Vodafone

Final Statement of Common Ground

1. Purpose of the Statement of Common Ground

This Statement of Common Ground has been prepared to confirm to the Examining Authority where agreement has been reached and where agreement has not been reached between National Grid and Vodafone regarding specific issues arising during construction and/or operation from the interface between the proposed Norwich to Tilbury Project and Vodafone.

This final signed version of the SoCG has been submitted at Examination Deadline 7.

2. Parties to the SoCG

This SoCG has been prepared by National Grid and Vodafone Limited.

3. Summary of matters under discussion

As requested by the Examining Authority, the below table provides an ‘at a glance’ summary of matters which are under discussion, together with a deadline by which such matters are expected to be resolved.

SoCG ID	Summary of matter under discussion	Deadline for resolution
7.1 Interface Identification and Categorisation	Vodafone have acknowledged the assessment of the impact to their interfaces, mitigation and impacts on stakeholder land or rights, conducted by National Grid. Engagement will continue after the DCO examination period to resolve these matters.	Engagement will continue following examination
7.2 Potential Project Impacts on Stakeholder Assets and		
7.3 Potential Project Impacts on Stakeholder Rights		

4. Background

4.1 Description of the Project/Development

National Grid Electricity Transmission plc ('National Grid') owns and maintains the national high voltage electricity transmission network throughout England and Wales. The transmission network connects the power from where it is generated to the regional Distribution Network Operators who then supply businesses and homes.

National Grid holds the Transmission Licence for England and Wales, and its statutory duty is to develop and maintain an efficient, coordinated and economical system of electricity transmission and to facilitate competition in the generation and supply of electricity, as set out in the Electricity Act 1989.

National Grid has developed plans for Norwich to Tilbury (referred to as the 'Project'). The Project would support the UK's net zero target through the connection of new low carbon energy generation in East Anglia and by reinforcing the transmission network.

The Project comprises reinforcement of the transmission network between the existing Norwich Main Substation in Norfolk and Tilbury Substation in Essex, via Bramford Substation, the new East Anglia Connection Node (EACN) Substation and the new Tilbury North Substation.

The reinforcement is needed because the existing transmission network, even with current upgrading, will not have sufficient capacity for the new renewable energy (a substantial proportion of which would be generated by offshore wind) that is expected to connect to the network over the next 10 years and beyond. Completion of the Project, together with other new reinforcements across the country, will meet this future energy transmission demand both in East Anglia and across the UK.

The Project is a Nationally Significant Infrastructure Project (NSIP), and National Grid is seeking development consent under statutory procedures set by government. NSIPs are projects of certain types, over a certain size, which are considered by the government to be of national importance, hence permission to build them needs to be given at a national level, by the relevant Secretary of State (in this case the Secretary of State for Energy Security and Net Zero). Instead of applying to the local authority for planning permission, the developer must apply to the Planning Inspectorate for a Development Consent Order (DCO) that would grant development consent.

National Grid has submitted an application for development consent to the Planning Inspectorate. The Examining Authority (consisting of five examining inspectors), after a period of public examination, will make their recommendation to the Secretary of State for Energy Security and Net Zero, who in turn will decide on whether development consent should be granted for the Project.

The Project is identified as critical to delivering a network which supports the clean power pathways for 2030 delivery.

The Planning Act 2008 places duties on National Grid as the Applicant for development consent to consult with prescribed or affected persons as well as to take account of responses to consultation and publicity. In accordance with these statutory requirements, National Grid has undertaken two non-statutory and one statutory consultation to inform its proposals, with further targeted consultations.

5. Stakeholder Interests

Vodafone is telecommunications provider. 43 individual interfaces between the Norwich to Tilbury Project and Vodafone assets have been identified. Engagement with Vodafone has established the nature of the interfaces and any assets or rights potentially impacted by the Project, and to agree the form of any required or recommended mitigations. National Grid will continue to engage with Vodafone during detailed design.

6. Matters Agreed

ID	Issue	Agreement reached	Date agreed	Relevant documentation
6.1				

7. Matters Currently Under Discussion

ID	Issue	Vodafone position	National Grid position	Relevant documentation
7.1	Interface Identification and Categorisation	Vodafone have acknowledged the interface identification and categorisation and will continue to engage after the DCO examination period.	Following development of the Project design and the undertaking of utilities searches, 43 individual interfaces have been identified between the Project and Vodafone assets. These include the following crossing types: • 8 with the proposed overhead transmission line • 1 with underground transmission cables • 7 with substations or substation compounds • 13 with the Project haul road and bellmouth junctions • 12 with Distribution Network Operator (DNO) mitigation works • 1 with an outfall working area	Norwich to Tilbury Interface Schedule with Vodafone Jun25; Crossing Points KLZ and GIS files (shared in confidence)

ID	Issue	Vodafone position	National Grid position	Relevant documentation
			• 1 with crossing protection Further detail is provided within the relevant documentation. National Grid seeks Vodafone's verification of the location and nature of these interfaces. A document detailing proposed construction methodologies has also been provided to Vodafone Limited per the request to do so.	
7.2	Potential Project Impacts on Stakeholder Assets and Associated Mitigations	Vodafone have acknowledged the potential project impacts on stakeholder assets and will continue to engage after the DCO examination period.	Subject to confirmation of the nature of interfaces, National Grid recognises the potential for the Project to impact Vodafone assets and their function during construction and/or operational phases. National Grid seeks agreement from Vodafone that standard construction practises will be adequate to protect and maintain access to their assets but recognises the potential for diversionary works or other additional measures to be sought, dependent on impacts. National Grid anticipates the detail and implementation of such measures will be agreed via future liaison between the National Grid construction contractor and Vodafone. Should Vodafone have bespoke mitigation requirements, National Grid requests these

			are shared for early review and mutual agreement, including in relation to associated matters of costs, liability and consents.	
7.3	Potential Project Impacts on Stakeholder Rights	Vodafone Limited have acknowledged potential project impacts on stakeholder land or rights and continue to engage after the DCO examination period.	National Grid has not identified Vodafone land holdings that may be affected by the Project, but requests any further information on land or rights matters, to be considered.
