its

evidential, historical and aesthetic values. The former farmhouse dates to the mid-16th century, has late 19th and mid-20th century alterations and comprises a plastered timber frame structure with a thatched roof. The farmhouse forms part of a historical farmstead known as Yewtree Farm or Cockerels Farm. The farmstead has historical and evidential value and is of **low value** based on its association with the listed building countered by the loss of its outbuildings.

3.3.1160 The setting of the farmhouse is informed its roadside former farmyard location and by the surrounding agricultural landscape with which the asset has historical and former functional relationships. There is a modern farmhouse and large barn immediately to the west, and these appear to have replaced the farm complex recorded on the first edition OS map of 1886 and labelled Cockerel's Farm. Due to its change of function and its separation from the farming complex, the setting of the asset makes a moderate contribution to its value, but due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1161 The Grade II listed assets 'The Elms Farmhouse' (**1033217**) and 'Hicks Farmhouse' (**1182484**) are located at the south-western extent of an unnamed road c. 1.3 km south-west of Forward Green, and c. 210-240 m north-east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The Elms former farmhouse dates to the early 17th century, has evidence of 20th century maintenance and comprises a plastered timber frame structure with a concrete pantiled roof. The farmhouse forms part of a historical farmstead known as Elm Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2470**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1162 The Hicks former farmhouse is of mainly late 17th century date but may have an earlier core. It comprises a plastered timber frame structure with a pantiled roof. The farmhouse was formally part of a historical farmstead known as Hicks Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2469**). The farmstead has historical and evidential value and is of **low value** based on its association with the listed building countered by the loss of all outbuildings.

3.3.1163 The setting of the Elms Farmhouse is informed by its former farmyard location and by its relationship with its former non-designated outbuildings, now dwellings, some of which are recorded on the first edition OS map of 1886 (**2470**). The setting is further informed by its relationship with the Grade II listed Hicks Farmhouse and its outbuildings, and by the surrounding agricultural landscape, with which the asset has historical and former functional relationships. Due to its change of function and the conversion of its outbuildings to dwellings, the setting of the asset makes a moderate contribution to its value and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1164 The setting of Hicks Farmhouse is informed by its former farmyard location. The setting is further informed by its relationship with the Grade II listed Elms Farmhouse and its outbuildings, and by the surrounding agricultural landscape, with which the asset has historical and former functional relationships. Due to the loss of all its former outbuildings the setting of the asset makes a minor contribution to its value. Due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1165 The Grade II listed 'Mud Hall' (**1033191**) is located at the eastern end of Stearn's Lane c. 730 m south-south-west of Forward Green and c. 870 m north-east of the

Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built in two sections in the mid-16th and mid-17th centuries and comprises a roughcast timber frame structure with a concrete tiled roof.

3.3.1166 The setting of the asset is informed by its isolated location in its large grounds, defined by mature tree lined hedgerows, and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical relationship. The setting of the house, therefore, makes a considerable contribution to its value, but due to it being restricted to its grounds and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1167 The Grade II listed 'Beechwood Farm' (**1033222**) is located on the western flank of the A1120, c. 740 m south-south-east of Forward Green and c. 1.4 km north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house is of probable late 16th or early 17th century date, has a mid-20th century extension and comprises a plastered timber frame structure with a thatched roof. The 20th century extension has a concrete tiled roof.

3.3.1168 The setting of the asset is informed by its roadside location with its large grounds and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have a historical relationship. A large stable range and associated paddocks have been developed recently to the west of the asset, but this is in keeping with the rural landscape and so does not detract from the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its grounds and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1169 The Grade II listed 'Church Farmhouse' (**1284442**) is located is located on the northern flank of the A1120 in the hamlet of Earl Stonham, c. 1.4 km south-east of Forward Green and c. 1.8 km east of the Order Limits. The Grade I listed medieval 'Church of St Mary the Virgin' (**1033223**) lies 25 m to the east. The former farmhouse is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset is of early 17th and early 18th century date, was altered in the mid-20th century and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1170 The setting of the asset is informed by its former farmyard location and by its relationship with the church and its non-designated outbuildings, which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships, although this link has been partially eroded by the imposition of a large intrusive industrial complex immediately to the north. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to its former farmyard and immediate landscape, the setting does not extend to the Order Limits.

3.3.1171 The Grade II listed 'Church Cottage' (**1284506**) is located on the western flank of Church Lane in the hamlet of Earl Stonham, c. 1.4 km south-east of Forward Green and c. 1.9 km east of the Order Limits. The Grade I listed medieval 'Church of St

Mary the Virgin' (**1033223**) lies 40 m to the north-west. The cottage is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset is of probable 17th or early 18th century date and comprises a plastered timber frame structure with a thatched roof.

3.3.1172 The setting of the asset is informed by its roadside settlement location, by its relationship with the church, and by its relationship with Whitehouse Farm complex on the eastern flank of Church Lane, which includes the Grade II listed farmhouse. The setting of the asset is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its roadside settlement location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1173 The Grade II listed 'Whitehouse Farmhouse' (**1033219**) is located in a farming complex on the eastern flank of Church Lane in the hamlet of Earl Stonham, c. 1.4 km south-east of Forward Green and c. 2 km east of the Order Limits. The Grade I listed medieval 'Church of St Mary the Virgin' (**1033223**) lies 90 m to the north-west. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to around 1600 and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1174 The setting of the asset is informed by its farmyard location within the small settlement and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the asset's relationships with the medieval church, the other Grade II listed post medieval buildings in the settlement, and the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its farmyard location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1175 The Grade II listed 'Guildhall Cottages' (**1182683**) is located on the northern flank of the A1120 in the hamlet of Earl Stonham, c. 1.5 km south-east of Forward Green and c. 1.9 km east of the Order Limits. The Grade I listed medieval 'Church of St Mary the Virgin' (**1033223**) lies 55 m to the north. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset is a pair of cottages built around 1700, with evidence of 18th, 19th and 20th century maintenance, an comprises a plastered timber frame structure with a concrete tiled roof.

3.3.1176 The setting of the asset is informed by its roadside settlement location and by its relationship with the medieval church and with the other Grade II listed post medieval buildings in the settlement. The setting is further informed by the surrounding agricultural, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its roadside settlement location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1177 The Grade II listed 'St Ambrose Cottage' (**1284462**) is located on the north-western flank of Fen Lane, c. 1.3 km south-west of Earl Stonham and c. 780 m east-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to around 1600 and comprises a plastered timber frame structure with a thatched roof.

3.3.1178 The setting of the asset is informed by its isolated roadside location within its large tree lined grounds, which affords the asset privacy. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.1179 The Grade II listed 'Upper Lonsdales [sic] Farmhouse' (**1033189**) is located at the south-western extent of a private drive 170 m south-west of Mill Lane, 1.2 km south of Broad Green and c. 340 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to around 1600, has an 18th century extension and comprises a plastered timber frame structure with a thatched roof. The farmhouse, and an associated barn (**2429**), all form part of a historical farm known as Upper Langdales Farm (**2475**). Both the barn and the farmstead have historical and evidential values.

3.3.1180 The setting of the asset is informed by its former farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1886 (**2429**). The setting is further informed by the surrounding agricultural landscape with which the asset and its outbuildings have historical and former functional relationships. The outbuildings appear to have been converted to holiday lets, but they and the asset retain their coherence as a former working farm complex. The setting of the asset, therefore, makes a considerable contribution to its value and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1181 The Grade II listed 'Fen Farmhouse' (**1033221**) is located on the south-eastern flank of Fen Lane c. 1.85 km south-west of Earl Stonham, and c. 650 m east-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse, now a dwelling, dates to the mid-16th century, has late 16th and early 17th century alterations and comprises a roughcast timber frame structure with a plain tiled roof.

3.3.1182 The setting of the asset is informed by its roadside location and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. The barns to the north (on which the NHL point of incorrectly located) have been converted into a residence and a new property boundary has been introduced to the former farmyard separating the asset from the barns and reducing the coherence of the former farming complex. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to its former farmyard location and the immediate landscape, the setting does not extend to the Order Limits.

Stonham Parva CP

3.3.1183 The Grade II listed 'Former Farmhouse 100 Metres North of Westwood Hall' (**1033195**) is located on the southern flank of an unnamed road, c. 2.4 km north-north-west of Little Stonham and c. 1.5 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset is part of a former farmhouse, which dates to the early 17th

century, has evidence of 19th and 20th century maintenance and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1184 The setting of the asset is informed by its farmyard location and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884, although the considerable complex represented on the maps had been largely demolished. The setting is further informed by the asset's relationship with the non-designated Westwood Hall 90 m to the south and the surrounding agricultural landscape with which the asset has historical and former functional relationships. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to its former farmyard location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1185 The Grade II listed 'College Farmhouse' (**1183059**) is located at the southern extent of a private drive c. 1.4 km north-north-west of Little Stonham and 1.8 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to c. 1550 to 1570 and comprises a plastered timber frame structure with a Roman pantile roof.

3.3.1186 The setting of the asset is informed by its isolated location and by its relationship with a modern barn/stable block and paddock. The setting is further informed by the surrounding agricultural landscape, with which the asset and has historical and former functional relationships. The asset appears to be the only surviving element of a large farming complex recorded on the first edition OS map of 1884, and due to this loss of context, the setting of the asset makes a moderate contribution to its value. The setting of the asset is restricted to its former farmyard and immediate landscape, and so it does not extend to the Order Limits.

Creeting St Peter CP

3.3.1187 The Grade II* listed assets 'Roydon Hall' (**1033215**), 'Barn 30 Metres North West of Roydon Hall' (**1284584**) and the Grade II listed 'Garden Wall Enclosing Garden to South Side of Roydon Hall' (**1352074**) are located in a working farm complex at the eastern extent of a unnamed road c. 670 m north-east of Creeting St Peters, and all are within c. 25 m of the Order Limits. The Grade II* assets are of **high value** and the Grade II asset is of **medium value** based on their designations and their evidential, historical and aesthetic values. The hall (**1033215**) is a mid-to-late 16th century farmhouse with early 17th and mid-19th century alterations and comprises a plastered timber frame structure with a plain tiled roof. The large 10 bay barn (**1284584**) dates to the mid-16th century and comprises a weatherboarded timber frame structure with a plain tiled roof. The garden wall (**1352074**) incorporates a datestone, which states 1576. The wall is constructed in English bond and varies in height between 2.5 m and 1 m. The assets form part of a historical farmstead known as Roydon Hall. The Suffolk HER has recognised the farmstead complex as a **medium value** non-designated heritage asset (**2422**) which has historical and evidential value.

3.3.1188 The setting of the assets is shared and informed by their location within a working farm complex, their interrelationships, and by their relationships with the non-designated buildings (**2422**) of the complex and a medieval moat (**2241**). The setting is further informed by the surrounding agricultural landscape, with which the assets and the non-designated outbuildings have historical and ongoing functional relationships. The setting of the assets, therefore, makes a considerable contribution

to their values, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1189 The Grade II listed 'Glebe House' (**1182315**) is located to the north of Mill Lane c. 700 m south-south-east of the centre of Creeting St Peter and c. 250 m west-north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former rectory incorporates a datestone bearing 1826 and was built for the Reverend Edward Paske by John Whiting of Ipswich. It comprises a painted gault brick structure with a low-pitched hipped slated roof.

3.3.1190 The setting of the asset is informed by its largely secluded location within its mature grounds, by its relationship with its non-designated outbuildings and its relationship with the Grade I listed medieval Church of St Peter to the west. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1191 The Grade II listed assets 'The Clamp' (**1033213**) and 'Clamp Cottages' (**1182326**) are located south-west of Mill Lane, c. 1.2 km south-west of Creeting St Peter, c. and c. 730 m west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The Clamp is a farmhouse which dates to around 1840, has a mid-17th century rear range and comprises a gault brick structure with a hipped slated roof. The cottages are a former farmhouse which dates to the mid-to-late 17th century, has 19th and 20th century alterations and comprises a pebble-dashed timber frame structure with a concrete pantiled roof. The assets are located within, or close to, a historical farmstead known as Clump Farm. This dates to the 17th century with later 19th century additions and alterations. The farmstead has historical and evidential value and is of **medium value** based on its association with the listed buildings and its cohesion as a historical farming complex.

3.3.1192 The setting of the assets is shared and informed by their location within a concentration of historic and modern buildings labelled Creeting Howe Farm and Clamp Farm on the first edition OS map of 1884. The setting is further by the assets' interrelationship, their relationships with the non-designated outbuildings of the farming complexes and by the surrounding agricultural landscape, with which the assets have historical and possible ongoing functional relationships. Several of the outbuildings have, however, been converted to dwellings and the agricultural land to the south, west and east is being developed and so the setting of the assets makes a moderate contribution to their values. As the setting is, however, restricted to the farming complex location and the immediate landscape, it does not extend to the Order Limits.

3.3.1193 The Grade II listed 'Hill Farmhouse' (**1182339**) is located at the northern extent of the private driveway 130 m north of Mill Lane, c. 1.2 km south-east of Creeting St Peter and c. 120 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the mid or late 16th century, has an early 17th century parlour block and comprises a plastered timber frame structure with a plain tiled roof. The farmhouse forms part of a historical farmstead known as Hill Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2449**). The

farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1194 The setting of the farmhouse is informed by its former farmyard location and by its relationship with its non-designated outbuildings, which are recorded on the first edition OS map of 1884 (**2449**). The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and former functional relationships. The introduction of the A14 c. 100 m to the north-east has introduced noise into the setting of the asset, but the cutting of the route and screening by mature vegetation has reduced the effect of its imposition. The asset and surviving outbuildings are, however, still coherent as a former farming complex and so the setting of the asset makes considerable contribution to its value, and due to the proximity of the Project the setting extends to the Order Limits.

3.3.1195 The Grade II* listed 'Creeting Hall' (**1352073**) is located at the southern extent of a private driveway c. 650 m south-south-east of Mills Lane, c. 1.5 km south of Creeting St Peter and c. 80 m south-west of the Order Limits access route and c. 100-150 m north-west of the Order Limits main corridor. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. The former manor house, now two dwellings one of which is a farmhouse, dates to the mid-16th century and has 17th century and 1828 alterations. The ground storey walls are of 16th century red brick with diaperwork in burnt headers, whilst the upper storey is of plastered timber frame construction with some early 19th century cable-pattern pargetting. The roofs are plain tiled. The Hall forms part of a historical farmstead known as Creeting Hall. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2448**). Within the grounds of Creeting Hall are two non-extant fishponds. These fishponds appear on the first edition OS map along the eastern side of a north to south aligned field boundary. The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1196 The setting of the hall is informed by its location within a former manorial farming complex and by its relationships with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884 (**2448**). The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1197 The Grade II listed 'Grove Farmhouse' (**1033214**) is located 170 m south-west of Mill Lane, c. 1.8 km south-south-east of Creeting St Peter, and c. 100 m south of the Order Limits access route and c. 200-250 m east of the Order Limits main corridor. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse is of late 16th or early 17th century, was extended and refaced in the mid-19th century, has 20th century alterations and comprises a rendered timber frame structure with a gault brick south-east façade. The farmhouse forms part of a historical farmstead known as Grove Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2447**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1198 The setting of the farmhouse is informed by its former farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the

first edition OS map of 1884 (**2447**). The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and former functional relationships, but this link has been partially eroded by the imposition of a concrete works immediately to the north in the 21st century. The setting of the asset, therefore, makes a minor contribution to its value, and due to the proximity of the Project it extends to the Order Limits.

Non-Designated Heritage Assets

3.3.1199 The **low value** Ipswich to Bury St Edmunds railway line (**2497**) crosses the Order Limits c. 900 m north-west of Needham Market. The asset has evidential and historical value. Originally built as an extension to the Eastern Union Railway, the railway line was opened in November 1846 and formally merged with the Eastern Union Railway in July 1847.

3.3.1200 Located approximately 220 m to the west of the Order Limits, and approximately 1.7 km to the north-east of Stowupland, is the extant Stowupland Town Farm (**2509**). The farm was constructed in the 19th century but according to the first edition OS map 1886 the present buildings on the farm have replaced many of the historical ones. The exceptions are the farmhouse and potentially one barn. The farm has historical and evidential value; it is of **low value**.

3.3.1201 To the west of the Order Limits by approximately 70 m, and approximately 2.1 km north-east of Stowupland, is Oak Tree Farm (**2520**). The farm was constructed in the 19th century and has largely been altered according to present day Google Earth images compared to the first edition OS map 1886. The farm has historical and evidential value; it is of **low value**.

3.3.1202 Bay's Farm (**2524**) is located approximately 165 m to the east of the Order Limits and approximately 1.5 km to east of Stowupland. The extant farm was constructed in the 19th century. It appears on the first edition OS map 1886 but has been greatly altered with the loss of original historical agricultural buildings which have been replaced with modern equivalents. The farm has historical and limited evidential value; it is of **low value**.

3.3.1203 To the east of the Order Limits, by approximately 90 m and to the east of Stowupland by 1.4 km, is Mill Farm (**2525**). The farm was established in the 19th century and appears on the first edition OS map 1886. The farm today is much smaller and has lost most of its original historical buildings. The farm has historical and limited evidential value; it is of **low value**.

3.3.1204 Near Stowupland and outside the Order Limits, were found two post medieval assets, a complete lead post medieval 'six-disc' alnage cloth seal (**2539**) and an incomplete lead post medieval to modern probably milled medallion (**2540**). They have both evidential and historical value but are of **low value.**

3.3.1205 The **low value** cropmark of two former ponds (**2347**) of evidential value is located c. 130 m north of the Grade II* listed Creeting Hall (**1352073**) and c. 190 m north-west of the Order Limits.

3.3.1206 The **low value** cropmarks of former field boundaries (**2348**) of evidential value is located c. 250 m north-west of the Grade II* listed Creeting Hall (**1352073**) and c. 190 m north-west of the Order Limits.

3.3.1207 An incomplete post medieval copper alloy mount (**2545**), likely dating to the 17th to 18th centuries AD or later was recovered from farmland near Creeting St Peter and

outside the Order Limits. The asset is asymmetrical with a lozenge-shaped upper half and elongated oval-shaped lower terminal. The flat-backed mount features a moulded domed front with a central circle forming a large saltire cross, creating a quatrefoil-shaped face. Traces of white and pink/red colouring are present. This asset with its evidential and historical value is of **low value**.

3.3.1208 The **low value** Ipswich and Stowmarket Navigation (**2313**) of evidential and historical value runs approximately north-west/south-east through the Order Limits approximately 215 m north-east of the B1113 and 300 m east of Badley Hill. The Ipswich and Stowmarket Navigation opened in 1793 following the Ipswich and Stowmarket Navigation Act of 1790 to make the Gipping river navigable between the two settlements (River Gipping Trust, 2024). The route runs for approximately 29.4 km between Stowmarket and Ipswich and included 15 locks, the locations of which are not recorded by the HER. The navigation was closed and abandoned in 1934.

Cropmark and LiDAR Assessment

3.3.1209 The Project has identified a **low value** cropmark complex (**2748**) of evidential value north of Saxham Street and partially within the Order Limits. The cropmarks are largely visible as field boundaries on the first edition OS map.

3.3.1210 The Project has identified a **low value** cropmark complex (**2749**) of evidential value north of Saxham Street and partially within the Order Limits. The cropmarks are largely visible as field boundaries on the first edition OS map.

3.3.1211 The Project has digitally mapped **low value** cropmarks (**2747**) of evidential value recorded on Bing Maps and on image 29812_029 available at Historic England's online Aeriel Photo Explorer. The complex is located north-east of Bell's Lane, c. 750 m east of Stowupland and partially within the Order Limits. The cropmarks are largely of field boundaries and ponds recorded on the first edition OS map but also include further boundaries and a small concentration of features in the north-east which may represent the site of a small undated farmstead.

3.3.1212 The Project has identified a **low value** cropmark complex (**2782**) of evidential value south-west of Bell's Lane c. 850 m east of Stowupland and partially within the Order Limits. The cropmarks are largely visible as field boundaries on the first edition OS map, but some unmapped features may represent earlier activity, particularly those flanking Bell's Lane.

3.3.1213 The Project has identified a **low value** cropmark complex (**2750**) of evidential value south and west of Broad Green and partially within the Order Limits. The cropmarks are visible as field boundaries and a pond visible on the first edition OS map.

3.3.1214 The Project has digitally mapped **low value** cropmarks (**2773**) to the east of Creeting Saint Peter of evidential value and recorded on image 29812_046 available at Historic England's online Aeriel Photo Explorer. The cropmarks are visible as field boundaries and a pond visible on the first edition OS map.

3.3.1215 The Project has identified a **low value** cropmark complex (**2769**) of evidential value around Hill Farm c. 600 m north-west of Creeting Saint Mary and partially within the Order Limits. The complex also includes assets identified by the National Mapping Programme and supplied by the Suffolk HER. The cropmarks are visible as field boundaries on the first edition OS map.

3.3.1216 The Project has identified a **low value** cropmark complex (**2774**) of evidential value around the Grade II listed Creeting Hall (**1182339**) c. 1.4 km west of Creeting Saint

Mary and partially within the Order Limits. The complex also includes assets identified by the National Mapping Programme and supplied by the Suffolk HER. The cropmarks are visible as field boundaries on the first edition OS map.

3.3.1217 The Project has identified a **low value** cropmark complex (**2758**) of evidential value around the Watering farmstead c. 500 m south-west of Creeting Saint Mary. The cropmarks are visible as field boundaries on the first edition OS map.

Historic Mapping Assessment

3.3.1218 A series of **negligible value** ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of two ponds are located within the Order Limits (**2823**, **2836**)
- A total of 24 ponds are located within 250 m of the Order Limits (**2826**, **2835**, **2837**, **2838**, **2841**, **2842**, **2844**, **2845**, **2854**, **2855**, **2856**, **2857**, **2858**, **2955**, **2956**, **2954**, **2958**, **2959**, **2977**, **2978**, **2977**, **2978**, **2979**, **2982**)

3.3.1219 **Low value** parish boundaries (**2748**, **2821**, **2822**) of evidential and historic value have been identified crossing the Order Limits and within the 250 m Study Area within this sub-section. The boundaries can be observed on the 1884 1:2500 and 1:10560 OS Maps and are still present. It is unknown to what extent the boundaries may physically be extant within the landscape. The boundary deviates from the current parish boundary within parts of this sub-section between the 1969 1:2500 OS map and the 1995 1:2500 map at some point after which the parish boundary has been amended to its current location. It is unknown to what extent the boundary may physically be extant within the landscape.

3.3.1220 Twenty **low value** possible important hedgerow locations of evidential and historic value are located crossing the Order Limits (**2830**, **2831**, **2850**, **2851**, **2859**, **2992**, **2993**, **2994**, **2995**, **2996**) and within the 250 m Study Area (**2829**, **2832**, **2833**, **2834**, **2839**, **2846**, **2848**, **2849**, **2852**, **2861**) within this sub-section. The hedgerows are first observed on the 1884 1:2500 OS map. It is unknown how much these hedgerows pre-date the 1884 map edition.

3.3.1221 A **negligible value** trigonometry point (**2847**) of evidential value within the Order Limits and 190 m east of Creeting Lane. The trigonometry point is first observed on the 1884 1:2500 and 1:10560 OS maps and is last observed on the 1903 1:2500 OS map.

3.3.1222 A **negligible value** trigonometry point (**2824**) of evidential value within the Order Limits and 315 m north-east of Saxham Street. The trigonometry point is first observed on the 1884 1:10560 OS map and is last observed on the 1903 1:2500 OS map.

3.3.1223 Two **low value** buildings and associated yard ‘Town Barn’ (**2840**) of evidential and historic value have been observed approximately 30 m east of the Order Limits and approximately 200 m south-east of Mill End Lane. The buildings and yard are first observed on the 1884 1:2500 and 1:10560 OS maps. Only the south-western-most building and yard can however be seen on the 1995 1:2500 OS map and nothing can be observed by the current aerial imagery.

Needham Market and Ringshall

Designated Heritage Assets

Creeting St Mary CP

3.3.1224 The Grade II listed 'Woolney Hall' (**1033208**) is located on the north-western flank of Low Lane, c. 860 m north of Creeting St Mary and c. 1.1 km east of the Order Limits. The asset is of **medium** value based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to around 1600 and comprises a plastered timber frame structure with large panels of 20th century pargetting and a plain tiled roof.

3.3.1225 The setting of the asset is informed by its farmyard location and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and it being restricted to the farmyard location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1226 The Grade II listed '28, All Saints Road' (**1182154**) is located south-east of All Saint's Road, within Creeting Saint Mary, and c. 1.3 km south-east of the Order Limits. The asset is of medium value based on its designation and its evidential, historical and aesthetic values. The single-storey timber-framed building also has an attic and was originally constructed as one dwelling in the 17th century, with 19th and 20th century alterations, although the dwelling is now comprised of two cottages.

3.3.1227 The setting of this asset is informed by its presence as a post medieval dwelling within a semi-rural village landscape within Creeting Saint Mary. The asset broadly remains within its original village setting, with the asset retaining a historical relationship with its village dwelling context despite now comprising of two dwellings rather than one. The surrounding village this building lies within further informs the assets setting. Overall, the asset's location within its village setting means the setting of the asset makes a considerable contribution to the assets value. There is likely to be no intervisibility between the building and the Order Limits, restricted by surrounding buildings. The setting of the asset does not extend within the Order Limits.

3.3.1228 The Grade II listed 'Whissels Farmhouse' (**1352047**) is located on the north-western flank of All Saints Road, c. 1.3 km north-east of Creeting St Mary and c. 2 km south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse is of probable 16th or early 17th century date and comprises a plastered timber frame structure with a thatched roof.

3.3.1229 The setting of the asset is informed by its farmyard location and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and ongoing functional relationships. This link has, however, been eroded by the 20th century expansion of the farmyard, by small-scale residential development along All Saints Road and by the imposition of pylons to the east of the asset. The setting of the

asset, therefore, makes a moderate contribution to its value, but due to overall distance and it being restricted to the farmyard location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1230 The Grade II listed 'All Saints Hall' (**1033207**) is located c. 130 m west of Low Lane, c. 270 m north-west of Creeting St Mary, and c. 690 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the mid-16th century, was altered in the early 17th century and comprises a plastered timber frame structure with some 18th century pargetting of both herringbone and cable pattern and a plain tiled roof.

3.3.1231 The setting of the asset is informed by its location within its tree lined grounds and by its relationships with its non-designated outbuildings and the non-designated buildings of a former farming complex to the south, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and it being restricted to the farmyard location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1232 The Grade II listed 'Vestry 10 Metres North of Church of St Mary' (**1182108**) is located north-west of All Saint's Road, north of the Grade II* listed Church of St. Mary (**1033245**), within the western fringes of Creeting Saint Mary, and c. 790 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The gault brick vestry is dated 1837 on a stone tablet over the entrance door and is constructed in a Gothic style.

3.3.1233 The setting of this asset is informed by its presence as a post medieval vestry. The asset remains within its original ecclesiastical setting, with the asset retaining a historical and functional relationship with the associated Grade II* listed Church of St. Mary (**1033245**) to the south. The ecclesiastical grounds the vestry lies within further inform the assets setting. Overall, the asset's location in proximity to the church means the setting of the asset makes a considerable contribution to its value. There is likely to be no intervisibility between the building and the Order Limits, restricted by trees to the west of the asset. The setting of the asset does not extend within the Order Limits.

3.3.1234 The Grade II listed 'The Old Rectory' (**1261027**) is located south-east of All Saint's Road, within the western fringes of Creeting Saint Mary, south-east of the Grade II* listed Church of St. Mary (**1033245**), and c. 880 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The two-storey redbrick, flint rubble, and Bathstone rectory building was constructed in a High Victorian Gothic style and dated to 1863. The rectory also contains attics and cellars, was later used as a school, and is now a private dwelling. Elements of the building also contain the remains of an older range of early 19th century or earlier origin. An associated weatherboarded and timber-framed Grade II listed 'Barn about 30 m North North East of the Old Rectory' (**1051966**) is located to the north of the rectory, and likely dates to the 16th century.

3.3.1235 The setting of the rectory is informed by its presence as a post medieval rectory, school and later dwelling within the western fringes of a semi-rural village and rural-agricultural landscape on the edge of Creeting Saint Mary. The rectory and barn broadly remain within its original village and rural-agricultural setting, with the assets retaining a historical relationship with the associated Grade II* listed Church of St. Mary (**1033245**) to the north-west on the rural-agricultural fringes of Creeting Saint

Mary. The village these building lie within further informs the assets' setting. Overall, the asset's location within its village setting in proximity to the church and the rural-agricultural landscape means the setting of the asset's makes a considerable contribution to its value. There is likely to be no intervisibility between the buildings and the Order Limits, restricted by trees and undulating topography to the west of the asset. The setting of the assets does not extend within the Order Limits.

3.3.1236 The Grade II listed '6 And 8, All Saints Road' (**1352048**) is located south-east of All Saint's Road, within Creeting Saint Mary, and c. 1.1 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The two-storey timber-framed building was originally constructed as one dwelling in the late 16th century with a possibly earlier core, and c.1700, as well as 18th, 19th and 20th century alterations, and now comprises of two houses.

3.3.1237 The setting of this asset is informed by its presence as a post medieval dwelling within a semi-rural village landscape within Creeting Saint Mary. The asset broadly remains within its original village setting, with the asset retaining a historical relationship with its village dwelling context. The surrounding village this building lies within further informs the assets setting. Overall, the asset's location within its village setting means the setting of the asset makes a considerable contribution to its value. There is likely to be no intervisibility between the building and the Order Limits, restricted by surrounding buildings. The setting of the asset does not extend within the Order Limits.

3.3.1238 The Grade II listed '3, All Saints Road' (**1033246**) is located north-west of All Saint's Road, within Creeting Saint Mary, and c. 1 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The single-storey timber-framed, and thatched building, with an attic, was constructed in 1767 with 19th and 20th century alterations, and represents a type of house found in central Suffolk from the mid. 16th century onwards.

3.3.1239 The setting of this asset is informed by its presence as a post medieval dwelling within a semi-rural village landscape within Creeting Saint Mary. The asset broadly remains within its original village setting, with the asset retaining a historical relationship with its village dwelling context. The surrounding village this building lies within further informs the assets setting. Overall, the asset's location within its village setting means the setting of the asset makes a considerable contribution to the assets value. There is likely to be no intervisibility between the building and the Order Limits, restricted by surrounding buildings. The setting of the asset does not extend within the Order Limits.

3.3.1240 The Grade II listed 'The Watering' (**1033206**) is located on the south-western flank of Mill Lane, c. 840 m south-west of Creeting St Mary, and c. 490 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the late 16th century, was majorly altered in the 19th and early 20th centuries and comprises a roughcast timber frame structure with a pantiled roof. The early 20th century extension to the south-east facing façade is of red brick. The property forms part of a historical farmstead known as The Watering or Winks Watering Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2446**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1241 The setting of the property is informed by its location within its large mature grounds which includes scattered mature trees, a pond, lawns and formal garden and are defined by mature tree lined hedgerows. The setting is further informed by the asset's former non-designated outbuildings (**2446**) to the south, which have been converted into dwellings, and all appear to be now separate to the Watering Farm complex further to the south. The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and former functional relationships. The setting of the asset, therefore, makes a moderate contribution to its value, but due to overall distance and it being restricted to the former farmyard location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1242 The Grade II listed 'Oak Hill Cottage' (**1182162**) is located west of Flordon Road, within the western fringe of Creeting Hills, south-west of the A14, north-east of Needham Market, and c. 1.3 km south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The two-storey timber-framed cottage likely dates to the late 16th century, with 20th century alterations.

3.3.1243 The setting of this asset is informed by its presence as a post medieval dwelling within a semi-rural village landscape within the western fringes of Creeting Hills. The asset is situated between two areas of modern period housing development to the north-west and south-east. The original setting of this asset would likely have been within a more rural-agricultural landscape setting. The asset retains a historical relationship with its rural-agricultural context; however, this is lessened by the more modern surrounding housing developments. Overall, the asset's location within its current setting means the setting of the asset makes a moderate contribution to the assets value. There is likely to be no intervisibility between the building and the Order Limits, restricted by buildings to the north-west. The setting of the asset does not extend within the Order Limits.

3.3.1244 The Grade II listed 'Buck of Former Post Mill at Alder Carr Farm' (**1182292**) is located south-east of Saint Mary's Road, on the eastern fringe of Needham Market, and c. 1.4 km south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The timber-framed and weatherboarded body or buck of a now disused early 19th century post mill was originally built approximately 800 m to the north and moved to this location pre-1880 where it has since become used as a dovecote. Post mill bucks were occasionally taken down and re-used in this manner and this asset is believed to be the last such example in the country. Part of the assets interest is because the asset was moved in one piece and the original frame survives intact.

3.3.1245 The setting of this asset is informed by its presence as a post medieval post-mill buck later re-purposed as a dovecote in a new location, within a semi-rural farmstead complex, in a wider semi-rural agricultural landscape, on the eastern fringes of Needham Market. Although the original setting of this asset has changed, as well as its original purpose, the asset retains a historical and functional relationship with its dovecote context. Part of the importance of this asset is that the asset has become a dovecote after first being used as part of a post-mill and moved to this location. Overall, the asset's location within its current setting means the setting of the asset makes a considerable contribution to the assets value. There is likely to be no intervisibility between the building and the Order Limits, restricted by nearby buildings, and established treelines to the north-west. The setting of the asset does not extend within the Order Limits.

Badley CP

3.3.1246 The Grade II listed 'Woodland Farmhouse' (**1278292**) is located c. 55 m south of the B1113 Stowmarket Road, c. 1.1 km north-east of the Badley Hall and church complex, and c. 800 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the 17th century, was majorly altered around 1840 and comprises a plastered timber frame structure with 18th or early 19th century herringbone pargetting in large panels and plain tiled and pantiled roofs.

3.3.1247 The setting of the asset is informed by its former farmyard location and by its relationship with its surviving non-designated outbuildings, which are recorded on the first edition OS map of 1884. A large proportion of the farming complex recorded on the map has, however, been demolished to allow for road improvements and for the development of a large industrial estate immediately to the west. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships, but this link has been largely eroded by the road improvements and the industrial estate. The setting of the asset, therefore, makes a minor contribution to its value, but due to it being restricted to the former farmyard location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1248 The Grade II listed 'Badley Mill House' (**1231092**) is located on the southern bank of the Gipping river, c. 150 m north-east of the B1113 Stowmarket Road, c. 1.4 km north-east of the Badley Hall and church complex, and c. 420 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former mill house dates to the 17th century, has alterations of 18th century date and around 1980, and comprises a plastered timber frame structure on a plinth of tarred red brick with a plain tiled roof. The house forms part of a historical farmstead known as Badley Mill. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2433**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical building complex. The HER also identifies the site of watermill (**2430**) c. 30 m to the east-south-east of the listed building and adjacent to the river. It is not if this record is a duplicate of the listed building, or the location of the missing wheelhouse, or perhaps the site of an earlier structure. Due to the unknown nature of the asset, it has not been valued.

3.3.1249 The setting of the listed building is informed by its location within a former milling complex on the bank of the river. The setting is further informed by the asset's relationship with its former outbuildings, most of which are recorded on the first edition OS map of 1884 (**2433**) but now serve as dwellings. The Great Western Railway Ipswich and Norwich Line immediately to the south-west has encroached on the setting introducing noise and movement, but the asset and associated buildings remain coherent as a former milling complex. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being focused on the mill complex and river, the setting does not extend to the Order Limits.

3.3.1250 The Grade II listed 'Cherry Tree Farmhouse' (**1231090**) is located on the north-eastern flank of the B1113 Stowmarket Road, c. 1.3 km north-east of the Badley Hall and church complex, and c. 80 m south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse is of mid-to-late 16th century, has 17th century extensions and comprises a pebble-dashed timber frame structure with a concrete

plain tiled roof. The farmhouse forms part of a historical farmstead known as Cherry Tree Farm or Badleywalk Farm. The Suffolk HER has recognised the farmstead complex as a **low value** non-designated heritage asset (**2432**). The farmstead has historical and evidential values.

3.3.1251 The setting of the farmhouse is informed by its surrounding garden, but the Badley Walk Farm (later Cherry Tree Farm) complex (**2432**) recorded on the first edition OS map of 1884 appears to have been demolished. The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and former functional relationships, but this link has been eroded by the imposition of the Great Western Railway Ipswich and Norwich Line immediately to the north-east, by the modernisation of the B1113 to the south-west and small-scale development to the east. The setting of the asset, therefore, makes a minor contribution to its value, but due to the proximity of the Project the setting extends to the Order Limits.

3.3.1252 The Grade II listed 'Barn, 20 Metres South East of Doveshill Farmhouse' (**1231089**) is located on the north-eastern flank of the B1113 Stowmarket Road at the north-western extent of Needham Market, and c. 45 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset was built around 1600 as an eight-bay stable range or granary. It was extended to the west by two bays in the 18th or early 19th centuries, at which time the original building was converted to a barn. The asset was converted into a commercial property in the early 21st century when a pantiled roof replaced the former corrugated iron covering. The barn forms part of a historical farmstead known as Doveshill farm. This a stable which dates to the 16th century, the farm also has 19th century assets. The Suffolk HER has recorded the farmstead complex as a **medium value** non-designated heritage asset (**2423**). The farmstead is of historical value.

3.3.1253 The setting of the asset is informed by its roadside location within the farmstead (**2423**) and by its relationship with the Grade II listed medieval former farmhouse (The Dower House) immediately to the north-west, which is now a separate residence. The setting is further informed by the surrounding agricultural landscape with which the asset and former farmhouse have historical and former functional relationships. There has, however, been some 20th century infill development to the north and south of the asset and the railway, 80 m to the north-east, was imposed onto its setting during the 19th century. The setting of the asset, therefore, makes a moderate contribution to its value and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1254 The Grade II listed assets 'Badley Green Farmhouse' (**1231086**) and 'Cottage 60 Metres South-East of Badley Green Farmhouse' (**1231087**) are located south of Badley Lane, c. 470 m south-south-west of the of the Badley Hall and church complex, and c. 670 - 730 m north-west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The farmhouse dates to the 16th century, was majorly altered in the 17th and 19th centuries and comprises a pebble-dashed timber frame structure with mixed clay and concrete plain tiled roofs. The cottage is of probable 16th or 17th century date and comprises a plastered timber frame structure. The asset was extended after 2015 when a new pantile roof was added.

3.3.1255 The setting of the assets is shared and informed by their interrelationship and by their relationships with the non-designated working farm outbuildings. The setting is further informed by the surrounding agricultural landscape with which the assets and

non-designated farm outbuildings have historical and ongoing functional relationships. The setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance and the setting being restricted to the farmyard location and the immediate landscape, it does not extend to the Order Limits.

Combs CP

3.3.1256 The Grade II listed assets 'Holyoak Farmhouse' (**1183126**), 'Barn About 50 Metres North West of Holyoak Farmhouse' (**1032956**), 'Granary/Cartlodge Aligned East West 30 Metres North of Holyoak Farmhouse' (**1183144**) and 'Stable Aligned North South 40 Metres North West of Holyoak Farmhouse' (**1033002**) are located at the southern extent of Church Road c. 670 m east of Combs, and c. 1.95 km north-west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The farmhouse is of medieval date and reported in the appropriate section above. The barn (**1032956**) dates to 1849 and comprises a weatherboarded timber frame structure on a tall red plinth in a Flemish bond derivative with a Welsh slate roof. The granary/cartlodge (**1183144**) is of probable late 18th century date reusing many 17th century elements and comprises a weatherboarded timber frame structure with a slated roof. The stable (**1033002**) dates to the late 18th century and comprises a weatherboarded timber frame structure with a thatched roof. Based on satellite imagery, these assets have been converted into residential or commercial properties.

3.3.1257 The setting of the assets is shared and informed by their interrelationships and by their relationships with the non-designated outbuildings of the farming complex, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the assets and outbuildings have historical and ongoing functional relationships. The setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance and the setting being restricted to the farmyard location and the immediate landscape, it does not extend to the Order Limits.

3.3.1258 The Grade II listed 'Halfpenny Hall' (**1242001**) is located at the junction of Badley Lane and Holyoak Lane, c. 850 m south-east of Combs, and c. 1.7 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 18th century and comprises a rendered timber frame structure on a brick plinth with a thatched roof.

3.3.1259 The setting of the asset is informed its isolated roadside location within its garden which is defined by mature hedgerows and by its relationship with its outbuildings, one of which may be recorded on the first edition OS map of 1884. The setting is further informed by the asset's relationships with the non-designated buildings of the former Pennyplot Farm complex to the south-east and the Grade II listed Elm Cottage and non-designated buildings of Little London to the south-west, several of which are recorded on the first edition OS map of 1884. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes positively to its setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the setting being restricted to the roadside location and the immediate landscape, it does not extend to the Order Limits.

3.3.1260 The Grade II listed 'Elm Cottage' (**1033007**) is located in the hamlet of Little London on the eastern flank of Badley Lane, c. 980 m south-east of Combs, and c. 1.7 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the 17th century and comprises a roughcast timer frame structure with a thatched roof.

3.3.1261 The setting of the asset is informed by its roadside location within the hamlet and by its relationships with the post medieval and modern non-designated building of the settlement that positively contribute to its character. The setting is further informed by the asset's relationship with the non-designated buildings of the former Pennyplot complex to the east and the Grade II listed Halfpenny Hall to the north-east. The surrounding agricultural landscape, with which the asset has a historical relationship, also contributes positively to its setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and the setting being restricted to the roadside location and the immediate landscape, it does not extend to the Order Limits.

3.3.1262 Grade II listed assets 'Bluehouse Farmhouse' (**1033006**) and 'Barn 20 Metres South of Bluehouse Farmhouse' (**1284210**) are located on the western flank of Bradley Lane in the hamlet of Little London, c. 930 m south-east of Combs, and c. 1.7 km north-west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The farmhouse was built no later than the early 17th century and may actually be a possible late medieval hall range. The asset comprises a timber frame structure with 18th or early 19th century weatherboarding and a plastered crosswing. The crosswing has some 18th to early 19th century herringbone pargetting in panels at the gable. The whole structure has thatched roofs. The five-bay barn date to around 1600 and comprises a weatherboarded timber frame structure with a corrugated iron roof.

3.3.1263 The setting of the assets is shared and informed by their location within a working farm complex, their interrelationship and their relationships with the non-designated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the assets have historical and ongoing functional relationships. there has been some considerable expansion of the farming complex to the east of Bradley Lane, but this have not detracted from the setting. The setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance, and the setting being restricted to the farmyard and surrounding landscape, it does not extend to the Order Limits.

3.3.1264 Grade II listed 'House Occupied by Mr E Battle' (**1183177**) is located on the south-eastern flank of Bradley Lane at the north-east extent of Moats Tye, and c. 1.8 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 16th or early 17th centuries and comprises a plastered timber frame structure with a thatched roof.

3.3.1265 The setting of the asset is informed by its roadside settlement location and by its relationships with non-designated buildings which also flank the throughfare and which contribute the character of the settlement. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. There has been some small-scale residential infill development, but this has not overly impacted the rural aspect of the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance

and it being restricted village location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1266 The Grade II assets listed 'Manor Cottage' (**1389703**), and 'Rosemount' (**1033010**) are located on the flanks of an unnamed road on the south-eastern flank of Bradley Lane in the north-east of Moats Tye, and c. 1.9 km west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. Manor Cottage dates to the 18th century and comprises a rendered and whitewashed timber frame structure with a thatched roof. Rosemount is an early 17th century three-cell house and comprises a roughcast timber frame structure with a thatched roof.

3.3.1267 The setting of the assets is shared and informed by their roadside settlement locations, by their interrelationship and by their relationships with non-designated buildings which also flank the throughfare and which contribute the character of the settlement. The setting is further informed by the surrounding agricultural landscape, with which the assets have historical relationships. There has been some small-scale 20th century infill residential development, but it is sympathetic and in the local architectural vernacular. The setting of the assets, therefore, makes a considerable contribution to their values, but due to it being focused on the settlement location and immediate landscape, the setting does not extend to the Order Limits.

Barking CP

3.3.1268 The Grade II listed 'Newton Cottages' (**1277414**) is located adjacent to Little Newton Wood on the north-western flank of an unnamed road, c. 1.7 km north of Barking, and c. 30 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The pair of cottages date to the mid-18th century and comprise a roughcast/rendered timber frame structure with thatched and pantiled roofs.

3.3.1269 The setting of the asset is informed by its location within its mature grounds and by its relationships with its non-designated outbuildings, which based on cartographic evidence, are largely of mid-20th century date. The setting is further informed by the adjacent woodland and surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project the setting extends to the Order Limits.

3.3.1270 The Grade II listed 'College Grove Farmhouse' (**1231093**) is located at the south-western extent of an unnamed road c. 1.1 km north of Barking, and c. 210 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse is of probable 17th century date and comprises a pebble-dashed timber frame structure with a Roman pantiled roof. The farmhouse is part of a historical farmstead, Plumtree Farm (also known as College Grove Farm). The Suffolk HER has recorded the farmstead complex as a non-designated heritage asset (**2419**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1271 The setting of the farmhouse is informed by its location within a former farmyard and by its relationship with its former non-designated outbuildings, which are recorded on the first edition OS map of 1884 (**2419**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its former outbuildings have historical and former functional relationships. The larger of the outbuildings,

likely a barn appears, however, to have been converted into a residence and the remaining outbuildings appear to be associated with it. The former farmyard has been subdivided to provide grounds for each dwelling reducing the cohesion of the former farming complex and so the setting of the asset makes a moderate contribution to its value. Due to the proximity of the Project, however, the setting of the asset and the farmstead extends to the Order Limits.

3.3.1272 The Grade II listed 'Bungeons Farmhouse' (**1231581**) is located at the north-eastern limit of a private driveway, c. 790 m north of Barking, and c. 40 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the mid-16th century, has 17th century alterations and comprises a plastered timber frame structure with 18th century pargetting and a thatched roof. The asset is located within a historical farmstead known as Bungeon's Farm. This dates to the 16th century with later 19th century additions and alterations. The Suffolk HER has recorded the farmstead complex as a non-designated heritage asset (**2428**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1273 The setting of the asset is informed by its working farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884 (**2428**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project the setting extends to the Order Limits.

3.3.1274 The Grade II listed 'The Old Rectory' (**1277413**) is located to the north of the Grade I listed medieval Church of St Mary, c. 700 m north-east of Barking, and c. 310 m north of the Order Limits access route and c. 400 m east of the Order Limits main corridor. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former rectory was built in 1819 by William Brown of Ipswich for the Reverend C. Davy. It comprises a gault brick with a limestone string beneath the first storey windows and a hipped slated roof.

3.3.1275 The setting of the asset is informed by its large garden location and by its interrelationship with the church it once served just to the south. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The large garden of the asset is defined by tree lined hedgerows and fences and there are tree belts to the east and south and a small copse to the west, which afford the asset some privacy. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the asset's gardens and immediate landscape, the setting does not extend to the Order Limits.

3.3.1276 The Grade II listed 'Home Farmhouse' (**1231443**) is located on the north-eastern flank of Hascot Hill in the north of Barking, and c. 100 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse was built in two stages in the mid-16th century and then around 1600 and comprises a roughcast timber frame structure with a crosswing to the north-west and a plain tiled roof. The farmhouse forms part of a historical farmstead known as Home Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2437**). The farmstead has

historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1277 The setting of the farmhouse is informed by its former farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884 (**2437**). The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and former functional relationships. A residential dwelling has been built to the south-east of the asset within its setting, but it is sympathetic, in the local architectural vernacular and well screened from the asset. The asset and its outbuildings are coherent as a former farming complex and so setting of the asset makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends of the Order Limits.

3.3.1278 The Grade II listed 'Fairfax House' (**1231522**) is located on the south-western flank of Hascot Hill in the north-east of Barking, and c. 90 m south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, formally Spalding Hall, was built around 1600 and comprises a pebble-dashed timber frame structure with a plain tiled roof. The Reverend John Fairfax, the Rector of Needham Market lived in the house until he was ejected in 1662 due to his nonconformist religious convictions.

3.3.1279 The setting of the asset is informed by its associated gardens to the front and rear, its roadside settlement location and by the surrounding agricultural landscape, with which the asset has a historical relationship. Once secluded, unsympathetic 20th century residential development along Hascot Hill to the north-west and south-east has encroached upon the setting of the setting of the asset. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends of the Order Limits.

3.3.1280 The Grade II listed 'Ashburnham Farmhouse' (**1278102**) is located on the south-eastern flank of the B1078 Barking Road, c. 25-50 m east of Barking, and c. 40 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the 16th century, has 17th and 19th century alterations and comprises a plastered timber frame structure with a plain tiled roof. The asset is located within a historical farmstead known as Ashburnham Farm or Church Farm. This dates to the 16th or 17th century. The Suffolk HER has recorded the farmstead complex as a non-designated heritage asset (**2427**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1281 The setting of the asset is informed by its former farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884 (**2427**). The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and former functional relationships. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends of the Order Limits.

3.3.1282 The Grade II listed 'Kennels Farmhouse' (**1231755**) is located c. 160 m south-east of the B1078 Barking Road, c. 1.5 km east-north-east of Barking, and c. 1.1 km east-north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse

dates to around 1700, has late 18th and mid-20th century alterations and a thatched roof.

3.3.1283 The setting of the asset is informed by its former farmyard location and by its relationships with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and former functional relationships. Although no longer a working farm complex, the asset and outbuildings are still coherent as such and, therefore, the setting of the asset makes a considerable contribution to its value. Due to overall distance, however, and the focus of the setting being on the asset's grounds and immediate landscape, it does not extend to the Order Limits.

3.3.1284 The Grade II listed 'Walnut Tree Cottage' (**1278138**) is located on the south-eastern flank of the B1078 Barking Road in Barking, and c. 350 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built in the late 16th or early 17th centuries as a bakehouse associated with the adjacent Grade II listed Timberleys medieval residence and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1285 The setting of the asset is informed by its roadside location within the settlement and by its relationship with the Grade II listed Timberleys medieval residence immediately to the north-east and which is recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has a historical relationship. There has been 20th century residential development on both flanks of Barking Road which has subsumed the asset into the village. The setting of the asset, therefore, makes a moderate contribution to its value, but due to the roadside village focus of the setting, it does not extend to the Order Limits.

3.3.1286 The Grade II listed 'Rectory Farmhouse' (**1231488**) is located 30 m north-west of the B1078 Barking Road in Barking, and c. 490 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the mid or late 17th century and comprises a pebble-dashed timber frame structure with a concrete tiled roof. The farmhouse forms part of a historical farmstead known as Rectory Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2438**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1287 The setting of the farmhouse is informed by its village location set back from the main road and by its relationships with the Grade II listed 15th/16th century Old School House to the west and the non-listed elements of the Rectory Farm complex (**2438**) to the north, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape with which the asset has historical and former functional relationships. The former outbuildings have largely been converted into residential properties, and the former farmyard has been divided up to provide garden areas for the properties. Residential development along Barking Road in the 20th century has annexed the asset into the village and coupled with its loss of function means the setting of the asset makes a moderate contribution to its value. Because the asset's setting is informed by its location within the village, the setting does not extend as far as the Order Limits.

3.3.1288 The Grade II listed assets 'The Fox Inn' (**1231437**) and 'The Grange' (**1231439**) are located on the opposing flanks of the B1078 in Barking, and c. 470-530 m south-east

of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The inn dates to the 18th century, was altered in the early 19th century and again around 1970 and comprises a red brick structure with a hipped plain tiled roof. The inn was extended to the north and south around 1970. The Grange dates to the 17th century, was altered in the mid-19th and 20th centuries and comprises a timber frame structure, which was encased in mid-19th century brick, with a plain tiled roof.

3.3.1289 The setting of the assets is shared and informed by their interrelationship and their roadside settlement locations. The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical relationship. Once isolated, residential development along the B1078 in the first half of the 20th century has subsumed the assets into Barking, although the properties are sympathetic, of the local architectural vernacular and are not overly intrusive. The setting of the assets, therefore, makes a considerable contribution to their values, but due to it being restricted to the roadside settlement location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1290 The Grade II listed 'Top Farmhouse' (**1231094**) is located c. 430 m north of the B1078, c. 770 m west of Barking, and within c. 25 m south of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the early or mid-17th century and comprises a plastered timber frame structure with a thatched roof. The farmhouse forms part of a historical farmstead known as Barking Tye. The Suffolk HER has recognised the farmstead complex as a **medium value** non-designated heritage asset (**2440**). The farmstead has historical and evidential value.

3.3.1291 The setting of the farmhouse is informed by its former farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884 (**2440**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. The formally associated barn complex appears to have been converted into a residential dwelling and the former farmyard has been divided to provide garden space for each property. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1292 The Grade II listed assets 'Overhall Farmhouse' (**1231412**) and 'Barn, 40 Metres North West of Overhall Farmhouse' (**1231095**) are located 230 m east of Barking Road in Barking, and c. 650 - 680 m east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The farmhouse was built in two stages in the 16th and mid-17th centuries, has evidence of 19th and 20th century maintenance and comprises a plastered timber frame structure with a plain tiled roof. The barn is of late 16th or early 17th century date and comprises a weatherboarded, timber frame five-bay structure with a corrugated iron roof.

3.3.1293 The setting of the asset is shared and informed by their working farm complex location, by their interrelationship and their relationship with the non-designated outbuildings of the farming complex. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and ongoing functional relationships. The setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance and it

being restricted to the farmyard location and surrounding landscape, the setting does not extend to the Order Limits.

3.3.1294 The Grade II listed assets 'Moat Farmhouse' (**1231305**) c. 25 to 50 m south and 'Former Stable Range 30 Metres West of Moat Farmhouse' (**1278293**) are located on the south-south-eastern flank of the B1078, and c. 10 to 30 m south of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The farmhouse dates to the mid-17th century and comprises a plastered timber frame structure with a plain tiled roof. The former stable range is now a residential dwelling, dates to the early-to-mid 17th century and comprises a four-bay weatherboarded structure with a pantiled roof. The farmhouse forms part of a historical farmstead known as Moat Farm or Barking Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2441**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed buildings and its cohesion as a historical farming complex.

3.3.1295 The setting of the farmhouse and former stable is shared and informed by their former farmyard location, by their interrelationship and by their relationships with the non-designated building of the former farming complex (**2441**) and medieval moat (**2248**). The setting is further informed by the surrounding agricultural landscape, with which the assets and outbuildings have historical and former functional relationships. Several of the non-designated outbuildings have also been converted into residences and the former farmyard has been divided between the properties. The setting of the assets, therefore, makes a moderate contribution to their values, and due to the proximity of the Project the setting extends to the Order Limits.

3.3.1296 The Grade II listed 'Tye Farmhouse' (**1278294**) is located on the southern flank of the A1078 in Barking, and c. 170 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse has a probable 16th or early 17th century core, was remodelled in the early 19th century and comprises a pebble-dashed timber frame structure with s hipped plain tiled roof.

3.3.1297 The setting of the asset is informed by its roadside location within its mature garden and by its relationships with its outbuilding and with the property and outbuildings to the west, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the assets and outbuildings have historical and former functional relationships. there has been sympathetic residential, small-scale development to the east, but this is well screened by mature trees and shrubs in the asset's garden. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its roadside settlement location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1298 The Grade II listed 'Browns Farmhouse' (**1231861**) is located on the eastern flank of Barking Road in Barking, and c. 440 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse is of probable 16th century date and comprises a plastered timber frame structure with a hipped Roman pantiled roof.

3.3.1299 The setting of the asset is informed by its roadside settlement location and by the surrounding agricultural landscape, with which it has historical and former functional relationships. Infill development along Barking Road in the 20th century has, however, absorbed the asset into the linear settlement, diminishing its once isolated

nature. The setting of the asset, therefore, makes a moderate contribution to its value, but due to it being restricted to is roadside location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1300 The Grade II listed 'Bonneywood Farmhouse' (**1231758**) is located c. 130 m east of Barking Road, c. 200 m north-east of Willisham Tye, and c. 560 m east-north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse is of probable 16th or 17th century date and comprises a pebble-dashed timber frame structure with a plain tiled roof.

3.3.1301 The setting of the asset is informed by its farmyard location and by its relationship with its outbuildings, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and functional relationships. The large outbuilding to the south-west has been converted into a second dwelling and the farmyard has been divided accordingly. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is focused on the farmyard location and the surrounding landscape, the setting does not extend to the Order Limits.

Needham Market CP

3.3.1302 The Grade II listed assets 'Hill House' (**1254384**) and 'Stable 20 Metres North East of Hill House' (**1253685**) are located within the former Dod's Farm complex immediately to the south-east of Hill House Lane at the northern extent of Needham Market, and c. 560 m and 540 m south-east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. Hill House, a former farmhouse, dates to the 17th century, was majorly remodelled in the late 19th century and comprises a timber frame core encased in 19th red brick with a plain tiled roof. The stable, now a dwelling, originally had a granary above and dates to the mid-17th century. The asset is constructed of red brick in English bond and has Dutch gables, which were largely rebuilt in the 19th century, and with plain and concrete tiled roofs. The farmstead has historical and evidential value and is of **low value** based on its association with the listed buildings countered by the loss of the other buildings of the complex and encompassing by residential development.

3.3.1303 The setting of the assets is shared and informed by their former farmyard location, by their interrelationship, and by their relationships with surviving non-designated outbuildings which were part of the Dod's Farm complex recorded on the first edition OS map of 1884. Today, the surviving buildings of the farm complex serve as separate dwellings, and the farmyard has been divided amongst the properties losing its definition as a working complex. The 20th and 21st century expansion of Needham has encroached on the former farm on all sides allowing for only glimpsed views of the agricultural land to the north-west, with which the assets and non-designated outbuildings have historical and former functional relationships. The setting of the assets, therefore, makes a minor contribution to their values, but due to it being restricted to its roadside location, the setting does not extend to the Order Limits.

3.3.1304 The Grade II listed assets 'Valley House' (**1277198**) and 'Hawks Mill (Including Bridge Beneath Road Attached To West Side)' (**1277199**) are located on opposing banks of a mill leat channelled off the Gipping river to the east, at the north-eastern edge to Needham Market. The Order Limits lie c. 1.1 km and 1.2 km to the north-west. The assets are of **medium value** based on their designations and their

evidential, historical and aesthetic values. Valley House, on the western flank of the river, has a timber frame core dating to c. 1600 that was encased in red brick in the mid-18th century, when the asset was also extended. The roof is hipped and slated. The former water mill was built in 1884 and had wings added in 1892. The mill is constructed of red brick with gault brick bands and concrete plain tiled roofs.

3.3.1305 The setting of the house is informed by its large garden location and by its relationship with its non-designated outbuildings, most of which and recorded on the first edition OS map of 1884. The setting is further informed by its river valley location and by its relationships with the listed mill and its non-designated formally associated outbuildings. The setting of the former mill is informed by its relationships with the leat it straddles, with its formerly associated outbuildings and with Valley House and its non-designated to the east. The valley setting of the house has been intruded upon by the 19th century construction of the railway which has introduced noise, movement and pollution into the setting, although the line was in place at the time of the building of the mill. The garden of Valley House does, however, have a high mature tree lined hedge boundary to the west, screening it from the railway and the outskirts on Needham Market beyond. The setting of the assets, therefore, makes a considerable contribution to their values, but due to it being restricted to its river valley location, the setting does not extend to the Order Limits.

Battisford CP

3.3.1306 The Grade II listed 'Premises Occupied by Mr A Cooper' (**1352141**) is located east of Deadman's Lane, in Battisford, c. 800 m south of Moats Tye, and c. 2 km west-north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The two-storey timber-framed dwelling likely dates to the 17th century, with 19th and 20th century alterations.

3.3.1307 The setting of this asset is informed by its presence as post medieval dwelling within a semi-rural agricultural landscape on the northern fringes of Battisford. The asset broadly remains within its original setting, with the asset retaining a historical relationship with its likely original farmstead context. The surrounding landscape further informs the assets setting. Overall, the asset's location within its broadly original setting surrounded by a number of weatherboarded farm buildings means the setting of the asset makes a considerable contribution to its value. There is likely to be no intervisibility between the building and the Order Limits, restricted by established treelines, and buildings. The setting of the asset does not extend to the Order Limits.

3.3.1308 The Grade II listed 'Battisford Hall' (**1352140**) is located c. 200 m north-north-east of Battisford and 940 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset is a farmhouse, which was built in the mid-16th century as a manor house probably for Sir Thomas Gresham, founder of the Royal Exchange, or his father Sir Richard. The asset was majorly remodelled around 1900 when it was also extended to the west and north. The asset comprises a timber frame structure, which was encased in red brick around 1900, with a plain tiled roof.

3.3.1309 The setting of the asset is informed by its farmyard location within a complex of outbuildings several of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is focused

on the farmyard location and the surrounding landscape, the setting does not extend to the Order Limits.

3.3.1310 The Grade II listed 'Church Cottages' (**1033019**) is located on the eastern flank of Church Road in Battisford and c. 910 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built around 1550, was extended around 1600 and comprises a plastered timber frame structure with a thatched roof.

3.3.1311 The setting of the asset is informed by its roadside village location, by its relationships with the Grade I listed medieval Church of St Mary to the north and the non-designated residence to the south, which is recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the roadside village location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1312 The Grade II listed 'Rose Farmhouse' (**1033017**) is located on the northern flank of Church Road in Battisford and c. 1.2 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse is of probable 17th century date and comprises a timber frame structure with a pebble-dashed upper storey, a 19th century red brick encased lower storey and a plain tiled roof.

3.3.1313 The setting of the asset is informed by its isolated roadside location within the dispersed settlement and by its relationship with its outbuildings which are largely recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the roadside village location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1314 The Grade II listed 'Kestrel Cottage Willow Cottage' (**1033016**) is located on the northern flank of Church Road at the western edge of Battisford and c. 1.5 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset comprises two cottages built as a single house around 1700 reusing medieval components. The asset was remodelled in the mid-19th century when the south (front) elevation of the plastered timber frame structure was encased in red brick.

3.3.1315 The setting of the asset is informed by its isolated roadside location within the dispersed settlement and by its relationship with the non-designated residential building to the east, which is recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the roadside village location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1316 The Grade II listed 'St Johns Manor House' (**1352138**) is located within the bounds of a medieval moat on the northern flank of Church Road c. 860 m west of Battisford and c. 1.8 km north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse was built around 1570 reusing some medieval components on the moated site of the

Preceptory of the Knights Hospitallers founded here in c. 1154 and dissolved in 1540. The asset was extensively remodelled in the mid-19th century likely for Dame Anne, wife of Sir Thomas Gresham, Lord of the Battisford and St. John's Manors and the founder of the Royal Exchange. The house comprises a plastered timber frame structure which is largely encased in mid-19th century gault brick with a plain tiled roof.

3.3.1317 The setting of the asset is informed by its working farmyard location and by its relationship with its outbuildings, although the complex of buildings shown on the first edition OS map of 1884 appear to have been replaced by modern structures in the latter half of the 20th century. The setting is further informed by the partially surviving medieval moat, which tells of the historical depth of the site, and by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the farmyard location and the surrounding landscape, the setting does not extend to the Order Limits.

3.3.1318 The Grade II listed 'Barn 40 Metres North East of Vale Farmhouse' (**1182673**) is located off an unnamed road 330 m north of Hascot Hill (road), c. 670 m south-east of St Mary's Church in Battisford, and 230 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The barn dates to the late 17th century and comprises a weatherboarded timber frame structure with a pantiled roof.

3.3.1319 The setting of the asset is informed by its farmyard location and by its relationship with its Grade II listed early 16th century Vale Farmhouse to the south-west. The setting is further informed by the asset's relationship with other non-designated outbuildings, most of which are recorded on the first edition OS map of 1884. The surrounding agricultural landscape, with which the asset has a historical and functional relationship, also contributes positively to the setting. The former fields to the east and south-east, however, have clearly not been worked for several decades and now appear to be wooded rough grazing. The mature vegetation affords the asset seclusion and privacy and so the setting makes a considerable contribution to its value. Due to the mature vegetation reducing the focus of the setting, however, it does not extend to the Order Limits.

3.3.1320 The Grade II listed 'Lower Manor Farmhouse' (**1284397**) is located north of Valley Road c. 950 m south-west of Battisford and c. 1.5 km west-north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the late 16th century, has 20th century alterations and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1321 The setting of the asset is informed by its former farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. The outbuildings appear, however, to have been converted into residences or holiday lets and the former farmyard has been sub-divided accordingly. The setting of the asset, therefore, makes a moderate contribution to its value, but as it is restricted to the former farmyard and immediate landscape, the setting does not extend to the Order Limits.

3.3.1322 The Grade II listed 'Tye Cottage' (**1033024**) is located south of Valley Road c. 1.1 km south-west of Battisford and c. 1.6 km west-north-west of the Order Limits. The asset

is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the mid-16th century, has 20th century alterations and comprises a plastered timber frame structure with a concrete tiled roof.

3.3.1323 The setting of the asset is informed by its open garden location and by its relationship with its 20th century outbuildings and the non-designated residence to the west, which appears to have replaced the earlier structure recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the garden location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1324 The Grade II listed 'Spinks Farmhouse' (**1033023**) is located 120 m south of Valley Road c. 770 m south-south-west of Battisford and c. 900 m north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the mid-16th century, has late 16th and early 17th century extensions and comprises a roughcast timber frame structure with a concrete pantiled roof.

3.3.1325 The setting of the asset is informed by its former farmyard location and by its relationship with its former barn to the south. The setting is further informed by the surrounding agricultural landscape, with which the asset and its former barn have historical and former functional relationships. The asset now serves as a residence and the barn has been converted to the same resulting in the division and conversion of the farmyard into gardens for the house. There is small-scale 20th century residential development to the north of the asset along the lane adjoining Valley Road to the north, which has slightly encroached on the setting of the asset. The setting of the asset, therefore, makes a moderate contribution to its value, but as it is restricted to the former farmyard location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1326 The Grade II listed 'Hascot Hill Farmhouse' (**1352142**) is located on the southern flank of Hascot Hill, c. 1.4 km south-east of Battisford and c. 110 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the mid-17th century, has an early 19th century extension and comprises a plastered timber frame structure with a plain tiled roof. The farmhouse forms part of a historical farmstead known as Highfields Farm or Hascothill Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2435**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1327 The setting of the farmhouse is informed by its roadside garden location and by its relationship with its former outbuildings, some of which are recorded on the first edition OS map of 1884 (**2435**). The setting is further informed by the surrounding agricultural landscape, with which the asset and its former outbuildings have historical and former functional relationships. The asset is now located within an enclosed garden defined by tree lined mature hedgerows affording the asset some privacy but detaching from its former farmyard setting. The former outbuildings now serve as residential and commercial properties and so, overall, the setting of the asset makes a moderate contribution to its value. Due to the proximity of the Project, however, the setting extends to the Order Limits.

Darmsden CP

3.3.1328 Grade II listed ‘Church of St Andrew’ (**1278100**) is located on the western outskirts of Darmsden, and c. 1.8 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The parish church was built in 1880 by Herbert Green of Norwich on the site of a medieval church. The church is in the Decorated Gothic style, comprises a nave chancel and south porch constructed of flint rubble with limestone dressings and a plain tiled roof.

3.3.1329 The setting of the asset is informed by its graveyard location and by its relationship with the settlement of Darmsden to the east, which itself is recorded in the Domesday Book. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and as the Project lies in the neighbouring parish, the setting does not extend to the Order Limits.

3.3.1330 Grade II Listed ‘Bridges Cottages’ (**1231696**) is located on the north-western flank of an unnamed road c. 340 m south-west of Darmsden, and c. 1.7 km east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset, now two houses, was built in the 16th century, was majorly altered in the 17th century and later and comprises a plastered timber frame structure with a Roman pantiled roof.

3.3.1331 The setting of the asset is informed by its roadside garden location and by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and it being restricted to the garden location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1332 The Grade II listed ‘Priestley Cottage’ (**1278101**) is located at the north-north-western extent of an unnamed road c. 1.2 km south-west of Darmsden, and c. 1.1 km south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to around 1600, has 20th century extensions and comprises a plastered timber frame structure with a concrete tiled roof.

3.3.1333 The setting of the former farmhouse is informed by its isolated garden location and by the surrounding agricultural landscape, with which the asset has historical and former functional relationships. Despite the loss of the outbuildings recorded on the first edition OS map of 1884, the setting of the asset makes a considerable contribution to its value, but due to overall distance and it being restricted to the garden location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1334 The Grade II listed assets ‘Clay Hall’ (**1231446**) and ‘Daisy Farmhouse’ (**1231704**) are located on the opposing flanks of an unnamed road c. 730 m south-west of Darmsden, and c. 1.6 - 1.7 km south-east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The hall, a former farmhouse, dates to the mid-16th century and comprises a pebble-dashed timber frame structure with a pantiled roof. Daisy Farmhouse is a former farmhouse dated to the late 1600 century, with 19th and 20th century alterations and comprises a plastered timber frame structure with a slated roof.

3.3.1335 The setting of the assets is shared and informed by their roadside garden locations and the surrounding agricultural landscape, with which the assets have historical and former functional relationships. The setting of the assets makes a considerable contribution to their values, but due to overall distance and it being restricted to the garden locations and immediate landscape, the setting does not extend to the Order Limits.

3.3.1336 The Grade II listed 'Tarston Hall' (**1231716**) is located immediately east of a medieval moat at the south-western extent of an unnamed road c. 1.6 km south-west of Darmsden and c. 1.3 km south-south-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the early 17th century with a probable 16th century service range to the rear and comprises a plastered timber frame structure with extensive restored 18th century cable-pattern pargetting and a plain tiled roof.

3.3.1337 The setting of the asset is informed by its relationship with its outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the medieval moat immediately to the west, which likely surrounded an earlier house of the manor of Tarston and is indicative of the time depth of the site. The surrounding agricultural landscape, with which the asset has historical and former functional relationships, also positively contribute to the setting. The setting of the asset makes a considerable contribution to its value, but due to overall distance and it being restricted the grounds of the asset and immediate landscape, the setting does not extend to the Order Limits.

Ringshall CP

3.3.1338 The Grade II listed 'Ringshall Hall' (**1032953**) and the Grade II* listed 'Barn 80 Metres South West of Ringshall Hall' (**1352190**) are located south of the Grade I listed Church of St Catherine in Ringshall c. 1.2 km north-east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The hall, formally the manor house, has a mid-16th century core, was much remodelled around 1788 and comprises a plastered timber frame structure on a 16th century brick plinth and with a hipped plain tiled roof. The barn was likely a manorial court hall of later 16th century date prior to its 18th century conversion to a barn. The barn was converted into a residential property in 1993. The asset comprises a weatherboarded plastered timber frame structure on a brick plinth with a Roman pantiled roof.

3.3.1339 The setting of the assets is shared and informed by their former farmyard complex location, by their interrelationship, their relationships with the church to the north, and by their relationships with the non-designated outbuildings of the former farming complex, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the assets and outbuildings have historical and former functional relationship. The setting of the assets makes a considerable contribution to their values, but due to overall distance and it being restricted to their grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.1340 The Grade II listed 'Ringshall Grange' (**1198439**) is located within a medieval moat at the eastern extent of a private road c. 160 m east of Stowmarket Road, c. 520 m south of Ringshall and c. 1 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset, a former rectory now self-catering apartments, dates to the mid-17th century,

has early and late 19th century extensions and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1341 The setting of the asset is informed by its location within its wooded grounds, which are defined by mature tree lined hedgerows, and by its location within a medieval moat which evidences the historical time depth of the site. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset makes a considerable contribution to its value, but due to overall distance and it being restricted to its grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.1342 The Grade II listed 'Hill House' (**1032954**) is located on the western flank of Stowmarket Road c. 650 m south of Ringshall and 1.2 km west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to around 1770 and comprises a colourwashed red brick structure with a plain tiled roof.

3.3.1343 The setting of the asset is informed by its roadside garden location and by its relationship with former outbuildings to the south, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and former functional relationships. Some of the outbuildings have, however, been converted to residences or offices and the former farmyard has been accordingly divided, all but removing the cohesion of the former working farm complex. The setting of the asset, therefore, makes a moderate contribution to its value, but due to overall distance and it being restricted to its garden and immediate landscape, the setting does not extend to the Order Limits.

3.3.1344 The Grade II listed 'Howes Farm Cottage' (**1198456**) is located on the north-eastern flank of Stowmarket Road c. 1 km south-south-east of Ringshall and c. 510 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the 16th century and comprises a plastered timber frame structure with a Roman pantiled roof.

3.3.1345 The setting of the asset is informed by its former farmyard location and by its relationship with its outbuildings, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and former functional relationships. The asset and its outbuilding, however, no longer function as a farming complex and some of the outbuildings appear to be related to a building supplies yard immediately to the east. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project the setting extends to the Order Limits.

3.3.1346 The Grade II listed 'Fairview' (**1032974**) is located on the south-eastern flank of the B1078 on the southern edge of Ringshall Stocks and c. 210 m south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the late 16th century, has late 18th and 19th century alterations and comprises a timber frame structure plastered to rear and encased in brick to the rear and gables with a pantiled roof.

3.3.1347 The setting of the asset is informed by its roadside garden location and by the surrounding agricultural landscape, with which the asset has a historical relationship. the asset's garden is defined by mature, tree lined hedgerows, which afford the asset some privacy and screen it from small-scale residential development on the eastern flank of Offton Road to the east. The setting of the asset, therefore, makes a

moderate contribution to its value, but due to it being restricted to its garden location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1348 The Grade II listed 'Ringshall House' (**1032952**) is located on the eastern flank of Offton Road c. 640 m south-south-east of Ringshall Stocks, and c. 220 m west-north-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse was built around 1620-1630, was majorly remodelled in the mid-19th century, and comprises a timber frame structure encased in mid-19th century gault brick with a plain tiled roof. The house forms part of a historic farmstead known as Squirrells Farm (**2400**), which includes a granary barn that was subject to a building recording and undated archaeological remain (**2421**) identified during the archaeological monitoring of works associated with the conversion of the barn. The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1349 The setting of the asset is informed by its garden location, by its relationship with its outbuildings in the garden and its relationship with the working farm complex on the opposite flank of the thoroughfare (**2400**, **2421**), some elements of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset, outbuildings and farming complex have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

Non-Designated Heritage Assets

3.3.1350 An archaeological evaluation then excavation of land adjacent To 96 Stowmarket Road, Needham Market, south of the B1113, and c. 240 m south-east of the Order Limits identified a range of archaeological features (**2378**). These features included **low value** post medieval remains comprising a large extraction pit, field boundaries, and small finds including tokens and book fittings.

3.3.1351 Partially within the Order Limits and approximately 240 m north of Needham Market, is Badley Bridge House also known as Badleybridge Farm (**2533**). The historical farmstead was constructed in the 19th century and appears on the first edition OS map 1884. The agricultural buildings have either been converted to residential or commercial use or are no longer extant, especially the eastern buildings. The farmhouse is still extant. The farmstead no longer functions as a farm. The asset has historical and evidential value and is of **low value**.

3.3.1352 Located approximately 40 m south-east of the Order Limits and approximately 1.1 km to the west of Neeham Market is the non-extant Newton Barn (**2531**). It was constructed in the 19th century and appears on the first edition OS map 1884. It has been replaced by a modern barn just to the north-west. The barn has historical and evidential value and is of **negligible value**.

3.3.1353 The **low value** Gibbon's Farm Farmstead (**2434**) is of evidential and historical value and is located c. 1 km east of Battisford, and immediately north of the Order Limits. The asset comprises a 19th century manor farmstead, a 17th century farmhouse and converted buildings.

3.3.1354 Flint Hall farmstead (**2529**) is located approximately 225 m to the west of the Order Limits and approximately 1.7 km to the east of Creeting St Mary. The farm was constructed in the 19th century and appears on the first edition OS map 1884. A

comparison between Google Earth Pro and this map shows that several of the historical agricultural buildings are now non-extant except for the farmhouse and possibly a barn. The asset has historical and limited evidential value and is of **low value**.

3.3.1355 A **low value** silver coin, possibly a hammered sixpence, of Elizabeth I (**2171**) was recovered from farmland outside the Order Limits and near the village of Badley. The asset has historical and evidential value.

3.3.1356 Along Stowmarket Road, approximately 165 m south-east of the Order Limits is the **low value** Badley Bridge (**2410**), which has evidential and historical value.

3.3.1357 A **low value** outfarm and old barn, Bacton (**2306**) of evidential value is located approximately 200 m north-west of the Order Limits, immediately south-west of Stowmarket Road, and 275 m north-west of Badley Hill. The 19th century outfarm, regular L-plan courtyard, multi-yard and agricultural buildings are recorded at this location, with the farmhouse set away from the yard. The buildings were still extant in 1945 and have since been demolished. The HER indicates there is potential for earlier origins to buildings and farmsteads however this has not been confirmed.

3.3.1358 Along Stowmarket Road, approximately 350 m north-west of the Order Limits is a milestone (**2411**). It has evidential and historical value and is of **low value**.

3.3.1359 Barking Hall (**2413**), historically associated with Francis Theobald in 1680 and later serving as the seat of the Earls of Ashburnham from around 1756, was transformed into tenements for the poor by 1836. Although the hall was demolished in 1926, the 18th century stables, and a surviving walled garden provide tangible remnants of its existence. The hall, described as an 'Early C18 house of 7 bays with a tower and later C18 wings,' boasted a long veranda on the entrance front. The asset is of **low value** due to its evidential and historical values. It is situated approximately 300 m east of the Order Limits. Additionally, **low value** archaeologically excavated remains of landscaping at Barking Hall (**2414**) are located about 240 m east of the Order Limits and hold evidential and historical value.

3.3.1360 A **negligible value** post medieval bronze object (**2535**) of evidential value was recovered from farmland within the Order Limits and c. 920 m north-west of Barking.

3.3.1361 Just clipping the Order Limits, north-east of Barking, is a collection of post medieval metal artifacts (**2495**) discovered through metal detecting in January 2001 comprises bronze strap fittings, silver coins, a pin, a candlestick, and an unidentified medieval object. This asset has evidential and historical value and is of **low value**.

3.3.1362 Ladies Walk (**2490**), situated 60 m east of the Order Limits and approximately 500 m north of Barking, comprises a **low value** substantial rectilinear north/south mound enclosed by a surrounding earthwork enclosure bank within the woodland named 'Ladies Walk.' Believed to be a post medieval prospect mound, it stands approximately 2 m high. The woodland is likely associated with the estate linked to Barking Hall, as indicated by its presence on the first edition OS map from the 1880s. The asset holds historical and evidential value.

3.3.1363 A partially preserved post medieval silver button (**2041**), sub-spherical with a flattened back and damaged integral suspension loop was found c. 175 m south of the Order Limits. The domed front face showcases a small central boss with incised diagonal strokes resembling a floral motif. It has evidential and historical value but is of **low value**.

3.3.1364 A **low value** worn silver six pence of William III minted 1696 AD (**2515**) was found within Order Limits near Barking. The asset has historical and evidential value.

3.3.1365 A **low value** multi-period concentration of PAS artefacts (**2561**) of evidential value has been recovered from farmland c. 200 m from the Order Limits and north-east of Barking. The post medieval artefact comprises a copper alloy thimble.

3.3.1366 Two **low value** PAS finds of evidential value were recovered from farmland south-east of Ringshall and outside the Order Limits. The finds comprise a very worn silver threepence of Elizabeth I, dated to 1565 AD (**2580**), and a silver penny, probably of Edward VI in the name of Henry VIII, c.1547-1551 AD (**2581**).

3.3.1367 A **low value** PAS find of evidential value comprising a small, incomplete post medieval copper alloy belt or strap mount (**2575**) was recovered from farmland south-west of Barking and outside the Order Limits.

3.3.1368 **Low value** metal detecting finds of mainly post medieval metal work (2412) of evidential value were recovered from a field, north of the B1078 and within the Order Limits.

3.3.1369 Located along the edge of the Order Limits, approximately 1.6 km to the south-east of Ringshall village, is Middle Farm (**2530**). The historical farmstead was constructed in the 19th century and can be seen on the first edition OS map 1884. A comparison between Google Earth Pro and this map shows that all of the historical agricultural buildings have now non-extant, but the asset still functions as a farm. It has historical and limited evidential value and is of **low value**.

Cropmark and LiDAR Assessment

3.3.1370 The National Mapping Programme has identified **low value** cropmarks (**2777**) of evidential value between the Ipswich to Bury St Edmunds railway line and the Gipping river, on the northern outskirts of Needham Market and c. 110 m south-east of the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.3.1371 The Project has identified a **low value** linear cropmarks (**2770**) of evidential value south of Badley Hill, south-west of Stowmarket Road and partially within the Order Limits. The complex also includes assets identified by the National Mapping Programme and supplied by the Suffolk HER. The cropmarks are visible as field boundaries on the first edition OS map.

3.3.1372 The National Mapping Programme has identified **low value** possible cropmarks (**2775**) of evidential value within a now wooded shallow river valley c. 500 m north-west of Needham Market. The assets form small, conjoined enclosures on both banks of the river that are not recorded on the first edition OS map.

3.3.1373 The Project has identified a **low value** cropmark complex (**2760**) of evidential value c. 600 m west of Needham Market and partially within the Order Limits. The cropmarks are largely visible as field boundaries on the first edition OS map.

3.3.1374 The Project has identified a **low value** cropmark complex (**2761**) of evidential value north of Hascot Hill, c. 1 km east of Battisford and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map, but two enclosures and a possible pond to the west of the Grade II listed Bungeons Farmhouse (**1231581**) are likely earlier in date.

3.3.1375 The Project has identified a **low value** cropmark complex (**2762**) of evidential value immediately north of Barking and partially within the Order Limits. The cropmarks correspond to field boundaries, a pond and trackways to the west and north of Barking Hall. The trackways likely formal approaches to the hall.

3.3.1376 The Project has identified a **low value** cropmark complex (**2764**) of evidential value immediately west of Barking and partially within the Order Limits. The cropmarks correspond to field boundaries visible on the first edition OS map.

3.3.1377 The Project has identified a **low value** cropmark complex (**2763**) of evidential value immediately south of Barking and partially within the Order Limits. The cropmarks correspond to field boundaries visible on the first edition OS map.

3.3.1378 The Project has identified a **low value** cropmark complex (**2766**) of evidential value immediately south of Barking and partially within the Order Limits. The cropmarks largely correspond to field boundaries visible on the first edition OS map but also includes an unmapped rectangular enclosure and internal features (**2717**) identified by the Suffolk HER.

3.3.1379 The Project has identified a **low value** cropmark complex (**2765**) of evidential value around the Grade II listed Moat Farm, centred c. 1.4 km south-west of Barking and partially within the Order Limits. Most of the cropmarks are visible as field boundaries on the first edition OS map, but they also include unmapped features on Barking Tye Common including the cropmark and earthwork of a sub-oval undated enclosure (**2700**).

Historic Mapping Assessment

3.3.1380 A series of **negligible value** ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of eight ponds are located within the Order Limits (**2865**, **2866**, **2872**, **2879**, **2886**, **2891**, **2898**, **2893**)
- A total of 18 ponds are located within 250 m of the Order Limits (**2863**, **2864**, **2867**, **2868**, **2870**, **2877**, **2885**, **2889**, **2890**, **2896**, **2897**, **2899**, **2900**, **2951**, **2953**, **2954**, **2980**, **2981**).

3.3.1381 **Low value** parish boundaries (**2518**, **2869, 2760**, **2764**, **2751**, **2906**, **2991**) of evidential and historic value have been identified crossing the Order Limits and within the 250 m Study Area within this sub-section. The boundaries can be observed on the 1884 1:2500 and 1:10560 OS maps and are still present. It is unknown to what extent the boundaries may physically be extant within the landscape. The boundaries are also visible as cropmarks within several locations within the sub-section (**2760**, **2764**, **2751**).

3.3.1382 Six **low value** possible important hedgerow locations of evidential and historic value are located crossing the Order Limits (**2874**, **2880**, **2892**, **2895**) and within the 250 m Study Area (**2881**, **2894**) within this sub-section. The hedgerows are first observed on the 1884 1:2500 OS map. It is unknown how much these hedgerows pre-date the 1884 map edition.

3.3.1383 The **low value** possible estate grounds of Barking Hall including 'Ladys Walk' woodland to north, a large fishpond and more formal garden-like land parcels (**2762**)

of evidential and historic value have been observed adjacent to the Order Limits and adjacent to Barking Road. The possible estate grounds are first observed on the 1902 1:2500 OS map and last seen on the 1995 a1:2500 OS map. Cropmarks associated with this have also been observed and are visible on the 1884 1:2500 OS map.

3.3.1384 The **low value** broadly north-west to south-east aligned line of the Great Eastern Railway Ipswich and Norwich line (**2860**) of evidential and historical value has been observed crossing the Order Limits and across the 250 m Study Area approximately 130 m north of Stowmarket Road. The railway line can be observed from the 1884 1:2500 and 1:10560 OS maps onwards.

3.3.1385 The **low value** 'Lodgefield Row' woodland copse (**2875**) of evidential and historic value has been observed partially within the Order Limits and approximately 850 m east of Badley Lane. The copse is first observed on the 1884 1:2500 and 1:10560 OS map and is still extant within the landscape.

3.3.1386 A **low value** 'Sand Pit' quarry (**2882**) of evidential and historic value has been observed immediately west of the Order Limits, approximately 95 m north of Hascot Hill. The quarry is first observed on the 1884 1:2500 and 1:10560 OS maps and is last noted as woodland on the 1953 1:10560 OS map. The quarrying activity was possibly associated with two further similarly valued sand pits (**2883**, **2884**) approximately 230 m to the south-west of pit (**2882**). Sand pit **2883** is only seen on the 1884 1:2500 OS map, and quarrying activity appears to be moved to the south-west (2884) on the 1902 1:2500 OS map onwards, although this too appears to be woodland by current aerial imagery.

3.3.1387 A **low value** woodland copse (**2873**) of evidential and historical value has been observed approximately 100 m west of the Order Limits and 930 m south-west of Stowmarket Road. The woodland copse is first observed on the 1884 1:2500 and 1:10560 OS map and is still extant within the landscape. The woodland has since expanded to the east and west.

3.3.1388 A **low value** orchard (**2901**) likely associated with Squirrells Farm (**2400**) and its barn (**2421**), is of evidential and historic value and has been observed immediately 100 m south-west of the Order Limits and immediately east of Offton Road. The orchard is first observed on the 1884 1:2500 OS map and is last seen on the 1971 1:10560 OS map. Two rows of trees seen on current aerial imagery may be remains of the orchard.

3.3.1389 The **low value** 'Old Sand Pits' quarry (**2871**) of evidential and historic has been observed partially within the Order Limits and 780 m south-west of Stowmarket Road. The quarry is first observed on the 1884 1:2500 and 1:10560 OS map and is still marked on the 1995 1:2500 OS map.

3.3.1390 **Low value** buildings, pond, and yard labelled as 'Old Barn' (**2862**) of evidential and historic value have been observed approximately 220 m north-west of the Order Limits and 20 m south-west of Stowmarket Road. The buildings, pond and yard are first observed on the 1884 1:2500 and 1:10560 OS map. The buildings, pond and yard are last observed on the 1969 1:2500 OS map. It is possible that the land parcel is associated with nearby ponds to the north-east (**2863**), and south-east (**2864**).

3.3.1391 The **low value** 'Ash Covert' woodland copse (**2876**) of evidential and historic value has been observed approximately 230 m west of the Order Limits and 750 m east of Badley Lane. The woodland copse is first observed on the 1884 1:2500 and 1:10560 OS map and is still extant within the landscape.

3.3.1392 The **low value** 'Ash Covert' woodland copse (**2878**) of evidential and historic value has been observed approximately 120 m west of the Order Limits and 760 m north-east of Church Road. The woodland copse is first observed on the 1884 1:2500 and 1:10560 OS map and is still extant within the landscape. The copse also expands to the south by current aerial imagery.

3.3.1393 A **negligible value** trigonometry point (**2887**) of evidential value approximately 210 m east of the Order Limits and 140 m south of Hascot Hill. The trigonometry point is first observed on the 1884 1:2500 and 1:10560 OS maps and is last observed on the 1902 1:2500 OS map.

3.3.1394 The **low value** 'Wellfield Covert' woodland copse (**2952**) of evidential and historic value has been observed approximately 200 m north-west of the Order Limits and 490 m south-east of Badley lane. The copse is first observed on the 1884 1:2500 and 1:10560 OS maps and is still extant within the landscape on current aerial imagery. Current aerial imagery also indicates that the woodland has since expanded to the east and west.

3.3.1395 A **low value** footbridge (**2888**) of evidential and historic value has been observed approximately 235 m west of the Order Limits immediately south of Valley Lane. The footbridge is first observed on the 1884 1:2500 OS map and is last recorded on the 1905 1:10560 OS map at the same location of a ford.

Great Bricett and Bramford

Designated Heritage Assets

Baylham CP

3.3.1396 The Grade II* listed assets ‘Baylham Hall’ (**1293336**) and ‘Stable Range, 30 Metres South East of Baylham Hall’ (**1208099**) are located partially within a medieval moat off an unnamed road c. 1.1 km west-north-west of Baylham, and c. 2.2 km south-east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The hall, a manor house, dates to the early 17th century, has later 17th and mid-19th century alterations and comprises a red brick structure with a plain tiled roof. The asset is a substantial fragment of a large country house.

3.3.1397 The setting of the assets is shared and informed by their location within a manorial complex, by their interrelationship and by their relationships with the non-designated buildings of the complex, several of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the assets and the outbuildings have historical and ongoing functional relationships. The setting of the assets, therefore, makes a considerable contribution to their values, but due to overall distance and it being restricted to the manorial complex and the surrounding landscape, the setting does not extend to the Order Limits.

Great Bricett CP

3.3.1398 The Grade II listed ‘Tudor Cottage’ (**1352159**) is located on the northern flank of the B1078 c. 530 m east-north-east of Great Bricett and c. 940 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential,

historical and aesthetic values. the house dates to the 17th century and comprises a plastered timber frame structure with a thatched roof.

3.3.1399 The setting of the asset is informed by its roadside garden location and by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its garden location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1400 The Grade II listed assets 'The Red Lion Inn' (**1352158**) and 'Red Lion Cottage' (**1032973**) are located on the eastern flank of the B1078 c. 460 m south of Great Bricett and c. 1.4 km west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The former inn is an early or mid-17th century house comprising s plastered timber frame structure with a slated roof. The cottage dates to around 1570 and comprises a plastered timber frame structure with a thatched roof.

3.3.1401 The setting of the assets is shared and informed by their secluded location within a wooded parcel of roadside land. The setting is further informed by the surrounding agricultural landscape, with which the assets have a historical relationship. The setting of the assets, therefore, makes a considerable contribution to their values, but due to it being restricted to their wooded grounds and immediate landscape, the setting does not extend to the Order Limits.

Willisham CP

3.3.1402 The Grade II listed 'Tye Farmhouse' (**1251803**) is located on the western edge of Willisham Tye, and within c. 15 m south of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the mid-16th century, has 20th century alterations, and comprises a plastered timber frame structure with a plain tiled roof. The farmhouse forms part of a historical farmstead known as Tye Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2485**). The farmstead has historical and evidential value.

3.3.1403 The setting of the farmhouse is informed by its farmyard location and by its relationship with its non-designated outbuildings, several of which are recorded on the first edition OS map of 1885 (**2485**). The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and ongoing functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project the setting extends to the Order Limits.

3.3.1404 The Grade II listed 'Church of St Mary' (**1251778**) is located at the southern extent of Willisham, and c. 770 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The parish church was built in 1878 by H. J. Green of Norwich, in the manner of the late 13th century. The asset comprises a nave, chancel and south porch constructed on flint and septaria rubble with freestone dressings and plain tiled roofs.

3.3.1405 The setting of the asset is informed by its graveyard location at the southern limit of the settlement and by its relationship with the early-to-mid 20th century farming complex to the north, which appears to have replaced the Willisham Hall complex recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship.

The graveyard is defined by mature tree lined hedgerows and fencing. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by its graveyard boundary and by the tree belts, copses and mature tree lined hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

Offton CP

3.3.1406 The Grade II listed 'Tollemache Hall' (**1262668**) is located within its grounds c. 800 m south-east of Great Bricett and 720 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, formally the Manor House of Great Bricett, dates to the mid-16th century, with early 17th, early 19th and 19th century alterations, and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1407 The setting of the asset is informed by its location within its grounds and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and former functional relationships. The grounds of the asset are defined by tree belts and mature tree lined hedgerows. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by its ground's boundaries and by the topography, copses and tree lined mature hedgerows of the intervening landscape, the setting does not extend to the Order Limits.

3.3.1408 The Grade II listed 'Hill House Farmhouse' (**1251590**) is located in the former Hillhouse Farm complex on the southern flank of Bildeston Road, c. 1.5 km west of the centre of Offton, and c. 490 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to around 1600, has 19th century alterations and comprises a timber frame structure encased in 19th century gault brick with a plain tiled roof. The farmhouse forms part of a historical farmstead known as Hillhouse Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2460**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1409 The setting of the asset is informed by its roadside situation and by its relationship with the other elements of the farm complex, which have been converted into residences, and with the Grade II listed early-to-mid 16th century barn, which is also now a residence and reported in the medieval section above. The setting is further informed by the asset's relationship with the buildings of the Poplar Farm complex (**2460**) to the east and the non-designated Shortings Farm Cottage to the north-east. The surrounding agricultural landscape, with which the assets have a historical and former functional relationship, also contributes positively to the setting of the assets. Due to the residential conversion of the farm outbuildings and the division of the farming complex into separate properties, the setting of the asset makes a moderate contribution to its value, and because the setting is now restricted to the former farmyard location and immediate surroundings, the setting does not extend to the Order Limits.

3.3.1410 The Grade II listed 'Rose Cottage Farmhouse' (**1251587**) is located on the southern flank of Bildeston Road, c. 1 km east of Offton, and c. 200 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential,

historical and aesthetic values. The farmhouse dates to the late 16th century, has a 17th century hall range to the east with 18th century alterations, and comprises a plastered timber frame structure with a plain tiled roof. The farmhouse forms part of a historical farmstead known as Cottage Farm or Rose Cottage Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2462**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1411 The setting of the farmhouse is informed by its farmyard location and by its relationship with its non-designated outbuildings, some of which are recorded on mid-to-late 20th century OS mapping (**2462**). The setting is further informed by the asset's relationship with the listed and non-designated medieval and post medieval buildings of the Poplar and Hillhouse farm complexes to the west and those of the Valley Farm complex to the east. The surrounding agricultural landscape, with which the asset has historical and ongoing functional relationships, also makes a positive contribution to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1412 The Grade II listed 'The Old Vicarage' (**1262688**) is located in Offton c. 50-75 m south of the Grade I listed medieval Church of St Mary, and c. 80 m south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former vicarage dates to the early 18th century, has late 18th century alterations, and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1413 The setting of the asset is informed by its location in the medieval core of Offton and by its relationships with the listed and non-designated buildings of Offton that contribute positively to the character of the settlement. These buildings include the Grade I listed medieval Church of St Mary immediately to the north. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of Project undergrounding works to the north, the setting extends to the Order Limits.

3.3.1414 The Grade II listed 'The Green' (**1251593**) is located on the north-western flank of Castle Road in Offton, and c. 100 m south of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The cottage dates to the 18th century, has mid-19th century alterations and comprises a plastered timber frame structure with a thatched roof.

3.3.1415 The setting of the asset is informed by its location in the medieval core of Offton within its large garden, which is defined by high, tree lined hedgerows allowing for only glimpsed views of the asset from the surrounding streets and affording the asset some privacy. The setting is further informed by the asset's relationships with the listed and non-designated buildings of Offton that contribute positively to the character of the settlement. There has been some 20th century residential development of Offton, some of it quite unsympathetic, but it is mostly well screened from the cottage. The asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its settlement location, the setting does not extend to the Order Limits.

3.3.1416 The Grade II listed 'Prospect House' (**1262690**) is located on the south-western flank of Ipswich Road, c. 700 m south-east of Offton, and c. 140 m north-east of the Order

Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the mid-18th century, has 19th century alterations and comprises a painted red brick structure with a plain tiled roof.

3.3.1417 The setting of the asset is informed by its roadside location and by its relationship with the neighbouring, non-designated post medieval buildings flanking Ipswich Road to the south-east, most of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship, although the former chalk pit and lime kiln recorded on OS mapping to the north-east has gone and been replaced by a small copse. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1418 The Grade II listed 'Maltings House' (**1251596**) is located at the junction of Ipswich Road and Elmsett Road, c. 970 m south-east of Offton, and c. 85 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The asset, formally a farmhouse, is of probable 17th century date, was extended in the 19th century and comprises a plastered timber frame structure with a plain tiled roof. Located within the former farm complex is an associated extant 1830s timber framed outbuilding (**2059**). The has historical and evidential value and is of **low value**.

3.3.1419 The setting of the asset is informed by its roadside location and by its relationship with the listed and non-designated buildings including (**2059**), which positively contribute to the character of the small hamlet arranged around the road junction and several of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1420 The Grade II listed 'The Mutton' (**1251597**) is located on the north-eastern flank of Ipswich Road 70 m south-east of the road's junction with Elmsett Road, c. 1.1 km south-east of Offton, and c. 110 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former public house, The Shoulder of Mutton, dates to the early 18th century, has later 18th and 19th century alterations, and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1421 The setting of the asset is informed by its roadside location and by its relationship with the listed and non-designated buildings, which positively contribute to the character of the small hamlet arranged around the road junction and several of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1422 The Grade II listed 'Offton Place' (**1262691**) is located on the south-western flank of Ipswich Road c. 1.3 km south-east of Offton, and c. 250 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse was built around 1800 for the Kersey family and comprises a red brick structure with a plain tiled roof. The asset forms part of a historical farmstead known as Offton Place. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2466**). The farmstead has

historical and evidential value and is of **low value** based on its poor cohesion due the loss of the outbuildings.

3.3.1423 The setting of the asset is informed by its roadside location and by its relationship with the non-designated buildings, which positively contribute to the character of the small hamlet in which it located. The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and former functional relationships. Several of the neighbouring buildings are recorded on the first edition OS map of 1885, but the former outbuildings (**2466**) have been replaced by 20th residential development, although this is sympathetic and in keeping with the local architectural vernacular. The setting of the asset, therefore, makes a moderate contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

Nettlestead CP

3.3.1424 The Grade II* listed 'High Hall' (**1250944**) is located in the High Hall Farm complex, c. 920 m north-north-west of Nettlestead, and c. 1.6 km north-east of the Order Limits. The asset is of **high value** based on its designation and its evidential, historical and aesthetic values. A large proportion of the house was probably built around 1620-30 for William Foorth around a fragmentary 16th century core, has alteration made around 1930 by H. Munroe Cautley, and comprises a red brick structure in English bond with a plain tiled roof.

3.3.1425 The setting of the asset is informed by its location within its large formal garden and by its relationship with the non-designated buildings of the High Hall Farm complex, several of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and non-designated farm buildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and it being restricted to its farmyard location and the surrounding landscape, the setting does not extend to the Order Limits.

3.3.1426 The Grade II listed 'Nettlestead Chace' (**1251559**) is located at the south-east extent of Nettlestead and c. 1.2 km north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house, formally known as Nettlestead Hall, was virtually rebuilt around 1813-1819 for L. H. Moore, but retaining and remodelling a small fragment of the mansion of Thomas, 2nd Lord Wentworth (1523-1583) that had stood on the site. The 19th century structure comprises painted brick whilst the 16th century elements of plastered timber frame. The roofs are slated and of plain tile. The setting of the house is informed by its relationship with its Grade II listed gateway to the west, and its Grade II listed 'Shell Summerhouse, but these assets have been scoped out.

3.3.1427 The setting of Nettlestead Chace is informed by its location within its grounds and its associated summerhouse and gateway, as well as by its relationship with the Grade I medieval Church of St Mary to the north and with its non-designated outbuildings and buildings of Nettlestead which contribute positively to the character of the settlement. The setting of both Nettlestead Chace is further informed by the surrounding agricultural landscape, with which the asset has a historical relationship. The grounds of the asset also contain scattered trees, lawns, a pond and are defined largely by tree belts affording the asset privacy and seclusion. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted

to its grounds and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1428 The Grade II* listed 'Tudor Grange' (**1263029**) and the Grade II listed assets 'Dairy and Bakehouse Range Immediately South of Tudor Grange' (**1250947**) and 'Barn 20 Metres West of Tudor Grange' (**1251581**) are located on the northern flank of Ipswich Road at the north-western extent of Somersham, and c. 660 m north of the Order Limits. The dairy and bakehouse is scoped out due to its restricted setting. The Grade II* grange is of **high value** based on its designation and its evidential, historical and aesthetic values. The grange is a mid-16th century farmhouse with early 17th century alterations and comprises a partly brick partly plastered timber frame structure with plain tiled roofs.

3.3.1429 The setting of the grange is informed by its working farm location, by its interrelationship with the listed dairy and bakehouse and by its relationship with the non-designated outbuildings of the farming complex. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to the working farmyard and the surrounding landscape, the setting does not extend to the Order Limits.

Somersham CP

3.3.1430 The Grade II listed 'Hill Farmhouse' (**1251696**) is located at the northern limit of unnamed road, c. 2 km west of Somersham, and c. 40 m west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to around 1600, was extended in the early 19th century and comprises a timber frame structure encased in 19th century red brick. The farmhouse forms part of a historical farmstead known as Hill Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2472**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1431 The setting of the farmhouse is informed by its working farmyard location and by its relationship with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1885 (**2472**). The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1432 The Grade II listed 'Grove Farmhouse' (**1262693**) is located on the southern flank of Offton Road, c. 1.5 km west of Somersham, and c. 90 m south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the 16th century, was altered in the 19th century and comprises a plastered timber frame structure with a pantiled roof. The farmhouse forms part of a historical farmstead known as Grove Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2473**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1433 The setting of the farmhouse is informed by its working farmyard location and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1885 (**2473**). The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1434 The Grade II listed 'Church Farmhouse' (**1262694**) is located on the southern edge of Somersham, c. 120 m south of the Grade I medieval Church of St Mary and c. 610 m north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the 17th century, has 18th and late 19th century alterations and comprises largely a plastered timber frame structure with a painted brick 19th century addition and pantiled roofs.

3.3.1435 The setting of the asset is informed by its working farmyard location by its relationships with the medieval church and with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1885. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the working farm and the surrounding landscape, the setting does not extend to the Order Limits.

3.3.1436 The Grade II listed assets 'Gunn's Farmhouse' (**1262659**) and 'Barn 20 Metres South West Of Gunn's Farmhouse' (**1251600**) are located on the north-western flank of Offton Road, c. 2 km west-south-west of Somersham, and c. 130 m south-west and c. 160 m south-west of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The farmhouse is of late 16th or early 17th century date and comprises a plastered timber frame structure with a plain tiled roof. The barn appears to have been demolished and replaced by a modern building in the later 20th century. The assets form part of a historical farmstead known as Gunn Farm or Caleygreen Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2476**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed buildings and its cohesion as a historical farming complex.

3.3.1437 The setting of the farmhouse and barn is shared and is informed by their interrelationship, their working farmyard/livery location (**2476**) and by their relationships with non-designated outbuildings, although these appear to be 20th century buildings. The setting is further informed by the surrounding agricultural landscape, with which the assets and outbuildings have historical and ongoing functional relationships. The setting of the assets, therefore, makes a considerable contribution to their value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1438 The Grade II listed 'Bleak Hall' (**1251669**) is located on the western flank of Blood Hill, c. 1.1 km south-west of Somersham, within c. 10 m of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house was built in three stages in the 16th century, around 1600 and in the 18th century. It comprises a plastered timber frame structure with a plain tiled roof. The Hall forms part of a historical farmstead known as Bleak Hall. The

Suffolk HER has recognised the farmstead complex as a **low value** non-designated heritage asset (**2474**). The farmstead has historical and evidential value.

3.3.1439 The setting of the hall is informed by its isolated roadside location and by its relationship with its non-designated outbuildings, one of which (a barn) is recorded on the first edition OS map of 1886 (**2474**). The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuilding have a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

Little Blakenham CP

3.3.1440 The Grade II listed 'Elm Farmhouse' (**1251403**) is located on the southern flank of Somersham Road, c. 780 m west of Little Blakenham and c. 1.5 km north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the early 17th century and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1441 The setting of the asset is informed by its roadside location in a working stables complex. The setting if further informed by the surrounding agricultural landscape, with which the asset has historical and functional relationships. The stable buildings associated with the asset appear to have replaced the farming complex recorded on 19th and 20th century OS mapping, although some 20th century barns survive to the east. The setting of the asset, therefore, makes a moderate contribution to its value, but due to overall distance and it being restricted to the farmyard and immediate landscape, the setting does not extend to the Order Limits. The setting of the asset, therefore, makes a moderate contribution to its value, but due to overall distance and it being restricted to the farmyard and immediate landscape, the setting does not extend to the Order Limits.

3.3.1442 The Grade II listed 'Rose Cottage' (**1250943**) is located on the southern flank of Somersham Road, c. 980 m west-south-west of Little Blakenham and c. 1.2 km north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The house dates to the mid-to-late 16th century and comprises a plastered timber frame structure with a slated roof.

3.3.1443 The setting of the asset is informed by its isolated roadside location and by its relationship with a complex of outbuildings, which based on cartographic evidence, developed in the latter half of the 20th century. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have a historical relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and it being restricted to its roadside location and immediate landscape, the setting does not extend to the Order Limits.

Claydon CP

3.3.1444 The Grade II* listed 'Mockbeggars Hall' (**1263022**) is located c. 370 m east of Paper Mill Lane, c. 750 m north-west of Whitton, and c. 2.3 km north-east the Order Limits. The asset is of high value based on its designation and its evidential, historical and aesthetic values. The two-storey red-bricked hall is dated 1621 on the gables, with 19th and 20th century alterations and renovations. The building also contains

Jacobean style panelling and also some Art Nouveau details and also contains an attic.

3.3.1445 The setting of this asset is informed by its presence as post medieval hall within a rural agricultural landscape. The asset broadly remains within its original setting, with the asset retaining a historical relationship with its original context. The immediate setting of the asset is broadly confined to its immediate vicinity by established trees, with the surrounding landscape further informing the assets setting, albeit to a lesser extent. Overall, the asset's location within its broadly confined original setting means the setting of the asset makes a considerable contribution to its value. There is likely to be no intervisibility between the building and the Order Limits, restricted by its surrounding established treelines and nearby buildings. The setting of the asset does not extend within the Order Limits.

Flowton CP

3.3.1446 The Grade II listed 'Lovetofts Farmhouse' (**1250929**) is located off the western flank of High Street in Flowton, and c. 370 m south-west of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to around 1600, has 19th and mid-20th century alterations and comprises a plastered timber frame structure with s plain tiled roof. The farmhouse forms part of a historical farmstead known as Lovetofts Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2450**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1447 The setting of the asset is informed by its gardens and grounds and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1886 (**2450**). The setting is further informed by the asset's relationship with the non-designated post medieval buildings flanking High Street to the south and including the Grove Farm complex, which is identified as Flowtongrove on the 1886 map. The surrounding agricultural landscape, with which the asset and its outbuildings have historical and functional relationships, also contributes positively to the setting. The setting of the asset, therefore, makes a considerable contribution to its value, but due to screening by the mature vegetation of the asset's grounds, the setting does not extend to the Order Limits.

3.3.1448 The Grade II listed 'Valley Farmhouse' (**1251241**) is located at the northern extent of a private road c. 80 m north of Flowton Road, c. 590 m west-north-west of Flowton and c. 230 m south of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the late 16th and 17th centuries, has an extension dating to around 1800 and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1449 The setting of the asset is informed by its farmyard location and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1886. The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and it being restricted to the farmyard location and immediate landscape, the setting does not extend to the Order Limits.

3.3.1450 The Grade II listed assets 'Gates Farmhouse' (**1262861**) and 'Granary 5 Metres West of Gates Farmhouse' (**1250930**) are located on the north-western flank of Flowton

Road c. 640 m south-west of Flowton and c. 660 m south-south-east of the Order Limits. The granary is scoped out due to its restricted setting. The farmhouse is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the early 17th century, was extended in the 18th and mid-19th centuries and comprises a plastered timber frame structure with a plain tiled roof.

3.3.1451 The setting of the farmhouse is informed by its roadside garden location, by its interrelationship with the gramary, and its relationship with the non-designated outbuildings of the farm, some of which are recorded on the first edition OS map of 1886. The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but due to overall distance and it being restricted to the farm complex and immediate landscape, the setting does not extend to the Order Limits.

Bramford CP

3.3.1452 The Grade II listed 'Tye Farmhouse' (**1263018**) is located on the south-eastern flank of Tye Lane, c. 2.5 km west-north-west of Bramford, and c. 590 m east-north-east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse dates to the late 17th century, but may have a 16th century core, and comprises a roughcast timber frame structure with a plain tiled roof.

3.3.1453 The setting of the asset is informed by its garden location and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset has historical and former functional relationships. A barn to the south-west has been developed as a residential dwelling and associated property boundaries have separated it and another outbuilding from the farmhouse. The setting of the asset, therefore, makes a moderate contribution to its value, but as it is restricted to its garden location and the immediate landscape, the setting does not extend to the Order Limits (Figure 7.12.F41_VP2.20 Viewpoint 2.20: Tye Lane, east of Flowton; document reference 7.12).

3.3.1454 The Grade II listed assets 'Rutters Farmhouse' (**1251604**) and 'Outhouse Approximately 8 Metres West of Rutters Farmhouse' (**1262551**) are located immediately west of the junction of the B1113 and Somersham Road at the northern limit of Bramford and c. 600 m and 590 m north-east of the Order Limits. The assets are of **medium value** based on their designations and their evidential, historical and aesthetic values. The former farmhouse dates to the early 17th century and comprises a rendered timber frame structure with a plain tiled roof. The outhouse is a 19th century red brick bakehouse or washhouse with a pantile roof and is included for group value.

3.3.1455 The setting of the assets is shared and informed by their interrelationship and their relationships with a non-designated former barn immediately to the north, and which appears to be the only surviving element of the large farming complex recorded on the first edition OS map of 1884. The setting is further informed by the local agricultural landscape, with which the assets have historical and former functional relationships, although this link has been eroded by the expansion of Bramford to the south and east and by the development of a large horticultural supplies yard to the north. The setting of the asset, therefore, makes a minor contribution to its value, but

due to overall distance and it being restricted to the assets' grounds and immediate landscape, the setting does not extend to the Order Limits.

3.3.1456 The Grade II listed 'Bullenhall Farmhouse' (**1033263**) is located at the northern limit of a private road c. 450 m north of Bullen Lane, c. 1.8 km west of Bamford and c. 420 m north of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to around 1600 and comprises a roughcast timber frame structure with a plain tiled roof. The farmhouse forms part of a historical farmstead known as Bullenhall Farm. The Suffolk HER has recognised the farmstead complex as a non-designated heritage asset (**2436**). The farmstead has historical and evidential value and is of **medium value** based on its association with the listed building and its cohesion as a historical farming complex.

3.3.1457 The setting of the farmhouse is informed by its relationships with its non-designated outbuilding several of which are recorded on the first edition OS map of 1884 and also include a cluster of later 20th century barns to the south (**2436**). The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and functional relationships. The grounds of the asset are defined by a tree belt and mature tree lined hedgerows, which affords the asset and its post medieval outbuildings privacy and seclusion, although existing pylons lie c. 100 m to the north-west. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1458 'Fidgeons Farmhouse' (**1293253**) is located at the southern limit of an unnamed track c. 160 m south of Bullen Lane, c. 830 m west of Bramford, and c. 150 m south of an Order Limits access route and c. 620 m east of the Order Limits main corridor. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse dates to the early or mid-17th century, has 19th and 20th century alterations and comprises a plastered timber frame structure with a plain tiled roof. The farmhouse is situated within the 19th century Fidgeon's Farm Farmstead (**2356**), which due to its poor survival is of **low value** based on its historical and evidential values.

3.3.1459 The setting of the asset is informed by its farmyard location (**2356**) and by its relationship with its non-designated outbuildings, some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and outbuildings have historical and functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is restricted to the farmyard and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1460 The Grade II listed 'Thornbush Hall' (**1251603**) is located at the western extent of Thornbush Lane, c. 750 m south-west of Bramford, and c. 35 m north of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The farmhouse was built in the 17th century in several phases and a large addition was built in the late 19th century. The 17th century element of the asset comprises a timber frame structure with a south facing front façade of 18th century red brick, which is elsewhere rendered. The 19th century wing is constructed of red brick, whilst the roofs are of plain and concrete tiles. The farmhouse is situated within the 19th century Thornbush Hall Farmstead (**2357**), which due to its poor survival is of **low value** based on its historical and evidential values.

3.3.1461 The setting of the asset is informed by its farmyard location and by its relationship with its non-designated outbuildings (**2357**), some of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1462 The Grade II listed 'The Grindle House' (**1372456**) is located at the western limit of The Grindle (road), c. 1.1 km south-south-west of Bramford, and c. 300 m east of the Order Limits. The asset is of **medium value** based on its designation and its evidential, historical and aesthetic values. The former farmhouse was built in the early mid-17th, possibly around an earlier core, it was altered around 1980 and comprises a roughcast timber frame structure with a plain tiled roof. The farmhouse is situated within the 19th century Grindle Farm Farmstead (**2355**), which due to its moderate survival is of **medium value** based on its historical and evidential values.

3.3.1463 The setting of the asset is informed by its former farmyard location (**2355**) and by its relationships with its non-designated outbuildings, most of which are recorded on the first edition OS map of 1884. The setting is further informed by the surrounding agricultural landscape, with which the asset and its outbuildings have historical and former functional relationships. The asset and its outbuildings are still coherent as a former farming complex, and so the setting of the asset makes a considerable contribution to its value, but as it is restricted to the former farmyard and the immediate landscape, the setting does not extend to the Order Limits.

Non-Designated Heritage Assets

3.3.1464 The findspot of a **low value** incomplete cast copper-alloy hooked tag of post medieval date (**2416**) is located outside the Order Limits near Willisham Tye. The asset has evidential and historical value.

3.3.1465 Located partially within a permanent access route of the Order Limits, and approximately 900 m to the north-west of the village of Willisham, is the site of a now demolished **low value** unnamed farm (**2504**). The farm is recorded on the first edition OS map of 1885 immediately to the east of Tye Farmstead (**2485**) which is extant. It is not clear if this and the non-extant farm were functionally related. The site of the former farm holds evidential value.

3.3.1466 Located 80 m north of the Order Limits, and approximately 170 m north of the village of Offton, is a non-extant farm known as Well Farm (**2526**). The farm was constructed in the 19th century and is recorded on the first edition OS map. The asset has historical and evidential value, overall, it is of **low value**.

3.3.1467 The site of the former Gowing's Barn (**2465**) is located within the Order Limits and approximately 400 m to the south-west of Offton. The barn as constructed in the 19th century and appears on the first edition OS map 1885. It is depicted as 'L' shaped with a yard area. The asset has historical and evidential value, overall, it is of **negligible value**.

3.3.1468 To the west of the Order Limits, by approximately 170 m and to the west of Offton by approximately 1 km, is Shorten's Farm (**2527**). The farm was established in the 19th century and appears on the first edition OS map 1885. The farm complex is now non-extant and only the farmhouse survives. The asset has historical and evidential value, overall, it is of **low value**.

3.3.1469 A **low value** multi-period concentration of PAS artefacts (**2562**) of evidential value has been recovered from farmland c. 150 m from the Order Limits and west of Offton. The post medieval artefacts comprise a lead and iron drop weight and a lead toy cannon.

3.3.1470 A **low value** multi-period concentration of PAS artefacts (**2563**) of evidential value has been recovered from farmland within the Order Limits and west of Offton. The post medieval artefacts comprise a coin weight and a token.

3.3.1471 Along Ipswich Road, approximately 750 m south-east of Offton and c. 160 m east of the Order Limits is the **medium value** 19th century farmstead Rook Hill Farm (**2408**) It is a L-shaped layout, including a farmhouse and agricultural buildings. The complex is part of a hamlet and has detached elements. Adjacent to the asset to the north is a **low value** lime kiln (**2406**) and chalk pit. It is located c. 120 m east of the Order Limits.

3.3.1472 The setting of asset (**2408**) is informed by its location within the dispersed rural settlement of Offton and by its relationships with the listed buildings and non-designated buildings which contribute positively to the character of the village. the setting is further informed by the surrounding agricultural landscape with which the asset has historical and ongoing functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but as it is focused on its settlement location and the immediate landscape, the setting does not extend to the Order Limits.

3.3.1473 Further east are **low value** archaeological discoveries of evidential value at Rook Hill Farm, particularly in Fields 3 & 3a (**2405**) and Field 2 (**2401**). Here were identified a background scatter of medieval and post medieval metalwork including a range of items such as Tudor buckles and button, a 17th century trade token, a crotal bell, a toy gun, Tudor button; an unidentified (medieval/post medieval) silver coin; an 18th century seal matrix and an Admiral Vernon seal.

3.3.1474 A silver post medieval thimble (**2537**) was found near Offton and outside the Order Limits. It has an evidential and historical value but is of **low value**.

3.3.1475 The remaining lime kiln at the Rook Hill Farn in Offton (**2406**), along with an adjacent chalk pit, hold historical value.

3.3.1476 Within the Order Limits near Somersham is the findspot of a small earthenware pot (**2536**), about 75 mm high with a brown-black sandy fabric and granitic inclusions. Its use could be as an inkwell or paint pot, possibly early 20th-century ‘art pottery’ or a Spanish/Portuguese import of uncertain, likely post medieval date. It has historical and evidential value and is of **low value**.

3.3.1477 The site of the former Mount Sorrowful Farm (**2521**) is located 60 m to the north of the Order Limits, approximately 1.1 km to the south-west of Lower Somersham. The farm was constructed in the 19th century and can be seen on the first edition OS map 1885. The asset has historical and evidential value and is of **low value**.

3.3.1478 Partially within the Order Limits m and approximately 1.3 km to the west of Lower Somersham, is Caley Green Farm (**2522**). The farm was constructed in the 19th century. A comparison between the first edition OS map 1885 and the present Google Earth images shows that the farm has lost several historical buildings. The farm has evidential and historical value and is of **low value**.

3.3.1479 Park Farm Farmstead (**2368**) is located c. 230 m south-east of Flowton Road, c. 550 m south-west of Somersham and 90 m north-east of the Order Limits. It is a 19th century farmstead and farmhouse with converted buildings on a regular courtyard U-shaped plan formed by working agricultural buildings. Although modernised, the farmstead is largely intact and so of **medium value** based on its historical and evidential value.

3.3.1480 The setting of the asset is informed by the interrelationships between the constituent buildings and by their relationships with later buildings within the working complex. The setting is further informed by the surrounding agricultural landscape with which the asset has historical and ongoing functional relationships. The setting of the asset, therefore, makes a considerable contribution to its value and due to the proximity of the Project, the setting extends to the Order Limits.

3.3.1481 The **low value** post medieval artefact scatter of metalwork and coins (**2404**) hold historical value. It is located north-east of Flowton, and c. 200 m of the Order Limits.

3.3.1482 To the west of the Order Limits by approximately 230 m and approximately 340 m north-east of Flowton, is the historical farmstead known as Grove Farm or Flowtongrove (**2528**). The farm was constructed in the 19th century and can be seen on the first edition OS map 1886. Google Earth shows that the many if the agricultural buildings on the map are no longer extant. The exception is the farmhouse and possible one barn. The asset has historical and limit evidential value. Overall, it is of **low value**.

3.3.1483 The post medieval boundary ditches (**2496**) located within the Order Limits, at the end of Bullen Lane, approximately 2.5 km west of Bramford, have **low value**. Identified through archaeological evaluation, these ditches have a documented history dating back to at least the 19th century. The asset holds historical and evidential value.

3.3.1484 Two **low value** post medieval field boundaries (**2376**) of evidential value were identified during an archaeological watching brief for a pipeline on land at Tye Lane, c. 1.2 km south-east of Flowton and within the Order Limits. The assets are recorded on 19th to 20th century OS mapping.

3.3.1485 A post medieval cast copper alloy dress fastener with a hexagonal shape and an intricate openwork geometric design at the centre (**2547**) was found outside the Order Limits near Bramford. It has evidential and historical value but is of **low value**.

3.3.1486 A **low value** multi-period concentration of PAS artefacts (**2566**) of evidential value has been recovered from farmland partially within the Order Limits and west of Bramford. The post medieval artefact comprises silver coin.

3.3.1487 A **low value** multi-period concentration of PAS artefacts (**2565**) of evidential value has been recovered from farmland partially within the Order Limits and west of Bramford. The post medieval artefacts comprise a coin a jetton and two strap ends.

3.3.1488 Located immediately south and east of the Order Limits, and approximately 1.7 km to the west of Bramford, is Bullen Farm (**2532**). This historical farmstead dates to the 19th century and appears on the first edition OS map 1884. A comparison between this map and Google Earth Pro shows that all of the historical buildings within the farm are now gone. The asset still has a farming function (storage), but it does not function as a working farmstead. The asset has historical and limited evidential value and is of **low value**.

3.3.1489 A **low value** multi-period concentration of PAS artefacts (**2564**) of evidential value has been recovered from farmland c. 10 m from the Order Limits and east of Candle Street. The post medieval artefact comprises a harness mount.

3.3.1490 The **low value** Hill Farm (**3123**) is a farmstead situated c. 250 m west of the Order Limits to the east of Burstalhill. The farmstead is visible on the first edition OS map set out in a loose plan with a detached farmhouse set away from the yard. There has been partial loss of the working buildings and there are some modern sheds on the side of the Farmstead. This asset is associated with the Grade II listed medium value Church Farmhouse (**1036952**) and holds evidential and historic value.

Cropmark and LiDAR Assessment

3.3.1491 The Project has identified a **low value** cropmark complex (**2751**) of evidential value to the west and south of Willisham Tye and partially within the Order Limits. The cropmarks are largely visible as field boundaries on the first edition OS map.

3.3.1492 The Project has identified a cropmark complex (**2755**) of evidential value in the fields to the south and east of the Grade II listed Tollemache Hall (**1262668**) and c. 110 m west of the Order Limits. The complex was further added to by features visible on image 27027_012 available at Historic England's online Aeriel Photo Explorer. Some of the cropmarks are visible as **low value** field boundaries and ponds on the first edition OS map, however, several features are unmapped and partially overlap with the site of the medieval Little Bricett Church (**2247**) recorded by the Suffolk HER. A church is represented by a simple cross on Hodgkinson's Map of 1783 to the east Tollemache Hall but it is not recorded on the OS drawing of Sudbury of 1802. The cropmarks in the area of the HER monument appear to be **low value** agricultural enclosures and field boundaries, however, any representing remains of the medieval church would likely be of **medium value**. The setting of asset (**2755**) is considered in conjunction with the site of Little Bricett Church (**2247**) in the medieval section above.

3.3.1493 The Project has identified **low value** cropmarks (**2757**) of evidential value within the farmland around the settlement of Offton and partially within the Order Limits. The cropmarks are visible as field boundaries on the first edition OS map.

3.3.1494 The Project has identified a **low value** cropmark complex (**2759**) of evidential value in the farmland to the west of Somersham and partially within the Order Limits. The cropmarks are largely visible as field boundaries on the first edition OS map.

3.3.1495 The Project has identified a **low value** cropmark complex (**2753**) of evidential value in farmland c. 750 m to the north-east of Flowton and partially within the Order Limits. The cropmarks are largely visible as field boundaries on the first edition OS map.

3.3.1496 The Project has identified a **low value** cropmark complex (**2752**) of evidential value in farmland c. 500 m to the south-east of Flowton and partially within the Order Limits. The cropmarks are largely visible as field boundaries on the first edition OS map, but there may be earlier elements.

3.3.1497 The Project has identified a **low value** cropmark complex (**2754**) of evidential value in the farmland to the south of Bullen Lane, immediately east of the Bullen Lane Substation and partially within the Order Limits. The cropmarks are largely visible as field boundaries on the first edition OS map, but small enclosures to the east of the Grade II listed Fidgeons Farmhouse (**1293253**) suggest earlier activity.

3.3.1498 The Project has identified a **low value** cropmark complex (**2767**) of evidential value in the farmland immediately south of the Bullen Lane Substation and largely within

the Order Limits. The cropmarks correspond with field boundaries, trackways and ponds visible on the first edition OS map and also include the site of the former Rose House (**2732**).

3.3.1499 The Project has identified a **low value** cropmark complex (**2768**) of evidential value in the farmland flanking Thornbush Lane, c. 900 m east-south-east of Bullen Lane Substation and partially within the Order Limits. The cropmarks are largely visible as field boundaries on the first edition OS map, but the possible ditches, pits and structural remains immediately west of Thornbush Lane suggest an earlier phase of activity.

Historic Mapping Assessment

3.3.1500 A series of negligible value ponds of evidential value have been identified during analysis of the historic Ordnance Survey mapping both with 250 m of the Order Limits and within the Order Limits themselves. Assets of this type within this subsection are outlined as follows:

- A total of four ponds are located within the Order Limits (**2925**, **2943**, **2949**, **2950**).
- A total of 15 ponds are located within 250 m of the Order Limits (**2902**, **2904**, **2905**, **2916**, **2918**, **2923**, **2924**, **2928**, **2929**, **2930**, **2933**, **2934**, **2937**, **2938**, **2941**).

3.3.1501 **Low value** parish boundaries (**2760**, **2764**, **2751**, **2906**, **2907**, **2909**, **2910**, **2911**) of evidential and historic value have been identified crossing the Order Limits and within the 250 m Study Area within this sub-section. The boundaries can be observed on the 1884 1:2500 and 1:10560 OS Maps and are still present. It is unknown to what extent the boundaries may physically be extant within the landscape. Boundary (**2752**) is also marked as the county boundary between Suffolk and Norfolk from the 1884 OS map onwards.

3.3.1502 Twenty-one **low value** possible important hedgerow locations of evidential and historic value are located crossing the Order Limits (**2548**, **2549**, **2550**, **2552**, **2554**, **2556**, **2913**, **2919**, **2920**, **2942**, **2947**, **2948, 2997, 2998, 2999, 3537, 3538**, **3543**, **3539**, **3547**) and within the 250 m Study Area (**2912**, **2914**, **2915**, **2922**, **2939**, **2945, 3401**) within this sub-section. The hedgerows are first observed on the 1884 1:2500 OS map. It is unknown how much these hedgerows pre-date the 1884 map edition.

3.3.1503 **Low value** buildings (**2926**) of evidential and historic value have been observed within the Order Limits, approximately 355 m north-west of Offton Road. Buildings are first observed on the 1884 1:2500 and 1:10560 OS map and are last seen on the 1905 1:10560 OS map. It is unknown when the buildings are no longer extant within the landscape, however they are not present by the 1953 1:10560 OS map. Further similarly valued buildings (**2927**) have also been observed approximately 10 m to the south-west, outside of the Order Limits. These buildings (**2927**) are also observed on the 1884 maps and are last observed on the 1994 1:2500 OS map as 'the cottage barn' and are no longer extant.

3.3.1504 A **low value** building and land parcel (**2936**) of evidential and historic value have been observed partially within the Order Limits immediately west of Offton Road. The asset is recorded as 'Hole in the Wall' on the 1884 1:2500 and 1:10560 OS maps, and the 1902 1:10560 OS map, but is not seen on subsequent mapping. The land parcel itself is last observed on the 1971 1:10560 OS map.

3.3.1505 **Low value** buildings and their associated land plot (**2932**) of evidential and historic value have been observed immediately north of the Order Limit, approximately 145 m

south-west of Blood Hill. The buildings and land plot are recorded north of the possibly associated 'Mount Sorrowful' on the 1884 1:2500 and 1:10560 OS maps and are last seen on the 1902 1:10560 OS map.

3.3.1506 The **low value** 'Old Quarry Pit' quarry (**2946**) of evidential and historic value has been observed approximately 5 m north of the Order Limits and 530 m south of Bullen Lane. The quarry is first observed on the 1880 1:2500 OS map and last observed on the 1902 1:2500 OS map.

3.3.1507 **Low value** buildings, structures, well and associated yard recorded as 'Monk's Cottage (**2935**) of evidential and historic value have been observed traversed by a permanent access route of the Order Limits, immediately east of Flowton Road. This asset is first observed on the 1884 1:2500 and 1:10560 OS map, with the buildings last seen on the 1953 1:10560 OS map, and the well remaining until the 1971 1:10560 OS map.

3.3.1508 A **low value** woodland copse and c-shaped pond (**2931**) of evidential and historic value has been observed approximately 40 m north of the Order Limits and immediately west of Blood Hill. The copse and pond are first observed on the 1884 1:2500 and 1:10560 OS map and the copse is still extant within the landscape. The pond is last seen on the 1995 1:2500 OS map but is obscured by trees canopies on current aerial imagery so it is unknown if the pond is still extant within the landscape.

3.3.1509 **Low value** buildings, structures and associated land parcel (**2917**) have been observed approximately 55 m east of the Order Limits and west of Castle Road. The buildings, structures and land parcel are first observed on the 1884 1:2500 and 1:10560 OS map and are last seen on the 1905 1:10560 OS map.

3.3.1510 Two **low value** assets marked as 'Stone' (**2903**, **2908**) of evidential and historic value have been observed approximately 60 m east of the Order Limits and 190 m north of Holly Road (**2903**), and at Bildeston Road approximately 105 m north-east of the Order Limits (**2908**) as follows. Both stones could be the locations of possible standing stones of prehistoric date or even a post medieval boundary marker:

- Stone **2903** is first observed on the 1884 1:2500 and 1:10560 OS map and is last observed on the 1902 1:2500 OS map
- Stone **2908** is observed on the 1884 1:2500 and 1:10560 OS map but is not seen on subsequent mapping.

3.3.1511 A **low value** thin scatter of medieval metalwork and a pottery sherd (**2395**) was recovered from farmland at Rook Farm, north of Ipswich Road and c. 220 m north-east of the Order Limits. The metal finds include two coins, a button, a token, a seal, a bodkin, a spur and a bell.

3.3.1512 A **low value** thin scatter of medieval metalwork and a pottery sherd (**2397**) was recovered from farmland at Rook Farm, south of Ipswich Road and c. 110 m north of the Order Limits. The metal finds include a coin, a token, a bell, a weight, and a finger ring.

3.3.1513 A **low value** 'Old Gravel Pit' quarry (**2921**) of evidential and historic value has been observed approximately 80 m north-east of the Order Limits and immediately south-west of Ipswich Road. The gravel pit is first observed on the 1884 1:2500 and 1:10560 OS map. Th location is marked as a pond on all subsequent mapping.

3.3.1514 The **low value** 'Darmsden Bushes' woodland copse (**2940**) of evidential and historic value has been observed approximately 110 m east of the Order Limits and

immediately north of Tye Lane. The woodland copse is first observed partially between the 1880 1:2500 and 1884 1:2500 and 1:10560 OS maps. The building of 'Oakwood' Tye House' can be observed on all subsequent map editions from 1902 onwards within the south-east of the land plot.

Modern

Needham Market and Ringshall

Non-Designated Heritage Assets

3.3.1515 Located partly within the Order Limits, approximately 190 m north of Barking village, was a type 23 pillbox (**2301**). It is no longer extant. A group of four WWII assets are located between 250 m and 240 m to the south-east of the Order Limits and approximately 2 km south-east of Ringshall. The assets (**2300**) comprise: a search light emplacement, a hexagon shaped pill box, a type 22 pill box and a type 23 pill box). All are located within a grassed area known as The Tye. This collection of assets, along with pill box (**2301**), would have defended settlements or important areas within Barking during WWII. All these assets have some historical value and are of **low value**.

Great Bricett and Bramford

Non-Designated Heritage Assets

3.3.1516 Located within the Order Limits and approximately 2 km south-west of Bramford village, was Sproughton/Burstall Patrol Auxiliary Unit Operational Base (**2048**). The base originally had two Nissen huts, these were perpendicular to one another and connected by a short passageway. The main hut has a drop-down entrance shaft and an emergency exit. The huts are no longer extant. The base has historical value and potentially evidential value. Overall, it is of **low value**.

3.3.1517 The site of a former **low value** D-Day marshalling area camp (**2342**) of evidential value is located within Bramford Hall Park c. 730 m west of Bramford and c. 40 m north of the Order limits. RAF photography of May 1944 records numerous structures and over 170 bell tents. All traces of the camp were removed by 1947.

Undated

Wortham, Mellis and Gislingham

Non-Designated Heritage Assets

3.3.1518 Human skeletal remains (**2714**) were recovered during works associated with the A143 Scole-Stuston Bypass in 1993, c. 50 m north of the Order Limits. The asset is of **low value** based on its evidential value. Although the remains are undated, Roman and Anglo-Saxon artefacts have been recovered in the vicinity, and it is possible the remains date accordingly.

3.3.1519 The cropmark of an irregular enclosure with a concave northern side (**2719**) is located north of Mendlesham Road, c. 1.2 km east-south-east of Cotton and partially within the Order Limits. The undated enclosure traverses the cropmark of a ring ditch

(**2038**) whilst enclosing another (**2039**). The ring ditches are likely the remains of Bronze Age round barrows and reported above, but without further investigation it is not possible to date the enclosure. The asset is of **low value** based on its evidential value.

3.3.1520 A **low value** undated PAS find (**2728**) of evidential value was recovered as part of a larger finds assemblage from farmland within the Order Limits, near Gislingham. The artefact comprises an apparently complete cast copper alloy unidentified object consisting of a shaft with a rectangular cross-section which is 4 mm wide and 27 mm in length. Both ends of the shaft terminate with knobs that taper towards the terminal end.

3.3.1521 A **low value** undated ditch (**2013**) of evidential value was identified during an archaeological evaluation of land on the edge of Mellis Green (**2222**) c. 160 m south-east of the Order Limits. Although undated the north-south aligned feature may represent a boundary ditch between one green-side tenement and its immediate neighbour and so of medieval/post medieval date.

3.3.1522 A large **low value** ditch (**2067**) of evidential value was identified during the archaeological monitoring of footing trenches at Treetops within the former Home Farm Farmstead complex (**2459**). Although undated the feature probably relates to medieval to post medieval water management.

Finningham, Mendlesham and Old Newton

Non-Designated Heritage Assets

3.3.1523 An unidentified cropmark (**2720**) is located c. 650 m north-east of Gislingham and c. 30 m north-east of the Order Limits. No further details are held be the HER. The asset is of **low value** based on its evidential value.

Middlewood Green and Stowmarket

Non-Designated Heritage Assets

3.3.1524 The cropmarks of a series of drainage ditches and field boundaries (**2722**) are located on the northern flank of the Gipping valley c. 900 m north-north-west of Needham Market and partially within the Order Limits. The asset is of **low value** based on its evidential value.

3.3.1525 The cropmark of a large pit or area of extraction c. 21 m in diameter (**2723**) is located on the western flank of Mill Lane and adjacent to the eastern flank of the Order Limits. The asset is of **low value** based on its evidential value.

3.3.1526 The cropmark of a small sub-rectangular enclosure (**2721**) is located immediately south-west of Mill Lane, c. 560 m south-south-east of Creeting St Peter and crossed by an Order Limits access road. The asset is of **low value** based on its evidential value. The enclosure is approximately 70 m by 60 m and the ditches are approximately 4 m in width.

3.3.1527 The cropmarks of parallel ditches, possibly a short section of trackway (**2724**) is located on the northern flank of the Gipping valley c. 1 km north-north-west of Needham Market and partially within the Order Limits. The asset is of **low value** based on its evidential value.

3.3.1528 The cropmarks of a series of field boundaries and ditches (**2725**) are located c. 1.15 km north-north-west of Needham Market and partially within the Order Limits. The asset is of **low value** based on its evidential value.

3.3.1529 The **low value** cropmark of a partial ring ditch cut by a modern field boundary (**2294**) is of evidential value and is located c. 1.1 km south of Creeting St Peter and c. 200 m north-west of the Order Limits. The asset is associated with three further ring ditches (**2028** and **2029**), which are considered to be the remains of Bronze Age barrows.

Needham Market and Ringshall

Non-Designated Heritage Assets

3.3.1530 A geophysical survey was carried out on land to the north of Badley Hill and c. 120 m south-west of the Order Limits in support of a planning application to construct the Woodlands Solar Farm. The survey identified **low value** undated anomalies (**2385**) of evidential value. Although undated, the anomalies possibly represent, prehistoric, Romano-British and post medieval activity.

3.3.1531 The cropmark of a curvilinear enclosure (**2700**) is located c. 150 m west of Barking Road in Barking, and c. 120 m east of the Order Limits. The asset is of **low value** based on its evidential value. The cropmark is located within the larger Barking Tye medieval green (**2232**) HER monument.

3.3.1532 The site of an ancient woodland (Great Newton Wood) (**2701**) is located at the south-west extent of an unnamed road, c. 1.8 km west of Needham Market and partially within the Order Limits. The asset is of **low value** based on its evidential value. The extent of the woodland has been reduced since it was originally mapped, and the remaining trees are located just outside the Order Limits.

3.3.1533 The site of an ancient woodland (Collage Grove) (**2702**) is located north of the Grade II listed Collage Grove Farmhouse (**1231093**), west of Needham Market and outside the Order Limits. Nothing of the woodland survives today. A single sherd of very abraded medieval courseware pottery (**2302**) and two possible medieval copper alloy harness rings (**2015**) were recovered from within the woodland as PAS finds. The woodland is of **low value** and the find is of **negligible value**. Both have evidential value, and the woodland has historical value.

3.3.1534 The site of an ancient woodland (Little Newton Wood) (**2703**) is located either side of an unnamed road c. 1.1 km west of Needham Market and just clipped by an Order Limits permanent access road. The asset is of **low value** based on its evidential value. The extent of the woodland has been reduced since it was originally mapped.

3.3.1535 The remains of a **negligible value** pavement of unknown date (**2299**) of evidential value has been identified to the east of Barking Hall in Barking and c. 250 m east of the Order Limits.

3.3.1536 An ancient woodland (Lower Wood) (**2707**) is located c. 770 m west of Barking and just within the western flank of the Order Limits. The asset is of **low value** based on its evidential value. The extent of the woodland has been reduced since it was originally mapped.

3.3.1537 An ancient woodland (Swingen's Wood) (**2293**) is located c. 550 m south-east of Barking and c. 200 m south-east of the Order Limits. The extant asset is of **low value** based on its evidential value.

3.3.1538 An ancient woodland (Keyfield Groves) (**2708**) is located c. 1.5 km north-west of Needham Market and c. 120 m north-west of the Order Limits. The asset is of **low value** based on its evidential value. The extent of the woodland has been reduced since it was originally mapped.

3.3.1539 The cropmarks of a possible stretch of four or five curving interrupted ditch sections (**2716**) are located to the south-east of the Keyfield Groves woodland (**2708**) and partially within the Order Limits. The asset is of **low value** based on its evidential value.

3.3.1540 A geophysical survey was undertaken on three sites ahead of the development of Bramford solar photovoltaic farm and battery. The sites are located c. 500 m north-west, c. 1 km north-west, and c. 890 m south-east of Flowton and in all three cases, within 120 m of the Order Limits. The survey identified five areas of archaeological potential comprising **low value** enclosures and field boundaries (**2381**) of evidential value.

Great Bricett and Bramford

Non-Designated Heritage Assets

3.3.1541 A cobbled surface in a clay/loam matrix (**2704**) was identified in the garden of 3 St Marys Close, Offton at a depth of 300 mm to 400 mm below the local ground surface. The asset is of **low value** based on its evidential value.

3.3.1542 An ancient woodland (Middle Wood) (**2705**) is located immediately north of Bildeston Road, c. 250 m north-west of Offton and adjacent to the Order Limits to the west and east. The asset is of **low value** based on its evidential value. The woodland exists as mapped at the time of writing.

3.3.1543 An ancient woodland (Somersham Park) (**2706**) is located c. 290 m north of Flowton and adjacent to the Order Limits. The asset is of **low value** based on its evidential value. The woodland exists as mapped at the time of writing.

3.3.1544 An ancient woodland (Round Wood and Elms Grove) (**2709**) is located c. 2 km south-west of Bramford and partially within the Order Limits. The asset is of **low value** based on its evidential value. The woodland exists as mapped at the time of writing.

3.3.1545 An ancient woodland (Bullen Wood) (**2710**) is located immediately to the east of Bramford Substation and entirely within the Order Limits. The asset is of **low value** based on its evidential value. The extent of the woodland has been reduced since it was originally mapped, likely due to the construction of the substation.

3.3.1546 An ancient woodland (Miller's Wood) (**2711**) is located between Tye Lane and Bullen Lane, c. 1.5 km west of Bramford and adjacent to the Order Limits along Bullen Lane. The asset is of **low value** based on its evidential value. The woodland exists as mapped at the time of writing.

3.3.1547 A pit containing charcoal and clay fragments (**2712**) was identified during an archaeological watching brief on Castle Road, Offton, and 240 m south-west of the Order Limits. The asset is of **low value** based on its evidential value.

3.3.1548 The cropmark of a poorly defined ring ditch (**2713**) is located c. 780 m north of Flowton, 70 m east of Flowton Road and c. 220 m south-south-west of the Order Limits. The ring ditch is around 25 m in diameter and is of **low value** based on its evidential value.

3.3.1549 Two areas of ancient woodland (**2715**) to the north and south of Bulling Green (**2244**) are located c. 360 m north-north-west of the Bramford Substation and partially within the Order Limits. The asset is of **low value** based on its evidential value. The woodland exists as mapped at the time of writing.

3.3.1550 The cropmark of a rectangular cropmark (**2717**) is located c. 800 m west of Barking and partially within the Order Limits. The asset is of **low value** based on its evidential value.

3.3.1551 The cropmarks of a trackway, a small rectangular enclosure, linear ditches and a possible pit (**2726**) are located c. 970 m south-west of Bramford and largely within the Order Limits. The asset is of **low value** based on its evidential value. The trackway is visible for around 200 m, aligned east/west, before turning to the north-east. The small rectangular enclosure measures approximately 23 m by 39 m and is appended to the northern flank of the trackway.

3.3.1552 The **low value** cropmarks of rectilinear enclosures (**2331**) of evidential value are located c. 830 m north-east of Flowton and within the Order Limits.

3.3.1553 The cropmarks of several ditches (**2727**) are located c. 1.3 km south-west of Bramford, c. 120 m west of cropmarks (**2726**) and partially within the Order Limits. The asset is of **low value** based on its evidential value. The review of the available aerial imagery by the Project has added several cropmarks to this complex and the HER polygon has been slightly extended to incorporate them.

3.3.1554 A **low value** PAS find of evidential value comprising a copper-alloy fragment from an unidentified object (**2576**) was recovered from farmland west of Bramford and outside the Order Limits.

3.3.1555 The **low value** cropmark of a possible partial enclosure (**2343**) of evidential value is located on the north-western outskirts of Bramford and c. 140 m north of the Order Limits.

3.3.1556 A **low value** cropmark complex including possible field boundaries, trackway and extraction pits (**2344**) is of evidential value and located c. 410 m west of the bB113 at Bramford and c. 140 m south of the Order Limits.

3.3.1557 Linear **low value** cropmarks and an extant extraction pit (**2345**) of evidential value are located within Bramford Hall Park c. 540 m west of Bramford and c. 140 m north of the Order Limits.

3.3.1558 The **low value** Burstall Long Woodland (**3183**), an ancient woodland, is situated c. 950 m north-east of Burstall and adjacent to the Order Limits which pass the settlement of Burstall on the eastern side. This asset holds evidential and historical value.

3.4 Section C: Babergh District Council, Colchester City Council and Tendring District Council

3.4.1 Known non-designated heritage assets and conservation areas identified in this Baseline Report are referenced using a consistent Project specific identification number. The preferred identification number from the originating organisations is provided in a gazetteer (Document reference – 6.11.A1 Annex B - Gazetteers) that accompanies this Baseline Report for cross reference. Designated assets are

referenced by their National Heritage List Entry numbers. Descriptions of the heritage assets are provided in this Baseline Report, Section C.

Location

3.4.2 The northern portion of Section C is located in the County of Suffolk and within the District Borough Unitary of Babergh, although the 3 km Study Area extends a little way into the District Borough Unitary of Ipswich. The southern portion of Section C is located in the County of Essex and within both the Unitary District Boroughs of Colchester and Tendring. Section C begins c. 480 m south of Bullen Lane Substation between Flowton and Burstall, c. 1.5 km west of the outskirts of Ipswich. From its northern limit, Section C heads generally south-south-west, by-passing the settlements of Burstall, Chattisham, Capel St Mary, Raydon, Langham and Ardleigh before arriving at the proposed East Anglia Connection Node (EACN) Substation 2 km east of Ardleigh. From here the Project heads west before Section C terminates at Old Ipswich Road 5 km to the west. Section C accounts for approximately 29 km of its overall length.

Topography

3.4.3 The northern extent of Section C, just south of Bramford Substation between Flowton and Burstall, stands at c. 56 m aOD. From here to the A1071 to the south at 37 m aOD the landscape is gently undulating. Section C crosses the Belstead Brook Valley, a tributary of the Orwell south of the A1071, at c. 16 m aOD, before climbing, and passing through a gently undulating landscape between 40 m and 51 m aOD to the B1068 to the south-south-west. Here, Section C crossed the Stour Valley c. 7 m aOD to the west of Stratford St Mary, before passing through undulating land between 38 m and 45 m aOD on its way to its southern limit at Old Ipswich Road.

Geology

3.4.4 From north to south the solid geology of Section C consists of alternating bands of clay, silt and sand of the Thames Group, and sand of the Red Crag Formation. Clay, sand and silt of the Thanet Formation and Lambeth Group underlies the Stour Valley and then to the south of here to its southern terminus, Section C is once again underlaid by clay, silt and sand of the Thames Group.

3.4.5 The superficial geology in the northern half of Section C is dominated by glacial till of the Lowestoft Formation. The till has a high chalk and flint content and includes outwash sands, gravels, silts and clays. Variation in this deposit model is seen in the Belstead Brook Valley where mixed bands of sand and gravel of the Lowestoft Formation; sand and gravel of the Kesgrave Catchment Subgroup; diamicton head deposits; and sand and gravel of the Kesgrave Catchment Subgroup are recorded. Glacial till of the Lowestoft Formation lies to the south of Belstead Brook Valley and prevails until just north of the Stour Valley. The superficial river valley deposits comprise mixed bands of diamicton head deposits; sand and gravel of the Lowestoft Formation; sand and gravels of the Kesgrave Catchment Subgroup; gravel head deposits; sand and gravel of River Terrace Deposit; and alluvial clay and silt. The superficial valley deposits give way, just to the south of Lamb Corner, to clay, silt and sand of Cover Sand Formation with bands of sand and gravel of the Kesgrave Catchment Subgroup extending to the southern limit of Section C.

3.4.6 Palaeolithic potential data mapped by the Essex HER suggest a moderate potential for evidence of Palaeolithic activity within the Order Limits between Pylon TB14 and TB17 to the west of Ardleigh. The asset comprises a deposit of Pleistocene Kesgrave (Colchester) Gravels located along the presumed boundary of the Waldringfield Member and Ardleigh member. A very small proportion of this superficial deposit falls within the Order Limits and extends further to the north and south.

Historic Landscape Characterisation

3.4.7 The historic landscape character of the Project described in this section of the report is shown on Figure A11.1.4: Historic Landscape Characterisation and Protected Lanes in Annex A. Section C is located in two National Character Areas; National Character Area 86: South Suffolk and North Essex Claylands and National Character Area 111: Northern Thames Basin. National Character Area 86 is characterised by a high, boulder clay central plateau dissected by small-scale undulating river valley topography. National Character Area 111 is characterised by the suburbs of North London, historic towns and cities and in the area of the Project, by moderately dispersed settlements, arable land and river valleys. (Natural England accessed 29/03/2023).

3.4.8 The Suffolk landscape through which the Order Limits passes is further divided into Landscape Character Types (LCT) as defined by Suffolk County Council[2]. From the Norfolk/Suffolk border immediately south to Stratford St Mary, the Order Limits passes through Ancient Plateau Claylands (LCT 3) before the Rolling Valley Farmlands (LCT 18) of the Belstead Brook Valley. The Order Limits then passes through Ancient Estate Claylands (LCT 1) and Plateau Farmlands (LCT 12) before its crossing of the Stour Valley with bands of Rolling Valley Farmlands (LCT 18) to the north and south of Valley Meadowlands (LCT 26) in the valley bottom.

3.4.9 The Historic Landscape Characterisation (HLC) data supplied by the Suffolk HER (Suffolk County Council Archaeological Service, 2012) indicates that the Section C of the Project from just south of Bramford Substation to the Suffolk/Essex boundary is dominated by a **negligible value** post-1950 agricultural landscape, largely derived through boundary loss from irregular co-axial fields, and pre-18th-century enclosure represented by **low value** irregular co-axial fields. The Order Limits also passes through, or close to, a disused military site, parcels of heath or rough pasture, and meadow or managed wetland.

3.4.10 South of the Stour Valley, the Order Limits passes into Essex. The Essex landscape of the Northern Thames Basin (NCA 111) has been further divided, by District, into Historic Environment Character Zones (HECZ) as defined in Section C by the Colchester Borough Historic Environment Characterisation Project (CBC/ECC, 2009) and the Tendring District Historic Environment Characterisation Project (TDC/ECC, 2008).

3.4.11 The first HECZ through which the Order Limits passes is HECZ 1.3: Stour Valley around Langham in the District of Colchester. This area is open and flat within the floodplain of the river Stour and the lower slopes of the Stour Valley. Fields are generally meadow defined by straight and sinuous drainage ditches, although there has been moderate to high 20th century boundary loss. The archaeological character of the zone is dominated by a number of multi-period cropmark complexes.

[2] Suffolk County Council[2] (https://suffolklandscape.org.uk/ - Accessed 29/03/2023).

3.4.12 Heading south, the next zone is HECZ 1.4: Langham, which comprises a sloping valley side landscape above the floodplain of the Stour. The field scape includes 18th and 19th century enclosure, enclosed meadow pasture along the Black Brook and, elsewhere in the zone, comprises irregular enclosure, which is likely to be ancient, probably Medieval, in origin. There has been moderate to high field boundary loss within the zone. The archaeology of the zone is dominated by a number of multi-period cropmark complexes that the Order Limits passes through. Stray finds of archaeological material from across the zone include a Prehistoric jadeite axe and Neolithic or Bronze Age arrowheads, cores and flakes, Beaker pottery and Roman coins and tile.

3.4.13 The next zone HECZ 3.4: Boxted Airfield area, which is located in the District of Colchester, comprises the former extent of the World War II Boxted Airfield. The zone lies on the top of a plateau, bounded by the valley slopes of the Black Brook to the north and the A12 and the valley of the Salary Brook to the south. Many Neolithic axes and other implements have been found within the zone, particularly around Park Lane Farm c. 2 km west of the Order Limits. Cropmarks indicative of Bronze Age, Iron Age and Romano-British settlement are also noted in the zone.

3.4.14 The Order Limit then passes through a short section of HECZ 12.2: Ardleigh in the District of Tendring (see below) before crossing into HECZ 12.4: Foxash Estate also in Tendring. The Foxash Estate Zone was largely developed for horticultural purposes in the 20th century and the fieldscape comprised a mixture of regular and irregular fields. Cropmarks are noted sporadically throughout the zone and consist mainly of linear features, enclosures and ring-ditches. There is the potential for the survival of deposits associated with the medieval and post medieval dispersed settlement pattern.

3.4.15 The next zone is HECZ 13.2: Bradfield Heath, which includes the EACN Substation 2 km east of Ardleigh. The area was heathland in the medieval and early post medieval period, but it is now largely under arable and some pastoral agriculture. The current fieldscape comprises a mixture of later enclosure by agreement and irregular fields of ancient origin with moderate boundary loss post the 1950s. The zone has a high density of cropmarks indicating the area that has long been the subject of human occupation and activity and there is potential for multi-period archaeological deposits.

3.4.16 The Order Limits then pass through a second short section of HECZ 12.2: Ardleigh (see below) before entering the northernmost part of HECZ 12.1: Ardleigh Cropmark Complex. The fieldscape is one of historic rectilinear field patterning of possible ancient origin, however, there has been considerable field boundary loss across the zone. The zone includes the nationally important Scheduled ‘Crop mark site S of Ardleigh’ (**1002146**) where excavations have revealed a remarkable multi-period archaeological site comprising of a Bronze Age cemetery; an enclosed roundhouse of middle Iron Age date; late Iron Age burials; and evidence for Romano-British settlement including a short-lived defended phase. Kilns and wasters illustrate contemporary pottery production, and a cemetery of Roman date has also been identified along with later Saxon burials.

3.4.17 The Order Limits then passes into HECZ 12.2: Ardleigh for a third and final time. The zone has a dispersed medieval settlement pattern of individual farmsteads and halls within a fieldscape that has suffered considerable boundary loss. Largely surrounding the Scheduled Ardleigh Cropmark complex, this zone contains a further range of cropmarks especially in the area around Ardleigh reservoir with several large enclosures being apparent. Further but less concentrated cropmarks are spread

throughout the rest of the zone and are likely to represent a range of periods. The Roman road from Colchester to a possible port at Mistley, now the A12, forms the eastern boundary of the zone.

3.4.18 The final HECZ zone the Order Limits intersects with is HECZ 11.1: Area to the north of Little Bentley. This zone comprises an open, rural landscape, incorporating areas of former heathland and greens. The settlement is largely dispersed, with small scale foci at little Bentley and Hare Green. The fieldscape is of ancient origin and there are several areas of ancient woodland in the north. Archaeologically, the character of the zone is dominated by multi-period cropmark complexes comprising likely Bronze Age funerary monuments, followed by evidence of later prehistoric, Romano-British and later settlement and agricultural practice.

3.4.19 The landscape of Essex is broken down further into smaller parcels described as Historic Landscape Character Types and defined in The Historic Landscape Characterisation Report for Essex, Volume 2 (Bennet 2011). The HLC Type data has been supplied by the Essex HER and analysis of it has shown that, in Section C, the Construction Zone passes through a landscape largely defined by low value 20th century enclosure and areas of post 1950s boundary loss. Also included within the bounds of the Construction Zone in Section C are dispersed parcels of low value 18th to 20th century woodland plantation, built-up areas - urban development, nursery with glass houses, water reservoirs and orchards. There are also medium value parcels of built-up areas - urban development based on their association with listed buildings at Church Farm, the Rectory, Glebe Farm, Malting Farm, Fountains Farm, and Bluebarns Farm.

3.4.20 Elsewhere within the Construction Zone in Section C there are parcels of:

- Common Pre-18th Century Irregular Enclosure (HEX26723, HEX28539), which accounts for 17.69% of the Essex landscape (Bennet 2011). These irregular enclosures vary considerably in size and shape, forming both arable and pasture with sinuous edges and offset corners. They are probably the result of piecemeal enclosure and may originate from the medieval period or earlier
- Occasional Piecemeal Enclosure by Agreement (HEX25102, HEX25104, HEX25116, HEX25119, HEX39361, HEX28548, HEX28552) which accounts for approximately 8.97% of the Essex landscape (Bennet 2011). These fields were created to subdivide a pre-existing earlier field system and are characterised by straighter boundaries. Dating of origin is difficult but they usually predate the introduction of the later formal Parliamentary Enclosure Acts and thus may relate in certain parishes to the earlier acts of enclosure
- Rare areas of Boundary Loss – with relict elements (HEX19751) which account for 2.07% of the Essex landscape (Bennet 2011). These represent field boundary loss since the 1950s due to mechanisation and changes in agricultural practices. This may range from the loss of a single boundary merging two fields into one, or many field boundaries being removed to form a single field. The resultant field is a hybrid and palimpsest, with edges that may have several periods of origin. The surviving edges of these fields are of historic importance
- Very rare Formal style Parliamentary Enclosure (HEX19583) which accounts for 0.98% of the Essex landscape (Bennet 2011). Formal style Parliamentary Enclosure is a rigorous rectilinear field system, often with contemporary roads and trackways, that has overwritten any prior landscape enclosure pattern,

usually either prior common arable field, or former heathlands, or wastes, associated with the later Parliamentary Enclosure Acts.

Protected Lanes

3.4.21 A large part of the road network in the East Anglian countryside derives from as early as the medieval period. Some of it possibly existed in early medieval times and it is also possible that some roads and lanes were formed before that. These lanes are part of what was once a network of minor roads and trackways connecting villages, hamlets and scattered farms and cottages. Many were used for agricultural purposes, linking settlements to arable fields, grazing or pasture, heaths and greens; and other resources such as woodland and coastal marsh. Generally, these roads were not deliberately designed and constructed; written records of the establishment of roads during the medieval period are rare. Instead, they would have started life as trackways without a bearing surface, although often with defined boundaries including hedgerows, ditches and banks. The protected lanes of the Project described in this section of the report are shown on Figure A11.1.4: Historic Landscape Characterisation and Protected Lanes in Annex A.

3.4.22 The **low value** single track Water Lane (**3278**) is of evidential and historical value, and it crosses the Order Limits between Boxted in the west and Stratford St Mary in the east.

3.4.23 The **low value** single track Low Lift Cottage Road (**3279**) is of evidential and historical value, and it crosses the Order Limits between Boxted in the west and Stratford St Mary in the east.

~~3.4.23~~3.4.24 The **low value** single track Wick Lane (**3299**) is of evidential and historical value, and it is located partially within the Order Limits between Old Ipswich Road in the west and Wick Farm in the east.

Conservation Areas

~~3.4.24~~3.4.25 There are nine conservation areas within Section C. These are discussed north to south. They comprise: Lawford (**CA25**), Ardleigh (**CA26**), Higham (**CA40**), Stratford St Mary (**CA41**), Chantry Park (**CA24**), Boxted (**CA65**), Thorington Street (**CA38**), East Bergholt (**CA39**), and Dedham (**CA7**).

~~3.4.25~~3.4.26 Chantry Park (**CA24**), also a Grade II listed park and garden (**1000271**), is located c. 1.2 km to the east of an arm of the Order Limits. Chantry Park was grazing land prior to the 16th century. It then became the home of Edmund Daundy, a local merchant and Portman. He claimed the land was his 'Chantry'. The park contains three Grade II listed building, The Chantry (mansion), the Hadleigh Road Entrance Gates and the North Lodge. These assets are, however, scoped out of this study as their settings are limited to the parkland and do not extend to the Order Limits. The park was designated for its historical and aesthetic values, due to this it is of **medium value**.

~~3.4.26~~3.4.27 Chantry Park and mansion, seen today, is primarily the product of two periods of development. The late 18th to early 19th century landscaped park is attributed to the Russell/Collinson family and the mid-19th century remodelling by Sir Fitzroy Kelly (Ipswich Borough Council, n.d CAA and management plan). Chantry Park has a long history of prominent owners, which adds to its historical value, such as Michael Collinson, noted naturalist; Sir Fitzroy Kelly, Baron of the Exchequer; and Charles Collinson, High Sherrif for the county of Suffolk. It also has several famous garden designers such as William Andrews Nesfield, considered to be one of Victorian

Britain's most important landscape architects, who designed the parterre and knot gardens. The park and house ceased to be private in 1928 when it was gifted to Ipswich town as a public park and was officially opened by HRH Princess Mary. Later the mansion served as an International Friendship Centre between WWI and WWII. During WWII the mansion was used as temporary housing during the Blitz and after the war it was used by the Red Cross as a convalescent home for service men. Today the mansion is used as a care home by Sue Ryder Foundation (Ipswich Borough Council, n.d).

~~3.4.27~~3.4.28 The Park has communal value as it plays host to several social and cultural events such as band concerts and nursery open days. At present the park contains several communal sports facilities such as tennis courts, football pitches, cricket pitches and bowling greens (Ipswich Borough Council, n.d). It also has communal value due the mansions use as a care home.

~~3.4.28~~3.4.29 Key features of the park are the listed buildings, a lake, an 'L' shaped pond or lake, a lily pond with fountain, walled gardens, the pleasure grounds and pleasant rolling parkland. The western part of the park is designated as a County Wildlife Site. The formal gardens laid out around the mansion are in the Italianate style, as is The Chantry (Ipswich Borough Council, n.d).

~~3.4.29~~3.4.30 The park lies on the western side of Ipswich on the outer edges of the town's suburbs, on the southern side of the Gipping Valley (HE, n.d. Chantry Park, Non Civil Parish - 1000271 | Historic England). It is bound to the north by Hadleigh Road, also its main entrance, and the A1214 to the south, to the east is a new housing estate and to the west are open agricultural fields. The mansion sits on gently undulating parkland which slopes down to the north, west and east. This topography allows views from the west over the Gipping valley to the north and over countryside to the west. There are also filtered views east over the park from the South Avenue towards Ipswich (HE, n.d). Due to the urban sprawl the historical and present setting of the park differs and detracts from the significance of the asset. Overall, the setting of the asset makes a minor contribution to its value. The setting of the park does not extend into the Order Limits due to distance.

~~3.4.30~~3.4.31 Located c. 350 m to the west of the Order Limits is Higham (**CA40**). The quiet little village is positioned 3.1 km to the west of East Bergholt. It is of **medium value** due to its historical and aesthetic values which lie with the characterful buildings and pleasing location within this part of Babergh.

~~3.4.31~~3.4.32 The date of the creation of this village is not known. Non-designated heritage assets hint at undated and uncharacterised cropmarks to the east of the settlement. These could potentially be the pre-medieval occupation remains of Higham (Babergh District Council, 2009 adopted 2010, CAA). The Domesday Book of 1086 lists four buildings (at least one or maybe two churches - this is quite unusual given the size of the village) and a mill within Higham and four manors (Babergh District Council, 2009 adopted 2010). This indicates that the area was wealthy enough for several manor houses but the village was small.

~~3.4.32~~3.4.33 Within the boundaries of Higham Conservation Area there are 10 listed buildings which are scoped into this DBA. These include: The Old Cottage (**1036961**), White House (**1036959**), Walnut Tree Cottage (**1036962**), The Old Post Office (**1036964**), White Oak and Dysart (**1036965**), Byways (**1051964**), Meadow View, Gabel End and Adjoining Cottage (**1193163**), The Old Guildhall (**1351626**) and Barhams Manor (**1366100**), and Tudor House (**1036960**), all Grade II listed. The majority of the buildings within Higham have historical character and value due to their good

retention of original or historical building materials, fixtures and fittings. These include timber framing, thatched or tiles roofs, rendered walls (some are brightly coloured) or weatherboard cladding (Babergh District Council, 2009 adopted 2010). Those at the western end of the conservation area are older with a local vernacular style whilst those at the eastern end tend to be more Georgian in age and style. Victorian building can be found throughout the conservation area. These are characterised by their use of red brick and slate roofs.

~~3.4.33~~3.4.34 Higham lies on the east bank of the Brent river. The village was built on the alluvial deposits from this river which were deposited in the Ice Ages (Babergh District Council, 2009 adopted 2010). The river forms the western boundary of the conservation area. It was made navigable in 1709, then known as the Soar Navigation. It took barge traffic from Mistley to Sudbury (Babergh District Council, 2009 adopted 2010). Other important transportation within the area includes the Ipswich to Stratford turnpike road (now the A12) which passed within a mile south of the village. The modernisation of this road has had a negative effect of the quiet rural feeling of the village with the introduction of more traffic (Babergh District Council, 2009 adopted 2010).

~~3.4.34~~3.4.35 The conservation area straddles the Lower Street (B1086) to the west and Higham Road as it curves to the east and south, where it slopes down. The curving nature of the roads do not allow for many views along them. However, there are excellent views around a large triangular village green within the central eastern areas of the conservation area (Babergh District Council, 2009 adopted 2010). This is also on a higher piece of ground compared to the west. The buildings surrounding this space have excellent intervisibility with one another despite the intrusion of a large tree within the village green. The eastern part of the conservation area has pavement lining the roads, but this is absent at the western end. The road in the western end is congested with parked cars which makes walking and driving along this part of Higham awkward.

~~3.4.35~~3.4.36 Higham is set within the heart of the Dedham Vale and Stour Valley Area of Outstanding Natural Beauty. The majority of properties in Higham are one plot deep, so that the countryside is immediately to hand at the rear of most properties (Babergh District Council, 2009 adopted 2010). This is a key feature within the conservation area. The quiet rural countryside cannot be seen from the centre of the conservation area due to topography and the curving roads, which are lined with well-established vegetation, but the surrounding rural landscape is visible at the north and south ends, as well as to the rear of the properties within Higham. This landscape would also include views to the Order Limits in the southern and eastern parts of the conservation area. To the south-east of the conservation area, along the Higham Road, are a small collection of characterful and historical buildings, including a Higham Hall, White House (**1036959**), Tudor House (**1036960**), The Old Vicarage (**1036958**, Grade II listed), Higham Hall (**1036957**, Grade II listed) and the Church of St Mary (**1351625**, Grade II*listed). Although these assets are outside of the conservation area, they have group value with one another. Overall, the setting of the conservation area contributes significantly to its value. Due to distance, topography and intervening well-established vegetation the asset's setting does not extend into the Order Limits.

~~3.4.36~~3.4.37 Thorington Street (**CA38**) is located approximately 1.8 km north-west of the Order Limits and contains the small settlement of Thorington Street, broadly centred around Mill Lane, Hudsons Lane, and Orcs Barn. No character appraisal has been created

for this asset; however the asset can be considered of **medium value** due to its historical, evidential and aesthetic values.

~~3.4.37~~3.4.38 There are 17 listed buildings within Thorington Street (**CA38**), nine of which lie within 2 km of the Order Limits. Of these, one is the Grade II* listed National Trust property of 'Thorington Hall' (**1200597**). The remaining 8 assets are Grade II listed and comprise of 'Rose Inn' (**1033486**), 'Garden Wall' (**1033487**), 'Outbuildings South to Thorington Hall' (**1033488**), 'Thorington House' (**1033489**), 'Wall to Thorington House' (**1200617**), 'Old Forge House' (**1300687**), 'Ores Barn Cottage' (**1351915**), and a 'K6 Telephone Kiosk' (**1351947**). The listed buildings are not confined to one area but are spread throughout the conservation area and dispersed settlement. The buildings appear to date from the 17th century onwards, and tend to be timber framed and brick, with plain tile roofs. Overall, the conservation area has a mix of old buildings with distinctive styles similar to those seen elsewhere in Suffolk, broadly located along the three main roads making up Thorington Street, within a broadly rural agricultural, hedge and tree boundary-lined landscape of rolling hills. The central core of the conservation area appears to be rural agricultural field systems. Using professional judgement, the main areas of importance for this conservation area appear focussed on the designated buildings within the conservation area which appear to be a good representation of a small post medieval rural settlement within Suffolk. In particular, the Grade II* listed National Trust property of 'Thorington Hall' (**1200597**), and the surrounding rural agricultural landscape with its tree and hedge lined rural lanes. Overall, the setting of the conservation area is primarily focussed on, and restricted to, within its bounds, and makes a major contribution to the assets value as an example of post medieval rural agricultural activity in the area. There would be no intervisibility between the conservation area and the Order Limits, and the assets setting does not extend to within the Order Limits.

~~3.4.38~~3.4.39 East Bergholt (**CA39**) is located approximately 1.3 km south-east of the Order Limits and contains the south and south-east portions of the settlement of East Bergholt, focussed along Gaston Street, The Street, Flatford Road, and Rectory Hill. No character appraisal has been created for this asset; however, the area lies within an area of outstanding natural beauty (AONB) characterised by older properties with large gardens with many buildings of historic importance as well as a number of areas of open land. The asset can be considered of medium value due to its historical, evidential and aesthetic values.

~~3.4.39~~3.4.40 There are 55 listed buildings within East Bergholt (**CA39**), 46 of which lie within 2 km of the Order Limits. Of these assets, one is the Grade I listed 'Church of St Mary' (**1193803**), three are Grade II* listed, 'Bellcage to North Side of Churchyard' (**1033451**), 'Churchgate House' (**1033454**), and 'The Gables' (**1285872**), and the remaining assets are Grade II listed. The listed buildings are spread throughout the conservation area and settlement. The buildings broadly appear to date from the post medieval period, although some buildings date to the medieval period, such as the Church of St Mary (**1193803**) which indicate continuous settlement within this area of East Bergholt from at least the medieval period onwards. Overall, the conservation area has a mix of old buildings with distinctive styles similar to those seen elsewhere in Suffolk, broadly located along the main roads within this area of East Bergholt on the fringes of a semi-rural agricultural landscape, and the wider, more modern period, settlement of East Bergholt to the north of the conservation area. Using professional judgement, the main areas of importance for this conservation area appear focussed on the designated buildings within the conservation area which appear to be a good representation of a medieval to post medieval semi-rural settlement within Suffolk and the surrounding rural agricultural landscape to the east, south and west of the

conservation area, with its tree and hedge lined roadways. Overall, the setting of the conservation area is primarily focussed on, and restricted to, within its bounds, and makes a moderate contribution to the assets value as an example of medieval to post medieval semi-rural settlement surrounded by agricultural activity. There would be no intervisibility between the conservation area and the Order Limits, blocked by more modern activity associated with the expansion of East Bergholt to the north of the conservation area, and therefore, the assets setting does not extend to within the Order Limits.

~~3.4.40~~3.4.41 Stratford St Mary (**CA41**) is located approximately 400 m to the east of the Order Limits and 1.3 km to the south-west of East Bergholt. The conservation area is divided into two by the A12. The main body of the conservation area is to the west with a smaller area to the east. The asset is of **medium value** due to its historical, evidential and aesthetic values.

~~3.4.41~~3.4.42 Along the western side of the conservation area is the river Stour. It was made navigable in 1709, then known as the Soar Navigation (**3194**). It took barge traffic from Mistley to Sudbury (Babergh District Council, 2007 adopted 2008, CAA). A disused lock to the west of Stratford St Mary is a remnant of this waterway which went out of use in 1928. Another historical extant transportation route is located on the western side of the village. The Ipswich to Stratford turnpike road, now noted as The Street, passes though the western side of the village. The turnpike road once met its counterpart in Essex, Gun Hill/Stratford Road, at a toll house on the Essex side on a bridge. Both the toll house and bridge are now gone (Babergh District Council, 2007 adopted 2008).

~~3.4.42~~3.4.43 The history of Stratford St Mary potentially dates to the pre-medieval period. Cropmarks to the south-east of the village include a large number of ring ditches clustered around a ‘cursus’ type monument (Babergh District Council, 2007 adopted 2008). This indicates at a prehistoric, Iron Age or Bronze Age, presence here. Roman finds hint at an occupation site near to the village and remains of a Roman road were found near to the river (Babergh District Council, 2007 adopted 2008). Stratford St Mary appears in the Domesday Book of 1086, noting a manor with a mill, as well as the Church of St Mary (**1283820**, Grade I listed) from which the village takes its name. Medieval remains from the 14th century, in the form of tiling, were found close to the church (Babergh District Council, 2007 adopted 2008), located on the eastern extent of the conservation area. The village during this time was prosperous and was able to maintain a market and fair up until the 17th century. Known post medieval archaeological remains of a bridge were located over the river Stour (Babergh District Council, 2007 adopted 2008). These were found further upstream from the current bridge along with two non-extant water mills. These all add evidential value to the conservation area and given how close they are to the Order Limits it would not be unreasonable that similar archaeological remains could be located within the Order Limits, particularly the Roman period.

~~3.4.43~~3.4.44 Within Stratford St Mary Conservation Area there are nine listed buildings scoped into the DBA: Church of St Mary (**1283820**, Grade I listed), The rest are Grade II: Haywards Cottage (**1036990**), Holly House (**1036992**), Kings Arms (**1036996**), Teazles (**1198535**), Valley House (**1198552**), 9 Lower Street (**81**), Corner House (**1198570), and** The Swan Inn (**1351599**). These listed buildings are not confined to one area but are spread throughout the conservation area and settlement. The older buildings, not just those that are listed, tend to be rendered timber framed with plain tile roofs which are in the style of the local Suffolk vernacular (Babergh District Council, 2007 adopted 2008). Brick is commonly found as a building material in

Stratford St Mary, on both older and more modern builds. There also a few properties with ‘Suffolk white’ brick which potentially came from nearby Sudbury and was popular in the 19th century (Babergh District Council, 2007 adopted 2008). Overall, the conservation area has a mix of old and new buildings with distinctive styles.

~~3.4.44~~3.4.45 There are three areas of importance within the conservation area (Babergh District Council, 2007 adopted 2008). One is within the smaller designated area to the east of the A12, where the church, two listed cottages, and several farms are located. The second is at the southern end of the conservation area on the south bank of the river. The third, and main focus of the village, is where Upper Street, Lower Street and The Row meet. Here stands a large, and non-designated, 1930s pump house (Babergh District Council, 2007 adopted 2008). Very much in the style of Art Deco. This building differs greatly not only in style but in function to those surrounding it. A large green is also located here which gives a sense of open space.

~~3.4.45~~3.4.46 There are a few important views within the conservation area (Babergh District Council, 2007 adopted 2008). Two are located within the centre of the village where Upper Street meets Lower Street. One looks along Upper Street to the west, the other up Lower Street looking to the north. These views appear to be directed towards the Order Limits to the west and south-west which may require visualisations and considerations during an impact assessment. Two other views are at the southern end of the conservation area. One looks north over the bridge and the other south over the bridge (Babergh District Council, 2007 adopted 2008).

~~3.4.46~~3.4.47 The setting of this conservation area is first informed by the modern development to the north, particularly along Upper Street and the A12 corridor. This development includes clusters of 20th- and 21st-century housing and the infrastructure of the A12, which together form a distinct edge to the historic village core. Beyond this developed edge, the setting is further informed by the surrounding agricultural fields and open countryside which extend in all other directions. These fields, defined by hedgerows, scattered trees, and a gently undulating topography, reflect the historical agrarian character of the village and reinforce its long-standing relationship with the rural Suffolk landscape. This broader rural setting enhances the appreciation of the conservation area's origins as a linear settlement with medieval roots, nestled within a productive agricultural environment. Overall, the setting of Stratford St Mary Conservation Area makes a moderate contribution to its value, offering both a visual and contextual framework that supports the understanding of its historical development while also accommodating modern changes at its fringes. Due to its proximity to the Order Limits, and despite the screening provided by the valley’s topography, the setting of the conservation area does extend to the Order Limits.

~~3.4.47~~3.4.48 Boxted (**CA65**) is located approximately 1.5 km west of the Order Limits and encompasses the small, historically rural settlement of Boxted. The village is broadly centred around Church Street, Parsonage Hill, Church Road, and Church Lane. Although no formal character appraisal has been prepared for this conservation area, it is considered to be of **medium value**, based on its historical, evidential, and aesthetic attributes.

~~3.4.48~~3.4.49 The conservation area contains six listed buildings, the most prominent being the Grade I listed Church of St Peter (1238709), which has its origins in the mid-12th century. The remaining six are Grade II listed buildings, including Boxted Vicarage (1238710), Parsonage Farmhouse (1274044), and Cheshunts Cottage (1274046), all located within approximately 2.2 km of the Order Limits. These assets are dispersed throughout the settlement rather than concentrated in a central core, reflecting the

linear and scattered development pattern of the village. Most of the buildings appear to date from the 17th century onwards, characterised by timber-framed construction and plain tile roofs, typical of traditional Suffolk vernacular architecture. The views within and from the conservation area are largely inward-facing due to the tree-lined lanes and hedgerows that define much of the village edge.

~~3.4.49~~3.4.50 The setting of this conservation area is informed by its dispersed rural landscape, which encompasses a network of narrow historic lanes, surrounding agricultural fields, and mature hedgerows. These elements collectively enhance the rural and historic character of Boxted as a traditional Suffolk village. The pattern of development, modest clusters of buildings along winding lanes interspersed with open farmland, illustrates the evolution of a medieval to post medieval rural settlement. The lack of intrusive modern development within or immediately around the conservation area allows its historic fabric and setting to be appreciated in a relatively undisturbed rural context. Agricultural activity remains an active component of the wider setting, contributing to the legibility of the area's historic land use and reinforcing its aesthetic and evidential value. Overall, the setting of the conservation area makes a considerable contribution to its significance, primarily by supporting and reflecting its historic development, vernacular architecture, and relationship with the surrounding Suffolk landscape. There is no intervisibility between the conservation area and the Order Limits, and the setting does not extend to the Order Limits.

~~3.4.50~~3.4.51 Approximately 1.5 km to the east of the Order Limits is Dedham Conservation Area (**CA7**). There is no conservation area appraisal for this asset. Information was gleaned from the setting survey and internet resources such as the Historic England designated asset descriptions. Dedham is located within the river Stour valley near to the border of Essex and Suffolk. The asset is of medium value and has historical and aesthetic values. The conservation area is comprised of the historic heart of the village within the northern section, the parkland of Lower Park (**1239177**, Grade II listed building) and a public park along with a section of Crown Street to the south.

~~3.4.51~~3.4.52 During the early medieval period the Royal Forest of Kingswood or Cestrewald extended into Dedham. As far north as Black Brook, Coopers Lane and East Lanes, just to the south of the conservation area. In 1245, the Lord of Dedham Hall (presumably located near to the present 16th century Hall, which is Grade II listed, **1273828**), located within the north-west corner of the conservation area, was granted permission to cut timber within the forest. This would suggest that not only was there a manorial hall located in Dedham at this time, but as these halls were rarely isolated in the landscape, then there would have been a settlement located nearby. Dedham was a cloth working village in the late medieval period and it had developed into a prosperous market town in the 16th century (Dedham: Introduction | British History Online (british-history.ac.uk)). From the 16th and into the 18th century the natural geology of the area was exploited (gravel, sand and brickearth) which added to the wealth of the area (Dedham: Introduction | British History Online (british-history.ac.uk)). The village of Dedham was, and still is, focused along Brook Street. The road curves from the south-west, to east, the turns sharply south until it becomes Crown Street.

~~3.4.52~~3.4.53 There are many historically characterful buildings along Brook Street and Crown Street including Georgian and Victorian villas, cottages and terraced houses. There is even a Georgian assembly rooms 'Hewitt Memorial Hall', now used as a village hall (**1239344**, Grade II listed). All of these properties retain many of their historical fixtures and fittings. Other historical buildings date to the medieval and post medieval

period. These tend to have the local vernacular style and are painted in the distinct local pink or light cream colours. These buildings are small cottages with tiled or thatched roofs within the outer part of the conservation area. Whilst the closer to the centre of Dedham, the larger they become. Within the centre of Dedham, focused around the Grade I listed Parish Church of St Mary (**1239340**), the more historically characterful the buildings become. Some of the buildings have exposed timbers, others jettied first floors and many retain their original shop fronts. These seem to be little altered or sympathetically repaired and maintained. The intrusion by modern housing is not apparent along Brook Street but as it turns southwards to become Crown Street some later housing is apparent.

~~3.4.53~~3.4.54 Within the southern part of the conservation area are open fields and grass parkland and within the centre is a public park, The Duchy Fields. These are accessible via The Drift and Essex Way. Along The Drift are a series of terraced two-storey cottages known as Southfield or The Flemish Cottages (**1239217**, Grade I listed). These seven cottages may be some of the oldest houses within the conservation area. They have painted exposed timber frames on their first floors (except the northern most which have timbers on both floors) and painted light pink rendering on the ground and in between the timbers. The roofs are clad in clay roof tiles. The park gives a sense of open space and communal value to this part of the conservation area. To the south-west of the park is Lower Park (**1239177**) Grade II listed building which is set within a park landscape. This is not publicly accessible but still adds to the sense of space in this part of the conservation area.

~~3.4.54~~3.4.55 The conservation area is located on lowland and surrounded by agricultural fields. It is within the Dedham Vale Area of Outstanding Natural Beauty. To the south-west and south are a dispersed grouping of farms and small collection of residential buildings. To the north is the river Stour. The landscape is quiet and rural in nature. The historical and present landscape setting are not too dissimilar. It even inspired John Constable (1776-1837), arguably one of Britain's most established painters. His landscape paintings have made the Dedham Vale famous. He was even educated at the grammar school in Dedham. He particularly liked to paint the church within the conservation area.

~~3.4.55~~3.4.56 There are no views to the Lower Park due to well-established vegetation along the border of the parkland and the road to the west. Despite the curing nature of the main roads within the conservation area they do allow for excellent intervisibility between historical properties especially near to the church and along Brook Street (in the east of the conservation area). Overall, the assets setting makes a considerable contribution to the value of the asset. Due to the distance between the conservation area and the Order Limits, the setting of the asset does not extend into the Order Limits.

~~3.4.56~~3.4.57 Located approximately 1.5 km to the north-east of the Order Limits is Lawford Conservation Area (**CA25**). The conservation area consists of agricultural fields to the east, part of the settlement of Lawford is located at its southern end and the parkland estate of Lawford Hall (**1254131**, Grade I listed) forms the north and western side. The conservation area is of **medium value** due to its historic and aesthetic values.

~~3.4.57~~3.4.58 The historic value of the conservation area lies with its development. A map from 1777 shows a grouping of buildings around the Church of St Mary (**1261462**, Grade I listed) within the centre of the conservation area (Tendering District Council 2006, CAA). The maps shows that the other buildings comprised of a parsonage and a

large house (now known as Abbots Manor) and Lawford Hall, located to the north-west. At the southern end of the conservation area few buildings line Wignall Street near to the road junctions of Dedham Road and Hungerdown Lane.

~~3.4.58~~3.4.59 The church and Lawford Hall are key buildings within the conservation area. The churches isolated location strongly suggests that it was an estate church, to the Hall (Tendering District Council 2006). However, the present Lawford Hall dates to the 1580-83 and the church is medieval in date, constructed in the 13th century. Presumably the church was used by an earlier Hall. Over the next couple of centuries, the settlement along Wignall Street developed, a few buildings are added, altered and demolished near the church and the grounds and Lawford Hall are added to, with new buildings and landscape features i.e., woodland, walled gardens, a new Hall and associated buildings.

~~3.4.59~~3.4.60 There are three distinct areas of interest within the conservation area, Lawford Hall and Farm, the church and buildings near to it and the building along Wignall Street (Tendering District Council 2006). Lawford Hall Farm is located within the north-eastern part of the conservation area. It has a collection of red brick building with definitive blue diaper patterns. There are a pair of workers cottages here, which date to 1871. Both the cottages and the agricultural buildings have retained their historical character and add to the character and charm of the Lawford estate. Lawford Hall itself is a very fine building. The north elevation is Elizabethan and is two and a half storeys tall. Its walls are of a deep pink render under a roof of old clay tiles. It is reached via a nearly north to south driveway lined by a double avenue of limes. A conifer screen to the east of the drive restricts views across the river (Tendering District Council 2006).

~~3.4.60~~3.4.61 The church and the buildings to the south of it are located along and off Church Hill. At the top end of the road is the church, with a large car park, and the private entrance to the Hall. The church is set back from the road by its church yard, which gives a sense of space to the building. The two most notable features of the church are the extravagant chancel windows in curvilinear decorated style and its tower (Tendering District Council 2006). The tower is faced in a piebald mixture of brick, flint, puddingstone and septaria. The buildings to the south of the church are all residential in nature. These buildings include the Grade II listed: Church Clarkes Cottage (**1254098**), a single storey with attics house; Pink Cottage (**1261435**), an 18th century thatched cottage; and The Rectory (**1261444**), which although a 1960s building, is a pleasing aesthetic building in red brick and classical detailing. The Old Rectory, a large villa style property with unusual, moulded brick cornice and string course on the southern elevation and a large porch on the principle north elevation with the arms of St Johns Colleges, Cambridge (Tendering District Council 2006). The further south along the road the more it dips down. The road is lined with mature trees and passes thatched cottages and another cottage. These two properties have retained their historical character. At the top of a short rise fringed by dense hedgerows stands Abbots' Manor, a pretty two storey house with sash windows set in pink render under a hipped slate roof (Tendering District Council 2006).

~~3.4.61~~3.4.62 At the southern end of the conservation area is Wignall Street and the junction with Dedham Road and Hungerdown Lane. A small council estate, from the 1930's and 50's is located along the eastern end of Wignall Street, these detract from the older more historically characterful buildings at its western end (Tendering District Council 2006). Many of the buildings here are of the local vernacular style those of note include the non-designated: the Almshouse, a long low range of buildings with a prominent gable and road frontage of diapered brick with an attractive timber arcaded

veranda; The Mount, a cottage with plain brick façade; and the Old School House, a diapered brick with Tudor style detailing (Tendering District Council 2006).

~~3.4.62~~3.4.63 The southern part of the parkland has several public footpaths radiating out from Church Hill and from the carpark at its northern end. This attracts dog walkers and locals who utilise the space to roam. This adds communal value to the parkland and to the conservation area. During the walkover survey this car park was frequently in use.

~~3.4.63~~3.4.64 The conservation area is within the boundary of the Dedham Vale Area of Outstanding Natural Beauty and is particularly important for the protection of the character of Lawford Hall and the Church of St Mary (Tendering District Council 2006). The asset is located between the A137, to the south, a railway line to the north and open countryside to the east and west. Despite the development and the urban sprawl of Lawford and Manningtree to the east of the conservation area, its immediate setting has not altered much since the first edition OS maps. It is quiet and rural. Noise intrusion from the railway to the north and the increase in traffic to the south hardly detract from the peaceful nature of the conservation area. Within the wider setting to the north-east, is the Stour Estuary. However, there is no intervisibility between the conservation area and the Order Limits due to urban development and well-established vegetation.

~~3.4.64~~3.4.65 The conservation area has several key views: within the Lawford estate a northern track continues to the edge of the conservation area where is reaches the railway embankment through which the lane passes under a semi-circular arched brick tunnel (Tendering District Council 2006). There is a pleasant view to the north-east from the other side of the tunnel and attractive views between the outbuildings and the tunnel to fields outside the conservation area to the east (Tendering District Council 2006). From the church there is a splendid view eastward over Manningtree and the Estuary, towards the tower of the Royal Hospital School (Tendering District Council 2006). The church's forecourt is surrounded by mature trees and has attractive views over parkland to the west (Tendering District Council 2006). Along Church Hill there are attractive glimpses of parkland on either side of the road. Abbots' Manor has a splendid view to the north-east. A building located along Wignall Street, Park View, has glimpses of the park to the north.

~~3.4.65~~3.4.66 Overall, the setting of the conservation area contributes significantly to the asset's value. However, due to the distance between the conservation area and the Order Limits, its setting does not extent into the Order Limits.

~~3.4.66~~3.4.67 Ardleigh Conservation Area (**CA26**) is located c. 60 m to the south-west of the Order Limits. It is a small medieval village located at an important road junction (Tendering District Council 2006) between The Street (north), Station Road (south), Harwich Road (east) and Colchester Road (west). It retains its church (Church of St Mary **1112060**, Grade II* listed) and many vernacular buildings. The well-treed approaches to the north and the east are essential to the character of the village. The village expanded southwards in the 19th century, resulting in further groups of distinctive buildings. Bordering the conservation areas southern edge is a scheduled monument, 'Crop mark site S of Ardleigh' (**1002146**). Overall, the asset is of **medium value** due to its historical and aesthetic values.

~~3.4.67~~3.4.68 Ardleigh has potentially had a very long history. Located to the south, and bordering the conservation area, are scheduled cropmarks (**1002146**) of later prehistoric and Romano-British date. Potentially the focus of activity and settlement was located near to the road or within the boundary of the conservation area. Given

how close these assets are to the Order Limits they add archaeological potential to the Order Limits. These features and archaeological remains add evidential value to the conservation area, particularly to its southern part.

~~3.4.68~~3.4.69 The village of Ardleigh is centred around a crossroads at the northern end of the conservation area (Tendering District Council 2006, CAA). The Church of St Mary is 14th century in date which indicates that there was some sort of settlement here since at least that date. The village remained, small and rural, until the mid-19th century. The first edition OS map, 1840s – 1880s, shows that the settlement at this time is still small and focused around the crossroads. However, two new additions to the area include New Hall (**1112056**, Grade II listed) and a railway both to the south. New Hall is a 19th century manor house located within its own private parkland. The last 50 years or so have seen new additions to Ardleigh including more residential housing and the roads are busier and more congested with traffic. These have put a strain on the village's rural character.

~~3.4.69~~3.4.70 The crossroads holds the focal point of the conservation area. Each quadrant has a different quality (Tendering District Council 2006). The south-western quadrant is densely developed. Here a group of historic buildings which line the road can be seen including a stone chapel. The north-western quadrant has an attractive group of older buildings near to the crossroads. The north-eastern quadrant is dominated by the church and mature trees. The south-eastern quadrant has the least townscape or historical or aesthetic interest (Tendering District Council 2006) and is not discussed further.

~~3.4.70~~3.4.71 The four main roads of the crossroads have several distinctive buildings. To the north, The Street, on its corner with Colchester Road has a two-storey cottage with light blue painted render with original clay tiled roof (Tendering District Council 2006). Next door is the Lion Inn which faces The Street and church, this is a pleasing two-storey building with rough rendered walls and dentilled brick eaves. Next door is a series of terraced cottages. The first two are two storeys with slightly jettied first floors. Next are two are single storied, with attics. All of these buildings are painted in pink tones (Tendering District Council 2006). The next building is Victorian, but it has lost much of its historical character, it was once linked with the non-extant Ardleigh Hall. On the eastern side of the road, north of the church post office, is a terrace of 19th to 20th century houses with distinctive brick work around to the doors and windows. The further north along this road are several villa style houses in Georgian and Victorian styles. Where Ardleigh Hall once stood, within the top north-western corner of the conservation area, are now modern houses.

~~3.4.71~~3.4.72 Colchester Road, to the west of the crossroads, represent the main street of the village (Tendering District Council 2006). Along its northern side is Boxley House (**1112058**), a small rendered timber frame cottage. Next door is The Bards, a Victorian villa of red brick. Next is the Village Shop, this was originally two vernacular style cottages with a shop extension on the western half (Tendering District Council 2006). Beyond this are post war housing. On the southern side of Colchester Road is another village shop, much altered. Next to this are three terraced Tudor style buildings, now converted to a single commercial property (Tendering District Council 2006). They have brick ground floors with black painted timber framed first floors. These appear to be the oldest houses within Ardleigh. The next two buildings are painted pink, the eastern one has been modernised whilst the western still retains its local vernacular charm. Next door is the stone Methodist chapel. This differs from the surrounding residential buildings both in use and building material. Next to the chapel are three small, terraced cottages. These are painted in grey, light blue and cream

colours and set back from the road by small gardens. Next is a converted house, now a restaurant and takeaway. This building retains many of its local vernacular characterful details despite its conversion. Further west are later buildings which hold little historical character.

~~3.4.72~~3.4.73 Station Road, heading south, has a row of old red brick cottages a short distance after the crossroads. Thes have been modernised but still retain their historical character. As the road heads south modern houses, some mimicking local historic character, have been constructed. These are intermingled with understated Victorian and Georgian cottages or small villas. Mid way down Station Road on the eastern side is New Hall. This is a located within a large private parkland which is screened from the road and from view by well-established vegetation. As Station Road nears the railway line the buildings become more industrial. There is a four-storey brick-built warehouse converted for commercial use but retains many of its historical features despite a large extension at the rear. The Tavern House is a three storey Georgian public house now used for commercial purposes. This also retains its historical character. The railway station has been modernised and converted to residential use. It retains some of its character.

~~3.4.73~~3.4.74 Ardleigh lies in relatively flat countryside, very open in character, particularly to the north and south-west of the village (Tendering District Council 2006). Despite the general openness of the landscape, the approaches to the older part of the village are relatively well screened (Tendering District Council 2006). From the north, mature hedgerows and trees on either side of The Street restrict forward views of the village (Tendering District Council 2006). Due to the curving nature of the roads in Ardleigh there are few views up or down the roads and views out into the country sides are restricted to the edges of the conservation areas especially where they give way to agricultural fields. The area very much retains its historical setting. Due to this its setting makes a considerable contribution to its value. As the Order Limits are located close to the conservation area (Figure 7.12.F80_VP3.11 Viewpoint 3.11: PRoW north of Ardleigh) (Ardleigh 2); document reference 7.12) and due to the flat topography of the surrounding landscape, the setting of the conservation area extends into the Order Limits.

Baseline Introduction

~~3.4.74~~3.4.75 The following cultural heritage baseline for Section C is presented chronologically by archaeological period and from north to south. Section C is further broken down into geographic parcels to allow the reader to orientate and to locate where on the appropriate figure a particular heritage asset is illustrated. These geographic parcels are largely defined by current settlements, and parish boundaries but also occasionally by landscape features such as high points and valleys and by anthropogenic features such as roads and railways. To avoid repetition, each parcel of Section C is introduced and described only in the first archaeological period where it is appropriate to be used.

Prehistoric Period

Palaeolithic

Elmsett, Chattisham and Copdock

~~3.4.75~~3.4.76 The geographic parcel encompasses some of the rural Suffolk landscape to the north-west, west, and south-west of Ipswich. Elmsett is a small rural village c. 11 km north-west of Ipswich and c. 5.2 km north-east of Hadleigh and is sat at high ground at 66 aOD. Nedging-with-Naughton is small village in the northernmost part of this Section, located on the B1078. It consists of three settlements – Naughton, Nedging, and Nedging Tye. The settlement is situated at c. 90 m aOD. The Belsted Brooks starts here and flows southwards where it ends in the river Orwell, passing Elmsett on the eastern side. The A1071 divides the rural landscape in a west to east direction between Elmsett in the north and Hintlesham to the south-east, and the Belstead Brook divides the settlements of Burstall and Hintlesham, two small rural villages c. 6.5 km north-west and c. 7 km west of Ipswich respectively. Burstall sits on low ground at 43 m aOD and is situated c. 2.5 km west of Sproughton, another semi-rural village at even lower ground at 18 m aOD. Sproughton is situated on the western side of Ipswich and is separated from the town by the north to south A14 road. On the eastern side, the river Gipping flows in a southerly direction towards the river Orwell. Chattisham, another semi-rural village, is situated c. 1.4 km south-east of Hintlesham and is c. 8 km south-east of Ipswich, and c. 2.4 km north-west of Copdock. Copdock and Washbrook are two semi-rural villages in the south-western edge of Ipswich and are situated along the London Road which joins the A12 to the B113. Copdock sits on higher ground at 54 m aOD whereas Washbrook is a 12 m aOD as the Belsted Brooks flows through the settlement in a north-west to south-east direction.

~~3.4.76~~3.4.77 There was a **low value** stone axe (**3002**) found in 1924 on Sir Arthur Churchman's estate, c. 545 m south of Burstall Lane, and c. 60 m east of the Order Limits. This asset holds evidential value.

Hornestreet, Dedham, Ardleigh and Lawford

~~3.4.77~~3.4.78 Three **low value** palaeolithic hand axes (**3201** (2), **3211** (1)) of evidential value are recorded as being found on the eastern outskirts of Ardleigh and c. 240 m west of the Order Limits.

Neolithic

Elmsett, Chattisham and Copdock

~~3.4.78~~3.4.79 A **low value** flint fabricator (**3104**) of evidential value was recovered from farmland on the western outskirts of Ipswich and c. 60 m south of the Order Limits.

~~3.4.79~~3.4.80 A **low value** flint leaf shaped arrowhead and a scraper (**3106**) of evidential value was recovered from farmland on the western outskirts of Ipswich and adjacent to the Order Limits.

Higham, Holton St Mary, Stratford St Mary and East Bergholt

~~3.4.80~~3.4.81 The geographic parcel of Higham, Holton St Mary, Stratford St Mary, and East Bergholt is situated in the semi-rural landscape between Ipswich to the north-east and Colchester to the south-west. The following civil parishes are included in this subsection: Stoke-by-Nayland, Holton St Mary, East Bergholt, and Stratford St Mary. The A12 dissects these settlements as it connects Ipswich to Colchester. The river Brett ends on the southern side of Higham, and the river Stour passes south of Stratford St Mary towards the river Orwell. Higham is a small rural village on low ground at 22 m aOD, and c. 10 km north-east of Colchester. The river Stour passes in an easterly direction along the south of village and along the south-west edge of Stratford St Mary, a small semi-rural settlement on the Suffolk/Essex border c. 1.7 km south-west of Higham at 6 m aOD. Stratford St Mary is bound by the A12 on the eastern side and the Order Limits is placed between here and Higham. East Bergholt is a small semi-rural village bound by the A12 on the north-west side and the B1070 which passes through the settlement. It sits on high ground at 46 m aOD.

~~3.4.81~~3.4.82 The **high value** scheduled monument 'Site discovered by aerial photography S of King's Wood' (**1006022**), located c. 1.6 km north-east the Order Limits, was discovered by T. Bradford and interpreted as a henge. The asset has evidential and historical value. The cropmarks include a dark penannular circle with an opening on the south-side. The site is not visible at ground level, but it is said that the asset shows as the crop grows at certain time of the year. Aerial photography indicates that a cross is present in the centre of the circle. The site represents potentially a ploughed-out barrow ditch; however, the cross may potentially indicate the site of a post mill.

~~3.4.82~~3.4.83 The asset is located c. 400 m west of the A12 Ipswich Road, and between the settlements of Holton St Mary and Stratford St Mary, within an agricultural field. A track way runs past the asset, associated with the farmland within which the monument resides. Immediately to the north-west and north of the asset is a patch of woodland, with another patch of woodland to the south-west of the asset, c. 100 m away. The wider landscape surrounding the asset is also agricultural and rural, divided in places by large thoroughfare such as the A12 as well as smaller roads. Patches of woodland and small settlements are also present, scattered within the landscape, with the largest settlement being East Bergholt, on the eastern side of the A12, c. 1.6 km east of the asset. the asset is located close to the edge of a high plateau of land, c. 49 m aOD, to the south-west, south and south-east of which the land lowers in elevation greatly towards the valley bottom that carries the river Stour, likely the remnant of a glacial palaeochannel. This elevated point in the landscape was likely a key factor in the construction of the asset at this site, commands views over the landscape, whilst positing it close to areas of high resource potential. The setting of the asset contributes moderately to its value, this is because of the changes to the landscape in terms of transport infrastructure placement, settlement growth and the division of the land for agricultural purposes, the landscape type in which the asset now resides. The setting of the asset does not extend to the Order Limits.

Hornestreet, Dedham, Ardleigh and Lawford

Designated Heritage Assets

~~3.4.83~~3.4.84 Hornestreet, Dedham, Ardleigh, and Lawford are situated on the north-east and eastern edges of Colchester and includes the following civil parishes: Boxted,

Langham, Dedham, Lawford, and Ardleigh. The Dedham Vale National Landscape (an Area of Outstanding Natural Beauty (AONB)), A12 and A120. Boxted is a rural village and civil parish in Essex. c. 8 km north of Colchester just within the southern area of Dedham Vale National Landscape (an AONB). The village is situated on intermediate ground level at c. 47 m aOD. It sits centrally equidistant from the river Stour in the north, the A134 in the west and the A12 in the east. Langham is a village in the City of Colchester District, c. 10 km north of Colchester. It sits on intermediate ground at c. 40 km aOD with Black Brook passing in a west to east direction to the north of the settlement. The A12 passes Langham in a northerly direction on the eastern side and separates Langham with Parney Heath. Parney Heath is a rural area within Dedham, c. 10 km north-east of Colchester. It sits on intermediate ground at c. 44 m aOD. Ardleigh is a semi-rural village and civil parish c. 6.5 km north-east of Colchester and sits on intermediate ground at c. 37 m aOD. The village is on the A137 which transects the settlement in a west/east direction before heading north-east towards Manningtree. The B1029 also heads in a north to south direction through the village. There is a reservoir to the west and south-west of the settlement, and a disused railway line to the east. Lawford is a large semi-rural village and civil parish in the Tendring district of north-east Essex, c. 2.5 km south-west of Manningtree, c. 35 m aOD. It joins Ardleigh, Manningtree, and Cattawade via the Harwich Road which comes from a westerly direction and cuts through the village towards the north over the river Stour.

~~3.4.84~~3.4.85 The scheduled monument ‘Henge 70 m North East of Cross Cottages’ (**1019078**), located c. 1.2 km west of the Order Limits, includes buried remains of a Neolithic henge, c. 2 km south of the river Stour. The henge is not visible from the ground, however from an aerial views infilled ditches and a central pit-like feature are visible. These cropmarks have been recorded since the 1950s, first identified as a henge in 1975. The henge has a broad circular, penannular ditch, infilled and buried, with two entrances, one on the north and the other on the southern side of the asset. The diameter of the ditch enclosure is c. 40 m, with the ditch being c. 5 m wide, resulting in an internal diameter of c. 30 m. an external bank would have had an external bank, but it has been destroyed over time by ploughing. To protect any archaeological traces of the henge, a 5 m wide margin has been included in the scheduling. Other cropmark features visible are several large pit-like features within the area contained by the ditch and bank, likely part of the ritual use of the enclosure.

~~3.4.85~~3.4.86 The asset is located on the north-eastern edge of the settlement of Boxted Cross, bordered by residential buildings along Cocks Hill to the west and south-west and Dedham Road to the south-east, also with some residential properties. To the east, north and north-west, the asset is surrounded by agricultural fields, with some woodland to the north beyond the immediate agricultural land. The asset is located on an area of high land in the landscape c. 48 m aOD, between to palaeochannels. The largest palaeochannel cuts through landscape from the north-west to the north of the asset, c. 530 m away, following a small tributary, before it joins the river Stour as it flows through the Dedham Vale. The second small palaeochannel being south-east of the asset, through a patch of woodland, where Black Brook flows also through the Dedham Vale into the river Stour before it reaches the estuary mouth. Both of these palaeochannels and their watercourses would have likely been a key aspect of consideration when the henge was constructed here, placing the monument on a raised area of land overlooking and close to two waterways, being areas of high resources. The assets setting contributes moderately to its value, as despite its presence within a mostly rural landscape, changes have occurred close to the asset and afar. The asset is now bordered by a rural settlement, with other close by, and

the landscape is also divided in many areas by agricultural practises and transport infrastructure. The asset has evidential and historical value and is **high value**. The setting of the asset does not extend to the Order Limits.

~~3.4.86~~3.4.87 The scheduled monument 'Round barrow W of Lawford Hall' (**1002125**), located c. 2.4 km north-east of the Order Limits, is a bowl barrow which was partly excavated in 1812, during which two urns were uncovered. The barrow is located in an agricultural field that is ploughed, yet the asset is still stands at 3ft high. This barrow is an example of one of the very few prehistoric burial mounds in Essex that are still upstanding.

~~3.4.87~~3.4.88 The asset is located in a large agricultural field, c. 180 m west of the Lawford Conservation Area, c. 186 m south-east of the Great Eastern Railway line and c. 270 m north-east of Mill Hill. Aerial imagery indicates that there is vegetation growing on top of the barrow. Surrounding the field which contains the agricultural field are patches of woodland to the north, east and west, with open fields to the south beyond Mill Hill/Dedham Road. The surrounding landscape is a mix of agricultural land, with areas of settlement such as Lawford to the c. 750 m to the south-east.

~~3.4.88~~3.4.89 The asset is situated on the edge of an escarpment, which begins where the railway line now transects the landscape. The asset is on the elevation c. 33 m aOD with the lowland terrain to the north lowering to c. 1 m aOD as the land extends toward the estuary. The asset's location on an area of high ground overlooking the lowland valley associated with the marshlands of the Stour river as well as the tributary of the Shir Burn which passes close to the asset and flows into the Stour river, was likely a key factor in the construction of the asset. This location would have overlooked the estuarine landscape of the Stour river, enabling greater views across the landscape but also indicates the proximity of activity to areas of high resource productivity, close to water sources. The setting of the asset contributes considerably to the asset significance, despite the addition of the railway line in the landscape which the asset overlooks. The landscape to the north, which the higher terrain of the asset overlooks, has maintained largely the same with mostly rural, but now agricultural, landscape between the asset and the marshland of the estuary. The asset has historical and evidential value and is **high value**. The setting of the asset does not extend to the Order Limits.

~~3.4.89~~3.4.90 The scheduled monument 'Settlement site NNE of Lawford House' (**1002157**), located c. 1.6 km north-east of the Order Limits, is a site containing a circular bank and ditch, 12-18 inches high and c. 120ft in diameter. The site contains a ring of postholes potentially indicating a large circular hut on the inner section. Pottery and flint were found at the site, with much of the pottery being Rinyo-Clacton in typology. From aerial photography, two ditch causeways are visible, one of which has been excavated. The site is often referred to as a henge, is probably a causewayed enclosure.

~~3.4.90~~3.4.91 The asset is located within a long rectangular field on the south-west periphery of the settlement of Lawford. The asset is c. 190 m south-west of the A137 and c. 160 m south of the Lawford Conservation Area. To the west and south of the asset are more open agricultural fields and to the north some settlement, then a mixture of agricultural land and patchwork woodland. To the east is the main section of the settlement of Lawford. The asset is located on a large area of upland terrain, c. 36 m, which extends across the landscape to the south and west towards the A12. The asset's location on this area of higher terrain, positions it over the lowering topography of the valley of the Wignall Brook which extends to the north-east

towards marshland and estuary of the Stour river. This topography positioning of the asset was likely a deliberate action, placing the asset in a prominent point in the landscape overlooking a water course, areas of high productivity and resources in prehistory. As such is it likely that much of the historical setting of the asset extended to the north-east on the direction of the marshes and coastline. The historic landscape setting has been broken-up by subsequently period of development with the settlements of Lawford and Manning now between the asset and the estuary. As such the setting of the asset contributes moderately to its value as a result of landscape changes. The asset has evidential and historical value and is of **high value**. The setting of the asset does not extend to the Order Limits.

Non-Designated Heritage Assets

~~3.4.91~~3.4.92 A **low value** hand axe (**3010**) was found c. 130 m east of Ardleigh road and c. 160 m north-east of the Order Limits between Lamb Corner and Ardleigh. This asset has historical and evidential value.

~~3.4.92~~3.4.93 A group of **low value** Neolithic assets were found c. 380 m to c. 480 m south-west of the Order Limits and were the following, which all have evidential and historical value:

- An axe (**3007**) which was found in a field c. 400 m south of the Order Limits
- An axe (**3008**) which was found c. 380 m south of the Order Limits
- A chisel (**3009**) which was found c. 480 m south of the Order Limits.

Great Bromley, Little Bromley and Little Bentley

Designated Heritage Assets

~~3.4.93~~3.4.94 The **high value** scheduled monument ‘Henge, round barrow cemeteries and enclosure cropmarks 510 m south-west of St Mary's Church’ (**1489898**) is of evidential and historical value. The asset is located north-east of Great Bromley, c. 700 m south-west of the Order Limits, and occupies two plots of land, both north-west of Badley Hall Road, and with the northern-most plot of land also containing Little Bromley Road within its north-west corner. A small watercourse also intersects the area. This asset comprises of multi-period cropmarks identified on aerial imagery, and associated with a Neolithic henge, Bronze Age round barrow cemeteries and Iron Age or Romano-British enclosures. The henge comprises of a circular enclosure interrupted by two causeways to the north-west and south-east c. 2.5 m wide. The ditches are range between 8 m to 10 m wide and the henge has a 23 m internal diameter. A later period (medieval) mill cross-arm has also been interpreted on some aerial imagery; however, the henge is bisected by an enclosure and has not been confirmed. A group of ring ditches of varying size dating to the Bronze Age have also been identified and are likely representative of a round barrow cemetery, the largest of which is approximately 30 m in diameter, and smallest approximately 6 m in diameter, with ditches between 5 m to 7 m wide and in rough alignment with the henge. To the north-west of the larger ring ditch are the remains of post medieval sand and gravel pits which are also visible as cropmarks. A further group of ring ditches of varying size are located approximately 400 m south-west of the henge and across the watercourse, one of which was excavated in 1964 and found to contain a Bronze Age collared urn with two cremations. The two groups of ring ditches are approximately 435 m apart, and it is possible there was inter-visibility between them.

Three parallel linear ditches also run through the cemetery and appear to respect the ring ditches which also suggests that the ditches are a later phase, and that the barrows were visible at the time of the ditch creation. The majority of these ring ditches are circular, with one being sub-square. An Iron Age to Romano British 33 m by 32 m square enclosure has also been identified approximately 80 m north-west of the henge, formed by a single ditch, with an entrance located to its south-west. A 6 m diameter ring ditch is also located within the enclosure which could be the remains of a round house, or another round barrow. A rectilinear field system and a trackway lie have also been identified within the same area but are of a later date. As some of these features overlie one another multiple phases of construction seem likely.

~~3.4.94~~3.4.95 The setting of the scheduled Neolithic henge is informed by its shallow, river valley location. The reasons for the siting of such monuments are still much debated and so it is difficult to understand its setting other than, perhaps, the influence of the local physical geography. The floodplain location is in sight of the watercourse and, therefore, it is possible the monument was intended to be seen in association with the watercourse, either for access to the monument, or as part of the context of the henge within the wider landscape. The siting of the later period barrow cemetery can also be interpreted as a continued importance of the henge monument and its surrounding landscape to Bronze Age communities. By the Iron Age to Romano-British period, the establishment of a small farmstead complex and associated field systems and organised farming is more in-keeping with the current context of the current rural agricultural landscape, with little to none of the prehistoric period assets still remaining extant within the landscape. Despite this, it is possible that the prehistoric assets may still have been visible within the landscape during the Iron Age to Romano-British periods. The setting of the asset makes a moderate contribution to its value due to the landscape remaining that of a predominantly rural agricultural landscape more similar to that of the Iron Age to Romano-British phase of this scheduling, however the prehistoric funerary landscape is no longer extent within the landscape meaning the setting of this aspect of the asset only makes a minor contribution to its value. The setting of this asset extends to the Order Limits.

Non-Designated Heritage Assets

~~3.4.95~~3.4.96 The scheduled monument (**1489898**) noted above is split in two with both sections located within wider cropmark complexes identified by the HER. The southern portion of the scheduled monument is situated within cropmark complex (**3250**), which is located c. 400 m north of Great Bromley and c. 370 m south of the Order Limits. Other than the scheduled element, asset (**3250**) comprises a possible barrow with concentric ring ditches, enclosures, pits, and a rectilinear field system. Asset (**3250**) is of **medium value** based on association with the scheduled monument and its evidential value.

~~3.4.96~~3.4.97 The northern section of the scheduled monument (**1489898**) is situated within cropmark complex (**3227**), which is located equidistance between Little Bromley and Great Bromley, and partially within the Order Limits. Other than the scheduled element, asset (**3227**) comprises ring ditches, enclosures, trackways, pits, and field systems. Asset (**3227**) is of **medium value** based on association with the scheduled monument and its evidential value.

~~3.4.97~~3.4.98 The setting of assets (**3250**) and (**3227**) is shared and informed by their location within a much wider network of cropmarks represented by numerous assets between Little Bromley to the north and Great Bromley to the south. The cropmarks record largely funerary and agricultural activity in the area through the later prehistoric

period and on into the post medieval period. More recent settlement construction and the establishment of the post medieval to modern infrastructure network has eroded the setting, and so it makes a moderate contribution to its value. As asset (**3227**) is located partially within the Project, the setting extends to the Order Limits. As asset (**3250**) includes the southern portion of the scheduled monument it forms part of the wider landscape represented by the northern asset (**3227**), and so its setting extends to the Order Limits.

~~3.4.98~~3.4.99 A **low value** leaf shaped flint arrowhead (**3247**) of evidential value was recovered from farmland c. 1. 7 km north-west of Little Bentley and c. 180 m east of the Order Limits.

Bronze Age

Elmsett, Chattisham and Copdock

~~3.4.99~~3.4.100 An aerial photograph of a **low value** possible ring ditch c. 25 m in a field north of Lodge Cottages (**3003**), c. 550 m south of the Order Limits and north of Little Wenham. There was a note in the HER record which suggested that this asset may be modern. This asset has evidential value.

~~3.4.100~~3.4.101 There is a **low value** ring ditch (**3004**) c. 5 m north of Wenham Road, c. 1.4 km north-north-east of Little Wenham and just clipped by a permanent access route of the Order. The ring ditch is c. 30 m in diameter and is suggested by the HER, to may be the remains of a prehistoric burial mound. This asset holds historic and evidential value.

~~3.4.101~~3.4.102 There is a **low value** cropmark of a partial ring ditch (**3005**) which likely represents a ploughed-out Bronze Age barrow. This asset is situated c. 305 m east of the Order Limits and c. 580 m west of Sproughton. This asset is c. 24 m in diameter with the south-west side of the circuit being open or masked in this area. There is also a small pit within the west side of the ring ditch. This asset holds evidential value.

~~3.4.102~~3.4.103 There are **low value** cropmarks (**3006**) of a series of boundaries and a ring ditch, within the Order Limits and c. 90 m to the east, and c. 615 m south of Burstall Lane and c. 800 m south-west of Sproughton. The cropmarks form a series of incomplete paddocks or fields with a central trackway and a small, 11 m diameter ring ditch. The cropmarks are undated, but a Bronze Age date is suggested for the ring ditch by the HER. These assets have evidential value.

~~3.4.103~~3.4.104 Two **low value** pits of evidential value (**3011**) were identified in 1958 during a topsoil strip ahead of sand quarrying at Valley Farm c. 130 m north-east of the Order Limits and c. 1.3 km south-south-west of Sproughton. The pits contained charcoal and the remains of two late Bronce Age urns.

~~3.4.104~~3.4.105 A **low value** hoard (**3099**) was found within the Order Limits. The find consists of a small socketed probable chisel or possible axe of Late Bronze Age date with another fragment visible within it. Only the blade end of the probable chisel survives, and the breaks are clearly hammered and appear old. The asset has historical and evidential value.

~~3.4.105~~3.4.106 A **low value** blade end of a Bronze-Age socketed axe (**3102**) of evidential value has been recovered from farmland c. 1 km east of Hintlesham and c. 160 m north-west of the Order Limits.

~~3.4.106~~3.4.107 A group of three(?) circular cropmarks likely representing ploughed out Bronze Age round barrows is located c. 570 m south of Sproughton and c. 270 m to 280 m north-east of the Order Limits. The HER records them as two assets with (**3115**) representing two ring ditches 20 m apart, one 25 m in diameter and circular, and the other is oval in shape and 35 m in diameter. Neither ring ditch has an entrance or internal features. The second asset (**3107**) is a circular cropmark 25 m in diameter, but it is not clear if this asset is superseded by (**3115**). The assets likely represent a **medium value** barrow cemetery of evidential value.

~~3.4.107~~3.4.108 The setting of the assets is informed by their interrelationship and by their relationship with another ring ditch (**3324**) located c. 220 m to the south and reported below. The setting of these potential funerary monuments is also informed by their slightly elevated locations overlooking the lower ground of the river Gipping floodplain to the north now occupied by Sproughton. The assets may have been placed to emphasise tribal claims of tenure over the shallow valley and is resources. The setting of the assets, therefore, makes a moderate contribution to their values but as it is focused on the river valley to the north and north-east, the setting does not extend to the Order Limits.

~~3.4.108~~3.4.109 The cropmark of a **low value** possible Bronze Age round barrow (**3324**) of evidential value is located in farmland c. 1 km south of Sproughton and c. 160 m east of the Order Limits. The asset has a diameter of 34 m and was partially excavated in 1984 when it was crossed by a waterpipe. The exposed ditch was c. 4 m wide, at least 2 m deep and contained intrusive Iron Age pottery.

Hornestreet, Dedham, Ardleigh and Lawford

Designated Heritage Assets

~~3.4.109~~3.4.110 The **high value** scheduled monument ‘Crop mark site S of Ardleigh’ (**1002146**) has evidential value, and is located c. 30 m south of the Order Limits and c. 500 m south-east of the centre of Ardleigh. The asset is a multi-period cropmark complex site, which was discovered from aerial photography. Many archaeological material finds have been uncovered since the 1950s due to deep ploughing in the area, the first being a middle Bronze Age ‘urnfield’ which was uncovered in 1955, followed by six rings ditches which were then excavated, and which produced urned cremations of a similar type and date. The monument is situated within a wider complex of **high value** cropmarks (**3218**) of evidential value. Asset (**3218**) extends northwards into the Order Limits and comprises the cropmarks of field boundaries enclosures, trackways and pits indicating the activity represented by the scheduled monument likely extends beyond its current boundaries. There has been minimal archaeological investigation within the bounds of asset (**3218**), but where archaeological remains have been encountered, they conform to the multi-period profile of the scheduled monument.

~~3.4.110~~3.4.111 The assets are located on the south-eastern periphery of the settlement of Ardleigh, bordering the south-eastern side of the Great Eastern Mainline Railway. The land south of the monument comprises mostly agricultural land with some of the land to the east and north-east part of the periphery of the settlement of Ardleigh. The Frating road also runs north-east/south-west through the southern half of the asset. The asset is located on a high plateau in the landscape c. 36 m aOD with two river valley channels close to the asset, one to the north-east on the north-eastern periphery of Ardleigh, where Bargate Lane crosses the Great Eastern Main line,

following the Shir Burn tributary that leads into the marshes and estuary of the river Stour. To the south-west of the asset is the other river valley channel, a small tributary which continues south-west to join the Salary Brook as it leaves Ardleigh Reservoir. The positioning of the assets on this high plateau of land between these two water course valleys was likely a key consideration in the assets' construction, placing it at a focal high point in the landscape, with extending views across the plateau and down into the river valleys and their resources. The setting of the assets contributes moderately to their values as a result of the changes within the landscape, with the development of transport infrastructure, such as the A120 to the south and the Great Eastern Railway Line to the north-west. Moreover, there are smaller road systems transecting the landscape and settlements and industry have been constructed around the landscape, particularly with the settlement Ardleigh which is partially located within the asset. The setting of the assets extends to the Order Limits.

Non-Designated Heritage Assets

~~3.4.111~~3.4.112 A multi-period scatter of confidential PAS finds (**3269**) of **unknown value** is reported as being found north of Hornestreet and partially within the Order Limits. The scatter included a Bronze Age find.

~~3.4.112~~3.4.113 A **medium value** cropmark complex (**3229**) of evidential value comprises ring ditches, pits, trackways, and linear features is located on the south-eastern outskirts of Ardleigh and partially within the Order Limits. The ring ditches are located at the southern end of the complex c. 310 m south-west of the Order Limits. One of the ring ditches was excavated 1979 and six **medium value** north/south aligned inhumations (**3199**) of evidential value were revealed. The burials were accompanied by beads, brooches, bracelets, and pottery. The excavation of a second ring ditch revealed a single **medium value** primary cremation (**3261**) of evidential value.

~~3.4.113~~3.4.114 The setting of asset (**3229**) is informed by its inclusion within a much wider network of cropmarks represented by assets (**3218**), (**3223**) and the scoped out MEX31239 in the immediate vicinity and by numerous others in the wider landscape. The cropmarks record largely funerary and agricultural activity in the area through the later prehistoric period and on into the post medieval period. More recent settlement construction and the establishment of the post medieval to modern infrastructure network has eroded the setting, and so it makes a moderate contribution to its value. As the asset is located partially within the Project, the setting extends to the Order Limits. The setting of the inhumations (**3199**) and cremation (**3261**) are not considered further as they have been removed.

~~3.4.114~~3.4.115 A **low value** beaker (**3242**) of evidential value is recorded as being found at Alderson's Cottages, c. 1.3 km north-east of Boxted Cross and c. 40 m north of the Order Limits.

Great Bromley, Little Bromley and Little Bentley

~~3.4.115~~3.4.116 Great Bromley village lies c. 6 km south of Manningtree and c. 9 km east of Colchester and includes the hamlets of Balls Green, Hare Green and Bromley Cross. The A120 trunk road (with the A133 as a spur off it) cuts right through the middle of the parish. The settlement is sited along a 'Y' shaped road junction between Hall Road (north-west), Badley Hall Road (north-east) and Brook Street (south). It is sites on land that measures c. 26 m aOD. Little Bromley is a rural village and civil parish in the Tendring district, c. 3 km south of Manningtree. The village is a linear settlement

in a north to south-west alignment and sits c. 32 m aOD. The village is surrounded by many farmsteads and agricultural areas. Little Bentley village sits on rising ground just to the west of the Holland Brook. The settlement is located around a four-way junction between Manningtree Road (north), Tendering Road (east), Church Road (south) and Rectory Road (west). The village stands at an elevation of c. 36 m aOD.

~~3.4.116~~3.4.117 Three **low value** cropmark complexes (**3164**, **3185**, **3187**) of evidential value are located across two fields c. 1.4 km north-north-west of Great Bromley and c. 180 m south-west of the Order Limits. The cropmarks comprise the ring ditch of a possible Bronze Age round barrow, a late prehistoric enclosure and undated field boundaries.

Iron Age

Elmsett, Chattisham and Copdock

~~3.4.117~~3.4.118 Two **low value** pits of evidential value (**3012**) were found during topsoil stripping of a sand quarry extension at Valley Farm c. 130 m north-east of the Order Limits in 1958. The pits contained Iron Age pottery including a hanging bowl, which is now in the Ipswich Museum.

Higham, Holton St Mary, Stratford St Mary and East Bergholt

~~3.4.118~~3.4.119 A **low value** La Tene terret (**3013**) was found immediately south of the Order Limits, c. 850 m west of Stratford St Mary. This asset has historic and evidential value.

~~3.4.119~~3.4.120 A **low value** bronze lipped terret ring (**3136**) was recovered from farmland c. 950 m west-south-west of Holton Saint Mary, c. 200 m east of the Order Limits and adjacent to Roman road (**3127**).

Hornestreet, Dedham, Ardleigh and Lawford

Designated Heritage Assets

~~3.4.120~~3.4.121 The **high value** scheduled monument ‘Crop mark site S of Ardleigh’ (**1002146**, explained in the above Bronze Age section), is located c. 30 m south of the Order Limits on the southern outskirts of Ardleigh. The asset features a multi-period cropmark complex which includes Iron Age activity. The prior Bronze Age presence at the site is likely to have influenced the use of the site into the Iron Age, likely representing a desirable area for continued activity. The asset has evidential and historical value. A dense **medium value** scatter of Belgic pottery (**3259**) of evidential value was recovered from the plough soil within the bounds of the monument. The setting of the finds scatter is restricted to the bounds of the monument and so not considered further.

~~3.4.121~~3.4.122 The setting of the asset is assessed in the Bronze Age section above.

Non-Designated Heritage Assets

~~3.4.122~~3.4.123 A **low value** possible Iron Age beaker (**3014**) and a pottery vessel (**3015**) were found c. 225 m south of the Order Limits c. 65 m west of the Ipswich Road which runs north to south between Langham and Parney Heath in a small gravel pit at a poultry farm. These assets are dated from the late Iron Age to the Roman period

and have evidential and historical value. A **low value** gold coin of Cunobelinus and a small conical cup were found (**3014**) c. 290 m west of the Order Limits c. 65 m west of the Ipswich Road which runs north/south between Langham and Parney Heath in a small gravel pit at a poultry farm. This asset has evidential and historical value.

~~3.4.123~~3.4.124 A **low value** coin (**3251**) was found within the Order Limits c. 125 m east of the A12 and c. 430 m north-west of the settlement at Parney Heath. The coin has been dated to the late Iron Age to pre-Boudican Roman Colchester. This asset has evidential and historical value. In the same field, a **low value** gold coin (**3256**) was found c. 30 m east of the A12. This coin was dated to the late Iron Age and has evidential and historical value.

~~3.4.124~~3.4.125 A cropmark of a D-shaped (**3231**) enclosure has been identified on farmland c. 600 m west of Wick Farm, c. 2 km west of Ardleigh and c. 170 m south-east of the Order Limits. The asset was archaeologically evaluated by trial trenching during the evaluation of a larger parcel of land both west and south of Wick Farm in 2007. The evaluation recorded the enclosure in six trenches and identified that the asset measured 115 m east/west by 108 m north/south. Excavation of the charcoal-rich enclosure ditch revealed evidence of recutting, indicating some time depth to its use, and pottery dating the asset to the late Iron Age. The pottery included a complete grog-tempered bowl, which may represent a structured/placed deposit. No animal bone or metal finds were recovered due to the acidic ground conditions. The trenching also identified pits, postholes gullies and the possible ring ditch of a roundhouse and a large assemblage of late Iron Age pottery (Germany 2006). The **medium value** D-shaped enclosure (**3231**) holds evidential value and based on satellite imagery, was fully excavated around early 2017 and has since been destroyed by quarrying. The setting of this asset is not, therefore, considered.

~~3.4.125~~3.4.126 The evaluation (Germany 2006) identified a further four **medium value** Iron Age sites (**3016**) of evidential value which are thought likely to be the remains of enclosed and unenclosed farmsteads that differ in age and location, suggesting an expanding and shifting pattern of settlement, beginning in the Early Iron Age and carrying on through until the late 1st / early 2nd century AD. A subsequent phase of archaeological excavation (Germany 2009) further investigated two areas of Iron Age activity to the north and east of the enclosure (**3231**).

~~3.4.126~~3.4.127 The investigations to the north identified two **medium value** boundary ditches aligned on the entrance to the settlement enclosure (**3016**) defining a broad approach to it, within which was a small rectangular ditched enclosure surrounded by rubbish pits, all of evidential value. Although no features were recorded within the enclosure, ironworking debris (iron deposits, hammerscale, fragments of furnace lining, vitrified surface fragments) recovered from its ditch suggests it was an annexe to the main settlement (**3016**) and used for craft working. The 65 identified Late Iron Age features contained a large assemblage of pottery. The late Iron Age remains (**3231**) and the enclosure to the south (**3016**) represent an extensive late Iron Age settlement spanning the head of the east-west valley.

~~3.4.127~~3.4.128 The investigations in the valley to the east contained a narrow late Iron Age trackway (**3231**) heading towards the entrance to the settlement enclosure (**3016**), a pit and a well (**3231**). The trackway is thought to have demarcated a boundary between the wet area along the valley floor and a field system to the south. Due to their association with the settlement remains to the west, these archaeological features (**3231**) are of **medium value** and hold evidential value.

~~3.4.128~~3.4.129 The setting of assets (**3231**, **3016**) is not considered as the site has been destroyed by quarrying.

~~3.4.129~~3.4.130 The evaluation also identified evidence of late Iron Age/early Romano-British activity in the north-west of the evaluation area c. 220 m north of the settlement enclosure (**3016**) and immediately south of the Order Limits. The activity was represented by **low value** ditches, gullies, pits, postholes and pottery (**3017**) of evidential value.

~~3.4.130~~3.4.131 An archaeological excavation of land adjacent to the A12 on the north-eastern edge of Colchester and partially within the Order Limits revealed **medium value** Late Iron Age to Romano-British gullies, ditches, pits, and postholes (**3267**) of evidential value. The finds evidence suggests the site was used continuously from the Late Iron Age until the late 2nd/early 3rd century. This site has since been developed and nothing remains of the asset, therefore, its setting is not considered.

General Prehistoric

Higham, Holton St Mary, Stratford St Mary and East Bergholt

~~3.4.131~~3.4.132 A **low value** causewayed sub-square or circular ring ditch traversed by a double ditched enclosure (**3001**) is recorded within the Order Limits, c. 15 m north of the B0168, c. 1 km south-west of Holton St Mary. This asset has evidential value.

~~3.4.132~~3.4.133 There is a **high value** extensive cropmark complex (**3168**) of probable later prehistoric in to Romano-British date within and around the Order Limits between Higham and Stratford St Mary. The complex includes: a small ring ditch with a central feature (**3195**); two small ring ditches (**3173**) and (**3174**) of c. 30 m in diameter situated c. 50 m east of the Order Limits; another ring ditch (**3175**) of c. 30 m in diameter which is c. 40 m south of (**3173**) and (**3174**) and outside of the Order Limits; a fourth ring ditch (**3166**) c. 20 m in diameter with a causeway to the north and within the Order Limits; a fifth ring ditch with concentric rings (**3169**) c. 50 and 30 m in diameter situated c. 480 m north-west of the Order Limits; a rectilinear enclosure (**3176**) c. 35 m by c. 30 m situated c. 95 m south of Higham Road within the Order Limits; a sub-rectangular enclosure (**3177**) c. 50 m south of Higham Road within the Order Limits; a rectangular enclosure (**3178**) c. 30 m south of Higham Road within the Order Limits; a small rectangular enclosure (**3179**) with central rectangular feature situated c. 40 m east of the Order Limits; a semi-circular enclosure (**3188**) c. 25 m in diameter situated c. 25 m south of Higham Road within the Order Limits; and a potential rectilinear field system across the Order Limits and beyond that may suggest a later phase of activity. The HER also holds an OUTLINE RECORD for fieldwalking finds (**11**) from across the cropmark complex comprising prehistoric worked flints, Iron Age, Roman, medieval and post medieval pottery and ceramic building material. All of these assets have evidential value.

~~3.4.133~~3.4.134 Many of the assets noted in the paragraph above have been mapped by the Project during the review of the available aerial imagery. This exercise has demonstrated the cropmark complex extends beyond the bounds of the assets mapped by the Suffolk HER and the added assets include linear features, curvi-linear features, pits, a possible pit alignment, a possible enclosure and a c. 24 m diameter ring ditch (**3339**) that are within the Order Limits. These assets likely represent agricultural, settlement and funerary/ritual activity and as a group have the potential to be of **high value** based on their evidential value and association with the group of assets in the paragraph above.

~~3.4.134~~3.4.135 The setting of this **high value** group of cropmarks is informed by the interrelationships between the integral elements of the complex. The setting of the group is further informed by its location on the northern bank of the shallow river Stour valley with the wide floodplain to the south. Three **high value** cropmark complexes (**3236**, **3239** and **3237**) of later prehistoric to Romano-British date are situated on the southern bank of the Stour valley and the assets' relationship with these assets further informs the setting. The setting has been slightly eroded by the introduction of later settlement and infrastructure but with clear views across the floodplain, the setting makes a moderate contribution to the value of the asset group. As the group is located partially within the Project, the setting extends to the Order Limits.

Hornestreet, Dedham, Ardleigh and Lawford

~~3.4.135~~3.4.136 Cropmark complexes (**3236**), (**3239**) and (**3237**) are located adjacent to each other on the southern bank of the shallow Stour river valley between c. 300 m and c. 2.2 km west of Stratford Saint Mary. All three assets are located within and partially within the Order Limits. The largest of the complexes (**3236**) lies over several fields and comprises numerous ring ditches (including two large examples truncated by a reservoir), trackways, enclosures and field boundaries. The ring ditches vary in diameter from 7 m to 35 m with one of the larger examples having concentric ditches. The ring ditches are thought to represent Bronze Age round barrows and worked and burnt flint and fragments of a **medium value** Bronze Age cremation urn (**3257**) of evidential value have been found in the area supporting this interpretation. The trackways, enclosures and field boundaries likely represent a later phase of activity, and based on their morphology, they are likely to be of late Iron Age to Romano-British date. The cropmark complex (**3236**) is of **high value** based on its evidential value. The review of the available aerial imagery undertaken by the Project has added several cropmarks to this complex including a further ring ditch.

~~3.4.136~~3.4.137 The middle of the three complexes, (**3239**), is located largely within the Order Limits and comprises approximately 12 ring ditches, a trackway and enclosure ditches. The ring ditches vary in diameter between 10 m and 15 m and based on their morphology there are likely to be a continuation of the funerary activity recorded in the fields to the west (**3236**). In a similar fashion, the trackway and enclosures are likely to be of late Iron Age/Romano-British date. The cropmark complex (**3239**) is of **high value** based on its evidential value. The review of the available aerial imagery undertaken by the Project has added the cropmarks of four small pits to the complex.

~~3.4.137~~3.4.138 The third cropmark complex (**3237**) is situated on the southern bank of the river Stour valley largely within the Order Limits. The asset consists of a series of rectilinear enclosure-paddocks including a series of large compounds, one subdivided to form small strip enclosures (probably several phases). In the north of the complex there is a small square enclosure that might represent a structure within a larger rectangular enclosure. The whole complex has been interpreted as a Romano-British farmstead and the cropmark of a trackway connects the complex with cropmarks to the west (3239). The asset is of high value based on its evidential value. The review of the available aerial imagery undertaken by the Project has added the several linear cropmarks to the complex.

~~3.4.138~~3.4.139 The setting of this **high value** group of cropmarks is informed by the interrelationships between the integral elements of the complex. The setting of the group is further informed by its location on the southern bank of the shallow river Stour valley with the wide floodplain to the north. A **high value** cropmark complex of

later prehistoric to Romano-British date is situated on the northern bank of the Stour valley and the assets' relationship with these assets further informs the setting. The setting has been slightly eroded by the introduction of later settlement and infrastructure but with clear views across the floodplain, the setting makes a moderate contribution to the value of the asset group. As the group is located partially within the Project, the setting extends to the Order Limits.

~~3.4.139~~3.4.140 A **low value** findspot of a pyroxene, jadeite axe (**3100**) was found in a field c. 60 m north of the Order Limits south of Langham Hall. This find has historical and evidential value.

~~3.4.140~~3.4.141 A **low value** piece of Belgic pottery associated with a 'red clay' area (**3027**) was found in a field c. 25 m south of the Order Limits Little Bromley Road between Ardleigh and Little Bromley. This asset has evidential value.

~~3.4.141~~3.4.142 A group of **low value** assets consisting of a ring ditch, pits, linear features, a length of road running north-west from Hungerdowns, and a square enclosure c. 59 m by c. 57 m with an entrance on the east side (**3225**) are situated c. 50 m west of the Order Limits. This asset has evidential value.

Hornestreet, Dedham, Ardleigh and Lawford

~~3.4.142~~3.4.143 The cropmark of **medium value** rectilinear enclosure with three sides and two entrances (**3233**) is situated on the northern side of Morrow Lane and within the Order Limits on the eastern side of Ardleigh settlement. The northern, longer side of the rectilinear enclosure is possibly causewayed. The review of the available aerial imagery by the Project added several linear and curvi-linear anomalies to this asset. This asset has historical and evidential value. Based on morphology and its association with neighbouring cropmarks complexes, a late prehistoric to Romano-British date is suggested.

~~3.4.143~~3.4.144 The setting of the asset is informed by its location within a much wider network of cropmarks to the south-east of Ardleigh which includes assets (**3218**), the scoped out MEX31239, and the scheduled monument 'Crop mark site S of Ardleigh' (**1002146**). The cropmarks record largely settlement, funerary and agricultural activity in the area through the later prehistoric period and on into the post medieval period. More recent settlement construction and the establishment of the post medieval to modern infrastructure network has eroded the setting, and so it makes a moderate contribution to the value of the asset. as the asset is located partially within the Project, its setting extends to the Order Limits.

~~3.4.144~~3.4.145 The **low value** cropmarks of a possible prehistoric enclosure (**3197**) of evidential value is located c. 1.5 km north-east of Boxted Cross and adjacent to the Order Limits.

Great Bromley, Little Bromley and Little Bentley

~~3.4.145~~3.4.146 There is a **low value** cropmark complex (**3343**) of evidential value in farmland between Bentley Road to the north and Hilliards Road to the south, c. 1.6 km north-west of Little Bromley and partially within the Order Limits. The cropmarks are of three ring ditches of possible late prehistoric/Romano-British date and undated linear features. The review of the available aerial imagery by the Project added several linear cropmarks to this asset and the HER monument polygon has been extended to include them. Some of these cropmarks are visible as field boundaries on the first edition OS map and are likely to be of medieval or post medieval date.

~~3.4.146~~3.4.147 The HER records the cropmarks of a further three **low value** ring ditches (**3344**) of evidential value immediately east of (**3343**) and Bentley Road and on the eastern flank of the Order Limits. Based on their morphology the ring ditches are likely to be of late prehistoric/Romano-British date and representative of roundhouses. The review of the available aerial imagery by the Project identified the cropmarks of a further three ring ditches and some linear assets and the HER monument polygon has been extended to include them.

~~3.4.147~~3.4.148 There is a **low value** cropmark complex comprising numerous pits and ditches (**3359**) and overlying field boundaries (**3360**) of evidential value north of Carringtons Road, c. 850 m north-north-west of Great Bromley and c. 200 m south-west of the Order Limits.

Roman Period

Elmsett, Chattisham and Copdock

~~3.4.148~~3.4.149 A **low value** Romano-British cremation urn and the bases of two other pottery vessels (**3022**) of evidential value were recovered from a pit identified in 1958 during a topsoil strip ahead of sand quarrying Valley Farm c. 130 m north-east of the Order Limits and c. 1.3 km south-south-west of Sproughton.

~~3.4.149~~3.4.150 There was a **low value** pottery scatter (**3021**) recorded c. 130 m north-east of the Order Limits in a field at Valley Farm c. 1 km north of Washbrook and Copdock. This pottery scatter was found in two pits which contained black and grey ware, a brown handle of an amphora, some complete or near complete urns, and a portion of a conglomerate quern. This asset held evidential value.

~~3.4.150~~3.4.151 A **low value** coin (**3043**) was found outside of the Order Limits and within the 250 m Study Area in the Chattisham geographic area. This asset is a worn copper-alloy Roman sestertius of uncertain Antonine ruler x.138 - 193 AD and features an unknown figure standing with an uncertain object in the left arm and its right arm outstretched. This asset has evidential value.

~~3.4.151~~3.4.152 A **negligible value** projected section of a Roman road (**3325**, **3142**) of evidential value runs north/south following the modern route of the B1113 Swan Hill through Sproughton within the Order Limits and extending c. 80 m to the east and c. 210 m to the south-east of the Order Limits respectively. The asset is apparent as a cropmark in Section C as (**3137**) to the north-west of East Bergholt to the south.

Historic Mapping Assessment

~~3.4.152~~3.4.153 A **low value** Roman pottery findspot location (**3400**) of evidential and historic value has been observed approximately 125 m north-east of the Order Limits and 30 m north-east of Valley Farm Drive. The findspot location is marked on the 1954 and 1970 1:10560 OS maps as ‘found c.1950’ and is not observed on subsequent mapping.

Raydon, Great Wenham, and Capel St Mary

~~3.4.153~~3.4.154 A **low value** Depondius of Trajan (**3028**) was found immediately south of the Order Limits c. 900 m west of Stratford St Mary. A **low value** Sestertius of Trajan (**3029**) was found within the Order Limits c. 280 m south-west of (**3028**), and c. 1.5 km south-west of Stratford St Mary. These assets hold evidential value.

Higham, Holton St Mary, Stratford St Mary and East Bergholt

~~3.4.154~~3.4.155 A **low value** north-west/south-east aligned section of a Roman road (**3050**) of evidential value crosses the Order Limits between Long Melford and East Bergholt.

~~3.4.155~~3.4.156 Fragments of a **low value** early 1st century 'spindle' style Roman amphora (**3019**) of evidential value were found during alterations to a bridge over the Stour river 'many years ago' on land c. 90 m east of Green Lane, c. 820 m east-south-east of Higham and c. 40 m south of the Order Limits.

A **low value** Bronze sestertius possibly of M Aurelius and a possible dupondius (**3602**) of evidential value have been recovered from farmland c. 500 m south-east of Holton St Mary and adjacent to the Order Limits.

~~3.4.156~~3.4.157 A **low value** north-east/south-west aligned section of a Roman road (**3127**) of evidential value, and which corresponds to Pye Road (Margary 3c), is located c. 600 m north-west of East Bergholt and c. 50 m south-east of the Order Limits. The asset is apparent as a cropmark in this location whilst its projected route is recorded as (**3142**) and (**3325**) elsewhere in Section C to the north.

~~3.4.157~~3.4.158 A **low value** north-west/south-east aligned cropmark of a Roman road (**3050**) of evidential value is located either side of the A12 c. 600 m south-east of Holton Saint Mary and partially within the Order Limits. The road runs between Long Melford and East Bergholt and its projected route is recorded elsewhere in Section C as (**3143**) and (**3144**). It again crosses the Order Limits (**3144**) a little to the west of Bacon's Green.

~~3.4.158~~3.4.159 A **low value** PAS find comprising a fragment of a Roman bronze brooch (**3156**) was recovered from farmland c. 950 m west-south-west of Holton Saint Mary, c. 200 m east of the Order Limits and adjacent to Roman road (**3127**).

~~3.4.159~~3.4.160 A **low value** PAS find comprising an incomplete copper alloy Roman nummus of Magnentius or Decentius, dating to the period AD 351-3 and minted in Amiens (**3140**), was recovered from farmland south-east of Holton Saint Mary and outside the Order Limits.

~~3.4.160~~3.4.161 A **negligible value** sherd of Romano-British pottery (**3130**) of evidential value was recovered from farmland c. 570 m south-east of Holton Saint Mary and adjacent to the Order Limits.

Hornestreet, Dedham, Ardleigh and Lawford

Designated Heritage Assets

~~3.4.161~~3.4.162 The **high value** scheduled monument 'Crop mark site S of Ardleigh' (**1002146**, see above Bronze Age section), is located c. 30 m south of the Order Limits on the southern outskirts of Ardleigh. The asset comprises a multi-period cropmark complex which includes activity from the Roman period including Romano-British burials, ditches, pits, pottery and kilns, distributed over a wide area suggesting a large settlement was located in the area. The prior Bronze Age and particularly Iron Age presence at the site is likely to have influenced the use of the site into the Roman period, likely representing a desirable area for continued activity. The asset has evidential and historical value. A **low value** scatter of Romano-British pottery (**3230**) of evidential value was recovered from the plough soil within the bounds of the monument.

~~3.4.162~~3.4.163 The setting of the asset is assessed in the Bronze Age section above.

Non-Designated Heritage Assets

~~3.4.163~~3.4.164 **Low value** pottery dated 20-60AD (**3036**) was found in 1949 at the southern end of a field within the poultry farm c. 130 m south-east of the Order Limits adjacent to the A12. The asset is noted to be similar in character as at Camulodunum (Roman Colchester) and has evidential and historical value.

~~3.4.164~~3.4.165 There was a **low value** stone figure of an infant (**3037**) of evidential value found c. 8 m east of the Order Limits west of Boxhouse Lane in the Parney Heath geographic area. This asset was originally covered in gesso (a white paint mixture used to coat surfaces as a paint primer), is of an undoubtably Romano-British origin. It was found in the front garden of Purney Heath and was donated to Colchester Museum. This asset holds historical, evidential and aesthetic values.

~~3.4.165~~3.4.166 A **low value** Roman road (**3206**) begins at the southern bank of the river Stour c. 25 m west of Lower Street and c. 220 m south-east of the Order Limits to the west of the A12 and follows the southerly direction of Ipswich Road. It passes through the Order Limits at three points and ends on the eastern side of the A12 within the Order Limits at Wick Lane. This asset has evidential and historical value.

~~3.4.166~~3.4.167 A **low value** PAS findspot of Roman date (**3271**) was found in a field c. 70 m west of Rectory Road and immediately adjacent to the Order Limits to the south of Langham Hall. This asset has evidential value.

~~3.4.167~~3.4.168 A **low value** scatter of oyster shell, brick, and five Roman bronze coins from the 1st to 2nd centuries (**3030**) were found within a field c. 160 m north of the Order Limits c. 500 m north-east of Langham Hall. This asset holds evidential value.

~~3.4.168~~3.4.169 A **low value** find of Roman tiles (**3031**) was found scattered over three fields c. 140 m west of the Order Limits. Another **low value** Roman tile scatter (**3032**) was found c. 70 m north-west of (**3031**) and c. 170 m north-west of the Order Limits. These assets hold evidential value.

~~3.4.169~~3.4.170 There is a **low value** findspot for an asset dated to the early to late Roman period (**3307**) situated c. 15 m east of the Order Limits c. 250 m south of Dedham Road. This asset has evidential value.

~~3.4.170~~3.4.171 A **low value** possible Roman pottery kiln (**3040**) was found west of Pyghle Farm, Ardleigh, c. 90 m west of the Order Limits. This asset has evidential value.

~~3.4.171~~3.4.172 A **low value** Roman road linking Mistley to Colchester (**3207**) heads north-east through Ardleigh and bisects the Order Limits in the area of Little Bromley Road. This road is visible through aerial photography and existing alignments. This asset has evidential value.

~~3.4.172~~3.4.173 A **low value** gold coin commemorating Drusus senior (**3224**) of evidential value was found on Little Bromley Farm c. 230 m north of the Order Limits.

~~3.4.173~~3.4.174 A multi-period scatter of confidential PAS finds (**3269**) of **unknown value** is reported as being found north of Hornestreet and partially within the Order Limits. The scatter included a Romano-British find.

~~3.4.174~~3.4.175 A multi-period scatter of confidential PAS finds (**3272**) of **unknown value** is reported as being found north of Hornestreet and outside the Order Limits. The scatter included three Romano-British finds.

Great Bromley, Little Bromley and Little Bentley

~~3.4.175~~3.4.176 A possible Roman road of **medium value** (**3035**) is situated c. 200 m north of the Order Limits between Ardleigh and Little Bromley, its western edge beginning at Grange Road. This asset is evident by modern road alignment, field boundaries, and cropmarks. This asset has evidential and historical value.

~~3.4.176~~3.4.177 A **low value** cropmark complex (**3038**) is situated immediately east of the Order Limits, immediately north of Ardleigh Road and c. 500 m west of Little Bromley. This cropmark complex has linear features which probably represent field boundaries despite it not being marked on first edition OS mapping, as well as the presence of a possible Roman road. This asset holds evidential value. The review of the available aerial imagery by the Project added several linear anomalies to this asset.

~~3.4.177~~3.4.178 There are **low value** cropmarks (**3039**) within the Order Limits along Grange Road in the Little Bromley geographic area which are believed to be indicative of a Roman road. This asset also contains cropmarks featuring a curvilinear enclosure, field boundary, linear feature, a site, and a trackway which are undated. The review of the available aerial imagery by the Project added several linear and curvilinear anomalies to this asset. The asset holds evidential and historic value.

~~3.4.178~~3.4.179 There is a **low value** east/west aligned possible Roman road through Horselycross Street (**3033** and **3035**) c. 70 m east of the Order Limits beginning at Grange Road between Ardleigh and Little Bromley. The projected westwards course of the assets extends into the Order Limits. This asset is c. 3 km in length and cuts through the rural landscape north of Little Bromley. Asset (**3035**) is near a modern road alignment, field boundaries and cropmarks. These assets have evidential value.

~~3.4.179~~3.4.180 An archaeological excavation of land adjacent to the A12 on the north-eastern edge of Colchester and partially within the Order Limits revealed **low value** Romano-British ditches, pits, a well, and a trackway (**3266**) of evidential value. The finds evidence suggests the site was used continuously from the Late Iron Age until the late 2nd/early 3rd century.

Early Medieval

Elmsett, Chattisham and Copdock

~~3.4.180~~3.4.181 A **low value** square enclosure cropmark (**3186**) is situated on the north side of Bottle Bridge Road, c. 60 m west of the Order Limits that pass in a south-western direction from the Chattisham area. The asset is probably a moat and the site of the Kings Green Cottages. This asset holds evidential value.

~~3.4.181~~3.4.182 A **low value** strap fitting (**3069**) was found east of the Order Limits in a field. The fitting was made of copper alloy and consists of a pair of annular frames, the larger one being D shaped with a smaller circular one attached. Bats are moulded on the strap fitting on the side bands of the large fitting. This asset has historical and evidential value.

~~3.4.182~~3.4.183 A **low value** PAS find comprising an incomplete mid to late Anglo-Saxon silver hooked tag (**3163**) was recovered from farmland south of Chattisham and within the Order Limits.

Higham, Holton St Mary, Stratford St Mary, and East Bergholt

~~3.4.183~~3.4.184 A **low value** stirrup (**3093**) was found within the Order Limits in the Holton St Mary geographic region. This stirrup was cast of copper-alloy and was sub-pentagonal in plan with a slightly rolled flange which protrudes backwards from the base. The lower part of the mount had two circular holes and two knops on slightly concave edges. The apex of the mount was rounded and pierced with a circular hole with a knop on each side of the base. The frontage was decorated at some point with an engraved design which had since worn away, and the rear was undecorated. The asset has evidential value.

Hornestreet, Dedham, Ardleigh and Lawford

~~3.4.184~~3.4.185 There is a **low value** earthwork at Ardleigh Heath (**3096**) in a field between the Order Limits and an access trackway, with the Order Limits touching on the eastern side. This asset is a cropmark of an enclosure in an agricultural field and can be seen in aerial photography. This enclosure was not mapped as part of the NMP, but the former field boundaries were. This asset has evidential value. The review of the available aerial imagery by the Project added another linear anomaly to this asset.

~~3.4.185~~3.4.186 A multi-period scatter of confidential PAS finds (**3269**) of **unknown value** is reported as being found north of Hornestreet and partially within the Order Limits. The scatter included an early medieval to medieval find.

~~3.4.186~~3.4.187 A multi-period scatter of confidential PAS finds (**3272**) of **unknown value** is reported as being found north of Hornestreet and outside the Order Limits. The scatter included an early medieval find.

Medieval

Elmsett, Chattisham and Copdock

Designated Heritage Assets

Nedging-with-Naughton CP

~~3.4.187~~3.4.188 The Grade II* listed ‘Brickhouse Farmhouse’ (**1037104**), located c. 2.7 km west of the Order Limits down a private road off the Ipswich Road B1078. It is a 15th-16th century timber-framed building. The asset comprises two storeys and has exposed timber frames, brick nogging and a tiled roof. The upper storey of the asset is jettied on its northern side, where remains of shafts, capitals and joints are still exposed. It is likely that this jettying once extended to the southern side of the asset but was later extended on the ground floor with red brick.

~~3.4.188~~3.4.189 The asset is located down a private track which leads off of the B1078 and within an active farmyard, with central hardstanding and multiple associated farm buildings. Surrounding the property are agricultural fields on all sides. The wider landscape is also primarily agricultural with some dispersed settlement. The setting of the asset contributes considerably to its significance, with the historical farming association with the landscape maintained into the present. The asset is **high value** and has historical and aesthetic value. The setting of the asset does not extend to the Order Limits.

Elmsett CP

~~3.4.189~~3.4.190 The Grade II listed 'Rookery Farmhouse' (**1268459**) is located c. 1.9 km south-west of the Order Limits accessed via a private driveway off Rookery Road. It is a two-storey house, built c. 1500 with additions in c. 1840-1850. The earlier section of the house is rendered and with a colour-washed timber-frame and plain-tile roof. The later section of the house to the front is built in red brick with Welsh slate roof and brick ridge stacks.

~~3.4.190~~3.4.191 The asset is located down a private driveway lined by mature vegetation which leads off Rookery Road, into a large garden lined by mature trees and vegetation which contains landscaped gardens and features such as a tennis court. The asset is located within a small settlement along Rookery Road and Manor Road. The surrounding landscape comprises agricultural and grass fields. The setting of the asset contributes considerably to its value. The asset is of **medium value** and historical and aesthetic values. The setting of the asset does not extend to the Order Limits.

~~3.4.191~~3.4.192 The Grade II listed 'Rectory' (**1037279**), located c. 2 km south-west of the Order Limits, is a 16th century timber-framed and plastered building with 18th century alterations and additions is located within the medieval scheduled monument 'Moated site at The Old Rectory, 150 m north-east of Malting Farm' (**1019537**), located c. 1.5 km south-west of the Order Limits. Both assets are situated on the northern side of Whatfield Road in the settlement of Elmsett.

~~3.4.192~~3.4.193 The Rectory (**1037279**) has a tiled roof with a ridge chimney stack. The building is laid out in an L-shape plan with wings to the north-east and south-east. The south-east wing was formerly a crosswing but has subsequently been incorporated into the main block. The doorway to the property has a Tuscan portico with a cornice and plain columns. The scholar and divine, John Boise is said to have been born here and was later rector. The Rectory is in the eastern corner of the moat island. The scheduled monument includes the medieval moated site of the Old Rectory, located 650 m south-west of the Elmsett Parish Church and adjacent to the Elmsett Green to the west. Within the moat is a sub-triangular island, 116 m north-south and 75 m east-west. Surrounding the island is a water-filled moat, 12 m wide and 3 m deep, with a wide causeway across the northern edge of the moat, and footbridge to the south-west.

~~3.4.193~~3.4.194 The assets are located within a property that is lined with dense vegetation, on the northern edge of the village of Elmsett. To the west and south are residential plots, to the east Elmsett Green and to the north open farmland. The assets are shielded from Whatfield Road by the dense vegetation lining the property. To the south-east of the assets is a large triangular green and a characterful thatched property Mannings Cottage (**1351609**), to the west also lining the green. The village is surrounded by rural fields. The rural village setting of the asset contributes considerably to the value of the asset, despite the increase in the modern development of the village. The vegetation around the assets provides much screening into the village and to the surrounding fields. This vegetation limits the assets setting extending into the surrounding area. The Rectory has historical, evidential and aesthetic value and is **medium value**. The moated site has historical and evidential value and is **high value**. The setting of the assets does not extend to the Order Limits.

~~3.4.194~~3.4.195 The Grade I listed 'Church of St Peter' (**1194594**), located c. 1.3 km south-west of the Order Limits set back from Manor Road to the north-east of Elmsett

settlement. It is a small 13th, 14th and 15th century church without aisles. The asset has some 17th century features including pulpit and communion rail.

~~3.4.195~~3.4.196 The asset is located within the graveyard associated with the church, which is lined by vegetation and a brick wall. The church has an open setting and is not encroached by the vegetation lining the graveyard. Bordering the asset to the south is the listed farmhouse 'Church Farm' (**1037319**), to the north, east and west are open agricultural fields. The church is located on the periphery of the village of Elmsett, and it is the village church. The surrounding landscape around the asset is an open agricultural landscape. The rural setting of the asset makes a considerable contribution to its value. The asset has historical, aesthetic and communal value and is high value. The setting does not extend to the Order Limits (Figure 7.12.F42_VP2.21 Viewpoint 2.21: Offton Road, north of Elmsett; document reference 7.12).

~~3.4.196~~3.4.197 'Redhouse Farmhouse' (**1194612**) is a Grade II medieval hall house situated off Flowton Road to the east of Elmsett settlement. It has been previously altered and extended in the 16th-17th century with 18th century fenestration, that features a timber-framed and plastered exterior with a tiled roof. The distinctive ridge chimney stack, adorned with three octagonal shafts, and large external chimney stacks at the north-west and south-east ends contribute to its historical charm. This house is located c. 1.2 km east of Elmsett and c. 1 km south-west of the Order Limits. This asset has **medium value** based on its evidential, historical and aesthetic value.

~~3.4.197~~3.4.198 Nestled atop a steep incline, Redhouse Farmhouse enjoys a secluded position set far back from the road. The expansive front garden, characterised by its openness, complements the wooded area to the east of the house. The setting is informed by its location in a farmyard as well as its relationship with the non-designated Farmstead: Red House Farm Elmsett. Associated buildings, stand to the left and behind the property. The setting is further informed by the surrounding agricultural landscape with which this asset has a functional and historical relationship. Overall, the setting makes very considerable contribution to its value and does not extend to the Order Limits.

Burstall CP

~~3.4.198~~3.4.199 The Grade I **high value** 'Church of St Mary' (**1036948**) has evidential, historical, aesthetic and communal value, and is located within Burstall c. 1 km west and c. 660 m south of the Order Limits. The parish church dates largely to the early 14th and 15th centuries, and it was restored in 1866, and 1870-1873 by Frederick Barnes of Ipswich. The asset is built of flint and rubble on stone plinths, it is part rendered, it has quoins and other dressings and plaintile roofs.

~~3.4.199~~3.4.200 The setting of the church is informed by its location within the small rural village of Burstall, situated at the heart of the settlement on the southern flank of The Street. The church is situated within a maintained lawned churchyard, with tree belts to the south and west but with open aspects to the east, and particularly to the north. The setting is further informed by the asset's relationships with listed and non-designated buildings in the vicinity that positively contribute to the character of the settlement. The surrounding agricultural landscape, with which the asset has a historical relationship, also informs the setting. The Order Limits lies beyond the boundaries of Burstall Civil Parish in the adjacent parishes of Sproughton and

Bramford. The rural village setting of the asset makes a considerable contribution to its value and it extends to the Order Limits.

~~3.4.200~~3.4.201 'Mulberry Hall' (**1036947**), is a Grade II listed building located within Burstall along The Street, c. 740 m south of the Order Limits. The house, dating back to c. 1500, features a timber-framed structure with subsequent alterations. The asymmetrical facade includes two stories with four three-light timber cross casements and a distinctive door. The house, historically linked to Cardinal Wolsey's estate, is a testament to its rich heritage. Overall, this listed building has a **medium value** due to its evidential, historical and aesthetic value.

~~3.4.201~~3.4.202 This hall is positioned with a setback from the road, featuring a spacious front garden and an open setting. The property is delineated from the road by a low hedge or fence, while neighbouring post medieval Grade II farm buildings (**1351618**) border it on the right. The overall ambiance is one of openness and semi-rurality along a road that experiences moderate traffic. Its setting is further informed by its historical relationship with other listed buildings within the settlement: the medieval Grade I Church of St Mary (**1036948**) and the post medieval Grade II 'Half Moon' (**1351619**). Overall, the setting makes considerable contribution to the asset's value but does not extend to the Order Limits.

~~3.4.202~~3.4.203 'Fenn Farmhouse' (**1351617**) is a Grade II listed building located along Thorpes Hill, c. 850 m south-east of Burstall. The Order Limits would pass c. 15 m east of this farmhouse. The farmhouse, originating from the late 15th or early 16th century, displays a charming timber-framed and brick exterior. The entrance front is adorned with replaced diamond mullioned casements, while the rear echoes this characteristic window style. Overall, this listed building has a **medium value** due to its evidential, historical and aesthetic value.

~~3.4.203~~3.4.204 The farmhouse is situated adjacent to a very busy main road (A1071), contributing to a semi-exposed feel despite hedging and a wall. The surroundings consist of fields to the west and a private caravan and fishing club to the south. The rural ambiance is, however, accompanied by the constant noise from the adjacent lively road. The busy-ness of the road is a detractor however; this farmhouse would have been placed deliberately by this road. Therefore, the road does contribute to its understanding. The setting is further informed by its historical relationship with the non-designated **low value** Fen Farm Farmstead (**3162**) as well as with the surrounding agricultural land. The farmstead (**3162**) holds evidential and historical values and is crossed by an Order Limits permanent access route. The setting of the farmhouse makes considerable contribution to its value, and due to the proximity of the Project, the setting extends to the Order Limits.

~~3.4.204~~3.4.205 The Grade II* 'All Saints' Church' (**1285956**) is located on the eastern side of the Church Lane/Lower Street junction within Sproughton settlement, and c. 940 m east of the Order Limits. The church stands as a notable medieval structure with a square, unbuttressed west tower showcasing an embattled parapet and restored windows. The nave features a three-bay north and south arcade, and the south aisle includes a two-light decorated window, a three-light perpendicular window, and a porch with a three-centre arched entrance. The church is further adorned with a 15th century octagonal font and various monuments, including one to Mrs Bull dated 1634, featuring a kneeling figure within an aedicule with angels and an achievement. Overall, The church has **high value** due to its evidential, historical, aesthetic and communal value.

~~3.4.205~~3.4.206 The setting of the Church (**1285956**) is informed by its location within the settlement, as well as other listed buildings within the vicinity of the village including the post medieval Grade II 'Sproughton Hall' (**1285915**) and the post medieval Grade II 'Barn about 50 metres Southwest of Sproughton Hall' (**1351647**). Both assets are recorded on the first edition of the OS map of 1886. The built landscape surrounding the Church and these assets has changed very little since, but there has been urban development and expansion to the south, including the addition of the A14, the emergence of the industrial areas to the east and south-east and the wider development of Ipswich. Overall, the setting of the Church makes a considerable contribution to its value but does not extend to the Order Limits.

~~3.4.206~~3.4.207 The Grade II 'The Wild Man' (**1351646**) is situated on the meeting of Burstall Lane, Lorraine Way/High Street, and Lower Street within Sproughton settlement, c.740 m south-east of the Order Limits. The Wild Man, with origins in the early and later 16th century, showcases timber-framed construction and a rendered exterior. Notable features include 20th century timber casements, a blocked doorway, and dormer casements. The interior, though altered, preserves stop-chamfered beams and exposed framing, highlighting the historic charm of the structure. The house has **medium value** based on its evidential, historical and aesthetic value.

~~3.4.207~~3.4.208 The setting of 'The Wild Man' (**1351646**) is informed by its location within Sproughton settlement, as well as the other listed buildings within the vicinity. The built landscape surrounding the asset has developed to the south, but many of the surrounding properties are characterful and historic. Urban expansion to the south includes 20th century housing developments, the A14, and the wider development of Ipswich. Overall, the setting of 'The Wild Man' does not extend to the Order Limits.

Hintlesham CP

~~3.4.208~~3.4.209 Within the settlement of Hintlesham is found the Grade II 'Church of St Nicholas' (**1351644**), c. 1.4 km north-west of the Order Limits. The medieval church was restored in the 19th century and features an imposing silhouette with its prominent 15th century square tower characterised by flint and rubble construction and stone dressings. Aisled nave elevations boast well-preserved 19th-century Perpendicular windows, and a rendered gault brick porch provides a welcoming entry. The chancel, buttressed and adorned with 19th-century decorated style fenestration, adds to the architectural value. The exterior also exhibits traces of notable memorial structures, contributing to the church's historical and aesthetic value. Overall, the church has a **medium value** due to its evidential, historical, communal and aesthetic value.

~~3.4.209~~3.4.210 Its setting is informed by its location within the settlement and its relationship with the other scoped in listed building within the settlement, the post medieval Grade II 'Hyntle Place' (**1351643**). The Church of St Nicholas is situated on the edge of the village along a very busy road. The front of the church faces a mix of park fields, a village hall, and a car park, contributing to a vibrant and somewhat busy atmosphere. The immediate setting features a relatively large open churchyard, enclosed by chain fencing and surrounded by established trees and a wooded area. Despite its proximity to the bustling road, the semi-rural surroundings and the presence of greenery provide a blend of tranquillity and activity in the vicinity of the church. The busy-ness of the road is a detractor however, this asset would have been placed deliberately by this road. Therefore, the road does contribute to its

understanding. Overall, the setting makes considerable contribution to the asset's value but does not extend to the Order Limits.

~~3.4.210~~3.4.211 'Wood Farmhouse' (**1036913**) is a Grade II listed building located along Duke Street, at the south-west end of Hintlesham, c. 1 km north-west of the Order Limits. The house exhibits a blend of historical elements, featuring a core from the 15th century with later extensions in the 17th and 19th centuries. Encased in brick, the two-story structure adopts a T-plan, showcasing scattered fenestration with diamond-leaded glazing. The central forward gabled wing adds architectural interest, complemented by a brick porch at the right-hand angle. Chimneys with shaped shafts punctuate the roofline. The rear facade preserves remnants of pargetting, emphasising its historical value. Overall, the farmhouse has a **medium value** due to its evidential, historical and aesthetic value.

~~3.4.211~~3.4.212 Situated off a bustling road, Wood Farmhouse enjoys a sense of enclosure attributed to established hedges and a setback from the road. The surroundings blend agricultural fields with a mix of period and modern housing, albeit with a noticeable level of activity from passing traffic. Overall, the setting makes considerable contribution to the asset's value but does not extend to the Order Limits.

~~3.4.212~~3.4.213 'Canes Farmhouse' (**1036949**) is a Grade II listed building found within Burstallhill, along Orchard Lands, c. 430 m south-west of the Order Limits. The farmhouse, potentially dating back to the 16th century boasts a rendered exterior with scattered casements, dormers, and distinctive doors. Brick stacks and a weatherboarded rear contribute to its character. Overall, this listed building has a **medium value** due to its evidential, historical and aesthetic value.

~~3.4.213~~3.4.214 The setting is informed by its location in a farmyard and by its historical relationship with the surviving non-designated elements of the Cane's Farm farmstead, which is identified by the Suffolk HER (**3052**). The farmstead is of **low value** due to the significant loss of working buildings. The setting is further characterised by the surrounding agricultural landscape with which the asset has historical and former functional relationships. The setting makes considerable contribution to the farmhouse's value but as it is restricted to the farmyard and immediate landscape, it does not extend to the Order Limits.

Chattisham CP

~~3.4.214~~3.4.215 Within the settlement of Chattisham are found three medieval listed buildings, the Grade II* 'Church of All Saints' (**1351620**), the Grade II 'Church farmhouse' (**1036952**) and the Grade II 'The Clayes' (**1193456**), between c. 230 m and c. 410 m north-west of the Order Limits. These assets are situated on The Street and on Church Lane within the settlement.

~~3.4.215~~3.4.216 The 'Church of All Saints' (**1351620**) originated in the early 14th century and features later modifications. It stands out in the landscape with a reduced-height tower, distinctive aesthetic elements including diagonal buttresses, and a blend of flint, brick, and stone dressings. The nave features rendered walls and 19th century neo-perpendicular gothic style windows and compliments the chancel with its flint cobbles and buttresses.

~~3.4.216~~3.4.217 The Grade II 'Church Farmhouse' (**1036952**) is a late 15th century to early 16th century timber-framed house situated to the east of the 'Church of All Saints' (**1351620**) and is accessed via a private road off Church Lane in Chattisham

settlement. The farmhouse features a mix of 16th, 17th, and later 20th century elements within its complex plan. These features include a 16th century timber-framed wing, a 17th century cross range, and a later modern addition to the northern part of the property.

~~3.4.217~~3.4.218 The Church of All Saints (**1351620**) and 'Church Farmhouse' (**1036952**) have group value. The Church has **high** value based on its evidential, aesthetic, communal value, whereas the Farmhouse has **medium value** based on its evidential historical, and aesthetic value. The setting of these two assets is informed by their location within the settlement and their historical association with each other. The setting of both the Church and Farmhouse is wider with an open view to the south from the Farmhouse and makes a considerable contribution to their values. Their settings extend to the Order Limits.

~~3.4.218~~3.4.219 The Grade II 'The Clayes' is situated off The Street in the western part of Chattisham settlement. The asset is a late 15th or early 16th century timber-framed house which features exposed framing, a thatched roof, and scattered leaded casement windows. The asset's historical character is preserved with a traditional design which includes an axial brick stack and a four-centre arched door head which showcases its rural ambiance.

~~3.4.219~~3.4.220 'The Clayes' has **medium value** based on its evidential, historical, and aesthetic value. Its setting is informed by its location within the settlement, but it is limited to the property's vicinity of its gardens and its location along The Street. The setting does make a considerable contribution to its value, but it does not extend to the Order Limits (Figure 7.12.F75_VP3.05 Viewpoint 3.05: The Street / NCR 1, Chattisham; document reference 7.12).

~~3.4.220~~3.4.221 The scheduled monument 'Moated site at Moat Farm, 450 m south of Cobbler's Corner' (**1019889**), is located off Woodlands Road/Clay Hill west of Chattisham and c. 1 km north-west of the Order Limits. It is a well preserved medieval moated site, which includes a roughly rectangular island, measuring 69 m north-south by 52 m east-west. The moat is water filled, measuring 10 m wide and 1.5 m deep, recently revetted with wood along the outer edge of the northern side of the moat. In the north-eastern corner a small pond feature extends out of the moat c. 14 m in diameter, potentially used for watering horses. The island would have been entered by a causeway, c. 5 m wide, along the eastern side of the moat, via a wooden bridge. The moated site appears on a map from 1595, which indicates there was a building at its centre names 'Tenements Claydons'. There is a post medieval farmhouse to the north which is thought to have been the successor to the previous house on the island. The island remains largely undisturbed by post medieval and modern activity, retaining archaeological structural evidence and buried features relating to the asset's development across its periods of occupation. There is potential for historical landscape understanding through buried silts in the base of the moat.

~~3.4.221~~3.4.222 The asset is lined with mature vegetation, following the outline of the moat. The immediate and surrounding landscape is that of a rural, agricultural landscape, with some clusters of buildings close by and a linear settlement lining Duke Street to the north. The setting of the asset contributes considerably to its setting, located within a rural landscape and next to the successive post medieval house which followed the previous medieval house located at the centre of the moat. There are some outbuildings immediately to the west which are a modern addition and disturb the assets setting slightly, but there is some mature vegetation between these

buildings and the moat. The asset has evidential and historical value and is **high value**. The setting of the asset does not extend to the Order Limits, with the landscape divided between the asset and the Order Limits by The Street, as well as intervening buildings, agricultural land and field boundaries.

Copdock and Washbrook CP

~~3.4.222~~3.4.223 Along Elm Lane, c. 500 m south-west to Washbrook and Copdock and c. 1.2 km south-east to the Order Limits is found the Grade II listed 'Tudor Cottage' (**1036933**). This cottage, likely built in the late 15th or early 16th century, showcases its historical evolution through subsequent modifications in the 17th, 18th, and 20th centuries. The timber-framed structure features a quaint two-story facade, rendered walls, and a plaintile roof. Architectural elements include an off-centre brick stack, a 20th century porch, and various small-paned windows. Overall, the cottage has a **medium value** due to its evidential, historical and aesthetic value.

~~3.4.223~~3.4.224 Nestled behind a lengthy driveway and surrounded by meticulously maintained gardens, Tudor Cottage exudes a sense of seclusion. The entrance imparts an enclosed ambiance, yet the immediate surroundings of the house unfold into an open, rural landscape, contributing to its quaint charm. The distant hum of busy roads is perceptible. The busy-ness of the road is a detractor however; this asset would have been placed deliberately by this road. Therefore, the road does contribute to its understanding. Overall, the setting of this property makes a considerable contribution to its value, but it does not extend to the Order Limits.

~~3.4.224~~3.4.225 'Dakons' (**1036897**) is a Grade II listed building located along Pigeons Lane, c. 1 km north-west of Washbrook and Copdock, c. 280 m south-west of the Order Limits access, and c. 390 m south-east of the Order Limits. The house, constructed in the first quarter of the 16th century and later, showcases a timber-framed exterior encased in brick. The front gable wall features c. 1700 mixed bond brickwork, with a boarded door under a 20th century porch and first-floor casements exhibiting soldier arches. Overall, the house has a **medium value** due to its evidential, historical and aesthetic value.

~~3.4.225~~3.4.226 Dakons is situated set back from the road, with a hedge and fence creating a separation, and it boasts a large front garden. The setting imparts a distinctly rural ambiance, surrounded by a mix of both period and modern properties. However, the visual landscape to the north is notably affected by a new build opposite, which now dominates a significant portion of the surrounding view. The broader surroundings maintain a serene and rural atmosphere. This setting is further informed by its relationship with the non-designated Washbrook Street (**3160**). Overall, the setting makes a moderate contribution to its value and does not extend to the Order Limits.

~~3.4.226~~3.4.227 The Grade II* 'Church of St Mary' (**1194408**) is situated down a trackway off Spring Road/Church Lane south of Spring Brook south of Washbrook Street hamlet, and c. 190 m south-east of the Order Limits. The church, with origins dating back to the 12th century and notable early and later 14th-century features, presents an intriguing exterior. The three-stage square tower, crowned with an embattled brick parapet, incorporates early brickwork and diagonal offset buttresses. The exterior also reveals a north baptistry, a 19th century addition with matching plinth and banding, contributing to the church's aesthetic value. Overall, this church has a **high value** due to its evidential, historical, communal and aesthetic value.

~~3.4.227~~3.4.228 Nestled within a secluded valley, the church is an isolated presence, devoid of immediate neighbouring settlements except for a solitary house. The picturesque

surroundings offer expansive views down the valley, with the church occasionally visible from elevated vantage points across the wider landscape. The setting is characterised by a blend of scrubland and wooded areas, creating a serene and distinctly rural ambiance. The setting is also informed by the relationship between the church and its churchyard as well as the **low value** earthworks of an extraction pit and a bank of unknown date (**3190**) which is c. 215 m east of the Order Limits. The non-designated assets here hold evidential and historical value. Overall, the setting of the church makes a considerable contribution to its value and extends to the Order Limits with a close Order Limits permanent access.

Belstead CP

~~3.4.228~~3.4.229 The Grade II* Church of St Mary (**1194048**) is located c. 400 m east of Belstead, c. 2.1 km south-east of Order Limits. The church reflects a rich historical tapestry with elements dating back to the 16th century. The exterior showcases a square 14th century tower with a brick embattled parapet, strategically set against the middle bay of the nave. The south nave features a two-light 14th century window, while the west window has been restored in a 1980s perpendicular style. The chancel exhibits two two-light cusped Y-traceried windows with almost triangular heads. Notably, the north chapel, dating from the 16th century and later, presents a white brick embattled parapet and 19th century plain lights beneath 16th century moulded brick four-centre arched hoods. The architecture seamlessly weaves together various historical periods, creating an exterior adorned with distinctive features that narrate the church's enduring legacy. Overall, this church has a **high value** due to its evidential, historical, communal and aesthetic value.

~~3.4.229~~3.4.230 Perched atop a hilltop, the Church of St Mary commands a serene presence at the village's edge. The churchyard, enclosed by a wooden fence and sparse hedgerow, offers a tranquil retreat. The broader setting unfolds with picturesque pasture fields dedicated to sheep, expanses of farming land, and interconnected access roads linking neighbouring villages. Despite the tranquillity of the local roads, the persistent hum of traffic noise from the nearby A14 motorway is discernible, a constant reminder of the broader regional activity. This road changed the wider setting of this asset since its creation, but the immediate setting did not change and is characterised by a serene churchyard, enclosed by established trees, and a wooded area, fostering a peaceful and secluded atmosphere. Overall, the setting makes considerable contribution to the assets' value but does not extend to the Order Limits.

~~3.4.230~~3.4.231 The Grade II* listed Church of St Peter (**1194324**) is located c. 400 m east of Belstead, c. 1.4 km south-south-east of Order Limits. The exterior of the Parish Church of St Peter reflects a blend of medieval and later architectural styles. The three-stage embattled tower, dating back to the 14th century, stands with diagonal buttresses and a stair turret. The nave, primarily constructed in the 15th century, features stepped buttresses and panel-traceried windows on each side. A south porch, built with flint and brick, enhances the architectural character, while well-preserved features like the octagonal font and west gallery contribute to the church's historical and aesthetic value. Noteworthy features include the tomb of John Marven, a renowned bellringer who passed away in 1789. To the north-east, a Commonwealth War Graves site adds historical value. Overall, this church has a **high value** due to its evidential, historical, communal and aesthetic value.

~~3.4.231~~3.4.232 The church is situated in a churchyard adorned with mature trees, but with its west side more open. The elevated position provides a vantage point overlooking

the new A12 and A14, c. 400 m east of the church, that changed the tranquillity of its setting. Positioned to the east of the village, adjacent to the post medieval Barn at Copdock Hall (**1351635**), also a Grade II listed building, the church finds itself in a rural landscape near the Old A12. Its setting is informed by the historical relationship between the church and the listed barn. Changes in infrastructure, such as the A12/ A14, may have potentially influenced the parish borders, therefore, the setting makes a moderate contribution to its value and does not extend to the Order Limits.

~~3.4.232~~3.4.233 'Woodsend And No 1 Woodsend' (**1036891**) is a Grade II divided house, dating back to c. 1500 with later extensions and restoration in the 1980s. It boasts an exposed timber frame and plain tile roofs. It is located along London Road, c. 1.6 km north-east of Capel, c. 1.7 km south-east of an Order Limits permanent access and c. 2.3 km south-east of the Order Limits. This listed structure has a **medium value** due to its evidential, historical and aesthetic value.

~~3.4.233~~3.4.234 The property is prominently positioned along a busy road, separated by a brick wall and sporadic bushes. The road's considerable traffic generates a constant and noticeable noise both to the front and rear of the house. The busy-ness of the road is a detractor however; this house would have been placed deliberately by this road. Therefore, the road does contribute to its understanding. The surroundings contribute to an open ambiance, as the nearby houses are modern rather than period, creating a contrast with the historical character of the property. However, its close position to the A12, c. 130 m west, affect its value. Overall, the setting of this property makes a moderate contribution to its value. Also, the setting does not extend to the Order Limits.

Non-Designated Heritage Assets

~~3.4.234~~3.4.235 A **low value** moat at Burstall Hall (**3103**) is situated c. 2 km north-west of Sproughton, with the south-western boundary within an Order Limits permanent access route. The asset is an L-shaped remnant of a possible sub-rectangular moat which surrounds Burstall Hall Farmstead (**3114**). The **low value** farmstead is visible on the first edition OS map and is laid out in a dispersed plan. The farmhouse is set away from the yard within a rural and isolated location. There has been significant loss of the working buildings with the remainder being converted for residential use. These assets have evidential value.

~~3.4.235~~3.4.236 The **low value** Ipswich to Bury St Edmunds railway line (**3244**) cuts through the Order Limits from Stowmarket in the north-west to Needham Market in the south-east. The Ipswich and Bury Railway was built as part of an extension of the Eastern Union Railway in November 1846 and was merged with the railway in July 1847. In the present day, this stretch of line is part of the Great Eastern Main Line Service and also forms part of the Ipswich to Ely line. This asset has historic and evidential value.

~~3.4.236~~3.4.237 A **low value** moat (**3047**) is present at Colegreen Farm, Chattisham, c. 140 m from an Order Limits permanent access. This asset is of an elongated rectangle shape, with the western and northern 'arms' with water, and the southern and eastern 'arms' having been filled in. The north-western corner of the moat overlaps the boundary of the low value post medieval farmstead (**3105**) at Coles Green Farm, c. 75 m east of the Order Limits. The farmstead is visible on the first edition OS map and is laid out in a regular courtyard plan with additional detached elements and is set within a rural and isolated location. The farmhouse is set away from the yard, and there has been partial loss of the working buildings. These assets hold historic and evidential value.

~~3.4.237~~3.4.238 There was a **low value** bronze padlock with distinct characteristics (**3246**) found within the Order Limits. The padlock is composed of a square section chamber that includes a projecting area housing a keyhole. On the opposite side, there is a corroded attached rod, potentially depicting the head of an animal. The padlock measures a maximum length of 55.2 mm and stands at a height of 40 mm. This artifact provides valuable historical evidence of the craftsmanship and locking mechanisms utilised during the medieval period. The asset holds evidential and aesthetic value.

~~3.4.238~~3.4.239 A **low value** artefact scatter which contained pottery (**3048**) c. 200 m south of an Order Limits permanent access that transects Washbrook Road and Pigeons Lane. This asset has evidential value.

~~3.4.239~~3.4.240 A **low value** coin (**3051**) was found in the 250 m Study Area of the Order Limits in the Washbrook and Copdock area. This asset is a copper-alloy rose farthing of King Charles I dated c. 1625-1949 and has evidential value.

~~3.4.240~~3.4.241 Several **low value** assets were found within 250 m of the Order Limits in Sproughton on the same site. These assets have evidential and historical value and comprise:

- A silver medieval penny (**3053**) from the reign of Edward I, dated c. 1302-1310
- A silver penny (**3054**) dated from the reign of Edward III in the post-Treaty period c. 1369-1377
- A very worn silver penny (**3055**) probably from the reign of Edward III c. 1351-1377
- A half of a silver penny (**3056**), estimated to be from the reign of Henry V c. 1413-1422
- A mount (**3057**) which was a complete cast copper-alloy bar mount with a pendant loop from the medieval period. It is rectangular and bevelled at the terminal end and was cast in two parts
- A buckle (**3058**). This asset is a d-shaped frame, oval in section, and constructed out of an incomplete cast of copper alloy. The bar is narrowed and offset for the pin which was present
- A buckle (**3059**). This asset was a cast copper-alloy buckle from the medieval period and was of an oval lipped frame with a plate and was d-shaped in section
- A buckle (**3060**) This asset was an oval cast copper-alloy buckle frame with a rectangular integral plate which is sub-triangular and tapered towards the attachment end
- A strap end (**3061**) was and consisted of a folded sheet metal in a rectangular shape and section. The asset had a missing end where one of the two attachments would have been. The asset had two holes in the attachment end for separately cast rivets, of which, one was present
- A strap end (**3063**) was also found. This asset was an incomplete cast copper-alloy strap end, circular in shape, and rectangular in section. It was uncertain which end was the top, but an acorn motif was suspended from a stem on one of the ends

- A strap fitting (**3064**) was found and consisted of a rectangular shape. The front face was decorated with a single line border with a series of horizontal, vertical, and diagonal lines within it
- A buckle (**3066**). This asset was an incomplete cast copper-alloy edge of a possible buckle frame, the rest was missing due to old breaks. The buckle was decorated with an oval knop pierced by two circular holes in the middle of the outer edge and the frame itself was decorated with a central groove
- A buckle (**3067**) was an incomplete cast copper-alloy buckle frame from the medieval or post medieval period. Both the inside and the outside edges were decorated with a central triangular knop with semi-circular knops above and below
- A key (**3068**). The key was a cast copper-alloy key from the medieval or post medieval period and was cast in a single piece with a circular bow which was oval in section
- A copper-alloy tap (**3070**) was cast and comprised of a tapering cylinder with a central circular perforation. On the top of the tap sat a cast flat, undecorated cockerel with a three-pointed comb
- Metal working debris (**3077**) consisted of two fragments of cast copper-alloy most likely because of metal working
- A furniture fitting (**3079**) was a cast copper-alloy circular bar and was assumed to be an incomplete handle possibly for a casket or a drawer. The asset was divided into three ovals with collars made of two bands between them
- A buckle (**3080**). This asset was a cast copper-alloy double looped buckle frame. The buckle frame and strap bar survive intact, but the pin was missing. Neither loop of the frame has a pin.

~~3.4.241~~3.4.242 A **low value** buckle (**3082**) was found within the Burstall, Sproughton, and Hintlesham geographic regions. This asset was a cast copper-alloy buckle with an oval frame with an offset and cylindrical bar and thickened outer edge. Traces of gilding are visible on both the frame and the plate, and the pin is missing due to historic breaks. This asset is nearly identical to an example found in London and holds evidential and historic value.

~~3.4.242~~3.4.243 A **low value** finger ring (**3083**) was found within the 250 m Study Area in the Burstall, Sproughton, and Hintlesham geographic regions. The design of the ring features a bezel in the form of two clasped hands with a hoop made from a strip of metal with the ends soldered together at a butt joint. The motif originated in the Roman period but became more popular through the 15th century in Europe with fide rings given during betrothals or marriages. This asset has evidential and historical value.

Raydon, Great Wenham and Capel St Mary

Designated Heritage Assets

Raydon CP

~~3.4.243~~3.4.244 The ‘Church of St Mary’ (**1286247**) is a Grade II* listed building located within the settlement of Raydon, c. 750 m west of the Order Limits. The Church,

dating from the late 13th to early 14th century and restored in 1883, showcases a distinctive aesthetic value. The exterior features a square bell house with louvres and a pyramidal roof, contributing to the visual character of the structure. The nave exhibits offset buttresses, and the south side presents a well-preserved late 19th-century gabled porch housing the original entrance, adorned with a niche. The churchyard, complementing the architectural richness, encompasses a wall tablet commemorating John Mayor, adding historical depth to its value. Overall, this church has **high value** based on its evidential, historical, communal and aesthetic value.

~~3.4.244~~3.4.245 Its setting is informed by its location within the settlement as well as its relationship with other listed buildings which are scoped out from the Study Area. The church, centrally positioned in the village churchyard, is accessed through two entrances, one with a low wall and iron gate on the east side, featuring a memorial. A hedge borders the south side, while mature trees encircle the churchyard to the north and west, creating a semi-residential, semi-rural ambiance. The western entrance, marked by a small wooden gate, leads to a relatively quiet space. Fields with horses and associated structures characterise the west and north, providing a pastoral backdrop. To the east lies the village's main road, generating audible traffic sounds within the churchyard. Despite this, the overall setting exudes a tranquil atmosphere, complemented by the compact size of the churchyard. Therefore, the setting of the church makes a considerable contribution to its value but does not extend to the Order Limits.

~~3.4.245~~3.4.246 'Raydon Hall' (**1193333**) is a **medium value** Grade II listed building located c. 200 m north-east of the settlement of Raydon and c. 480 m west of the Order Limits. The Hall, now divided into two dwellings, exhibits architectural elements spanning the probable early 16th century hall range and a later 16th century crosswing. The crosswing, once jettied, reveals a rebuilt right return in red brick, housing an external off-set stack with a reconstructed upper part in the 20th century. The Hall has evidential, historical, and aesthetic value. The asset is located within the 19th century Raydon Hall Farmstead (**3119**), which comprises a courtyard E-shaped plan formed by working agricultural buildings, with additional detached elements including the farmhouse. There has been partial loss (less than 50%) of the traditional farm buildings and the addition of later buildings. The farmstead is of **medium value** based on its evidential and historical values.

~~3.4.246~~3.4.247 The setting of Raydon Hall is informed by its location within its immediate grounds, its association with its attendant working farm and by its relationships with its outbuildings, several of which are recorded on the first edition OS map of 1885 (**3119**). The setting is further informed by the surrounding agricultural landscape, with which the asset has a historical and functional relationship. The setting of the asset, therefore, makes a considerable contribution to its value, but due to it being restricted to its farmyard location and the immediate agricultural landscape, it does not extend to the Order Limits.

Wenham Magna CP

~~3.4.247~~3.4.248 The Grade II* 'Wenham Place' (**1351955**) and Grade II 'Walled Garden attached to north of Wenham Place' (**1285667**) are located c. 100 m south of Great Wenham Place, and c. 1.1 to c. 1.3 km north-east of the Order Limits. Wenham Place (**1351955**) was built in the early 16th century and has had alterations and additions made since its construction. The red brick in Flemish bond exterior with exposed timber framing and infill on the northern façade is from its original construction, with some of the red brick in English bond on the southern façade being

added later. The changes in the brick laying styles indicate a change in aesthetic preference of the time in which they were created, as well as indicate addition of a new part of the building. The asset has a red pan tiled roof and is laid in a 'L'-shaped plan with the medieval wings to the east and north, and the post medieval wings to the north and south-east, and a taller range to the west. There are original interior features inside Wenham Place, such as a brick spiral staircase, moulded joists, an arched fireplace, and a possible Jacobean overmantel which add to the historic and aesthetic value of the asset. Damage made to the roof by the agricultural riots in the 19th century add historic provenance to the value of the asset too. An owner of Wenham Place, Willie Lot, also owned a cottage at Flatford which was featured in a painting by John Constable.

~~3.4.248~~3.4.249 The walled garden (**1285667**) was constructed in the 16th century, most likely at the same time as Wenham Place (**1351955**), and features repairs from a later date, and a 19th century summer house. The wall is constructed of red brick with some diapering and is c. 3 m in height. It encloses a rectangular garden on the northern side of Wenham Place (**1351955**). The south-western side of the wall is stepped and has a polygonal buttress at the angle which may show the remains of a former wing of the main house. There is a 19th century summer house with a round-headed archway and with carved barge boards, as well as gateways on the north and west walls. There are two bee holes within the north wall.

~~3.4.249~~3.4.250 Wenham Place (**1351955**) and the walled garden (**128566**) have group value and also hold evidential, aesthetic, and historic value. While Wenham Place has **high value** based on its evidential, historical and aesthetic value, the walled garden has **medium value** based on the same qualifying values.

~~3.4.250~~3.4.251 Their setting is informed by their roadside location and being both in at the entrance of a yard. It is also informed by their historical and functional relationships. Wenham Place enjoys a quiet atmosphere, with expansive flat agricultural fields and large farm buildings to the west. The adjacent walled garden, set amidst agricultural buildings to the east, complements the overall rural feeling. These assets are documented on the OS map from 1886, and their immediate as well as broader surroundings have remained unchanged since then. Overall, their setting makes very considerable contribution to their value but does not extend to the Order Limits.

~~3.4.251~~3.4.252 The Grade II* 'Priory Farmhouse' (**1351956**) and the Grade II 'Old Rectory' (**1194528**) are both located within the settlement of Great Wenham, c. 1.1 km to 1.2 km east of the Order Limits. The Priory Farmhouse boasts a timber-framed structure with evidence of 15th century or earlier origins, a 1699-dated chimney stack, and various wings revealing the passage of time. Further south-west, c. 140 m, the Old Rectory, with a 16th century or earlier origin, presents an exposed timber frame and later Georgian and Victorian wings. Although the frame retains its integrity, some features have been introduced from elsewhere. The Priory Farmhouse has **high value**, the Old Rectory holds **medium value**, both based on their evidential, historical and aesthetic values.

~~3.4.252~~3.4.253 Their setting is informed by their location within the settlement. Both properties are documented in the first edition of the OS map dating back to 1886. Since that time, only the northern part of the settlement has undergone alterations, witnessing the emergence of new dwellings that primarily affect the setting of the northern section of Priory Farmhouse's yard, obstructing the westward view. Nestled in the eastern end of Great Wenham, the Priory Farmhouse enjoys a secluded ambiance accessed via a private trackway. Surrounded to the north by agricultural

buildings, its wider setting includes expansive agricultural fields, the nearby Grade II* St. John's Church (**1033403**) and other listed buildings such as the Old Rectory (**1194528**), the 'Walnut Thatch' (**1033402**) and the 'Pump Adjacent to Scullery Wall Priory Farmhouse' (**1285636**), the latter being scoped out from the Study Area. Opposite St. John's Church (**1033403**), the Old Rectory stands with a front garden enclosed by a brick wall and gate. While neighbouring residences are nearby, the south and east sides of the property are embraced by fields, providing a quiet and rural setting. The mature trees contribute to the privacy of the Old Rectory's garden. Overall, the setting of both the Priory Farmhouse and the Old Rectory makes considerable contribution to their value but does not extend to the Order Limits being limited to the settlement.

~~3.4.253~~3.4.254 Walnut Thatch' (**1033402**), a Grade II listed house with origins in the 16th century is located within Great Wenham, c. 1 km east of the Order Limits. Its exposed timber frame, red plain tiled roof, and red brick chimney stacks exemplify a historical charm. Combining evidential, historical, and aesthetic elements, Walnut Thatch is recognised as a **medium value** heritage asset, contributing to the cultural richness of its surroundings and preserving a tangible link to the past.

~~3.4.254~~3.4.255 Walnut Thatch enjoys a strategic location at a Y junction, situated behind a well-maintained garden that creates a buffer from the road. The thick, well-established hedge effectively shields the asset from immediate view, fostering a sense of privacy. The surrounding environment is characterised by characterful properties within a small, dispersed settlement. Opposite the house, the Grade II* listed 'St John's Church' (**1033403**) contribute to the historical and cultural context. Overall, the setting of Walnut Thatch makes a considerable contribution to its value but does not extend to the Order Limits.

~~3.4.255~~3.4.256 The **high value** Grade II* listed 'Boynton Hall' (**1033394**) is a raised aisle hall of evidential, historical, and aesthetic value. The asset is located c. 2.4 km north-east of the Order Limits approximately 100 m east of Old London Road, and 800 m south of Capel St. Mary. The two-storey timber framed house was constructed in the 14th century, with 16th century and later alterations.

~~3.4.256~~3.4.257 The setting of this asset is informed by its presence as a part of a medieval to post medieval manorial hall. The original setting of this asset would have been as a high-status building designed to have intervisibility with its surrounding grounds rather than that of its wider rural agricultural landscape. This asset broadly retains its historic setting within its grounds and its wider rural agricultural landscape, which make a major contribution to the setting of the asset. There is likely to be no intervisibility between this asset and the Project due to established trees and hedges between the asset and the Order Limits to the west. The setting of the asset does not extend to the Order Limits.

~~3.4.257~~3.4.258 The **medium value** Grade II listed 'Manor House' (**1033396**) is a manorial house of evidential, historical, and aesthetic value. The asset is located approximately 1.8 km north-east of the Order Limits, approximately 15 m south of Old London Road, and 970 m south of Capel St. Mary. The two-storey timber framed house was constructed in the 15th to 16th century, with some 19th century brickwork. The 15th to 16th century left wing was converted into a dairy in the 19th century. The left wing still retains the dairy, with a brick floor, bake oven and meat hooks on the ceiling beams.

~~3.4.258~~3.4.259 The setting of this asset is informed by its presence as a part of a medieval to post medieval manorial hall, and latterly as a farmstead. The original setting of this

asset would have been as a high-status building designed to have intervisibility with its surrounding grounds rather than that of its wider rural agricultural landscape with which the building now maintains more of a functional relationship with. This asset broadly retains both its historic setting within its grounds, and its more functional wider rural agricultural landscape, which collectively make a major contribution to the setting of the asset. There is likely to be no intervisibility between this asset and the Project due to established trees and hedges between the asset and the Order Limits to the west. The setting of the asset does not extend to the Order Limits.

~~3.4.259~~3.4.260 'Wenham Hill' (**1285661**) is a Grade II listed building located c. 700 m south of Great Wenham and c. 1 km north-east of the Order Limits. Wenham Hill, a residence with H-shaped architecture dating back to the 16th century or earlier, presents a distinctive exterior marked by four imposing red brick chimney stacks. Overall, it holds a **medium value** based on its evidential, historical and aesthetic value.

~~3.4.260~~3.4.261 Wenham Hill is situated along a private road within an expansive and private landscaped parkland, surrounded by mature trees that contribute to its sense of seclusion. The property's setting is further enhanced by the inclusion of agricultural fields in its wider surroundings. Notably, there is the recent construction of the A12, located approximately 600 m to the south of the asset, but it cannot be seen from the house. Overall, the setting is limited to the parkland and does not extend to the Order Limits. In addition, the setting makes a considerable contribution to the asset's value.

~~3.4.261~~3.4.262 The 'Church of St John' (**1033403**), designated Grade II*, stands as a heritage structure with **high value**, underscored by its evidential, historical, and aesthetic value. The church is located within Great Wenham, c. 1 km east of the Order Limits. The church exhibits a harmonious blend of architectural styles, including a 14th century chancel with an added south porch, a 14th century nave featuring north and south porches, and a 15th century west tower. Flint with stone dressings characterises the tower, while the rest of the church is plastered with exposed stone windows. The timber-framed south porch adds a distinctive touch to the nave. The west tower, buttressed and adorned with louvred bell chamber windows, boasts a four-centred head west window.

~~3.4.262~~3.4.263 The Church of St John, nestled within a churchyard occupies a central position in the heart of a village. Surrounded by residences to the south and east, the church is situated along a road, elevated above the surrounding terrain. A field adorns its northern boundary, complemented by the presence of mature trees enhancing the churchyard's ambiance. This setting, slightly elevated from the road, offers a serene atmosphere. Beyond the immediate vicinity, the landscape opens up to fields and a rural expanse, contributing to the overall charm of the locale. While the setting makes a considerable contribution to the church's value, it does not extend to the Order Limits.

~~3.4.263~~3.4.264 'Threeways' (**1033404**), a Grade II listed house tracing its origins to the 16th century with subsequent alterations and 20th century restorations, possesses a **medium value** rooted in its evidential, historical, and aesthetic value. The timber-framed and plastered structure, adorned with red plain tiled roofs, exhibits a jettied crosswing to the left and a hipped and gabled right range with later brick additions. This asset is located in Little Wenham and c. 940 m south of the Order Limits.

~~3.4.264~~3.4.265 Threeways is positioned at the corner of a road, slightly set back, creating a sense of enclosure with the presence of hedges and established trees. The wider setting unfolds into a predominantly rural and agricultural landscape, contributing to a

quiet atmosphere. Therefore, the surroundings make a considerable contribution to the asset's overall value. However, the setting does not extend to the Order Limits.

~~3.4.265~~3.4.266 North of Little Wenham, c. 500 m, is the Grade II ‘Manor Farmhouse’ (**1194545**) located c. 720 m south, and c. 470 m south-west of the Order Limits. This house, a 16th century or earlier timber-framed dwelling with red plain tiled roofs, showcases a classic L-shaped design. This house has **medium value** based on its evidential, historical and aesthetic value.

~~3.4.266~~3.4.267 Nestled just off the main road and separated by a front garden, Manor Farmhouse enjoys a setting surrounded by expansive agricultural fields and an open landscape. The property's open garden is enclosed by wooden fencing, providing a quiet outdoor space. The initial edition of the OS map from 1885 features this property, and over the years, commercial activities have emerged approximately 300 m to the north-west of the asset. Overall, the setting of this asset makes a considerable contribution to the asset’s value but does not extend to the Order Limits.
