ESP Utilities Group

Final Statement of Common Ground

1. Purpose of the Statement of Common Ground

This Statement of Common Ground has been prepared to confirm to the Examining Authority where agreement has been reached and where agreement has not been reached between National Grid and ESP Utilities Group, regarding specific issues arising during construction and/or operation from the interface between the proposed Norwich to Tilbury Project and ESP Utilities.

This final version of the SoCG has been submitted at Examination Deadline 7.

2. Parties to the SoCG

This SoCG has been prepared by National Grid and ESP Utilities Group.

3. Background

3.1 Description of the Project/Development

National Grid Electricity Transmission plc ('National Grid') owns and maintains the national high voltage electricity transmission network throughout England and Wales. The transmission network connects the power from where it is generated to the regional Distribution Network Operators who then supply businesses and homes.

National Grid holds the Transmission Licence for England and Wales, and its statutory duty is to develop and maintain an efficient, coordinated and economical system of electricity transmission and to facilitate competition in the generation and supply of electricity, as set out in the Electricity Act 1989.

National Grid has developed plans for Norwich to Tilbury (referred to as the 'Project'). The Project would support the UK's net zero target through the connection of new low carbon energy generation in East Anglia and by reinforcing the transmission network.

The Project comprises reinforcement of the transmission network between the existing Norwich Main Substation in Norfolk and Tilbury Substation in Essex, via Bramford Substation, the new East Anglia Connection Node (EACN) Substation and the new Tilbury North Substation.

The reinforcement is needed because the existing transmission network, even with current upgrading, will not have sufficient capacity for the new renewable energy (a substantial proportion of which would be generated by offshore wind) that is expected to connect to the network over the next 10 years and beyond. Completion of the Project, together with other new

reinforcements across the country, will meet this future energy transmission demand both in East Anglia and across the UK.

The Project is a Nationally Significant Infrastructure Project (NSIP), and National Grid is seeking development consent under statutory procedures set by government. NSIPs are projects of certain types, over a certain size, which are considered by the government to be of national importance, hence permission to build them needs to be given at a national level, by the relevant Secretary of State (in this case the Secretary of State for Energy Security and Net Zero). Instead of applying to the local authority for planning permission, the developer must apply to the Planning Inspectorate for a Development Consent Order (DCO) that would grant development consent.

National Grid has submitted an application for development consent to the Planning Inspectorate. The Examining Authority (consisting of five examining inspectors), after a period of public examination, will make their recommendation to the Secretary of State for Energy Security and Net Zero, who in turn will decide on whether development consent should be granted for the Project.

The Project is identified as critical to delivering a network which supports the clean power pathways for 2030 delivery.

The Planning Act 2008 places duties on National Grid as the Applicant for development consent to consult with prescribed or affected persons as well as to take account of responses to consultation and publicity. In accordance with these statutory requirements, National Grid has undertaken two non-statutory consultations and one statutory consultation to inform its proposals, together with further targeted consultations.

4. Stakeholder Interests

ESP Utilities Group is an independent multi-utility company providing water, wastewater, electricity, and gas services. Potential interactions between the Norwich to Tilbury Project and ESP Utilities Group assets have been identified. Engagement with ESP Utilities Group has established the nature of these interactions and any assets or rights potentially impacted by the Project, and to agree the form of any required or recommended mitigations prior to conclusion of the DCO examination. National Grid will continue to engage with ESP Utilities Group during detailed design.

5. Matters Agreed

ID	Issue	Agreement reached	Date agreed	Relevant documentation
----	-------	-------------------	-------------	------------------------

5.1

6. Matters Currently Under Discussion

ID	Issue	ESP Utilities Group position	National Grid position	Relevant documentation
----	-------	------------------------------	------------------------	------------------------

6.1	Interface Identification and Categorisation	ESP Utilities Group have acknowledged the interface Identification and categorisation and will continue to engage after the DCO examination period.	Following development of the Project design and the undertaking of utilities searches, to the best of our knowledge no direct interfaces have been identified between the Project and ESP Utilities Group assets. National Grid has identified ESP Utilities Group assets within 3km of the Project but does not anticipate any significant interference impacts on ESP Utilities Group assets. National Grid is seeking to verify this position through engagement with ESP Utilities Group to discuss assets within the vicinity of the Project and confirm our understanding of any potential impacts.	
-----	---	---	--	--

ID	Issue	ESP Utilities Group position	National Grid position	Relevant documentation
6.2	Potential Project Impacts on Stakeholder Assets and Associated Mitigations	ESP Utilities Group have acknowledged the construction practices and mitigations and will continue to engage after the DCO examination period.	Subject to confirmation of the nature of interactions, National Grid recognises the potential for the Project to impact ESP Utilities Group assets and their function during construction and/or operational phases. National Grid seeks agreement from ESP Utilities Group that standard construction practices will be adequate to protect and maintain access to their assets but recognises the potential for other additional measures to be sought, dependent on impacts. National Grid anticipates the detail and implementation of such measures will be agreed via proposed engagement between the National Grid construction contractor and ESP Utilities Group. Should ESP Utilities Group have bespoke mitigation requirements, National Grid requests these are shared for early review and mutual agreement, including in relation to associated matters of costs, liability and consents.	
6.3	Potential Project Impacts on Stakeholder Land or Rights	ESP Utilities Group have acknowledged potential project impacts on stakeholder land or rights and continue to engage after the DCO examination period.	National Grid has not been able to confirm whether ESP Utilities Group land holdings may be affected by the Project but requests ESP Utilities Group to provide any further information on land or rights matters to be identified and considered.
