Norwich to Tilbury

Volume 8: Examination Documents

**Document: 8.27 Response to Category 1 and 2 Affected Persons
Objections**

Final Issue A

July 2026

Planning Inspectorate Reference: EN020027

nationalgrid

Contents

1.1	Overview	1
1.2	Navigating the Document	1
1.3	Reason for the Format	2
	Appendix A	

1.1 Overview

- 1.1.1 This document forms the explanatory preface to **8.27 Response to Category 1 and 2 Affected Persons Objections Schedule (Tracker)**, submitted at Deadline 7 for the Norwich to Tilbury project (hereafter ‘the Project’).
- 1.1.2 This document constitutes the Applicant’s response to the Rule 17 letter dated 18 June 2026 [**PD-028**], with the submitted response reflective of the additional instructions and clarifications provided by the Examining Authority at the conclusion of Issue Specific Hearing 4 on 25 June 2026.
- 1.1.3 Whilst the Applicant has sought to comply with all aspects of the Examining Authority’s Rule 17 Letter, it has become apparent in doing so that inherent technical limitations within the functionality of Microsoft Excel mean that it is a software format which is unsuitable for capturing the detailed written submissions which the Applicant has sought to prepare in response to each of the submitted objections.
- 1.1.4 The Applicant has therefore prepared the Tracker as a fully navigable Microsoft Word document in anticipation that it may be read alongside the **8.14 Schedule of affected persons objecting to CA or TP of their lands or rights** and in a manner which more readily enable the Examining Authority and all Affected Persons (APs) to review the Applicant’s responses to the submitted objections. The Applicant trusts that the format adopted for the Tracker will facilitate efficient examination of the matters raised and support consideration of the issues in dispute.
- 1.1.5 At this point, it is worth reiterating that whilst the Tracker presents the Applicant’s current position in response to the objections raised by Category 1 and Category 2 Affected Persons, the Applicant remains committed to engaging proactively and constructively with all Affected Persons throughout the remainder of the Examination and, where necessary, following the close of Examination, with a view to narrowing areas of disagreement, progressing negotiations, and seeking to resolve objections through voluntary agreement wherever reasonably practicable. Further supporting detail is set out in Annex B of **8.5.10 Applicant’s Written Summary of Oral Submissions and Response to Action Points for Compulsory Acquisition Hearing 3 (Final Issue A) [REP6-116]**.

1.2 Navigating the Document

- 1.2.1 This document contains the latest **8.27 Response to Category 1 and 2 Affected Persons Objections Schedule (Tracker)** which features an additional column: “Applicant’s Response”. Under this column, for each AP, a text embedded navigable link directs to the relevant table within Appendix A of the document.
- 1.2.2 Appendix A contains all of the AP objections submitted at Deadline 5A and the Applicant’s response in a series of unique tables for each AP.
- 1.2.3 For each AP, the left-hand column in Appendix A records the AP’s verbatim objection as submitted at Deadline 5A.
- 1.2.4 The right-hand column contains the Applicant’s response, including:
- a summary of the AP’s objection;

- details of the land and other interests held by the AP within the Order Land and the land, rights and/or powers of temporary possession sought to be acquired or exercised by or on behalf of the Applicant;
- replies to AP-specific concerns (including, where relevant, responses provided by UKPN); and
- thematic responses where issues are common across multiple APs (noting that the inclusion of thematic text within responses to individual AP objections reflects the Examining Authority's clear instruction that the Applicant should ensure that each response should be capable of being read in isolation).

1.2.5 A fully navigable Table of Contents is included at the start of Appendix A . Each main heading in the Table of Contents contains the AP number and Name, and sub-heading for the respective response table, titled with the PIL Reference ID number.

1.2.6 Where an objection contains limited detail, the Applicant has sought to assist the Examining Authority by providing a response informed by previous engagement with the relevant AP. This approach is intended to ensure that issues previously raised during discussions and correspondence are addressed holistically, notwithstanding the absence of detailed supporting information within the objection itself.

1.3 Reason for the Format

1.3.1 Due to the extent, complexity and volume of information required to sufficiently respond to the APs, many entries exceed Microsoft Excel's visible-field character limit; this is a limitation of Excel.

1.3.2 Microsoft Excel is primarily designed to carry out complex calculations, present large amounts of numerical information, manipulate data and produce numerically associated visualisations such as pie charts.

1.3.3 Conversely, Microsoft Word is designed to present tables with rich text formatting in visually accessible layouts.

1.3.4 Attempts to present the responses in Excel compromised readability and formatting integrity for individual AP entries and the Applicant's responses. Introducing additional lines or using filters further affected the document's structure.

1.3.5 In addition, the file size when using Excel made the document difficult to read, navigate and use, and materially reduced performance.

1.3.6 The Applicant has therefore prepared the material in Microsoft Word, which allows faster navigation and improved presentation of the requested information.

NORWICH TO TILBURY PROJECT EN020027: SUMMARY OF RESPONSES TO RULE 17 1 JUNE 2026

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Michael John & Christine Clews	9917 10067	Yes	Temporary possession;Compulsory Acquisition of rights;	All	Both	The proposed terms provide wide ranging rights and powers to NG, and impose significant restrictions on our use of our land, both during the option period and into perpetuity. When discussing the land use with Fisher German LLP, they indicated that NG does not intend to construct anything on our land and the proposed agreement is to enable temporary access to facilitate the construction of the proposed power line. They also indicated that this access probably would not be needed but is being sought as a precautionary measure. The area of our land is only one acre. NG seeks rights over two tranches of land, one in the middle and one at the Eastern end of our land, this would significantly reduce the useable area of our land. Granting NG such rights would be a blight on our land that renders it practically unusable and unsellable. We believe it would be more appropriate for the terms to reflect the intended purpose rather than grant wide ranging and unnecessary powers, just in case. In principle, we do not object to granting NG temporary access, if required, to facilitate construction but, we do not believe it appropriate to grant rights allowing towers to be permanently installed on our land, or oversail, when Fisher German LLP say this is not intended. We are prepared to consider terms that better reflect the intended use of our land.	See Appendix A: AP 1 - Michael John & Christine Clews
Janet Lesley Masterson	4757	Yes	Compulsory Acquisition of land ;Compulsory Acquisition of rights	All	Both	Because this is MY land, my property.	See Appendix A: AP 2 - Janet Lesley Masterson
Frances Williams	8663	Yes	Compulsory Acquisition of land		Both		See Appendix A: AP 3 - Frances Williams
Catherine Judith Chamaud (as director of Westlands Farm Developments Ltd)	15364	Yes	All of the above	All	Both	Failure of NG and UKPN to recognise the impact of their proposals on the proposed residential development at Lynton, and the lack of any meaningful engagement with the land owner and developer, to resolve technical and design issues in a way that is commercially viable to all parties.	See Appendix A: AP 4 - Catherine Judith Chamaud (as director of Westlands Farm Developments Ltd)
Nicholas Dent	5156	Yes	Temporary possession;Compulsory Acquisition of rights;Compulsory Acquisition of land ;All of the above	All	Both	I don't want my land destroyed,hedges being removed and trees.dont want the disruption and I will have land impossible to farm and I don't want bullying by ng	See Appendix A: AP 5 - Nicholas Dent
Martin Baxter	6777	Yes	All of the above	My home address	Both	I object	See Appendix A: AP 6 - Martin Baxter
David Robert Miles	2692	Yes	All of the above	All	Both	The Pylon Line goes through an area of the farm that has been in an Environmental Scheme for a number of years, and all the good things that we have achieved for the environment, bird numbers and wildlife in general, will be decimated	See Appendix A: AP 7 - David Robert Miles
Sheila Miles	28376						Seeila Miles
Gareth Pressley	13564	Yes	All of the above	ALL	Both	My property is not your standard empty field or farm land. We are a small holding and we have animals for meat which we breed ourselves. We grow fruit and veg, make our own compost, We have bee's for honey and so much more. National grids project and use of our land will decimate it, we have cable towers and nets, haul roads and drainage, all spread out over the entirety of our 4 acres. Simply put they will destroy our families way to feed itself and much more. There is no regard for green space, nature, animals or peoples mental health. We have been threatened on our doorstep by representatives, and have had meetings with more people than we can count and every time is a different person, different plan amounting to the same thing, and different contradictory information, even the plans submitted to the authorities are different to what we received with basic heads of terms. Its farcical and purposefully mis directional.	See Appendix A: AP 8 - Gareth Pressley
Robert James Capps	15838	Yes	Compulsory Acquisition of land ;Compulsory Acquisition of rights;All of the above;Temporary possession	All	Both	I own the house. No idea where you want to access as you haven't told me	See Appendix A: AP 9 - Robert James Capps
Matthew Gementera	15953	No					See Appendix A: AP 10 - Matthew Gementera
Joel Woolf	1918	Yes	All of the above	All	Both	The proposed right take around the headlands and not the centre but remove access to the centre during works. This is unacceptable and sterilises the entirety to my land because the proposal is to take the only access into the remaining land	See Appendix A: AP 11 - Joel Woolf
Antony Francis Goddard	3302	Yes	All of the above	All	Both		See Appendix A: AP 12 - Antony Francis Goddard
Trevor George Musk	6377	Yes	All of the above	All	Both		See Appendix A: AP 13 - Trevor George Musk
Linda Jane Goddard	3980	Yes	All of the above	All	Both		See Appendix A: AP 14 - Linda Jane Goddard
Ann Dent	2652	Yes	All of the above;Temporary possession;Compulsory Acquisition of rights;Compulsory Acquisition of land	All	Both	Sick of all of it,don't want my farmland ruined or hedges and trees removed	See Appendix A: AP 15 - Ann Dent

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Georgina Sally Green	4862	Yes	Compulsory Acquisition of land ;Compulsory Acquisition of rights;Temporary possession;All of the above	All	Both	We farm this land and the construction of the pylons will make it much harder to farm with agricultural machinery. Once the pylons are installed there may be areas of land that are too small to be economically farmed.	See Appendix A: AP 16 - Georgina Sally Green
Bernard William Green	4679	Yes	All of the above	All	Both	We farm this land and the construction of the pylons will make it much harder to farm with agricultural machinery. Once the pylons are installed there may be areas of land that are too small to be economically farmed.	See Appendix A: AP 17 - Bernard William Green
Gillian Leeks /Malcolm Leeks	2596 4478	Yes	All of the above	ALL	Both	We object to any compulsory purchase or any interference with our land on the basis it's our privately owned land and we do not want pylons buzzing interfering with the peace of the countryside. This is why we purchased the land. It's our right as landowners to protect the countryside.	See Appendix A: AP 18 - Gillian Leeks /Malcolm Leeks
Mark Ian Hoskin	14202	Yes	Compulsory Acquisition of land ;Compulsory Acquisition of rights;Temporary possession;All of the above	B-1/13 B-1/14	Both	We object to the proposed interference with our land because it would cause serious and long term harm to the operation and financial stability of our farm and holiday lodge business. The land identified is essential to how our business functions, and losing it would directly reduce our ability to farm effectively and damage the setting, appeal, and commercial performance of our holiday accommodation. This would result in a significant loss of income and restrict our ability to sustain or grow the business in the future. It is also not clear exactly what land they are looking to compulsory purchase and what it will be used for as there are multiple land areas and descriptions in the "Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051" that do not appear to align to our previously discussed areas with National Grid. The proposal would also negatively affect the value and saleability of our property. Any reduction in land, amenity, or operational capacity makes the property less attractive to future buyers and reduces its market value, creating long term financial uncertainty for us. In addition, alternative avenues have not yet been explored, including the possibility of an access agreement or other forms of cooperation that would allow the project to proceed without removing or permanently interfering with our land. Any such arrangement would also need to include appropriate compensation for any losses or disruption caused. These options should be fully considered before any permanent acquisition or interference is pursued. Overall, the level of harm to our business, property, and livelihood is substantial, avoidable, and disproportionate. The impact on us is severe, and reasonable alternatives have not been properly examined.	See Appendix A: AP 19 - Mark Ian Hoskin
Helen Phillips	6457	Yes	All of the above	All	Both	I object to the installation of 7 pylons in such a small village, encroaching on the landscape and wildlife, also on a personal level. There will be major disruption around this build and the landscape will never be the same	See Appendix A: AP 20 - Helen Phillips
Jane Wendy Betts Jane Betts. Also as representative to the estate of John Gavin Betts (deceased) of same address.	9143 28095	No					See Appendix A: AP 21 - Jane Wendy Betts Jane Betts. Also as representative to the estate of John Gavin Betts (deceased) of same address.
Amy Frances Travell	14201	Yes	All of the above	B-1/13 B-1/14	Both	We object to the proposed interference with our land because it would cause serious and long term harm to the operation and financial stability of our farm and holiday lodge business. The land identified is essential to how our business functions, and losing it would directly reduce our ability to farm effectively and damage the setting, appeal, and commercial performance of our holiday accommodation. This would result in a significant loss of income and restrict our ability to sustain or grow the business in the future. It is also not clear exactly what land they are looking to compulsory purchase and what it will be used for as there are multiple land areas and descriptions in the "Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051" that do not appear to align to our previously discussed areas with National Grid. The proposal would also negatively affect the value and saleability of our property. Any reduction in land, amenity, or operational capacity makes the property less attractive to future buyers and reduces its market value, creating long term financial uncertainty for us. In addition, alternative avenues have not yet been explored, including the possibility of an access agreement or other forms of cooperation that would allow the project to proceed without removing or permanently interfering with our land. Any such arrangement would also need to include appropriate compensation for any losses or disruption caused. These options should be fully considered before any permanent acquisition or interference is pursued. Overall, the level of harm to our business, property, and livelihood is substantial, avoidable, and disproportionate. The impact on us is severe, and reasonable alternatives have not been properly examined.	See Appendix A: AP 22 - Amy Frances Travell

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Oak Farm Lodges	14201 14202	Yes	Compulsory Acquisition of land ;All of the above;Temporary possession;Compulsory Acquisition of rights	B-1/13 B-1/14	Both	We object to the proposed interference with our land because it would cause serious and long term harm to the operation and financial stability of our farm and holiday lodge business. The land identified is essential to how our business functions, and losing it would directly reduce our ability to farm effectively and damage the setting, appeal, and commercial performance of our holiday accommodation. This would result in a significant loss of income and restrict our ability to sustain or grow the business in the future. It is also not clear exactly what land they are looking to compulsory purchase and what it will be used for as there are multiple land areas and descriptions in the "Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051" that do not appear to align to our previously discussed areas with National Grid. The proposal would also negatively affect the value and saleability of our property. Any reduction in land, amenity, or operational capacity makes the property less attractive to future buyers and reduces its market value, creating long term financial uncertainty for us. In addition, alternative avenues have not yet been explored, including the possibility of an access agreement or other forms of cooperation that would allow the project to proceed without removing or permanently interfering with our land. Any such arrangement would also need to include appropriate compensation for any losses or disruption caused. These options should be fully considered before any permanent acquisition or interference is pursued. Overall, the level of harm to our business, property, and livelihood is substantial, avoidable, and disproportionate. The impact on us is severe, and reasonable alternatives have not been properly examined.	See Appendix A: AP 23 - Oak Farm Lodges
Paul Edmund Baker (also representing the Estate of E Hudson Baker and Mabel Anne Baker)	3085 rep 5262 14920	Yes	All of the above	All plots in our freehold and occupation	Both	No direct consultation after planned route changed to impacting our interests	See Appendix A: AP 24 - Paul Edmund Baker (also representing the Estate of E Hudson Baker and Mabel Anne Baker)
Alison Taylor	6078	Yes	All of the above	All	Both		See Appendix A: AP 25 - Alison Taylor
David Robert Miles	2692	Yes	All of the above	All	Both	For many years we have been involved with environmental schemes to enhance wildlife in the area that the pylons will be removed and built. We have seen substantial benefit from this, especially with small birds. This scheme will undo all the good that has been achieved over the years	See Appendix A: AP 26 - David Robert Miles
Andrew Bendall	1625 7256	Yes	Compulsory Acquisition of rights,Temporary possession,Compulsory Acquisition of land,All of the above	N-T_LIQ_18289	Both	The lane we use to access our property is used frequently and any loss of access is not acceptable. Disturbance by increased amount of traffic would adversely affect the quiet location and also upset our dogs who are reactive to traffic on the lane.	See Appendix A: AP 27 - Andrew Bendall
Rachel Perry James Perry	7645 7033	Yes	All of the above	All	Both		See Appendix A: AP 28 - Rachel Perry James Perry
Paul Whittle	2599	Yes	All of the above	All	National Grid	National Grid have not responded to any of our concerns. Why should we help them if they continue to not listen?	See Appendix A: AP 29 - Paul Whittle
Jonathan Cole-Matthews / John Cole Farms Limited	10187	Yes	All of the above	All	Both	It is an infringement of our private property rights. Compensation would not reflect the international loss of valuable land	See Appendix A: AP 30 - Jonathan Cole-Matthews / John Cole Farms Limited
Victoria Owen	561	Yes	All of the above	All	Both	Please refer to my agent, E. Havers at Clarke and Simpson Ltd.	See Appendix A: AP 31 - Victoria Owen
William John Gray	1115						See Appendix A: AP 32 - William John Gray
Sam Taylor	10337	Yes	All of the above	All F-7/5 (Section F Sheet 7)	Both	The land in question is a former infilled quarry; our surface ownership is covered under EX834408. Holcim is referred to in the document as 'Lafarge International Holdings'. The former quarry was infilled with landfill and as such requires ongoing gas monitoring to comply with the EA landfill permit. To complicate matters, all access rights have been granted to 'Lafarge Aggregates Limited' (which is Tarmac) to infill, extract landfill gas and undertake any works necessary for landfill management under the EA permit. Therefore, we cannot agree to a unilateral arrangement or anything that will impede the rights granted to 'Lafarge Aggregates Limited' (Tarmac).	See Appendix A: AP 33 - Sam Taylor
Ian James Colchester	3229	Yes	All of the above	ALL	Both		See Appendix A: AP 34 - Ian James Colchester
Nemone Braithwaite	4830	Yes	All of the above	All	Both	The land is a nature reserve	See Appendix A: AP 35 - Nemone Braithwaite
Brian James Floringer	4865	Yes	All of the above	All	Both	All of our land is used for grazing by our horses and we cannot disrupt or reduce their food supply, or risk granting access	See Appendix A: AP 36 - Brian James Floringer
Martin Richard Mountfort	3180	Yes			Both	FP 105141-008 Seven Acre Field at Dunton (Sole Ownership) Also shown on your National Grid Drawing NG-NT-2025-06-GF-CON-R3-1481 N-T-LIQ-18833 OS Map Ref TQ 65 90 (part ownership with Justin Samuel Mountfort and Verity Collins) [REDACTED]. Presence of High Voltage Overhead Lines will devalue property. Construction work will damage Gateways and land surfaces(topsoil will be lost or mixed into deeper clay)	See Appendix A: AP 37 - Martin Richard Mountfort
Jonathan James Nelson	9614	Yes	Compulsory Acquisition of rights,Temporary possession,Compulsory Acquisition of land,All of the above	All	Both	This work will create a negative financial effect on house value, will cause disruption and environmental damage to where we live, and will cause inconvenience to our everyday lives and our ability to walk the surrounding area.	See Appendix A: AP 38 - Jonathan James Nelson
Katherine Ann Nelson	6668	Yes	All of the above	all	Both	this will cause severe inconvenience , have a negative effect on our house value, make it more difficult to be able to use the surrounding area for physical activity and for exercising dogs. It will scare away wildlife such as barn owls, bats and many more.	See Appendix A: AP 39 - Katherine Ann Nelson
Andrew Donald Smith	3398	Yes	All of the above	All	Both	We have an agent working on our behalf to make an agreement with National Grid and UK Power Networks so that CA and TP should not be necessary.	See Appendix A: AP 40 - Andrew Donald Smith
Claire Tebbutt	13638	Yes	All of the above	All	Both		See Appendix A: AP 41 - Claire Tebbutt
KEVIN WILLIAM TEBBUTT	13637	Yes	All of the above	All	Both		See Appendix A: AP 42 - KEVIN WILLIAM TEBBUTT

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Juliet Francis	14957	Yes	All of the above		Both	I wholeheartedly oppose the entire scheme and object to the enormous loss of value the scheme has had on my property, as well as the huge detrimental environmental impact. I have been unable to sell the field a pylon will be sited on and this is causing me to have to sell my entire small farm and home of 30 years. My husband died in December 2025, hugely troubled by the prospect of us having to sell the farm because no one will buy a field which is due to have the enormous disruption of a pylon being constructed. We have previously sold land very successfully to maintain our life here on the farm and that field is the only one remaining to sell whilst keeping the heart of the farm intact.	See Appendix A: AP 43 - Juliet Francis
Stephen March, Jane March and The Trustees of the Foljambe 1984 Settlement	2550, 3717, 6103, 9438	Yes	All of the above	All	Both	Our objections to how this project would interfere with our land are twofold. There is the loss of use of the land and the impact on our business with a reduced acreage and the environmental damage that will be caused by the removal and stacking of soil for the haul roads and the trenching. The stacking of the topsoil will destroy the microbe and organic content of the soil as well as the drainage capability when returned to the field. As three parcels of land are permanent pasture, the effect will be greater as this will not return to what it is for many years. Especially the land in Fordham Valley where the land is ridge and furrow and provides Summer and Winter grazing. This land will lose its stock carrying capacity and productivity completely. The three areas of grassland will have a big impact on our competition horse breeding and beef rearing as we would have insufficient grass land to graze the animals and conserve winter forage.	See Appendix A: AP 44 - Stephen March, Jane March and The Trustees of the Foljambe 1984 Settlement
Clive Bainbridge	59	Yes	Compulsory Acquisition of land,Compulsory Acquisition of rights,All of the above,Temporary possession	All	Both	Desecration old hedgerows and trees. Violation private land and loss of privacy.	See Appendix A: AP 45 - Clive Bainbridge
Ellena Benton	29427	Yes	Compulsory Acquisition of rights,Compulsory Acquisition of land	All		Object	See Appendix A: AP 46 - Ellena Benton
Laura Lennox	777	Yes	All of the above	ALL	Both	The Heads of Terms are not satisfactory and NG / UK Power Networks are not engaging with the relevant bodies /land agents in a constructive manner to resolve landowner issues.	See Appendix A: AP 47 - Laura Lennox
Stuart Paris	7304	Yes	All of the above	ALL	Both	The Heads of Terms are not satisfactory and NG / UK Power Networks are not engaging with the relevant bodies /land agents in a constructive manner to resolve landowner issues.	See Appendix A: AP 48 - Stuart Paris
Brian John Faulkner	9339	Yes	All of the above	F-10/50	Both	Pylon TB180 at Handley Green The proposed pylon TB180 will be alongside the access road from Handley Green to our property which is the only property on this road. It is a cul-de-sac, an unmade dirt road and is our only access in and out of our property. We therefore need access 24/7. We object to any change which affects our access. If National Grid or UKPN are to use this track they must ensure our access is freely available during any construction and maintenance work. The road into Handley Green and the dirt road to Marshalls Farm and Annexe are single track and unsuitable for large and/or heavy vehicles and National Grid will need to resurface and maintain the roads.	See Appendix A: AP 49 - Brian John Faulkner
Usha Faulkner (nee Rao)	7661	Yes	All of the above	F-10/50	Both	Pylon TB180 at Handley Green The proposed pylon TB180 will be alongside the access road from Handley Green to our property which is the only property on this road. It is a cul-de-sac, an unmade dirt road and is our only access in and out of our property. We therefore need access 24/7. We object to any change which affects our access. If National Grid or UKPN are to use this track they must ensure our access is freely available during any construction and maintenance work. The road into Handley Green and the dirt road to Marshalls Farm and Annexe are single track and unsuitable for large and/or heavy vehicles and National Grid will need to resurface and maintain the roads.	See Appendix A: AP 50 - Usha Faulkner (nee Rao)
Elizabeth Xenakis	7345	Yes	All of the above	All	Both	Ruin the countryside	See Appendix A: AP 51 - Elizabeth Xenakis

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Stephen Paul Goulding	3931	Yes	All of the above	All	Both	I object to the proposed interference with my land and private rights arising from the Development Consent Order. My land is approximately two acres of pasture forming part of my home known as [REDACTED]. The land is not a detached commercial holding; it forms part of the setting, amenity, enjoyment and ordinary use of my home. My objection is focused on the interference with my land and rights, including access during development, the impact of construction and operational works in close proximity to my property, the loss of the countryside setting visible from and enjoyed as part of my home, and potential interference with utilities and internet services on which I rely, including for working from home. I do not consent to the compulsory acquisition, temporary possession, acquisition of rights, creation of new rights, extinguishment, suspension, overriding or interference with any rights affecting my land unless the Applicant can demonstrate that the strict statutory tests are met. Section 122 of the Planning Act 2008 requires the Secretary of State to be satisfied that the land or rights are required for the development, are required to facilitate or are incidental to it, or are replacement land, and that there is a compelling case in the public interest. That is a demanding test. It is not enough for the Applicant to show that interference with my land or rights would be convenient, cheaper, administratively easier, or preferable from the Applicant's point of view. The Applicant must show that the interference is necessary, proportionate and no more than is reasonably required. I object because the Applicant has not demonstrated that interference with my land or rights is "required" within the meaning of section 122. My land is pasture forming part of a residential property and its setting. Any interference with access, services, occupation, quiet enjoyment, existing rights, amenity or use of that land would be a serious private burden. The Applicant must explain precisely what powers are sought over or affecting my land, why those powers are necessary, why less intrusive alternatives are not available, and why the same outcome cannot be achieved by design changes, routing changes, construction controls, protective provisions, voluntary agreement, or other mitigation. The Department for Communities and Local Government guidance, Planning Act 2008: Guidance related to procedures for compulsory acquisition, September 2013, makes clear that compulsory acquisition powers should only be sought where there is a compelling case in the public interest, and that applicants should be able to demonstrate that all reasonable alternatives to compulsory acquisition have been explored. I do not consider that this has been demonstrated in relation to my land. In particular, the Applicant has not shown that the impacts on my access, residential enjoyment, pasture use, services and property setting have been avoided or reduced to the minimum necessary.	See Appendix A: AP 52 - Stephen Paul Goulding
						Access is a particular concern. The [REDACTED] and its associated pasture require safe, practical and reliable access. Any construction traffic, temporary works, road closures, diversions, obstruction, narrowing, mud, noise, vibration, or restricted access could interfere with my ability to use and enjoy my property and land. These are not minor inconveniences. They affect the ordinary occupation of my home, the use and management of the pasture, visitors, deliveries, emergency access, and the general ability to live and work from the property. The Applicant has not provided sufficient certainty that access will be maintained at all times, or that any interference will be avoided, minimised, strictly controlled and enforceable. I also object because of the potential impact on utilities and internet services. I work from home and reliable internet and utility connections are essential to the ordinary use of my property. Any interruption, damage, diversi [COMMENT TRUNCATED AT THIS POINT]	
Stephen Roger Hart	5305	Yes	Compulsory Acquisition of land,Compulsory Acquisition of rights	All	Both	As I have attempted to comply with all reasonable requests for access, intrusive and non intrusive surveys and other questions I don't feel there is a need under section 122 to acquire any of the rights over the land. For section 123, I will have a permanent land impairment that will impact my ability to farm, develop or enjoy rightful use and enjoyment of the entire land holding. The holding was purchased in 2019 for £400,000 and considerable input costs have been incurred to bring the holding into productive use. The current stated single payment is derisory in comparison to the productivity and amenity lost.	See Appendix A: AP 53 - Stephen Roger Hart
Heather Jane English	37	Yes	All of the above	A-1/23	Both	A-1/23 NK67663 Following 2 on-site consultations alternative re-routing plans from the west of my front entrance and then to the south along the field boundary west of The Vale up to Church Road were acknowledged. Subsequently no up-dated plans have been received. The original plan still appears to be in place.	See Appendix A: AP 54 - Heather Jane English
Coryn Gladys Hart	15231	Yes	Compulsory Acquisition of land,Compulsory Acquisition of rights,All of the above,Temporary possession	All	UK Power Networks	For section 123. The land is not strictly required as it is over 1mile away from the proposed works. It is not on any direct or indirect access routes and has had no infrastructure or access requests made upon it.	See Appendix A: AP 55 - Coryn Gladys Hart
Great Cowbridge Grange Farm Ltd	10359	Yes	All of the above	All	Both	Section 122. There is no need to gain additional access to the proposed sites other than via the access road for the Southern Water sewerage treatment works. Section 123. The potential loss to Great Cowbridge Grange Farm Ltd. is of an agreed option with Conrad Energy (Developments) ltd. and respective planning permission to build a solar farm on or adjacent to the land in question The agreement is for a 40 year lease to Conrad Energy of the land unencumbered (As per clause 9 of the option) If the planned works impact or cause the option agreement not to be exercised there will be a loss of 40 years worth of rent and generation income to Great Cowbridge Grange Farm Ltd.	See Appendix A: AP 56 - Great Cowbridge Grange Farm Ltd

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Richard John Allan	6498	Yes	All of the above	All	Both	Objection Summary: Interference with My Land/Rights via Compulsory Acquisition To the Secretary of State for National Infrastructure re: Norwich to Tilbury Project Development Consent Order I, Richard John Allan, owner of [REDACTED], object to the proposed compulsory acquisition of my land / rights over my land / temporary possession of my land EX835923, EX835920 in the draft DCO. Section 122 of the Planning Act 2008 A DCO may include provision authorising compulsory acquisition of land only if the Secretary of State is satisfied that: (a) the land is required for the development (or to facilitate or be incidental to it, or is replacement land); and (b) there is a compelling case in the public interest for the compulsory acquisition. 1. The land is not shown to be required (s.122(2)) The applicant has not demonstrated that my specific land/plots are required, or that the extent of interference (full acquisition / rights / temporary possession) is no more than reasonably necessary. Viable alternatives exist but have not been presented in a fully costed way for fair comparison. The DCLG Guidance (September 2013) states at paragraph 8 that applicants must show all reasonable alternatives to compulsory acquisition (including scheme modifications) have been explored, and that the proposed interference is necessary and proportionate. This test is not met. The interference with my rights is not justified as the minimum required. 2. No compelling case in the public interest (s.122(3)) There is no compelling evidence that the public benefits of acquiring/interfering with my land outweigh the significant private loss I would suffer. The private loss includes permanent loss of farmland my severance of my remaining land; loss of access; disruption to my livelihood/quiet enjoyment; and financial impacts. These effects engage my rights under Article 1 of the First Protocol (peaceful enjoyment of possessions) and, where relevant, Article 8 ECHR. The Guidance (paragraphs 10, 13–16) requires the Secretary of State to balance public benefit against private loss and to be satisfied that the interference is legitimate, necessary, and proportionate. Parliament's view (Guidance para 13) is that land should only be taken compulsorily where there is clear evidence that public benefit outweighs private loss. The applicant has not provided this in relation to my land. The interference fails the test. Section 123 of the Planning Act 2008 A DCO may authorise compulsory acquisition only if one of the conditions in s.123(2)–(4) is met (e.g., the application included a request for CA of the land and proper procedures were followed, or all interested parties consent). I do not consent. I question whether the procedures were adequately followed in respect of my land. The Guidance emphasises seeking acquisition by agreement wherever practicable (paragraphs 21–26 on pre-application consultation and engagement). This has not been achieved. Further relevant Guidance points •Para 8: Failure to explore all reasonable alternatives and lack of proportionality. •Para 9: Inadequate demonstration of a reasonable prospect that funds will be available for the acquisition and related works. The Funding Statement does not sufficiently address my land. •Para 10: The proposal does not adequately justify the interference with my human rights. Conclusion The statutory tests in sections 122 and 123 of the Planning Act 2008 are not satisfied in respect of my land/rights. The Secretary of State should refuse to authorise the compulsory acquisition or other interference with my interests, or modify the DCO to exclude or minimise it. I remain willing to negotiate a voluntary agreement on fair terms but oppose the use of compulsory powers.	See Appendix A: AP 57 - Richard John Allan
Dominic William Petre	1004	Yes	Compulsory Acquisition of land, Compulsory Acquisition of rights	All	Both	We are trying to engage in the granular planning process and accept that the project need to be done in general so there is no need for compulsory powers	See Appendix A: AP 58 - Dominic William Petre
Lord Petre (W H Norris and Sons)	1406	Yes	Compulsory Acquisition of land, Compulsory Acquisition of rights		Both	we are trying to engage with the granular planning process. While there is no objection for the overall need of the project there are many fine details that need agreement but there is no need for compulsory powers	See Appendix A: AP 59 - Lord Petre (W H Norris and Sons)
Lord Petre	1406	Yes	Compulsory Acquisition of land, Compulsory Acquisition of rights		Both	We are engaging with the granular planning process. While we accept the overall nature of the project there are many details that still need addressing. However compulsory powers are un needed	See Appendix A: AP 60 - Lord Petre
Peter Albert Kelly	24590	Yes	All of the above	A-7/4 A-7/9 A-7/35	Both	Any land taken from me would have a detrimental affect on the property value and marketability if I wished to move in the future.	See Appendix A: AP 61 - Peter Albert Kelly
Geoffrey Norman William Stevens	2997	Yes	Temporary possession, All of the above	A-6/51	Both	I have completed this form in the way I have as the proposed discussion with National Grid and UK Power Networks has not yet taken place about the works involved and how it affects my property.	See Appendix A: AP 62 - Geoffrey Norman William Stevens
Ann Ruth Stevens	8159	Yes	Temporary possession, All of the above	A-6/51	Both	I have completed this form in the way I have as the proposed discussion with National Grid and UK Power networks has not yet taken place about the works involved and how it affects my property.	See Appendix A: AP 63 - Ann Ruth Stevens
Edward Marriage	2500	Yes	All of the above	All	Both	F-6/62; F-6/63; F-7/10; F-7/13; F7-14; F7-20; F7/22 There are still important points outstanding and the Heads of Terms have not been sufficiently progressed for me to agree with them.	See Appendix A: AP 64 - Edward Marriage

Andrew Soar	3183	Yes	All of the above	All	Both	Despite numerous meetings with project representatives many of our questions remain to be answered. Our suggestions over pylon positions have also been ignored. Our preference of underground routing appears to be not effectively considered and no project comparisons are available. Vast amounts of land are being taken for the construction and subsequent access easements with very little in the way of compensation particularly with land value effects. Remains of agricultural land adjacent to the project boundary will be uneconomical to operate farm equipment over due to awkward angles and reduced area within fields. Interference from the transmission of electricity is likely to affect phone internet and GPS equipment which is essential in the operation of modern farm equipment. Suggested per pylon rates of compensation do not account for land use during build or over sail compensation. Corner pylons will occupy a much greater area than the mid station pylons. Land that will be used for access but not actually have a pylon upon it will presumably be compensated over and above the pylon construction rate that claims to cover the whole build project. Engagement with land owners agents have been minimal.	See Appendix A: AP 65 - Andrew Soar
Victoria Jordan	2305	No					See Appendix A: AP 66 - Victoria Jordan
Geraldine Alison Millhouse (As deputy of Court of Protection) for John Terence Millhouse	28089 24303 24301	Yes	All of the above	Page 901 - Section H - Sheet 7	Both	Objection raised under advisement of Land Agent (Whirledge and Nott)	See Appendix A: AP 67 - Geraldine Alison Millhouse (As deputy of Court of Protection) for John Terence Millhouse
Robert Pearce	3752	Yes	All of the above	E-3/66, E-4/1, E-4/6, E-4/7, E-4/8, E-4/9, E-4/11, E-4/14, E-4/18	Both	The heads of terms are not in a suitable state and we strongly object to the routing. If it absolutely has to pass through our land then underground would be much preferred.	See Appendix A: AP 68 - Robert Pearce
James Robert Pearce	2988	Yes	All of the above	E-3/66, E-4/1, E-4/6, E-4/7, E-4/8, E-4/9, E-4/11, E-4/14, E-4/18	Both	The heads of terms are not in a suitable state and we strongly object to the routing. Copy Hold Vermögens-Verwaltungsges	4316	Yes	All of the above	ALL	Both	•We do not consider the compulsory acquisition of our land and rights to be in the public interest, particularly where reasonable alternatives are available. •We do not consider that the Applicant has properly considered reasonable alternatives to reduce the impact on our holding. •The Applicant has not listened to constructive feedback from landowners, or taken sufficient steps to reduce impacts and mitigate losses. •The rights being sought may be wider than necessary for the scheme. •The Heads of Terms are still not in a reasonable or acceptable format. •The current Heads of Terms impose unfair and unreasonable restrictions on landowners. •We do not consider that the Applicant has demonstrated that the interference with our land and rights is necessary, proportionate, or limited to what is reasonably required	See Appendix A: AP 84 - Copy Hold Vermögens-Verwaltungsges
Susan Standen & Kevin Standen	8798 8336	Yes	All of the above	E-581	Both	The proposed haul road close to our property and the proposed traffic lights adjacent to our property will lead to lack of access and obstruction of our drive potentially making it inaccessible for the duration of the project.	See Appendix A: AP 85 - Susan Standen & Kevin Standen
Graham Moore	624 5938 28355	Yes	All of the above	ALL	Both	I am a small farm and it is going to slice through the middle of my business, home and main growing field making it unviable to farm and live.It makes it unable for the local airfields to fly killing local economy and I object on health reasons of the EMF magnetic waves affecting me running my farm safely and me and my families health.	See Appendix A: AP 86 - Graham Moore
Nicola Moore	624 5938 28355	Yes	All of the above	ALL	Both	I object to National grid ploughing straight through the middle of our farm financially ruining us.Straight through our main growing field and our him we will be ruined by the project. I object to the project stopping two local airfields from flying due to safety issues listened to and I object to the EMF waves given off as my family and I do not want to live in a house next to a pylon giving off electric waves that may affect our health and enjoyment of our home and have the danger of my husband safely farming.	See Appendix A: AP 87 - Nicola Moore
Christopher John Thorogood	9128	Yes	All of the above	All	National Grid	Heads of terms are not acceptable	See Appendix A: AP 88 - Christopher John Thorogood
Gillian Mather	8424	Yes	All of the above	All	Both	We are hampered in making any arguments over any application by National Grid to acquire compulsory rights over our land since we don't know what exactly National Grid propose to do or how they propose to overcome any of the physical obstacles which the site presents since they do not engage with us and ignore representations we have made in responses to consultations etc. To be explicit, the site may ultimately require HDDing rather than trenching, but National Grid won't discuss this, although in one of their documents put out several years ago they did propose HDDing under the Blackbrook Stream at Langham and therefore under our land immediately to the south of the Blackbrook. However, they withdrew this plan without explanation or notice. We have attempted to query with National Grid at various stages including at an early stage how they plan to tackle the physical complications of laying cables under the undulating, hilly site including Blackbrook Hill, the Blackbrook Stream, our land and the high-pressure gas main to the south but without response. In view of the above, any attempt to seek compulsory rights would be premature until National Grid have made a final decision how to go about the laying of cables under our land, since it is assumed that rights to trench or alternatively HDD would have to be worded differently. We have already communicated to National Grid that we are willing to enter into a reasonable agreement to grant them necessary and reasonable rights therefore compulsory action should be unnecessary. Our land agents are in the process of attempting to agree Heads of Terms with National Grid though there is no agreement at the moment. Whether National Grid have taken all necessary prescribed steps before making any application(s) to compulsorily acquire rights over our land and considered all other options is a huge technical question given the size of the Norwich to Tilbury project and the amount of paperwork and information so far generated. I can't answer the point.	See Appendix A: AP 89 - Gillian Mather
Stuart Philpot (SJR Farming Ltd)	10273	Yes	All of the above	All	Both	We do not want this on our land, thank you.	See Appendix A: AP 90 - Stuart Philpot (SJR Farming Ltd)
Richard Turner	14378	Yes	Temporary possession	All	Both	Boxted Airfield Museum. The erection of the pylons and the construction works before hand would seriously disrupt our openings in the following ways. The roadways on site date from WW2 and we take visitors on guided walks, these are single carriageway so there would e a risk to the walkers from construction vehicles. This WW2 Airfield site was the base for the Most important American Fighter Aircraft Group serving in Europe. Visitors and relatives of the men who served come to the Museum to get the feel of what their Grandfathers and fathers experienced. 12000 men were stationed here during the course of the second world war. The erection of the pylons would completely spoil the views and destroy the enjoyment for these families. We have then and now pictures on our website and within the Museum and to have those showing pylons I am sure would put visitors off and seriously affect our revenue. The National Lottery recognized this as a Heritage site helping us with financial grants over the years. In the summer months a grass airstrip is established behind the Airfield memorial off Park Lane and is used by a flying club, the pylons would seriously affect this activity. We also have visiting aircraft display on special open days.	See Appendix A: AP 91 - Richard Turner
Tamasyn Holland	28603 20989	Yes	All of the above	ALL	Both	I strongly object to the proposed pylons being located on or affecting my land due to the significant visual, environmental, and property impacts. This proposal would cause unacceptable harm to my property rights, amenity, and the surrounding landscape.	See Appendix A: AP 92 - Tamasyn Holland
Rachel Bryan	28943	Yes	All of the above	All	Both	There are still important points outstanding and the Heads of Terms have not yet been sufficiently progressed	See Appendix A: AP 93 - Rachel Bryan
Andrew David Upson	4711	Yes	All of the above	All	Both		See Appendix A: AP 94 - Andrew David Upson
Janette Upson	7032	Yes	All of the above	All	Both		See Appendix A: AP 95 - Janette Upson
F H Easton Limited	10198	Yes	All of the above	ALL	Both	I am not familiar the various Acts, Sections etc listed above no more than NG are familiar with the growth stages of winter wheat. Without more detail it is difficult to articulate objections precisely on the consequences of what such interference to our land will have. At best compulsory rights will add or bring nothing to the farm and at worst blight and devalue the holding. Those acquiring temporary rights will have little to no interest in the long term effect they may have on the land and it will take a long time, possibly decades to recover from any works. This prediction is based upon more than one poor experience with civil contractors working on our farm.	See Appendix A: AP 96 - F H Easton Limited

British Pipeline Agency Limited ("BPA") as agents for and on behalf of United Kingdom Oil Pipelines Limited ("UKOP")	21224	Yes	All of the above	All	Both	UKOP is the owner of the 14-inch Thames to Epping high pressure multi fuel pipeline (hereafter called the "Pipeline") and benefits from the associated land rights relating to the Pipeline. BPA is employed as agent by UKOP to operate and maintain the Pipeline and act on its behalf in this DCO process. The below summary is by way of update to the presentations and submissions made on behalf of BPA / UKOP to date including RR-0413, PDA-011, AS-086, REP1-235-238 (inclusive), REP3-121 and the oral submissions made by Fieldfisher on behalf of BPA / UKOP at CAH1. With reference to whether the purposes for which compulsory acquisition powers are sought comply with section 122(2) of the Planning Act 2008 and whether the compelling case in the public interest test under s122(3) of the Planning Act has been met, UKOP's position is as follows: 1.1The private loss which may be suffered by BPA and UKOP (as well as the consequential impacts to persons, the environment, and the key end users operating crucial national infrastructure) are of vital importance as to whether considering whether there is a compelling case for compulsory acquisition. 1.2BPA and UKOP remain of the view that, absent the Order being confirmed with the benefit of the change request as applied for, and further agreements being entered into with the Applicant, the proposed compulsory acquisition in the current form of the dDCO pose an unacceptable risk to the safety of the Pipeline and by extension the environment. 1.3UKOP requires the rights sought in the Change request which has now been accepted into the Examination to enable it to carry out the works proposed under Work [17A]. 1.4Section 127(5) Planning Act 2008 states that in the case of statutory undertakers the SoS should be satisfied that the rights can be purchased without any serious detriment to the carrying on of the undertaking and that any consequential detriment to the carrying on of the undertaking can be made good by the undertaker by the use of other land belonging to or available for acquisition by the undertaker. 1.5UKOP is not a Statutory Undertaker BUT it is the owner of Nationally Significant high pressure fuel infrastructure and as such it and the risks associated with its infrastructure, should be treated equivalently. There is a very real need to ensure robust protections (both practically and in terms of legal rights) to ensure the ongoing use and maintenance of the Pipeline given the reasons of national energy security. In addition to the legal rights sought via the change request UKOP require the Applicant to enter into an asset protection agreement to ensure appropriate protection for the UKOP apparatus. 1.6BPA/UKOP need to ensure that the necessary rights can be guaranteed to be obtained via the Order powers in accordance with the change request to ensure that that: (a)the Order can deliver the necessary powers to cross the Pipeline without serious detriment; or (b)it has or can acquire the necessary land to deliver such mitigation as may be necessary. While BPA / UKOP continue not to have objections to the Project in principle, they do require the Order, as amended by the change request, to be confirmed to ensure that their concerns are fully addressed and suitable protections are secured, preferably by private treaty. BPA / UKOP acknowledge the Applicant's constructive engagement, regular meetings and ongoing efforts to agree contractual protections for the Pipeline, with the aim of reaching a settlement by Deadline 6 so that the objection can be withdrawn. However, until adequate mitigation measures and long-term safeguards are guaranteed and formalised, BPA / UKOP maintain their objection in light of the significant risk of damage to the Pipeline, including accelerated corrosion, which could endanger the public, the environment, and the resilience of nationally significant fuel infrastructure until the Asset Protection Agreement is in place. Those risks and	See Appendix A: AP 97 - British Pipeline Agency Limited ("BPA") as agents for and on behalf of United Kingdom Oil Pipelines Limited ("UKOP")
Mr Toby Reeves	15979	Yes	All of the above	2 moat farm barn ip68je & other properties for whom the development affects in respect of the above	Both	All myself and other parties on the site would like is a transparent view on what the project entails. I had a teams meeting with a chap based in bury st Edmunds named Toby who stated wooden pylons in the field adjacent would be removed and replaced with an underground system but this was some time ago. Has this changed since as the project moves forward at your end? The letters you send us tell us nothing at all in real terms. If we can be confident in your proposal then this moves forward along quite nicely but if you are not clear with us then naturally this will slow things down. Nobody wants this. It actually prevents us and others from listing our properties, should we wish to do so as well as being unsettling as to both current and future values of our homes. Homes we have worked our whole lives for. Please rectify this matter by contacting myself on either [REDACTED]	See Appendix A: AP 98 - Mr Toby Reeves

Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Oliver Lukies	10225	Yes	All of the above		Both	We act on behalf of our client Seventyholds Ltd, whose freehold land is impacted by the proposed Norwich to Tilbury scheme. On behalf their behalf, we object to the proposed interference with their land and rights in relation to the Planning Act 2008. Seventyholds Ltd has been promoting, for over 10 years, a comprehensive scheme for the delivery of Southfields Village and Country Park in Thurrock. The current alignment of the proposed overhead line would have a fundamental and unacceptable impact on the deliverability of the scheme. The Southfields proposal comprises a residential-led development of approximately 800 dwellings and a Country Park, including the restoration and long-term public use of an approximately 80-acre former landfill site owned by Thurrock Council. The proposal has been subject to extensive technical work and engagement and represents a deliverable scheme bringing clear housing, environmental and community benefits. The Country Park forms part of an agreed regeneration approach involving Thurrock Council. As currently shown, the proposed 400kV overhead line crosses the southern part of the Southfields site and affects the adjacent landfill regeneration area through the location of new pylons. The effect would be to blight the site to the extent that the residential development would be commercially unviable. The impact is not limited to the land directly occupied, but extends across the wider site through visual intrusion and market perception. In addition, the proposed pylon positions would prejudice the agreed regeneration of the landfill site and restrict the delivery of the Country Park. Taken together, the current alignment would sterilise a well-developed scheme which would otherwise deliver substantial public benefits. A reasonable alternative alignment is available. The line could continue further south along the east side of Buckingham Hill Road, crossing just south of the Holford Road junction. This would remove the blighting effect upon the proposed village site, and the regenerated for recreation purposes Buckingham Hill Road 'Council-owned refuse tip, while occupying land which is presently vacant and unlikely to ever be considered for residential development. There is no evident reason why this alternative would result in any material increase in construction cost or complexity. Again, the current positing of the pylons and overhead lines cannot be regarded as the least harmful option. The proposal falls to be considered under the Planning Act 2008. Section 122 provides that compulsory acquisition may only be authorised where the land is required for the development and there is a compelling case in the public interest. The requirement that land is “required” is a substantive test. Where a reasonable alternative exists which avoids significant harm, it is difficult to conclude that land in this location meets that test. The public interest test requires the benefits of the scheme to be weighed against the harm. Here, that harm includes the loss of a viable housing and regeneration scheme, which weighs heavily against the current alignment. Section 123 further requires that compulsory acquisition is properly justified. Given the availability of a less harmful alternative, the inclusion of the Southfields land within the Order limits cannot be regarded as justified or proportionate. Government guidance reinforces these principles, requiring a clear justification for all land included and a proper balance between public benefit and private loss, taking account of alternatives. The availability of a reasonable alternative alignment significantly weakens any case that the current land take is necessary. The Southfields scheme would deliver substantial housing and environmental benefits. The current alignment would prevent this, whereas the alternative alignment would allow both schemes to proceed. Seventyholds therefore requests that the alignment be amended to follow the alternative route.	See Appendix A: AP 99 - Oliver Lukies
Henrietta Mary Guest	2386	Yes	All of the above	All	Both	The acquisition of rights over our land materially interferes with our ability to farm and the enjoyment that an owner should rightfully have over their land. We believe that as per section 123 subsection 4 we do believe that the prescribed procedure has been followed in relation to the land.	See Appendix A: AP 100 - Henrietta Mary Guest
Rex Webster and G Webster and Son Ltd	5622 7360	Yes	Compulsory Acquisition of land,Compulsory Acquisition of rights,Temporary possession,All of the above	ALL	Both	I object to the proposed compulsory acquisition of land and rights affecting Flordon Hall and Farm on the basis that the Applicant has failed to demonstrate compliance with the requirements of Sections 122 and 123 of the Planning Act 2008 and the relevant guidance contained in the Department for Communities and Local Government's Planning Act 2008: The proposed acquisition of rights over Flordon Hall, Farm and tenanted properties would permanently interfere with established property rights, agricultural operations, estate management, and future use of the land. Such interference engages fundamental property rights and should not be authorised unless the Applicant demonstrates that the acquisition is necessary and proportionate. ECHR: Under Article 1 of Protocol 1 and Article 8 of the European Convention on Human Rights, the acquisition of rights over private land and the imposition of permanent restrictions must be shown to be necessary and proportionate. The Applicant has not demonstrated that the rights sought over Flordon Hall and Farm have been reduced to the minimum necessary. Nor has it adequately explained why alternative routing, engineering solutions, reduced easement widths, or other less intrusive approaches could not be adopted. Without such evidence, the proposed acquisition cannot be regarded as the minimum interference necessary to deliver the project. Section 123 PA 08 permits the compulsory acquisition of rights rather than land itself but this does not reduce the Applicant's burden of justification. The rights proposed over Flordon Hall and Farm would impose significant and enduring restrictions on ownership and occupation. The Applicant has not provided sufficient evidence that the rights sought have been carefully tailored to what is genuinely required for the project. For the purposes of Sections 122 and 123 of the Planning Act 2008 and the Department for Communities and Local Government Guidance on compulsory acquisition, the Applicant has failed to demonstrate: •that the rights sought over Flordon Hall and Farm are strictly necessary; •that the extent of the proposed acquisition has been minimised; •that the interference with private property rights is proportionate; •that a fair balance has been struck between the public benefits of the project and the substantial prejudice suffered by the landowner. The proposed works would interfere materially with the ownership, occupation, management, enjoyment, and future use of Flordon Hall, Farm and tenanted properties. The proposed route would result in significant adverse impacts on agricultural productivity, farm business operations, landscape character, biodiversity, heritage interests and future development opportunities associated with Flordon Hall and Farm.	See Appendix A: AP 101 - Rex Webster and G Webster and Son Ltd

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights? Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Katharine Elizabeth Allan	3432	Yes	All of the above	All	Both	I object to the proposed Compulsory Acquisition (CA), Compulsory Acquisition of rights, and Temporary Possession (TP) of my land and rights for the Norwich to Tilbury project. The Applicant has not demonstrated compliance with the statutory tests in Sections 122 and 123 of the Planning Act 2008, nor with the requirements of the DCLG Guidance (September 2013) on compulsory acquisition. 1. Section 122(2): The land has not been shown to be "required" for the development Section 122(2) requires the Applicant to show that the land is required, necessary to facilitate, or incidental to the development. The DCLG Guidance (paras 11–13) stresses that the land take must be the minimum reasonably necessary and supported by clear evidence. The Applicant has not demonstrated why the full extent of the land and rights sought over my property are required. The scope of the proposed rights is excessive, insufficiently justified, and not supported by plot-specific evidence. No adequate explanation has been provided as to why less intrusive alternatives—such as micro-siting, design adjustments, or alternative access arrangements—cannot be used. Without clear justification, the statutory test of necessity is not met. 2. Section 122(3): No "compelling case in the public interest" Section 122(3) requires the decision-maker to be satisfied that the public benefits clearly outweigh the private loss. The DCLG Guidance (paras 12–13, 17–19) emphasises that compulsory acquisition is a last resort and must be proportionate. The Applicant has not demonstrated that the interference with my land and rights is proportionate. The impacts on the use, enjoyment, and value of my land are significant, yet the Applicant has not provided sufficient detail on the nature, duration, or consequences of the proposed works. Without clear evidence that the public benefits outweigh the harm, the test of proportionality is not satisfied. 3. Section 123: Failure to attempt acquisition by agreement Section 123 requires the Applicant to show that it has made genuine attempts to acquire the land by agreement. The DCLG Guidance (paras 25–28) requires early, meaningful, and ongoing engagement. The Applicant has not engaged constructively with me. Communications have been limited, generic, and lacking in detail. No reasonable offer or explanation of the rights sought has been provided, nor has the Applicant demonstrated that voluntary agreements or reduced -impact alternatives have been explored. The statutory requirement for negotiation has not been met. 4. Lack of clarity and justification for the rights sought The Guidance (paras 13, 20–23) requires clear explanation of why each plot and each right is needed. The Applicant has not provided adequate detail on the extent, purpose, or duration of the rights sought, preventing proper assessment of their necessity or proportionality. 5. Insufficient assessment of alternatives The Applicant has not demonstrated that reasonable alternatives—route adjustments, engineering solutions, reduced land take, or temporary rather than permanent rights—have been properly considered, contrary to the Guidance (paras 13, 18, 21). Conclusion - The Applicant has not shown that the land is required, that the interference is necessary or proportionate, that a compelling case in the public interest exists, or that reasonable efforts have been made to acquire the land by agreement. The statutory tests in Sections 122 and 123 are not met, and I therefore object to the CA, CA of rights, and TP of my land.	See Appendix A: AP 102 - Katharine Elizabeth Allan
John Mather	5872	Yes	All of the above	All	Both	We are hampered in making any arguments over any application by National Grid to acquire compulsory rights over our land since we don't know what exactly National Grid propose to do or how they propose to overcome any of the physical obstacles which the site presents since they do not engage with us and ignore representations we have made in responses to consultations etc. To be explicit, the site may ultimately require HDDing rather than trenching, but National Grid won't discuss this, although in one of their documents put out several years ago they did propose HDDing under the Blackbrook Stream at Langham and therefore under our land immediately to the south of the Blackbrook. However, they withdrew this plan without explanation or notice. We have attempted to query with National Grid at various stages including at an early stage how they plan to tackle the physical complications of laying cables under the undulating, hilly site including Blackbrook Hill, the Blackbrook Stream, our land and the high-pressure gas main to the south but without response. In view of the above, any attempt to seek compulsory rights would be premature until National Grid have made a final decision how to go about the laying of cables under our land, since it is assumed that rights to trench or alternatively HDD would have to be worded differently. We have already communicated to National Grid that we are willing to enter into a reasonable agreement to grant them necessary and reasonable rights therefore compulsory action should be unnecessary. Our land agents are in the process of attempting to agree Heads of Terms with National Grid though there is no agreement at the moment. Whether National Grid have taken all necessary prescribed steps before making any application(s) to compulsorily acquire rights over our land and considered all other options is a huge technical question given the size of the Norwich to Tilbury project and the amount of paperwork and information so far generated. I can't answer the point.	See Appendix A: AP 103 - John Mather
Shelly Eliza Cockrell	3787	Yes	Compulsory Acquisition of land	All	Both	The land in question is woodlands that forms part of our estate that has been in our family for over 60 years. The amount of money that was offered to aquire this land was ridiculously low and we feel that, with the talks about the new estate that will be built on the land behind our property, it should be worth much more. Alternatively, if access to the land is needed to perform maintenance on the oversail, we are happy if the relevant organisation wishes to rent the land.	See Appendix A: AP 104 - Shelly Eliza Cockrell
Colin Henry Smith (A H Smith & Sons)	14506	Yes	All of the above	ALL	Both	High quality producing agricultural land which provides our main income to our farming business and has done for over 100 years.	See Appendix A: AP 105 - Colin Henry Smith (A H Smith & Sons)
Annabel Wood (JA Buntings and Sons)	28603	Yes	All of the above	ALL	Both	I strongly object to the proposed pylons being located on or affecting my land due to the significant visual, environmental, and property impacts. This proposal would cause unacceptable harm to my property rights, amenity, and the surrounding landscape.	See Appendix A: AP 106 - Annabel Wood (JA Buntings and Sons)

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights? Paul Charles Peter Wenden	2022	Yes	All of the above	All	Both	I see no reason why the project needs to infringe my property as it could be moved eastwards to avoid me completely	See Appendix A: AP 107 - Paul Charles Peter Wenden
Donna Wenden	3080	Yes	All of the above	All	Both	No need to use the land	See Appendix A: AP 108 - Donna Wenden
Christopher Philpot (CJH Holdings Ltd)	10457	Yes	All of the above	11120	National Grid	CJH Farming does not consider the compulsory acquisition of our land and rights to be in the public interest, particularly where reasonable alternatives are available. Compulsory acquisition is unnecessary. The company has engaged fully with National Grid (NG) and has never had any direct response to any questions raised and therefore can honestly say that we do not consider that the Applicant has properly considered reasonable alternatives to reduce the impact on our holding. One feels that every meeting I have held with Fisher German has just been a tick box exercise for National Grid so the affected land owner can explain the situation on the ground but then none of this information ACTUALLY gets back to NG and actioned, proof that the applicant has not listened to constructive feedback from landowners, or taken sufficient steps to reduce impacts and mitigate losses. CJH Farming is seriously concerned that the rights being sought may be wider than necessary for the scheme - NG want to have Rights over my affected EX number - this EX number for this 'project' covers over 1,000 acres - I can't have NG controlling what happens on the entire holding - that's not fair and needs to be conceded by NG in the draft Heads of Terms. The Heads of Terms are still not in a reasonable or acceptable format. Why can't NG be 'reasonable' rather than being so stubborn and never conceding anything - or agreeing to a practical solution. It's just wasting everyone's time and winding people up unnecessarily. In summary, the current Heads of Terms impose unfair and unreasonable restrictions on landowners. CJH Farming do not consider that the Applicant has demonstrated that the interference with our land and rights is necessary, proportionate, or limited to what is reasonably required. In summary I wish to make it clear that CJH Farming objects to the compulsory acquisition of our land and rights unless and until the Applicant can properly justify the powers sought, reduce the impact on our holding, and agree reasonable terms and protections.	See Appendix A: AP 109 - Christopher Philpot (CJH Holdings Ltd)
CJH Holdings Ltd	10457	Yes	All of the above		Both	CJH Holdings does not consider the compulsory acquisition of our land and rights to be in the public interest, particularly where reasonable alternatives are available. Compulsory acquisition is unnecessary. The company has engaged fully with National Grid (NG) and has never had any direct response to any questions raised and therefore can honestly say that we do not consider that the Applicant has properly considered reasonable alternatives to reduce the impact on our holding. One feels that every meeting I have held with Fisher German has just been a tick box exercise for National Grid so the affected land owner can explain the situation on the ground but then none of this information ACTUALLY gets back to NG and actioned, proof that the applicant has not listened to constructive feedback from landowners, or taken sufficient steps to reduce impacts and mitigate losses. CJH Holdings is seriously concerned that the rights being sought may be wider than necessary for the scheme - NG want to have Rights over my affected EX number - this EX number for this 'project' covers over 300 acres - I can't have NG controlling what happens on the entire holding - that's not fair and needs to be conceded by NG in the draft Heads of Terms. I am very concerned that NG are wanting access rights through the Essex YFC Show field. This is completely unacceptable and we have tried to tell NG this on a number of occasions. This must not be allowed to happen - there is a perfectly acceptable access directly off the A1060 which was proposed until very recently and I don't understand why the longer route was more recently proposed. We have been assured that this route will not be used or put in the final document - let's see what happens... The Heads of Terms are still not in a reasonable or acceptable format. Why can't NG be 'reasonable' rather than being so stubborn and never conceding anything - or agreeing to a practical solution. It's just wasting everyone's time and winding people up unnecessarily. In summary, the current Heads of Terms impose unfair and unreasonable restrictions on landowners. CJH Holdings do not consider that the Applicant has demonstrated that the interference with our land and rights is necessary, proportionate, or limited to what is reasonably required. In summary I wish to make it clear that CJH Holdings objects to the compulsory acquisition of our land and rights unless and until the Applicant can properly justify the powers sought, reduce the impact on our holding, and agree reasonable terms and protections.	See Appendix A: AP 110 - CJH Holdings Ltd
Abdul Azeem Dhillon	24283	Yes	All of the above	All	Both	This proposal being part of a major infrastructure project conflicts with the major infrastructure project of LTC as the proposals by LTC will result in major changes around our land including new road layout as part of the scheme. It is my view that there has been no transparency in terms of looking at the link up between these two projects and the link up of the LTC project will conflict with the tasks being proposed that will impact as a result of the Norwich and Tilbury project. It is my view that if there is a requirement for even temporary disturbance then this should be based upon clear transparency and evaluating the facts which sadly have not been forthcoming and I have had no explanations as to why there should be land utilisation/ disturbance upon our site. The last thing we need is a big hotchpotch of one project doing one thing, and the other project doing another. The previous plans were not to have any impact on or near our site and these have also been changed without due communication with us, therefore, I must object to this scheme and ask the planning inspectorate the redress the balance without the need for such services to require compulsory acquisition/ utilisation of our land.	See Appendix A: AP 111 - Abdul Azeem Dhillon
Abdul Aleem Dhillon	24284	Yes	All of the above	All	Both	This proposal being part of a major infrastructure project conflicts with the major infrastructure project of LTC as the proposals by LTC will result in major changes around our land including new road layout as part of the scheme. Charles Tritton	4814	Yes	Compulsory Acquisition of land,Compulsory Acquisition of rights,All of the above,Temporary possession	All	Both		See Appendix A: AP 115 - Charles Tritton
Diana Tritton	6852	Yes	All of the above	All	Both		See Appendix A: AP 116 - Diana Tritton
MRS PRISCILLA VICTORIA LATHAM	8638	Yes	Temporary possession	All	Both	Plots (The land and roads around my house (Manor Farmhouse, Diss Road Tibenham, NR16 1QF) which fronts Diss Road and has Mill Road forming the boundary on the west. I have been unable to access the Book of Reference online to provide the plot numbers.) I object to the access proposals for the construction of the proposed route of the pylons which runs within 300 metres to the east of our land on several grounds: * The roads in front of and to the east of the house are far too narrow to cope with the size of the construction vehicles necessary for such a major development. They will inevitably damage the verges, ditches and hedgerows with potential irreversible damage to our hedgerow trees if they are damaged due to over sized vehicles pushing past them. Or being cut back by contractors to facilitate access without our permission which we are highly unlikely to grant. * Access to our home is will be seriously effected by road closures meaning circuitous routes greatly increasing the mileage incurred during the course of routine daily life. * Our house and garden will effectively on surrounded by construction access routes and the actual line of the pylons - our right of access will be infringed. * The noise and constant activity of heavy construction taking place over a period of months will be detrimental to the natural environment. The wildlife which is abundant here will be adversely effected - reptiles such as Great Crested Newts, Slow Worms and Grass Snakes all of which breed in our garden and the ditches/ponds immediately around us will undoubtedly be impacted by the construction. * In the lead up to construction work, and for its duration any possibility of selling our property with a view to downsizing which is planned in the relatively near future will be impossible without a major reduction in the value.	See Appendix A: AP 117 - MRS PRISCILLA VICTORIA LATHAM

Tritton Farming Partnership LLP	14063	Yes	All of the above,Compulsory Acquisition of land,Compulsory Acquisition of rights,Temporary possession	All	Both		See Appendix A: AP 120 - Tritton Farming Partnership LLP
David Lewis	1997	No					See Appendix A: AP 121 - David Lewis
Stephen Knight, Stanfords LLP	25434	Yes	All of the above	All	Both	I object on behalf of Gent Fairhead & Co Limited, and Blackwater Aggregates to the alignment of the proposed overhead cables and pylons. The Scheme is proposed to pass through Monks Farm, Kelvedon which is subject to the terms of an Option Agreement for mineral extraction in my clients favour. It is National Grids intention to locate pylons TB083 and TB084 in the centre of Monks Farm, which will sterilise significant mineral reserves. Whilst Monks Farm is not yet identified within the Minerals Local Plan, it was submitted to Essex County Council in July 2024 for the purposes of their Mineral Local Plan Review, which is currently under consultation. I have been in discussion with National Grid representatives regarding the route alignment, and we are yet to receive confirmation that the route will re-aligned to the south, closer to the red line application area to help mitigate the sterilisation.	See Appendix A: AP 122 - Stephen Knight, Stanfords LLP
Matthew Bunting	28603 15478	Yes	All of the above	All	Both	Because it would cut our land completely in half and would for ever cause obstruction. Would also create a blot on the landscape of the farm.	See Appendix A: AP 123 - Matthew Bunting

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights? Derek Boreham	27008	Yes	Compulsory Acquisition of rights,Temporary possession	H-7/20	National Grid	1. Failure to Demonstrate Necessity – Section 122(2) Section 122(2) of the Planning Act 2008 requires the Secretary of State to be satisfied that the rights sought are required for the development, are required to facilitate the development, or are incidental to it. I do not consider that National Grid has demonstrated that the full extent of the rights sought over my land is genuinely necessary. The powers sought appear wider than reasonably required and have not been sufficiently justified. In particular, it has not been demonstrated why more limited rights, reduced land take or temporary arrangements would be insufficient. The Department for Communities and Local Government Guidance Planning Act 2008: Guidance related to procedures for compulsory acquisition (September 2013) states that applicants should seek no more land or rights than are reasonably required for the proposed development. I do not believe this requirement has been satisfied in relation to my land. 2. Failure to Establish a Compelling Case in the Public Interest – Section 122(3) Section 122(3) requires there to be a compelling case in the public interest before compulsory acquisition powers can be granted. The Guidance makes clear that a fair balance must be struck between the public interest and the private loss suffered by affected landowners. In my case, I do not consider that National Grid has demonstrated why the extent of the interference with my land rights is justified or proportionate. 3. Disproportionate Impact on My Agricultural Holding The proposed rights and associated powers would adversely affect the efficient operation of my agricultural holding. Their exercise has the potential to disrupt farming activities, restrict access for agricultural machinery, interfere with field operations and reduce the flexibility with which the land can be managed. As an agricultural business, the cumulative effect of these restrictions extends beyond the area directly affected and has implications for the efficient and economic operation of the holding as a whole. I do not consider that National Grid has adequately demonstrated that these impacts have been minimised or that the least intrusive solution has been adopted. 4. Failure to Minimise Interference and Consider Alternatives The 2013 Guidance expects applicants to demonstrate that they have considered alternatives and have minimised the extent of compulsory powers wherever possible. I do not believe sufficient consideration has been given to alternative arrangements, revised working methods or narrower rights that could reduce the impact on my land and agricultural operations. The extent of the rights sought appears to provide operational flexibility to the Applicant rather than reflecting the minimum rights reasonably required. 5. Insufficient Attempts to Reach Agreement The Guidance states that compulsory acquisition powers should be used only as a last resort and that applicants should make reasonable efforts to acquire land and rights by agreement. I do not consider that sufficient progress has been made through negotiation or that all reasonable steps have been exhausted before seeking compulsory powers over my land. In my view, the use of compulsory powers is being pursued prematurely. 6. Human Rights Considerations The proposed acquisition of rights engages Article 1 of the First Protocol to the European Convention on Human Rights, which protects the peaceful enjoyment of possessions. A fair balance must be struck between the interests of the public and those whose rights are affected. Given the extent of the interference with my agricultural land and the lack of evidence that less intrusive alternatives have been fully explored, I do not consider that the necessary balance has been achieved.	See Appendix A: AP 124 - Derek Boreham
Mark Easton	10198	Yes	All of the above	ALL	Both	Since the consultation period I believe there has been little or no consideration that given to alternative routes or design changes to lessen the impact to our area. Giving NG a blanket policy to obtain compulsory rights seems completely disproportionate and without regard to what they might actually need. They could put in place compulsory powers for their own convenience or just to keep flexibility to change things sometime in the future without consulting anyone.	See Appendix A: AP 125 - Mark Easton
David and Heather Pearce	7809	Yes	Compulsory Acquisition of rights	F-1/10	National Grid	1. Failure to Demonstrate Necessity – Section 122(2) Section 122(2) of the Planning Act 2008 requires the Secretary of State to be satisfied that the rights sought are required for the development, are required to facilitate the development, or are incidental to it. I do not consider that National Grid has demonstrated that the full extent of the rights sought over my property is genuinely necessary. The powers sought appear wider than reasonably required and have not been sufficiently justified. In particular, it has not been demonstrated why more limited rights, reduced land take or temporary arrangements would be insufficient. The Department for Communities and Local Government Guidance Planning Act 2008: Guidance related to procedures for compulsory acquisition (September 2013) states that applicants should seek no more land or rights than are reasonably required for the proposed development. I do not believe this requirement has been satisfied in relation to my property. 2. Failure to Establish a Compelling Case in the Public Interest – Section 122(3) Section 122(3) requires there to be a compelling case in the public interest before compulsory acquisition powers can be granted. The Guidance makes clear that a fair balance must be struck between the public interest and the private loss suffered by affected owners and occupiers. In my case, I do not consider that National Grid has demonstrated why the extent of the interference with my property rights is justified or proportionate. 3. Disproportionate Impact on My Property Rights The proposed rights and associated powers would adversely affect my use and enjoyment of my home and property. As the owner and occupier, I would be subject to ongoing restrictions and uncertainty arising from the exercise of these rights. I do not consider that National Grid has adequately demonstrated that the impact on my property has been minimised or that the least intrusive solution has been adopted. The extent of the rights sought appears disproportionate to the purpose for which they are required. 4. Failure to Minimise Interference and Consider Alternatives The 2013 Guidance expects applicants to demonstrate that they have considered alternatives and have minimised the extent of compulsory powers wherever possible. I do not believe sufficient consideration has been given to alternative arrangements, revised working methods or narrower rights that could reduce the impact on my property. The extent of the rights sought appears to provide operational flexibility to the Applicant rather than reflecting the minimum rights reasonably required. 5. Insufficient Attempts to Reach Agreement The Guidance states that compulsory acquisition powers should be used only as a last resort and that applicants should make reasonable efforts to acquire land and rights by agreement. I do not consider that sufficient progress has been made through negotiation or that all reasonable steps have been exhausted before seeking compulsory powers over my property. In my view, the use of compulsory powers is being pursued prematurely. 6. Human Rights Considerations The proposed acquisition of rights engages Article 1 of the First Protocol to the European Convention on Human Rights, which protects the peaceful enjoyment of possessions. The proposals also engage Article 8 rights relating to respect for private and family life and the home. A fair balance must be struck between the interests of the public and those whose rights are affected. Given the extent of the interference with my property rights and the lack of evidence that less intrusive alternatives have been fully explored, I do not consider that the necessary balance has been achieved.	See Appendix A: AP 126 - David and Heather Pearce

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Dick Lanham	2823	Yes	All of the above	All plots relating to Sheddings Farm, Church Road, Dunton, Brentwood, CM13 3SS	Both	I object to the proposed interference with my land rights at Sheddings Farm, Church Road, Dunton, Brentwood. The proposed access arrangements would result in a severe and disproportionate interference with my property rights, farming operations, business activities, privacy, security and enjoyment of my home. My objection is not limited to construction access. I object to any proposed access through Sheddings Farm associated with the project, whether temporary, permanent, occasional, maintenance-related or otherwise. Any access through the property interferes with my land rights and has a direct impact on my home, family and farming business. The proposed access route passes immediately adjacent to my family home and would introduce third-party access within close proximity of the dwelling. This creates significant safeguarding, privacy and security concerns. The presence of project personnel, contractors, vehicles or other authorised users accessing the land through this route would fundamentally alter the character and security of our home environment. The land affected forms part of an actively farmed agricultural holding. Any access through the property has the potential to disrupt farming operations, interfere with the use of grazing land and create ongoing biosecurity risks associated with the movement of people, vehicles and equipment through agricultural land. I do not consider that National Grid has demonstrated that the proposed interference with my land rights is necessary or proportionate as required by Sections 122 and 123 of the Planning Act 2008. An alternative access route exists via the public highway and neighbouring land which avoids the significant impacts on my home and farming business. This alternative route has been proposed to National Grid and Fisher German for a considerable period and would substantially reduce the interference with my rights whilst still enabling access to the relevant land. In addition, documents produced by National Grid appear to identify access to the same area of land from the direction of the alternative route, demonstrating that alternative means of access have been considered and are available. In these circumstances, I do not believe that National Grid has demonstrated a compelling case in the public interest for the interference proposed at Sheddings Farm. The availability of a less harmful alternative route means the proposed interference with my land rights is unnecessary and disproportionate. For these reasons, I object to the compulsory acquisition and/or temporary possession of rights affecting Sheddings Farm and request that the Examining Authority gives full consideration to the alternative access arrangements which would significantly reduce the impact on my property, family and business.	See Appendix A: AP 129 - Dick Lanham
Paul Farrelly	1289	Yes	All of the above	All	Both	Serious ingress and egress issues to my property which is fairly isolated and only accessible by vehicle. Any road closure would completely cut off and isolate the property. Noise and light pollution / nuisance by the proposed works. Particularly relevant to myself with a [REDACTED]. Potential vibration structural / foundation damage to my home which is close to the roadside. Dust, dirt and visual blight. Danger posed by large machinery working in such close proximity to property housing family members. Loss of value of my property. Saleability and mortgageability issues.	See Appendix A: AP 130 - Paul Farrelly
Mr Philip Brown & Mrs G Brown	17593	Yes	All of the above	All regarding your map reference N-T_LIQ_18030. OS map reference TM 04 74	Both	We have major concerns regarding the impact heavy machinery would have on the integrity our listed dwelling, which is around 400 years old. We also have concerns about the effect the increased traffic would have on the footfall to our small butchery and farm shop and even more concerns about the noise and vibrations will have on our livestock. The B1113 is already of an insufficient width for the increased amount of heavy modern farm vehicles and lorries which regularly use it, you can already see where the bank at the front of our boundary has been eroded by large vehicles attempting to pass each other on the bend and there is nowhere that roadway widening or passing places could be introduced within the existing public highway.	See Appendix A: AP 131 - Mr Philip Brown & Mrs G Brown

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Christopher Padfield	14511	Yes	Compulsory Acquisition of rights, Temporary possession	G-4/62 G-4/75 G-4/70 G-4/60 G-4/25 G-4/26 G-4/63	Both	1. Failure to Demonstrate Necessity – Section 122(2) Section 122(2) of the Planning Act 2008 requires the Secretary of State to be satisfied that the rights sought are required for the development, are required to facilitate the development, or are incidental to it. I do not consider that National Grid has demonstrated that the full extent of the rights sought over my land is genuinely necessary. The powers sought appear wider than reasonably required and have not been sufficiently justified. In particular, it has not been demonstrated why more limited rights, reduced land take or temporary arrangements would be insufficient. The Department for Communities and Local Government Guidance Planning Act 2008: Guidance related to procedures for compulsory acquisition (September 2013) states that applicants should seek no more land or rights than are reasonably required for the proposed development. I do not believe this requirement has been satisfied in relation to my land. 2. Failure to Establish a Compelling Case in the Public Interest – Section 122(3) Section 122(3) requires there to be a compelling case in the public interest before compulsory acquisition powers can be granted. The Guidance makes clear that a fair balance must be struck between the public interest and the private loss suffered by affected landowners. In my case, I do not consider that National Grid has demonstrated why the extent of the interference with my land rights is justified or proportionate. 3. Disproportionate Impact on My Agricultural Holding The proposed rights and associated powers would adversely affect the efficient operation of my agricultural holding. Their exercise has the potential to disrupt farming activities, restrict access for agricultural machinery, interfere with field operations and reduce the flexibility with which the land can be managed. As an agricultural business, the cumulative effect of these restrictions extends beyond the area directly affected and has implications for the efficient and economic operation of the holding as a whole. I do not consider that National Grid has adequately demonstrated that these impacts have been minimised or that the least intrusive solution has been adopted. 4. Failure to Minimise Interference and Consider Alternatives The 2013 Guidance expects applicants to demonstrate that they have considered alternatives and have minimised the extent of compulsory powers wherever possible. I do not believe sufficient consideration has been given to alternative arrangements, revised working methods or narrower rights that could reduce the impact on my land and agricultural operations. The extent of the rights sought appears to provide operational flexibility to the Applicant rather than reflecting the minimum rights reasonably required. 5. Insufficient Attempts to Reach Agreement The Guidance states that compulsory acquisition powers should be used only as a last resort and that applicants should make reasonable efforts to acquire land and rights by agreement. I do not consider that sufficient progress has been made through negotiation or that all reasonable steps have been exhausted before seeking compulsory powers over my land. In my view, the use of compulsory powers is being pursued prematurely. 6. Human Rights Considerations The proposed acquisition of rights engages Article 1 of the First Protocol to the European Convention on Human Rights, which protects the peaceful enjoyment of possessions. A fair balance must be struck between the interests of the public and those whose rights are affected. Given the extent of the interference with my agricultural land and the lack of evidence that less intrusive alternatives have been fully explored, I do not consider that the necessary balance has been achieved.	See Appendix A: AP 132 - Christopher Padfield
MARGARET STANCOMBE	24824	Yes	All of the above	ALL	Both	There are still important points outstanding and the Heads of Terms have not yet been sufficiently progressed.	See Appendix A: AP 133 - MARGARET STANCOMBE
Jeremy Robin Sibson-Barnes	1661	Yes	All of the above	All	Both	I believe in the tenants of Common Law that a Freeholder should be the only entity that holds the various rights over their land	See Appendix A: AP 134 - Jeremy Robin Sibson-Barnes
Kay Norman	1755	Yes	All of the above	all	Both	there has been a complete lack of engagement from National Grid and Fisher German with no consideration given to the affect on the life of people this affects	See Appendix A: AP 135 - Kay Norman
Andrew Harry Harbott Stevens	9034	Yes	All of the above	All	Both	The Consultations have been defective - see Legal opinion of Lord Charles Banner QC submitted by Essex Suffolk Norfolk campaign group who found numerous legal deficiencies in National Grid's approach to the consultations arguing it falls well short of adequate pre-application consultation sufficient to enable a Development Consent Order application to proceed to examination	See Appendix A: AP 136 - Andrew Harry Harbott Stevens
Alcemi Storage Developments 1 Limited	28327	No				We have submitted the requested online form for the interests shown in the Land Rights Tracker, with the Interest in Land (PIL) Reference ID 28327, confirming no objection in relation to these plots. This relates to land held under an Option with R Jackson (East Anglia) Limited dated 28 March 2024. However, Alcemi hold another Option, dated 18 March 2025 with Thornbush Energy Limited. This has been flagged in representations to date as not appearing in the Book of Reference and Alcemi's interest in these plots does not appear to be reflected in the Land Rights Tracker. We therefore cannot deal with these interests via the online form. I attach the previously submitted representations which set out these affected plots (all within Sheet 20). Discussions are continuing with the Promoter to resolve Alcemi's concerns around these plots, but until a suitable Framework Agreement is entered into, Alcemi must continue their objection to the compulsory acquisition of these plots	See Appendix A: AP 137 - Alcemi Storage Developments 1 Limited
ANITA MARGARETA OCTAVIA MOORE	858	Yes	All of the above	ALL	Both	I have lived in Tibenham all my life and my family has farmed the land for generations. This will not only affect family farming land but will also alter the view of Tibenham and the countryside permanently. I believe it is not in the best interests for the countryside in anyway to be disrupted in such a manner.	See Appendix A: AP 138 - ANITA MARGARETA OCTAVIA MOORE
Gavin Peter Moore	624	Yes	All of the above	ALL	Both	My family has farmed this land for generations. This will not only affect my family farming land and business but will also alter the view of the land and the countryside permanently. I believe it is not in the best interests for the countryside in anyway to be disrupted in such a manner.	See Appendix A: AP 139 - Gavin Peter Moore

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Sara Price	2605	Yes	All of the above	ALL	Both	I have tried to engage with this project through my representative but they have had little to no success obtaining answers/solutions and to make real progress, progress is painfully slow, they seem unwilling to fully engage to resolve our issues and concerns. They wish to use my property to access another party's land, I have made recommendations and suggestions which would mean my property would not need to be used, also saving them time and money, this suggestion has been ignored. This is not simply a field issue, my property is a private residents with no connection to the land they wish to use, compulsory acquisition of land or rights or even temporary possession is completely wrong given our attempts to engage with the project and would have a massive negative impact of the use and freedoms with my property. Most concerning is the fact that they wish to use my property for 7-10 years, that is a massive restriction on my home and life considering the pipeline and future equipment is on someone else's land with its own access I feel that the lack of engagement from them is stopping solutions from being found, there are very few land owners involved in the pipe line side of the project and with some simple face to face meetings this could of been resolved weeks ago. I feel that direct individual contact I.E meetings with pipeline affected residents and their representatives could resolve issues and have contracts in place in a matter of weeks.	See Appendix A: AP 140 - Sara Price
Alison Mary Hayward	13768	Yes	Compulsory Acquisition of rights, Temporary possession	All	UK Power Networks	We have been successful in persuading National Grid to relocate one pylon, but only because with the assistance of a NG engineer we were able to demonstrate a benefit to NG of relocating the pylon. We have suggested both in writing and at face to face site meetings re routing a permanent access way to reduce the impact on the farm and to offer NG a more direct shorter route to the relevant pylon. In meeting Fisher German agree with us and say they will take it to NG, but nothing happens. The convoluted route remains the route being persued. We were asked at the initial consultations to put forward proposals to mitigate the loss of 30 acres of grass for 5 years which will severely affect our sheep numbers. We found our neighbouring farm is willing to put 30 acres of arable land into a 5 year ley and let this to us. We have written to Fisher German numerous times asking for accomodation works to achieve this i.e fencing and seeding of grass. Nothing has been heard in response. At our last meeting with FG in May we were told that nothing could be done until the DCO was determined. But to have grass to graze in Spring 2026 we need to be sowing the grass this autumn and that means NG should be negotiating and drafting a Farm Business Tenancy now. It would easy to agree a break clause in the. event of the DCO being refused. It is immensely frustrating to face the threat of serious damage to your farming business and be unable to have a dialogue with NG to address the issues and resolve them. NG doesn't seem to care about what damage it does so long as the line is built on time, it appears blind to everything else.	See Appendix A: AP 141 - Alison Mary Hayward
Jane Sarah Bird	2820	Yes	Compulsory Acquisition of land, Compulsory Acquisition of rights	All	Both	•There is a lack of necessity to acquire these rights when clearly short term rights would suffice. There are a number of locations where rights are looking to be acquired just for future convenience of the project. This disproportionately prevents efficient and profitable running of the farm in the future. •There has been no consideration of any alternatives to minimize the effect on property rights. No consultation with landowners has been taken seriously and they cannot show where any discussions have been taken into account. •Insufficient negotiations have been made to discuss the Heads of terms, they cannot show where any discussions have been taken into account when drawing up these very generic and wide spread heads of terms.	See Appendix A: AP 142 - Jane Sarah Bird
William Nicholas Bird	2394	Yes	Compulsory Acquisition of land, Compulsory Acquisition of rights, All of the above, Temporary possession	All	Both	•There is a lack of necessity to acquire these rights when clearly short term rights would suffice. There are a number of locations where rights are looking to be acquired just for future convenience of the project. This disproportionately prevents efficient and profitable running of the farm in the future. •There has been no consideration of any alternatives to minimize the effect on property rights. No consultation with landowners has been taken seriously and they cannot show where any discussions have been taken into account. •Insufficient negotiations have been made to discuss the Heads of terms, they cannot show where any discussions have been taken into account when drawing up these very generic and wide spread heads of terms.	See Appendix A: AP 143 - William Nicholas Bird
David Michael Stacey	5513	Yes	All of the above	All	Both	The disruption to our daily work activities. We have no rights to object to the actions(it's our land), lack of compensation for any actions.	See Appendix A: AP 144 - David Michael Stacey
Gavin Richard Clark	2309	Yes	All of the above	ALL	Both	despite raising questions and concerns directly in person with National Grid / representatives we are yet to receive answers to eg the working hours of the set down site at Church Lane, Margaretting ie no working/activity outside of Monday to Friday 9am to 5pm. Any potential impact to internet signal from nearby pylons noting we run a business etc	See Appendix A: AP 145 - Gavin Richard Clark
karen elizabeth clark	1890	Yes	All of the above	ALL	Both	despite raising questions and concerns directly in person with National Grid / representatives we are yet to receive answers to eg the working hours of the set down site at Church Lane, Margaretting ie no working/activity outside of Monday to Friday 9am to 5pm. Any potential impact to internet signal from nearby pylons noting we run a business etc	See Appendix A: AP 146 - karen elizabeth clark
Michael John Golding	25624	No					See Appendix A: AP 147 - Michael John Golding

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights? Benjmain Richard Coode-Adams	1030	Yes	Compulsory Acquisition of land,Compulsory Acquisition of rights,All of the above,Temporary possession		Both	I notice that the information you are asking for is not freely available nor searchable and you use acronyms with abandon. For this reason your consultation process is flawed and should be restarted with forms people can actually use. I am Ben Coode-Adams, farming partner of G&S Coode-Adams Farm Partnership, operating Feering Bury Farm and Coggeshall Hall Farm in Essex. Three proposed towers — TB077, TB078 and TB079 — fall on farm land. TB080 lies immediately across the road from the boundary and will cause construction-phase disruption to access and operations. This objection is confined to land rights interference under sections 122 and 123 of the Planning Act 2008. No environmental objection is raised. The DCO proposes permanent acquisition of rights, temporary possession and intrusive survey powers at TB077, TB078 and TB079. TB079 is particularly damaging: it falls within fields planted with early blackcurrant varieties entirely dependent on a permanently installed frost-protection and sprinkler irrigation system. Disruption cascades across the whole enterprise. No other part of the farm has frost protection and the early variety cannot be relocated. Yield decline begins before construction, as bushes must be retained beyond their productive lifespan. Total impact spans approximately eight years — the construction period plus a four-year replanting lag. Some 14 hectares will be lost, eliminating a stewardship scheme worth approximately £56,000. Quantified losses include approximately £150,000 per year in lost blackcurrant revenue for up to eight years; approximately £100,000 to relocate and £100,000 to reinstate frost infrastructure; approximately £20,000 per year from farm severance; and approximately £24,000 per year in management costs. Surveys cause further losses through destroyed bushes, compacted headlands and yield suppression. Construction access along Coggeshall Hall drive generates claims for wear, nuisance and safety risk. Ditch disruption may impede run-off to the farm reservoir. TB080 adds construction-phase access disruption. Under section 122 and DCLG Guidance paragraph 8, the applicant must demonstrate that all reasonable alternatives have been explored and that compulsory acquisition is necessary and proportionate. The siting of TB079 within frost-protected fields is not the only workable alignment. A modest repositioning could avoid or substantially reduce cascading enterprise losses. No evidence shows alternatives were assessed and rejected. The cumulative impact of three towers together with TB080's proximity renders the interference disproportionate to any marginal advantage of the chosen alignment. Section 122(3) and DCLG Guidance paragraph 13 require the Secretary of State to be satisfied there is a compelling case in the public interest. Parliament has consistently held that land should be taken compulsorily only where public benefit clearly outweighs private loss. Private loss here is very substantial: destruction of a specialist enterprise dependent on unique fixed infrastructure, financial losses well in excess of £1 million, and permanent imposition of rights over productive freehold land. No assessment weighs these losses against the incremental benefit of the chosen positions. Specific alternatives warranting investigation include repositioning TB079 away from the frost-irrigated fields; repositioning TB077 and TB078 to reduce cumulative impact; provision of replacement frost infrastructure within the consented scheme; engineering measures to protect the ditch and reservoir; and modification of the construction access route. No evidence was provided that any of these was properly examined. The conditions of sections 122 and 123 of the Planning Act 2008 have not been met. I respectfully request that the Secretary of State decline to include compulsory acquisition provisions in the DCO in respect of my land at TB077, TB078 and TB079, or alternatively modify the DCO to exclude or substantially reduce the impact on the frost-protection system and the blackcurrant enterprise at Feering Bury Farm and Coggeshall Hall Farm.	See Appendix A: AP 148 - Benjmain Richard Coode-Adams
Benjamin Richard Coode-Adams	1030	Yes	All of the above	Not known. I've emailed Fisher German but haven't heard back.	Both	I am Ben Coode-Adams, sole owner of [REDACTED]. This is a Grade II listed sixteenth-century timber-framed barn in separate personal ownership from the adjoining G&S Coode-Adams Farm Partnership. No pylon towers are proposed on the barn land itself. This objection is made as the owner of an interest in land whose peaceful enjoyment, heritage significance, amenity and asset value will be materially and permanently interfered with by the authorised works. It is limited solely to interference with my rights and interests in land under the Planning Act 2008 and DCLG Guidance. No environmental objection is advanced. Towers TB075, TB076, TB077, TB078 and TB079 are located on the adjacent farm landholding; TB076 lies immediately across from the barn boundary. All four towers will be visible from the barn, its curtilage and its approach. The barn is a Grade II listed building of sixteenth-century origin whose heritage significance, character and market value are inseparable from the open agricultural landscape in which it has stood for five centuries. The permanent erection of six 50-metre steel lattice pylons in close proximity will irreversibly alter and diminish that setting in a manner which cannot be mitigated and from which the property cannot recover. This constitutes lasting harm to my interest in the property and an irrecoverable diminution in both heritage significance and market value. No compensation framework has adequately addressed this category of loss for a listed building affected by visible infrastructure of this scale. During construction, the near-continuous temporary haul road — typically 8 metres wide with a 21-metre cross-section including topsoil storage and demarcation fencing — will run close to the property. National Grid and contractor vehicles are excluded from existing public roads and directed onto this haul road, carrying heavy construction traffic for the estimated four-year build. A new bridge across the river is to be constructed nearby. The haul road, its plant, heavy vehicles and bridge construction will generate sustained noise, vibration, dust, light pollution and disturbance in close proximity to the barn throughout that entire period. The cumulative impact on amenity, use and letting value is substantial and prolonged. It falls on a property with no towers on its own land and which has made no agreement with the applicant. Under section 122 of the Planning Act 2008 and DCLG Guidance paragraph 8, interference with rights in land must be necessary and proportionate and all reasonable alternatives must have been explored. The applicant has not demonstrated that haul road routing or tower positions were assessed with specific regard to the setting of this listed building. Under DCLG Guidance paragraph 13, compelling evidence must show public benefit outweighs private loss. The permanent and irrecoverable harm to the heritage setting of a Grade II listed sixteenth-century barn, combined with four years of intensive construction disturbance and consequent falls in asset and letting value, constitute a private loss that has not been weighed against the incremental benefit of the chosen alignment. Under DCLG Guidance paragraph 10 and Article 1 of the First Protocol to the ECHR, interference with peaceful enjoyment of property must be lawful, necessary and proportionate. That balance has not been struck. I request that the examining authority require the applicant to assess the impact of the authorised works on Feering Bury Farm Barn as a Grade II listed building and demonstrate that tower positions and haul road routing were properly considered with regard to the heritage and amenity interests in this property. I note you say 1500 words but you actually mean 4000 characters including spaces. This form is appalling for the use of acronyms and jargon and asking for information that is not available.	See Appendix A: AP 149 - Benjamin Richard Coode-Adams

Mark John Putnam	6008	Yes	All of the above	D-3/26 and all	Both	I object to the proposed acquisition of rights over my land and property and submit that National Grid has failed to satisfy the requirements of Sections 122 and 123 of the Planning Act 2008 and the principles set out in the Department for Communities and Local Government Guidance, "Planning Act 2008: Guidance related to procedures for compulsory acquisition" (September 2013). Section 122 requires that compulsory acquisition powers should only be granted where the land or rights sought are necessary for the development and where there is a compelling case in the public interest. The Guidance further states that applicants must demonstrate that all reasonable alternatives have been considered and that any interference with private property rights must be proportionate, justified and no more than is reasonably required. I do not believe National Grid has demonstrated that the proposed acquisition of rights affecting my property is necessary or proportionate. Nor do I believe that National Grid has established the compelling case in the public interest required to justify the severe impact that this project is having and will continue to have on my family, our home and our property rights. National Grid has not adequately demonstrated why the proposed cables must be routed through or immediately adjacent to my property. Alternative routes, technologies and methods appear to be available. In particular, alternatives involving HVDC technology, offshore routing and subsea options have been dismissed primarily on the basis of cost. However, the assessment of those costs has been undertaken by National Grid itself and I do not believe sufficient evidence has been provided to demonstrate that alternatives have been evaluated in a transparent, objective and balanced manner which properly weighs cost against the substantial impacts imposed on affected landowners. The Government's Guidance states that applicants should demonstrate that all reasonable alternatives have been considered before seeking powers to interfere with private land rights. National Grid has failed to demonstrate that less intrusive alternatives have been fully explored and exhausted before seeking compulsory powers affecting my property. My family home is a small two-bedroom bungalow located immediately adjacent to a narrow strip of land which National Grid refers to as a "pinch point" measuring approximately 120 metres in width. National Grid proposes to use this entire corridor for a haul road and the installation of underground high-voltage electricity cables. The scale, intensity and duration of these activities immediately next to our home will have an exceptional and disproportionate impact on our property rights and our ability to enjoy our home. The proposed works will involve extensive construction activity, heavy machinery, excavation works, vehicle movements and associated disturbance immediately adjacent to our property. We have also been advised that much of the work will take place during night-time periods. The prospect of major construction works occurring directly next to our family home, including at night, raises serious concerns regarding noise, disturbance and loss of sleep. My wife, our [REDACTED] child and I will be subjected to prolonged disruption affecting our daily lives, wellbeing and ability to enjoy the peaceful occupation of our home. The impact of this project extends far beyond temporary inconvenience. The project has already caused severe and demonstrable financial harm to my family through the effective blighting of our property. Following the announcement of the project, we actively attempted to sell our home through multiple estate agents. We initially marketed the property at the values recommended by those agents and subsequently reduced the asking price by more than £120,000 (approximately 33%) in an effort to secure a sale. Despite these substantial reductions, we were unable to find a buyer. Feedback received consistently indicated that prospective purchasers were deterred by the potential presence of the transmission infrastructure and/or the proposed works associated with this project. As a result, our home has become effectively unsaleable except at a very substantial financial loss. We estimate that the loss in value attributable to the project significantly exceeds £120,000. This is not a speculative concern; it is a real and ongoing financial impact that has already materially affected our property rights and financial security. The effect of the scheme has therefore gone significantly beyond ordinary inconvenience. It has effectively removed our freedom to move home and has trapped us in a property which has suffered severe planning blight. The resulting financial uncertainty has caused considerable distress, anxiety and mental health issues for my family. Recognising the serious impact the project was having upon our property, we requested that National Grid purchase our home at its unaffected market value. National Grid refused. As a result, we remain exposed to the continuing effects of blight, uncertainty and loss while being denied any practical means of mitigating the harm caused by the scheme. I am also concerned that National Grid has not provided sufficient clarity regarding precisely what land rights are required, the extent of those rights, the duration of any occupation, the specific activities that may be undertaken on the land, or the long-term restrictions that may apply following construction. This lack of certainty has left my family in a prolonged state of limbo. We are unable to make informed decisions regarding our future, our finances or our property because key information remains uncertain. The continuing uncertainty surrounding the project has imposed a significant emotional and psychological burden on my family. The prolonged inability to move forward with our lives, coupled with the financial losses already suffered and the prospect of years of disruption, has had a serious adverse impact on our mental wellbeing and quality of life. The Guidance accompanying the Planning Act makes clear that there must be a compelling case in the public interest before compulsory acquisition powers can be granted. It also requires a fair balance to be struck between the public benefits of a project and the private losses imposed on those affected. In my case, National Grid seeks powers affecting land immediately adjoining my family home and land within my boundary whilst imposing a level of disruption, uncertainty, financial loss and loss of amenity that is exceptional when compared with the wider public benefit obtained from using this particular corridor. The burden imposed upon my family is disproportionate and National Grid has failed to demonstrate why such a severe interference with our rights is necessary when alternative solutions exist. The Guidance also requires consideration of the rights protected by Article 1 of the First Protocol to the European Convention on Human Rights, namely the peaceful enjoyment of possessions, and Article 8, which protects the right to respect for private and family life and the home. The proposed interference with my property rights is substantial. The project has already caused severe financial harm through property blight, has rendered our home effectively unsaleable, has prevented us from moving home without suffering a major financial loss, and threatens years of disruption immediately adjacent to our property. The interference with our family life will be equally significant due to the anticipated noise, disturbance, loss of amenity, uncertainty and stress associated with the works. The scale and intensity of these works in such close proximity to our home will have a severe impact on our property rights and our ability to enjoy our home. In these circumstances, I do not believe National Grid has demonstrated that the proposed interference with my rights is the minimum necessary to achieve the objectives of the scheme. Nor has it demonstrated that less intrusive alternatives have been properly exhausted. Consequently, I do not believe that the required balance between the public interest and private rights has been achieved. For all of the reasons set out above, I submit that National Grid has failed to satisfy the statutory tests contained within Sections 122 and 123 of the Planning Act 2008. The acquisition of rights affecting my property has not been shown to be necessary, proportionate or justified by a compelling case in the public interest. Accordingly, I object to the proposed interference with my land and property rights and respectfully request that the powers sought over my property be refused.	See Appendix A: AP 150 - Mark John Putnam

Frederica Susan Chisolm Robins	8681	Yes	All of the above	not known not available	Both	I am Frederica Robins, joint owner of [REDACTED] a Grade II listed sixteenth-century timber-framed barn held in separate personal ownership from the adjoining G&S Coode-Adams Farm Partnership. No pylon towers are proposed on the barn land. This objection is made as joint owner of an interest in land whose peaceful enjoyment, heritage significance, amenity and asset value will be materially and permanently interfered with by the authorised works. It is limited to interference with my rights and interests in land under the Planning Act 2008 and DCLG Guidance. No environmental objection is advanced. Towers TB075, TB076, TB077, TB078 and TB079 are located on or adjacent to the neighbouring farm landholding; TB076 lies immediately across from the barn boundary. All five towers will be directly and permanently visible from the barn, its curtilage and its approach. The barn is a Grade II listed building of sixteenth-century origin whose heritage significance, character and market value are inseparable from the open agricultural landscape in which it has stood for centuries. The permanent erection of five 50-metre steel lattice pylons in close proximity will irreversibly alter and diminish that setting in a manner which cannot be mitigated and from which the property cannot recover. This constitutes lasting harm to my interest in the property and an irrecoverable diminution in both heritage significance and market value. No compensation framework has adequately addressed this category of loss for a listed building so directly affected by infrastructure of this scale. During construction, the near-continuous temporary haul road — typically 8 metres wide with a 21-metre cross-section including topsoil storage and demarcation fencing — will run close to the property and its access. National Grid and contractor vehicles are excluded from existing public roads and directed onto this haul road, carrying heavy construction traffic for the estimated four-year build. A new bridge across the river is to be constructed nearby. The haul road, its plant, heavy vehicles and bridge works will generate sustained noise, vibration, dust, light pollution and disturbance in close proximity to the barn throughout that period. The cumulative impact on amenity, use and letting value is substantial and prolonged. This burden falls on a property that has made no agreement with the applicant and will be continuously affected for the full duration of the works. Under section 122 of the Planning Act 2008 and DCLG Guidance paragraph 8, interference with rights in land must be necessary and proportionate and all reasonable alternatives must have been explored. The applicant has not demonstrated that haul road routing or tower positions were assessed with regard to the setting of this listed building. Under DCLG Guidance paragraph 13, compelling evidence must show public benefit outweighs private loss. The permanent and irrecoverable harm to the heritage setting of a Grade II listed sixteenth-century barn, combined with four years of construction disturbance and consequent falls in asset and letting value, is a private loss not weighed against the incremental benefit of the chosen alignment. Under DCLG Guidance paragraph 10 and Article 1 of the First Protocol to the ECHR, interference with peaceful enjoyment of property must be lawful, necessary and proportionate. That balance has not been struck. I request that the examining authority require the applicant to assess the impact of the authorised works on Feering Bury Farm Barn as a Grade II listed building and demonstrate that tower positions and haul road routing were properly considered with regard to the heritage and amenity interests in this property.	See Appendix A: AP 151 - Frederica Susan Chisolm Robins
Donna Chantry	7604	Yes	All of the above	All	Both	The Norwich to Tilbury project will totally obliterate our countryside, people's homes, affecting wildlife and for no reason there are alternatives like we have already sent over to you. Meetings and webinars were arranged, and those who attended were unanimous in their opposition to the Pylon scheme. Regrettably, our concerns fell on deaf ears. Subsequently, a second consultation emerged, seemingly designed to fulfill checkboxes on National Grid's end, without a genuine consideration of our pleas for offshore or underground alternatives. At a personal level, my family and I are already struggling with the project's impact. The prospect of unsightly pylons marring our countryside and disrupting wildlife habitats deeply troubles us. Should National Grid proceed, the installation of 50-meter-high pylons would undeniably disrupt our local community. Traffic, noise, pollution, and potential health implications all loom large, despite National Grid's assurances of safety. Concerns about cancer risks arising from close proximity to such installations only further our anxieties. As homeowners, we find ourselves in a state of uncertainty. Selling our properties feels unfair to potential buyers, yet the prospect of residing here while awaiting what seems like an inevitable outcome is equally daunting. Recent visits by estate agents have delivered disheartening news — our homes are estimated to depreciate by 30 percent. Having all invested our time, hard efforts, and personal finances into our homes, this revelation is deeply unsettling. Unfortunately, expecting compensation from National Grid for affected properties along this route seems futile. Despite being a privately owned entity, National Grid operates without meaningful government intervention. As a custodian of a grade II listed farm house, i take pride in being a small part of brentwood's rich heritage, However , the impending distruction of the current lanscape fills me will deep sadness and concerns for my homes legacy. [REDACTED] -Please do not let this project go through without looking at the alternatives!.	See Appendix A: AP 152 - Donna Chantry

Jeremy James Fisher	9639	Yes	All of the above	All	Both	Report on Objections to the Norwich to Tilbury (N2T) Scheme under Sections 122 and 123 of the Planning Act 2008 1.Introduction This report summarises the principal objections to the proposed National Grid Norwich to Tilbury (N2T) transmission scheme, with particular regard to the statutory tests governing compulsory acquisition under sections 122 and 123 of the Planning Act 2008. These provisions require that: •There must be a compelling case in the public interest for compulsory acquisition. •The land or rights sought must be necessary for the development. •The Secretary of State must be satisfied that the purposes for which the land is acquired justify the interference with private rights, including under human rights legislation. Drawing upon the submitted objection materials, including landowner representations and professional advice, this report identifies key grounds upon which the scheme, as currently promoted, fails to satisfy these statutory requirements. 2.Overview of the Proposed Scheme and Impacts The N2T scheme proposes a new overhead electricity transmission line between Norwich and Tilbury, including extensive new pylons, access routes, compounds, and associated infrastructure across rural landholdings. For example, the Faulkbourne Estate alone would be affected by 11 new pylons (TB97–TB113) together with significant haul roads and construction activity,in addition to the 6 from the Pelham to Rayleigh line that already cross the Estate under an Easement. Objections focus not only on the principle of the scheme but, more significantly, on its detailed alignment, the extent of land taken, and the manner in which works would be carried out. The evidence demonstrates that the impacts extend beyond land-take to include: •Severe disruption to farming operations •Safety risks arising from construction routes •Loss of residential amenity •Interference with existing infrastructure and utilities •Long-term landscape and environmental harm These matters must be assessed against the strict statutory tests in sections 122 and 123. 3.Section 122: Necessity and Scope of Compulsory Acquisition 3.1Lack of Necessity for Specific Land Interests Section 122(2) requires that land be acquired only if it is necessary for the development. While the overarching project may be justified, there is a strong argument that the extent of land and rights proposed exceeds what is reasonably required. The objections identify that: •National Grid may be able to justify the project in principle, but not the specific land parcels or access arrangements proposed. •Certain areas appear to be included for flexibility or convenience rather than strict necessity. This is especially evident in relation to, •haul roads and access routes, where alternative alignments exist that would reduce impact without compromising deliverability, and •the extent of land which National Grid are seeking to acquire under the DCO for the provision of environmental mitigation and BNG. The Estate has offered to provide and manage BNG arising from the Scheme through carefully located sites across the Holding, at prevailing BNG Credit values, although equally National Grid could consider the UK BNG Bank. The need to compulsory acquire land for this purpose has not been established. 3.2Excessive and Disproportionate Rights A further issue arises where the scheme seeks permanent acquisition or extensive rights where temporary or limited rights would suffice. Key examples include: •Permanent disruption of agricultural land where temporary access could achieve the same objective •Overly wide or intrusive haul roads •Interference with established access routes and farm operations The evidence suggests that National Grid has failed to minimise land-take and rights, contrary to the requirements of proportionality embedded in section 122 and associated guidance. 4.Section 123: Compelling Case in the Public Interest 4.1Failure to Demonstrate a Compelling Case at a Local Level While national energy infrastructure may serve a broad public interest, section 123 requires a balanced assessment of public benefit against private harm. Objectors argue that: •The scheme imposes significant and concentrated burdens on specific landowners and communities •These burdens are not adequately mitigated or justified by the chosen route •The same strategic objectives could be achieved through less harmful alternatives As such, the case for compulsory acquisition is weakened where less intrusive options have not been properly examined. 4.2Inadequate Consideration of Alternatives A critical requirement in demonstrating a compelling case is the proper evaluation of alternatives. The objections provide substantial evidence that this has not been adequately carried out.	See Appendix A: AP 153 - Jeremy James Fisher

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
						Examples include: •A proposed offshore cable route from North Norfolk to Tilbury or Bradwell, utilising existing infrastructure corridors •Use of existing redundant pylon routes instead of constructing entirely new infrastructure •Multiple alternative haul road alignments that would reduce disruption to residents and farming operations Despite representations made during earlier consultations (2024–2025), it appears that National Grid has not sufficiently engaged with or incorporated these alternatives. This failure directly undermines the statutory justification for compulsory acquisition. 4.3Disproportionate Impact on Landowners and Communities The scheme's impacts go well beyond what might reasonably be expected for infrastructure development. Specific concerns include: •Residential impact: properties becoming unlettable due to proximity to haul roads •Safety risks: dangerous junctions and high-speed traffic conflicts created by construction access •Community disruption: interference with footpaths, local routes, and daily activities •Agricultural harm: loss of productivity due to field fragmentation and obstruction of modern farming equipment •Large scale expensive destructive and long term costs when affected landholders seek to reorganise the hedges, trees and tracks on the farms to enable existing farming operations to continue on the land holdings For instance, placing a haul road through the centre of a large field would prevent the use of standard 38m machinery and require a complete redesign of drainage systems. Such impacts suggest a failure to strike a fair balance, a key requirement under both section 123 and human rights law. 5.Procedural and Consultation Deficiencies A further significant objection concerns the adequacy of the pre-application consultation process. Evidence indicates that: •The consultation process fell short of statutory requirements •There were methodological and procedural errors in key assessments, including landscape, heritage, and environmental impacts •Professional and legal opinions (including from senior counsel) conclude that the process is insufficient to support a Development Consent Order (DCO) If established, these deficiencies could mean that: •The Secretary of State cannot be satisfied that all relevant considerations have been taken into account •The statutory tests under sections 122 and 123 cannot properly be met 6.Failure to Engage and Negotiate Guidance under the Planning Act 2008 requires that promoters make reasonable efforts to acquire land by agreement before resorting to compulsory powers. However, the evidence suggests: •Negotiations have been ongoing for several years without resolution •Landowners have not been provided with final or clear terms •NG will not engage with landowners suggestions of even minor changes/ameliorations •The promoter continues to revise fundamental aspects such as the basis of compensation claims This raises concerns that: •Compulsory acquisition powers are being used prematurely •The statutory expectation of meaningful negotiation has not been fulfilled Such failures weigh against the existence of a compelling case in the public interest. 7.Deliverability and Design Concerns Although not the central objection, there are also questions regarding the practical deliverability of the scheme as designed, including: •Insufficient detail on infrastructure such as bridges across flood-prone areas •Construction proposals that are impractical or unsafe •Lack of clarity on how temporary works would be implemented and restored Where a scheme is not clearly deliverable, it becomes difficult to justify the compulsory acquisition of land to facilitate it. 8.Application of Sections 122 and 123 Bringing these issues together, the objections demonstrate multiple areas where the scheme fails to meet the statutory tests: Section 122 (Necessity) •Land and rights are broader than required •Alternatives exist that would reduce land-take •The scheme has not been optimised to minimise interference Section 123 (Compelling Case in the Public Interest) •Impacts on landowners are severe and disproportionate •Consultation and alternatives analysis are inadequate •Negotiation efforts have been insufficient •The balance between public benefit and private harm is not properly justified

						9.Conclusion In conclusion, while the strategic need for electricity transmission infrastructure may be accepted, the Norwich to Tilbury scheme—particularly in its current form—raises serious legal and planning concerns under sections 122 and 123 of the Planning Act 2008. The evidence indicates that: •The extent of compulsory acquisition is not fully justified •Less intrusive alternatives have not been adequately considered •The impacts on affected landowners and communities are excessive •Procedural shortcomings undermine confidence in the scheme Accordingly, there is a credible and substantive basis for objection, and a strong argument that the statutory tests for compulsory acquisition have not yet been met. To proceed lawfully, National Grid need to: •Demonstrate genuine optimisation of the route and access arrangements •Provide clear evidence of alternatives being properly assessed •Engage meaningfully with affected parties •Ensure that land acquisition is strictly limited to what is necessary Absent such steps, the justification for compulsory powers remains open to significant challenge.	
Aura Power Development Ltd	10316	Yes	All of the above	B-1/13, B-1/15, B-1/24, B-1/25, B-1/27, B-1/29, B-1/32, B-1/34, B-1/36, B-1/37, B-1/40, B-1/42, B-1/44	National Grid	Aura Power objects to the inclusion of its land interests and the proposed interference in its land rights within the forthcoming Development Consent Order (DCO) application. National Grid cannot satisfy the strict statutory conditions as set out within Section 122 and 123 of the Planning Act 2008, nor the requirements of the Department for Communities and Local Government Guidance 'Planning Act 2008: Guidance related procedures for compulsory acquisition The Specific objections regarding the differing types of rights to be acquired by National Grid are detailed below: 1.Compulsory Acquisition of Land (Permanent Pylon RG91): Aura Power objects to the compulsory acquisition of land for permanent pylon RG91 under Section 123 of the Planning Act 2008. The Applicant fails to satisfy Section 122(3) of the Act and Paragraph 13 of the Guidance, which dictate that a DCO may only authorise compulsory acquisition if there is a compelling case in the public interest, which outweighs the private loss suffered. Permanent pylon RG91 would cause severe, disproportionate loss by materially disrupting Aura Power's land rights held via an option for lease (via the project SPV Haedus Solar Ltd (company no. 13663837)) and a restriction against title that it holds over the whole of title SK176181. The title is designated for a utility-scale, ground-mounted solar project which already benefits from planning consent (making it committed development) granted by Mid Suffolk District Council on 13 August 2025 (LPA ref. DC/23/05426). The interference in Aura Power's land rights will directly prevent Aura Power from fulfilling its statutory Biodiversity Net Gain (BNG) obligations under its planning consent and its legal obligations relating to provision of skylark plots required under the Section 106 Agreement with Mid Suffolk District Council dated 8 August 2025, and therefore by extension negatively impact overall delivery of the aforementioned consented solar project. By limiting the delivery of a committed, consented renewable energy project, National Grid's proposal creates an irreconcilable conflict between two public interests. Because this DCO application is still in preparation, National Grid has a clear duty under Paragraph 8 of the Guidance to demonstrate that "all reasonable alternatives to compulsory acquisition (including modifications to the scheme) have been explored." National Grid must relocate pylon RG91 to avoid sterilising this committed green energy asset. Failure to modify the scheme means National Grid cannot demonstrate that the land taken is "no more than is reasonably required" under Paragraph 11 of the Guidance, invalidating their case under Section 122(2). 2.Compulsory Acquisition of Rights (Permanent Access to Pylons RG89, RG90 and RG91): Aura Power objects to the compulsory acquisition of permanent rights of access across titles SK176181, SK113952, and SK129903. These access rights permanently conflict with Aura Power's option for lease and cable easement rights for its consented solar development and associated cable route. These permanent rights of access propose to cross Aura Power's consented cable route in at least five locations and will therefore negatively impact Aura Power's land rights to lay a section of underground cable of approx 850 metres that forms part of the essential connection between the solar project and the point of grid connection at Diss BSP, in line with the planning consent granted by South Norfolk District Council on 7 April 2025 (LPA ref. 2023/3574).	See Appendix A: AP 154 - Aura Power Development Ltd

						Severing or restricting the grid connection infrastructure of an independent renewable energy asset means National Grid cannot justify these rights as "necessary and proportionate" under Paragraph 8 of the Guidance. National Grid has failed to prove that alternative access routes have been fully explored to mitigate this impact, meaning the statutory threshold under Section 122(3) has not been met. 3.Compulsory Acquisition of Rights (Overhead Line Stringing between Pylons RG90, RG91, and RG92): The proposed location for the stringing of the new overhead line between pylons RG90, RG91, and RG92 would introduce unquantified operational risks to Aura Power's committed development. If National Grid requires operational safety buffers underneath the line, it will force an alteration of the aforementioned consented solar project's layout causing a direct loss of solar panels, clean generation output, and revenue for the solar project. Under Paragraph 9 of the Guidance, a DCO applicant must have a "clear idea of how they intend to use the land which it is proposed to acquire." By leaving potential buffer zone restrictions unconfirmed during the pre-application phase, National Grid is seeking disproportionate powers without a legitimate, fully defined purpose. This fails the test of proportionality and necessity set out in Paragraph 8 of the Guidance and Section 122(2) of the Act. 4.Temporary Possession (Haul Road & Construction SuDS for Pylons RG89-RG92): While temporary possession is distinct from permanent acquisition, the draft DCO provision must still satisfy the overarching test of justification, minimisation of impact and proportionality by Paragraph 8 of the Guidance. Temporary possession of land outlined for the Haul Road to reach pylons RG89, RG90, RG91, and RG92 and its associated Construction SuDS would have a material impact on Aura Power's enjoyment of its land rights that exist via an option for lease (via the project SPV Haedus Solar Ltd (company no 13663837)) and restriction against title that it holds over the whole of title SK176181 for the development of a utility scale ground mounted solar project. The interference in Aura Power's land rights will negatively impact its ability to meet its BNG obligations under its planning consent granted by Mid Suffolk District Council on 13 August 2025 (LPA ref. DC/23/05426), negatively impact its legal obligations relating to provision of skylark plots required under the Section 106 Agreement with Mid Suffolk District Council dated 8 August 2025, and negatively impact the visual landscaping that Aura Power hold land rights to implement by virtue of the Haul Road route also crossing through a proposed new hedgerow and new 10m deep treebelt. Therefore the interference in land rights held will impact overall delivery of the aforementioned consented solar project that is already committed development. Forcing temporary possession over this specific alignment creates an immediate compliance breach for an extant planning permission. National Grid has failed to justify why alternative, less damaging haulage routes cannot be utilised, failing the requirements of Paragraph 8 and Section 122(2).	
Claire Monica Oxley Fisher (The Faulkbourne Estate)	6234	Yes	All of the above	All	Both	Report on Objections to the Norwich to Tilbury (N2T) Scheme under Sections 122 and 123 of the Planning Act 2008 1. Introduction This report summarises the principal objections to the proposed National Grid Norwich to Tilbury (N2T) transmission scheme, with particular regard to the statutory tests governing compulsory acquisition under sections 122 and 123 of the Planning Act 2008. These provisions require that: •There must be a compelling case in the public interest for compulsory acquisition. •The land or rights sought must be necessary for the development. •The Secretary of State must be satisfied that the purposes for which the land is acquired justify the interference with private rights, including under human rights legislation. Drawing upon the submitted objection materials, including landowner representations and professional advice, this report identifies key grounds upon which the scheme, as currently promoted, fails to satisfy these statutory requirements. 2. Overview of the Proposed Scheme and Impacts The N2T scheme proposes a new overhead electricity transmission line between Norwich and Tilbury, including extensive new pylons, access routes, compounds, and associated infrastructure across rural landholdings. For example, the Faulkbourne Estate alone would be affected by 11 new pylons (TB97–TB113) together with significant haul roads and construction activity,in addition to the 6 from the Pelham to Rayleigh line that already cross the Estate under an Easement. Objections focus not only on the principle of the scheme but, more significantly, on its detailed alignment, the extent of land taken, and the manner in which works would be carried out. The evidence demonstrates that the impacts extend beyond land-take to include: •Severe disruption to farming operations •Safety risks arising from construction routes •Loss of residential amenity •Interference with existing infrastructure and utilities •Long-term landscape and environmental harm These matters must be assessed against the strict statutory tests in sections 122 and 123. 3. Section 122: Necessity and Scope of Compulsory Acquisition 3.1 Lack of Necessity for Specific Land Interests Section 122(2) requires that land be acquired only if it is necessary for the development. While the overarching project may be justified, there is a strong argument that the extent of land and rights proposed exceeds what is reasonably required. The objections identify that: •National Grid may be able to justify the project in principle, but not the specific land parcels or access arrangements proposed. •Certain areas appear to be included for flexibility or convenience rather than strict necessity.	See Appendix A: AP 155 - Claire Monica Oxley Fisher (The Faulkbourne Estate)

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights? Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
						This is especially evident in relation to, •haul roads and access routes, where alternative alignments exist that would reduce impact without compromising deliverability, and •the extent of land which National Grid are seeking to acquire under the DCO for the provision of environmental mitigation and BNG. The Estate has offered to provide and manage BNG arising from the Scheme through carefully located sites across the Holding, at prevailing BNG Credit values, although equally National Grid could consider the UK BNG Bank. The need to compulsory acquire land for this purpose has not been established. 3.2 Excessive and Disproportionate Rights A further issue arises where the scheme seeks permanent acquisition or extensive rights where temporary or limited rights would suffice. Key examples include: •Permanent disruption of agricultural land where temporary access could achieve the same objective •Overly wide or intrusive haul roads •Interference with established access routes and farm operations The evidence suggests that National Grid has failed to minimise land-take and rights, contrary to the requirements of proportionality embedded in section 122 and associated guidance. 4. Section 123: Compelling Case in the Public Interest 4.1 Failure to Demonstrate a Compelling Case at a Local Level While national energy infrastructure may serve a broad public interest, section 123 requires a balanced assessment of public benefit against private harm. Objectors argue that: •The scheme imposes significant and concentrated burdens on specific landowners and communities •These burdens are not adequately mitigated or justified by the chosen route •The same strategic objectives could be achieved through less harmful alternatives As such, the case for compulsory acquisition is weakened where less intrusive options have not been properly examined. 4.2 Inadequate Consideration of Alternatives A critical requirement in demonstrating a compelling case is the proper evaluation of alternatives. The objections provide substantial evidence that this has not been adequately carried out. Examples include: •A proposed offshore cable route from North Norfolk to Tilbury or Bradwell, utilising existing infrastructure corridors •Use of existing redundant pylon routes instead of constructing entirely new infrastructure •Multiple alternative haul road alignments that would reduce disruption to residents and farming operations Despite representations made during earlier consultations (2024–2025), it appears that National Grid has not sufficiently engaged with or incorporated these alternatives. This failure directly undermines the statutory justification for compulsory acquisition. 4.3 Disproportionate Impact on Landowners and Communities The scheme's impacts go well beyond what might reasonably be expected for infrastructure development. Specific concerns include: •Residential impact: properties becoming unlettable due to proximity to haul roads •Safety risks: dangerous junctions and high-speed traffic conflicts created by construction access •Community disruption: interference with footpaths, local routes, and daily activities •Agricultural harm: loss of productivity due to field fragmentation and obstruction of modern farming equipment •Large scale expensive destructive and long term costs when affected landholders seek to reorganise the hedges, trees and tracks on the farms to enable existing farming operations to continue on the land holdings For instance, placing a haul road through the centre of a large field would prevent the use of standard 38m machinery and require a complete redesign of drainage systems. Such impacts suggest a failure to strike a fair balance, a key requirement under both section 123 and human rights law. 5. Procedural and Consultation Deficiencies A further significant objection concerns the adequacy of the pre-application consultation process. Evidence indicates that: •The consultation process fell short of statutory requirements •There were methodological and procedural errors in key assessments, including landscape, heritage, and environmental impacts •Professional and legal opinions (including from senior counsel) conclude that the process is insufficient to support a Development Consent Order (DCO) If established, these deficiencies could mean that: •The Secretary of State cannot be satisfied that all relevant considerations have been taken into account •The statutory tests under sections 122 and 123 cannot properly be met 6. Failure to Engage and Negotiate Guidance under the Planning Act 2008 requires that promoters make reasonable efforts to acquire land by agreement before resorting to compulsory powers. However, the evidence suggests: •Negotiations have been ongoing for several years without resolution •Landowners have not been provided with final or clear terms •NG will not engage with landowners suggestions of even minor changes/ameliorations •The promoter continues to revise fundamental aspects such as the basis of compensation claims

						This raises concerns that: •Compulsory acquisition powers are being used prematurely •The statutory expectation of meaningful negotiation has not been fulfilled Such failures weigh against the existence of a compelling case in the public interest. 7. Deliverability and Design Concerns Although not the central objection, there are also questions regarding the practical deliverability of the scheme as designed, including: •Insufficient detail on infrastructure such as bridges across flood-prone areas •Construction proposals that are impractical or unsafe •Lack of clarity on how temporary works would be implemented and restored Where a scheme is not clearly deliverable, it becomes difficult to justify the compulsory acquisition of land to facilitate it. 8. Application of Sections 122 and 123 Bringing these issues together, the objections demonstrate multiple areas where the scheme fails to meet the statutory tests: Section 122 (Necessity) •Land and rights are broader than required •Alternatives exist that would reduce land-take •The scheme has not been optimised to minimise interference Section 123 (Compelling Case in the Public Interest) •Impacts on landowners are severe and disproportionate •Consultation and alternatives analysis are inadequate •Negotiation efforts have been insufficient •The balance between public benefit and private harm is not properly justified 9. Conclusion In conclusion, while the strategic need for electricity transmission infrastructure may be accepted, the Norwich to Tilbury scheme—particularly in its current form—raises serious legal and planning concerns under sections 122 and 123 of the Planning Act 2008. The evidence indicates that: •The extent of compulsory acquisition is not fully justified •Less intrusive alternatives have not been adequately considered •The impacts on affected landowners and communities are excessive •Procedural shortcomings undermine confidence in the scheme Accordingly, there is a credible and substantive basis for objection, and a strong argument that the statutory tests for compulsory acquisition have not yet been met. To proceed lawfully, National Grid need to: •Demonstrate genuine optimisation of the route and access arrangements •Provide clear evidence of alternatives being properly assessed •Engage meaningfully with affected parties •Ensure that land acquisition is strictly limited to what is necessary Absent such steps, the justification for compulsory powers remains open to significant challenge.	
Stacey Farms Ltd	10402	Yes	All of the above	ALL	Both	Lack of financial compensation	See Appendix A: AP 156 - Stacey Farms Ltd
Carol Gosling	4794	Yes	All of the above	All	National Grid	I object to the compulsory acquisition powers sought by National Grid on the basis that it has not demonstrated that the rights sought over my land are necessary, proportionate, or that reasonable alternatives have been properly considered. Land has been included for convenience, future flexibility or wider working areas, rather than because it is essential. This would have a significant impact on the farm business, including disruption to agricultural operations, access, cropping, drainage, irrigation and the general management of the holding. The extent of the rights sought also appears disproportionate. In some cases, National Grid are seeking permanent rights or extensive rights over land where temporary access or more limited rights may be sufficient. The proposed pylons, access tracks, compounds and working areas have not been designed in a way that minimises the impact on the landowner or the retained holding. The interference with private property rights therefore goes further than is reasonably required. National Grid has not properly considered alternatives. Where alternative access routes, compound locations, pylon positions or design changes have been suggested, these do not appear to have been properly explored or adequately responded to. National Grid should be required to demonstrate why less intrusive alternatives cannot be adopted. There has also been insufficient meaningful negotiation on site-specific impacts. The generic Heads of Terms are not in an acceptable format and site specific commitments have not yet been made. National Grid has not taken sufficient steps to acquire the necessary rights by agreement before relying on compulsory acquisition powers. I also remain concerned about the adequacy of the consultation process. The legal opinion of Lord Charles Banner KC, submitted by the Essex Suffolk Norfolk campaign group, identifies a number of alleged legal deficiencies in National Grid's consultation approach and argues that the consultation falls short of what is required to enable the DCO application to proceed to examination. The ESNP group has also referred to professional reports identifying procedural and methodological concerns in National Grid's approach to landscape, heritage and archaeology, soils and the environment. If these issues have not been properly corrected and consulted upon, they create further concerns regarding the adequacy of the application and the compulsory acquisition powers sought.	See Appendix A: AP 157 - Carol Gosling

Personal Representative to the Estate of Frederick Hamilton	25512	Yes	All of the above	ALL	Both	Current, slightly ambiguously worded, announcements suggest the the project may CA land for use after the construction of the pylon route is completed. While we appreciate that easement access for maintenance to the pylons is required, acquisition of land will severely impact the usefulness of the surrounding fields. Furthermore, it is unclear why such acquisition is justifiable unless the National Grid etc. are planning on farming ?	See Appendix A: AP 161 - Personal Representative to the Estate of Frederick Hamilton
Martyn Mills	17600	Yes	All of the above	B-2/23	Both	Conformation required that the rights do not extend beyond the highway into my title.	See Appendix A: AP 162 - Martyn Mills
Hugh Hamilton	15833	Yes	All of the above	ALL	Both	It is unclear why the N-T operator will, upon completion of the project, have need to compulsorily acquire portions of land in order to provide maintenance and upkeep of the line instead of the usual permissive easements which are typically used. Loss of agricultural land will impact the ongoing access, usage & profitability of the surrounding land.	See Appendix A: AP 163 - Hugh Hamilton
Paul Edmund Baker	3085 14920 5262	Yes	Compulsory Acquisition of land,Compulsory Acquisition of rights	All plots within our interest multiple especially 9/53 9/56 9/102 9/99	Both	Insufficient consultation. Land originally not impacted then route change (Suffolk 3 Change) occurred with no further consultation in regards to new land impacts created by change. The Rights to be acquired re 9/53 9/56 9/102 9/99 are way beyond what could be achieved with alternatives that we have been unable to discuss that would have lower cost and impact for all parties	See Appendix A: AP 164 - Paul Edmund Baker
Radnoel Ltd	17432	Yes	All of the above	All	Both	how's this? Objection to Compulsory Acquisition / Interference with Land Rights (EN020027) I object to the proposed compulsory acquisition of my freehold land in connection with EN020027, as a Category 1 and/or Category 2 Affected Person under section 57 of the Planning Act 2008. Compelling case not established (Section 122(3)) The Applicant has failed to demonstrate a compelling case in the public interest as required by Section 122(3). There is no adequate justification that my specific land is essential to the scheme, nor that the public benefits clearly outweigh the private harm caused to me as a freehold owner. Lack of necessity and unjustified routing (Section 122(2)) Section 122(2) requires that land is no more than reasonably necessary to deliver the development. The routing appears to have been selected in a way that directly affects my freehold despite the apparent availability of viable alternative alignments that would avoid my land entirely. My land does not represent the most logical or least intrusive option. The Applicant has not demonstrated that alternatives have been properly assessed or that the extent of land take represents the minimum required. Failure to engage and negotiate (DCLG Guidance, paras 8–10, 25–27) The DCLG Guidance requires meaningful efforts to acquire land by agreement and to engage directly with affected persons. To date, engagement has been limited to generic communications, with no meaningful one-to-one negotiation, no attempt to agree terms, and no exploration of how impacts on my land might be avoided or reduced. This falls short of the Guidance requirements. Disproportionate interference (Guidance and human rights principles) The proposed acquisition represents a disproportionate interference with my property rights. Given that alternative routes appear available, the decision to acquire my freehold is not justified. The Applicant has not demonstrated that a less intrusive solution would be incapable of delivering the scheme. Overbreadth of land take (Section 123) The extent of land sought from my freehold is excessive and not clearly limited to what is strictly necessary. No adequate explanation has been provided as to why a reduced land take, or an alternative alignment avoiding my land, would be insufficient. Uncertainty as to deliverability (Section 122(2)(b); Guidance paras 13–17) There is insufficient certainty that the scheme, insofar as it affects my land, is fully funded and deliverable. This further undermines the justification for granting compulsory acquisition powers. Conclusion The proposed acquisition does not satisfy the statutory tests in Sections 122 and 123 of the Planning Act 2008 or the requirements of the DCLG Guidance (September 2013). The Applicant has failed to demonstrate necessity, proportionality, proper engagement, or a compelling public interest case in respect of my land. The routing unjustifiably targets my freehold where alternatives appear to exist. Accordingly, compulsory acquisition powers should not be authorised in respect of my interest.	See Appendix A: AP 165 - Radnoel Ltd
Stephen Baker, for H&O Godbold Partnership, and Thornbush Energy Ltd	28420, 28421, 9646,	Yes	All of the above	All	Both	We DO recognise the need for this major upgrade in energy infrastructure, but we have found it necessary to formally object due to the manner in which National Grid have pursued the implementation of the DCO project on our farm. a) The process for gaining CPA/TP does not withstand scrutiny, and is flawed (see our formal objection for legal detail). In particular consultation has been lacking, and - until recently - engagement very poor. b) As yet UKPN have not agreed the land they will finally need access to, and their consultation process has started very late - too late - for CPA/TP to be effective. c) Areas of land initially included by NGET for compulsory purchase (e.g. soil bund, and extension to sub station site) have already been revised following negotiation, which begs the question, where else is no longer necessary to be compulsorily acquired? d) Access requirements/arrangements to allow the farm to continue to function as a business have still not been finalised. e) There is confusion between this and the other DCO (Bramford to Twinstead), with both projects claiming the need to access the same land on our farm. Although work continues on Heads of Terms, and agreeing how the DCO can proceed effectively on Thornbush Farm, the fundamental points made in our objection about process and engagement remain entirely valid, and the lack of progress obliges us to conclude that we cannot withdraw our objection at this time.	See Appendix A: AP 166 - Stephen Baker, for H&O Godbold Partnership, and Thornbush Energy Ltd

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights? Stephanie Jane Bickford	7371	Yes	Temporary possession, Compulsory Acquisition of rights	G-4/53	Both	I object to the proposed interference with my land rights through the acquisition of a temporary access easement over plot G-4/53, at 548 Rayleigh Road, Hutton, Brentwood, Essex, CM13 1SG, registered title number EX681970. Under Sections 122 and 123 of the Planning Act 2008, the compulsory acquisition of rights should only be authorised where the applicant can demonstrate that the rights sought are necessary, proportionate and supported by a compelling case in the public interest. The Department for Communities and Local Government Guidance further requires a clear justification for the extent of any rights sought and that interference with private rights is no greater than is reasonably necessary. I do not consider that National Grid has adequately demonstrated that these requirements have been met. The rights sought in the application are broad and potentially permit a wide range of activities. However, during discussions, National Grid representatives have indicated that the intended use may be more limited than the powers sought. Despite this, the application documents have not been amended, and there remains uncertainty as to the actual extent of rights required and how they would be exercised. In addition, key information necessary to assess the proportionality of the interference remains outstanding. This includes details of the construction programme, duration and sequencing of works, working hours, traffic and road management arrangements, associated utility works, construction impacts, and mitigation measures. National Grid has also indicated that potential mitigation for impacts on my household, including measures to reduce noise at source, is being considered. National Grid has been made aware that members of my household have protected characteristics which require particular consideration when assessing the impacts of the proposed rights; however, no final assessment, mitigation strategy, implementation plan or supporting documentation has been provided. In the absence of this information, it is not possible to understand how these matters have been taken into account or how they inform the assessment of proportionality. Whilst engagement has taken place, responses have largely been generic and have not provided sufficient property-specific information. Following recent discussions, no written confirmation of proposals, assessments, or mitigation measures has been received, and there remains a lack of clarity between the application documents and information discussed in meetings. There is also no information or documentation provided to demonstrate that alternative approaches, access arrangements, or less intrusive means of delivering the stated objective have been considered in relation to my property. In the absence of such evidence, it is not possible to assess whether the rights sought represent the minimum necessary interference with private property rights. National Grid is seeking broad, flexible rights over my property, but without sufficient property-specific justification or settled parameters it cannot be demonstrated that those rights represent the minimum necessary interference with my land. The information currently available does not enable an assessment of the nature, duration and extent of the interference that may result from the exercise of the rights sought, nor whether the statutory tests in Sections 122 and 123 of the Planning Act 2008 are met. For these reasons, I continue to object to the proposed acquisition of rights over my property on the basis that necessity and proportionality have not been demonstrated.	See Appendix A: AP 167 - Stephanie Jane Bickford
Daniel James Bickford	5663	Yes	Compulsory Acquisition of rights, Temporary possession	G-4/53	Both	I object to the proposed interference with my land rights through the acquisition of a temporary access easement over plot G-4/53, at 548 Rayleigh Road, Hutton, Brentwood, Essex, CM13 1SG, registered title number EX681970. Under Sections 122 and 123 of the Planning Act 2008, the compulsory acquisition of rights should only be authorised where the applicant can demonstrate that the rights sought are necessary, proportionate and supported by a compelling case in the public interest. The Department for Communities and Local Government Guidance further requires a clear justification for the extent of any rights sought and that interference with private rights is no greater than is reasonably necessary. I do not consider that National Grid has adequately demonstrated that these requirements have been met. The rights sought in the application are broad and potentially permit a wide range of activities. However, during discussions, National Grid representatives have indicated that the intended use may be more limited than the powers sought. Despite this, the application documents have not been amended, and there remains uncertainty as to the actual extent of rights required and how they would be exercised. In addition, key information necessary to assess the proportionality of the interference remains outstanding. This includes details of the construction programme, duration and sequencing of works, working hours, traffic and road management arrangements, associated utility works, construction impacts, and mitigation measures. National Grid has also indicated that potential mitigation for impacts on my household, including measures to reduce noise at source, is being considered. National Grid has been made aware that members of my household have protected characteristics which require particular consideration when assessing the impacts of the proposed rights; however, no final assessment, mitigation strategy, implementation plan or supporting documentation has been provided. In the absence of this information, it is not possible to understand how these matters have been taken into account or how they inform the assessment of proportionality. Whilst engagement has taken place, responses have largely been generic and have not provided sufficient property-specific information. Following recent discussions, no written confirmation of proposals, assessments, or mitigation measures has been received, and there remains a lack of clarity between the application documents and information discussed in meetings. There is also no information or documentation provided to demonstrate that alternative approaches, access arrangements, or less intrusive means of delivering the stated objective have been considered in relation to my property. In the absence of such evidence, it is not possible to assess whether the rights sought represent the minimum necessary interference with private property rights. National Grid is seeking broad, flexible rights over my property, but without sufficient property-specific justification or settled parameters it cannot be demonstrated that those rights represent the minimum necessary interference with my land. The information currently available does not enable an assessment of the nature, duration and extent of the interference that may result from the exercise of the rights sought, nor whether the statutory tests in Sections 122 and 123 of the Planning Act 2008 are met. For these reasons, I continue to object to the proposed acquisition of rights over my property on the basis that necessity and proportionality have not been demonstrated.	See Appendix A: AP 168 - Daniel James Bickford
Jane Elizabeth Smith	15224	Yes	All of the above	All	Both	We do not want this	See Appendix A: AP 169 - Jane Elizabeth Smith

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
ScottishPower Renewables UK Limited	10227	Yes	All of the above	B-20/174, B-20/179, B-20/181, B-20/182, B-20/183, B-20/185, B-20/191, B-20/195, B-20/197, B-20/199, B-20/202, B-20/204, B-20/205, B-20/180	National Grid	ScottishPower Renewables UK Limited (“SPRUKL”) is the landowner of a consented Nationally Significant Infrastructure Project comprising offshore wind generation and associated onshore transmission infrastructure and is therefore directly affected by the Proposed Development. While it does not object to the principle of reinforcing the electricity transmission network, it objects to the extent and justification of the powers sought over its interests. In particular, SPRUKL submits that the Applicant has failed to comply with the requirements of Sections 122 and 123 of the Planning Act 2008 and the Department for Communities and Local Government Guidance (September 2013) on compulsory acquisition. Section 122(2) requires that land or rights may only be acquired where they are necessary for the development or to facilitate it, and Section 122(3) requires a compelling case in the public interest. SPRUKL’s position is that the Applicant has not demonstrated that interference with SPRUKL’s land or rights is necessary, as the Proposed Development appears to conflict with existing and consented SPRUKL infrastructure corridors in a manner that could reasonably be avoided through protective provisions or voluntary agreements. The extent of rights sought is not limited to the minimum required but instead risks imposing excessive and unjustified restrictions on the tenants of SPRUKL’s ability to access, operate and maintain its infrastructure. The statutory test requires that land be needed rather than merely desirable or convenient, and SPRUKL considers that this threshold has not been met. Furthermore, although SPRUKL recognises the general public benefits associated with the Proposed Development as transmission infrastructure, the Applicant has not demonstrated a compelling case in the public interest in respect of the specific interference with SPRUKL’s interests, as required by Section 122(3). The assessment of public interest must consider the balance between the benefits of the scheme and the harm caused, and in this case there has been insufficient consideration of the cumulative interaction between two nationally significant infrastructure projects. SPRUKL’s, EA1L’s & EA3’s infrastructure contributes to national renewable energy generation and decarbonisation objectives, and any restriction on its operation, maintenance or future development has the potential to undermine those objectives. In addition, the Applicant has not satisfied the requirements of the DCLG Guidance, which makes clear that compulsory acquisition should only be used where there is a compelling justification, that reasonable alternatives have been properly considered and that the extent of acquisition is proportionate. The Guidance requires that applicants minimise interference and use compulsory powers only as a last resort following reasonable negotiation. In this case, SPRUKL considers that the rights sought are disproportionate, that insufficient steps have been taken to minimise the extent of interference and that meaningful agreement has not yet been achieved. The proposals risk imposing safeguarding constraints and operational limitations. The principles underlying Section 123 of the Planning Act 2008 are also engaged, given the nature of SPRUKL’s infrastructure as nationally important energy infrastructure. Those principles require that land should not be acquired where this would cause serious detriment to the carrying on of the undertaking. SPRUKL is concerned that the Proposed Development may result in such detriment by restricting access for maintenance and emergency works, increasing safety risks and imposing operational inefficiencies. Finally, SPRUKL considers that there has been insufficient engagement and negotiation in accordance with the DCLG Guidance, which requires applicants to seek agreement wherever possible and to use compulsory acquisition only as a measure of last resort. While discussions have taken place, they have not resulted [COMMENT TRUNCATED AT THIS POINT]	See Appendix A: AP 170 - ScottishPower Renewables UK Limited
Annabel Gardiner (Lord Rayleigh's Farm Ltd)	1275	Yes	Compulsory Acquisition of land, Compulsory Acquisition of rights	All	National Grid	REP1-247 and REP3-124 Purpose of Representation – from a tenants and landowners perspective The purpose of this representation is to ensure the scheme is designed and implemented in a manner sympathetic to existing land uses, particularly the Estate’s ongoing commercial farming and shooting operations. We also highlight concerns with the engagement process and the potential environmental and operational impacts of the proposals. Key Concerns Environmental Impacts - We are particularly concerned about the effect on local listed buildings and their settings. The mitigation measures proposed to date appear insufficient to fully address potential harm. 1.Compulsory Acquisition of Land - The extent of compulsory acquisition proposed is considered unnecessary and will have a significant adverse impact on the Estate’s commercial shoot operations. 2.Design Issues - There is no clear justification provided for the decision not to use underground cabling, which could reduce surface impacts. Additionally, safety concerns arise regarding machinery working near overhead cables. 3.Construction Impacts - The construction phase is expected to have a massive impact on the small rural roads around Fairstead, causing disruption, safety issues, and inconvenience to local residents and businesses. 4.Stakeholder Engagement - Engagement to date has been very poor. Notifications have been late, information insufficient or inaccurate, and responses to submitted concerns have not been forthcoming. This has caused unnecessary stress and uncertainty. 5.Soil and Drainage - We are concerned about the long-term impacts on soil quality and drainage, particularly in haul road areas. There is insufficient detail about how soil compaction and drainage disruption will be mitigated or remediated. Engagement The Estate, together with its agent, has engaged extensively with National Grid and Fisher German. A formal response was submitted on 29th July 2025 during the Landowner Consultation, following an extension due to initially incorrect mapping, as well as an additional submission on 26th February 2026. To date, we have not received any substantive response to this submission. The plans provided during consultation were often incorrect and of low resolution, hampering meaningful review and causing significant time and stress. The late notification of additional land required for an attenuation pond is a further example of inadequate consultation. Impact on the Estate	See Appendix A: AP 171 - Annabel Gardiner (Lord Rayleigh's Farm Ltd)

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
						Farming Operations - The proposals will cause significant disruption during construction, with potential long-term impacts on farming productivity, including risks of soil compaction and reduced yields. 1.Soil and Drainage - Existing drainage systems must be maintained intact, as per drainage plans provided by the Estate. We seek assurance that land disturbed will be fully restored. 2.Cable Depth - We request a minimum soil cover of 1.2 metres above cables to protect agricultural machinery and land use. 3.Construction Management - Managing the farm during construction will require significant additional time and resources for access coordination, supervision, and ongoing operational adjustments. Compulsory Acquisition and Heads of Terms We are not yet in a position to negotiate Heads of Terms, pending further instruction from our agent. It is critical that the extent of land acquisition is fully justified and minimised. A properly designed scheme is essential to reduce impacts on the Estate. Environmental and Landscape Considerations The development will result in disruption to landscape character and farming practices. This representation aims to ensure impacts are minimised and appropriately mitigated. Pylon Locations - TB116 should be repositioned as far east as possible toward the hedged boundary to reduce farming impacts. - TB117 should be at least 40 metres from the southern field boundary to allow machinery access. Permanent Access Routes (Plan 1275) We request permanent access routes follow existing field boundaries rather than cross through fields. Biodiversity Net Gain (BNG) Woodland identified for BNG within Plan 1275 must be removed from Order Limits, as it is not available for sale and is integral to the Estate's commercial shooting operations. Solar DCO Interaction The land is subject to an approved DCO for Longfield Solar Farm, with existing third-party rights. Early coordination between National Grid, the Solar Farm, and the Estate is essential to minimise conflict. Shooting and Farming Operations Two key shooting drives will be affected, potentially making the shoot unviable during construction. We request National Grid works with the Estate to avoid shooting seasons and minimise farming disruption. Failure to do so may lead to financial losses and compensation claims. Final Note The cumulative burden of the process so far — including poor engagement and unaddressed consultation points — has caused considerable stress and operational challenges. We request that these concerns be fully taken into account in the examination.	
Lucy Alexandra Nutting	7972	Yes	All of the above	ALL	Both	1) the consultations have been defective 2) there are fundamental errors in National Grid's DCO application, 3) I do not consider the compulsory acquisition of my land and rights to be in the public interest, particularly where reasonable alternatives are available, as proposed previously. 4) I do not consider that the Applicant has properly considered reasonable alternatives to reduce the impact on my holding. 5) The Applicant has not listened to constructive feedback from landowners, or taken sufficient steps to reduce impacts and mitigate losses. 6) The rights being sought may be wider than necessary for the scheme. 7) The Heads of Terms are still not in a reasonable or acceptable format. 8) The current Heads of Terms impose unfair and unreasonable restrictions on landowners. I do not consider that the Applicant has demonstrated that the interference with my land and rights is necessary, proportionate, or limited to what is reasonably required.	See Appendix A: AP 172 - Lucy Alexandra Nutting
Nigel Edwin Markham	101	Yes	All of the above	All	Both	One of the NtoT pylons is planned to be situated at the corner of our field. There are normal pylons and a gas main crossing the same corner, but despite numerous requests, no one has been able to clarify for us how/where the normal pylons and the gas main will be relocated and the implications to us. We haven't been told the implications to us of the NtoT pylons either outwith it being on our land. We need a realistic image of what the NtoT pylons are anticipated to look like so that the impact to our land can be fully assessed, for example loss of potential development value. Also we have no information on what compensation we would be offered if any of our land was to be put under CA or TP. We need all this information to be able to consider the impact of the NtoT plans. Lastly with modern engineering capabilities, we find it hard to believe that these cables can't be put underground as they have been elsewhere where it has been deemed to be more important to do so.	See Appendix A: AP 173 - Nigel Edwin Markham
Elizabeth Anne Sprunt	6786	Yes	All of the above	All	Both	One of the NtoT pylons is planned to be situated at the corner of our field. Paul Lanham	539	Yes	All of the above	All land interests at Dukes Farm, [REDACTED] affected by the proposed acquisition of land, acquisition of rights and/or temporary possession.	Both	I object to the proposed interference with my land rights at Dukes Farm, [REDACTED]. The proposed acquisition of rights and/or temporary possession would result in a substantial and disproportionate interference with the operation of my farm business and my use and enjoyment of the land. Dukes Farm is a long-established working agricultural holding. The land affected forms an integral part of the farming operation and supports livestock grazing, a commercial turkey enterprise, agricultural activities and associated business interests. The proposed rights would interfere with the day-to-day management of the farm, impact grazing land, disrupt farming operations and create significant biosecurity concerns associated with third-party access, vehicles and equipment entering the holding. The turkey enterprise operates under strict biosecurity requirements. Any increase in third-party access across the farm presents a significant risk to those operations and to the continued viability of that part of the business. Biosecurity is a critical consideration for livestock enterprises and the proposed rights would introduce ongoing uncertainty and risk. In addition, the proposals would affect areas associated with the fishing lake and surrounding land which form an important part of the wider farm business. Any access associated with the project, whether temporary, permanent, occasional, maintenance-related or otherwise, represents an interference with my land rights and with the normal operation of the farm. The issue is not simply the frequency of access but the imposition of rights over private agricultural land where less harmful alternatives are available. I do not consider that National Grid has demonstrated that the interference with my land rights is necessary or proportionate as required by Sections 122 and 123 of the Planning Act 2008. Alternative access arrangements have been identified and raised during the examination process which would significantly reduce the impact on Dukes Farm and the wider farming business. In these circumstances, I do not believe that a compelling case in the public interest has been demonstrated for the extent of the interference proposed at Dukes Farm. For these reasons, I object to the compulsory acquisition and/or temporary possession of rights affecting Dukes Farm and request that the Examining Authority gives full consideration to the alternative access arrangements and the significant impact that the proposed interference would have on my property, farming business and livelihood.	See Appendix A: AP 177 - Paul Lanham
Ben Knighton	3677	Yes	All of the above	All	National Grid	1.An extension for drainage from contaminated digging of the trench and laying of cables direct to the brook on our land (which runs to the River Stour) 2.Interruption of land drains, probably irredeemable, leading to loss of fertility and value of cultivable land 3.Raising of clay and stones close to the topsoil, later subsidence of soil over the trench, and soil compaction, leading to loss of fertility and value of cultivable land 4.50m pylons and the cables to the west and east will still daunt the plot 200m from where I was born 5.Permanent structures, above-ground apparatus, tracks, and easements on the plot, which will interfere with agricultural operations	See Appendix A: AP 178 - Ben Knighton
Stephen Mugliston	2253	Yes	Compulsory Acquisition of land,Compulsory Acquisition of rights	All	Both	The applicant has failed to explain why the land rights are required for the development or even provide details of what land rights are required. Because of this lack of detail, the applicant has failed to demonstrate that there are no alternatives and has made no genuine attempt to negotiate. During a meeting with the applicant's agent, Fisher German, stated that they could not provide any details about the reason for the proposed acquisition, nor could they explain why the applicant needed to acquire any rights over the land. They also stated that "It was unlikely that National Grid would need to compulsory purchase but retained it as a possibility as details of the rights that need to be acquired were not available....." This despite a compulsory acquisition notification being issued. For something described on the "Compulsory land acquisition schedule" as "house and premises," National Grid should have provided more information. The applicant claims a meeting took place to "review discuss and negotiate detailed clauses within Heads of Terms issue v1," but in the absence of adequate information provided by National Grid, no meaningful negotiations took place. The statutory notices do not correlate with the entries in the Land Rights Tracker documentation. There are "land rights" listed on "AENC-TQST-LAN-REP-0002 Detailed Land and Rights Negotiations Tracker - Category 1 & 2 interests", that do not appear in the statutory notifications. The email "correspondence" that National Grid claims took place, consists of a variety of statutory notices and notifications and does not constitute a genuine attempt to negotiate. In summary, the applicant's actions to date consist of a deluge of notices and notifications which provide no specific information about the acquisition of rights. Their agent cannot even advise the nature of the rights that National Grid want to acquire. Their approach appears to be a rushed attempt to complete procedural steps without providing detailed, specific information about how the landowner will be affected. As a result, National Grid have been unable to enter into meaningful negotiations and are unable to establish that the proposed acquisition is necessary and proportionate. Other evidence supplied to the Planning Inspectorate has clearly demonstrated that the public benefits for the scheme have been overstated and therefore National Grid cannot effectively assess that the public benefit outweighs the harm to the affected party's property nor are they able to fully explore alternative arrangements that do not involve the compulsory acquisition of rights over the affected land.	See Appendix A: AP 179 - Stephen Mugliston

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights? June Elizabeth Mugliston	225324	Yes	Compulsory Acquisition of land, Compulsory Acquisition of rights	All	Both	The applicant has failed to explain why the land rights are required for the development or even provide details of what land rights are required. Because of this lack of detail, the applicant has failed to demonstrate that there are no alternatives and has made no genuine attempt to negotiate. During a meeting with the applicant's agent, Fisher German, stated that they could not provide any details about the reason for the proposed acquisition, nor could they explain why the applicant needed to acquire any rights over the land. They also stated that "It was unlikely that National Grid would need to compulsory purchase but retained it as a possibility as details of the rights that need to be acquired were not available....." This despite a compulsory acquisition notification being issued. For something described on the "Compulsory land acquisition schedule" as "house and premises," National Grid should have provided more information. The applicant claims a meeting took place to "review discuss and negotiate detailed clauses within Heads of Terms issue v1," but in the absence of adequate information provided by National Grid, no meaningful negotiations took place. The statutory notices do not correlate with the entries in the Land Rights Tracker documentation. There are "land rights" listed on "AENC-TQST-LAN-REP-0002 Detailed Land and Rights Negotiations Tracker - Category 1 & 2 interests", that do not appear in the statutory notifications. The email "correspondence" that National Grid claims took place, consists of a variety of statutory notices and notifications and does not constitute a genuine attempt to negotiate. In summary, the applicant's actions to date consist of a deluge of notices and notifications which provide no specific information about the acquisition of rights. Their agent cannot even advise the nature of the rights that National Grid want to acquire. Their approach appears to be a rushed attempt to complete procedural steps without providing detailed, specific information about how the landowner will be affected. As a result, National Grid have been unable to enter into meaningful negotiations and are unable to establish that the proposed acquisition is necessary and proportionate. Other evidence supplied to the Planning Inspectorate has clearly demonstrated that the public benefits for the scheme have been overstated and therefore National Grid cannot effectively assess that the public benefit outweighs the harm to the affected party's property nor are they able to fully explore alternative arrangements that do not involve the compulsory acquisition of rights over the affected land.	See Appendix A: AP 180 - June Elizabeth Mugliston
The Honourable John Frederick Strutt	9897	Yes	All of the above	All	Both	REP3-158 and REP1-393 Purpose of Representation The purpose of this representation is to ensure the scheme is designed and implemented in a manner sympathetic to existing land uses, particularly the Estate's ongoing commercial farming and shooting operations. I also highlight concerns with the engagement process, environmental and heritage impacts, and the potential operational impacts of the proposals. Consultation and Engagement The Estate, together with its agent, has engaged extensively with National Grid and Fisher German. A formal response was submitted on 29th July 2025 during the Landowner Consultation, following an extension due to initially incorrect mapping, as well as an additional submission on 26th February 2026. To date, we have not received any substantive response to this submission. The plans provided during consultation were often incorrect and of low resolution, hampering meaningful review and causing significant time and stress. Key Concerns and Harm Caused by the Project Heritage - Significant visual impact on the Parish Church of St Mary the Virgin at Fairstead and Beauchamps House. To avoid detracton from the rural setting, we request the lines be buried. Environment, Habitat, and Species - The project passes near Galley Cable Wood and Troys Spring, which are important wildlife sites. Ground-nesting birds and other species will be affected. Landscape - The project will compound landscape impacts caused by existing 400kV lines. The alignment should, where possible, follow the route of existing lines to minimise new impacts. Proximity to Business - Agricultural workability of fields will be significantly reduced. Sporting rights (shooting operations) will also be severely affected. Breaches of Holford Rules - We have concerns regarding design and routing in relation to Holford Rules, particularly regarding landscape sensitivity. Access Roads - Proposed access roads will have a severe impact on agricultural output and soil compaction. Connection Method - The connection should be either under the sea or underground to minimise surface impacts. Impact on Farming and Shooting Operations The Estate operates a commercial shoot, with two principal drives likely to be affected, potentially making them unviable. National Grid should coordinate with the Estate to avoid shooting seasons during construction and minimise impacts on farming operations. Failure to do so will likely result in financial losses and potential compensation claims.	See Appendix A: AP 181 - The Honourable John Frederick Strutt

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights? 						Solar DCO Interaction The land is subject to an approved DCO for Longfield Solar Farm. There are existing third-party rights. Early engagement between National Grid, Longfield Solar Farm, and the Estate is critical to minimise development conflicts. Access Routes Plan 5111-1: Permanent access should follow the existing track along the field edge, not cut into the field. Plan 5111-2: Permanent access should follow the existing track along the field edge, not cut into the field. Environmental and Landscape Considerations The development will result in landscape, environmental, and heritage impacts. This representation aims to ensure impacts are minimised and appropriately mitigated. Final Note The cumulative burden of the consultation process, poor engagement, and the proposed impacts on the Estate's operations and environment is substantial. We request that these concerns be fully taken into account during the examination.	
Alan Bruce Marshall	3513	Yes	All of the above	All	Both	My wife and I have been custodians and farmers of this land for over 45 years. Our land is all grade 1 BMV and should be kept as that. Defra say there is only 3% of this quality in the country. We feel that the nations food security should be taken more into account. The planning act (2008) clearly states that the land requirement must prove there is no alternative especially where grade 1 land is involved. We have seen no proof and have been asking since the first consultation. We have turned down offers from a quarry company as we overly 12m of sand and ballast including silica sand.We have turned down an application for building. This is how strongly we feel! We have looked after it, to the best of our ability, without any doubt for the future and being able to pass it on to our children. They are now of the age they should be discussing their views for the future of our farm but this has now been put on hold for probably 5+years during the proposed construction and we don't know what devastation we will be left with afterwards! We are a small farm of 78 acres of which the proposed project is claiming 64 acres leaving us one 11acre field that we are going to struggle to get a contractor interested in servicing. Our fields are edged by ancient hedgerows which provide us our land security. These will apparently be devastated by the proposed project which will also affect the vast amount of wildlife, that we have encouraged, that rely on such hedges. The rights being sought are far wider than necessary for the scheme and the applicant seems to have ignored any constructive feedback from ourselves and other landowners. The applicant has not demonstrated to us that they have considered any alternatives schemes. The applicant is asking for us to sign Heads of Terms that are unfair and contain unreasonable restrictions. The cash incentives look like a bribe to get us to sign but then find we are no longer able to comment on the scheme!	See Appendix A: AP 182 - Alan Bruce Marshall

B-20/963, B-20/964, B-20/965, B-20/966, B-20/967, B-20/968, B-20/969, B-20/970, B-20/971, B-20/972, B-20/973, B-20/974, B-20/975, B-20/976, B-20/977, B-20/978, B-20/979, B-20/980, B-20/981, B-20/982, B-20/983, B-20/984, B-20/985, B-20/986, B-20/987, B-20/988, B-20/989, B-20/990, B-20/991, B-20/992, B-20/993, B-20/994, B-20/995, B-20/996, B-20/997, B-20/998, B-20/999, B-20/1000	Paragraph 8 of the Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (September 2013) ("the Guidance") provides that the Applicant should be able to demonstrate to the satisfaction of the Secretary of State that all reasonable alternatives to compulsory acquisition (including modifications to the scheme) have been explored. The Guidance further states that the applicant will need to demonstrate that the proposed interference with the rights of those with an interest in the land is for a legitimate purpose, and that it is necessary and proportionate. The Applicant has failed to demonstrate that all reasonable alternatives have been explored, as required by the Guidance, principally because negotiations are at a very early stage and alternative designs or routes have not been properly considered. The Applicant has not made adequate attempts to acquire the land and rights by agreement before seeking compulsory acquisition powers, contrary to the expectation set out in paragraph 25 of the Guidance that authority to acquire land compulsorily should only be sought if attempts to acquire by agreement fail. Agreement has not yet been reached, and the Applicant has not afforded our client a proper opportunity to negotiate terms that could avoid the need for compulsory acquisition. The impacts of the proposed scheme on EDF Energy Renewable's infrastructure have not been adequately considered by the Applicant. The Applicant has not engaged sufficiently to understand the nature and extent of the impact on EDF Energy Renewable's infrastructure, nor has it properly assessed the consequences that the proposed compulsory acquisition would have upon the operation and maintenance of that infrastructure. Without adequate engagement, the Applicant cannot demonstrate to the satisfaction of the Secretary of State that the interference the land and rights is proportionate, or that the land to be acquired is no more than is reasonably required for the purposes of the development. In conclusion, many of the impacts of the proposed scheme on its land and infrastructure might be avoided, or substantially mitigated, if private treaty discussions had been advanced at an earlier stage and in a more meaningful manner. Had the Applicant engaged constructively with our client through private treaty negotiations, it is likely that mutually acceptable arrangements could have been reached that would protect our client's infrastructure whilst accommodating the requirements of the scheme. The Applicant's failure to pursue this course means that it has not discharged the burden of demonstrating that compulsory acquisition is necessary and proportionate, and the Secretary of State cannot be satisfied that the conditions in section 122 of the Planning Act 2008 are met. We will continue to engage in negotiations with the Applicant and will update the Examining Authority on the status of negotiations as they progress.	See Appendix A: AP 183 - EDF Energy Renewables Ltd

Mrs Jayne Bridget Marshall	5883	Yes	Compulsory Acquisition of land, Compulsory Acquisition of rights, All of the above, Temporary possession	ALL	Both	Our family run farm has provided us with a steady income, security and a much loved home in a rural environment that we have managed and cared for with dedication for +40 years. Our home is our safe place and where we work, rest and enjoy time with family and friends. The thought of losing this is upsetting and a constant worry, to say the least! It belongs to us! Our plans for our children to take over the farm in future years will offer no incentive for them to do so if pylons, overhead high voltage cables and underground HVAC cabling are to blight our land and take over the area as they currently know it. All our land is of finest quality Grade 1 BMV soil (approximately only 3% nationwide), which enables high volumes of good quality staple diet crops (eg wheat, barley, potatoes, sugarbeet) to be grown on it. Maintaining sustainable returns for us, whilst contributing also to our country's all important food chain (National Food Security) is of massive importance to us. During the proposed construction period, our 45 year old bramley apple orchard would be affected by dust, resulting in smaller fruit size, surface contamination and a crop not fit for sale. Our land structure will never recover! We are totally opposed to the use of any soil stabilization materials, as has been suggested! Our property will be open and vulnerable to trespassing and fly tipping if our ancient hedgerows are ripped out (some with tree preservation orders in place). These provide much natural security. Insurance premiums are likely to increase (extra cost to us) if security is compromised. National grid's (NG) proposals to upgrade its grid system (Norwich to Tilbury) now threaten everything we, as a family have worked hard for, and just the thought of what's planned is indescribably sickening! The proposals contradict the Planning Act of 2008 (section 122) and where it states that applicants (in this case, National Grid) must demonstrate that they have explored all other alternatives to ensure compulsory acquisition is a last resort and kept to the absolute minimum. To date, National Grid has failed to provide us with any alternative options, failed to answer questions and many of its representatives are often arrogant and dismissive. National Grid's consultations have been defective throughout, there are fundamental errors in the DCO and as an example, we are still waiting for results from all survey works carried out on our land thus far, despite having asked on numerous occasions. Where are these results? Most of our land will be ruined beyond repair (3 pylons and 200 meter swathes for HVAC underground cabling) if this project is granted planning consent. One remaining field (so we thought) of 11 acres will be difficult to manage efficiently and cost effectively. We have, in the last few days, been informed by our land agent that Fisher German (on behalf of NG) now want to survey this field also, which is outside of the order limit. Why is it that NG seems to be doing just as it pleases? I question why changes to an already submitted DCO application should be permitted, as has been the case on numerous occasions? It's undemocratic, unfair and unacceptable! Our entire land/property will be devalued! Relocation is not an option! You cannot move a farm and we also have another business on site. Compulsory acquisition is not in the interest of the public when alternative methods of upgrading the system haven't been considered. We have, in the past, rejected offers from housing developers to purchase some of our land. We know we have at least 12 meters of sand and ballast beneath our fine topsoil, yet we've declined the opportunity to excavate; for the simple reason that Farmland is For Food! We will still be expected to pay our annual land drainage charge to the Environment Agency, as will most of the affected landowners. This hasn't been mentioned! The Heads of Terms are unreasonable and should be considered bribery! A case of 'signing prior to a DCO being consented and receive an early-signing incentive payment' (up to 20% land fights value), or forfeit this by refusing. By signing, we will be unable to make further comments about the proposal (in other words.....Sign up and shut up). These are bully-boy tactics! The applicant (NG) hasn't demonstrated that interference is necessary, proportionate or limited to what is reasonably required. We feel we can't plan for the future, invest in solar panels for a new barn we built, erect new fencing, plant a foraging woodland (as we had hoped to do) or invest in new equipment. In conclusion: Our farm is our life! We ALL need food, and in order to provide it, we must protect the land upon which it grows!	See Appendix A: AP 189 - Mrs Jayne Bridget Marshall
Cullum Agric Ltd	5577	Yes	Compulsory Acquisition of rights,Temporary possession	ALL	Both	This submission is made on behalf of T A Cullum and is based upon the detailed written representations submitted at Deadline 4 for CAH2. This Landowner objects to the proposed compulsory acquisition (CA) on the basis that the Applicant has not met the statutory tests under Sections 122 and 123 of the Planning Act 2008, nor followed the 2013 DCLG Guidance. Under Section 122, the Applicant has failed to demonstrate that the land and rights are necessary or justified. The land take is considered excessive, with inclusion of areas beyond what is required or feasible, and reasonable alternatives, such as route changes or undergrounding, have not been properly explored. In addition, key technical matters remain unresolved, meaning the full impacts cannot be understood, while harm to the farming business is significant and may outweigh any benefits. Under Section 123, the proposals lack sufficient clarity and definition, particularly in relation to access, easements, and working areas, and are supported by incomplete and fragmented information. The Applicant has also not complied with the 2013 Guidance, with no agreed Heads of Terms, inconsistent engagement, limited effort to minimise land take, and inadequate supporting evidence. Compulsory acquisition has not been demonstrated to be a last resort. Overall, the proposals would result in long term and permanent agricultural land loss, operational disruption, and long-term business impacts, which have not been adequately mitigated. By way of an update a meeting has been arranged with the Applicant and their agent on 19 June to progress ongoing negotiations regarding the Heads of Terms. To conclude while not objecting to the scheme in principle, the landowner considers compulsory acquisition premature and unjustified, and therefore objects to the exercise of CA powers at this stage.	See Appendix A: AP 190 - Cullum Agric Ltd

Norwich Diocesan Board of Finance Limited	10177	Yes	Compulsory Acquisition of rights, Temporary possession	ALL	National Grid	This submission is made on behalf of the Norwich Diocesan Board of Finance Limited and is based upon the detailed Written Representation submitted at Deadline 4 for CAH2. Our client objects to the proposed compulsory acquisition (CA) on the basis that the Applicant has not met the statutory tests under Sections 122 and 123 of the Planning Act 2008, nor followed the 2013 DCLG Guidance. Under Section 122, the Applicant has failed to demonstrate that the land and rights are necessary or justified. The land take is considered excessive, with inclusion of areas beyond what is required, and reasonable alternatives, such as route changes or undergrounding, have not been properly explored. In addition, key technical matters remain unresolved, meaning the full impacts cannot be understood, while harm to the farming business is significant and outweigh any benefits. Under Section 123, the proposals lack sufficient clarity and definition, particularly in relation to access, easements, and working areas, and are supported by incomplete and fragmented information. The Applicant has also not complied with the 2013 Guidance, with no agreed Heads of Terms, inconsistent engagement, limited effort to minimise land take, and inadequate supporting evidence. Compulsory acquisition has not been demonstrated to be a last resort. The Applicant has further failed to properly address occupier interests, where land is subject to agricultural tenancies. It is inappropriate to expect the landowner to negotiate on the Applicant's behalf, and this omission creates additional uncertainty, contrary to the Guidance requirement to identify and address all land interests. Overall, the proposals would result in long term and permanent agricultural land loss, operational disruption, and long-term business impacts, which have not been adequately mitigated. By way of an update a meeting has been arranged with the Applicant and their agent on 19 June to progress ongoing negotiations regarding the Heads of Terms. To conclude while not objecting to the scheme in principle, the landowner considers compulsory acquisition premature and unjustified, and therefore objects to the exercise of CA powers at this stage.	See Appendix A: AP 192 - Norwich Diocesan Board of Finance Limited
D N Grady & Sons Ltd	10516	Yes	Compulsory Acquisition of rights, Temporary possession	ALL	Both	This submission is made on behalf of D N Grady Ltd and is based upon the detailed written representations submitted at Deadline 4 for CAH2. The landowner objects to the proposed compulsory acquisition (CA) on the basis that the Applicant has not met the statutory tests under Sections 122 and 123 of the Planning Act 2008, nor followed the 2013 DCLG Guidance. Under Section 122, the Applicant has failed to demonstrate that the land and rights are necessary or justified. The land take is considered excessive, with inclusion of areas beyond what is required, and reasonable alternatives, such as route changes or undergrounding, have not been properly explored. In addition, key technical matters remain unresolved, meaning the full impacts cannot be understood, while harm to the farming business is significant and outweighs any benefits. Under Section 123, the proposals lack sufficient clarity and definition, particularly in relation to access, easements, and working areas, and are supported by incomplete and fragmented information. The Applicant has also not complied with the 2013 Guidance, with no agreed Heads of Terms, inconsistent engagement, limited effort to minimise land take, and inadequate supporting evidence. Compulsory acquisition has not been demonstrated to be a last resort. The Applicant has further failed to properly address the occupier interests, where the land is subject to agricultural tenancy. It is inappropriate to expect the landowner to negotiate on the Applicant's behalf, and this omission creates additional uncertainty, contrary to the Guidance requirement to identify and address all land interests Overall, the proposals would result in long term and permanent agricultural land loss, operational disruption, and long-term business impacts, which have not been adequately mitigated. By way of an update a meeting has been arranged with the Applicant and their agent on 19 June to progress ongoing negotiations regarding the Heads of Terms. To conclude while not objecting to the scheme in principle, the landowner considers compulsory acquisition premature and unjustified, and therefore objects to the exercise of CA powers at this stage.	See Appendix A: AP 193 - D N Grady & Sons Ltd

Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Katherine S Lee	254689410	Yes	Compulsory Acquisition of rights, Temporary possession	ALL	UK Power Networks	This submission is made on behalf of Katherine Lee and in her role as Personal Representative to the Estate of Michael Lee and is based upon the detailed Written Representation submitted at Deadline 4 for CAH2. The landowner is affected only by third-party utility works and objects to the interference with the land and rights on the basis that the Applicant has failed to satisfy the statutory requirements of Sections 122 and 123 of the Planning Act 2008, and has not complied with the principles of the DCLG Guidance (September 2013). Under Section 122, there is no compelling case, with insufficient clarity on third-party utility works, limited engagement, and failure to properly consider a less impactful alternative route. The land and rights sought have not been shown to be necessary or proportionate, and impacts on farming operations have not been minimised. Under Section 123, the proposals lack clarity and completeness, with uncertainty over land take, temporary possession, construction activities, and reinstatement. Supporting information is fragmented and high-level, preventing proper assessment. The Applicant has also not complied with Guidance, having failed to treat compulsory acquisition as a last resort, properly consider alternatives, provide a robust evidence base, or minimise impacts. The scheme would cause temporary land loss, disruption to farming, and long-term business impacts, which have not been adequately mitigated and are therefore disproportionate. By way of an update UKPN's agents have now offered a meeting to discuss outstanding matters, however, issues relating to coordination, routeing, and impacts remain unresolved, and this does not overcome the fundamental deficiencies identified above. Overall, compulsory acquisition is premature and unjustified, as the scheme is not sufficiently defined, impacts remain unclear, and meaningful engagement has not taken place.	See Appendix A: AP 194 - Katherine S Lee
2 Agriculture Growing Limited	15476	Yes	Compulsory Acquisition of rights, Temporary possession	ALL	Both	This objection is submitted on behalf of 2 Agriculture Growing Ltd and is based on the detailed written representations provided at Deadline 4 for CAH2, which set out the landowner's concerns in full. Our client is affected by third-party utility works and objects on the basis that the Applicant has failed to satisfy the statutory requirements of Sections 122 and 123 of the Planning Act 2008, and has not complied with the principles of the DCLG Guidance (September 2013). Under Section 122, there is no compelling case, with insufficient clarity on third-party utility works, limited engagement, and failure to properly consider a less impactful alternative route. The land and rights sought have not been shown to be necessary or proportionate, and impacts on farming operations have not been minimised. There has been a failure to engage with the occupier's interests, as a tenant operating a poultry unit. The Applicant has not shown that the land and rights sought are necessary or proportionate, nor that reasonable steps have been taken to acquire them by agreement. The absence of engagement and clarity around occupier rights undermines the case that compulsory acquisition is justified. The proposals lack clarity and completeness, particularly in relation to the rights sought and how occupiers' legal interests will be secured. There is no clear framework setting out how engagement will take place or what is expected of affected parties, leaving the tenant in a position of uncertainty and preventing meaningful negotiation. The Applicant has also failed to comply with the 2013 Guidance, including not demonstrating compulsory acquisition as a last resort, by failing to engage meaningfully with our client. The scheme presents a risk of significant disruption to an operational poultry business, with potential impacts not yet properly understood or addressed due to lack of engagement and clarity. By way of an update UKPN's agents have now offered a meeting to discuss outstanding matters, however, issues relating to coordination, routeing, and impacts remain unresolved, and this does not overcome the fundamental deficiencies identified above. Overall, compulsory acquisition is premature and unjustified, as the Applicant has not properly engaged with our client, has failed to demonstrate that all reasonable steps have been taken to secure agreement, and has not provided sufficient clarity on the rights sought or impacts of the scheme.	See Appendix A: AP 195 - 2 Agriculture Growing Limited

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
East Anglia Three Limited	20335	Yes	All of the above	B-20/174, B-20/179, B-20/181, B-20/182, B-20/183, B-20/185, B-20/191, B-20/195, B-20/197, B-20/199, B-20/202, B-20/204, B-20/205.	National Grid	Note plot B-20/180 appears to be marked for compulsory acquisition on EN020027-002892-2.2 Land Plans – Section B, Revision C however is not marked for compulsory acquisition under the Book of Reference, this is to be clarified. In any event, it is marked in the Book of Reference for temporary possession, to which we object. East Anglia Three Limited (“EA3L”) is the developer of a consented Nationally Significant Infrastructure Project comprising offshore wind generation and associated onshore transmission infrastructure, and is directly affected by the Proposed Development. NGET seek CA and TP powers over land owned by ScottishPower Renewables (UK) Limited (“SPRUKL”), EA3L’s direct owner, in which EA3L has various rights. The compulsory acquisition and temporary possession of land owned by SPRUKL, in combination with powers sought under Articles 14 and 16 of the draft DCO to temporarily close Bullen Lane, would put EA3, a critical national infrastructure project, at risk. Bullen Lane is the only access road leading to the EA3 substation, and then to the access track used to access the SuDs pond for the EA3 substation. It is therefore vital that 24/7 uninterrupted access to the EA3 substation via Bullen Lane is maintained for fire and safety reasons, as well as to ensure the continued maintenance of the EA3 substation and SuDs pond, which are vital parts of the overall EA3 windfarm operation. While EA3L does not object to the principle of reinforcing the electricity transmission network, it objects to the extent and justification of the powers sought over its interests. In particular, EA3L submits that the Applicant has failed to comply with the requirements of Section 122 of the Planning Act 2008 and the Department for Communities and Local Government Guidance (September 2013) on compulsory acquisition. Section 122(2) requires that land or rights may only be acquired where they are necessary for the development or to facilitate it, and Section 122(3) requires a compelling case in the public interest. EA3L’s position is that the Applicant has not demonstrated that the extent of CA and TP powers being sought, which would allow the Applicant to exclude EA3L from using Bullen Lane, the access road to the EA3 substation, and the access track to the SuDs pond, rights is necessary. The extent of rights sought is not limited to the minimum required but instead risks imposing excessive and unjustified restrictions on EA3L’s ability to access, operate and maintain its infrastructure. Furthermore, although EA3L recognises the general public benefits associated with the Proposed Development as transmission infrastructure, the Applicant has not demonstrated a compelling case in the public interest in respect of the specific interference with EA3L’s interests, as required by Section 122(3). The assessment of public interest must consider the balance between the benefits of the scheme and the harm caused, and in this case there has been insufficient consideration of the cumulative interaction between two nationally significant infrastructure projects. EA3’s infrastructure contributes to national renewable energy generation and decarbonisation objectives, and any restriction on its operation, maintenance or future development has the potential to undermine those objectives. In addition, the Applicant has not satisfied the requirements of the DCLG Guidance (paragraphs 8-10), which makes clear that compulsory acquisition should only be used where there is a compelling justification, that reasonable alternatives have been properly considered and that the extent of acquisition is proportionate. The Guidance requires that applicants minimise interference and use compulsory powers only as a last resort following reasonable negotiation. In this case, EA3L considers that the rights sought are disproportionate, that insufficient steps have been taken to minimise the extent of interference and that meaningful agreement has not yet been achieved. The proposals risk imposing safeguarding constraints and operational limitations.	See Appendix A: AP 196 - East Anglia Three Limited
						The principles underlying Section 127 of the Planning Act 2008 are also engaged, given the nature of EA3L’s infrastructure as nationally important critical energy infrastructure. Those principles require that the Secretary of State cannot authorise the compulsory acquisition of statutory undertakers’ land where this would cause serious detriment to the carrying on of the undertaking. EA3 holds an interest in the listed plots for the purposes of carrying on the construction and operation of the EA3 offshore windfarm. EA3 is significantly concerned that the Proposed Development will result in serious detriment to the carrying on of the construction and operation of the EA3 offshore windfarm by restricting access to the EA3 substation and its SuDs pond for maintenance and emergency works, increasing safety risks and imposing operational inefficiencies. The EA3 substation is a vital part of the overall windfarm operation, which is wholly dependent on the operation and function of the EA3 substation. Finally, EA3L considers that there has been insufficient engagement and negotiation in accordance with the DCLG Guidance (paragraph 25), which requires applicants to seek agreement wherever possible and to use compulsory acquisition only as a measure of last resort. While discussions have taken place, they have not resulted in agreed protective provisions or coexistence arrangements sufficient to safeguard EA3L’s interests, and the Applicant’s reliance on compulsory powers is therefore premature. Accordingly, EA3L objects to the compulsory acquisition powers sought over its rights.	
Hugh French / Guy French / Rockbroon Ltd / James French / E French & Sons	14142	Yes	All of the above	All.	Both	We object to land or any being compulsorily acquired. National Grid should engage in meaningful negotiations with landowners over any land rights they require. Our Agents have advised there are various aspects to these negotiations which are reasonable comprises by the landowner, that National Grid is currently not agreeing to.	See Appendix A: AP 197 - Hugh French / Guy French / Rockbroon Ltd / James French / E French & Sons

East Anglia One Limited	13598	Yes	All of the above	B-20/174, B-20/179, B-20/181, B-20/182, B-20/183, B-20/185, B-20/191, B-20/195, B-20/197, B-20/199, B-20/202, B-20/204, B-20/205.	National Grid	Note plot B-20/180 appears to be marked for compulsory acquisition on EN020027-002892-2.2 Land Plans – Section B, Revision C however is not marked for compulsory acquisition under the Book of Reference, this is to be clarified. In any event, it is marked in the Book of Reference for temporary possession, to which we object. East Anglia One Limited (“EA1L”) is the developer of a consented Nationally Significant Infrastructure Project offshore wind generation and associated onshore transmission infrastructure, and is directly affected by the Proposed Development. NGET seek CA and TP powers over land owned by ScottishPower Renewables (UK) Limited (“SPRUKL”), EA1L's direct owner, in which EA1L has various rights and generation assets within EA1’s substation compound. The compulsory acquisition and temporary possession of land owned by SPRUKL, in combination with powers sought under Articles 14 and 16 of the draft DCO to temporarily close Bullen Lane, would put EA1, a critical national infrastructure project, at risk. Bullen Lane is the only access road leading to the EA1 substation, where EA1L still holds generation assets within. It is therefore vital that 24/7 uninterrupted access to the EA1 substation via Bullen Lane is maintained for fire and safety reasons, as well as to ensure the continued maintenance of the EA1 substation, which are vital parts of the overall EA1 windfarm operation. While EA1L does not object to the principle of reinforcing the electricity transmission network, it objects to the extent and justification of the powers sought over its interests. EA1L’s position is that the Applicant has not demonstrated that the extent of CA and TP powers being sought, which would allow the Applicant to exclude EA1L from using Bullen Lane, the access road to the EA1 substation, rights is necessary. The extent of rights sought is not limited to the minimum required but instead risks imposing excessive and unjustified restrictions on EA1L's ability to access, operate and maintain its infrastructure. The principles underlying Section 127 of the Planning Act 2008 are also engaged, given the nature of EA1L's infrastructure as nationally important critical energy infrastructure. Those principles require that the Secretary of State cannot authorise the compulsory acquisition of statutory undertakers' land where this would cause serious detriment to the carrying on of the undertaking. EA1 holds an interest in the listed plots for the purposes of carrying on the operation of the EA1 offshore windfarm. EA1 is significantly concerned that the Proposed Development will result in serious detriment to the carrying on of the operation of the EA1 offshore windfarm by restricting access to the EA1L's generation assets within the EA1 substation for maintenance and emergency works, increasing safety risks and imposing operational inefficiencies. The EA1 generation assets within the substation are a vital part of the overall windfarm operation, which is wholly dependent on the operation and function of the EA1 substation.	See Appendix A: AP 199 - East Anglia One Limited
Margaret Eileen Hamilton	9148	Yes	All of the above	ALL	Both	The recent paperwork appearing to outline plans for compulsory acquisition & holding by the operator after the construction project, when typically landowners provide easement rights for access and maintenance, requires clarification on case-by-case basis because CA of significant areas of land will affect agricultural activities for many parties including ourselves.	See Appendix A: AP 200 - Margaret Eileen Hamilton
Stephen Chantry	1857	Yes	All of the above	ALL	Both	apart from all the objections with regards the desecration of the countryside, wildlife, our family home worth nothing, the affects on the local community whilst work is carried out, road capabilities as we are always having floods, and that none of our concerns are looked into by national grid???, there are better ways underground or offshore SITE SPECIFIC OBJECTIONS: national grids plans show that part of our garden/paddock lie just east of TB207 , This is a area where there are ancient oaks,centuries old supporting a large range of wildlife, they are irreplaceable part of the local ecosystem. IMPACT ON STABLES AND HORSE WELFARE: near the affected area there are stables, during construction it would impact and distress the horses, noise, vibration and site activity could be disastrous. national grid have failed to demonstrate the need, the applicants justification under NPS EN-1 AND EN5 is weak. They have not adequately consider alternatives, use existing power lines or update them, go underground, offshore???. ECOLOGY AND BIODIVERSITY , this has not been taken into consideration. Landscape and Heritage: We live in a listed building and the land is in the curtilage of this, placing a 50 metre pylon will totally obliterate the whole point of importance in the heritage and listed system. My family have all been affected by this proposal, my wife stressed and anxious now taking medication how can this be fair?. As far as ED miliband criticising (NIMBYs) as he calls people it has now come to light that his own wife fought against a proposal that would affect their home and it is not going ahead now??? how two faced is that. PLEASE RE THINK THIS SCHEME. KIND REGARDS STEPHEN CHANTRY	See Appendix A: AP 201 - Stephen Chantry
LIH Dunton Hills Limited (c/o Agents BTSurveyors)	29095	Yes	Compulsory Acquisition of rights,Temporary possession	All, excluding plot 6/127	National Grid	This response is a summary of LIH Dunton Hills Ltd's (LIH) position on interference with its land interests. A fuller explanation of these issues is set out in the Representations dated November 2025 submitted by BTS on behalf of LIH. LIH's primary concern relates to the proposed CA of rights for the works relating to Pylon TB 229 (in particular, plot G-6/133). As currently proposed, rights are sought over a wide area, and the exercise of the rights risks sterilising some land intended for residential development, and therefore may impact on the delivery of LIH's Dunton Hills Garden Village (DHGV) project. This potential conflict between the NTT project and LIH's developable land, and the extent of the interference with LIH's interests, is disproportionate and is not properly justified. This is particularly the case given that, based on discussions between the Applicant and LIH, design solutions may be available which would limit the impact on LIH's interests. LIH welcomes the engagement of the Applicant and progress towards agreeing Heads of Terms for an agreement between the parties. The agreement is expected to include obligations which seek to address LIH's concerns through the detailed design process, including reviewing the works and location for Pylon TB229 to avoid or minimise material impacts on DHGV. Until terms are agreed, LIH maintains its objection to the proposed CA powers. LIH does not object to the CA powers sought for diversion of the UKPN overhead 132 kV cables (PSC 3-7) but still intends to agree terms for voluntary acquisition of those rights.	See Appendix A: AP 202 - LIH Dunton Hills Limited (c/o Agents BTSurveyors)
SBS Spares Ltd	3623	Yes	All of the above	All	Both	We object to the rights being taken by compulsion. We are not against entering into a voluntary agreement and commencing in commercial negotiations with UK Power and /or National Grid or their agents. As you are aware we have appointed Landbridge land agents, Rivers Court, High Street, Sproughton, Ipswich IP8 3AP to act on our behalf. Future correspondence on this should be directed to them FAO Will Barton	See Appendix A: AP 203 - SBS Spares Ltd

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights? Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
Bianca Moller Robert Moore	4235	Yes	All of the above	All	Both	I object to the proposed project for the following reasons: 1)Failure to properly consider alternatives to pylons The applicant has failed to adequately consider alternatives to the use of pylons for this project. Less intrusive options appear to exist, but these have not been properly assessed, explained, or justified. 2)Failure to consider less harmful alternatives The proposal does not demonstrate that the least damaging or least intrusive option has been selected. The applicant has not shown that alternative routes, technologies, mitigation measures, or methods of delivery have been fully explored in order to reduce the impact on affected landowners, businesses, homes, and livelihoods. 3)Disproportionate private loss and human rights impact The proposed project would cause very significant private loss and would have a serious impact on the rights and livelihoods of affected landowners and businesses. In our case, the proposed power lines would cross our farm and would cause substantial harm to our business, including the destruction of a wedding venue, which is the small farm's main source of income. This impact is severe, personal, and disproportionate. The harm to land, businesses, income, and way of life outweighs any public benefit that the applicant claims would arise from the project. 4)Lack of a compelling case in the public interest The applicant has failed to demonstrate a compelling case in the public interest for this project in its proposed form. There has been insufficient justification for why the project must proceed using pylons, why this route has been selected, and why less intrusive alternatives have not been pursued. 5)Insufficient pre-application work and inadequate consultation Prior to submitting the DCO application, the applicant failed to carry out sufficient detailed preparatory work, particularly in relation to consultation and engagement with affected landowners. 6)We have been trying to address the issue of the proposed power lines crossing our farm with the applicant for three years. Despite this, we have received limited feedback and there has been no meaningful progress towards resolving our concerns. This demonstrates inadequate engagement, poor communication, and a failure to properly consult with those most directly affected. 7)Inadequate engagement and negotiation The applicant has not engaged with us in a constructive or meaningful way. Given the scale of the impact on our farm and business, we would have expected detailed discussions, proper negotiation, and genuine attempts to reduce or avoid the harm caused. This has not happened. I imagine many other businesses / farms have similar concerns 8)Compensation concerns We have serious concerns about whether affected parties will receive fair, adequate, and timely compensation. The damage to our business and livelihood would be substantial, and to date there has been no communication from the applicant about how losses will be assessed, how compensation will be calculated, and when compensation would be paid. 9)No heads of terms or voluntary agreement No heads of terms or voluntary agreement has been signed. This is due to the lack of meaningful engagement and negotiation by the applicant. The absence of agreed terms further demonstrates that the applicant has not properly addressed the impact of the project on our land and business. For these reasons, I object to the application. I ask that the Examining Authority gives significant weight to the severe impact on our farm, business, livelihood, and property rights, and requires the applicant to properly consider less intrusive alternatives before any consent is granted.	See Appendix A: AP 204 - Bianca Moller Robert Moore
Jeremy Nicholas John Sheppard	2976	Yes	All of the above	F-6/24, F-6/27	Both	My wife and I own the freehold on Braddocks, a residential property situated on Mashbury Road, Chignal St James. The property is approximately 160 metres north of the proposed line of pylons and a crossing point for the haul road. Two plots of land on the property are the subject of compulsory acquisition. Firstly, a narrow strip of land forming the roadside margin which has been aggregated with other land to form plot F-6/24. Secondly, an area of approximately 72 sq metres contained within the boundary of the property, forming plot F-6/27. We contributed to both the statutory and landowner consultations and met with representatives of the applicant's agents, Fisher German, on multiple occasions. As part of those meetings we asked for explanations of the justification for the proposed compulsory acquisition, details of any work that would be done within the plots and what considerations were given to the implications for existing infrastructure – primarily a water main, hydrant point, culverted land drain and overhead telephone and fibre optic cables which all lie within the boundary of plot F-6/24. Fisher German assured us the requests had been passed back to the applicant however we have never received a response. With no response, the applicant has so far failed to provide any justification for seeking permanent rights over the affected land (Planning Act s. 122 and Guidance paras 5-7), has not provided us with an opportunity to consider any reasonable alternatives, including temporary rights of access, (Guidance para 8) and has failed to explain how the rights over the land will be used (Guidance para 9). We also have more specific concerns about the impact of the proposed permanent rights and how they interfere with our property. Plot F-6/24 : Properties on Mashbury Road are not connected to mains drainage. Treated effluent from Braddocks is discharged into the culverted drain within plot F-6/24. The permanent rights sought under Class 4 (g) and (h) can be used to render the property uninhabitable by allowing the applicant to prevent the removal of effluent from the property by decommissioning the drain and forbidding its replacement. This infringes on our Article 8 and Protocol 1 Article 1 rights under the ECHR. Plot F-6/27 : This comprises two sections, 1) a narrow strip within which there is a mature 8 foot high mixed hawthorn hedge fronting onto Mashbury Road and some mature fruit trees within the garden itself, and 2) a surfaced area between Mashbury Road and the gate to Braddocks which comprises the primary access point to the property. The hedge provides security and privacy to the property however the permanent rights sought under Class 4 (b) and (e) would allow the applicant to require its removal and forbid any replacement. In the document Ref EN020027, submitted by the applicant, covering tree and hedgerow management all fruit trees in the garden are marked as "unaffected" and the hawthorn hedge is only classed as "potentially affected". This strongly indicates that the permanent rights sought are unnecessary, the applicant has failed to provide an appropriate justification for seeking permanent rights and what would be done with them (Guidance, paras 5-9) when temporary access would be sufficient. In respect of the primary access to the property, the permanent rights sought under Class 4 (a)-(d) would allow the applicant to control access to the property in perpetuity by the simple act of parking vehicles upon it. Together, the effect of the permanent rights sought is grossly disproportionate for this residential property. They constitute a disproportionate and severe infringement of our rights under Article 8 and Protocol 1 Article 1 of the ECHR (Guidance para 10) and would be detrimental to the habitable use, safety, amenity, privacy, value and saleability of the property.	See Appendix A: AP 205 - Jeremy Nicholas John Sheppard

Together, the effect of the permanent rights sought is grossly disproportionate for this residential property. They constitute a disproportionate and severe infringement of our rights under Article 8 and Protocol 1 Article 1 of the ECHR (Guidance para 10) and would be detrimental to the habitable use, safety, amenity, privacy, value and saleability of the property.	See Appendix A: AP 206 - Susan Jane Sheppard
Alex Haden - BTSurveyors Ltd - Representative of Orsett Golf Club	10292	Yes	All of the above	All	Both	The grounds for objection have been outlined in our previous Representations on behalf of Orsett Golf Club (November 2025 & February 2026) . We are in ongoing, discussions with National Grid and their appointed agents with a view to covering outstanding matters within a confidential Heads of Terms Agreement.	See Appendix A: AP 207 - Alex Haden - BTSurveyors Ltd - Representative of Orsett Golf Club
Monika Weglarz, TLT on behalf of Basildon BESS Ltd	27173	Yes	Compulsory Acquisition of rights	H-1/1, H-1/5	Both	Basildon BESS Ltd has previously stated, in its relevant representation [RR-0334], its written representation [REP1-203] and at the compulsory acquisition hearing on 29 April, that it has an installation, on leased land, in parts of plots H-1/1, H-1/5 and H-1/11 comprising of an operational Battery Energy Storage System to the north of the UKPN substation. Basildon BESS has been liaising with the Applicant in respect of these plots and the interests that are sought over them and during these discussions it has become apparent that Basildon BESS does not have an interest in plot H-1/11. In respect of the remaining two plots, the parties have recently agreed the wording of a side agreement. However, the agreement has not yet reached completion and, until such a time as it does, Basildon BESS maintains its strong objection to the Applicant's proposals in their current form.	See Appendix A: AP 208 - Monika Weglarz, TLT on behalf of Basildon BESS Ltd
TC East Anglia One OFTO Limited	13598	Yes	All of the above	B-20/199, B-20/179, B-20/191, B-20/195, B-20/209, B-20/174, B-20/180, B-20/182, B-20/196, B-20/197, B-20/204, B-20/205, B-20/214	Both	Please note that TC East Anglia One OFTO Limited leases land and benefits from rights in adjoining land, but they do not feature in the Book of Reference. We are wrongly not detailed in this document [Book of Reference]. This needs to be rectified as it has been raised previously. [See previous submissions]	See Appendix A: AP 209 - TC East Anglia One OFTO Limited
PACE Nano Energy Limited	15947	Yes	Compulsory Acquisition of rights, Temporary possession	All	National Grid	Until such time as the Commercial Agreement between PACE Nano Energy Ltd and NGET is executed, PACE objects to the compulsory acquisition of its rights and interests in land and the temporary use of the land it holds an interest in. Once completed, the terms of the Commercial Agreement will resolve PACE's concerns with the interference of its rights and following which PACE Nano will withdraw its objection. PACE refers to its previous submissions in this examination ([REP-2789], [REP1-264], [REP3-129] and [REP5-261]) and the draft Statement of Common Ground ([REP4-227]) between the parties for context of the issues and reasons for objection.	See Appendix A: AP 210 - PACE Nano Energy Limited
Gillian Ann Whittle	3768	Yes	Compulsory Acquisition of land, Compulsory Acquisition of rights, All of the above, Temporary possession	C-49/9 and C-14/10	Both	Neither NG nor UK Power Networks have need or necessity for these rights over our land. The impact would be disproportionate, and there has been a severe lack of communication and negotiation to acquire any such rights at any point. Communication from NG or Fisher German has been absolutely zero since a meeting with them on 19th June 2024, when they promised to be in touch with answers within a couple of weeks. Their lack of engagement with people and communities in these circumstances has been wholly inadequate, despite NG's claims to have communicated fully.	See Appendix A: AP 211 - Gillian Ann Whittle
Nicola Jane Underwood	16149	Yes	All of the above	All	Both	My husband and I purchased a very small piece of land behind our house, [REDACTED] from Writtle Agricultural College in December 2016. We have tried to inform you on several occasions that we do not think that our land is part of this process and we do not own any other land in this area and certainly have no knowledge of ownership of the 13 parcels of land that appear on your document REP4-051 in our names. We believe these parcels of land probably do, or used to belong to Writtle Agricultural College. We have been unable to identify our land as being listed on the document REP4-051 at all. Our TP1 form location map shows a Search Reference of: 1617_00939 and the Property Address as: [REDACTED]	See Appendix A: AP 212 - Nicola Jane Underwood

Bank of Ireland UK Plc	24735						See Appendix A: AP 214 - Bank of Ireland UK Plc
Tessa Saunders / Anglian Water Services Limited	10188	Yes	Compulsory Acquisition of rights, Temporary possession	A-3/6, A-7/20, A-7/30, A-13/68, A-13/69, A-13/70, C-17/36, C-17/37, C-17/57, C-17/60, C-17/69, C-17/66, C-17/72, C-17/74, C-17/76, C-17/79, C-17/80, C-17/81, C-17/86, G-3/3, G-3/7, G-3/21, G-3/22, G-3/27, G-3/28, G-3/33, G3-3/34, G-3/38, G-3/42	Both	Anglian Water Services Limited (AWSL) is raising objections to those plot numbers where we have a freehold interest and matters are not resolved in respect of compulsory acquisition of rights over our land assets or temporary use. This includes our following assets: Land at Bracon Ash; Forncett End water recycling centre (WRC); Roydon-Barnards Lane Pumping Station, Bressingham Road; Land at Ardleigh – Dedham Road; Ardleigh-Wick Lane Reservoir; Shenfield and Hutton WRC. These matters are listed in the draft Statement of Common Ground between the Applicant and AWSL [REP4-101], as matters under discussion. Whilst AWSL has a large number of assets (i.e. sewers and water mains) on plots where our land interest is identified as 'occupation' these interfaces will be addressed through the bespoke Protective Provisions for Anglian Water, which are substantively agreed, but not yet included on the face of the draft Development Consent Order (DCO). The compulsory acquisition of rights and temporary use of our land is still under discussion with the Applicant. Shenfield and Hutton WRC: AWSL's agents, Savills, are awaiting a date for a site visit with National Grid's contractors to discuss mitigations of the proposed access route. Forncett End WRC: AWSL is progressing the phosphorus and nitrogen removal schemes due for delivery at the WRC by 31 March 2030. This will assess the alternative land offered by the Applicant. Ardleigh-Wick Lane Reservoir: The Applicant held a meeting with AWSL and Affinity Water to discuss the proposals including overhead line and easement across the reservoir and UKPN diversion works. A Land Disposal Risk Assessment has been prepared and circulated for review. Our Estates Partner, Savills, is liaising with the Applicant's Lands Team on a number of these interfaces. For each location a Land Disposal Risk Assessment is being prepared. When Anglian Water disposes of any property, whether freehold, leasehold or an easement right, the Estates Partner uses the Land Disposal Risk Assessment (LDRA) to document and confirm approval of the proposal. This ensures that the relevant stakeholders have been consulted and that any potential issues are identified and appropriately mitigated. The four stakeholders that are consulted are the Site Manager of the affected property, who reviews whether the proposal impacts the day-to-day operation of the site; the Asset Delivery Planning team, who assess whether there are any future schemes planned for the site that may be affected by the proposal; the Biodiversity Team, who review any potential impacts on Anglian Water's environmental commitments, particularly in relation to Biodiversity Net Gain; and the Estates team, who consider any estate-related matters such as covenants or existing agreements affecting the land parcel in question. Both the Site Manager and Asset Delivery Planning teams are consulted to review the impact of the proposal on Anglian Water's duties as a statutory undertaker, both now and in the future. In respect of Ardleigh in this example, AVH Parks, who manage the recreational activities on behalf of Anglian Water, will also be consulted and included within the LDRA process. For example, where a commercial activity may be affected by a compulsory purchase proposal, mitigation may include a business loss claim. If all relevant stakeholders agree to the proposal and the associated mitigation measures, the matter is then referred to the Commercial Team, who manage the Estates Partner function within Anglian Water, to provide final approval. This process ensures that all affected stakeholders have formally confirmed their approval of the proposal. The approved Land Disposal Risk Assessment then forms part of the legal instruction to Anglian Water's in-house legal department, who will complete the relevant agreement with support from the Estates Partner. This process will help inform ongoing discussions with the Applicant.	See Appendix A: AP 215 - Tessa Saunders / Anglian Water Services Limited

Ian Nicholas Thomson	5342	Yes	All of the above	All	Both	Report on Objections to the Norwich to Tilbury (N2T) Scheme under Sections 122 and 123 of the Planning Act 2008 1. Introduction This report summarises the principal objections to the proposed National Grid Norwich to Tilbury (N2T) transmission scheme, with particular regard to the statutory tests governing compulsory acquisition under sections 122 and 123 of the Planning Act 2008. These provisions require that: •There must be a compelling case in the public interest for compulsory acquisition. •The land or rights sought must be necessary for the development. •The Secretary of State must be satisfied that the purposes for which the land is acquired justify the interference with private rights, including under human rights legislation. Drawing upon the submitted objection materials, including landowner representations and professional advice, this report identifies key grounds upon which the scheme, as currently promoted, fails to satisfy these statutory requirements. 2. Overview of the Proposed Scheme and Impacts The N2T scheme proposes a new overhead electricity transmission line between Norwich and Tilbury, including extensive new pylons, access routes, compounds, and associated infrastructure across rural landholdings. Objections focus not only on the principle of the scheme but, more significantly, on its detailed alignment, the extent of land taken, and the manner in which works would be carried out. The evidence demonstrates that the impacts extend beyond land-take to include: •Severe disruption to farming operations •Safety risks arising from construction routes •Loss of residential amenity •Interference with existing infrastructure and utilities •Long-term landscape and environmental harm These matters must be assessed against the strict statutory tests in sections 122 and 123. 3. Section 122: Necessity and Scope of Compulsory Acquisition 3.1 Lack of Necessity for Specific Land Interests Section 122(2) requires that land be acquired only if it is necessary for the development. While the overarching project may be justified, there is a strong argument that the extent of land and rights proposed exceeds what is reasonably required. The objections identify that: •National Grid may be able to justify the project in principle, but not the specific land parcels or access arrangements proposed. •Certain areas appear to be included for flexibility or convenience rather than strict necessity. This is especially evident in relation to, •haul roads and access routes, where alternative alignments exist that would reduce impact without compromising deliverability, and •the extent of land which National Grid are seeking to acquire under the DCO for the provision of environmental mitigation and BNG. 3.2 Excessive and Disproportionate Rights A further issue arises where the scheme seeks permanent acquisition or extensive rights where temporary or limited rights would suffice. Key examples include: •Permanent disruption of agricultural land where temporary access could achieve the same objective •Overly wide or intrusive haul roads •Interference with established access routes and farm operations The evidence suggests that National Grid has failed to minimise land-take and rights, contrary to the requirements of proportionality embedded in section 122 and associated guidance. 4. Section 123: Compelling Case in the Public Interest 4.1 Failure to Demonstrate a Compelling Case at a Local Level While national energy infrastructure may serve a broad public interest, section 123 requires a balanced assessment of public benefit against private harm. Objectors argue that: •The scheme imposes significant and concentrated burdens on specific landowners and communities •These burdens are not adequately mitigated or justified by the chosen route •The same strategic objectives could be achieved through less harmful alternatives As such, the case for compulsory acquisition is weakened where less intrusive options have not been properly examined. 4.2 Inadequate Consideration of Alternatives A critical requirement in demonstrating a compelling case is the proper evaluation of alternatives. The objections provide substantial evidence that this has not been adequately carried out. Examples include: •A proposed offshore cable route from North Norfolk to Tilbury or Bradwell, utilising existing infrastructure corridors •Use of existing redundant pylon routes instead of constructing entirely new infrastructure •Multiple alternative haul road alignments that would reduce disruption to residents and farming operations Despite representations made during earlier rounds of both non-statutory and statutory consultations, it appears that National Grid has not sufficiently engaged with or incorporated alternative proposals put forward in many cases. This failure directly undermines the statutory justification for compulsory acquisition.	See Appendix A: AP 216 - Ian Nicholas Thomson

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
						4.3 Disproportionate Impact on Landowners and Communities The scheme's impacts go well beyond what might reasonably be expected for infrastructure development. Specific concerns include: •Residential impact: properties becoming unlettable due to proximity to haul roads •Safety risks: dangerous junctions and high-speed traffic conflicts created by construction access •Community disruption: interference with footpaths, local routes, and daily activities •Agricultural harm: loss of productivity due to field fragmentation and obstruction of modern farming equipment •Large scale expensive destructive and long term costs when affected landholders seek to reorganise the hedges, trees and tracks on the farms to enable existing farming operations to continue on the land holdings For example, placing a haul road through the centre of a large field will prevent the use of large scale machinery and require a complete redesign of drainage systems. Such impacts suggest a failure to strike a fair balance, a key requirement under both section 123 and human rights law. 5. Procedural and Consultation Deficiencies A further significant objection concerns the adequacy of the pre-application consultation process. Evidence indicates that: •The consultation process fell short of statutory requirements •There were methodological and procedural errors in key assessments, including landscape, heritage, and environmental impacts •Professional and legal opinions (including from senior counsel) conclude that the process is insufficient to support a Development Consent Order (DCO) If established, these deficiencies could mean that: •The Secretary of State cannot be satisfied that all relevant considerations have been taken into account •The statutory tests under sections 122 and 123 cannot properly be met 6. Failure to Engage and Negotiate Guidance under the Planning Act 2008 requires that promoters make reasonable efforts to acquire land by agreement before resorting to compulsory powers. However, the evidence suggests: •Negotiations have been ongoing for several years without resolution •Landowners have not been provided with final or clear terms •NG will not engage with landowners suggestions of even minor changes/ameliorations •The promoter continues to revise fundamental aspects such as the basis of compensation claims This raises concerns that: •Compulsory acquisition powers are being used prematurely •The statutory expectation of meaningful negotiation has not been fulfilled Such failures weigh against the existence of a compelling case in the public interest. 7. Deliverability and Design Concerns Although not the central objection, there are also questions regarding the practical deliverability of the scheme as designed, including: •Insufficient detail on infrastructure such as bridges across flood-prone areas •Construction proposals that are impractical or unsafe •Lack of clarity on how temporary works would be implemented and restored Where a scheme is not clearly deliverable, it becomes difficult to justify the compulsory acquisition of land to facilitate it. 8. Application of Sections 122 and 123 Bringing these issues together, the objections demonstrate multiple areas where the scheme fails to meet the statutory tests: Section 122 (Necessity) •Land and rights are broader than required •Alternatives exist that would reduce land-take •The scheme has not been optimised to minimise interference Section 123 (Compelling Case in the Public Interest) •Impacts on landowners are severe and disproportionate •Consultation and alternatives analysis are inadequate •Negotiation efforts have been insufficient •The balance between public benefit and private harm is not properly justified 9. Conclusion In conclusion, while the strategic need for electricity transmission infrastructure may be accepted, the Norwich to Tilbury scheme—particularly in its current form—raises serious legal and planning concerns under sections 122 and 123 of the Planning Act 2008. The evidence indicates that: •The extent of compulsory acquisition is not fully justified •Less intrusive alternatives have not been adequately considered •The impacts on affected landowners and communities are excessive •Procedural shortcomings undermine confidence in the scheme Accordingly, there is a credible and substantive basis for objection, and a strong argument that the statutory tests for compulsory acquisition have not yet been met.

						To proceed lawfully, National Grid need to: •Demonstrate genuine optimisation of the route and access arrangements •Provide clear evidence of alternatives being properly assessed •Engage meaningfully with affected parties •Ensure that land acquisition is strictly limited to what is necessary Absent such steps, the justification for compulsory powers remains open to significant challenge.	
Carolyn Gordon / Northumbrian Water Ltd	10192	Yes	All of the above	H-1A/1, H-1A/2, H-1A/4, H-1A/5, H-1A/6, H-1A/11, H-1A/12, H-1A/14	Both	REP4-381, REP5-279 NWL have undertaken an initial and high-level desktop study and have identified a number of key or strategic assets that are shown to be within the revised red line boundary of the Proposed Scheme. Further engagement is required to understand the impact on NWLs assets before removing any objection to the proposed limit changes.	See Appendix A: AP 217 - Carolyn Gordon / Northumbrian Water Ltd
Julie Russell on behalf of National Highways Limited	10201	Yes	All of the above	All plots to which National Highways have an interest	Both	1.Overview of NH's Objection 1.1NH objects to the compulsory acquisition ("CA") and temporary possession ("TP") powers sought over approximately 154 plots of land owned or occupied by NH for the purposes of its statutory undertaking as strategic highway authority. NH's core submission is that the inclusion of these plots in the Book of Reference is neither necessary nor proportionate, and that the statutory tests for authorising compulsory acquisition are not met. 2.Overview of NH's Objection 2.1Under section 122 of the Planning Act 2008, an order granting development consent may include provision authorising compulsory acquisition of land only if the Secretary of State is satisfied that the land is (a) required for the development to which the development consent relates, (b) required to facilitate or is incidental to that development, or (c) replacement land given in exchange. Under section 123, there must be a compelling case in the public interest for the land to be acquired compulsorily, taking into account the availability of alternatives and proportionality. 2.2The DCLG Guidance (September 2013) elaborates on these tests, emphasising that the applicant must demonstrate that the land sought is necessary (i.e., no more land is included than is reasonably required) and that the proposed interference is proportionate to the objectives of the scheme. 3.NH's Specific Grounds of Objection 3.1Compulsory Acquisition of Operational Land is Not Necessary 3.1.1NH submits that the plots in question constitute operational land acquired for the purpose of maintaining its statutory undertaking. NH identifies that the permanent land take plots fall into two principal categories: ☐ Land which is currently NH-managed highway and is required for highway works to the Strategic Road Network ("SRN") or widening works as part of the Applicant's proposals. Such works are already authorised by the DCO subject to protective provisions, and therefore CA is unnecessary. ☐ Land which is not highway but is owned by NH and is required for SRN widening as part of the Applicant's proposals. This land does not need to be acquired only to be transferred back to NH; access can be granted through protective provisions and by agreement. 3.1.2NH contends that there is no need for plots in either category to be compulsorily acquired, as they are either already part of the SRN or land that will become part of the new SRN. Their inclusion in the Book of Reference is therefore not necessary or proportionate as required by the Planning Act CA Guidance. 3.2Acquisition of Rights is Not Necessary 3.2.1Regarding the acquisition of rights (principally for overhead lines and underground cabling), NH submits that the majority of plots relate to operational highway forming part of the SRN. NH argues that rights are not in fact required because National Grid already possesses statutory powers under the New Roads and Street Works Act 1991 to install, maintain, and repair apparatus in a public highway, with section 105 of that Act confirming that references to "in" a highway include works under, over, across, along or upon it. Accordingly, National Grid can undertake overhead line works without CA, and the inclusion of these plots is again not necessary or proportionate as required by the CA Guidance. 3.2.2Where an underground cable may require an easement, NH is prepared to grant that easement by consent and is willing to negotiate terms, further obviating the need for compulsory powers. 3.2.3Discussions with the Applicant as to the appropriateness of the utilising the powers in the New Roads and Street Works Act 1991 are on going. NH hope to be in a position to provide an update in the above regard at CAH3 which is due to be held on 24 June. 3.3Section 127: Serious Detriment to the Undertaking 3.3.1 NH also relies on section 127 of the Planning Act 2008, which provides that an order granting development consent may only include provision authorising the CA of statutory undertakers' land to the extent that the Secretary of State is satisfied that the land can be purchased and not replaced without serious detriment to the carrying on of the undertaking, or can be replaced without such detriment. NH submits that if its operational land were compulsorily acquired, it could cause serious detriment to the safe and efficient operation of the SRN, as NH needs to remain in control of its highway and subsoil. 3.4 Historic Ownership Plots 3.4.1 NH notes that certain plots where rights are sought relate to roads that have been detrunked, meaning ownership has in fact passed to the local authority but the transfer has not been registered at the Land Registry. As this land is non-operational, NH can agree to transfer any interest it retains by agreement, and CA is therefore not necessary. 4. Summary and Conclusion 4.1 In essence, NH's objection rests on the proposition that the tests of necessity and proportionality under sections 122 and 123 of the Planning Act 2008 and the DCLG Guidance are not satisfied, because the Applicant can achieve its objectives without compulsory acquisition — either through existing statutory powers, protective provisions, or voluntary agreement. Additionally, the serious detriment test under section 127 presents a further barrier to the acquisition of NH's operational land.	See Appendix A: AP 218 - Julie Russell on behalf of National Highways Limited

Rosemary Carol Thomson	7272	Yes	All of the above	All	Both	Report on Objections to the Norwich to Tilbury (N2T) Scheme under Sections 122 and 123 of the Planning Act 2008 1. Introduction This report summarises the principal objections to the proposed National Grid Norwich to Tilbury (N2T) transmission scheme, with particular regard to the statutory tests governing compulsory acquisition under sections 122 and 123 of the Planning Act 2008. These provisions require that: •There must be a compelling case in the public interest for compulsory acquisition. •The land or rights sought must be necessary for the development. •The Secretary of State must be satisfied that the purposes for which the land is acquired justify the interference with private rights, including under human rights legislation. Drawing upon the submitted objection materials, including landowner representations and professional advice, this report identifies key grounds upon which the scheme, as currently promoted, fails to satisfy these statutory requirements. 2. Overview of the Proposed Scheme and Impacts The N2T scheme proposes a new overhead electricity transmission line between Norwich and Tilbury, including extensive new pylons, access routes, compounds, and associated infrastructure across rural landholdings. Objections focus not only on the principle of the scheme but, more significantly, on its detailed alignment, the extent of land taken, and the manner in which works would be carried out. The evidence demonstrates that the impacts extend beyond land-take to include: •Severe disruption to farming operations •Safety risks arising from construction routes •Loss of residential amenity •Interference with existing infrastructure and utilities •Long-term landscape and environmental harm These matters must be assessed against the strict statutory tests in sections 122 and 123. 3. Section 122: Necessity and Scope of Compulsory Acquisition 3.1 Lack of Necessity for Specific Land Interests Section 122(2) requires that land be acquired only if it is necessary for the development. While the overarching project may be justified, there is a strong argument that the extent of land and rights proposed exceeds what is reasonably required. The objections identify that: •National Grid may be able to justify the project in principle, but not the specific land parcels or access arrangements proposed. •Certain areas appear to be included for flexibility or convenience rather than strict necessity. This is especially evident in relation to, •haul roads and access routes, where alternative alignments exist that would reduce impact without compromising deliverability, and •the extent of land which National Grid are seeking to acquire under the DCO for the provision of environmental mitigation and BNG. 3.2 Excessive and Disproportionate Rights A further issue arises where the scheme seeks permanent acquisition or extensive rights where temporary or limited rights would suffice. Key examples include: •Permanent disruption of agricultural land where temporary access could achieve the same objective •Overly wide or intrusive haul roads •Interference with established access routes and farm operations The evidence suggests that National Grid has failed to minimise land-take and rights, contrary to the requirements of proportionality embedded in section 122 and associated guidance. 4. Section 123: Compelling Case in the Public Interest 4.1 Failure to Demonstrate a Compelling Case at a Local Level While national energy infrastructure may serve a broad public interest, section 123 requires a balanced assessment of public benefit against private harm. Objectors argue that: •The scheme imposes significant and concentrated burdens on specific landowners and communities •These burdens are not adequately mitigated or justified by the chosen route •The same strategic objectives could be achieved through less harmful alternatives As such, the case for compulsory acquisition is weakened where less intrusive options have not been properly examined. 4.2 Inadequate Consideration of Alternatives A critical requirement in demonstrating a compelling case is the proper evaluation of alternatives. The objections provide substantial evidence that this has not been adequately carried out. Examples include: •A proposed offshore cable route from North Norfolk to Tilbury or Bradwell, utilising existing infrastructure corridors •Use of existing redundant pylon routes instead of constructing entirely new infrastructure •Multiple alternative haul road alignments that would reduce disruption to residents and farming operations Despite representations made during earlier rounds of both non-statutory and statutory consultations, it appears that National Grid has not sufficiently engaged with or incorporated alternative proposals put forward in many cases. This failure directly undermines the statutory justification for compulsory acquisition.	See Appendix A: AP 219 - Rosemary Carol Thomson

						4.3 Disproportionate Impact on Landowners and Communities The scheme's impacts go well beyond what might reasonably be expected for infrastructure development. Specific concerns include: •Residential impact: properties becoming unlettable due to proximity to haul roads •Safety risks: dangerous junctions and high-speed traffic conflicts created by construction access •Community disruption: interference with footpaths, local routes, and daily activities •Agricultural harm: loss of productivity due to field fragmentation and obstruction of modern farming equipment •Large scale expensive destructive and long term costs when affected landholders seek to reorganise the hedges, trees and tracks on the farms to enable existing farming operations to continue on the land holdings For example, placing a haul road through the centre of a large field will prevent the use of large scale machinery and require a complete redesign of drainage systems. Such impacts suggest a failure to strike a fair balance, a key requirement under both section 123 and human rights law. 5. Procedural and Consultation Deficiencies A further significant objection concerns the adequacy of the pre-application consultation process. Evidence indicates that: •The consultation process fell short of statutory requirements •There were methodological and procedural errors in key assessments, including landscape, heritage, and environmental impacts •Professional and legal opinions (including from senior counsel) conclude that the process is insufficient to support a Development Consent Order (DCO) If established, these deficiencies could mean that: •The Secretary of State cannot be satisfied that all relevant considerations have been taken into account •The statutory tests under sections 122 and 123 cannot properly be met 6. Failure to Engage and Negotiate Guidance under the Planning Act 2008 requires that promoters make reasonable efforts to acquire land by agreement before resorting to compulsory powers. However, the evidence suggests: •Negotiations have been ongoing for several years without resolution •Landowners have not been provided with final or clear terms •NG will not engage with landowners suggestions of even minor changes/ameliorations •The promoter continues to revise fundamental aspects such as the basis of compensation claims This raises concerns that: •Compulsory acquisition powers are being used prematurely •The statutory expectation of meaningful negotiation has not been fulfilled Such failures weigh against the existence of a compelling case in the public interest. 7. Deliverability and Design Concerns Although not the central objection, there are also questions regarding the practical deliverability of the scheme as designed, including: •Insufficient detail on infrastructure such as bridges across flood-prone areas •Construction proposals that are impractical or unsafe •Lack of clarity on how temporary works would be implemented and restored Where a scheme is not clearly deliverable, it becomes difficult to justify the compulsory acquisition of land to facilitate it. 8. Application of Sections 122 and 123 Bringing these issues together, the objections demonstrate multiple areas where the scheme fails to meet the statutory tests: Section 122 (Necessity) •Land and rights are broader than required •Alternatives exist that would reduce land-take •The scheme has not been optimised to minimise interference Section 123 (Compelling Case in the Public Interest) •Impacts on landowners are severe and disproportionate •Consultation and alternatives analysis are inadequate •Negotiation efforts have been insufficient •The balance between public benefit and private harm is not properly justified

						9. Conclusion In conclusion, while the strategic need for electricity transmission infrastructure may be accepted, the Norwich to Tilbury scheme—particularly in its current form—raises serious legal and planning concerns under sections 122 and 123 of the Planning Act 2008. The evidence indicates that: •The extent of compulsory acquisition is not fully justified •Less intrusive alternatives have not been adequately considered •The impacts on affected landowners and communities are excessive •Procedural shortcomings undermine confidence in the scheme Accordingly, there is a credible and substantive basis for objection, and a strong argument that the statutory tests for compulsory acquisition have not yet been met. To proceed lawfully, National Grid need to: •Demonstrate genuine optimisation of the route and access arrangements •Provide clear evidence of alternatives being properly assessed •Engage meaningfully with affected parties •Ensure that land acquisition is strictly limited to what is necessary Absent such steps, the justification for compulsory powers remains open to significant challenge.	
Christopher Edward Broom	20000	Yes	All of the above	All	National Grid	Report on Objections to the Norwich to Tilbury (N2T) Scheme under Sections 122 and 123 of the Planning Act 2008 1. Introduction This report summarises the principal objections to the proposed National Grid Norwich to Tilbury (N2T) transmission scheme, with particular regard to the statutory tests governing compulsory acquisition under sections 122 and 123 of the Planning Act 2008. These provisions require that: •There must be a compelling case in the public interest for compulsory acquisition. •The land or rights sought must be necessary for the development. •The Secretary of State must be satisfied that the purposes for which the land is acquired justify the interference with private rights, including under human rights legislation. Drawing upon the submitted objection materials, including landowner representations and professional advice, this report identifies key grounds upon which the scheme, as currently promoted, fails to satisfy these statutory requirements. 2. Overview of the Proposed Scheme and Impacts The N2T scheme proposes a new overhead electricity transmission line between Norwich and Tilbury, including extensive new pylons, access routes, compounds, and associated infrastructure across rural landholdings. Objections focus not only on the principle of the scheme but, more significantly, on its detailed alignment, the extent of land taken, and the manner in which works would be carried out. The evidence demonstrates that the impacts extend beyond land-take to include: •Severe disruption to farming operations •Safety risks arising from construction routes •Loss of residential amenity •Interference with existing infrastructure and utilities •Long-term landscape and environmental harm These matters must be assessed against the strict statutory tests in sections 122 and 123. 3. Section 122: Necessity and Scope of Compulsory Acquisition 3.1 Lack of Necessity for Specific Land Interests Section 122(2) requires that land be acquired only if it is necessary for the development. While the overarching project may be justified, there is a strong argument that the extent of land and rights proposed exceeds what is reasonably required. The objections identify that: •National Grid may be able to justify the project in principle, but not the specific land parcels or access arrangements proposed. •Certain areas appear to be included for flexibility or convenience rather than strict necessity.	See Appendix A: AP 220 - Christopher Edward Broom

						This is especially evident in relation to, •haul roads and access routes, where alternative alignments exist that would reduce impact without compromising deliverability, and •the extent of land which National Grid are seeking to acquire under the DCO for the provision of environmental mitigation and BNG. 3.2 Excessive and Disproportionate Rights A further issue arises where the scheme seeks permanent acquisition or extensive rights where temporary or limited rights would suffice. Key examples include: •Permanent disruption of agricultural land where temporary access could achieve the same objective •Overly wide or intrusive haul roads •Interference with established access routes and farm operations The evidence suggests that National Grid has failed to minimise land-take and rights, contrary to the requirements of proportionality embedded in section 122 and associated guidance. 4. Section 123: Compelling Case in the Public Interest 4.1 Failure to Demonstrate a Compelling Case at a Local Level While national energy infrastructure may serve a broad public interest, section 123 requires a balanced assessment of public benefit against private harm. Objectors argue that: •The scheme imposes significant and concentrated burdens on specific landowners and communities •These burdens are not adequately mitigated or justified by the chosen route •The same strategic objectives could be achieved through less harmful alternatives As such, the case for compulsory acquisition is weakened where less intrusive options have not been properly examined. 4.2 Inadequate Consideration of Alternatives A critical requirement in demonstrating a compelling case is the proper evaluation of alternatives. The objections provide substantial evidence that this has not been adequately carried out. Examples include: •A proposed offshore cable route from North Norfolk to Tilbury or Bradwell, utilising existing infrastructure corridors •Use of existing redundant pylon routes instead of constructing entirely new infrastructure •Multiple alternative haul road alignments that would reduce disruption to residents and farming operations Despite representations made during earlier rounds of both non-statutory and statutory consultations, it appears that National Grid has not sufficiently engaged with or incorporated alternative proposals put forward in many cases. This failure directly undermines the statutory justification for compulsory acquisition. 4.3 Disproportionate Impact on Landowners and Communities The scheme's impacts go well beyond what might reasonably be expected for infrastructure development. Specific concerns include: •Residential impact: properties becoming unlettable due to proximity to haul roads •Safety risks: dangerous junctions and high-speed traffic conflicts created by construction access •Community disruption: interference with footpaths, local routes, and daily activities •Agricultural harm: loss of productivity due to field fragmentation and obstruction of modern farming equipment •Large scale expensive destructive and long term costs when affected landholders seek to reorganise the hedges, trees and tracks on the farms to enable existing farming operations to continue on the land holdings For example, placing a haul road through the centre of a large field will prevent the use of large scale machinery and require a complete redesign of drainage systems. Such impacts suggest a failure to strike a fair balance, a key requirement under both section 123 and human rights law. 5. Procedural and Consultation Deficiencies A further significant objection concerns the adequacy of the pre-application consultation process. Evidence indicates that: •The consultation process fell short of statutory requirements •There were methodological and procedural errors in key assessments, including landscape, heritage, and environmental impacts •Professional and legal opinions (including from senior counsel) conclude that the process is insufficient to support a Development Consent Order (DCO) If established, these deficiencies could mean that: •The Secretary of State cannot be satisfied that all relevant considerations have been taken into account •The statutory tests under sections 122 and 123 cannot properly be met 6. Failure to Engage and Negotiate Guidance under the Planning Act 2008 requires that promoters make reasonable efforts to acquire land by agreement before resorting to compulsory powers. However, the evidence suggests: •Negotiations have been ongoing for several years without resolution •Landowners have not been provided with final or clear terms •NG will not engage with landowners suggestions of even minor changes/ameliorations •The promoter continues to revise fundamental aspects such as the basis of compensation claims

Vicky Fowler on behalf of Bloor Homes Limited	10163	Yes	Compulsory Acquisition of land,Temporary possession	6/71, 6/71a and 6/71b.	Both	The current scope of Bloor Homes objection relates to land parcels at Chadwell St Mary. In particular plots 6/71, 6/71a and 6/71b. Bloor has an option over this land and is promoting a planning application for the development of up to 1,500 dwellings, together with education, health and retail uses. The land forms part of a growth area proposed by Thurrock Borough Council for the delivery of up to 4,000 homes, and plays a key role in meeting the Borough's housing delivery targets. The Bloor scheme will be delivered in phases and start on site is anticipated in 2029. Taking the parcels in turn: Land Parcel 6/71a: This is a strip of land adjacent to Brentwood Road (coloured brown and referenced 6/71a in the Land Plans). NGET is proposing a compulsory acquisition of this land to provide its temporary and permanent access. This strip of land will be fundamental to the Bloor scheme as it will contain the proposed access to residential development parcels off Brentwood Road and overlaps with the first area for development adjacent to the site entrance. This strip is excessively wide. Bloor has sought comfort that NGET will not require the full extent of this land and was hoping for the land plans to be scaled back. Bloor have also sought comfort that it will be able to construct the permanent access and lay services as required and commence building within Area A as shown on the plan appended to the Statement of Common Ground submitted at deadline 1 [REP1-083]. Land Parcels 6/71 and 6/71b Bloor has concerns regarding the other land coloured brown on the Land Plans, including parcels 6/71 and 6/71b. Should these be fully acquired by NGET, this would have very significant adverse consequences for the Bloor scheme. It is Bloor's understanding, through discussions with NGET, that a relatively small proportion of the brown land is actually required for For all 3 parcels, it is Bloor's view that compulsory acquisition is not necessary, and instead Bloor (or the landowner ahead of Bloor's acquisition) could retain the land and grant NGET rights as necessary. Moreover, permanent access to NG apparatus ought to be capable of taking place over the estate roads once constructed. Negotiations with the Applicant have been positive and the dropping of option A is helpful to Bloor. The Statement of Common Ground ("SoCG"), submitted at deadline 1, records agreement on several key matters, including: •that NGET will only implement land and property rights to the extent actually required; •that the NGET permanent access route can be varied to be routed through the Bloor Scheme; •the broad location for a construction access preferred by both parties to the north of the main access to the residential development; •an understanding that restrictions on built development in certain areas are not intended to prevent Bloor's enabling works; and a commitment to exploring opportunities for shared facilities and materials. Bloor objects to both the compulsory acquisition ("CA") and temporary possession ("TP") powers sought by NGET in respect of the Bloor Scheme land, to the extent that these are not reduced in size, changed to temporary or regulated by a binding legal agreement to reflect the commitments given. Bloor would still like to see the land plans amended and a commitment to locate the permanent overhead line as far north in the site as possible. Importantly the commitments set out in the SoCG need to be secured in a legal agreement. Bloor have received heads of terms for such an agreement and understand that the negotiation of the agreement will progress with the aim of completing the same during the Examination. Taken at face value, the Land Plans suggest a fundamental constraint to the Bloor scheme and if the permanent acquisition was simply exercised without regard to the agreed matters then that would remove the access to a strategic housing site.	See Appendix A: AP 221 - Vicky Fowler on behalf of Bloor Homes Limited

Claire Lincoln-White	2859	Yes	All of the above	ALL	Both	We own the freehold on Brittons Hall Farm, a residential property situated on Mashbury Road. The property is situated next to a field which is planned by NG for the situation of a pylon and a crossing point for the haul road. There are F-6/40/46/47/49/50/54. We met with representatives of the applicants agents on multiple occasions. As part of those meetings we asked for explanations of the justification for the proposed acquisition, details of any work that would be done within the plots and what considerations were given to the implications for existing infrastructure and access to the property but have not received a response. With no response, the applicant has so far failed to provide any justification for temporary right nor seeking permanent rights over the affected land (Planning Act s. 122 and Guidance paras 5-7), has not provided us with an opportunity to consider any reasonable alternatives and has failed to explain how the rights over the land will be used (Guidance para 9). In addition, the applicant has not explained why there needs to be access at night and failed to explain how our property will remain safe, secure and private. Specific concerns which have not been responded to by the applicant are:1) the boundary of the garden and the field onto which the haul road will be build is not clear. The option area shaded seems to include part of the field which does not belong to the property. 2) the purpose of acquiring the garden is not clear, even on a temporary basis. The haul road is not being built on it. There are mature trees and hedges at the end of this section backing onto the field where the haul road will be situated and onto Mashbury Road. This provides not only habitats for wildlife but also security and privacy for the property. Fisher German have said they are not clear what this land will be intended to be used for but speculated it is for visibility for traffic from the haul road crossing Mashbury Road. We have asked why they cannot consider traffic lights or moving the haul road slightly further away from the boundary of the property into the field which is already impacted as alternatives to negate the need for the acquisition and destruction on boundary trees/hedges. 3) It is not clear whether current access to the property will be impacted by proposed acquisitions. 4) Asked what provisions they will make to ensure our property is kept safe and secure if work goes ahead and if access if granted during the day or night. 5) It is not clear how overhead lines / telecom lines will be impacted and where they will occupy air space in and around the property or whether they are likely to be buried underground. 6) We rely on non-fibre wifi which is delivered via antenna on our property. Electricity pylons and overhead lines can interfere with this and we've asked for how this would be addressed. The applicant has said the plots 'may be affected' but cannot explain how, have not considered alternatives and have failed to outline how our property (and its occupants) would remain safe, secure and have privacy during any works and afterwards, where applicable. This strongly indicates the applicant has failed to provide an appropriate justification for seeking permanent rights and what would be done with them (Guidance, paras 5-9) when temporary access would be sufficient, and have insufficiently considered why permanent / temporary access is required at all, particularly in relation to the garden. In respect of the primary access, the permanent rights sought under Class 4 (a)-(d) would allow the applicant to control land close to the access to the property in perpetuity by the simple act of parking vehicles upon it. Together, the effect of the permanent and temporary rights sought, constitute a disproportionate and severe infringement of our rights under Articles 1 and 8 of the ECHR and would be detrimental to the habitable use, safety, amenity, privacy, value and saleability of the property.	See Appendix A: AP 222 - Claire Lincoln-White
Richard White	8024	Yes	All of the above	ALL	Both	We own the freehold on Brittons Hall Farm, a residential property situated on Mashbury Road. BRICKKILN FARM SOLAR LIMITED	10138	Yes	Compulsory Acquisition of rights,Temporary possession	All	Both	Brickkiln Farm Solar Limited ("Brickkiln") maintains the position expressed in its consultation responses of 25 July 2024 and 17 July 2025 and in its representations submitted on 27 November 2025 (Examination Library ref. REP1-211) and 26 February 2026 (Examination Library ref. REP1-212) (together, "the Representations" and each a "Representation") in respect of the application by National Grid Electricity Transmission ("NGET") for development consent for its Norwich to Tilbury project ("the Proposed Development"). There has been no material progress in negotiations with NGET since the submission of the latest Representation despite Brickkiln's efforts to engage: the information requested from NGET in the Representations has not been provided, no heads of terms for the voluntary acquisition of land rights have been received, and NGET has not confirmed that an indemnity will be provided for any damage caused to Brickkiln Solar Farm by the Proposed Development. Executive summary NGET has not demonstrated a compelling case in the public interest for the compulsory acquisition of rights over Brickkiln Solar Farm. NGET has not made reasonable efforts to negotiate with Brickkiln, nor has it provided evidence to clarify the full extent of the impact that the Proposed Development would have on Brickkiln Solar Farm. It is reasonable to assume that the Proposed Development could cause Brickkiln to suffer significant financial losses and it is not clear whether NGET has allocated sufficient resources to fully compensate Brickkiln. NGET has also not provided any evidence to suggest that reasonable alternatives and modifications to the scheme have been considered which would avoid the need for rights over Brickkiln Solar Farm. In any event, it would be counterintuitive for improvements to low-carbon transmission infrastructure to come at the expense of an operational renewable electricity generating station. Brickkiln therefore respectfully requests the Inspector to require modifications to the Proposed Development to avoid Brickkiln Solar Farm and refuse to grant compulsory acquisition powers in relation to Brickkiln Solar Farm. Relevant legislation and guidance Section 122 of the Planning Act 2008 ("the 2008 Act") provides that a DCO may include provision authorising the compulsory acquisition of land only if the Secretary of State ("SoS") is satisfied that the land is (inter alia): (a) required for the development to which the DCO relates; or (b) required to facilitate or incidental to that development. There must also be a compelling case in the public interest for the land to be acquired compulsorily. The September 2013 'Planning Act 2008: Guidance related to procedures for compulsory acquisition' ("the Guidance") identifies a number of factors which the SoS will refer to in deciding whether to authorise the compulsory acquisition of land in the DCO. These include that: (i) the applicant should be able to demonstrate that all reasonable alternatives to compulsory acquisition (including modifications to the scheme) have been explored and the proposed interference with the rights of those with an interest in the land is for a legitimate purpose, necessary, and proportionate (paragraph 8 of the Guidance); (ii) the applicant must be able to demonstrate that there is a reasonable prospect of the requisite funds for acquisition becoming available (paragraph 9) (iii) the SoS must be persuaded that the purposes for which the DCO authorises compulsory acquisition of land are legitimate and sufficient to justify interfering with the human rights of those with an interest in the land affected (paragraph 10); (iv) the SoS must be satisfied that the land to be acquired is: (i) no more than is reasonably required for the purposes of the development where land is required for the development; or (ii) no more than reasonably necessary for the purpose for which it is acquired and is proportionate where the land is required to facilitate or is incidental to the development (paragraph 11); (v) the SoS must be persuaded there is compelling evidence that the public benefits that would be derived from the compulsory acquisition will outweigh the private loss that would be suffered by those whose land is to be acquired (paragraph 13). Paragraph 16 of the Guidance provides that the SoS could decide against including provisions authorising the compulsory acquisition of land in the DCO where the SoS is not persuaded all of the land is necessary or considers that the scheme should be modified. Paragraph 25 of the Guidance provides that applicants should seek to acquire land by negotiation wherever practicable. Objection to interference with land Brickkiln's land at Brickkiln Solar Farm ("the Land") is identified for compulsory acquisition on Land Plan A Sheet 2 (plots A-2/31, A-2/35, A-2/36, A-2/37, A-2/38, A-2/39, A-2/40, A-2/41, and A-2/43). According to the draft Order for the Proposed Development (document reference 3.1), rights over the Land may be needed for the construction and installation of a new overhead transmission electric line (Route RG) between the two gantries at Norwich Main Substation (Work No. 1) and the two gantries at Bramford Substation (Work No. 3), including: (a) the foundations and steelwork to construct new pylons; (b) the installation of 69 kilometres of overhead transmission electric line between Norwich Main Substation and Bramford Substation; (c) the installation of conductors, insulators and fittings; and (d) the installation of fibre optic conductors. The DCO application contemplates rights being compulsorily acquired over the Land for overhead and underground cables and temporary use of the Land ("the Rights"). It does not appear that NGET has considered all reasonable alternatives which would avoid the need for the Rights to be compulsorily acquired. It may be possible to meet the need for low-carbon transmission infrastructure without compulsorily acquiring the Rights. Brickkiln has not been provided with any site-specific assessment to justify the need for the Rights over the Land. NGET has therefore not demonstrated that it is proposing to compulsorily acquire no more land than is reasonably required or necessary for the Proposed Development. Brickkiln acknowledges that pylon RG14 is now located outside the operational boundary for Brickkiln Solar Farm to mitigate earthing interactions and safety risks. However, it is not clear that NGET has considered undergrounding or any other modifications to the scheme to avoid the need for the Rights to be acquired. It is therefore not clear that the proposed interference with the Land is for a legitimate purpose and necessary for the Proposed Development. If there is a reasonable alternative to acquiring the Rights, it is neither legitimate nor necessary to authorise the use of compulsory acquisition powers which would disrupt Brickkiln's enjoyment of its land. The interference to Brickkiln Solar Farm would also be disproportionate. The operation of Brickkiln Solar Farm, which is currently producing renewable energy and contributing to Clean Power 2030, should not be prejudiced by the compulsory acquisition of the Rights if reasonable alternatives should have been given further consideration. It is not proportionate to disrupt renewable electricity generation at an operational solar farm with a view to enabling the delivery of low-carbon transmission infrastructure if the Proposed Development could be delivered without the Rights being compulsorily acquired.	See Appendix A: AP 224 - BRICKKILN FARM SOLAR LIMITED

						In the absence of detailed design, method statements, and outage requirements, Brickkiln has been unable to carry out a shading analysis and other evaluations to accurately assess the level of loss it would suffer as a result of the compulsory acquisition of the Rights. Brickkiln has also been unable to confirm the operational, safety, and earthing risks posed by the Proposed Development. However, it appears likely that the overhead cabling would cause shading, and the construction and operation of the cables would require the displacement and/or removal of solar panels. This would disrupt the generation of electricity at Brickkiln Solar Farm, and it is not unreasonable to assume this would cause Brickkiln to suffer significant financial losses. Such losses carry weight and must be assessed against the public benefit of the Proposed Development, but the appropriate weight to be given to these losses cannot be identified until the losses themselves have been accurately quantified. As the level of loss has not been accurately quantified at this stage, this also casts doubt on whether NGET has allocated sufficient resources to fully compensate Brickkiln for its losses. Brickkiln further objects to the grant of compulsory acquisition powers on the basis that NGET has not satisfactorily engaged in negotiations with Brickkiln to date. NGET has not yet provided information to allow Brickkiln to assess its commercial position in terms of the risks posed by the Proposed Development. This has prevented Brickkiln from being able to meaningfully negotiate with NGET. NGET has also not issued proposed heads of terms for acquisition by agreement. Brickkiln has therefore not been presented with an alternative proposal to consider instead of compulsory acquisition. Brickkiln therefore respectfully invites the Inspector to require modifications to the Proposed Development to avoid Brickkiln Solar Farm and to refuse to grant compulsory acquisition powers in relation to Brickkiln Solar Farm. Brickkiln reserves the right to maintain its objection to the Proposed Development throughout the Examination unless and until satisfactory information is provided or changes to the scheme are made. Brickkiln also reserves the right to submit further representations.	
John Stacey	5698	Yes	Compulsory Acquisition of land,Compulsory Acquisition of rights,All of the above,Temporary possession	All	Both	Reasons for objecting. No alternative route At the onset, on receiving the first documents from NG we were only given a purple swathe where NG had pre-determined the pylon route. This was not at the formative stage so did not meet the first Gunning Principle Rule. Lack of engagement. We only had direct engagement with FG, NG avoided direct engagement. The statutory guidance to which NGET need to "have regard" is here: Planning Act 2008: Pre-application stage for Nationally Significant Infrastructure Projects - GOV.UK. The section "What is needed for consideration of land matters?" "the strong expectation is that applicants of proposed NSIPs will act reasonably in engaging with landowners", One example of a lack of engagement is the survey licences. According to the terms of these licences land owners are allowed to receive the raw survey data within 14 days. NG consistently refused our requests for these results.This would have led to less design issues going forward. The only opportunity to speak directly was at the Consultation events. We were always told at these events that our horses were a special case and NG were aware of the problem. We were led to believe that provision would be in place for our horses wellbeing. We were also promised electric gates for our crossing points. At present these seem hollow promises. We made representation at every consultation event, any suggested route of design change was difficult to find as it was lost in the general documents available on line. At every opportunity we proposed options to allow our horses to remain in their existing paddock and field. We also highlighted the excess harm the haul road planned routeing would have in the need to remove around 100m of hedge and deep ditch. This could be minimised by a small western change to the route. NG avoided any direct engagement and therefore localised design accommodation was avoided. Both of my neighbours have indicated that they have proposed slight movement of pylons TB94 and TB100 to the West. If there had been a coordinated approach we could all have had our requests accommodated. Route Design The route should have been designed to minimise the harm. Soils NG still make the claim that the routeing and siting selection process confirms that there are no other suitable soils sites of poorer agricultural quality that can accommodate the project. They highlight that they looked at the impact on agricultural land and sought to minimise impacts on the BMV land. This cannot be true as, according to NG, soils were scoped out in the design and routeing process. Proximity to our house. The route could have been designed to allow a greater distance from our house. Crossing Horse paddock During the design process there was a lack of consideration the construction would have on horses. When pylon TB98 did get moved 80m its construction area footprint was still within the paddock and the construction noise still in a position that the horses would not tolerate, this is also the case with the haul road which runs alongside the paddock.	See Appendix A: AP 225 - John Stacey

						This re positioning of TB98 has in fact been counterproductive as its resighting has still meant the horses will need moving and the pylon is now not near the field edge. Harm from the haul road. The haul road that runs to the west of TB97 has been designed to run diagonally across our 4m deep ditch. This has meant that around 100m of hedge will also be removed. The ditch has seven field drains running into it, these will need to be kept open and running and the ditch will need to be reinstated. UKPN works In July 2025 we found out that NG had changed the plans and decided to re-route the existing 11KV OHL through our farm yard. This will cause immense disruption. We have since offered to allow the undergrounding to be rerouted through a grass area around the house which would be considerably cheaper and avoid the considerable disruption the planned route would create. Unfortunately, this is outside the DCO draft order limit so is not possible. If there had been any engagement from NG and UKPN before May 2026, when we first found out the reason for it going through the farm yard, this could have been resolved before the DCO. Some 5 weeks later we are still awaiting further contact from either party. This is not the only issue we have with the OHL rerouting. Over by TB96 there is to be over 300m of undergrounding for the OHL, this OHL that is being removed is not even on our land. Lack of updated maps Looking at the design, firstly it has been and still is difficult to establish what is proposed, the amendments in 2025 were not available on NG's interactive map until the DCO was made. Suds The suds are not all positioned to allow natural drainage from the haul roads. Construction Compound. The plan is that there will be a construction compound on our land alongside the B1018, the bellmouth into the compound will be problematic as the field is around a metre higher than the road and the compound has been placed where the road has a gradual curve. I have been told that NG will not lower the field level, but as a landowner we need to see a design as eventually we will need to bring the area back into crop production. Permanent Access These tend to run within the fields and do not make use of the headlands. This access needs to be agreed mutually and not just imposed upon us from the NG desktop design. Draft Order Limit The width of the draft order is excessive. We are uncertain what is planned within this area. Will we be able to farm the land up to the start of construction and what will the area of land that will not be available to be cropped be and how long for? Inadequate Consideration of Alternatives. Several alternatives have not been properly considered. TS Conductors These would mean potential for a reduced number of pylons. Offshore. After a lot of pressure NG made a token attempt at looking at an offshore option. They did not look at an offshore hub but just a direct route, this was for three 2MW DC Cables. In fact, as it was DC, two cables would have been sufficient as found in the Eastern Green Link 3 & 4 Strategic Optioneering Report 2024 HVDC Undergrounding. This could be considerably less harmful and would only need 4MW as DC is more efficient. Project costs. The 10% contingency is considerably low and would cover the injurious compensation which seems impossible to have benchmarked when the level of design is at such a preliminary stage. Farm safety. Clearance of farm machinery According to NG, line safety clearance for farm machinery is expected to be implemented by third parties whenever they are near overhead lines. NG state that agricultural vehicles, such as combine harvesters will be safe to pass underneath. Across our farm the indicated line will be below 10m at its lowest point. According to the Energy Network Association Passing safety clearance is for harvesting is 4.3m for 400 Kv, at present the largest New Holland Combine at its highest point is 6.56m. This will create unacceptable safety concerns for farmers. Payment rates NG are using their Land Rights Strategy for payments for pylons, these payments are too low and NG are relying on injurious compensation. EirGrid are offering an upfront payment of €43,000 for pylons and €140 per metre for power lines. In addition, there is a minimum payment of €8,000, and landowners may seek further compensation within six years. Current negotiations We met FG in February and discussed UKPN Undergrounding, Siting of Pylons/Haul roads, Horse Paddocks, Construction Impacts, Footpath Diversions, Trees, Haul Roads and Badger Setts. We then had a meeting with NG and FG on 12TH May. We had expected at this meeting to receive answers to the points we raised at the February meeting but NG couldn't tell us anything. Do NG have plans or are they just not willing to share them with us? We are uncertain on their plans for our horses, as if the plan goes ahead they will need permanently relocating well ahead of any works, which will be a considerable cost that we cannot afford and cannot be burdened with. Conclusion We are not going accept a voluntary agreement as NG, over the four years, have not sufficiently engaged with us and have withheld information. They have not taken on board our suggestions even though we indicated that we would not voluntarily agree if they did not resolve the issue with the horses and move the pylon away from their paddock. The design at its infancy should have considered a higher degree of embedded mitigation for noise even it had been further from our residence.	

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights? Richard Long Group Limited	10184	Yes	All of the above	All	National Grid	The objections to the interference with land rights are summarized as follows •The Applicant's failure to consider alternatives for their project, less intrusive options exist •The land is not necessary for the scheme, alternative designs or routes could avoid acquisition of these rights. •The private loss and human rights impact due to the proposed project outweighs the public benefit with significant harm to landowners, business and livelihoods, in this case involving a solar farm •Pre-application-there has been insufficient detailed preparatory work by the Applicant prior to the DCO application both in consulting landowners and considering alternative routes and design changes which have been put forward •Inadequate engagement or negotiation-we have been trying to address with the Applicant the issue of the proposed power lines crossing the solar site for nearly 3 years with little feedback from the Applicant •Lack of compelling case in the public interest-the Applicant has not demonstrated a sufficiently strong justification for the project •Compensation issues-we have concerns about whether affected parties will receive fair and timely compensation •Heads of Terms-despite negotiations with the Applicant no heads of terms for a voluntary agreement are agreed, again due to a lack of engagement from the Applicant	See Appendix A: AP 226 - Richard Long Group Limited
Linda Fisher	1169	Yes	All of the above	D-6/3	Both	am writing to you because my land is directly affected by the proposed Norwich to Tilbury Grid Upgrade Scheme, with our comments for the statutory consultation in relation to Norwich to Tilbury Grid Upgrade. Property description My property comprises a detached cottage with gardens and additional, connected, land containing a reservoir. The property is located on Fossetts Lane in the village of Fordham in Essex. The land and reservoir, serve a very important role in my family life, providing a safe recreation and amenity area for family and friends. My property is not a commercial horticultural or agricultural property, and therefore differs from the majority of properties directly affected by the scheme, which are predominantly, traditional agricultural use. A Nationally Significant Infrastructure Project (NSIP) has significant impact on all types of property that are directly affected by it, but often greater impact is felt on residential properties, such as mine. In most cases, residential occupiers are unfamiliar with any form of compulsory purchase and the direct impact this can have. As a result, it is even more important that detailed information is provided to them to enable them to understand the impacts, and to attempt to allay natural fears and heightened anxiety. Land Plans The land plans showing the scheme requirements provided to me in Fisher Germans letter date 16th June 2025 are, for a lay-person unfamiliar with such infrastructure schemes, very difficult to interpret. Two plans were provided with the letter. One shows the scheme requirements related to one HM Land Registry Title Number at small scale and the other at a larger scale. From the Legend accompanying the plans it is not possible to ascertain with any certainty what the areas are required for. The plans show a portion of the southeast bank of the reservoir shaded green. The Legend states that this is "Zone for permanent assets (NGET)". No further detail is provided. In an attempt to gain clarity, the Norwich to Tilbury interactive map accessed at https://norwichtotilburymap.nationalgrid.com/ was referred to. This shows similar to the plans issued, and with no further detail regarding the works. As may be anticipated, the thought that part of my land is to be acquired by National Grid for any purpose is incredibly unnerving and has created a massive amount of stress and anxiety. The additional stress from the lack of information on the proposed use of the land has only served to make matters even worse.	See Appendix A: AP 227 - Linda Fisher
						Landowner Engagement Over the past two years I, together with my land agents have engaged with your land agents Fisher German, and at every consultation stage useful feedback has been provided on National Grids proposed scheme. Additional detailed information and clarity has been requested from Fisher German / National Grid regarding the potential impacts of the scheme on my property. At each meeting, the said requested additional information has not been available for Fisher German to share with us and as a result, despite the two years of engagement, i still have very little significant specific information on how the scheme will actually affect my property. Although engagement meetings have been provided to me, as stated, the distinct lack of significant content and details provided at those meetings has not only NOT helped allay my fears, but has actually increased my concerns. I am retired and enjoy the amenity that the reservoir provides to my property and the recreational opportunities it provides to my wider family. Despite having entered into early engagement meetings, the position that I find myself in now with regards the scheme, through no fault of my own, is taking a considerable toll on my life and my wider family's life. The complete lack of significant information being provided from National Grid, has put me in an intolerable position.	
Chris Smith	14516	Yes	All of the above	All, but C-15/24, C-17/23, C-17/39, C-17/107 and C-17/112 in particular	Both	The interference with our land in Little Bromley is only being considered because of the plan to build a substation or connecting point at Ardleigh. I do not believe that a proper, evidence based case has been made for the alleged need to construct a sub station at Ardleigh. It is not needed for the Norwich to Tilbury project itself, and there are better ways to connect Five Estuaries and North Falls to the grid. The requirements of section 122 (2) are not therefore satisfied because the interference with our rights is not required for the Norwich to Tilbury project and is not incidental to it. In particular the Norwich to Tilbury project could and should be completed without coming anywhere near Ardleigh or Little Bromley.	See Appendix A: AP 228 - Chris Smith

John Fisher	6961	Yes	All of the above	D-6/3	Both	We have been to the various public exhibitions to view the plans but pylons were the only option on the table, no consideration given to the alternatives, eg underground or offshore. Surely all options should have been available so the public could have a balanced view. NG have not taken into account the consequences of their actions will alter the character and visually pollute a wide corridor of East Anglian countryside either side of the route. The cables will be a major hazard to migrating birds, the footings will eat up many acres of productive farmland. We are privileged to live in a cottage in FORDHAM that has enjoyed unblemished views over the beautiful Colne Valley for over 500 years. The woodland trust recently planted 1000's of trees around the village and visitors come from all around the country to enjoy them but if the preferred route goes ahead not only will our cottage will be SURROUNDED by pylons, the trees will be a casualty, who would like to picnic under a pylon! Thankfully there is a lot of opposition against these plans, with the alternatives of underground and the preferred option of offshore pipelines suggested. National Grid should consider undergrounding between TB42 and TB50 in light of the special character of the Fordham Valley and the disproportionate impact pylons there would bring. 6) There is significant archaeology in the area between TB46 and TB52. Damage to these sites is unacceptable and careful routing will be required to avoid entirely, regardless of whether pylons or underground cable are employed. The woodlands at Fiddlers Farm / Fiddlers Woods are ancient and Fiddlers Farm is a Listed Building, ruling out a more easterly route. Thank you for considering my comments.	See Appendix A: AP 230 - John Fisher
Robert Gray Farming Contractors Ltd	10555	Yes	All of the above	All	National Grid	Our objections are as follows: •National Grids failure to consider alternatives for their project, there are less intrusive options •The land is not necessary for the scheme, alternative routes could avoid acquisition of these rights. •The private loss and human rights impact due to the proposed project outweighs the public benefit with significant harm to landowners, business and livelihoods. •Pre-application-there has been insufficient detailed preparatory work by National Grid prior to the DCO application both in consulting landowners and considering alternative routes and design changes which have been put forward •Inadequate engagement or negotiation-we have been trying to address with National Grid the issue of the proposed power lines crossing our land with little feedback •Lack of compelling case in the public interest-National Grid has not demonstrated a sufficiently strong justification for the project •Compensation issues-we have concerns about whether affected parties will receive a fair compensation •Heads of Terms-despite negotiations with the National Grid no heads of terms for a voluntary agreement are agreed, again due to a lack of engagement	See Appendix A: AP 231 - Robert Gray Farming Contractors Ltd
ARU Writtle (Writtle University College / Anglia Ruskin University)	7116 28443	Yes	All of the above	F-8/9, F-8/15, F-8/16, F-8/17, F-8/19, F-8/20, F-8/21, F-8/23, F-8/24, F-8/25, F-8/26, F-8/27, F-8/29, F-8/30, F-8/32, F-8/33, F-8/36, F-8/37, F-8/42, & F-8/47	Both	ARU Writtle (F1201D065, NTOT-AFP2247) is described in the Lands Right Tracker and the Schedule of Affected Persons as "Writtle University College" (PIL 7116) and "Anglia Ruskin University Higher Education Corporation" (PIL 28443). ARU Writtle's objection centres on the legal requirement that compulsory acquisition powers in a Development Consent Order (DCO) must be necessary, justified, and supported by a compelling public interest case, and that National Grid Electricity Transmission (NGET) has failed to meet those standards in relation to ARU Writtle's land and most notably Plot 8/42. The objection relies on the statutory tests in particularly the emphasis on necessity, proportionality, and consideration of alternatives. NGET have failed to satisfy Section 122(2) and 123 PA 2008 through lack of necessity or requirement as the purpose of CA Plot 8/42 can be achieved through powers already included in the draft DCO, TRO's and road closures. Failure in relation to Section 122(3) that there is no compelling case in the public interest as the scheme can proceed without interfering with ARU Writtle's land rights and the acquisition is therefore disproportionate and unnecessary. The Application creates a logical contradiction; if traffic is excluded, scaffolding access becomes unnecessary and if alternative access exists, additional rights are duplicative. The statutory tests cannot be satisfied. In relation to the Government Guidance ARU Writtle argues that the guidance requires a clear justification that land is needed for the scheme, but that the presence of alternative access routes and powers shows no genuine need. There is a lack of proper consideration of alternatives. The guidance stresses that interference with private rights must be no more than necessary but acquiring Plot 8/42 exceeds what is required, especially where the objective can be achieved via less intrusive means and the impact of access and use of Plot 8/42 is so impactful on ARU Writtle. Severe disruption to a nationally significant education and research facility The proposed overhead line and construction access directly affect ARU Writtle's Equine Unit, which underpins teaching, research, industry collaboration and student placements across agriculture, animal sciences and equine studies. Unacceptable health and safety risks Construction traffic and works would pass through the Equine Centre, close to stables, teaching rooms, parking areas and riding arenas, creating serious risks to students (including under 18s), staff and horses, and obstructing emergency access and evacuation routes. Incompatibility with equine welfare and animal safety Horses are highly sensitive to noise, machinery, vibration and EMFs. Overhead lines above grazing paddocks would render fields unusable, increase stress and health risks, force prolonged stabling and compromise animal welfare. Loss of essential grazing and long term operational constraints Construction and reinstatement would lead to extended loss of safe equine grazing, with paddocks taking 12+ months to become suitable again, causing enduring disruption beyond the construction phase.	See Appendix A: AP 232 - ARU Writtle (Writtle University College / Anglia Ruskin University)

						Irreplaceable educational harm Practical, hands on learning is fundamental to 17 FE, undergraduate and postgraduate programmes. Current proposals would prevent safe delivery of assessments, clinical exams and required contact hours, risking non compliance with regulatory and accreditation requirements. Significant financial and reputational damage Expected losses include reduced tuition income, additional stabling and veterinary costs, disruption to loan horse schemes, cancellation of external clinics and competitions, and long term reputational harm affecting recruitment, retention and partnerships. Increased traffic and access pressures Construction traffic would intensify pressures on narrow single-track routes (including Cow Watering Lane), exacerbating congestion, safety risks and disruption at peak times. Environmental and ecological impacts The proposed acquisition would result in avoidable disturbance to undeveloped paddock land that is not being mitigated. It will introduce additional ground disturbance, soil compaction, loss of vegetation, fragmentation of paddock habitats and dangers to horses and humans introducing cumulative long term environmental and ecological impacts and effects. Overall The compulsory acquisition is unnecessary and is not the least intrusive option. The Secretary of State cannot lawfully include Plot 8/42 in the DCO because, section 122(2) is not satisfied (no necessity), and section 122(3) is not satisfied (no compelling case). Consent should only be granted for development that is "required". Plot 8/42 is not "required", so it must be excluded. This is set out in full in ARU Writtle's written submissions REP1-200, REP3-117, REP4-348.	
Robert Gray	14200	Yes	All of the above	All	Both	Our Objections are as follows: •National Grids failure to consider alternatives for their project, there are less intrusive options •The land is not necessary for the scheme, alternative routes could avoid acquisition of these rights. •The private loss and human rights impact due to the proposed project outweighs the public benefit with significant harm to landowners, business and livelihoods. •Pre-application-there has been insufficient detailed preparatory work by National Grid prior to the DCO application both in consulting landowners and considering alternative routes and design changes which have been put forward •Inadequate engagement or negotiation-we have been trying to address with National Grid the issue of the proposed power lines crossing our land with little feedback •Lack of compelling case in the public interest-National Grid has not demonstrated a sufficiently strong justification for the project •Compensation issues-we have concerns about whether affected parties will receive a fair compensation •Heads of Terms-despite negotiations with the National Grid no heads of terms for a voluntary agreement are agreed, again due to a lack of engagement	See Appendix A: AP 233 - Robert Gray
Deborah Smith / Andrew Donald Smith	3398	Yes	All of the above	All	Both	I do not give any permission relating to my property relating to this scheme. The scheme is environmentally detrimental, personally financially detrimental. This is my land. I am already disadvantaged by this scheme so I am totally against it in every way. I do not have any permissions.	See Appendix A: AP 234 - Deborah Smith / Andrew Donald Smith
Richard Long Limited	10556	Yes	Compulsory Acquisition of rights, Temporary possession	All	National Grid	The objections to the interference with land rights are summarized as follows •The Applicant's failure to consider alternatives for their project, less intrusive options exist •The land is not necessary for the scheme, alternative designs or routes could avoid acquisition of these rights. •The private loss and human rights impact due to the proposed project outweighs the public benefit with significant harm to landowners, business and livelihoods. •Pre-application-there has been insufficient detailed preparatory work by the Applicant prior to the DCO application both in consulting landowners and considering alternative routes and design changes which have been put forward •Inadequate engagement or negotiation-we have been trying to address with the Applicant the issue of the proposed power lines crossing the land with little feedback from the Applicant •Lack of compelling case in the public interest-the Applicant has not demonstrated a sufficiently strong justification for the project •Compensation issues-we have concerns about whether affected parties will receive fair and timely compensation •Heads of Terms-despite negotiations with the Applicant no heads of terms for a voluntary agreement are agreed, again due to a lack of engagement from the Applicant	See Appendix A: AP 235 - Richard Long Limited

Joe Hearnden, BTF Partnership on behalf of the Cole Family	The Cole Family (multiple references, see RR-3629 for list of Aps)	Yes	All of the above	All	Both	The Applicant has failed to demonstrate that the compulsory acquisition of the Affected Person's specific land or rights is strictly necessary to deliver the scheme. The inclusion of the Affected Person's property appears to be driven by a desire for flexibility or contingency rather than a clearly evidenced requirement. The Application lacks justification as to why the Affected Person's land is essential, nor any evidence that the scheme could not proceed with a reduced land take or alternative configuration. The extent of the rights sought is disproportionate to the needs of the Scheme. The Applicant appears to be seeking permanent rights or outright acquisition in circumstances where temporary access or limited rights would be sufficient. The proposals do not demonstrate that impacts on the Affected Person's property have been minimised and instead impose excessive interference with the Affected Person's use and enjoyment of the land. This includes long-term constraints on use, potential loss of value, and disruption to access or operations. Such interference fails to strike a fair balance between private rights and public benefit. There has been an inadequate consideration of reasonable alternatives. The Applicant has not meaningfully explored different route alignments, layouts, or design refinements that could avoid or reduce impacts on the Affected Person's property. Without a transparent and reasoned assessment of alternatives, it cannot be concluded that the current proposals represent the least intrusive solution or the which is most effective at delivering on the public need. This omission significantly weakens the justification for a Development Consent Order. There are concerns regarding the deliverability of the scheme. Uncertainty remains where Objectors often point to a lack of secured funding, necessary consents, and the realism of the proposed programme. Where delivery is not clearly secured, it is inappropriate to authorise compulsory acquisition powers that may result in land being taken or rights being restricted without the Scheme proceeding as anticipated. These uncertainties undermine the claimed public interest case. The Applicant has not demonstrated that it has taken reasonable steps to acquire the required land or rights by agreement. Engagement to date has been limited and has not amounted to meaningful negotiation. The Applicant has proposed Heads of Terms for the rights and interests being sought, but are unable or unwilling to alter or amend the terms sufficiently for parties to resolve disputes or reach points of common ground. In particular, there has been insufficient effort to reduce the extent of acquisition or to explore less intrusive options through discussion. The Affected Person does not believe that the Applicant has reached the required threshold to justify the use of compulsory acquisition powers as a measure of last resort. There are concerns regarding compliance with procedural and legal requirements. The justification for the inclusion of the Affected Person's land, and for the specific rights sought, has not been clearly or adequately articulated. To the extent that the Order seeks powers beyond what is necessary or lacks sufficient precision, it risks exceeding statutory limits. The panel of Examining Inspectors must be satisfied that all legal requirements are fully and properly met, which does not appear to be the case. The compensation framework concerning the full extent of impacts, including injurious affection, disturbance, and long-term restrictions on the use of the Affected Person's property is inadequate or fails to strike a fair balance under Human Rights legislation. While compensation cannot justify unnecessary acquisition, the framework must still ensure affected parties are treated fairly, which has not been convincingly demonstrated.	See Appendix A: AP 236 - Joe Hearnden, BTF Partnership on behalf of the Cole Family
Joe Hearnden, BTF Partnership on behalf of the Brice Family	The Brice Family (multiple references, see RR-3626 for list of Aps)	Yes	All of the above	all	Both	The Applicant has failed to demonstrate that the compulsory acquisition of the Affected Person's specific land or rights is strictly necessary to deliver the scheme. The inclusion of the Affected Person's property appears to be driven by a desire for flexibility or contingency rather than a clearly evidenced requirement. The Application lacks justification as to why the Affected Person's land is essential, nor any evidence that the scheme could not proceed with a reduced land take or alternative configuration. The extent of the rights sought is disproportionate to the needs of the Scheme. The Applicant appears to be seeking permanent rights or outright acquisition in circumstances where temporary access or limited rights would be sufficient. The proposals do not demonstrate that impacts on the Affected Person's property have been minimised and instead impose excessive interference with the Affected Person's use and enjoyment of the land. This includes long-term constraints on use, potential loss of value, and disruption to access or operations. Such interference fails to strike a fair balance between private rights and public benefit. There has been an inadequate consideration of reasonable alternatives. The Applicant has not meaningfully explored different route alignments, layouts, or design refinements that could avoid or reduce impacts on the Affected Person's property. Without a transparent and reasoned assessment of alternatives, it cannot be concluded that the current proposals represent the least intrusive solution or the which is most effective at delivering on the public need. This omission significantly weakens the justification for a Development Consent Order. There are concerns regarding the deliverability of the scheme. Uncertainty remains where Objectors often point to a lack of secured funding, necessary consents, and the realism of the proposed programme. Where delivery is not clearly secured, it is inappropriate to authorise compulsory acquisition powers that may result in land being taken or rights being restricted without the Scheme proceeding as anticipated. These uncertainties undermine the claimed public interest case. The Applicant has not demonstrated that it has taken reasonable steps to acquire the required land or rights by agreement. Engagement to date has been limited and has not amounted to meaningful negotiation. The Applicant has proposed Heads of Terms for the rights and interests being sought, but are unable or unwilling to alter or amend the terms sufficiently for parties to resolve disputes or reach points of common ground. In particular, there has been insufficient effort to reduce the extent of acquisition or to explore less intrusive options through discussion. The Affected Person does not believe that the Applicant has reached the required threshold to justify the use of compulsory acquisition powers as a measure of last resort. There are concerns regarding compliance with procedural and legal requirements. The justification for the inclusion of the Affected Person's land, and for the specific rights sought, has not been clearly or adequately articulated. To the extent that the Order seeks powers beyond what is necessary or lacks sufficient precision, it risks exceeding statutory limits. The panel of Examining Inspectors must be satisfied that all legal requirements are fully and properly met, which does not appear to be the case. The compensation framework concerning the full extent of impacts, including injurious affection, disturbance, and long-term restrictions on the use of the Affected Person's property is inadequate or fails to strike a fair balance under Human Rights legislation. While compensation cannot justify unnecessary acquisition, the framework must still ensure affected parties are treated fairly, which has not been convincingly demonstrated.	See Appendix A: AP 237 - Joe Hearnden, BTF Partnership on behalf of the Brice Family

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
David William Salmon	5741	Yes	All of the above	All	Both	We object to the NG Norwich to Tilbury pylon route and especially its lack of engagement with ourselves over the impacts to our business and land holding during the so called 'consultation and engagement meetings'. In particular we object to the following points:- •Lack of meaningful engagement and information sharing, in particular information regarding our irrigation reservoir with active fishing club in Ardleigh (Drawing AENC-TQST-LAN-DWG-0002 parcel ref 17/39) Initially ignoring our feedback regarding our angling club and then not answering questions about the future of angling on the lake, which we now understand will be prohibited completely. •Lack of meaningful engagement regarding the permanent private access road- we have had to feedback on designs at meetings where information is so lacking that our response has been limited. Even with the 2 rounds of variations the engagement was very one sided resulting in each variation being more detrimental to our business than the previous iteration. We provided multiple rounds of feedback and if only the designers consulted with us in a 2 way dialogue a design which sterilises less of our land and has a smaller impact could have been found. As it stands we are still un-clear of how we will access our field (15/52 on drawing AENC-TQST-LAN-DWG-0002) as our only access route has been severed by the road and the latest route sterilises our land in a long 30m wide slither between road and our boundary. •Lack of information regarding the use of the permanent private access road and the shared temporary wind farm substation construction road. When will they be used and for what? There is no meaningful information on how NG would 'share' the wind farm road, We cannot negotiate or provide feedback if there is no information. They have included all the option routes on the wind farm road and cannot provide clarity of what they intend to do. •Cumulative impact of wind farms and NG on our farmland and residential house at Hall Farm is unacceptable. With 2 haul roads and multiple companies/operators involved the resulting un-certainty and direct impact of when/if projects go ahead and the duration of the works will have a significant impact on the farm business, environment and enjoyment of our house(noise/dust/view etc) •Insufficient negotiation on the HOT's on all general points and especially where the substation haul roads are involved, as information is not available. In conclusion we feel the lack of negotiation and information being shared is not acceptable and require progress on all of the above points before we would be in agreement with the CA or TP of land rights by NG.	See Appendix A: AP 238 - David William Salmon
Robert Moore	4235	Yes	All of the above	All	Both	I object to the proposed project for the following reasons: 1)Failure to properly consider alternatives to pylons The applicant has failed to adequately consider alternatives to the use of pylons for this project. Less intrusive options appear to exist, but these have not been properly assessed, explained, or justified. 2)Failure to consider less harmful alternatives The proposal does not demonstrate that the least damaging or least intrusive option has been selected. The applicant has not shown that alternative routes, technologies, mitigation measures, or methods of delivery have been fully explored in order to reduce the impact on affected landowners, businesses, homes, and livelihoods. 3)Disproportionate private loss and human rights impact The proposed project would cause very significant private loss and would have a serious impact on the rights and livelihoods of affected landowners and businesses. In our case, the proposed power lines would cross our farm and would cause substantial harm to our business, including the destruction of a wedding venue, which is the small farm's main source of income. This impact is severe, personal, and disproportionate. The harm to land, businesses, income, and way of life outweighs any public benefit that the applicant claims would arise from the project. 4)Lack of a compelling case in the public interest The applicant has failed to demonstrate a compelling case in the public interest for this project in its proposed form. There has been insufficient justification for why the project must proceed using pylons, why this route has been selected, and why less intrusive alternatives have not been pursued. 5)Insufficient pre-application work and inadequate consultation Prior to submitting the DCO application, the applicant failed to carry out sufficient detailed preparatory work, particularly in relation to consultation and engagement with affected landowners. 6)We have been trying to address the issue of the proposed power lines crossing our farm with the applicant for three years. Despite this, we have received limited feedback and there has been no meaningful progress towards resolving our concerns. This demonstrates inadequate engagement, poor communication, and a failure to properly consult with those most directly affected. 7)Inadequate engagement and negotiation The applicant has not engaged with us in a constructive or meaningful way. Given the scale of the impact on our farm and business, we would have expected detailed discussions, proper negotiation, and genuine attempts to reduce or avoid the harm caused. This has not happened. I imagine many other businesses / farms have similar -----	See Appendix A: AP 239 - Robert Moore

Your full name	Person with Interest in Land (PIL) Reference ID (see Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051)	Do you object to the Compulsory Acquisition (CA) or Temporary Possession (TP) of your land or rights over your land or any proposed interference with your existing land rights?	Do you object to CA, TP or both (select all that apply)?	On which plots listed in the Book of Reference (BoR) do you object to the interference of land rights? List each plot (e.g. A-1/1) or if applicable, type 'All'	Do you object to the interference of land rights by National Grid and/ or UK Power Networks?	Please summarise (in no more than 1500 words) the reason(s) for your objection to the interference of your land or rights, with reference to the relevant articles of the Planning Act 2008 (in particular)	Applicants Response
						8)Compensation concerns We have serious concerns about whether affected parties will receive fair, adequate, and timely compensation. The damage to our business and livelihood would be substantial, and to date there has been no communication from the applicant about how losses will be assessed, how compensation will be calculated, and when compensation would be paid. 9)No heads of terms or voluntary agreement No heads of terms or voluntary agreement has been signed. This is due to the lack of meaningful engagement and negotiation by the applicant. The absence of agreed terms further demonstrates that the applicant has not properly addressed the impact of the project on our land and business. For these reasons, I object to the application. I ask that the Examining Authority gives significant weight to the severe impact on our farm, business, livelihood, and property rights, and requires the applicant to properly consider less intrusive alternatives before any consent is granted.	
Parkers Of Leicester Limited	10218		All of the above	All	Both	1. Introduction 1.1. These representations are made on behalf of Parkers of Leicester Limited ("POL") and Parker Strategic Land Limited ("PSL") (together, "our clients") in relation to National Grid Electricity Transmission plc ("National Grid")'s application for a Development Consent Order for the Norwich to Tilbury Project (the "Project"). 1.2. POL owns land within the DCO redline boundary ("POL's Land"), identified under the following Land Plot numbers within the DCO Land Plans – Section E [APP-013]:E-2/116, E-2/117, E-2/119, E-2/120, E-2/121, E-2/123, E-2/124, E-2/125, E-2/126,E-2/127, E-2/128, E-3/1, E-3/2, E-3/3, E-3/4, E-3/5, E-3/8, E-3/9, E-3/10, E-3/11,E-3/12, E-3/15, E-3/23, E-3/27 and E-3/29. 1.3. POL's Land forms part of a wider site of approximately 553 hectares ("the Development Site") being promoted by PSL for residential-led mixed use development comprising up to 6,000 new homes and 40ha of employment land. The Development Site was recently identified by Braintree District Council as a preferred site in the Regulation 18 consultation on the emerging Braintree Local Plan. Our clients confirm that their objection to the interference with their land rights is maintained in its entirety. 2. Summary of Objections 2.1. Our clients' objections were set out in full in their Relevant Representations. They are summarised below. Inadequate Justification for the Extent of the Order Limits and Compulsory Acquisition 2.2. The DCO application allows for Limits of Deviation ("LoD") representing the maximum locational flexibility for permanent infrastructure. On most land plots the LoD are of a standard width. However, on Plots 3/32, 3/31, 3/28, 3/23, and 3/29, the LoD and Order Limits are significantly wider than elsewhere. No adequate justification has been provided for why the Order Limits on POL's Land must be so wide or of such an unusual shape. Seeking powers with significant flexibility, without demonstrating why such flexibility is essential, is contrary to the fundamental principle that compulsory acquisition powers should only be sought over land demonstrably necessary for delivery of the Project. 2.3. These matters are directly relevant to Section 122 of the Planning Act 2008, which requires that compulsory acquisition of land is necessary for the purposes of the authorised development. In the absence of plot-specific justification, the applicant cannot demonstrate that the compulsory acquisition of such extensive rights over POL's Land is necessary. This is further at odds with the Department for Communities and Local Government Guidance, Planning Act 2008: Guidance related to procedures for compulsory acquisition (September 2013) ("the Guidance"), which requires acquiring authorities to demonstrate that land take is the minimum required. 2.4. National Grid has stated it is satisfied that all land interests identified for compulsory acquisition and temporary possession are required. However, the Statement of Reasons provides only generic, high-level justification rather than plot-specific analysis. There is no detailed explanation of why each individual plot is necessary, whether less intrusive alternatives have been considered, or why the extent of land take is proportionate. This falls short of the Guidance. Failure to Demonstrate Compulsory Acquisition as a Last Resort 2.5. The Statement of Reasons fails to demonstrate that compulsory powers are genuinely a last resort as required by the Guidance. National Grid claims its preference is to secure land rights on a voluntary basis, yet the Statement of Reasons provides no evidence of meaningful negotiations with our clients, no detail on offers made or rejected, and no explanation of why voluntary agreement has not been reached. The Guidance requires acquiring authorities to demonstrate reasonable steps to acquire by agreement. The minimal engagement with our clients demonstrates that the applicant has not treated compulsory acquisition as a last resort.	See Appendix A: AP 240 - Parkers Of Leicester Limited

						3. Continuing Inadequacy of Engagement 3.1. The applicant's engagement with our clients has been, and remains, wholly inadequate. Despite the Project having been in planning for a number of years, the applicant has made minimal effort to engage with POL regarding the impact on POL's Land and the Development Site. Our clients have been seeking to engage with National Grid since July 2024 on the potential conflict between the Project and the Development Site. 3.2. Since submitting their Relevant Representations, our clients have continued to seek constructive engagement with National Grid on pylon alignment, mitigation and the interface between the Project and the Development Site. No meaningful progress has been made. National Grid has not engaged substantively with our clients' specific concerns, and no Statement of Common Ground has been entered into. This is in stark contrast to the approach taken towards other affected parties – as demonstrated by the detailed Statement of Common Ground with Blackwater Aggregates (Bradwell Quarry). Our clients are entitled to equivalent engagement and have received none. 3.3. The absence of meaningful engagement further demonstrates that the test under the Guidance – that compulsory acquisition must be a genuine last resort – has not been met. 4. National Grid's Proposed Southward Realignment of the Overhead Line and its Prejudicial Impact on the Development Site 4.1. Our clients wish to draw the Examining Authority's attention to a further development that has arisen during the course of the examination, which materially worsens the position for our clients and reinforces their objection. 4.2. As confirmed in National Grid's Draft Statement of Common Ground with Blackwater Aggregates (Bradwell Quarry) (document reference 8.3.27, Revision B, Deadline 4), the applicant has committed to an alternative route scenario that moves pylons TB085 and TB086 further to the south, with TB084 positioned closer to the Order Limits. The applicant has stated that it has committed to this alternative option and will now progress with it as the preferred scenario. 4.3. This realignment has been made to accommodate the interests of Blackwater Aggregates in relation to the Bradwell Quarry Monks Farm site at Kelvedon, which Blackwater Aggregates seeks to develop for the extraction of sand and gravel. The mineral rights at Monks Farm are owned by Blackwater Aggregates, and the Monks Farm extension is understood to be area A8 (Essex County Council mineral planning department reference site A47). 4.4. The alternative scenario adjusts the overhead line between TB084 and TB087, moving pylons further south within the Order Limits, with the stated purpose of reducing mineral sterilisation within the quarry area. 4.5. Our clients object strongly to this approach for the following reasons. 4.6. First, the southward movement of the overhead line centre line within the Order Limits means that the pylons will have a greater impact on POL's Land and the Development Site, which lies to the south. This directly increases the sterilisation of the Development Site and worsens the interference with our clients' land rights compared to the position as originally proposed. 4.7. Second, the realignment is being made principally to protect the interests of Gent Fairhead & Co Limited and Blackwater Aggregates in respect of emerging mineral interests at Monks Farm, Kelvedon. However, the extraction of sand and gravel at Monks Farm is not yet identified in the Minerals Local Plan (being only an emerging allocation at present) and subject to mineral planning consent being granted. 4.8. This means that the mineral extraction interest at Monks Farm has no formal planning status. Yet, the Development Site was voted by Braintree District Council's Local Plan Sub-Committee on 6 October 2025 to be included in the Regulation 18 consultation on the emerging Braintree Local Plan, which identifies it as a potential strategic site for future growth. ~~Our clients consider this approach to be a double standard that includes the Development Site.~~ 4.9. Third, and critically, the emerging housing allocation on the Development Site should in fact be given greater weight than the mineral interests at Monks Farm, not less. The Development Site represents a critical component of the housing land supply in the emerging Braintree Local Plan. It will be essential to meeting identified local housing need during the plan period. The delivery of up to 5,000 homes on a highly sustainable site adjacent to the railway line and Kelvedon station addresses a national imperative to deliver new housing. National planning policy gives significant weight to housing delivery. 4.10. By contrast, the Monks Farm mineral interests, whilst of local importance, carries no greater planning status than the Development Site. National Grid's decision to prefer the mineral interest over the housing allocation interest, in a manner that increases the interference with our clients' land rights, is wrong in principle and unjustified on the evidence. It represents the same double standard that our clients have previously objected to: the applicant applies a double standard by providing detailed analysis and mitigation for some emerging allocations whilst either ignoring or, in this case, actively prejudicing others. 4.11. Our clients therefore call upon the Examining Authority to scrutinise National Grid's approach to this realignment as part of its consideration of whether there is a compelling case in the public interest for the interference with our clients' land rights under Section 122 of the Planning Act 2008, and to give proper and proportionate weight to the significance of the Development Site as an emerging allocation for a major strategic housing development.	
Arqiva Limited	10301					I write in response to your letter of 1st June requesting that Arqiva Limited complete the electronic form provided before deadline 5a and ongoing discussions between Arqvia Limited and representatives of the developer in respect of the matters raised in my objection letter of 11th May 2026 (REP4-347). I wish to update the Planning Inspectorate that Arqiva's Technical Safeguarding Team has now discussed their concerns with representatives from the Norwich to Tilbury Project. Arqiva are expecting the developer to consider how the project impacts their network and suggest potential ways in which impacts can be mitigated. Subject to the conclusion of this discussion, it is the intention that a Statement of Common Ground is provided to the Examination before Deadline 7 (21st July). I would be grateful if you could pass this update to the relevant examining Planning Inspector and I anticipate providing a further update in the coming days.	See Appendix A: AP 241 - Arqiva Limited
Susan Wardale	8927	Yes	Compulsory Acquisition of land, Compulsory Acquisition of rights	A-4/67	Both	Whole scheme should be underground Alternatives have not been considered Less intrusive options exist Viability of the project There has been inadequate engagement or negotiation	See Appendix A: AP 242 - Susan Wardale

Please summarise (in no more than 1500 words) the reason(s) for your objection

The proposed terms provide wide ranging rights and powers to NG, and impose significant restrictions on our use of our land, both during the option period and into perpetuity.

When discussing the land use with Fisher German LLP, they indicated that NG does not intend to construct anything on our land and the proposed agreement is to enable temporary access to facilitate the construction of the proposed power line. They also indicated that this access probably would not be needed but is being sought as a precautionary measure.

The area of our land is only one acre. NG seeks rights over two tranches of land, one in the middle and one at the Eastern end of our land, this would significantly reduce the useable area of our land. Granting NG such rights would be a blight on our land that renders it practically unusable and unsellable. We believe it would be more appropriate for the terms to reflect the intended purpose

Applicant's Response

Summary of Objection

The AP objects to the proposed agreement because it grants National Grid broad, potentially perpetual rights over the AP's one-acre holding—divided into two tranches—which would materially reduce usable land and render it blighted and effectively unsellable. Fisher German LLP has confirmed NG does not intend permanent construction and is seeking only precautionary temporary access for construction, yet the current draft nevertheless permits permanent towers and oversail rights. The AP would accept narrowly defined temporary access if required, but insists the agreement be amended to remove permanent rights and to reflect the limited, temporary purpose.

Land Rights Sought

The Applicant is seeking to acquire the following permanent rights for National Grid over land in which the AP holds an interest: (a) Class 2 (overhead line infrastructure). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which the AP holds an interest: (a) Class 4 (Overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest.

Consolidated Response

The Applicant has engaged with the AP in respect of the land rights sought. A Teams meeting was held on 2 March 2026. Correspondence was subsequently received from the AP on 31 March 2026 confirming that they were not willing to proceed with the Heads of Terms at that stage. Version 2 of the Heads of Terms ("V2 HoTs") was issued to the AP on 9 April 2026, and that correspondence included an offer of a further meeting to discuss the terms.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
rather than grant wide ranging and unnecessary powers, just in case. In principle, we do not object to granting NG temporary access, if required, to facilitate construction but, we do not believe it appropriate to grant rights allowing towers to be permanently installed on our land, or oversail, when Fisher German LLP say this is not intended. We are prepared to consider terms that better reflect the intended use of our land.	The Applicant notes the AP's concern that certain rights appear broader than the activities currently anticipated on the land. The rights sought over the two areas of the AP's property have been identified through the detailed design process and are required to retain the flexibility necessary to construct, operate and maintain the authorised development. Whilst it is currently anticipated that access over these areas would only be required, if at all, to facilitate construction activities associated with the Project, the Applicant must ensure that all rights that may reasonably be required are secured through the DCO. The fact that a particular right may not ultimately be exercised does not mean it is unnecessary. The Applicant is not currently proposing to install permanent infrastructure on the AP's land, however the rights sought reflect the Project's operational requirements and provide the level of flexibility reasonably required for the delivery, operation and maintenance of the authorised development. The Applicant does not consider that the acquisition of the proposed rights would render the holding unusable or unsaleable and will continue to discuss the scope and exercise of the rights sought through ongoing negotiations with the AP. A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land"

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

(MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

2. AP 2 - Janet Lesley Masterson

2.1 Person with Interest in Land (PIL) Reference ID: 4757

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Because this is MY land, my property.	Summary of Objection The AP has summarised their reasons for objection in the following terms: "Because this is MY land, my property." Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 5 (access). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant has engaged with the AP over an extended period. Version 1 of the Heads of Terms ("V1 HoTs") was issued to the AP in October 2025. V2 HoTs were issued on 2 April 2026, which included an offer of a meeting to discuss the terms. A door knock was carried out at the AP's property on 16 June 2026. To date, the Applicant notes that the AP has not engaged with the land rights negotiation process. In respect of the specific plots of land in which this AP holds an interest, the Applicant can confirm the following. Affected plot E-5/117 refers to a section of public highway which the Applicant is seeking temporary rights over to apply a visibility splay to ensure safe design of the cross over bellmouths for the haul road. a The Applicant is aware of a discrepancy between the Land Registry title plan, the Ordnance Survey mapping and the adopted highway boundary. It appears that the AP may have inadvertently become an affected person in relation to certain plots as a result of this discrepancy, and the Applicant has no plan to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

access the AP's private land in this location. Where existing hedgerows or trees impact on the proposed visibility splay, these will be cut back or removed in order to provide compliant and safe visibility at the crossover. Affected Plot E-5/120 refers to an area needed to provide the Applicant permanent access rights to maintain the asset. The extent of Order Limits for this access cross over a corner of the AP's garden, the Applicant confirms that this is an error. The Applicant's intention is for that plot to be redesignated as Class 8 ("white land"), meaning no powers of compulsory acquisition or temporary possession will be sought over it. The Applicant will not seek to take any part of the AP's garden for access purposes.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

3. AP 3 - Frances Williams

3.1 Person with Interest in Land (PIL) Reference ID: 8663

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Summary of Objection No written reasons for objection have been provided by the AP . Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), (d) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response The Applicant has engaged with the AP in respect of the land rights sought. V2 HoTs were issued to the AP on 26 March 2026, which included an offer of a meeting to discuss the terms. A telephone call was held with the AP on 11 May 2026. The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on 4 June 2026, at which land rights and Heads of Terms matters were discussed. The Applicant remains committed to continuing to engage with the AP and their representatives with a view to reaching a voluntary agreement.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project.

4. AP 4 - Catherine Judith Chamaud (as director of Westlands Farm Developments Ltd)

4.1 Person with Interest in Land (PIL) Reference ID: 15364

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Failure of NG and UKPN to recognise the impact of their proposals on the proposed residential development at Lynton, and the lack of any meaningful engagement with the land owner and developer, to resolve technical and design issues in a way that is commercially viable to all parties.	Summary of Objection The AP has summarised their reasons for objection as follows: a failure of National Grid and UK Power Networks to recognise the impact of the Project on a proposed residential development at Lynton, and a lack of meaningful engagement to resolve the associated technical and design issues. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for both National Grid and UKPN in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant wishes to address the AP's concern regarding the level of engagement. In respect of the land rights currently sought by the Applicant, the Applicant confirms that no Heads of Terms have been issued by the Applicant to this AP in relation to National Grid's rights, as the affected plots relate solely to UKPN cable mitigation. A Teams meeting was held with the AP on 8 May 2026. A further joint Teams meeting was held on 4 June 2026 with Fisher German, National Grid and UKPN together. The AP has declined to grant a survey

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

licence, which has had implications for the progress of directional drill assessments. Alternative cable routes have been provided to the AP for consideration, and the AP's proposed development plan has been provided to UKPN. UKPN is currently seeking a 10-metre cable easement, and further discussions on the cable route and the overlay with the AP's development proposals are ongoing. The Applicant is committed to minimising impacts on the AP's proposed development where practicable.

In relation to UKPN's position, UK Power Networks held a meeting with the affected party jointly with National Grid and Fisher German on the 4th June to review the proposals for the identified land parcels. The landowner has requested that UK Power Networks consider alternative routing for the proposed 132kV cable. UK Power Networks are currently reviewing these proposals, however, note that all three proposals fall outside of the red line boundary for the Norwich to Tilbury scheme. UK Power Networks will continue to work with the affected party to minimise impacts as far as practicable, and reach a voluntary agreement where possible.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land"

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

(MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

5. AP 5 - Nicholas Dent

5.1 Person with Interest in Land (PIL) Reference ID: 5156

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I don't want my land destroyed, hedges being removed and trees. don't want the disruption and I will have land impossible to farm and I don't want bullying by ng	Summary of Objection The AP has summarised their reasons for objection as follows: the AP objected to the proposed works, citing the disruption, destruction of associated vegetation and what they perceive as bullying behaviour. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation, Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), (d) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant has engaged extensively with the AP in respect of the land rights sought and the AP's concerns regarding impacts on the land and farming operations. A site meeting was held with Nicholas Dent at his property on 21 January 2026, at which mitigation measures were discussed in detail, including in relation to hedgerows. The AP's concerns were relayed to National Grid Electricity Transmission following that meeting. A further meeting was held with the AP's professional representative, Richard Prentice, on 26 May 2026, at which Heads of Terms plan amendments and a potential reduction in the land area to be included within the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Order Limits were discussed. The Applicant remains committed to continuing to engage with the AP and their representatives with a view to minimising impacts on the holding and reaching a voluntary agreement.

In respect of the AP's concerns regarding the removal of hedgerows and trees, the Applicant can confirm the design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation in line with the mitigation hierarchy. **6.8 Environmental Statement Chapter 8 - Ecology and Biodiversity [Revision C]** assesses the effects on important ecological receptors. As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys have been undertaken over the 2022–2025 period, the findings of which have informed the design and approach to mitigation. **7.4 Outline Landscape and Ecological Management Plan [Revision G]** and **7.2 Outline Code of Construction Practice [Revision G]** contain a list of relevant good practice measures to avoid or reduce impacts on protected species and additional mitigation measures, as appropriate. For example, where it is necessary to remove hedgerows and trees, replacement planting would be provided. Following the implementation of mitigation, no significant residual effects on ecology receptors have been identified as a result of construction or operation (and maintenance) of the Project. Where it is necessary to remove hedgerows and trees, replacement planting would be provided.

The Applicant can confirm that some plots refer to a section of public highway which the Applicant is seeking temporary rights over to apply a visibility splay to ensure safe design of the cross over bellmouths for the haul road. The Applicant is aware of a discrepancy between the Land Registry title plan, the Ordnance Survey mapping and the adopted highway boundary. It appears that the AP may have inadvertently become an affected person in relation to certain plots as a result of this discrepancy, and the Applicant has no plan to access the AP's private land in this location. Where existing hedgerows or trees impact on the proposed visibility splay, these will be cut back or removed in order to provide compliant and safe visibility at the crossover, however these will be retained where possible..

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have raised concerns regarding the environmental impacts of the Project, including on landscape, ecology, biodiversity, trees and hedgerows. In respect of those concerns, the Applicant refers to its Environmental Statement and the suite of supporting technical documents submitted as part of its application for development consent. The Applicant acknowledges that the Project will have temporary impacts during construction and some limited permanent impacts. However, the Applicant is satisfied that its Environmental Statement has properly and comprehensively assessed those impacts in accordance with the applicable legislative and regulatory requirements, and that appropriate mitigation measures are proposed to reduce impacts to the lowest reasonably practicable level. The Applicant submits that no significant residual adverse effects on the environment remain after mitigation is taken into account.

A number of APs have raised concerns in relation to the impact of the Project on agricultural land and farming businesses. In particular, concerns have been raised regarding: impacts on agricultural operations during construction, including the severance of land holdings and disruption to farm management; the permanent loss of farmland, including Best and Most Versatile ("BMV") agricultural land; and the adequacy of proposed mitigation and compensation measures. The Applicant has had regard to agricultural land impacts throughout its route options appraisal process and the development of the detailed Project design, seeking to minimise impacts on BMV agricultural land in particular. The Applicant acknowledges that the Project will have an impact on the agricultural operations of affected landowners during construction and, to a lesser extent, during operation. The Applicant is committed to working with affected landowners and their representatives to understand and minimise the disruption to agricultural operations where it is reasonably practicable to do so. The Applicant acknowledges that it will not be possible to resolve or agree all mitigation measures until detailed design is more advanced. Compensation for agricultural impacts will be dealt with on a case-by-case basis in accordance with the Compensation Code and, where applicable, the discretionary payments included in the Applicant's Land Rights Strategy. The

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Applicant will give prior warning to landowners before commencing works that may affect livestock, to allow appropriate management arrangements to be put in place.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

A number of APs have raised concerns regarding impacts on the Project during construction, including impacts from haul roads, drainage works, site compounds, construction vehicles, noise, vibration and dust. The Applicant acknowledges that construction of the Project will have temporary adverse impacts on the surrounding area and on individual landowners and occupiers, including those who farm the land. The Applicant's Code of Construction Practice sets out the measures that will be applied by the Applicant and its contractors to manage and mitigate those impacts during construction. The Applicant is committed to working with affected landowners and occupiers to seek to agree construction mitigation and accommodation works on a case-by-case basis, having regard to the particular circumstances of each holding, and will keep affected parties informed of the construction programme as it develops.

6. AP 6 - Martin Baxter

6.1 Person with Interest in Land (PIL) Reference ID: 6777

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I object	Summary of Objection The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), (d) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response The Applicant has engaged with the AP in respect of the land rights sought. V2 HoTs were issued to the AP on 26 March 2026, which included an offer of a meeting to discuss the terms. A telephone call was held with the AP on 11 May 2026. The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on 4 June 2026, at which land rights and Heads of Terms matters were discussed. The Applicant remains

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

committed to continuing to engage with the AP and their representatives with a view to reaching a voluntary agreement.

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project.

7. AP 7 - David Robert Miles, Sheila Miles

7.1 Person with Interest in Land (PIL) Reference ID: 2692, 28376

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The Pylon Line goes through an area of the farm that has been in an Environmental Scheme for a number of years, and all the good things that we have achieved for the environment, bird numbers and wildlife in general, will be decimated	Summary of Objection The AP has summarised their reasons for objection as follows: the AP objects to the proposed pylon route, arguing it will significantly harm the environmental, benefits that has been achieved through an Environmental Scheme. Land Rights Sought The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 5 (access). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Powers of temporary possession (Class 7) are also sought for UKPN in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant has engaged with the AP over an extended period. A meeting was held on 21 January 2026 with the AP and their agent Richard Prentice (Durrants), at which the Heads of Terms and accommodation works were discussed, including matters relating to the shoot and environmental schemes operating on the holding and the potential for those impacts to be taken into account in the context of compensation. V2 HoTs were issued to the AP on 9 April 2026, which included an offer of a further meeting to discuss the terms. The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on 4 June 2026, at which land rights and Heads of Terms matters were discussed. A further email was sent to the AP's representative on 26 June 2026 regarding the provision of crossing points across the construction corridor. The Applicant notes the importance of the environmental scheme to the AP and confirms that its impacts on such schemes and the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

associated compensation will be considered on a case-by-case basis in accordance with the Compensation Code.

In respect of the AP's concerns regarding the impact of the Project on the natural environment, ecology and wildlife, the Applicant confirms that the design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation in line with the mitigation hierarchy. **6.8 Environmental Statement Chapter 8 - Ecology and Biodiversity [Revision C]** assesses the effects on important ecological receptors. As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys have been undertaken over the 2022–2025 period, the findings of which have informed the design and approach to mitigation. **7.4 Outline Landscape and Ecological Management Plan [Revision G]** and **7.2 Outline Code of Construction Practice [Revision G]** contain a list of relevant good practice measures to avoid or reduce impacts on protected species and additional mitigation measures, as appropriate. For example, where it is necessary to remove hedgerows and trees, replacement planting would be provided. Following the implementation of mitigation, no significant residual effects on ecology receptors have been identified as a result of construction or operation (and maintenance) of the Project.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) [REP3-010], and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule [REP5-066], which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]). In particular, the Applicant repeats the following submission as set out in [REP1-138] (emphasis added):

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

"Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have raised concerns regarding the environmental impacts of the Project, including on landscape, ecology, biodiversity, trees and hedgerows. In respect of those concerns, the Applicant refers to its Environmental Statement and the suite of supporting technical documents submitted as part of its application for development consent. The Applicant acknowledges that the Project will have temporary impacts during construction and some limited permanent impacts. However, the Applicant is satisfied that its Environmental

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Statement has properly and comprehensively assessed those impacts in accordance with the applicable legislative and regulatory requirements, and that appropriate mitigation measures are proposed to reduce impacts to the lowest reasonably practicable level. The Applicant submits that no significant residual adverse effects on the environment remain after mitigation is taken into account.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

8. AP 8 - Gareth Pressley

8.1 Person with Interest in Land (PIL) Reference ID: 13564

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant’s Response
My property is not your standard empty field or farm land. We are a small holding and we have animals for meat which we breed ourselves. We grow fruit and veg, make our own compost, We have bee's for honey and so much more. National grids project and use of our land will decimate it, we have cable towers and nets, haul roads and drainage, all spread out over the entirety of our 4 acres. Simply put they will destroy our families way to feed itself and much more. There is no regard for green space, nature, animals or peoples mental health. We have been threatened on our doorstep by representatives, and have had meetings with more people than we can count and every time is a different person, different plan amounting to the same thing, and different contradictory information, even the plans submitted to the authorities are different to what we received with basic heads of terms. Its farcical and purposefully mis directional.	Summary of Objection The AP has summarised their reasons for objection as follows: The four-acre smallholding sustains the family—livestock for meat, fruit and vegetables, composting and beekeeping—but National Grid’s proposed cable towers, nets, haul roads and drainage would spread across the site and destroy its productivity and biodiversity. Consultations have been inconsistent, threatening, misleading and have caused distress; fair, transparent engagement is demanded. The Applicant notes the Affected Person's concerns regarding their experience of engagement with representatives acting on behalf of the Project. The Applicant does not accept that any threats have been made to the Affected Person. Engagement has been undertaken to provide information about the Project, understand the Affected Person's circumstances and seek to reach agreement where possible. A number of representatives and technical specialists have been involved at different stages of the Project to address specific matters, which may have resulted in engagement being undertaken by different individuals. The Applicant remains committed to constructive and respectful engagement with the Affected Person and will continue to seek to address their concerns through ongoing discussions. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation, Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest.

Consolidated Response

The Applicant has engaged with the AP over an extended period. V2 HoTs were issued to the AP on 9 April 2026, which included an offer of a meeting to discuss the terms. A site meeting was then held on 29 May 2026 with the AP, their agent and National Grid representatives, at which detailed mitigation and accommodation works were discussed, including the haul road, drainage arrangements, scaffolding requirements, site security and reinstatement. Queries raised at that meeting are being reviewed internally by the Applicant. A further meeting was held with the AP's agent on 9 June 2026 to continue discussions on accommodation works. The AP's representative also attended the Agent's Group Meeting with Fisher German and National Grid on 4 June 2026, at which Heads of Terms and land rights matters were discussed. The Applicant is committed to continuing to work with the AP to resolve their concerns regarding the construction methodology as far as is reasonably practicable.

In respect of the AP's concern regarding the overhead line alignment and any oversail of their land, the Applicant confirms that its routing and siting approach has been carried out in accordance with the Holford Rules. To avoid the overhead line oversailing the AP's land, it would be necessary to introduce an additional angle pylon into the alignment. The Applicant does not consider this to be a proportionate change and no alteration to the overhead line alignment is proposed at this location.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 and, in particular, to its submissions regarding Paragraph 25 of the Guidance. Paragraph 25 says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have raised concerns in relation to the impact of the Project on agricultural land and farming businesses. The Applicant has had regard to agricultural land impacts throughout its route options appraisal process and the development of the detailed Project design, seeking to minimise impacts on BMV agricultural land in particular. The Applicant is committed to working with affected landowners and their representatives to understand and

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

minimise the disruption to agricultural operations where it is reasonably practicable to do so. Compensation for agricultural impacts will be dealt with on a case-by-case basis in accordance with the Compensation Code and, where applicable, the discretionary payments included in the Applicant's Land Rights Strategy. The Applicant will give prior warning to landowners before commencing works that may affect livestock, to allow appropriate management arrangements to be put in place.

In respect of the AP's concerns regarding the impacts to nature and animals, the Applicant can confirm the design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation in line with the mitigation hierarchy. **6.8 Environmental Statement Chapter 8 - Ecology and Biodiversity [Revision C]** and the impact of the Project on the natural environment, the Applicant confirms that the design and routing of the Project has had regard to biodiversity throughout. Ecological surveys were undertaken between 2022 and 2025. **7.4 Outline Landscape and Ecological Management Plan [Revision G]** and **7.2 Outline Code of Construction Practice [Revision G]** The OLEMP and CoCP contain appropriate mitigation measures to protect ecology and biodiversity during and after construction. Where hedgerows and trees are required to be removed as part of the Project, replacement planting will be provided. The Applicant's assessment concludes that there are no significant residual effects on ecology and biodiversity having regard to the mitigation measures proposed.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1, in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The **4.2 Funding Statement [REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have raised concerns regarding impacts during construction, including impacts from haul roads, drainage works, site compounds, construction vehicles, noise, vibration and dust. The Applicant acknowledges that construction will have temporary adverse impacts, and its Code of Construction Practice sets out the measures that will be applied to manage and mitigate those impacts. The Applicant is committed to working with affected landowners and occupiers to seek to agree construction mitigation and accommodation works on a case-by-case basis, having regard to the particular circumstances of each holding, and will keep affected parties informed of the construction programme as it develops.

9. AP 9 - Robert James Capps

9.1 Person with Interest in Land (PIL) Reference ID: 15838

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I own the house. No idea where you want to access as you haven't told me	Summary of Objection The AP has summarised their reasons for objection as follows: "I own the house. No idea where you want to access as you haven't told me." Land Rights Sought Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project. Consolidated Response The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds a Category 2 interest: (a) Class 5 (access). No rights are sought for UKPN over land in which this AP holds an interest and no powers of temporary possession are sought in relation to this AP's land interest. The Applicant is able to clarify the nature of the access right being sought. The permanent access right required over plot B-12/107 is needed to enable National Grid to access the overhead line span between pylons RG165 and RG166. That span is partly located between the railway line and the River Gipping. The permanent access right will be exercised only

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

infrequently, for the purposes of the inspection and maintenance of Project infrastructure. The Applicant confirms that the most suitable route for exercising access at any particular time would be agreed with the AP at the time of access. The Applicant remains willing to meet with the AP to discuss the nature of the access right in further detail.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Those directly affected by the Order will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1, the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. Section 123 of the PA 2008 provides

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met.

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant considers that it has acted, and continues to act, in full accordance with the Guidance, including Paragraph 25 thereof which acknowledges that for long, linear schemes it may not always be practicable to acquire by agreement each plot of land and that it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset.

A number of APs have raised concerns about the nature and extent of the permanent access rights sought by the Applicant. The Applicant confirms that permanent access rights are sought only where they are strictly necessary to provide access to Project infrastructure for the purposes of ongoing inspection and maintenance. Where permanent access rights are sought, the Applicant will only exercise those rights infrequently, for the specific purpose of accessing the relevant infrastructure. The Applicant's intention is that the route taken to access the infrastructure at any given time will be agreed with the relevant landowner at the time of access, to minimise disruption to the land and its use.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1, in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

10. AP 10 - Matthew Gementera

10.1 Person with Interest in Land (PIL) Reference ID: 15953

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Summary of Objection No written reasons for objection have been provided by the AP. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold. The Applicant confirms that no permanent rights are sought over land in which this AP holds an interest. Powers of temporary possession (Class 7) only are sought for National Grid in connection with the Project over land in which this AP holds a subsoil interest. The Applicant's preference is at all times to reach a voluntary agreement with affected landowners in respect of the exercise of temporary possession powers. Consolidated Response The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle. The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project. "

11. AP 11 - Joel Woolf

11.1 Person with Interest in Land (PIL) Reference ID: 1918

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The proposed right take around the headlands and not the centre but remove access to the centre during works. This is unacceptable and sterilises the entirety to my land because the proposal is to take the only access into the remaining land	Summary of Objection The AP has summarised their reasons for objection as follows: the AP is concerned the proposed rights sterilises the entirety of the land because it would take the only means of access into the remaining land. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Certain parcels of land in which the AP holds an interest also fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). The Applicant wishes to address the AP's concern regarding the level of engagement. In respect of the land rights currently sought by the Applicant, the Applicant confirms that no Heads of Terms have been issued by the Applicant to this AP in relation to National Grid's rights, as the affected plots relate solely to UKPN cable mitigation Consolidated Response In respect of the AP's concerns regarding agricultural land impacts, the Applicant confirms that it has had regard to impacts on agricultural land throughout its route options appraisal process and the development of the detailed Project design, seeking to minimise impacts on

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Best and Most Versatile agricultural land in particular. During construction, the Applicant will seek to minimise disruption to agricultural operations and will give prior warning to landowners before commencing works that may affect livestock. The Applicant is committed to working with affected landowners to understand and minimise construction disruption where it is reasonably practicable to do so. Compensation for agricultural impacts will be dealt with on a case-by-case basis in accordance with the Compensation Code and, where applicable, the discretionary payments included in the Applicant's Land Rights Strategy.

During route optioneering the impacts on agricultural land, including on agricultural land-take and on agricultural activities / operations, as far as was understood based on the data available at the time, were a consideration in the route selection process, as outlined in 6.3 Environmental Statement Chapter 3 -Alternatives [Revision B]. The Applicant has sought to minimise impacts on Best and Most Versatile land and proposes to implement mitigation measures to protect soil resources (5.6 Planning Statement [Revision B]).

During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. The Applicant would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so. National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims (as stated in 6.6 Environmental Statement Chapter 6 - Agriculture and Soils [Revision B]) for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.

In respect of the specific land rights sought over this AP's land, the Applicant confirms that the rights have been formulated by reference to the design solution agreed between the Applicant and UKPN. The rights sought permit the underground cabling to run around the edges of the relevant fields or straight across the field adjacent to the existing overhead line, depending on the final detailed design outcome.

The Applicant notes the AP's concern that the acquisition of rights around the field boundary could sterilise the wider field. The rights sought do not prevent the continued agricultural use

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

of the land, save where temporary restrictions are required during construction or where necessary to protect the operational integrity and safe access to the underground electricity infrastructure once installed. The extent of any restrictions has been limited to those reasonably required for the undertaking and the final detailed design will seek, where reasonably practicable, to minimise impacts on the operation of the holding.

Engagement with UKPN and affected persons on this matter is ongoing as the detailed design for the underground cable element of the Project progresses. The Applicant remains committed to engaging with the AP and their representatives to understand the specific operational concerns associated with the holding and to seek to minimise impacts through the detailed design process. Any diminution in land value or losses arising from the exercise of compulsory acquisition powers would be compensable in accordance with the statutory compensation code. A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1, the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding Section 123 of the Planning Act 2008. The Applicant respectfully disagrees. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is met.

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant considers that it has acted, and continues to act, in full accordance with the Guidance, including Paragraph 25 thereof which acknowledges that for long, linear schemes it may not always be practicable to acquire by agreement each plot of land.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1, in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

12. AP 12 - Antony Francis Goddard

12.1 Person with Interest in Land (PIL) Reference ID: 3302

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant’s Response

Summary of Objection

No written reasons for objection have been provided by the AP.

Land Rights Sought

The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). No powers of temporary possession (Class 7) are sought in relation to this AP's land.

Consolidated Response

The Applicant has engaged with the AP in respect of the land rights sought and associated mitigation and accommodation works matters. Heads of Terms negotiations are ongoing with the AP's professional representatives, and meetings have been held with the AP's agent to discuss those negotiations together with mitigation and accommodation works proposals. The AP's professional representative attended the Agent's Group Meeting with Fisher German and National Grid on 4 June 2026, at which land rights and Heads of Terms matters were discussed. The Applicant remains committed to continuing to engage with the AP and their representatives with a view to reaching a voluntary agreement.

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project. "

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Summary of Objection No written reasons for objection have been provided by the AP. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). No powers of temporary possession (Class 7) are sought in relation to this AP's land. Consolidated Response The Applicant has engaged with the AP in respect of the land rights sought and associated mitigation and accommodation works matters. Heads of Terms negotiations are ongoing with the AP's professional representatives, and meetings have been held with the AP's agent to discuss those negotiations together with mitigation and accommodation works proposals. The AP's professional representative attended the Agent's Group Meeting with Fisher German and National Grid on 4 June 2026, at which land rights and Heads of Terms matters were discussed. The Applicant remains committed to continuing to engage with the AP and their representatives with a view to reaching a voluntary agreement. The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

15.1 Person with Interest in Land (PIL) Reference ID: 2652

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Sick of all of it,don't want my farmland ruined or hedges and trees removed	Summary of Objection The AP has summarised their reasons for objection in the following terms: "Sick of all of it, don't want my farmland ruined or hedges and trees removed." Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), (d) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant will continue to engage with affected landowners to understand site-specific concerns and to minimise disruption to agricultural operations during construction. Where disruption cannot be avoided, the Applicant will compensate affected parties in line with the compensation code. The Applicant has engaged with the AP in respect of the land rights sought and the AP's concerns regarding impacts on the land and farming operations. A site meeting was held with the AP at the property on 21 January 2026, at which mitigation measures were discussed in detail, including in relation to the treatment of hedgerows. The AP's concerns were relayed to National Grid Electricity Transmission following that meeting. A further

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

meeting was held with the AP's spokesperson's representative, Richard Prentice (Durrants) on 26 May 2026, at which Heads of Terms plan amendments and a potential reduction in the land area to be included within the Order Limits were discussed. The Applicant remains committed to continuing to engage with the AP and their representatives with a view to minimising impacts on the holding and reaching a voluntary agreement.

In respect of the AP's concerns regarding the impacts to farmland and removal of hedgerows and trees, the Applicant can confirm the design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation in line with the mitigation hierarchy. **6.8 Environmental Statement Chapter 8 - Ecology and Biodiversity [Revision C]** and the impact of the Project on the natural environment, the Applicant confirms that the design and routing of the Project has had regard to biodiversity throughout. Ecological surveys were undertaken between 2022 and 2025. **7.4 Outline Landscape and Ecological Management Plan [Revision G]** (oLEMP) and **7.2 Outline Code of Construction Practice [Revision G]** (CoCP). The oLEMP and oCoCP contain appropriate mitigation measures to protect ecology and biodiversity during and after construction. Where hedgerows and trees are required to be removed as part of the Project, replacement planting will be provided. The Applicant's assessment concludes that there are no significant residual effects on ecology and biodiversity having regard to the mitigation measures proposed.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Those directly affected by the Order will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for loss or damage caused by the exercise of powers by the Applicant.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met as set out in **[REP3-010]**. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project.

The Applicant considers that it has acted, and continues to act, in full accordance with the MHCLG (2013) Guidance, including Paragraph 25 thereof which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset.

A number of APs have raised concerns regarding the environmental impacts of the Project, including on landscape, ecology, biodiversity, trees and hedgerows. In respect of those concerns, the Applicant refers to its Environmental Statement and the suite of supporting technical documents submitted as part of its application for development consent. The Applicant acknowledges that the Project will have temporary impacts during construction and some limited permanent impacts. However, the Applicant is satisfied that its Environmental Statement has properly and comprehensively assessed those impacts in accordance with the applicable legislative and regulatory requirements, and that appropriate mitigation measures are proposed to reduce impacts to the lowest reasonably practicable level. The Applicant submits that no significant residual adverse effects on the environment remain after mitigation is taken into account.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

16. AP 16 - Georgina Sally Green

16.1 Person with Interest in Land (PIL) Reference ID: 4862

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We farm this land and the construction of the pylons will make it much harder to farm with agricultural machinery. Once the pylons are installed there may be areas of land that are too small to be economically farmed.	Summary of Objection The AP has summarised their reasons for objection as follows: the AP farms the land in question; pylon construction will make it harder to farm and the areas remaining between and around the pylons may be too small to economically farm once the pylons are installed. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest also fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response The Applicant has engaged with the AP over an extended period. The Applicant is aware that two pylons are located on the AP's land. A meeting was held with the AP and their agent on 1 June 2026, at which the construction corridor and associated re-fencing requirements were discussed. At that meeting, the Applicant confirmed that it will communicate the project programme to the AP, that it is committed to mitigating the effects of the Project on the AP's farming operations to the extent reasonably practicable, and that it will endeavour to facilitate the provision of crossing points across the construction corridor to enable the AP to continue

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

to use and manage their land during the construction phase. The Applicant also confirmed at that meeting that the Compensation Code will apply in respect of any loss or damage caused to the AP by the exercise of the Applicant's powers. V2 HoTs were issued to the AP on 2 April 2026 with an offer of a meeting, and a telephone call was also held on 2 April 2026. A further meeting was held on 20 April 2026 with the AP and their representatives, at which crossing points, the AP's continued use of the land during construction, and the protection of memorial trees on the holding were discussed. The AP's representative also attended the Agent's Group Meeting with Fisher German and National Grid on 4 June 2026, at which land rights and Heads of Terms matters were discussed.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have raised concerns in relation to the impact of the Project on agricultural land and farming businesses. In particular, concerns have been raised regarding: impacts on agricultural operations during construction, including the severance of land holdings and disruption to farm management; the permanent loss of farmland, including Best and Most Versatile ("BMV") agricultural land; and the adequacy of proposed mitigation and compensation measures. The Applicant has had regard to agricultural land impacts throughout its route options appraisal process and the development of the detailed Project design, seeking to minimise impacts on BMV agricultural land in particular. The Applicant acknowledges that the Project will have an impact on the agricultural operations of affected landowners during construction and, to a lesser extent, during operation. The Applicant is committed to working with affected landowners and their representatives to understand and minimise the disruption to agricultural operations where it is reasonably practicable to do so. The Applicant acknowledges that it will not be possible to resolve or agree all mitigation

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

measures until detailed design is more advanced. Compensation for agricultural impacts will be dealt with on a case-by-case basis in accordance with the Compensation Code and, where applicable, the discretionary payments included in the Applicant's Land Rights Strategy. The Applicant will give prior warning to landowners before commencing works that may affect livestock, to allow appropriate management arrangements to be put in place.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

A number of APs have raised concerns regarding impacts on the Project during construction, including impacts from haul roads, drainage works, site compounds, construction vehicles, noise, vibration and dust. The Applicant acknowledges that construction of the Project will have temporary adverse impacts on the surrounding area and on individual landowners and occupiers, including those who farm the land. The Applicant's Code of Construction Practice sets out the measures that will be applied by the Applicant and its contractors to manage and mitigate those impacts during construction. The Applicant is committed to working with affected landowners and occupiers to seek to agree construction mitigation and accommodation works on a case-by-case basis, having regard to the particular circumstances of each holding, and will keep affected parties informed of the construction programme as it develops.

17. AP 17 - Bernard William Green

17.1 Person with Interest in Land (PIL) Reference ID: 4679

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We farm this land and the construction of the pylons will make it much harder to farm with agricultural machinery. Once the pylons are installed there may be areas of land that are too small to be economically farmed.	Summary of Objection The AP has summarised their reasons for objection as follows: the AP farms the land in question; pylon construction will make it harder to farm and the areas remaining between and around the pylons may be too small to economically farm once the pylons are installed. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest also fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). The Applicant has engaged with the AP over an extended period. The Applicant is aware that two pylons are located on the AP's land. A meeting was held with the AP and their agent on 1 June 2026, at which the construction corridor and associated re-fencing requirements were discussed. At that meeting, the Applicant confirmed that it will communicate the project programme to the AP, that it is committed to mitigating the effects of the Project on the AP's farming operations to the extent reasonably practicable, and that it will endeavour to facilitate the provision of crossing points across the construction corridor to enable the AP to continue to use and manage their land during the construction phase. The Applicant also confirmed

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

that the Compensation Code will apply in respect of any loss or damage caused to the AP by the exercise of the Applicant's powers. V2 HoTs were issued to the AP on 2 April 2026 with an offer of a meeting, and a telephone call was held on 2 April 2026. A further meeting was held on 20 April 2026 with the AP and their representatives, at which crossing points, the AP's continued use of the land during construction, and the protection of memorial trees on the holding were discussed. The AP's representative also attended the Agent's Group Meeting with Fisher German and National Grid on 4 June 2026, at which land rights and Heads of Terms matters were discussed.

During route optioneering the impacts on agricultural land, including on agricultural land-take and on agricultural activities / operations, as far as was understood based on the data available at the time, were a consideration in the route selection process, as outlined in 6.3 Environmental Statement Chapter 3 -Alternatives **[Revision B]**. During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. The Applicant would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so. National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. We would seek to work with the farming community to limit disruption where practicable.

It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction corridor re-fencing and health and safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the construction to provide a more detailed understanding of the time when any construction works will take place.

The Applicant remains committed to explore appropriate and proportionate options to mitigate the effects of the project during construction, including temporary severance of land. The Applicant will not be able to settle the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land and disturbance) assessed on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

(captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

A number of APs have raised concerns regarding impacts on the Project during construction, including impacts from haul roads, drainage works, site compounds, construction vehicles, noise, vibration and dust. The Applicant acknowledges that construction of the Project will have temporary adverse impacts on the surrounding area and on individual landowners and

	occupiers, including those who farm the land. The Applicant's Code of Construction Practice sets out the measures that will be applied by the Applicant and its contractors to manage and mitigate those impacts during construction. The Applicant is committed to working with affected landowners and occupiers to seek to agree construction mitigation and accommodation works on a case-by-case basis, having regard to the particular circumstances of each holding, and will keep affected parties informed of the construction programme as it develops.

18. AP 18 - Gillian Leeks, Malcolm Leeks

18.1 Person with Interest in Land (PIL) Reference ID: 2596, 4478

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We object to any compulsory purchase or any interference with our land on the basis it's our privately owned land and we do not want pylons buzzing interfering with the peace of the countryside. This is why we purchased the land. It's our right as landowners to protect the countryside.	Summary of Objection The AP has summarised their reasons for objection as follows: the AP objects to any compulsory purchase or interference with the privately owned land and oppose the erection of pylons that would disturb the peace of the countryside. Protecting the countryside and preserving the land's tranquillity is why they bought the land and a right they assert as landowners.. Land Rights Sought The Applicant notes that the interest held by the APs is a Category 2 interest in plot B-12/104. Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project. Consolidated Response A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in

land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have raised concerns regarding the environmental impacts of the Project, including on landscape, ecology, biodiversity, trees and hedgerows. In respect of those concerns, the Applicant refers to its Environmental Statement and the suite of supporting technical documents submitted as part of its application for development consent. The Applicant acknowledges that the Project will have temporary impacts during construction and some limited permanent impacts. However, the Applicant is satisfied that its Environmental Statement has properly and comprehensively assessed those impacts in accordance with the applicable legislative and regulatory requirements, and that appropriate mitigation measures are proposed to reduce impacts to the lowest reasonably practicable level. The Applicant submits that no significant residual adverse effects on the environment remain after mitigation is taken into account.

A number of APs have raised concerns about the nature and extent of the permanent access rights sought by the Applicant. The Applicant confirms that permanent access rights are sought only where they are strictly necessary to provide access to Project infrastructure for the purposes of ongoing inspection and maintenance. Where permanent access rights are sought, the Applicant will only exercise those rights infrequently, for the specific purpose of accessing the relevant infrastructure. The Applicant's intention is that the route taken to access the infrastructure at any given time will be agreed with the relevant landowner at the time of access, to minimise disruption to the land and its use.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

19. AP 19 - Mark Ian Hoskin

19.1 Person with Interest in Land (PIL) Reference ID: 14202

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We object to the proposed interference with our land because it would cause serious and long term harm to the operation and financial stability of our farm and holiday lodge business. The land identified is essential to how our business functions, and losing it would directly reduce our ability to farm effectively and damage the setting, appeal, and commercial performance of our holiday accommodation. This would result in a significant loss of income and restrict our ability to sustain or grow the business in the future. It is also not clear exactly what land they are looking to compulsory purchase and what it will be used for as there are multiple land areas and descriptions in the "Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051" that do not appear to align to our previously discussed areas with National Grid. The proposal would also negatively affect the value and saleability of our property. Any reduction in land, amenity, or operational	Summary of Objection The AP has summarised their reasons for objection as follows: the Project would cause serious and long-term harm to the AP's farm and holiday lodge business; the land is essential to the operation of the business, and its loss or restriction would reduce farming effectiveness and cause significant damage to the commercial performance of the holiday accommodation. The AP raises concerns about a significant loss of income, and states that it is unclear exactly what land will be subject to compulsory acquisition. The AP also objects to the negative effect on property value and considers that alternatives, such as an access agreement rather than formal powers of acquisition, have not been adequately explored. The AP submits that the level of harm arising from the Project would be substantial, avoidable and disproportionate. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 5 (access). No rights are sought for UKPN over land in which this AP holds an interest. Consolidated Response The Applicant has engaged with the AP over an extended period. A meeting was held with the AP on 21 January 2026, at which the AP raised concerns about the impact of the Project on their holiday letting business, mitigation measures during construction, and the approach to compensation. Heads of Terms negotiations have been ongoing and V2 HoTs were issued to the AP on 9 April 2026 with an offer of a further meeting to discuss the terms. The AP's representative attended the Agent's Group Meeting with Fisher German and National

Please summarise (in no more than 1500 words) the reason(s) for your objection

capacity makes the property less attractive to future buyers and reduces its market value, creating long term financial uncertainty for us.

In addition, alternative avenues have not yet been explored, including the possibility of an access agreement or other forms of cooperation that would allow the project to proceed without removing or permanently interfering with our land. Any such arrangement would also need to include appropriate compensation for any losses or disruption caused. These options should be fully considered before any permanent acquisition or interference is pursued.

Overall, the level of harm to our business, property, and livelihood is substantial, avoidable, and disproportionate. The impact on us is severe, and reasonable alternatives have not been properly examined.

Applicant's Response

Grid on 4 June 2026, at which land rights and Heads of Terms matters were discussed. A further email was sent to the AP's representative regarding crossing points across the construction corridor.

In respect of the specific access right being sought over the AP's land, the Applicant can confirm the following. The permanent access right is required to enable National Grid to access pylon RG89 using an existing public highway access point and a gap in the existing hedge. This access right would be used only infrequently, for the purposes of inspections and maintenance of the overhead line infrastructure. The Applicant recognises the sensitivity of the AP's position given the co-location of the farming operation with the holiday accommodation business and is committed to minimising disruption to those operations throughout the life of the Project. The most suitable route for exercising the access right at any particular time would therefore be agreed with the AP at the time of access. This, together with the provision of information about access duration and nature of works, would help minimise disruption to the AP's farming and business operations.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have raised concerns in relation to the impact of the Project on agricultural land and farming businesses. In particular, concerns have been raised regarding: impacts on agricultural operations during construction, including the severance of land holdings and disruption to farm management; the permanent loss of farmland, including Best and Most Versatile ("BMV") agricultural land; and the adequacy of proposed mitigation and compensation measures. The Applicant has had regard to agricultural land impacts throughout its route options appraisal process and the development of the detailed Project design, seeking to minimise impacts on BMV agricultural land in particular. The Applicant acknowledges that the Project will have an impact on the agricultural operations of affected

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

landowners during construction and, to a lesser extent, during operation. The Applicant is committed to working with affected landowners and their representatives to understand and minimise the disruption to agricultural operations where it is reasonably practicable to do so. The Applicant acknowledges that it will not be possible to resolve or agree all mitigation measures until detailed design is more advanced. Compensation for agricultural impacts will be dealt with on a case-by-case basis in accordance with the Compensation Code and, where applicable, the discretionary payments included in the Applicant's Land Rights Strategy. The Applicant will give prior warning to landowners before commencing works that may affect livestock, to allow appropriate management arrangements to be put in place.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

A number of APs have raised concerns regarding impacts on the Project during construction, including impacts from haul roads, drainage works, site compounds, construction vehicles, noise, vibration and dust. The Applicant acknowledges that construction of the Project will have temporary adverse impacts on the surrounding area and on individual landowners and occupiers, including those who farm the land. The Applicant's Code of Construction Practice sets out the measures that will be applied by the Applicant and its contractors to manage and mitigate those impacts during construction. The Applicant is committed to working with affected landowners and occupiers to seek to agree construction mitigation and accommodation works on a case-by-case basis, having regard to the particular

Applicant's Response

circumstances of each holding, and will keep affected parties informed of the construction programme as it develops.

20. AP 20 - Helen Phillips

20.1 Person with Interest in Land (PIL) Reference ID: 6457

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I object to the installation of 7 pylons in such a small village, encroaching on the landscape and wildlife, also on a personal level. There will be major disruption around this build and the landscape will never be the same	Summary of Objection The AP has summarised their reasons for objection as follows: the AP objects to the installation of seven pylons in a small village; the AP considers this will cause major disruption and encroach on the landscape and wildlife. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds a Category 2 interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), (d) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest also fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project

Consolidated Response

The Applicant has sought to reduce, as far as practicable, potential impacts on visual receptors, through routeing and siting. The Applicant notes the concern related to views from Faulkbourne. Effects on visual receptors within White Notley and Faulkbourne parish are set out under Visual Receptor Area (VRA) E4 (paragraphs 13.8.35 to 13.8.46), VRA E5 (paragraphs 13.8.47 to 13.8.58) and VRA E6 (paragraphs 13.8.59 to 13.8.70) in Section 13.8 in **6.13.A3 Environmental Statement Appendix 13.3 - Visual Baseline and Assessment - Part 1 of 4 [Revision B]**. Significant visual effects are identified within approximately 1.5 km of the Project, including views from Faulkbourne. Views from the edge of Faulkbourne are represented by Viewpoint 5.12 in **6.13.A3 Environmental Statement Appendix 13.3 - Visual Baseline and Assessment - Part 4 of 4 [Revision B]**. The visual effect of the Project from this viewpoint is assessed as significant, as the Project would be visible in open views as it crosses the Brain Valley.

Effects on landscape receptors within White Notley and Faulkbourne parish are set out in **6.13.A2 Environmental Statement Appendix 13.2 – Landscape Baseline and Assessment [Revision B]** under Landscape Character Area (LCA) B1 Central Essex Farmland in paragraphs 13.3.654 to 13.3.678 and LCA C6 Blackwater and Brain Valley in paragraphs 13.3.679 to 13.3.698. Significant effects are identified within approximately 1.5 km of the Project. Although significant landscape and visual effects have been identified, the rural farmland landscape will remain in place beneath and around the proposed overhead line.

In respect of the AP's concerns about the alignment of the Project in the area, the Applicant confirms that it has carefully considered requests to change the proposed alignment. Moving the route northwards would bring it closer to the southern edge of White Notley village and to the Scheduled Monument and Grade I listed buildings at Cressing Temple. The proposed alignment has a smaller number of residential receptors within its zone of visual influence and is in excess of one kilometre from the Grade I listed buildings at Faulkbourne Hall. The proposed alignment is also preferable to alternative alignments in terms of its consistency with Holford Rule Two.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation in line with the mitigation hierarchy. **6.8 Environmental Statement Chapter 8 - Ecology and Biodiversity [Revision C]** assesses the effects on important ecological receptors. As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys have been undertaken over the 2022–2025 period, the findings of which have Informed the design and approach to mitigation. **7.4 Outline Landscape and Ecological Management Plan [Revision G]** and **7.2 Outline Code of Construction Practice [Revision G]** contain a list of relevant good practice measures to avoid or reduce impacts on protected species and additional mitigation measures, as appropriate. For example, where it is necessary to remove hedgerows and trees, replacement planting would be provided. Following the implementation of mitigation, no significant residual effects on ecology receptors have been identified as a result of construction or operation (and maintenance) of the Project.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to

	other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

21. AP 21 - Jane Wendy Betts. Also as representative to the estate of John Gavin Betts (deceased) of same address.

21.1 Person with Interest in Land (PIL) Reference ID: 9143, 28095

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Summary of Objection The Applicant has noted the objection of Jane Wendy Betts, acting also as representative to the estate of John Gavin Betts (deceased) of the same address. No specific reasons for objection have been set out in this AP's written representation. Land Rights Sought The APs are noted as having Category 2 interests on the plots A-3/9, A-3/14-15. Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project. Consolidated Response The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle. The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project. ”

22. AP 22 - Amy Frances Travell

22.1 Person with Interest in Land (PIL) Reference ID: 14201

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We object to the proposed interference with our land because it would cause serious and long term harm to the operation and financial stability of our farm and holiday lodge business. The land identified is essential to how our business functions, and losing it would directly reduce our ability to farm effectively and damage the setting, appeal, and commercial performance of our holiday accommodation. This would result in a significant loss of income and restrict our ability to sustain or grow the business in the future. It is also not clear exactly what land they are looking to compulsory purchase and what it will be used for as there are multiple land areas and descriptions in the "Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051" that do not appear to align to our previously discussed areas with National Grid.	Summary of Objection The Applicant understands that the AP's objection relates to: • the serious and long-term harm that would be caused to the operation and financial stability of her farm and holiday lodge business; • concerns about the impact on the business's income, setting, appeal and commercial performance; • uncertainty as to the precise land to be acquired given perceived misalignments in the Land Rights Tracker [REP4-051] with previously discussed areas; • the potential negative effect on the value and saleability of the property; • and the contention that alternatives, including access agreements and other cooperative arrangements, have not been properly explored and that any arrangement would need to include appropriate compensation. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 5 (access) on Plots B-1/13 and B-1/14 Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP and her representatives. A meeting was held with the AP and her agents on 21 January 2026, at which concerns regarding the impact on her holiday lets

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The proposal would also negatively affect the value and saleability of our property. Any reduction in land, amenity, or operational capacity makes the property less attractive to future buyers and reduces its market value, creating long term financial uncertainty for us. In addition, alternative avenues have not yet been explored, including the possibility of an access agreement or other forms of cooperation that would allow the project to proceed without removing or permanently interfering with our land. Any such arrangement would also need to include appropriate compensation for any losses or disruption caused. These options should be fully considered before any permanent acquisition or interference is pursued. Overall, the level of harm to our business, property, and livelihood is substantial, avoidable, and disproportionate. The impact on us is severe, and reasonable alternatives have not been properly examined.

business were discussed, as were potential mitigation measures during construction and the matter of compensation. Heads of Terms ("HoTs") negotiations are ongoing with the AP and her agent, including meetings to engage with the AP regarding practical matters associated with the Project. Version 2 of the HoTs was sent on 9 April 2026, which included an offer of a meeting to discuss the HoTs. The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on 4 June 2026. An email was also sent to the AP's representative regarding crossing points.

The Applicant notes the AP's concern that the Detailed Land and Rights Negotiations Tracker [REP4-051] does not align with previous discussions. The Applicant does not agree that there is any inconsistency. The Applicant is seeking only **Class 5 (access) rights over Plots B-1/13 and B-1/14** in which the AP holds a freehold and occupational interest. No permanent acquisition of land is sought and no permanent Project infrastructure is proposed within those plots. The rights sought relate solely to access required for the operation and maintenance of pylon RG89 and are consistent with the rights identified through the ongoing engagement process and recorded within the Detailed Land and Rights Negotiations Tracker. The Applicant further considers that the limited nature of the rights sought would not give rise to the significant long-term impacts alleged in respect of the continued operation of the farming enterprise or holiday lodge business, given that the rights would be exercised only intermittently for inspection, maintenance and related operational activities.

The Applicant has engaged with the AP and her representatives regarding access arrangements and remains willing to discuss reasonable alternatives to the proposed access route where practicable. Discussions have included site-specific operational requirements, accommodation works and potential alternative forms of access. Through the ongoing engagement process, including Heads of Terms negotiations and consideration of landowner requests, the Applicant will continue to review any proposals put forward by the AP that may reduce impacts whilst still enabling the safe construction, operation and maintenance of the Project. The Applicant therefore considers that both the rights sought and the information presented within the Detailed Land and Rights Negotiations Tracker are consistent with the documented engagement undertaken by Fisher German and National Grid. The Applicant conducts a process where requests for accommodation works and particular individual requests are received by Fisher German, inserted into a register and regular twice weekly meetings are conducted to triage, seek to identify common themes across PILs and identify

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and seek the correct direction or decision from the technical specialists within National Grid. The Applicant will continue to review and respond to requests through this process and does not anticipate that the register will close for requests and consideration in the future. The focus at this time continues to be the matters that should be negotiated as part of HoTs rather than simply practical matters that would be dealt with through the usual agricultural liaison / pre-entry schedule of condition workstream at the commencement of main works

Impacts on the visitor economy and visitor accommodation are assessed in 6.15 Environmental Statement Chapter 15 - Socio-economics, Recreation and Tourism **[Revision C]** which notes that there could be both direct and indirect economic effects on individual businesses as a result of the construction and operation of the Project including, for example, loss of business to visitor accommodation during construction. As mentioned, potential mitigation to effects and any compensation (which falls outside the scope of the EIA) is part of the ongoing engagement.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have restated general concerns as to the potential impact of the Project on existing agricultural operations. It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction corridor re-fencing and health and safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the construction to provide a more detailed understanding of the time when any construction works will take place. The Applicant remains committed to explore appropriate and proportionate options to mitigate the effects of the project during construction, including temporary severance of land. The Applicant will not be able to settle

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land) assessed on a case-by-case basis.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1--138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

The Applicant notes concerns raised by certain APs regarding the potential for construction activities associated with the Project to cause damage to agricultural and other land. Although not directly related to the Applicant's request for authorisation of CA and TP powers, the Applicant's approach to soil handling is set out in 7.2 Outline Code of Construction Practice Appendix C – Outline Soil Resource Plan **[Revision D]**. This is based on published good practice and is designed to enable soils which have been handled and stockpiled to be reinstated to return land to its preconstruction condition. This includes aspects of preparing the subsoil which has become compacted prior to placement of topsoil. This plan also confirms that topsoil and subsoil should be stockpiled on like for like (i.e. topsoil can be stored on topsoil). This will limit the potential for subsoil or clay migration into topsoil resources. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including damage caused by the works) assessed on a case-by-case basis.

23. AP 23 - Oak Farm Lodges

23.1 Person with Interest in Land (PIL) Reference ID: 14201, 14202

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We object to the proposed interference with our land because it would cause serious and long term harm to the operation and financial stability of our farm and holiday lodge business. The land identified is essential to how our business functions, and losing it would directly reduce our ability to farm effectively and damage the setting, appeal, and commercial performance of our holiday accommodation. This would result in a significant loss of income and restrict our ability to sustain or grow the business in the future. It is also not clear exactly what land they are looking to compulsory purchase and what it will be used for as there are multiple land areas and descriptions in the "Land Rights Tracker which can be found in the examination library of the Norwich to Tilbury website reference REP4-051" that do not appear to align to our previously discussed areas with National Grid. The proposal would also negatively affect the value and saleability of our property. Any reduction in land, amenity, or operational	Summary of Objection The Applicant understands that the AP's objection relates to the serious and long-term harm that would be caused to the operation and financial stability of the farm and holiday lodge business; concerns that land identified as subject to the Project's land rights is essential to how the business functions and that losing it would reduce the ability to farm effectively and damage the setting, appeal and commercial performance of the holiday accommodation; the potential negative effect on property value and saleability; the contention that alternatives have not yet been fully explored; and the AP's view that the harm is substantial, avoidable and disproportionate. Land Rights Sought The Applicant is seeking to acquire the following permanent rights for National Grid over land in which the AP has an interest: (a) Class 5 (access) on plots B-1/13 and B-1/14. Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP and their representatives. A meeting was held with the AP and their agents on 21 January 2026, at which concerns regarding the impact on the holiday lets business were discussed, as were potential mitigation measures during construction and compensation. Heads of Terms ("HoTs") negotiations are ongoing with the AP and their agent, including meetings to engage with the AP regarding practical matters associated with the Project. Version 2 of the HoTs was sent on 9 April 2026, which included an offer of a meeting to discuss the HoTs. The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on 4 June 2026. An email was also sent to the AP's representative regarding crossing points.

Please summarise (in no more than 1500 words) the reason(s) for your objection

capacity makes the property less attractive to future buyers and reduces its market value, creating long term financial uncertainty for us. In addition, alternative avenues have not yet been explored, including the possibility of an access agreement or other forms of cooperation that would allow the project to proceed without removing or permanently interfering with our land. Any such arrangement would also need to include appropriate compensation for any losses or disruption caused. These options should be fully considered before any permanent acquisition or interference is pursued. Overall, the level of harm to our business, property, and livelihood is substantial, avoidable, and disproportionate. The impact on us is severe, and reasonable alternatives have not been properly examined.

Applicant's Response

Oak Farm Lodges is included in the assessment of potential impacts on built assets (which includes a range of types of facilities and assets such as visitor accommodation) located within a 3km study area of the Project. This assessment is presented in 6.15.CA1 Environmental Statement Appendix 15.1 - Built and Other Assets within the 3 km Study Area **[Revision B]**. For Oak Farm Lodges, the assessment concludes that there are likely to be minor adverse impacts on the accommodation during both the construction and operation phases, driven primarily by the likely visual impact experienced at this location. Disruption to access is not considered to be likely during the construction phase and a range of measures to contract potential construction impacts associated with the Project (for example noise) are set out in 7.2 Outline Code of Construction Practice **[Revision G]**. Impacts are not considered to be significant. Impacts on the visitor economy and visitor accommodation are assessed in 6.15 Environmental Statement Chapter 15 - Socio-economics, Recreation and Tourism **[Revision C]** which notes that there could be both direct and indirect economic effects on individual businesses as a result of the construction and operation of the Project including, for example, loss of business to visitor accommodation during construction. These matters are addressed outside of the Environmental Impact Assessment (EIA) process, through individual discussions with landowners, as specified here.

In relation to the permanent access right sought, this relates to access to pylon RG89 using the existing public highway access point and gap in hedge. The permanent access route will be used infrequently for inspections and maintenance activities only. The most suitable route of access would be agreed between the Applicant and the AP at the time the access is required.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Applicant's Response

outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have restated general concerns as to the potential impact of the Project on existing agricultural operations. It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction corridor re-fencing and health and safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the construction to provide a more detailed understanding of the time when any construction works will take place. The Applicant remains committed to explore appropriate and proportionate options to mitigate the effects of the project during construction, including temporary severance of land. The Applicant will not be able to settle the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land) assessed on a case-by-case basis.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant notes concerns raised by certain APs regarding the potential for construction activities associated with the Project to cause damage to agricultural and other land. Although not directly related to the Applicant's request for authorisation of CA and TP powers, the Applicant's approach to soil handling is set out in 7.2 Outline Code of Construction Practice Appendix C – Outline Soil Resource Plan **[Revision D]**. This is based on published good practice and is designed to enable soils which have been handled and stockpiled to be reinstated to return land to its preconstruction condition. This includes aspects of preparing the subsoil which has become compacted prior to placement of topsoil. This plan also confirms that topsoil and subsoil should be stockpiled on like for like (i.e. topsoil can be stored on topsoil). This will limit the potential for subsoil or clay migration into topsoil resources. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including damage caused by the works) assessed on a case-by-case basis.

24. AP 24 - Paul Edmund Baker (also representing the Estate of E Hudson Baker and Mabel Anne Baker)

24.1 Person with Interest in Land (PIL) Reference ID: 3085, rep 5262 14920

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
No direct consultation after planned route changed to impacting our interests	Summary of Objection The Applicant understands that the AP's objection is that there was no direct consultation with this AP after the planned route changed so as to impact their interests. Land Rights Sought The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds a subsoil interest also fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP and their representatives. A meeting was held with the AP's representatives on 9 December 2025 to discuss practical matters associated with the Project, including severed areas and accommodation works. Version 2 of the Heads of Terms ("HoTs") was sent on 9 April 2026, which included an offer of a meeting to discuss the HoTs. A further meeting was held with the agent on 26 May 2026 to discuss reducing the grantor's land on the HoTs plans. The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on 4 June 2026.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In response to the AP's specific concern regarding the lack of consultation following the route change, the Applicant confirms that the relevant change was consulted upon in the 2025 targeted consultations, under location reference: Suffolk 3. The consultation was held between 30 January 2025 and 3 March 2025, with full details available on the Project website (Document library, National Grid).

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

(captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

25. AP 25 - Alison Taylor (previously Alison Jane Davis)

25.1 Person with Interest in Land (PIL) Reference ID: 6078

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Summary of Objection The Applicant has noted the objection of this AP. No specific written reasons have been set out in the AP's representation. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds a Category 2 interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), and (d) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project

Consolidated Response

The Applicant confirms that early statutory consultation engagement, including a section 42 notification pack, was undertaken with this AP in the summer of 2025, and that further engagement took place at the end of 2025. The Applicant remains committed to pursuing a voluntary agreement with this AP and to continuing engagement as the Project progresses.

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily.

However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project.

26. AP 26 - David Robert Miles

26.1 Person with Interest in Land (PIL) Reference ID: 2692

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
For many years we have been involved with environmental schemes to enhance wildlife in the area that the pylons will be removed and built. We have seen substantial benefit from this, especially with small birds. This scheme will undo all the good that has been achieved over the years	Summary of Objection The AP has summarised their reasons for objection as follows: the AP objects to the proposed pylon route, arguing it will significantly harm the environmental, benefits that has been achieved through an Environmental Scheme. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure) and (b) Class 5 (access). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Powers of temporary possession (Class 7) are also sought for UKPN in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP and their representatives. A meeting was held with the AP and their agent on 21 January 2026 to discuss Heads of Terms ("HoTs") and accommodation works. The main issues raised were the effects of the Project on the AP's shoot and mitigating losses to areas in environmental schemes. Version 2 of the HoTs was sent on 9 April 2026, which included an offer of a meeting to discuss the HoTs. The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on 4 June 2026. An email regarding crossing points was sent to the agent on 26 June 2026. Where the Project affects land under an environmental scheme, the Applicant will seek to minimise disturbance during construction and provide compensation for losses to scheme payments where

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

applicable. Engagement is ongoing with the AP and their representatives to understand the specific stewardship prescriptions in place.

In respect of the AP's concerns regarding the impact of the Project on the natural environment, ecology and wildlife, the Applicant confirms that the design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation in line with the mitigation hierarchy. **6.8 Environmental Statement Chapter 8 - Ecology and Biodiversity [Revision C]** assesses the effects on important ecological receptors. As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys have been undertaken over the 2022–2025 period, the findings of which have informed the design and approach to mitigation. **7.4 Outline Landscape and Ecological Management Plan [Revision G] and 7.2 Outline Code of Construction Practice [Revision G]** contain a list of relevant good practice measures to avoid or reduce impacts on protected species and additional mitigation measures, as appropriate. For example, where it is necessary to remove hedgerows and trees, replacement planting would be provided. Following the implementation of mitigation, no significant residual effects on ecology receptors have been identified as a result of construction or operation (and maintenance) of the Project.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met.

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have raised concerns regarding the potential environmental impact of the Project. An Environmental Impact Assessment (EIA) has been undertaken for the Project in accordance with the Infrastructure Planning (EIA) Regulations 2017. The EIA is detailed within the Environmental Statement (ES) that was submitted as part of the application for

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

development consent. The ES can be found in Volume 6 of the application documents. The ES assesses the impact of Norwich to Tilbury on a number of topics which are of direct relevance to those holding interests within the Order Land, including: air quality, agriculture and soils, ecology and biodiversity, contaminated land geology and hydrogeology, health and wellbeing, historic environment, hydrology land drainage and flood risk, landscape and visual, noise and vibration, socio-economics recreation and tourism and traffic and transport. The scope of the EIA was set out and agreed within 6.19 Scoping Report - including appendices B to K (Final Issue A) **[APP-296]** and 6.20 Scoping Opinion (Final Issue A) **[APP-297]**. Where potential effects on the environment have been anticipated, mitigation has been designed to avoid, prevent, reduce and offset impacts. Mitigation measures are set out and secured in 7.2 Outline Code of Construction Practice (Final Issue E) **[REP5-139]**, 7.3 Outline Construction Traffic Management Plan (Final Issue D) **[REP5-149]**, 7.4 Outline Landscape and Ecological Management Plan (Final Issue E) **[REP5-157]**, Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (Final Issue B) **[REP5-161]** and Outline Public Rights of Way Management Plan (Final Issue C) **[REP5-163]**. Residual effects (following the implementation of mitigation measures) of the Project are set out in each individual environmental statement topic chapter.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

27. AP 27 - Andrew Bendall

27.1 Person with Interest in Land (PIL) Reference ID: 1625, 7256

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The lane we use to access our property is used frequently and any loss of access is not acceptable. Disturbance by increased amount of traffic would adversely affect the quiet Location and also upset our dogs who are reactive to traffic on the lane.	Summary of Objection The Applicant understands that the AP's objection relates to the lane used frequently to access the AP's property, and concerns that any loss of access to this lane is not acceptable. The AP also raises concerns that increased levels of traffic on the lane would adversely affect the quiet character of the location and would disturb the AP's dogs, which are reactive to traffic on the lane. Land Rights Sought The AP is identified as a Category 2 interest on plot C-2/21 (class 3) and C-2/27 (class 7). Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project. Consolidated Response Although the Applicant has had no direct engagement with the AP to date and no land Rights are required from the AP, the Applicant would be happy to engage with the AP further to discuss their concerns. The Applicant wishes to address the AP's concerns regarding access directly. Access to the lane will remain unaffected by the Project. There are no Primary Access Routes

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

("PARs") located north or south of the AP's land parcels, only a crossover bellmouth on Burstall Lane to accommodate construction traffic associated with the undergrounding works for UKPN. Construction traffic is unable to access the haul road at crossover points from the public highway, unless captured within a specific circumstance detailed in **7.3 Outline Construction Traffic Management Plan [Revision E]**. Construction traffic access will be from Bullen Lane (Link PAR 21) or the A1071 (Link PAR 23) and will traverse along an associated haul road. The impact of traffic on these routes has been assessed as part of the **7.11 Transport Assessment [APP-333]** which indicate a low level of impact on traffic.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

28.1 Person with Interest in Land (PIL) Reference ID: 7645, 7033

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Summary of Objection

The Applicant has noted the objection of Rachel Perry and James Perry. No specific reasons for objection have been set out in this AP's written representation

Land Rights Sought

The AP has Category 2 interest on parcels B-16/30 (Class 5 - access) and therefore no rights are being sought from the AP by the Applicant. Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project.

Consolidated Response

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project. ”

29. AP 29 - Paul Whittle

29.1 Person with Interest in Land (PIL) Reference ID: 2599

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
National Grid have not responded to any of our concerns. Why should we help them if they continue to not listen?	Summary of Objection The Applicant understands that the AP's objection is that National Grid has not responded to his concerns, and queries why the AP should cooperate with the Project in the absence of such engagement. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure) and (b) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Consolidated Response The Applicant respectfully disagrees with the assertion that it has failed to engage with the AP's concerns. Following review of the AP's representations and the issues raised regarding subsoil rights beneath the highway, the Applicant reassessed its land requirements and concluded that rights over the AP's land are no longer required for National Grid's purposes. As a result, the AP's land has been removed from National Grid's voluntary acquisition programme and, on 8 June 2026, the Applicant wrote to the AP's representative confirming that the Draft Land Rights Tracker would be updated accordingly. The Applicant considers that this demonstrates that concerns raised during the Examination have been actively considered and have directly informed the Applicant's approach to land rights acquisition. The Applicant remains willing to engage further with the AP and their representative should any outstanding matters remain.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. Applicant's Response

Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

30. AP 30 - Jonathan Cole-Matthews / John Cole Farms Limited

30.1 Person with Interest in Land (PIL) Reference ID: 10187

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
It is an infringement of our private property rights. Compensation would not reflect the international loss of valuable land	Summary of Objection The Applicant understands that the AP's objection relates to the infringement of their private property rights, and to the view that any compensation offered would not reflect the loss of valuable land. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation, and Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), and (d) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP and their representatives. A meeting was held with the AP and their representatives on 27 January 2026, at which the main concerns raised were pylon siting and permanent access routes. These matters are currently being reviewed and discussions are ongoing to reach voluntary terms. Version 2 of the HoTs was sent on 9 April 2026, which included an offer of a meeting to discuss the HoTs. The AP's representative attended an

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Agent's Group Meeting with Fisher German and National Grid on 4 June 2026. The Applicant remains committed to reaching a voluntary agreement with this AP.

The Applicant acknowledges the Affected Person's concerns regarding the impact of the Project on their property and their view that compensation would not adequately reflect the perceived loss. The Applicant notes that the powers of compulsory acquisition and the interference with private property rights associated with them are authorised only where there is a compelling case in the public interest and where the tests set out in the Planning Act 2008 and the relevant national policy have been satisfied. The extent of the land rights sought has been limited to those considered reasonably necessary for the construction, operation and maintenance of the Proposed Development.

The Applicant recognises that compensation cannot remove all personal concerns associated with the exercise of compulsory acquisition powers. However, affected persons are entitled to compensation in accordance with the statutory compensation code, which is intended to provide fair compensation for losses arising from the acquisition of land or rights and the effects of the Project on retained land.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added):

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

"Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

31. AP 31 - Victoria Owen

31.1 Person with Interest in Land (PIL) Reference ID: 561

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Please refer to my agent, E. Havers at Clarke and Simpson Ltd.	Summary of Objection The Applicant notes that the AP has referred to her agent in relation to her objection and has not set out any further specific details Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Restrictive Covenants, and Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), and (d) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP's representative. Version 2 of the HoTs was sent on 26 March 2026, which included an offer of a meeting to discuss the HoTs. The Applicant has met with the AP's agent on numerous occasions to progress the HoTs, most recently on 4 June 2026. Engagement continues between the AP's agent and the Applicant to reach voluntary terms. No AP-specific concerns have been raised to the Applicant's land agents during these meetings.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project. ”

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Summary of Objection The Applicant has noted the objection of William John Gray. No specific reasons for objection have been set out in the AP's written representation. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. Powers of temporary possession (Class 7) are sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP and their representatives. Version 1 of the HoTs was issued in October 2025. Version 2 of the HoTs was issued in April 2026. No site meeting has been held following the issue of the HoTs, notwithstanding that multiple requests for a HoTs meeting have been made via the AP's agent, Rachel Hipperson, the last of which was made on 21 May 2026. The Applicant remains committed to meeting with the AP and their agent to progress HoTs discussions and reiterates its offer of a meeting. The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle. The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in

33. AP 33 - Sam Taylor

33.1 Person with Interest in Land (PIL) Reference ID: 10337

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The land in question is a former infilled quarry; our surface ownership is covered under EX834408. Holcim is referred to in the document as 'Lafarge International Holdings'. The former quarry was infilled with landfill and as such requires ongoing gas monitoring to comply with the EA landfill permit. To complicate matters, all access rights have been granted to 'Lafarge Aggregates Limited' (which is Tarmac) to infill, extract landfill gas and undertake any works necessary for landfill management under the EA permit. Therefore, we cannot agree to a unilateral arrangement or anything that will impede the rights granted to 'Lafarge Aggregates Limited' (Tarmac).	Summary of Objection The Applicant understands that the AP's objection relates to the fact that the land in question is a former infilled quarry, and as such requires ongoing gas monitoring. The Applicant notes and understand the AP feels they cannot agree to any unilateral arrangement or anything that would impede the rights granted to Lafarge Aggregates Limited (Tarmac). Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP. Version 1 of the HoTs was issued in October 2025. Version 2 of the HoTs was issued on 2 April 2026, which included an offer of a meeting to discuss the HoTs. No site meeting has been held following the issueof the HoTs. The Applicant acknowledges the AP's concerns regarding the existing rights granted to Lafarge Aggregates Limited (Tarmac) and confirms that it will engage with the AP and any relevant third parties to ensure that the rights sought by the Applicant do not impede any existing rights or obligations associated with the landfill permit. The Applicant remains committed to resolving these matters through ongoing dialogue. The Applicant Will liaise further with the AP to better understand the constraint, and request further details of the access rights granted to Lafarge Aggregates Limited (Tarmac), including the extent of the land affected, the nature

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and duration of the rights, and whether those rights would prevent or materially restrict the exercise of the powers and rights sought by the Applicant.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all

Applicant's Response

times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have raised concerns regarding the potential environmental impact of the Project. An Environmental Impact Assessment (EIA) has been undertaken for the Project in accordance with the Infrastructure Planning (EIA) Regulations 2017. The EIA is detailed within the Environmental Statement (ES) that was submitted as part of the application for development consent. The ES can be found in Volume 6 of the application documents. The ES assesses the impact of Norwich to Tilbury on a number of topics which are of direct relevance to those holding interests within the Order Land, including: air quality, agriculture and soils, ecology and biodiversity, contaminated land geology and hydrogeology, health and wellbeing, historic environment, hydrology land drainage and flood risk, landscape and visual, noise and vibration, socio-economics recreation and tourism and traffic and transport. The scope of the EIA was set out and agreed within 6.19 Scoping Report - including appendices B to K (Final Issue A) **[APP-296]** and 6.20 Scoping Opinion (Final Issue A) **[APP-297]**. Where potential effects on the environment have been anticipated, mitigation has been designed to avoid, prevent, reduce and offset impacts. Mitigation measures are set out and secured in 7.2 Outline Code of Construction Practice (Final Issue E) **[REP5-139]**, 7.3 Outline Construction Traffic Management Plan (Final Issue D) **[REP5-149]**, 7.4 Outline Landscape and Ecological Management Plan (Final Issue E) **[REP5-157]**, Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (Final Issue B) **[REP5-161]** and Outline Public Rights of Way Management Plan (Final Issue C)

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

[REP5-163]. Residual effects (following the implementation of mitigation measures) of the Project are set out in each individual environmental statement topic chapter.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

34. AP 34 - Ian James Colchester

34.1 Person with Interest in Land (PIL) Reference ID: 3229

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Summary of Objection The Applicant has noted the objection of Ian James Colchester. No specific reasons for objection have been set out in the AP's written representation. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Powers of temporary possession (Class 7) are also sought for UKPN in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant confirms that statutory consultation engagement was undertaken with this AP in 2024 and 2025, and that meetings were held with agents in January and February 2026. The Applicant remains committed to progressing engagement with this AP and their representatives and to reaching a voluntary agreement wherever possible. The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant

	considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project. ”

35. AP 35 - Nemone Braithwaite

35.1 Person with Interest in Land (PIL) Reference ID: 4830

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The land is a nature reserve	Summary of Objection The Applicant understands that the AP's objection is that the land the subject of the proposed acquisition is a nature reserve. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Powers of temporary possession (Class 7) are also sought for UKPN in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP and their representatives. Regular meetings have been held with Brooks Leney, acting as the AP's representative, to discuss and negotiate the HoTs. Specifically, a meeting was held on 1 April 2026 to discuss the reissue of the HoTs and to continue with progression on specific points. A further meeting was held on 15 April 2026 to negotiate Version 2 of the HoTs, with National Grid in attendance. A subsequent meeting took place on 7 May 2026, again with National Grid present. The Applicant acknowledges that a temporary access route is required to conduct the 132kV works and the end of the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

11kV works, and the Applicant is committed to minimising the impact of such works on the AP's land in the course of those operations.

The Applicant is aware that this area is near to a locally designated County Wildlife Site (CWS), known as Sproughton Park CWS. Potential impacts to this CWS have been included in the **6.8 Environmental Statement Chapter 8 - Ecology and Biodiversity [Revision C]** and mitigation provided as necessary within the **7.4 Outline Landscape and Ecological Management Plan [Revision G]** and **7.2 Outline Code of Construction Practice [Revision G]**.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
All of our land is used for grazing by our horses and we cannot disrupt or reduce their food supply, or risk granting access	Summary of Objection The Applicant understands that the AP's objection relates to the use of all of the AP's land for grazing by horses, and the concern that the Project would disrupt or reduce the horses' food supply or risk granting access to that land. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds a Category 2 interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), and (d) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project

Consolidated Response

In relation to the AP's concern regarding the use of the land for equestrian activities, the Applicant notes that, based on a review of available aerial imagery, street view and site photographs, the parcels referenced appear to be arable rather than equestrian in nature.

The Applicant is committed to minimising disruption to those operations throughout the life of the Project. The most suitable route for exercising the access right at any particular time would therefore be agreed with the AP at the time of access. This, together with the provision of information about access duration and nature of works, would help minimise disruption to the AP's farming and business operations.

The design of the Project meets the increased electromagnetic field ("EMF") requirements due to the road crossings at either side of the affected parcels. Accordingly, the design is compliant with relevant standards regardless of whether the land beneath the overhead line is used for equestrian activities.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance

entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added):

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

"Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
FP 105141-008 Seven Acre Field at Dunton (Sole Ownership) Also shown on your National Grid Drawing NG-NT-2025-06-GF-CON-R3-1481 N-T-LIQ-18833 OS Map Ref TQ 65 90 (part ownership with Justin Samuel Mountfort and Verity Collins) [REDACTED]. Presence of High Voltage Overhead Lines will devalue property. Construction work will damage Gateways and land surfaces(topsoil will be lost or mixed into deeper clay)	Summary of Objection The Applicant understands that the AP's objection relates to the presence of high voltage overhead lines will devalue the property, and that construction work will damage gateways and land surfaces, with particular concern that topsoil will be lost or mixed into deeper clay. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Occupation and Freehold. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP and their representatives. A meeting was held with the AP and their agent at the AP's property on 1 June 2026. A meeting was also held with the AP's agent on 20 April 2026 to negotiate Version 2 of the HoTs. The HoTs were issued on 21 April 2026 with an offer of a meeting to discuss them, though no response has been received to that offer. In relation to the AP's concern regarding property value, the Applicant acknowledges the concern but maintains that there is no reliable evidence that the Project causes a general reduction in property prices. Property values are influenced by multiple factors and are not a material planning consideration. Compensation for diminution in value is available only where the statutory Compensation Code applies, including injurious affection and statutory

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

blight where the relevant legal tests are met. Perceived loss of value, loss of view or generalised blight do not of themselves give rise to compensation.

In relation to the AP's concern regarding damage to gateways and land surfaces, and the potential for construction activities associated with the Project to cause damage to agricultural and other land, the Applicant's approach to soil handling is set out in 7.2 Outline Code of Construction Practice Appendix C – Outline Soil Resource Plan **[Revision D]**.

7.2 Outline Code of Construction Practice Appendix C - Outline Soil Resource Plan **[APP-303]** provides strategy, guidance and methodology in relation to the key soil mitigation measures required to protect soil resources and ensure the land can be restored (i.e., for temporary haul routes) to its previous condition, or as agreed with the landowner. These measures, including the aftercare period, will ensure topsoil and subsoil resources do not become mixed and remain available and in the right condition to ensure the land can be returned to its preconstruction condition.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant acknowledges concerns regarding potential property value impacts but maintains that there is no reliable evidence that the Project causes a general reduction in property prices. Property values are influenced by multiple factors and are not a material planning consideration. Compensation for diminution in value is available only where the statutory Compensation Code applies, including injurious affection and statutory blight where the relevant legal tests are met. Perceived loss of value, loss of view or generalised blight do not of themselves give rise to compensation.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have restated general concerns as to the potential impact of the Project on existing agricultural operations. It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction corridor re-fencing and health and safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the construction to provide a more detailed understanding of the time when any construction works will take place. The Applicant remains committed to explore appropriate and proportionate options to mitigate the effects of the project during construction, including temporary severance of land. The Applicant will not be able to settle the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land) assessed on a case-by-case basis.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

38. AP 38 - Jonathan James Nelson

38.1 Person with Interest in Land (PIL) Reference ID: 9614

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
This work will create a negative financial effect on house value, will cause disruption and environmental damage to where we live, and will cause inconvenience to our everyday lives and our ability to walk the surrounding area.	Summary of Objection The Applicant understands that the AP's objection relates to concerns that the Project will create a negative financial effect on house value, will cause disruption and environmental damage in the area where the AP lives, and will cause inconvenience to the AP's everyday life and ability to walk the surrounding area. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds a Category 2 interest: (a) Class 5 (access). Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project Consolidated Response In relation to the AP's concerns regarding property value, the Applicant acknowledges those concerns but maintains that there is no reliable evidence that the Project causes a general reduction in property prices. Property values are influenced by multiple factors and are not a

material planning consideration. Compensation for diminution in value is available only where the statutory Compensation Code applies, including injurious affection and statutory blight where the relevant legal tests are met. Perceived loss of value, loss of view or generalised blight do not of themselves give rise to compensation.

An Environmental Impact Assessment (EIA) has been undertaken for the Project in accordance with the Infrastructure Planning (EIA) Regulations 2017. The EIA is detailed within the Environmental Statement (ES) that was submitted as part of the application for development consent. The ES can be found in Volume 6 of the application documents. The ES assesses the impact of Norwich to Tilbury on a number of topics which are of direct relevance to those holding interests within the Order Land, including: air quality, agriculture and soils, ecology and biodiversity, contaminated land geology and hydrogeology, health and wellbeing, historic environment, hydrology land drainage and flood risk, landscape and visual, noise and vibration, socio-economics recreation and tourism and traffic and transport. The scope of the EIA was set out and agreed within 6.19 Scoping Report - including appendices B to K (Final Issue A) **[APP-296]** and 6.20 Scoping Opinion (Final Issue A) **[APP-297]**. Where potential effects on the environment have been anticipated mitigation has been designed to avoid, prevent, reduce and offset impacts. Mitigation measures are set out and secured in 7.2 Outline Code of Construction Practice **[Revision G]**, 7.3 Outline Construction Traffic Management Plan **[Revision F]**, 7.4 Outline Landscape and Ecological Management Plan **[Revision G]**, 7.5 Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation **[Revision C]** and 7.6 Outline Public Rights of Way Management Plan **[Revision D]**. Residual effects (following the implementation of mitigation measures) of the Project are set out in each individual environmental statement topic chapter.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

39. AP 39 - Katherine Ann Nelson

39.1 Person with Interest in Land (PIL) Reference ID: 6668

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
this will cause severe inconvenience , have a negative effect on our house value, make it more difficult to be able to use the surrounding area for physical activity and for exercising dogs. It will scare away wildlife such as barn owls, bats and many more.	Summary of Objection The Applicant understands that the AP objects on the grounds that the Project will cause major disruption, reduce property values, impede recreational use of the area (including dog-walking and exercise), and have an adverse impact on wildlife (notably barn owls and bats). Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over plots B-12/8, B-12/25, B12-/28 and B-12/41 which this AP holds a Category 2 interest: (a) Class 5 (access). Consolidated Response Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project. In relation to the AP's concerns regarding ecology and wildlife, the design process has taken account of existing biodiversity, the natural environment and, where practicable,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation in line with the mitigation hierarchy. **6.8 Environmental Statement Chapter 8 - Ecology and Biodiversity [Revision C]** assesses the effects on important ecological receptors. As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys have been undertaken over the 2022–2025 period, the findings of which have informed the design and approach to mitigation. **7.4 Outline Landscape and Ecological Management Plan [Revision G]** and **7.2 Outline Code of Construction Practice [Revision G]** contain a list of relevant good practice measures to avoid or reduce impacts on protected species and additional mitigation measures, as appropriate. Following the implementation of mitigation, no significant residual effects on ecology receptors have been identified as a result of construction or operation (and maintenance) of the Project.

In relation to the AP's concerns regarding physical activity and use of the surrounding area, as part of the Environmental Impact Assessment (EIA) process, an assessment has been completed on the potential impacts of the Project on health and wellbeing, with the findings presented in **6.10 Environmental Statement Chapter 10 - Health and Wellbeing [Revision C]**. This includes an assessment of impacts as they relate to physical activity as a result of the potential for disruption to recreational routes or areas of open space. The assessment notes that the duration of effects that may potentially affect people's ability to be physically active (e.g. closures of Public Rights of Way) are generally short-term, with rapid reversal or diversions in place. As such, impacts are considered to be negligible. Mitigation measures, management regimes and information relating to duration of impacts are described in **7.6 Outline Public Rights of Way Management Plan [Revision D]**.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the **4.1 Statement of Reasons (Issue B) [REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in **8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

The Applicant acknowledges concerns regarding potential property value impacts but maintains that there is no reliable evidence that the Project causes a general reduction in property prices. Property values are influenced by multiple factors and are not a material planning consideration. Compensation for diminution in value is available only where the statutory Compensation Code applies, including injurious affection and statutory blight where the relevant legal tests are met. Perceived loss of value, loss of view or generalised blight do not of themselves give rise to compensation.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have raised concerns regarding the potential environmental impact of the Project. An Environmental Impact Assessment (EIA) has been undertaken for the Project in accordance with the Infrastructure Planning (EIA) Regulations 2017. The EIA is detailed within the Environmental Statement (ES) that was submitted as part of the application for development consent. The ES can be found in Volume 6 of the application documents. The ES assesses the impact of Norwich to Tilbury on a number of topics which are of direct relevance to those holding interests within the Order Land, including: air quality, agriculture and soils, ecology and biodiversity, contaminated land geology and hydrogeology, health and wellbeing, historic environment, hydrology land drainage and flood risk, landscape and visual, noise and vibration, socio-economics recreation and tourism and traffic and transport. The scope of the EIA was set out and agreed within 6.19 Scoping Report - including appendices B to K (Final Issue A) **[APP-296]** and 6.20 Scoping Opinion (Final Issue A) **[APP-297]**. Where potential effects on the environment have been anticipated mitigation has been designed to avoid, prevent, reduce and offset impacts. Mitigation measures are set out and secured in 7.2 Outline Code of Construction Practice (Final Issue E) **[REP5-139]**, 7.3 Outline Construction Traffic Management Plan (Final Issue D) **[REP5-149]**, 7.4 Outline Landscape and Ecological Management Plan (Final Issue E) **[REP5-157]**, Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (Final Issue B) **[REP5-161]** and Outline Public Rights of Way Management Plan (Final Issue C) **[REP5-163]**. Residual effects (following the implementation of mitigation measures) of the Project are set out in each individual environmental statement topic chapter.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

40. AP 40 - Andrew Donald Smith

40.1 Person with Interest in Land (PIL) Reference ID: 3398

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We have an agent working on our behalf to make an agreement with National Grid and UK Power Networks so that CA and TP should not be necessary.	Summary of Objection The Applicant understands that the AP's will continue to work with the applicant and UKPN to negate the need for Compulsory Acquisition and Temporary Possession. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), and (d) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant wishes to draw to the Examining Authority's attention the engagement that has taken place with this AP and their representatives. A meeting was held with the AP and their representatives on 23 January 2026 to discuss practical matters associated with the Project. Version 2 of the HoTs was issued on 9 April 2026, and dialogue has continued with the AP's agent since that time. The AP's representatives attended an Agent's Group Meeting with Fisher German and National Grid on 4 June 2026. The Applicant remains committed to reaching a voluntary agreement with this AP and continues to engage actively towards that end.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In relation to the position of UK Power Networks, the Applicant confirms the following response from UKPN: UK Power Networks have had correspondence with Mr Smith's agent and intend to host a Teams meeting further to the design for the UK Power Networks works having been shared. UK Power Networks support the position that both parties are working to reach voluntary agreement on the land rights required, and further to a successful resolution compulsory acquisition will not be required.

The Applicant also refers, in response to the AP's assertion that CA and TP powers are not necessary, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. As the Statement of Reasons makes clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance. In any event, the Applicant notes that, consistent with the AP's own position, both National Grid and UKPN are actively working to reach a voluntary agreement with the

AP, and the Applicant is confident that the ongoing engagement underway with the AP's representatives reflects a genuine and committed effort to conclude terms without recourse to compulsory powers.

41. AP 41 - Claire Tebbutt

41.1 Person with Interest in Land (PIL) Reference ID: 13638

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Summary of Objection

The Applicant has noted the objection of Claire Tebbutt. No specific reasons for objection have been set out in the AP's written representation.

Land Rights Sought

The Applicant understands that this AP's objection concerns an Easement Right or Privilege held within the Project Order Limits. The Applicant is seeking to permanently acquire land in which this AP holds a Category 2 interest (Class 1 – Compulsory Acquisition of Land), to acquire permanent rights for National Grid in respect of underground cable infrastructure (Class 3), and to exercise powers of temporary possession (Class 7) over land in which this AP holds an interest. No substantive specific reasons for objection were set out in the AP's submission. The AP holds an interest in plots D-4/29, D-4/30, D-4/31, D-4/32, D-4/32, D-4/33, D-4/35-38, D-4/43, D-4/44.

Consolidated Response

Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Due to the above no engagement has been required in regards to HoTs, and the Applicant confirms there are no outstanding site-specific matters to be addressed beyond the thematic points below. The Applicant remains committed to engaging with this AP to reach a voluntary agreement in respect of the land and rights required.

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project. ”

44. AP 44 - Stephen March, Jane March and The Trustees of the Foljambe 1984 Settlement

44.1 Person with Interest in Land (PIL) Reference ID: 2550, 3717, 6103, 9438

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Our objections to how this project would interfere with our land are twofold. There is the loss of use of the land and the impact on our business with a reduced acreage and the environmental damage that will be caused by the removal and stacking of soil for the haul roads and the trenching. The stacking of the topsoil will destroy the microbe and organic content of the soil as well as the drainage capability when returned to the field. As three parcels of land are permanent pasture, the effect will be greater as this will not return to what it is for many years. Especially the land in Fordham Valley where the land is ridge and furrow and provides Summer and Winter grazing. This land will lose its stock carrying capacity and productivity completely. The three areas of grassland will have a big impact on our competition horse breeding and beef rearing as we would have insufficient grass land to	Summary of Objection The AP objects on two principal grounds: the temporary loss of land and reduced acreage during construction will harm the AP's business', and the environmental damage from removal and stacking of soil for haul roads and trenching. Land Rights Sought The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds both Category 1 and Category 2 interests in the form of: Class 1 (Compulsory acquisition), Class 2 (overhead line) Class 3 (underground cable infrastructure), Class 4 (overhead line and underground cable infrastructure), Class 5 (access). Powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest. Certain parcels of land in which the APs hold an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). The APs have interests in plots D-4/10-13, D-4/21, D-4/23-25, D-4/28-46, D-4/52, D-4/54, D-4/59, D-4/62 D-4/64-66, D-4/72-73, D-4/75, D-4/77-78, D-4/80-81, D-4/83 D-4/85-86, D-4/93-97, D-4/101, D-5/1, D-5/3-5, Consolidated Response In terms of engagement with this AP, Version 2 of the Heads of Terms was sent on 26 March 2026, which included an offer of a meeting to discuss the terms. A HoTs meeting was subsequently arranged for and held on 20 April 2026, at which the AP and their representative were present. Commitments were taken away from that meeting for the Applicant to review, and responses have since been provided on a number of matters

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
graze the animals and conserve winter forage.	including the potential for reducing the grantor's land take. Large-scale plans were provided to the AP as requested. During route optioneering, the impacts on agricultural land, including on agricultural land-take and on agricultural activities and operations, as far as was understood based on the data available at the time, were a consideration in the route selection process, as outlined in 6.3 Environmental Statement Chapter 3 – Alternatives [Revision B]. The Applicant has sought to minimise impacts on Best and Most Versatile land and proposes to implement mitigation measures to protect soil resources (5.6 Planning Statement [Revision B]). During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. The Applicant would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so. National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. The Applicant seeks to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims (as stated in 6.6 Environmental Statement Chapter 6 – Agriculture and Soils [Revision B]) for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements. The Applicant notes concerns raised by certain APs regarding the potential for construction activities associated with the Project to cause damage to agricultural and other land. Although not directly related to the Applicant's request for authorisation of CA and TP powers, the Applicant's approach to soil handling is set out in 7.2 Outline Code of Construction Practice Appendix C – Outline Soil Resource Plan [AP-303]. provides strategy, guidance and methodology in relation to the key soil mitigation measures required to protect soil resources and ensure the land can be restored (i.e. for temporary haul routes) to its previous condition, or as agreed with the landowner. This is based on published good practice and is designed to enable soils which have been handled and stockpiled to be reinstated to return land to its preconstruction condition. This includes aspects of preparing the subsoil which has become compacted prior to placement of topsoil. This plan confirms that topsoil and subsoil should be stockpiled on like for like (i.e. topsoil can be sorted on

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

topsoil). This will limited potential for subsoil or clay migration into topsoil resources. To confirm suitability of stockpiled soils for restoration, they will be inspected and assessments carried out before their reinstatement. Stockpiled soils shall be reconditioned as required. These measures, including the aftercare period, will ensure the soils have returned to their pre-construction condition.

The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including damage caused by the works) assessed on a case-by-case basis.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have restated general concerns as to the potential impact of the Project on existing agricultural operations.

It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction corridor re-fencing and health and safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

construction to provide a more detailed understanding of the time when any construction works will take place.

The Applicant remains committed to explore appropriate and proportionate options to mitigate the effects of the project during construction, including temporary severance of land. The Applicant will not be able to settle the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery.

The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land) assessed on a case-by-case basis.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

45. AP 45 - Clive Bainbridge

45.1 Person with Interest in Land (PIL) Reference ID: 59

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Desecration old hedgerows and trees. Violation private land and loss of privacy.	Summary of Objection The AP objects to the desecration of old hedgerows and trees and to the violation of private land and loss of privacy arising from the Project. Land Rights Sought The Applicant understands that this AP holds Freehold and Occupation interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid in the form of Class 3 (underground cable infrastructure), and permanent rights for UKPN in the form of Class 3 (underground cable infrastructure), over land in which this AP holds an interest. Powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest. The AP has interest in plots D-7/68, D-7/71, D-7/75. Consolidated Response The Applicant confirms that it is not itself seeking rights directly from this AP in connection with the National Grid element of the Project at this stage. The rights being sought in relation to this AP's land refer to UKPN diversion works only, and UKPN's appointed agent has been engaging with the AP separately in order to negotiate terms in respect of those works. The Applicant remains open to discussing any queries the AP may have in connection with the Project. In relation to the AP's concerns regarding the impact on hedgerows and trees, the Applicant confirms that the design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity through avoidance or mitigation in line with the mitigation hierarchy. 6.8 Environmental Statement Chapter 8 – Ecology and Biodiversity [Revision C] assesses the effects on important ecological receptors. As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys have been

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

undertaken over the 2022–2025 period, the findings of which have informed the design and approach to mitigation. For example, trees and hedgerows that are removed by the Project will be replaced with new planting. **7.4 Outline Landscape and Ecological Management Plan [Revision G]** and **7.2 Outline Code of Construction Practice [Revision G]** contain a list of relevant good practice measures to avoid or reduce impacts on protected species and additional mitigation measures, as appropriate. Following the implementation of mitigation, no significant residual effects on ecology receptors have been identified as a result of construction or operation (and maintenance) of the Project.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a

Applicant's Response

manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code fore.g. loss or damage caused by the exercise of powers by the Applicant.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have sought to argue that the future exercise of those acquired rights and consented powers will cause damage to the environment.

In response, the Applicant notes that an Environmental Impact Assessment (EIA) has been undertaken for the Project in accordance with the Infrastructure Planning (EIA) Regulations 2017. The Environmental Impact Assessment is detailed within the Environmental Statement (ES) that was submitted as part of the application for development consent. The ES can be

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

found in Volume 6 of the application documents. The ES assesses the impact of Norwich to Tilbury on a number of topics which are of direct relevance to those holding interests within the Order Land, including: air quality, agriculture and soils, ecology and biodiversity, contaminated land geology an hydrogeology, health and wellbeing, historic environment, hydrology land drainage and flood risk, landscape and visual, noise and vibration, socio-economics recreation and tourism and traffic and transport. The scope of the EIA was set out and agreed within 6.19 Scoping Report - including appendices B to K (Final Issue A) **[APP-296]** and 6.20 Scoping Opinion (Final Issue A) **[APP-297]**.

Where potential effects on the environment have been anticipated mitigation has been designed to avoid, prevent, reduce and offset impacts. Mitigation measures are set out and secured in 7.2 Outline Code of Construction Practice (Final Issue E) **[REP5-139]**, 7.3 Outline Construction Traffic Management Plan (Final Issue D) **[REP5-149]**, 7.4 Outline Landscape and Ecological Management Plan (Final Issue E) **[REP5-157]**, Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (Final Issue B) **[REP5-161]** and Outline Public Rights of Way Management Plan (Final Issue C) **[REP5-163]**. Residual effects (following the implementation of mitigation measures) of the Project are set out in each individual environmental statement topic chapter. Residual effects are stated to be significant or not-significant in accordance with the methodology the assessments have been undertaken in accordance with.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

46. AP 46 - Ellena Benton

46.1 Person with Interest in Land (PIL) Reference ID: 29427

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Object	Summary of Objection The AP has registered an objection of “object” to the Project. Land Rights Sought The Applicant understands that this AP holds a Freehold interest within the Project Order Limits. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: Class 2 (overhead line infrastructure), Class 3 (underground cable infrastructure), Class 4 (overhead line and underground cable infrastructure), and Class 5 (access). The Applicant is also seeking to acquire permanent rights for UKPN over land in which this AP holds an interest: Class 3 (underground cable infrastructure) and Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest. The AP has an interest in plots H-4/35, H-4/37, H-4/44-47, H-4/49, H-4/51, H-4/53-56, H-4/59. Consolidated Response The Applicant has been actively engaging with this AP's agent. A meeting was held on 20 April 2026 to negotiate the Version 2 Heads of Terms, attended by the Applicant's land team. The HoT document was sent to the AP's agent on 21 April 2026 with an offer of a further meeting to discuss the terms. On 28 May 2026, a meeting was held with the landowner to discuss the potential for a data centre on the land and the interaction of any such development with the Red Line Boundary. The AP subsequently provided plans for the proposed development so that this could be assessed by the Applicant. The Applicant is

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

currently reviewing those plans and remains committed to continued engagement with the AP on this matter with a view to finding a suitable solution.

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project. ”

47. AP 47 - Laura Lennox

47.1 Person with Interest in Land (PIL) Reference ID: 777

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The Heads of Terms are not satisfactory and NG / UK Power Networks are not engaging with the relevant bodies /land agents in a constructive manner to resolve landowner issues.	Summary of Objection The AP's objection is that the Heads of Terms are not satisfactory and that National Grid and UK Power Networks are not engaging with the relevant bodies and land agents in a constructive manner to resolve landowner issues. Land Rights Sought The Applicant understands that this AP holds Freehold, Leasehold, and Occupation interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of Class 2 (overhead line infrastructure), and powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8, meaning no powers of compulsory acquisition or temporary possession are sought in respect of those parcels. Consolidated Response In terms of the Applicant's engagement with this AP, a meeting was held with the AP's agents on 20 April 2026 to negotiate the Version 2 Heads of Terms, with the Applicant's land team in attendance. The Version 2 HoT document was sent to the AP's agent on 21 April 2026 with an offer of a further meeting to discuss the terms. No response to that offer has been received to date. The Applicant remains open to discussions over the Heads of Terms and committed to reaching a voluntary agreement. In relation to the land parcels relating to the affected party, UK Power Networks have been seeking to engage with the freehold (Category 1) affected party (Flying Trade Group Plc). An initial response was received from Flying Trade Group Plc on 5 June 2026; however, UK Power Networks continue to seek further engagement with the affected party. UK Power Networks have yet to issue HoTs in relation to these parcels in line with the UK Power

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Networks land strategy to seek meaningful engagement and issue specific HoTs to each affected party.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

48. AP 48 - Stuart Paris

48.1 Person with Interest in Land (PIL) Reference ID: 7304

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The Heads of Terms are not satisfactory and NG / UK Power Networks are not engaging with the relevant bodies /land agents in a constructive manner to resolve landowner issues.	Summary of Objection The AP's objection mirrors that of AP 47 in that the Heads of Terms are said not to be satisfactory and that National Grid and UK Power Networks are not engaging with the relevant bodies and land agents in a constructive manner to resolve landowner issues. Land Rights Sought The Applicant understands that this AP holds a Freehold interest within the Project Order Limits. Certain parcels of land in which the AP holds an interest fall within Class 8, meaning no powers of compulsory acquisition or temporary possession are sought in respect of those parcels. Consolidated Response In terms of the Applicant's engagement with this AP, a meeting was held with the AP's agents on 20 April 2026 to negotiate the Version 2 Heads of Terms, with the Applicant's land team in attendance. The Version 2 HoT document was sent to the AP's agent on 21 April 2026 with an offer of a further meeting to discuss the terms. No response to that offer has been received to date. The Applicant remains open to discussions over the Heads of Terms and committed to reaching a voluntary agreement. In relation to the land parcels relating to the affected party, UK Power Networks have been seeking to engage with the freehold (Category 1) affected party (Flying Trade Group Plc). An initial response was received from Flying Trade Group Plc on 5 June 2026; however, UK Power Networks continue to seek further engagement with the affected party. UK Power Networks have yet to issue HoTs in relation to these parcels in line with the UK Power Networks land strategy to seek meaningful engagement and issue specific HoTs to each affected party.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public

Applicant's Response

there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

49. AP 49 - Brian John Faulkner

49.1 Person with Interest in Land (PIL) Reference ID: 9339

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Pylon TB180 at Handley Green The proposed pylon TB180 will be alongside the access road from Handley Green to our property which is the only property on this road. It is a cul-de-sac, an unmade dirt road and is our only access in and out of our property. We therefore need access 24/7. We object to any change which affects our access. If National Grid or UKPN are to use this track they must ensure our access is freely available during any construction and maintenance work. The road into Handley Green and the dirt road to Marshalls Farm and Annexe are single track and unsuitable for large and/or heavy vehicles and National Grid will need to resurface and maintain the roads.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP objects to any change in use of the access road to their property from Handley Green, to enable construction of Pylon TB180, or enabling works by UKPN. The AP further raises concern on the functionality of the road into Handley Green and the dirt road to Marshalls Farm and Annexe, which National Grid will need to resurface and maintain the roads. Land Rights Sought The Applicant understands that this AP holds Occupation and Easement Right or Privilege interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of Class 2 (overhead line infrastructure) and Class 4 (overhead line and underground cable infrastructure). The Applicant is also seeking to acquire permanent rights for UKPN in the form of Class 4 (overhead line and underground cable infrastructure). The AP has not received HOTs as The Applicant is seeking these from the Category 1 Freeholder. Consolidated Response The Applicant wishes to clarify for this AP that the pylon located near Handley Green and Marshalls Farm is pylon TB182 and not TB180 as referenced in the AP's submission. In terms of the road and dirt track that the AP is concerned about, the Applicant can confirm that these are intended to be used only as either a crossover bellmouth location for the construction haul road, or as a permanent maintenance access point. The road itself will not be used as a Primary Access Route throughout construction, following the construction

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

access strategy in **7.3 Outline Construction Traffic Management Plan [Revision F]**. Access to the residential property will be maintained throughout the construction and operational phase, as secured through Article 16(3) of **3.1 draft Development Consent Order [Revision F]**. The permanent right of access that is sought will be used only infrequently, for inspections and maintenance activities. Such access will necessitate only light vehicles; accordingly, the AP's concern regarding large and/or heavy goods vehicles does not arise. The most suitable route of access on each occasion would be agreed between the Applicant and the AP at the time the access is required.

UK Power Networks are undertaking steps to engage the landowner directly based on details provided in the Book of Reference, due to the land being unregistered. The affected party's concerns regarding access are noted, and UK Power Networks will work to ensure that access is maintained to their property at all times during any works undertaken.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory

Applicant's Response

compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

50. AP 50 - Usha Faulkner (nee Rao)

50.1 Person with Interest in Land (PIL) Reference ID: 7661

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Pylon TB180 at Handley Green The proposed pylon TB180 will be alongside the access road from Handley Green to our property which is the only property on this road. It is a cul-de-sac, an unmade dirt road and is our only access in and out of our property. We therefore need access 24/7. We object to any change which affects our access. If National Grid or UKPN are to use this track they must ensure our access is freely available during any construction and maintenance work. The road into Handley Green and the dirt road to Marshalls Farm and Annexe are single track and unsuitable for large and/or heavy vehicles and National Grid will need to resurface and maintain the roads.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP objects to any change in use of the access road to their property from Handley Green, to enable construction of Pylon TB180, or enabling works by UKPN. The AP further raises concern on the functionality of the road into Handley Green and the dirt road to Marshalls Farm and Annexe, which National Grid will need to resurface and maintain the roads. Land Rights Sought The Applicant understands that this AP holds Occupation and Easement Right or Privilege interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of Class 2 (overhead line infrastructure) and Class 4 (overhead line and underground cable infrastructure). The Applicant is also seeking to acquire permanent rights for UKPN in the form of Class 4 (overhead line and underground cable infrastructure). The AP has not received HOTs as The Applicant is seeking these from the Category 1 Freeholder. Consolidated Response The Applicant wishes to clarify for this AP that the pylon located near Handley Green and Marshalls Farm is pylon TB182 and not TB180 as referenced in the AP's submission. The road and dirt track are intended to be used only as either a crossover bellmouth location for the construction haul road, or as a permanent maintenance access point. The road itself will not be used as a Primary Access Route throughout construction, following the construction access strategy in 7.3 Outline Construction Traffic Management Plan [Revision F].

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Access to the residential property will be maintained throughout the construction and operational phase, as secured through Article 16(3) of **3.1 draft Development Consent Order [Revision F]**. Any permanent right of access will be used only infrequently for inspections and maintenance activities, and will necessitate only light vehicles; accordingly, the AP's concern regarding large and/or heavy goods vehicles does not arise. The most suitable route of access on each occasion would be agreed between the Applicant and the AP at the time the access is required.

UK Power Networks are undertaking steps to engage the landowner directly based on details provided in the Book of Reference, due to the land being unregistered. The affected party's concerns regarding access are noted, and UK Power Networks will work to ensure that access is maintained to their property at all times during any works undertaken.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Ruin the countryside	Summary of Objection The AP has summarised their reasons for objection as follows: The Project will ruin the countryside. Land Rights Sought The Applicant understands that this AP holds Freehold and Occupation interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of: Class 2 (overhead line infrastructure), Class 4 (overhead line and underground cable infrastructure), and Class 5 (access). The Applicant is also seeking to acquire permanent rights for UKPN in the form of Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest. Consolidated Response The Applicant has been in active dialogue with this AP's agent. Version 2 of the Heads of Terms was sent on 26 March 2026 and the Applicant has maintained ongoing engagement with the AP's agent, the most recent occasion being 4 June 2026. The Applicant remains committed to reaching voluntary terms with this AP in respect of the land and rights required. The Applicant has sought to reduce, as far as practicable, potential impacts on visual receptors, through routeing and siting of infrastructure. The rural landscape will remain in place beneath and around the proposed overhead line, albeit there will be significant effects on landscape character and visual amenity as reported in the Landscape and Visual Impact Assessment (LVIA) in 6.13 Environmental Statement Chapter 13 - Landscape and Visual [Revision B].

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land"

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

(MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have sought to argue that the future exercise of those acquired rights and consented powers will cause damage to the environment.

In response, the Applicant notes that an Environmental Impact Assessment (EIA) has been undertaken for the Project in accordance with the Infrastructure Planning (EIA) Regulations 2017. The Environmental Impact Assessment is detailed within the Environmental Statement (ES) that was submitted as part of the application for development consent. The ES can be found in Volume 6 of the application documents. The ES assesses the impact of Norwich to Tilbury on a number of topics which are of direct relevance to those holding interests within the Order Land, including: air quality, agriculture and soils, ecology and biodiversity, contaminated land geology an hydrogeology, health and wellbeing, historic environment, hydrology land drainage and flood risk, landscape and visual, noise and vibration, socio-economics recreation and tourism and traffic and transport. The scope of the EIA was set out and agreed within 6.19 Scoping Report - including appendices B to K (Final Issue A) **[APP-296]** and 6.20 Scoping Opinion (Final Issue A) **[APP-297]**.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Where potential effects on the environment have been anticipated mitigation has been designed to avoid, prevent, reduce and offset impacts. Mitigation measures are set out and secured in 7.2 Outline Code of Construction Practice (Final Issue E) **[REP5-139]**, 7.3 Outline Construction Traffic Management Plan (Final Issue D) **[REP5-149]**, 7.4 Outline Landscape and Ecological Management Plan (Final Issue E) **[REP5-157]**, Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (Final Issue B) **[REP5-161]** and Outline Public Rights of Way Management Plan (Final Issue C) **[REP5-163]**. Residual effects (following the implementation of mitigation measures) of the Project are set out in each individual environmental statement topic chapter. Residual effects are stated to be significant or not-significant in accordance with the methodology the assessments have been undertaken in accordance with.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

52. AP 52 - Stephen Paul Goulding

52.1 Person with Interest in Land (PIL) Reference ID: 3931

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I object to the proposed interference with my land and private rights arising from the Development Consent Order. My land is approximately two acres of pasture forming part of my home known as [REDACTED]. The land is not a detached commercial holding; it forms part of the setting, amenity, enjoyment and ordinary use of my home. My objection is focused on the interference with my land and rights, including access during development, the impact of construction and operational works in close proximity to my property, the loss of the countryside setting visible from and enjoyed as part of my home, and potential interference with utilities and internet services on which I rely, including for working from home. I do not consent to the compulsory acquisition, temporary possession, acquisition of rights, creation of new rights, extinguishment, suspension, overriding or interference with any rights affecting my land unless the Applicant can demonstrate that the strict statutory tests are met.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP's land comprises approximately two acres of pasture forming part of his home and its setting. The objection is focused on the interference with the AP's land and rights, including: access to the property during the development phase; the impact of construction and operational works in close proximity to the property; the loss of the countryside setting visible from and enjoyed as part of the home; and potential interference with utilities and internet services on which the AP relies, including for working from home. The AP challenges whether the Section 122 test is met, submitting that the Applicant has not demonstrated that interference with his land or rights is "required" within the meaning of that section, and that less intrusive alternatives have not been fully explored. The AP also raises concerns regarding access for construction traffic, temporary works, and road closures, and maintains that the Applicant has not provided sufficient certainty that access will be maintained at all times. The Applicant recognises that visual impact from overhead lines and pylons can cause concern for communities and may lead to perceptions of property value loss. However, property values are influenced by many factors, making it hard to attribute depreciation to a single cause like infrastructure development. UK law does not include for compensation in cases of a loss of view or changes to a view. Under the Compulsory Purchase Code, property owners and businesses may be able to claim compensation for any loss in value directly caused by the Project if they meet the criteria. Land Rights Sought The Applicant understands that this AP holds an Easement Right or Privilege within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid

Please summarise (in no more than 1500 words) the reason(s) for your objection

Section 122 of the Planning Act 2008 requires the Secretary of State to be satisfied that the land or rights are required for the development, are required to facilitate or are incidental to it, or are replacement land, and that there is a compelling case in the public interest. That is a demanding test. It is not enough for the Applicant to show that interference with my land or rights would be convenient, cheaper, administratively easier, or preferable from the Applicant's point of view. The Applicant must show that the interference is necessary, proportionate and no more than is reasonably required.

I object because the Applicant has not demonstrated that interference with my land or rights is "required" within the meaning of section 122. My land is pasture forming part of a residential property and its setting. Any interference with access, services, occupation, quiet enjoyment, existing rights, amenity or use of that land would be a serious private burden. The Applicant must explain precisely what powers are sought over or affecting my land, why those powers are necessary, why less intrusive alternatives are not available, and why the same outcome cannot be achieved by design changes, routing changes, construction controls, protective provisions, voluntary agreement, or other mitigation.

Applicant's Response

over land in which this AP holds a Category 2 interest in the form of: Class 2 (overhead line infrastructure), Class 3 (underground cable infrastructure), Class 4 (overhead line and underground cable infrastructure), and Class 5 (access). The Applicant is also seeking permanent rights for UKPN in the form of Class 3 (underground cable infrastructure) and Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest.

Consolidated Response

Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project. The Applicant notes that this AP's property is situated approximately 200 metres from the closest point of the Red Line Boundary. The Applicant confirms that there has been no active direct engagement with this party as no rights are being sought directly from the AP in respect of the National Grid element of the Project.

The Applicant does not envisage that the exercise of the rights sought for the Project would interfere with, extinguish or otherwise adversely affect this AP's existing easement rights or privileges, and no direct acquisition of rights from this AP is proposed. Should any impact on those rights arise as the detailed design develops, the Applicant would engage with the affected party and any entitlement to compensation would be considered in accordance with the statutory compensation code.

In relation to the AP's concerns regarding access, with the exception of Great Tey Road, all other local highways and access tracks within the APs interest are intended to be used only as either a crossover bellmouth location for the construction haul road, or as a permanent maintenance access point. Only Great Tey Road will be used as a Primary Access Route

Please summarise (in no more than 1500 words) the reason(s) for your objection

The Department for Communities and Local Government guidance, Planning Act 2008: Guidance related to procedures for compulsory acquisition, September 2013, makes clear that compulsory acquisition powers should only be sought where there is a compelling case in the public interest, and that applicants should be able to demonstrate that all reasonable alternatives to compulsory acquisition have been explored. I do not consider that this has been demonstrated in relation to my land. In particular, the Applicant has not shown that the impacts on my access, residential enjoyment, pasture use, services and property setting have been avoided or reduced to the minimum necessary.

Access is a particular concern. [REDACTED] and its associated pasture require safe, practical and reliable access. Any construction traffic, temporary works, road closures, diversions, obstruction, narrowing, mud, noise, vibration, or restricted access could interfere with my ability to use and enjoy my property and land. These are not minor inconveniences. They affect the ordinary occupation of my home, the use and management of the pasture, visitors, deliveries, emergency access, and the general ability to live and work from the property. The Applicant has not provided sufficient certainty that access will be maintained at all times, or that any

Applicant's Response

throughout construction, following the construction access strategy in **7.3 Outline Construction Traffic Management Plan [Revision F]**. Great Tey Road is referred to as Link PAR 39, and has been assessed for impact in **7.11 Transport Assessment [APP-333]**. The peak construction traffic is expected to have a duration of approximately 3 weeks, with an addition 6 LGVs and 14 HGVs in both the AM and PM Peak (details included in **7.11 Transport Assessment Appendix E: LRN AM and PM Peak Construction Traffic Committed Developments Impacts [APP-338]**. Access to the residential property will be maintained throughout the construction and operational phase, as secured through Article 16(3) of **3.1 draft Development Consent Order [Revision F]**. Any permanent right of access over this land would be used only infrequently for inspections and maintenance activities and will necessitate only light vehicles. The most suitable route of access on each occasion would be agreed between the Applicant and the AP at the time the access is required.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
interference will be avoided, minimised, strictly controlled and enforceable. I also object because of the potential impact on utilities and internet services. I work from home and reliable internet and utility connections are essential to the ordinary use of my property. Any interruption, damage, diversi [COMMENT TRUNCATED AT THIS POINT]	to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of [REP3-010] makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need. The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations. The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

Some APs have questioned whether the Project may interfere with existing service connections, such as aerially-transmitted internet services. The Applicant notes these concerns, but confirms that the proposed overhead line is designed to the Applicant's technical specifications which include the requirements of BS 5049-3 (BSI, 1994), along with other equipment-specific standards such as BS EN 60437 (BSI, 1998) for the insulators on the pylons. All the equipment used will meet the requirements in these standards, which are in place to prevent interference issues. These are the same good engineering practices that are applied to the existing transmission system assets, including existing 400 kV overhead lines. The electromagnetic performance of the transmission system has been certified by a competent body and designed using good engineering practices, detailed in Section 3 of 7.8 Electric and Magnetic Field Compliance Report **[REP3-034]** and would present no issues with for electrical equipment, telecommunication, WiFi, GPS and broadcast equipment under normal operating conditions.

53. AP 53 - Stephen Roger Hart

53.1 Person with Interest in Land (PIL) Reference ID: 5305

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
As I have attempted to comply with all reasonable requests for access, intrusive and non intrusive surveys and other questions I don't feel there is a need under section 122 to acquire any of the rights over the land. For section 123, I will have a permanent land impairment that will impact my ability to farm, develop or enjoy rightful use and enjoyment of the entire land holding. The holding was purchased in 2019 for £400,000 and considerable input costs have been incurred to bring the holding into productive use. The current stated single payment is derisory in comparison to the productivity and amenity lost.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP states that he has complied with all requests for access and surveys, and submits that on this basis, the Section 122 test has not been satisfied as the acquisition of his land by compulsory means is not necessary. The AP further objects on the basis that permanent impairment of his farmland will severely affect his farming operation and that the payment offered is derisory in comparison to the productivity and amenity lost. Land Rights Sought The Applicant understands that this AP holds Freehold, Occupation, and Easement Right or Privilege interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of Class 2 (overhead line infrastructure) and Class 5 (access). Powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest. Consolidated Response The Applicant has engaged with this AP on a number of occasions. A meeting was held on 20 January 2026 at which a range of accommodation works matters were discussed, including: soil stripping and storage; severed land; drainage; crossing points; haul roads; and the potential for solar development on the AP's land. The solar option continues to be explored through the Statement of Common Ground process. A further meeting took place on 20 April 2026 to discuss the Version 2 Heads of Terms, and the Version 2 HoT document was subsequently sent to the AP's agent on 21 April 2026. The Applicant has made requests for a further meeting to continue discussions and remains committed to reaching a voluntary agreement with this AP in respect of the land and rights required.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

The Applicant recognises that visual impact from overhead lines and pylons can cause concern for communities and may lead to perceptions of property value loss. However, property values are influenced by many factors, making it hard to attribute depreciation to a single cause like infrastructure development. UK law does not include for compensation in cases of a loss of view or changes to a view. Under the Compulsory Purchase Code, property owners and businesses may be able to claim compensation for any loss in value directly caused by the Project if they meet the criteria.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

54. AP 54 - Heather Jane English

54.1 Person with Interest in Land (PIL) Reference ID: 37

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
A-1/23 NK67663 Following 2 on-site consultations alternative re-routing plans from the west of my front entrance and then to the south along the field boundary west of The Vale up to Church Road were acknowledged. Subsequently no up-dated plans have been received. The original plan still appears to be in place.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP states that two on-site consultations took place with a number of alternative re-routing plans acknowledged by the National Grid representatives as viable. The AP assumes that the original plan remains in place as they have not received updated plans from National Grid. Land Rights Sought The Applicant understands that this AP holds Freehold and Occupation interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of Class 3 (underground cable infrastructure) and Class 4 (overhead line and underground cable infrastructure). The Applicant is also seeking to acquire permanent rights for UKPN in the form of Class 3 (underground cable infrastructure) and Class 4 (overhead line and underground cable infrastructure). Consolidated Response The Applicant notes that it is not itself seeking rights directly from this AP in connection with the National Grid element of the Project. The rights being sought in relation to this AP's land are in connection with UKPN works, and UKPN are actively engaging with all affected persons to secure rights to undertake works required on their own network. The Applicant understands that UKPN's engagement with this AP in respect of those works is ongoing. The Applicant remains open to discussing any queries the AP may have in connection with the Project generally and will liaise with UKPN regarding the proposed rerouting.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations. The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant. A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) [REP3-010], and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land"

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

(MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

55. AP 55 - Coryn Gladys Hart

55.1 Person with Interest in Land (PIL) Reference ID: 15231

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
For section 123. The land is not strictly required as it is over 1mile away from the proposed works. It is not on any direct or indirect access routes and has had no infrastructure or access requests made upon it.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP objects on the basis that their land is over one mile away from any construction works, does not appear to be on any access route, and that no request to install any infrastructure on or under the land has been received. Land Rights Sought The Applicant understands that this AP holds an Easement Right or Privilege within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds a Category 2 interest in the form of Class 2 (overhead line infrastructure). The AP's land is directly affected by the overhead line infrastructure forming part of the Project. The AP has an interest in plot G-3/6. Consolidated Response A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") an temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Applicant's Response

Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

56. AP 56 - Great Cowbridge Grange Farm Ltd

56.1 Person with Interest in Land (PIL) Reference ID: 10359

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Section 122. There is no need to gain additional access to the proposed sites other than via the access road for the Southern Water sewerage treatment works. Section 123. The potential loss to Great Cowbridge Grange Farm Ltd. is of an agreed option with Conrad Energy (Developments) Ltd. and respective planning permission to build a solar farm on or adjacent to the land in question. The agreement is for a 40 year lease to Conrad Energy of the land unencumbered (As per clause 9 of the option). If the planned works impact or cause the option agreement not to be exercised there will be a loss of 40 years worth of rent and generation income to Great Cowbridge Grange Farm Ltd.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP sets out two grounds of objection. First, pursuant to Section 122, the AP submits that there is no need for any additional access to the AP's land beyond the existing Southern Water access road, which the AP asserts would be sufficient for National Grid's purposes. Second, pursuant to Section 123, the AP submits that the Project could result in the loss of a potential 40-year solar farm option that the AP has with Conrad Energy, which the AP submits represents a substantial private loss that is not adequately addressed. Land Rights Sought The Applicant understands that this AP holds Freehold and Occupation interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of: Class 2 (overhead line infrastructure), Class 3 (underground cable infrastructure), Class 4 (overhead line and underground cable infrastructure), and Class 5 (access). The Applicant is also seeking permanent rights for UKPN in the form of Class 3 (underground cable infrastructure) and Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant does not agree that there is no need for the access rights sought. The rights have been identified as necessary to facilitate the construction, operation and maintenance requirements of the Project. The Applicant notes the AP's suggestion that access could be obtained solely via the Southern Water sewage treatment works access road. The Applicant has considered access requirements as part of the Project design process and continues to review detailed access arrangements through ongoing design development and engagement with affected parties. The Applicant remains willing to discuss alternative access arrangements where these are practicable and compatible with the safe and efficient delivery, operation and maintenance of the Project.

In relation to the AP's concern regarding the option agreement with Conrad Energy (Developments) Ltd and the potential future solar farm development, the Applicant acknowledges the existence of ongoing discussions with Conrad regarding the interaction between the Project and the proposed solar farm. As recorded in the Statement of Common Ground, discussions are ongoing and the finalisation of proposals will be confirmed following detailed design development. The extent of any temporary haul road access and any additional maintenance access requirements remain subject to detailed design and continued engagement with Conrad Energy. Any such access arrangements would need to remain within the Order Limits. The Applicant therefore does not agree that it has been demonstrated that the Project would prevent the exercise of the option agreement or give rise to the loss alleged by the AP. The Applicant will continue to engage with Conrad Energy and affected landowners to seek to minimise interactions between the respective projects and to identify appropriate mitigation where required.

To the extent that any legally compensable loss is incurred as a result of the exercise of powers under the Order, entitlement to compensation would be assessed in accordance with the statutory Compensation Code.

The Applicant has been in active engagement with this AP on a number of occasions. Meetings took place on 12 September 2025 and 3 February 2026, and a further meeting has been arranged for 7 July 2026. Discussions have covered the pulling areas associated with pylons TB203 and TB204, the potential impact on the AP's solar panels, the haul road design, and sustainable urban drainage (SUDs) matters within the photovoltaic area. In relation to pylon TB203, the Applicant can confirm that the pulling areas will most likely not be required under the current design, which would reduce impact on the solar panels

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

associated with that pylon. The pulling areas and haul road associated with TB204 remain under design and are within the photovoltaic area; the Applicant is working to minimise the footprint of those works in this location. In relation to pylon TB204, the Applicant's position is that the pylon itself cannot be relocated, but the Applicant maintains that both the Project and the proposed solar scheme can co-exist without the solar scheme being prevented from proceeding.

In relation to the siting of pylons TB203 and TB204, the Applicant confirms that these have been positioned to reduce the impact on the AP's land as far as practicable. Alternative overhead line alignments to the west of pylon TB204's current position were considered but were assessed as less preferable due to the effects that would arise in relation to a Grade I listed church, areas of ancient woodland, and the need to oversail third-party infrastructure in that location. The Applicant therefore made no change to the location of those pylons following consideration of the representations made.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have restated general concerns as to the potential impact of the Project on existing agricultural operations.

It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction corridor re-fencing and health and

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the construction to provide a more detailed understanding of the time when any construction works will take place.

The Applicant remains committed to explore appropriate and proportionate options to mitigate the effects of the project during construction, including temporary severance of land. The Applicant will not be able to settle the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery.

The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land) assessed on a case-by-case basis.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

The Applicant notes concerns raised by certain APs regarding the potential for construction activities associated with the Project to cause damage to agricultural and other land.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, the Applicant's approach to soil handling is set out in 7.2 Outline Code of

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Construction Practice Appendix C – Outline Soil Resource Plan [APP-303]. This is based on published good practice and is designed to enable soils which have been handled and stockpiled to be reinstated to return land to its pre-construction condition. This includes aspects of preparing the subsoil which has become compacted prior to placement of topsoil. This plan also confirms that topsoil and subsoil should be stockpiled on like for like (i.e. topsoil can be stored on topsoil). This will limit the potential for subsoil or clay migration into topsoil resources. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including damage caused by the works) assessed on a case-by-case basis.

57. AP 57 - Richard John Allan

57.1 Person with Interest in Land (PIL) Reference ID: 6498

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Objection Summary: Interference with My Land/Rights via Compulsory Acquisition To the Secretary of State for National Infrastructure re: Norwich to Tilbury Project Development Consent Order I, Richard John Allan, owner of [REDACTED], object to the proposed compulsory acquisition of my land / rights over my land / temporary possession of my land EX835923, EX835920 in the draft DCO. Section 122 of the Planning Act 2008 A DCO may include provision authorising compulsory acquisition of land only if the Secretary of State is satisfied that: (a) the land is required for the development (or to facilitate or be incidental to it, or is replacement land); and (b) there is a compelling case in the public interest for the compulsory acquisition. 1. The land is not shown to be required (s.122(2)) The applicant has not demonstrated that my specific land/plots are required, or that the extent of interference (full acquisition / rights / temporary	Summary of Objection The AP has summarised their reasons for objection as follows: The AP submits that the Section 122 statutory test has not been met, contending that the Applicant has not demonstrated a compelling case in the public interest for the compulsory acquisition of the AP's land, with reasonable alternatives not adequately explored. The AP notes the permanent and irreversible loss of agricultural land, severance of the farm holding, loss of vehicular access, and the overall financial impact on their farming livelihood. The AP challenges whether the Section 123 procedural condition has been properly satisfied and asserts that the Applicant has failed to comply with the applicable guidance in the DCLG/MHCLG 2013 document in relation to pre-application engagement and evidence of the reasonable necessity of the acquisition. Land Rights Sought The Applicant understands that this AP holds Freehold, Occupation, and Easement Right or Privilege interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of: Class 2 (overhead line infrastructure), Class 4 (overhead line and underground cable infrastructure), and Class 5 (access). The Applicant is also seeking permanent rights for UKPN in the form of Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest. Consolidated Response The Applicant does not agree that the land and rights sought are unnecessary. The extent of the land and rights included within the Order has been informed by the Project's design requirements and has been limited to those considered reasonably necessary for the

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
possession) is no more than reasonably necessary. Viable alternatives exist but have not been presented in a fully costed way for fair comparison. The DCLG Guidance (September 2013) states at paragraph 8 that applicants must show all reasonable alternatives to compulsory acquisition (including scheme modifications) have been explored, and that the proposed interference is necessary and proportionate. This test is not met. The interference with my rights is not justified as the minimum required. 2. No compelling case in the public interest (s.122(3)) There is no compelling evidence that the public benefits of acquiring/interfering with my land outweigh the significant private loss I would suffer. The private loss includes permanent loss of farmland my severance of my remaining land; loss of access; disruption to my livelihood/quiet enjoyment; and financial impacts. These effects engage my rights under Article 1 of the First Protocol (peaceful enjoyment of possessions) and, where relevant, Article 8 ECHR. The Guidance (paragraphs 10, 13–16) requires the Secretary of State to balance public benefit against private loss and to be satisfied that the interference is legitimate, necessary, and proportionate. Parliament's view (Guidance para 13) is that land should	construction, operation and maintenance of the Proposed Development. The Applicant has considered alternatives throughout the design process and has sought to minimise impacts on affected landowners where reasonably practicable. The Applicant considers that the land and rights sought over the Affected Person's land are required for the Proposed Development and that the requirements of section 122 of the Planning Act 2008 have been satisfied. The Applicant has engaged with this AP's agent on multiple occasions. Version 1 of the Heads of Terms was issued to the AP's agent in October 2025, and Version 2 was issued in April 2026. Requests for a meeting have been made on multiple occasions through the AP's agent, most recently on 18 May 2026. The Applicant remains open to meeting with the AP and their representative to discuss the Heads of Terms and the AP's specific concerns, and reiterates that offer of a meeting in this response. A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
only be taken compulsorily where there is clear evidence that public benefit outweighs private loss. The applicant has not provided this in relation to my land. The interference fails the test. Section 123 of the Planning Act 2008 A DCO may authorise compulsory acquisition only if one of the conditions in s.123(2)–(4) is met (e.g., the application included a request for CA of the land and proper procedures were followed, or all interested parties consent). I do not consent. I question whether the procedures were adequately followed in respect of my land. The Guidance emphasises seeking acquisition by agreement wherever practicable (paragraphs 21–26 on pre-application consultation and engagement). This has not been achieved. Further relevant Guidance points • Para 8: Failure to explore all reasonable alternatives and lack of proportionality. • Para 9: Inadequate demonstration of a reasonable prospect that funds will be available for the acquisition and related works. The Funding Statement does not sufficiently address my land. • Para 10: The proposal does not adequately justify the interference with my human rights.	The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of [REP3-010] makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need. The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations. The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. The Applicant recognises that visual impact from overhead lines and pylons can cause concern for communities and may lead to perceptions of property value loss. However, property values are influenced by many factors, making it hard to attribute depreciation to a single cause like infrastructure development. UK law does not include for compensation in cases of a loss of view or changes to a view. Under the Compulsory Purchase Code,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Conclusion The statutory tests in sections 122 and 123 of the Planning Act 2008 are not satisfied in respect of my land/rights. The Secretary of State should refuse to authorise the compulsory acquisition or other interference with my interests, or modify the DCO to exclude or minimise it. I remain willing to negotiate a voluntary agreement on fair terms but oppose the use of compulsory powers.

Applicant's Response

property owners and businesses may be able to claim compensation for any loss in value directly caused by the Project if they meet the criteria.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential for an offshore solution to satisfy the existing needs case. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that it is by no means easier or quicker to obtain, whether by compulsion or otherwise, the rights associated with subsea routeing options. Those subsea routeing options would likely interface with gas pipelines, telecommunications equipment, and other utilities infrastructure. Crown licences would also be required.

The Applicant is required to develop proposals in line with national policy and its regulatory duties. 5.15 Design Development Report **[APP-122]** paragraphs 2.5.5 to 2.5.11 set out the relevant context for onshore schemes which starts from the Government's strong starting presumption in NPS EN-5 (2024) paragraph 2.9.20 for the use of overhead lines which form the basis of the Project with change where justified by consideration of the mitigation hierarchy. Paragraphs 2.5.13 to 2.5.18 go on to explain why offshore technology and onshore options not including pylons are not preferred. The Applicant considers its proposals to be the appropriate means to meet the need case in the context of policy and regulatory environments.

National Grid considered alternatives in 7.19 2023 - Strategic Options Backcheck and Review **[APP-357]**, with all onshore alternatives of AC overhead line, AC cable, AC gas insulated line and HVDC Options, and offshore options of AC subsea cables and HVDC alternatives. In all cases the HVDC onshore and offshore alternatives were significantly more expensive than overhead line alternatives whilst not providing the system flexibility and full capacity as the AC alternative.

The Development Consent Order (DCO) Project has been developed in accordance with the Holford and Horlock Rules. The Applicant has used the Environmental Impact Assessment (EIA) to inform the balance and define the proposals taken forward. The Applicant has also

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

received extensive input from feedback with stakeholders ranging from landowners, residents, non-statutory and statutory bodies. Feedback at all stages has been comprehensively reviewed with the Applicant responding to consultation feedback received covering changes ranging from route alternatives, to individual pylons and temporary works locations. This has resulted in a substantial number of modifications being made to reduce effects on individual property, land or business, as well as on specific landscape and other environmental (including socio-economic) features. The Applicant's response to those suggested changes was set out in detail in the 5.1 Consultation Report **[APP-066]** and Design Development Reports **[2025 in APP122, 2024 in APP-359 and 2023 in APP-358]**. Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

58. AP 58 - Dominic William Petre

58.1 Person with Interest in Land (PIL) Reference ID: 1004

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We are trying to engage in the granular planning process and accept that the project need to be done in general so there is no need for compulsory powers	Summary of Objection The AP has summarised their reasons for objection as follows: The AP objects to the Applicant's intention to seek compulsory acquisition powers in respect of their land, given their willingness to engage voluntarily. Land Rights Sought The Applicant understands that this AP holds Freehold and Occupation interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of: Class 2 (overhead line infrastructure), Class 3 (underground cable infrastructure), Class 4 (overhead line and underground cable infrastructure), and Class 5 (access). The Applicant is also seeking permanent rights for UKPN in the form of Class 3 (underground cable infrastructure) and Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for both National Grid and UKPN over land in which this AP holds an interest. Consolidated Response The Applicant welcomes the AP's constructive engagement with the Project and acknowledges the AP's stated willingness to proceed on a voluntary basis. The Applicant has engaged with this AP on several occasions. A meeting was held on 10 March 2026 to discuss accommodation works matters including crossing points, severed areas, soils management and drainage. A further meeting was held with the AP's agents on 20 April 2026 to discuss Heads of Terms wording and related matters. Version 2 of the Heads of Terms was sent to the AP's agent on 21 April 2026, and the Applicant is seeking a further meeting to continue discussions with a view to finalising voluntary terms as soon as possible.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations. The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant. A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) [REP3-010], and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land"

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

(MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

59. AP 59 - Lord Petre (W H Norris and Sons)

59.1 Person with Interest in Land (PIL) Reference ID: 1406

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We are trying to engage with the granular planning process. While there is no objection for the overall need of the project there are many fine details that need agreement but there is no need for compulsory powers	Summary of Objection The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle. Land Rights Sought The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure) (c) Class 4 (overhead line and underground cable infrastructure), (d) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest also fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

authorisation of CA powers was made by the Applicant as part of its development consent application for the Project.

The Applicant understands that this AP holds Freehold, Occupation, and Restrictive Covenant interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of: Class 2 (overhead line infrastructure), Class 3 (underground cable infrastructure), Class 4 (overhead line and underground cable infrastructure), and Class 5 (access). The Applicant is also seeking permanent rights for UKPN in the form of Class 3 (underground cable infrastructure) and Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8, meaning no powers of compulsory acquisition or temporary possession are sought in respect of those parcels at this stage.

The Applicant has engaged with this AP's agent on a number of occasions. A meeting was held on 10 March 2026 to discuss accommodation works matters including crossing points, severed areas, soils management and drainage. A further meeting was held with the AP's agents on 20 April 2026. Version 2 of the Heads of Terms was sent to the AP's agent on 21 April 2026, and the Applicant is seeking to arrange a further meeting to continue discussions and progress matters towards voluntary agreement.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

60. AP 60 - Lord Petre

60.1 Person with Interest in Land (PIL) Reference ID: 1406

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We are engaging with the granular planning process. While we accept the overall nature of the project there are many details that still need addressing. However compulsory powers are un needed	Summary of Objection The AP has summarised their reasons for objection as follows: The AP objects to the Applicant's intention to seek compulsory acquisition powers in respect of their land, given their willingness to engage, but noting that many details still need to be addressed. Land Rights Sought The Applicant understands that this AP holds Freehold, Occupation, and Restrictive Covenant interests within the Project Order Limits. The Applicant is seeking to acquire permanent rights for National Grid over land in which this AP holds an interest in the form of: Class 2 (overhead line infrastructure), Class 3 (underground cable infrastructure), Class 4 (overhead line and underground cable infrastructure), and Class 5 (access). The Applicant is also seeking permanent rights for UKPN in the form of Class 3 (underground cable infrastructure) and Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8, meaning no powers of compulsory acquisition or temporary possession are sought in respect of those parcels at this stage. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant welcomes the AP's acknowledgement of the overall need for the Project and its engagement with the planning process. The Applicant has engaged with this AP's agent on a number of occasions. A meeting was held on 10 March 2026 to discuss accommodation works matters including crossing points, severed areas, soils management and drainage. A further meeting was held with the AP's agents on 20 April 2026. Version 2 of the Heads of Terms was sent to the AP's agent on 21 April 2026, and the Applicant is seeking to arrange a further meeting to progress those discussions. The Applicant reiterates that its strong preference is to reach voluntary agreement with this AP and will continue to engage actively to achieve that aim. A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be

already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

61. AP 61 - Peter Albert Kelly

61.1 Person with Interest in Land (PIL) Reference ID: 24590

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Any land taken from me would have a detrimental affect on the property value and marketability if I wished to move in the future.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP is concerned by the potential detrimental effect that any land taken for use by the project would have on their property value and marketability. Land Rights Sought The Applicant understands that this Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds a Category 2 interest: (a) Class 2 (overhead line infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Consolidated Response

As previously explained in 8.8.1 Applicant's Comments on Written Representations **[REP2-209]**, the Applicant acknowledges concerns regarding potential property value impacts but maintains that there is no reliable evidence that the Project causes a general reduction in property prices. Property values are influenced by multiple factors and are not a material planning consideration. Compensation for diminution in value is available only where the statutory Compensation Code applies, including injurious affection and statutory blight where the relevant legal tests are met. Perceived loss of value, loss of view or generalised blight do not of themselves give rise to compensation.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

The Applicant recognises that visual impact from overhead lines and pylons can cause concern for communities and may lead to perceptions of property value loss. However, property values are influenced by many factors, making it hard to attribute depreciation to a single cause like infrastructure development. UK law does not include for compensation in cases of a loss of view or changes to a view. Under the Compulsory Purchase Code, property owners and businesses may be able to claim compensation for any loss in value directly caused by the Project if they meet the criteria.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

As previously explained in 8.8.1 Applicant's Comments on Written Representations **[REP2-209]**, the Applicant acknowledges concerns regarding potential property value impacts but maintains that there is no reliable evidence that the Project causes a general reduction in property prices. Property values are influenced by multiple factors and are not a material planning consideration. Compensation for diminution in value is available only where the statutory Compensation Code applies, including injurious affection and statutory blight where the relevant legal tests are met. Perceived loss of value, loss of view or generalised blight do not of themselves give rise to compensation.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

62. AP 62 - Geoffrey Norman William Stevens

62.1 Person with Interest in Land (PIL) Reference ID: 2997

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I have completed this form in the way I have as the proposed discussion with National Grid and UK Power Networks has not yet taken place about the works involved and how it affects my property.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP's objection is raised on the basis that the proposed discussion with National Grid and UK Power Networks has not yet taken place about the works involved and how they affect his property. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant can confirm that engagement has taken place with the AP's representative, Brooks Leney. The Applicant's land agent (Fisher German) has met with Brooks Leney multiple times to negotiate and progress the Heads of Terms ("HoTs"), most recently at a meeting held on 15 June 2026. Revised Terms will be issued in due course and the Applicant continues to engage with the AP's agent. In addition, the AP's representatives attended an Agent's Group meeting with Fisher German and National Grid on 4 June 2026. No specific concerns have been identified by the AP's agent during these meetings.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In relation to UK Power Networks' works, UK Power Networks held a meeting with the affected party's identified land agent (Brooks Leney) on 18th June 2026. UK Power Networks have proposed a site visit to discuss the proposals with the affected party and their agent, after which specific HOTs will be issued to the affected party/their land agent for review. UK Power Networks intend to continue to work with the landowner and their agent to seek to achieve the rights required voluntarily.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) [REP3-010], and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have asserted that the Applicant's approach to pre-application consultation was inadequate.

The Applicant respectfully disagrees with those assertions. In particular, it is noted that the Applicant has developed its proposals and carried out consultation in accordance with the statutory guidance and the relevant Gunning Principles. The Planning Inspectorate accepted the application for the Project into examination having regard to the adequacy of pre-application consultation. A detailed response with regards to the Applicant's approach to consultation can be found in 5.1 Consultation Report **[APP-066]** and detail on the application of the Gunning Principles can be found in 5.1 Consultation Report - Appendix N: Legal Opinions **[REP1-007]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

63. AP 63 - Ann Ruth Stevens

63.1 Person with Interest in Land (PIL) Reference ID: 8159

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I have completed this form in the way I have as the proposed discussion with National Grid and UK Power networks has not yet taken place about the works involved and how it affects my property.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP's objection is raised on the basis that the proposed discussion with National Grid and UK Power Networks has not yet taken place about the works involved and how they affect his property. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant can confirm that engagement has taken place with the AP's representative, Brooks Leney. The Applicant's land agent (Fisher German) has met with Brooks Leney multiple times to negotiate and progress the HoTs, most recently at a meeting held on 15 June 2026. Revised Terms will be issued in due course and the Applicant continues to engage with the AP's agent. The AP's representatives also attended an Agent's Group meeting with Fisher German and National Grid on 4 June 2026. No specific concerns have been identified by the AP's agent during these meetings.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In relation to UK Power Networks' works, UK Power Networks held a meeting with the affected party's identified land agent (Brooks Leney) on 18th June 2026. UK Power Networks have proposed a site visit to discuss the proposals with the affected party and their agent, after which specific HOTs will be issued to the affected party/their land agent for review. UK Power Networks intend to continue to work with the landowner and their agent to seek to achieve the rights required voluntarily.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) [REP3-010], and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have asserted that the Applicant's approach to pre-application consultation was inadequate.

The Applicant respectfully disagrees with those assertions. In particular, it is noted that the Applicant has developed its proposals and carried out consultation in accordance with the statutory guidance and the relevant Gunning Principles. The Planning Inspectorate accepted the application for the Project into examination having regard to the adequacy of pre-application consultation. A detailed response with regards to the Applicant's approach to consultation can be found in 5.1 Consultation Report **[APP-066]** and detail on the application of the Gunning Principles can be found in 5.1 Consultation Report - Appendix N: Legal Opinions **[REP1-007]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

64. AP 64 - Edward Marriage

64.1 Person with Interest in Land (PIL) Reference ID: 2500

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
F-6/62; F-6/63; F-7/10; F-7/13; F7-14; F7-20; F7/22 There are still important points outstanding and the Heads of Terms have not been sufficiently progressed for me to agree with them.	T Summary of Objection The AP has summarised their reasons for objection as follows: The AP notes that there are still important points (F-6/62, F-6/63, F-7/10, F-7/13, F7-14, F7-20 and F7/22) outstanding and the Heads of Terms have not been sufficiently progressed for the AP to agree to them. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure); (b) Class 5 (access). Consolidated Response The Applicant can confirm that active engagement has taken place with this AP. A HoTs meeting was held with the landowner and their agent (Whirlledge and Nott) on 25 February to discuss accommodation works, including crossing points and security issues. Accommodation matters have been recorded on the Land Interest Register and Accommodation works (LIRA) and are awaiting confirmation. The AP's agent advised at that time that the HoTs should not be signed at that stage. A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

65. AP 65 - Andrew Soar

65.1 Person with Interest in Land (PIL) Reference ID: 3183

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Despite numerous meetings with project representatives many of our questions remain to be answered. Our suggestions over pylon positions have also been ignored. Our preference of underground routing appears to be not effectively considered and no project comparisons are available. Vast amounts of land are being taken for the construction and subsequent access easements with very little in the way of compensation particularly with land value effects. Remains of agricultural land adjacent to the project boundary will be uneconomical to operate farm equipment over due to awkward angles and reduced area within fields. Interference from the transmission of electricity is likely to affect phone internet and GPS equipment which is essential in the operation of modern farm equipment. Suggested per pylon rates of compensation do not account for land use during build or over sail compensation. Corner pylons will	Summary of Objection The AP has summarised their reasons for objection as follows: The AP states that questions remain unanswered and suggestions over pylon positions have been ignored; underground routing does not appear to have been effectively considered with no project comparisons available; vast amounts of land are being taken for construction and access easements with limited compensation; agricultural land adjacent to the project boundary will be uneconomical to operate farm equipment; interference from electricity transmission will affect essential to the operation of modern farm equipment; per-pylon compensation rates do not account for land use during the build or over sail compensation; land used for access but not a pylon upon will require additional compensation; and engagement with the landowner's agents has been minimal. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 5 (access). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant confirms that active engagement has taken place with this AP. A meeting was held with the AP's representatives on 9 June 2026 to discuss practical matters associated with the Project, including severed areas, crossing points and pylon siting. Accommodation matters have been recorded on the LIRA and are currently being reviewed. The AP's representatives

Please summarise (in no more than 1500 words) the reason(s) for your objection

occupy a much greater area than the mid-station pylons.

Land that will be used for access but not actually have a pylon upon it will presumably be compensated over and above the pylon construction rate that claims to cover the whole build project.

Engagement with land owners agents have been minimal.

Applicant's Response

also attended an Agent Group Meeting with Fisher German and National Grid on 4 June 2026. The Applicant's land team continues to actively engage with the AP's agent on these matters.

In relation to the specific concern raised regarding the position of the overhead alignment, the Applicant notes the following. The position of the overhead alignment across the affected parcels (RG79, RG80 and RG81) is dictated by the positions of angle pylons RG76 to the east and RG81 to the west. Pylon RG76 cannot be moved north due to a residential property and fishing lake, and cannot be moved south without transferring effects to multiple residential properties located to the south. Additionally, moves to the south are restricted by the position of angle pylon RG81 which facilitates the alignment south, which is approximately midway between properties on the edges of Snow Street (south-east/east) and Bressingham Common (west). A move in any direction would increase effects on the associated properties.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential to underground additional sections of the Project alignment.

In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that the delivery of any alternative solution would also inevitably require the acquisition of land and rights in the ownership of parties other than the Applicant. For example, an increased extent of undergrounding would invariably require the authorisation of CA powers over a larger extent of land, noting that the Order limits for underground cable swathes are typically wider than those required for overhead line.

The Applicant also notes that the Project's development has been undertaken within the context of the relevant Planning policy, in this case NPS EN-1 and EN-5. These define a strong starting presumption for the use of overhead lines with underground cable where routes unavoidably cross nationally designated landscapes and under certain other circumstances. The Applicant is clear that the land or area identified in the AP's objection does not meet the criteria (i.e. it is not subject to a national landscape designation nor meets the threshold under paragraph 2.9.23) to justify a change to underground cable. A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs. Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level. The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Some APs have questioned whether the Project may interfere with existing service connections, such as aerially-transmitted internet services. The Applicant notes these concerns, but confirms that the proposed overhead line is designed to the Applicant's technical specifications which include the requirements of BS 5049-3 (BSI, 1994), along with other equipment-specific standards such as BS EN 60437 (BSI, 1998) for the insulators on the pylons. All the equipment used will meet the requirements in these standards, which are in place to prevent interference issues. These are the same good engineering practices that are applied to the existing transmission system assets, including existing 400 kV overhead lines. The electromagnetic performance of the transmission system has been certified by a competent body and designed using good engineering practices, detailed in Section 3 of 7.8 Electric and Magnetic Field Compliance Report **[REP3-034]** and would present no issues with for electrical equipment, telecommunication, WiFi, GPS and broadcast equipment under normal operating conditions.

Some APs have objected to the Applicant's request to seek authorisation for powers of compulsory acquisition on grounds that the Project will be harmful to human health. Health considerations are given a high priority in the process by which the Applicant arrives at any proposals for new electricity circuits. Assessment of compliance with national guidance and policies is key to the Applicant's approach. The UK has a carefully thought-out set of policies for managing EMFs, which include which includes both numerical exposure guidelines to protect against established, acute effects of EMFs, and precautionary policies to provide appropriate protection against the possibility of chronic effects of EMFs at lower levels, including, specifically, the possibility of a risk for childhood leukaemia. These are incorporated

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

into the decision-making process for Development Consent in National Policy Statement EN-5. The Applicant's approach ensures all of its transmission assets comply with those policies, which are set by Government on the advice of their independent advisors UKHSA. This ensures that health concerns are properly and adequately addressed. The evidence concerning compliance with these policies, including the numerical guidelines is included in the 7.8 Electric and Magnetic Field Compliance Report (Rev B) **[REP3-034]**. UK Government, acting on the advice of authoritative scientific bodies, has put in place appropriate measures to protect the public from EMF. These measures comprise compliance with the relevant exposure limits, and one additional precautionary measure, optimum phasing, applying to high voltage power lines. This policy is incorporated in NPS EN-5 (DESNZ, 2024a). Components associated with the Project would be fully compliant with the UK Government policies on EMFs. Specifically, all the EMFs produced would be below the relevant exposure limits, and the proposed overhead lines would comply with the policy on optimum phasing. If these requirements are met, NPS EN-5's Simplified Route Map for dealing with EMFs states that 'EMF effects are minimal' and therefore, there would be no significant EMF effects resulting from the Project.

APs have also objected to the Applicant's request to seek authorisation for powers of compulsory acquisition on grounds that the Project will be harmful to animal health. In response, the Applicant notes that, as well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences." Although horses are not directly mentioned, there is no evidence to suggest they are any different to other animals. As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Governments Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential to underground additional sections of the Project alignment. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that the delivery of any alternative solution would also inevitably require the acquisition of land and rights in the ownership of parties other than the Applicant. For example, an increased extent of undergrounding would invariably require the authorisation of CA powers over a larger extent of land, noting that the Order limits for underground cable swathes are typically wider than those required for overhead line. The Applicant also notes that the Project's development has been undertaken

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

within the context of the relevant Planning policy, in this case NPS EN-1 and EN-5. These define a strong starting presumption for the use of overhead lines with underground cable where routes unavoidably cross nationally designated landscapes and under certain other circumstances. The Applicant is clear that the land or area identified in the AP's objection does not meet the criteria (i.e. it is not subject to a national landscape designation nor meets the threshold under paragraph 2.9.23) to justify a change to underground cable.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have asserted that the Applicant's approach to pre-application consultation was inadequate. The Applicant respectfully disagrees with those assertions. In particular, it is noted that the Applicant has developed its proposals and carried out consultation in accordance with the statutory guidance and the relevant Gunning Principles. The Planning Inspectorate accepted the application for the Project into examination having regard to the adequacy of pre-application consultation. A detailed response with regards to the Applicant's approach to consultation can be found in 5.1 Consultation Report **[APP-066]** and detail on the application of the Gunning Principles can be found in 5.1 Consultation Report - Appendix N: Legal Opinions **[REP1-007]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

66. AP 66 - Victoria Jordan

66.1 Person with Interest in Land (PIL) Reference ID: 2305

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Summary of Objection The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Freehold, Occupation, Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), (d) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response The Applicant confirms that active engagement has taken place with this AP. A meeting was held with the AP and their agent on 21 January 2026 to discuss HoTs and accommodation works, including crossing points and security fencing. Version 2 HoTs were sent on 9 April 2026, which included an offer of a meeting to discuss the terms. The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on 4 June 2026.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

An email regarding crossing points was also sent to the agent on 26 June 2026. The Applicant continues to actively engage with the AP and their agent to progress negotiations. The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project.

67. AP 67 - Geraldine Alison Millhouse (As deputy of Court of Protection) for John Terence Millhouse

67.1 Person with Interest in Land (PIL) Reference ID: 28089, 24303, 24301

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Objection raised under advisement of Land Agent (Whirledge and Nott)	Summary of Objection The AP has summarised their reasons for objection as follows: under the advisement of their land agent, Whirledge and Nott. Land Rights Sought All parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response The Applicant confirms that active engagement has taken place with this AP. Version 2 Heads of Terms were issued to the AP's land agents (Whirledge & Nott) on 16 April 2026. A meeting was held with the AP's land agent on 20 April 2026 to discuss generic Heads of Terms matters, although no plot-specific discussions took place at that stage due to limited engagement. A further telephone call was made on 10 June 2026 to confirm the appropriate land agent contact details. The Applicant notes that all parcels of land in which this AP holds an interest fall within Class 8, meaning that no powers of compulsory acquisition or temporary possession are sought over those parcels. Accordingly, the Applicant is not seeking to compulsorily acquire any land or rights from this AP. The Applicant nevertheless remains willing to engage with the AP and their representatives should they wish to discuss any aspect of the Project or its interaction with their land interests. A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs. Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level. The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have asserted that the Applicant's approach to pre-application consultation was inadequate. The Applicant respectfully disagrees with those assertions. In

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

particular, it is noted that the Applicant has developed its proposals and carried out consultation in accordance with the statutory guidance and the relevant Gunning Principles. The Planning Inspectorate accepted the application for the Project into examination having regard to the adequacy of pre-application consultation. A detailed response with regards to the Applicant's approach to consultation can be found in 5.1 Consultation Report **[APP-066]** and detail on the application of the Gunning Principles can be found in 5.1 Consultation Report - Appendix N: Legal Opinions **[REP1-007]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

68. AP 68 - Robert Pearce

68.1 Person with Interest in Land (PIL) Reference ID: 3752

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The heads of terms are not in a suitable state and we strongly object to the routing. If it absolutely has to pass through our land then underground would be much preferred.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP's objection is that the Heads of Terms are not in a suitable state, strongly objects to the routing of the Project across his land. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTS negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential to underground additional sections of the Project alignment.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that the delivery of any alternative solution would also inevitably require the acquisition of land and rights in the ownership of parties other than the Applicant. For example, an increased extent of undergrounding would invariably require the authorisation of CA powers over a larger extent of land, noting that the Order limits for underground cable swathes are typically wider than those required for overhead line.

The Applicant also notes that the Project's development has been undertaken within the context of the relevant Planning policy, in this case NPS EN-1 and EN-5. These define a strong starting presumption for the use of overhead lines with underground cable where routes unavoidably cross nationally designated landscapes and under certain other circumstances. The Applicant is clear that the land or area identified in the AP's objection does not meet the criteria (i.e. it is not subject to a national landscape designation nor meets the threshold under paragraph 2.9.23) to justify a change to underground cable.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale..

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

69. AP 69 - James Robert Pearce

69.1 Person with Interest in Land (PIL) Reference ID: 2988

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The heads of terms are not in a suitable state and we strongly object to the routing. If it absolutely has to pass through our land then underground would be much preferred.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP's objection is that the Heads of Terms are not in a suitable state, strongly objects to the routing of the Project across his land, and would prefer underground routing. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTS negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential to underground additional sections of the Project alignment.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that the delivery of any alternative solution would also inevitably require the acquisition of land and rights in the ownership of parties other than the Applicant. For example, an increased extent of undergrounding would invariably require the authorisation of CA powers over a larger extent of land, noting that the Order limits for underground cable swathes are typically wider than those required for overhead line.

The Applicant also notes that the Project's development has been undertaken within the context of the relevant Planning policy, in this case NPS EN-1 and EN-5. These define a strong starting presumption for the use of overhead lines with underground cable where routes unavoidably cross nationally designated landscapes and under certain other circumstances. The Applicant is clear that the land or area identified in the AP's objection does not meet the criteria (i.e. it is not subject to a national landscape designation nor meets the threshold under paragraph 2.9.23) to justify a change to underground cable.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

70. AP 70 - Heather Ann Pearce

70.1 Person with Interest in Land (PIL) Reference ID: 4403

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The heads of terms are not in a suitable state and we strongly object to the routing. If it absolutely has to pass through our land then underground would be much preferred.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP's objection is that the Heads of Terms are not in a suitable state, strongly objects to the routing of the Project across his land, and would prefer underground routing. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. In relation to the AP's concern regarding underground routing, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that it does not support that proposition, noting that the delivery of any alternative solution would also inevitably require the acquisition of land and rights in the ownership of parties other than the Applicant. For example, an increased extent of undergrounding would invariably require the authorisation of CA powers over a larger extent of land, noting that the Order limits for underground cable swathes are typically wider than those required for overhead line.

The Applicant also notes that the Project's development has been undertaken within the context of the relevant Planning policy, in this case NPS EN-1 and EN-5. These define a strong starting presumption for the use of overhead lines with underground cable where routes unavoidably cross nationally designated landscapes and under certain other circumstances. The Applicant is clear that the land or area identified in the AP's objection does not meet the criteria (i.e. it is not subject to a national landscape designation nor meets the threshold under paragraph 2.9.23) to justify a change to underground cable.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

71. AP 71 - Harry James Pearce

71.1 Person with Interest in Land (PIL) Reference ID: 9985

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The heads of terms are not in a suitable state and we strongly object to the routing. If it absolutely has to pass through our land then underground would be much preferred.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP's objection is that the Heads of Terms are not in a suitable state, strongly objects to the routing of the Project across his land, and would prefer underground routing. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. In relation to the AP's concern regarding underground routing, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that it does not support that proposition, noting that the delivery of any alternative solution would also inevitably require the acquisition of land and rights in the ownership of parties other than the Applicant. For example, an increased extent of undergrounding would invariably require the authorisation of CA powers over a larger extent of land, noting that the Order limits for underground cable swathes are typically wider than those required for overhead line.

The Applicant also notes that the Project's development has been undertaken within the context of the relevant Planning policy, in this case NPS EN-1 and EN-5. These define a strong starting presumption for the use of overhead lines with underground cable where routes unavoidably cross nationally designated landscapes and under certain other circumstances. The Applicant is clear that the land or area identified in the AP's objection does not meet the criteria (i.e. it is not subject to a national landscape designation nor meets the threshold under paragraph 2.9.23) to justify a change to underground cable.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential to underground additional sections of the Project alignment. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that the delivery of any alternative solution would also inevitably require the acquisition of land and rights in the ownership of parties other than the Applicant. For example, an increased extent of undergrounding would invariably require the authorisation of CA powers over a larger extent of land, noting that the Order limits for underground cable swathes are typically wider than those required for overhead line. The Applicant also notes that the Project's development has been undertaken within the context of the relevant Planning policy, in this case NPS EN-1 and EN-5. These define a strong starting presumption for the use of

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

overhead lines with underground cable where routes unavoidably cross nationally designated landscapes and under certain other circumstances. The Applicant is clear that the land or area identified in the AP's objection does not meet the criteria (i.e. it is not subject to a national landscape designation nor meets the threshold under paragraph 2.9.23) to justify a change to underground cable.

A number of APs have also raised the potential use of offshore and/or HVDC alternatives. In response, the Applicant refers to the relevant sections of its submissions at Compulsory Acquisition Hearing 1 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and also to the relevant sections of the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and the 3.1 Planning Statement **[APP-056]**, in which these alternatives are comprehensively addressed, and, in particular, to the relevant chapter of the Environmental Statement, specifically 6.2 Environmental Statement Chapter 2 - Alternatives **[APP-215]**, where the Applicant has demonstrated why such alternatives do not represent a viable alternative to the Project as currently proposed. The Applicant also refers in this regard to the relevant section of the Examining Authority's report of its 8.4.1 Preliminary Meeting **[REP1-139]** which notes that the need case for the Project is established, and the focus of the examination is on the details of the Project as proposed.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

72. AP 72 - Lodge Lane Estates Ltd

72.1 Person with Interest in Land (PIL) Reference ID: 10205

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Our agent has been discussing the Heads of Terms with National Grid but at the moment the current terms are not satisfactory and, therefore, we are not in a position to agree to them.	Summary of Objection The AP has summarised their reasons for objection as follows: The current terms are not satisfactory, and their agent is not in a position to agree to them. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Freehold, Occupation, Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken

	reasons set out in [REP1-138], the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance. Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

73. AP 73 - Michael Elwyn Hughes

73.1 Person with Interest in Land (PIL) Reference ID: 5723

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I object to the compulsory acquisition of my land and rights. The scheme designed by the Applicant is not appropriate and not within the public interest, when there are reasonable alternatives available. The works will potentially affect development proposals on the land. We are yet to see the proposed heads of terms from UKPN, and until these are in a reasonable format, compulsory powers should not be granted.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP objects to the compulsory acquisition of their land and rights, including the potential effect on land development proposals. Concern that the proposed Heads of Terms from UKPN have not been resolved, and as such, compulsory powers should not be granted. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Freehold, Occupation. The Applicant is seeking to permanently acquire land in which this AP holds an interest (Class 1 - Compulsory Acquisition of Land). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Powers of temporary possession (Class 7) are also sought for UKPN in connection with the Project over land in which this AP holds an interest. Consolidated Response In relation to UK Power Networks' position, the affected party's landholding has been identified as falling within an identified limit of deviation for UK Power Networks' 132kV diversion works. At this stage UK Power Networks do not consider that the full extent of the limit of deviation, and therefore the affected party's identified land parcel, will be subject to permanent land rights required by UK Power Networks to deliver the diversion works. For this reason UK Power Networks have not sought to engage the affected party at this stage and no HOTs will be issued. If further to ongoing detailed design works the above position were to change, UK Power Networks would seek to engage the affected party to reach

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

voluntary agreement on required land rights with compulsory acquisition considered to be a last resort in the event rights cannot be achieved voluntarily.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs. Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level. The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

74. AP 74 - Peter Blomfield Willows

74.1 Person with Interest in Land (PIL) Reference ID: 6506

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I object to the compulsory acquisition of my land and rights. The scheme designed by the Applicant is not appropriate and not within the public interest, when there are reasonable alternatives available. The works will potentially affect development proposals on the land. We are yet to see the proposed heads of terms from UKPN, and until these are in a reasonable format, compulsory powers should not be granted.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP objects to the compulsory acquisition of their land and rights, including the potential effect on land development proposals. Concern that the proposed Heads of Terms from UKPN have not been resolved, and as such, compulsory powers should not be granted. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Freehold, Occupation. Powers of temporary possession (Class 7) are sought for National Grid in connection with the Project over land in which this AP holds an interest. Powers of temporary possession (Class 7) are also sought for UKPN in connection with the Project over land in which this AP holds an interest. No permanent rights of compulsory acquisition are sought in respect of this AP's land at this time. Consolidated Response In relation to UK Power Networks' position, the affected party's landholding has been identified as falling within an identified limit of deviation for UK Power Networks' 132kV diversion works. At this stage UK Power Networks do not consider that the full extent of the limit of deviation, and therefore the affected party's identified land parcel, will be subject to permanent land rights required by UK Power Networks to deliver the diversion works. For this reason UK Power Networks have not sought to engage the affected party at this stage and no HOTS will be issued. If further to ongoing detailed design works the above position were to change, UK Power Networks would seek to engage the affected party to reach

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

voluntary agreement on required land rights with compulsory acquisition considered to be a last resort in the event rights cannot be achieved voluntarily.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is

says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

75. AP 75 - Verity Louise Collins

75.1 Person with Interest in Land (PIL) Reference ID: 7035

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The works will interfere in the operation of the farming business plus effect the value of the land and any future use of the land, farming or otherwise.	Summary of Objection The AP has summarised their reasons for objection as follows: The works will interfere with her farming business and will affect land value and future use of her land. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Freehold, Occupation, Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), (d) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid and for UKPN in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In relation to the AP's concerns regarding property value and soil handling, the Applicant notes that there is no reliable evidence that the Project causes a general reduction in property prices. Property values are influenced by multiple factors and are not a material planning consideration. Compensation for diminution in value is available only where the statutory Compensation Code applies, including injurious affection and statutory blight where the relevant legal tests are met. In relation to soil handling, the Applicant will comply with all relevant legislative and policy requirements in relation to soil management during construction. This will be subject to appropriate conditions within the Development Consent Order. The Applicant's Outline Construction Environmental Management Plan (OCEMP), which forms part of the Environmental Statement, sets out the approach to soil management during construction, which will be further developed in the Construction Environmental Management Plan (CEMP) prior to the commencement of construction activities.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

In relation to the AP's concerns regarding the impact of the Project upon agricultural activities, the Applicant notes that, during the construction phase, impacts on agricultural land are expected to be temporary in nature and will be managed through the CEMP. The Applicant's Outline CEMP includes a commitment to minimise disruption to agricultural operations during construction, including in relation to access to fields, soil management and reinstatement. The Applicant recognises the importance of agricultural land and is committed to ensuring that, following construction, agricultural land is reinstated to the same standard as far as reasonably practicable.

In relation to the AP's concerns regarding construction works, the Applicant will ensure that all construction activities are undertaken in accordance with the provisions of the Development Consent Order and all associated documents, including the CEMP. The Applicant is committed to minimising the impacts of construction on those living and working near the route of the Project. This will include implementing mitigation measures such as restricting working hours, managing noise and dust, and maintaining access to land and properties where required.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

As previously explained in 8.8.1 Applicant's Comments on Written Representations **[REP2-209]**, the Applicant acknowledges concerns regarding potential property value impacts but maintains that there is no reliable evidence that the Project causes a general reduction in property prices. Property values are influenced by multiple factors and are not a material planning consideration. Compensation for diminution in value is available only where the statutory Compensation Code applies, including injurious affection and statutory blight where the relevant legal tests are met. Perceived loss of value, loss of view or generalised blight do not of themselves give rise to compensation.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

76. AP 76 - Hayden Dixon

76.1 Person with Interest in Land (PIL) Reference ID: 3500

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I do not want plant machinery passing close to my fence-line, nor workers overlooking my property	Summary of Objection The AP has summarised their reasons for objection as follows: They do not want plant machinery passing close to their fenceline, nor do they want workers overlooking their property. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds a Category 2 interest: (a) Class 5 (access). Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project.

Consolidated Response

In relation to the AP's specific concerns regarding construction traffic and proximity to his property, the Applicant is pleased to confirm that no construction traffic is proposed to use this access route. The construction traffic will follow the construction access strategy detailed in **7.3 Outline Construction Traffic Management Plan [Revision F]**. The permanent access right being sought is to enable maintenance access to the overhead line in the event that this is required following construction. The Applicant notes and understands the AP's concerns regarding amenity during the construction period and confirms that construction activities will be managed in accordance with the relevant provisions of the CEMP, which will be designed to minimise disturbance to neighbouring landowners and occupiers.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have raised concerns regarding the Applicant's request for permanent access rights over their land. In response, the Applicant wishes to clarify the purpose and extent of the access rights sought. Permanent access rights are sought in very limited circumstances, principally where they are required to enable ongoing maintenance access to Project infrastructure. The Applicant is committed to ensuring that the exercise of any permanent access rights will be undertaken in a manner which minimises disruption to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

landowners and occupiers, and only where strictly necessary for the maintenance of the Project's infrastructure. The terms on which access will be exercised will be set out in the relevant HoTs and subsequently in the legal agreement governing the grant of rights.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I do not want views and beautiful countryside developed. I do not want my sunset views removed and replaced by hideous pylons	Summary of Objection The AP has summarised their reasons for objection as follows: They do not want their views of the local countryside to be developed and do not want their sunset views hindered. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds a Category 2 interest: (a) Class 5 (access). Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project.

Consolidated Response

The Applicant has sought to reduce, as far as practicable, potential impacts on landscape and visual receptors, through routeing and siting of infrastructure. The rural landscape will remain in place beneath and around the proposed overhead line, albeit there will be significant effects on landscape character and visual amenity as reported in the Landscape and Visual Impact Assessment (LVIA) in **6.13 Environmental Statement Chapter 13 - Landscape and Visual [Revision B]**.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have raised concerns regarding the environmental impacts of the Project. In response, the Applicant notes that the environmental impacts of the Project have been comprehensively assessed in the Environmental Statement which forms part of the application for development consent. The Environmental Statement has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017, and has been subject to a thorough examination by the Examining Authority. The Applicant is committed to implementing all reasonable mitigation measures identified within the Environmental Statement and, where relevant, the relevant requirements set out within the Development Consent Order. The landscape will remain rural in character following the construction of the Project; however, it is acknowledged that

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

there will be significant effects on landscape character and visual amenity at some locations during both construction and operation.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. 78.1 Person with Interest in Land (PIL) Reference ID: 14524

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Do we live under a dictatorship.?? NO WE DONT.!!! Our family purchased this land generations past to produce food for this country. Not to be ridden roughshod over by an organisation that does care about the Suffolk countryside. OFFSHORE: cheaper, faster, better.	Summary of Objection The AP has summarised their reasons for objection as follows: They have farmed their land for generations and are concerned about the impact the Project will have on their farming operation and the heritage of their land – as well as why offshore alternatives are not being pursued. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 5 (access). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The Applicant is continuing to engage with the APs representative, with regular meetings held with the Land Agent groups to continue discussions on the HOTs. The Applicant confirms that active engagement has taken place with this AP. A meeting was held with the AP on 22 January 2026 to discuss HoTs and accommodation works relating to the AP's land. Version 2 HoTs were subsequently issued on 9 April 2026, which included an offer of a further meeting to discuss the terms. The AP's representatives attended an Agent's Group Meeting with Fisher German and National Grid on 4 June 2026. An email regarding crossing points was also sent to the AP's agent on 26 June 2026. The Applicant continues to engage with the AP to seek to agree the terms of any voluntary agreement.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

79. AP 79 - Susanna Nunn

79.1 Person with Interest in Land (PIL) Reference ID: 28478

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Our agent has been discussing the Heads of Terms with National Grid but at the moment the current terms are not satisfactory and, therefore, I am not in a position to agree to them.	Summary of Objection The AP has summarised their reasons for objection as follows: The current terms are not satisfactory and at present they cannot agree to them. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker) - Freehold, Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the

and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. 	reasons set out in [REP1-138], the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance. Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

81. AP 81 - Patricia Jane Gooding

81.1 Person with Interest in Land (PIL) Reference ID: 1936

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Our agent has been discussing the Heads of Terms with National Grid but at the moment the current terms are not satisfactory and, therefore, I am not in a position to agree to them.	Summary of Objection The AP has summarised their reasons for objection as follows: The current terms are not satisfactory and at present they cannot agree to them. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), and (c) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

82. AP 82 - Personal representative to the estate of Robin John Lacey Gooding

82.1 Person with Interest in Land (PIL) Reference ID: 14961

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Our agent has been discussing the Heads of Terms with National Grid but at the moment the current terms are not satisfactory and, therefore, we are not in a position to agree to them.	Summary of Objection The AP has summarised their reasons for objection as follows: The current terms are not satisfactory and at present they cannot agree to them. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Freehold. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), and (c) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the

Applicant's Response

land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

83. AP 83 - Richard Percival Marriage

83.1 Person with Interest in Land (PIL) Reference ID: 7382

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The scope of the compulsory acquisition is beyond that required to facilitate the development. There is no compelling case for the land to be obtained compulsorily especially since National grid have made no serious attempts to obtain rights by negotiation and have merely resorted to threats of withdrawal of offers if not completed within a certain time. This is against the guidance where as all efforts should be made to encourage meaningful relationship between all parties.	Summary of Objection The AP has summarised their reasons for objection as follows: The Applicant notes that the Affected Party does not consider the scope for compulsory acquisition valid, nor the Applicant's approach to engagement with the AP. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), and (c) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response With regard to the AP's specific objection concerning the adequacy of negotiations and engagement, the Applicant provides the following specific details. Version 2 of the Heads of Terms was sent on 2nd April 2026, which included an offer of a meeting to discuss the HoTs, and a follow-up call was made to offer that meeting. The AP's agent is Whirlledge and Nott, who have attended Agent Group Meetings to continue discussions regarding the HoTs. In addition, a HoTs meeting was held with the landowner and agent (Whirlledge and Nott) on 25th February 2026 to discuss accommodation works including crossing points and security

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

issues. At that time, the agent advised the AP not to sign the HoTs. The Applicant therefore strongly disputes the characterisation that no serious attempts have been made to negotiate, and reiterates its commitment to reaching a voluntary agreement. The Applicant does not agree that the scope of the compulsory acquisition powers sought exceeds that which is reasonably required for the Proposed Development. The land and rights included within the Order have been identified through the design process and have been limited to those considered necessary for the construction, operation and maintenance of the Proposed Development.

The Applicant also does not agree that it has failed to make serious attempts to acquire the necessary rights by negotiation. The Applicant and its appointed land agents have engaged extensively with affected persons throughout the development of the Project and have sought to progress voluntary agreements wherever possible. The Applicant notes the Affected Person's assertion that they were threatened with the withdrawal of offers if agreements were not completed within a particular timeframe. The Applicant does not accept that it has issued threats to affected persons. Any correspondence referring to the duration or validity of offers has been provided as part of the normal course of commercial negotiations and to explain the basis upon which offers have been made, rather than to discourage engagement or agreement.

The Applicant remains committed to constructive and meaningful engagement with affected persons and their representatives and continues to seek to secure land rights by agreement wherever possible. Notwithstanding ongoing negotiations, the Applicant considers that there remains a compelling case in the public interest for the acquisition of the land and rights required for the Proposed Development and that the requirements of sections 122 and 123 of the Planning Act 2008 have been satisfied.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs. Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level. The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have asserted that the Applicant's approach to pre-application consultation was inadequate. The Applicant respectfully disagrees with those assertions. In particular, it is noted that the Applicant has developed its proposals and carried out consultation in accordance with the statutory guidance and the relevant Gunning Principles. The Planning Inspectorate accepted the application for the Project into examination having regard to the adequacy of pre-application consultation. A detailed response with regards to the Applicant's approach to consultation can be found in 5.1 Consultation Report **[APP-066]**

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and detail on the application of the Gunning Principles can be found in 5.1 Consultation Report - Appendix N: Legal Opinions **[REP1-007]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

84. AP 84 - Copy Hold Vermögens-Verwaltungs-ges

84.1 Person with Interest in Land (PIL) Reference ID: 4316

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
• We do not consider the compulsory acquisition of our land and rights to be in the public interest, particularly where reasonable alternatives are available. • We do not consider that the Applicant has properly considered reasonable alternatives to reduce the impact on our holding. • The Applicant has not listened to constructive feedback from landowners, or taken sufficient steps to reduce impacts and mitigate losses. • The rights being sought may be wider than necessary for the scheme. • The Heads of Terms are still not in a reasonable or acceptable format. • The current Heads of Terms impose unfair and unreasonable restrictions on landowners. • We do not consider that the Applicant has demonstrated that the interference with our land and rights is necessary,	Summary of Objection The AP has summarised their reasons for objection as follows: The AP raises a number of objections, including: compulsory acquisition, alternatives to reduce the impact on their holding, not taken sufficient steps to reduce impacts and mitigate losses; rights being sought may be wider than necessary; Heads of Terms are not in a reasonable or acceptable format / impose unfair and unreasonable restrictions on landowners; not demonstrated that the interference with their land and rights is necessary, proportionate, or limited to what is reasonably required. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), and (d) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid and for UKPN in connection with the Project over land in which this AP holds an interest. Consolidated Response With regard to specific engagement with this AP, the Applicant notes that an accommodation works meeting was held on 10 March 2026 at which UKPN interaction was reviewed alongside soils, severed areas, and crossing points. A further agents' meeting was held on 20

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

proportionate, or limited to what is reasonably required

April 2026. Version 2 of the Heads of Terms was issued to the agent on 21 April 2026 with an offer of a meeting to discuss those terms.

In relation to the AP's concerns regarding the positioning of pylon TB209 and alternative configurations, the Applicant notes the comments from the AP and has reviewed and assessed the alternatives suggested and has responded previously in 8.8.1 Applicant's Comments on Written Representations **[REP2-029]**. The positioning of TB209 is influenced by a Public Right of Way along the field boundary. Movement wholly to the field to the north would have knock-on effects for pylon TB208 and would be likely to move that pylon closer to residential property. Some adjustment within Limits of Deviation is likely to be possible to position the pylon closer to the boundary. This will be considered through detailed design and informed by site-specific discussions between the Great Grid Partnership (the Applicant's delivery partner) and the relevant landowner. Records of engagement are maintained, and any aspirational commitments are documented for detailed design purposes, subject to technical, environmental and constructability considerations.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the

Applicant's Response

4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have asserted that the Applicant's approach to pre-application consultation was inadequate. The Applicant respectfully disagrees with those assertions. In particular, it is noted that the Applicant has developed its proposals and carried out consultation in accordance with the statutory guidance and the relevant Gunning Principles. The Planning Inspectorate accepted the application for the Project into examination having regard to the adequacy of pre-application consultation. A detailed response with regards to the Applicant's approach to consultation can be found in 5.1 Consultation Report **[APP-066]** and detail on the application of the Gunning Principles can be found in 5.1 Consultation Report - Appendix N: Legal Opinions **[REP1-007]**.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential for an offshore solution to satisfy the existing needs case. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that it is by no means easier or quicker to obtain, whether by compulsion or otherwise, the rights associated with subsea routeing options. Those subsea routeing options would likely interface with gas pipelines, telecommunications equipment, and other utilities infrastructure. Crown licences would also be required. The Applicant is required to develop proposals in line with national policy and its regulatory duties. 5.15 Design Development Report **[APP-122]** paragraphs 2.5.5 to 2.5.11 set out the relevant context for onshore schemes which starts from the Government's strong starting presumption in NPS EN-5 (2024) paragraph 2.9.20 for the use of overhead lines which form the basis of the Project with change where justified by consideration of the mitigation hierarchy. Paragraphs 2.5.13 to 2.5.18 go on to explain why offshore technology and onshore options not including pylons are not preferred. The Applicant considers its proposals to be the appropriate means to meet the need case in the context of policy and regulatory environments. National Grid considered alternatives in 7.19 2023 - Strategic Options Backcheck and Review **[APP-357]**, with all onshore alternatives of AC overhead line, AC cable, AC gas insulated line and HVDC Options, and offshore options of AC subsea cables and HVDC alternatives. In all cases the HVDC onshore and offshore alternatives were significantly more expensive than overhead line alternatives whilst not providing the system flexibility and full capacity as the AC alternative. The Development Consent Order (DCO) Project has been developed in accordance with the Holford and Horlock Rules. The Applicant has used the Environmental Impact Assessment (EIA) to inform the balance and define the proposals taken forward. The Applicant has also received extensive input from feedback with stakeholders ranging from landowners, residents, non-statutory and statutory bodies. Feedback at all stages has been comprehensively reviewed with the Applicant responding to consultation feedback received covering changes ranging from route alternatives, to individual pylons and temporary works locations. This has resulted in a substantial number of modifications being made to reduce effects on individual property, land or business, as well as on specific landscape and other environmental (including socio-economic) features. The Applicant's response to those suggested changes was set out in detail in the 5.1 Consultation Report **[APP-066]** and Design Development Reports **[2025 in APP122, 2024 in APP-359 and 2023 in APP-358]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

85. AP 85 - Susan Standen & Kevin Standen

85.1 Person with Interest in Land (PIL) Reference ID: 8798, 8336

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The proposed haul road close to our property and the proposed traffic lights adjacent to our property will lead to lack of access and obstruction of our drive potentially making it inaccessible for the duration of the project.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP objects to the proposed haul road and traffic lights adjacent to their property, which will potentially make their drive inaccessible during the project. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: Class 7 (temporary use). The APs have interest in plots E-5/81, E-5/88. Consolidated Response With regard to the specific engagement with this AP, Version 2 of the Heads of Terms was sent on 2nd April 2026, which included an offer of a meeting to discuss the HoTs; however, no meeting has been held to date. The Applicant notes that the AP's land interest within the Order Limits is minimal, limited to an encroachment of a visibility splay, and that the AP's primary concern is the visual and property value impact of the scheme. The Applicant notes the AP's specific concerns regarding the location of the haul road and traffic management. The proposed bellmouth and haul road have been located far enough away from the AP's access in order to avoid any disruption to the access. Traffic lights may only be required for the construction and removal of the temporary bellmouth whilst it is constructed. However, other forms of traffic management may be selected by the contractor. The design and position of any traffic lights or traffic management will be undertaken by the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

contractor at the detailed design stage and will not be located in a position which prevents access.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) [REP3-010], and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule [REP5-066], which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

86. AP 86 - Graham Moore

86.1 Person with Interest in Land (PIL) Reference ID: 624, 5938, 28355

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I am a small farm and it is going to slice through the middle of my business, home and main growing field making it unviable to farm and live. It makes it unable for the local airfields to fly killing local economy and I object on health reasons of the EMF magnetic waves affecting me running my farm safely and me and my families health.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP objects to the Project passing through the middle of his farm, the economic impact preventing local airfields from operating, and the health concerns from the proposed overhead line infrastructure. Land Rights Sought The AP holds freehold and occupier interests (Category 1) in a number of agricultural plots in Section A-8, including plots A-8/64–65, A-8/67, A-8/69–72, A-8/74–80, A-8/83–86, A-8/89–102. The Applicant is seeking a combination of permanent rights and temporary possession powers across those plots, including Class 2, 3 and 4 rights on a number of plots identified in the DLRT. Engagement has included meetings with the AP and their agent on 23 January 2026, 20 April 2026 and 26 May 2026, together with ongoing Heads of Terms negotiations. Version 2 Heads of Terms was issued on 9 April 2026 and engagement remains ongoing. Consolidated Response With regard to the specific engagement with this AP, a meeting was held with the AP and their agent on 23rd January 2026 to discuss practical matters associated with the Project, including permanent access routes and UKPN mitigation works. Engagement with the AP's representatives has continued and the Applicant's agents have met with the AP's representatives multiple times to negotiate and progress the Heads of Terms, with the most recent meeting being held on 26th May 2026. Version 2 of the Heads of Terms was sent on 9th April 2026, which included an offer of a meeting to discuss the HoTs. The AP's representative also attended an Agent's Group Meeting with Fisher German and National Grid on 4th June 2026.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In respect of the concerns relating to local airfields, the perceived impacts on aviation have been assessed in detail throughout the examination at the oral hearings and in many written submissions. The Applicant maintains its position that both Priory and Tibenham airfields can continue to operate.

Impacts on local airfields have been assessed through the Environmental Impact Assessment (EIA) process, with impacts during both the construction and operational phase of the Project presented in **6.15 Environmental Statement Chapter 15 - Socio-economics, Recreation and Tourism [Revision C]** and 6.15.A2 Environmental Statement Appendix 15.2 - Review of Aviation Impact [Revision C]. The latter includes an assessment of effects as they relate to Tibenham and Priory airfields in particular, concluding that both airfields can continue to operate. Discussions are ongoing with both operators.

Impacts on agricultural operations are presented in **6.6 Environmental Statement Chapter 6 - Agriculture and Soils [Revision B]**. During construction, agricultural operations may experience disruption due to factors such as disturbance, fragmentation of land, access restrictions, or disruptions to water supplies and drainage. By the end of construction, all land required temporarily would be reinstated, and effects on agricultural operations during the construction phase would be managed through compensation agreements (which lie outside of the EIA process). The implementation of good practice measures would ensure that disruption is minimised, and this is described in 7.2 Outline Code of Construction Practice [Revision G]. Effects on agricultural landholdings during the operational phase of the Project was scoped out of the Environmental Statement and this is set out in 6.20 Scoping Opinion **[APP-297]**.

In relation to the alignment in the vicinity of this AP's land, the Applicant has looked at alternative alignments. Moving RG52 to the east would increase effects on Tibenham and Priory airfields. Moving to the east or west would also transfer effects onto other residential properties and would introduce additional angles and would be longer and less direct, which would be less consistent with the Holford Rules. The Applicant acknowledges the concern that the Proposed Development could affect the operation of the farming business. The Applicant has sought to minimise impacts on agricultural land and farm holdings through the route selection and design process and will continue to engage with affected landowners to understand farm-specific requirements. The Applicant does not agree that the Proposed Development would render the holding unviable. Access to retained land will be maintained,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and where land is required permanently or temporarily, compensation will be available in accordance with the statutory compensation code. The Applicant will continue discussions with the landowner to identify measures which may reduce disruption to the ongoing operation of the farm.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Some APs have questioned whether the Project may interfere with existing service connections, such as aerially-transmitted internet services. The Applicant notes these concerns, but confirms that the proposed overhead line is designed to the Applicant's technical specifications which include the requirements of BS 5049-3 (BSI, 1994), along with other equipment-specific standards such as BS EN 60437 (BSI, 1998) for the insulators on the pylons. All the equipment used will meet the requirements in these standards, which are in place to prevent interference issues. These are the same good engineering practices that are applied to the existing transmission system assets, including existing 400 kV overhead lines. The electromagnetic performance of the transmission system has been certified by a competent body and designed using good engineering practices, detailed in Section 3 of 7.8

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Electric and Magnetic Field Compliance Report [REP3-034] and would present no issues with for electrical equipment, telecommunication, WiFi, GPS and broadcast equipment under normal operating conditions. Some APs have objected to the Applicant's request to seek authorisation for powers of compulsory acquisition on grounds that the Project will be harmful to human health. Health considerations are given a high priority in the process by which the Applicant arrives at any proposals for new electricity circuits. Assessment of compliance with national guidance and policies is key to the Applicant's approach. The UK has a carefully thought-out set of policies for managing EMFs, which includes both numerical exposure guidelines to protect against established, acute effects of EMFs, and precautionary policies to provide appropriate protection against the possibility of chronic effects of EMFs at lower levels, including, specifically, the possibility of a risk for childhood leukaemia. These are incorporated into the decision-making process for Development Consent in National Policy Statement EN-5. The Applicant's approach ensures all of its transmission assets comply with those policies, which are set by Government on the advice of their independent advisors UKHSA. This ensures that health concerns are properly and adequately addressed. The evidence concerning compliance with these policies, including the numerical guidelines is included in the 7.8 Electric and Magnetic Field Compliance Report (Rev B) [REP3-034]. UK Government, acting on the advice of authoritative scientific bodies, has put in place appropriate measures to protect the public from EMF. These measures comprise compliance with the relevant exposure limits, and one additional precautionary measure, optimum phasing, applying to high voltage power lines. This policy is incorporated in NPS EN-5 (DESNZ, 2024a). Components associated with the Project would be fully compliant with the UK Government policies on EMFs. Specifically, all the EMFs produced would be below the relevant exposure limits, and the proposed overhead lines would comply with the policy on optimum phasing. If these requirements are met, NPS EN-5's Simplified Route Map for dealing with EMFs states that 'EMF effects are minimal' and therefore, there would be no significant EMF effects resulting from the Project. APs have also objected to the Applicant's request to seek authorisation for powers of compulsory acquisition on grounds that the Project will be harmful to animal health. In response, the Applicant notes that, as well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences." Although horses are not directly mentioned, there is no evidence to suggest they are any different to other animals. As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Government's Code of Practice 'Power Lines: Control of Microshocks and other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have restated general concerns as to the potential impact of the Project on existing agricultural operations. It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction corridor re-fencing and health and safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the construction to provide a more detailed understanding of the time when any construction works will take place. The Applicant remains committed to exploring appropriate and proportionate options to mitigate the effects of the project during construction, including temporary severance of land. The Applicant will not be able to settle the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land) assessed on a case-by-case basis.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential for an offshore solution to satisfy the existing needs case. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that it is by no means easier or quicker to obtain, whether by compulsion or otherwise, the rights associated with subsea routeing options. Those subsea routeing options would likely interface with gas pipelines, telecommunications equipment, and other utilities infrastructure. Crown licences would also be required. The Applicant is required to develop proposals in line with national policy and its regulatory duties. 5.15 Design Development Report **[APP-122]** paragraphs 2.5.5 to 2.5.11 set out the relevant context for onshore schemes which starts from the Government's strong starting presumption in NPS EN-5 (2024) paragraph 2.9.20 for the use of overhead lines which form the basis of the Project with change where justified by consideration of the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

mitigation hierarchy. Paragraphs 2.5.13 to 2.5.18 go on to explain why offshore technology and onshore options not including pylons are not preferred. The Applicant considers its proposals to be the appropriate means to meet the need case in the context of policy and regulatory environments. National Grid considered alternatives in 7.19 2023 - Strategic Options Backcheck and Review **[APP-357]**, with all onshore alternatives of AC overhead line, AC cable, AC gas insulated line and HVDC Options, and offshore options of AC subsea cables and HVDC alternatives. In all cases the HVDC onshore and offshore alternatives were significantly more expensive than overhead line alternatives whilst not providing the system flexibility and full capacity as the AC alternative. The Development Consent Order (DCO) Project has been developed in accordance with the Holford and Horlock Rules. The Applicant has used the Environmental Impact Assessment (EIA) to inform the balance and define the proposals taken forward. Feedback at all stages has been comprehensively reviewed with the Applicant responding to consultation feedback received covering changes ranging from route alternatives, to individual pylons and temporary works locations. This has resulted in a substantial number of modifications being made to reduce effects on individual property, land or business, as well as on specific landscape and other environmental (including socio-economic) features. The Applicant's response to those suggested changes was set out in detail in the 5.1 Consultation Report **[APP-066]** and Design Development Reports **[2025 in APP122, 2024 in APP-359 and 2023 in APP-358]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	The Applicant notes concerns raised by certain APs regarding the potential for construction activities associated with the Project to cause damage to agricultural and other land. Although not directly related to the Applicant's request for authorisation of CA and TP powers, the Applicant's approach to soil handling is set out in 7.2 Outline Code of Construction Practice Appendix C – Outline Soil Resource Plan [Revision D]. This is based on published good practice and is designed to enable soils which have been handled and stockpiled to be reinstated to return land to its pre-construction condition. This includes aspects of preparing the subsoil which has become compacted prior to placement of topsoil. This plan also confirms that topsoil and subsoil should be stockpiled on like for like (i.e. topsoil can be stored on topsoil). This will limit the potential for subsoil or clay migration into topsoil resources. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including damage caused by the works) assessed on a case-by-case basis.

87. AP 87 - Nicola Moore

87.1 Person with Interest in Land (PIL) Reference ID: 624, 5938, 28355

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I object to National grid ploughing straight through the middle of our farm financially ruining us. Straight through our main growing field and our him we will be ruined by the project. I object to the project stopping two local airfields from flying due to safety issues listened to and I object to the EMF waves given off as my family and I do not want to live in a house next to a pylon giving off electric waves that may affect our health and enjoyment of our home and have the danger of my husband safely farming.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP objects to the Project passing through the middle of his farm, the economic impact preventing local airfields from operating, and the health concerns from the proposed overhead line infrastructure. Land Rights Sought The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), (d) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest also fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). Consolidated Response With regard to the specific engagement with this AP, the Applicant notes that the same engagement history applies as for Graham Moore. A meeting was held with the AP and their agent on 23rd January 2026 to discuss practical matters associated with the Project, including permanent access routes and UKPN mitigation works. Engagement with the AP's representatives has continued and the Applicant's agents have met with the AP's representatives multiple times to negotiate and progress the Heads of Terms, with the most recent meeting being held on 26th May 2026. Version 2 of the Heads of Terms was sent on

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

9th April 2026, which included an offer of a meeting to discuss the HoTs. The AP's representative also attended an Agent's Group Meeting with Fisher German and National Grid on 4th June 2026.

In respect of the concerns relating to local airfields, the perceived impacts on aviation have been assessed in detail throughout the examination at the oral hearings and in many written submissions. The Applicant maintains its position that both Priory and Tibenham airfields can continue to operate. Impacts on local airfields have been assessed through the Environmental Impact Assessment (EIA) process, with impacts during both the construction and operational phase of the Project presented in **6.15 Environmental Statement Chapter 15 - Socio-economics, Recreation and Tourism [Revision C]** and **6.15.A2 Environmental Statement Appendix 15.2 - Review of Aviation Impact [Revision C]**. The latter includes an assessment of effects as they relate to Tibenham and Priory airfields in particular, concluding that both airfields can continue to operate. Discussions are ongoing with both operators.

Impacts on agricultural operations are presented in **6.6 Environmental Statement Chapter 6 - Agriculture and Soils [Revision B]**. During construction, agricultural operations may experience disruption due to factors such as disturbance, fragmentation of land, access restrictions, or disruptions to water supplies and drainage. By the end of construction, all land required temporarily would be reinstated, and effects on agricultural operations during the construction phase would be managed through compensation agreements (which lie outside of the EIA process). The implementation of good practice measures would ensure that disruption is minimised, and this is described in 7.2 Outline Code of Construction Practice **[Revision D]**. Effects on agricultural landholdings during the operational phase of the Project was scoped out of the Environmental Statement and this is set out in 6.20 Scoping Opinion [APP-297].

In relation to the alignment in the vicinity of this AP's land, the Applicant has looked at alternative alignments. Moving RG52 to the east would increase effects on Tibenham and Priory airfields. Moving to the east or west would also transfer effects onto other residential properties and would introduce additional angles and would be longer and less direct, which would be less consistent with the Holford Rules.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]**

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations. The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant. Some APs have questioned whether the Project may interfere with existing service connections, such as aerially-transmitted internet services. The Applicant notes these concerns, but confirms that the proposed overhead line is designed to the Applicant's technical specifications which include the requirements of BS 5049-3 (BSI, 1994), along with other equipment-specific standards such as BS EN 60437 (BSI, 1998) for the insulators on the pylons. All the equipment used will meet the requirements in these standards, which are in place to prevent interference issues. These are the same good engineering practices that are applied to the existing transmission system assets, including existing 400 kV overhead lines. The electromagnetic performance of the transmission system has been certified by a competent body and designed using good engineering practices, detailed in Section 3 of 7.8 Electric and Magnetic Field Compliance Report [REP3-034] and would present no issues for electrical equipment, telecommunication, WiFi, GPS and broadcast equipment under normal operating conditions. Some APs have objected to the Applicant's request to seek authorisation for powers of compulsory acquisition on grounds that the Project will be harmful to human health. Health considerations are given a high priority in the process by which the Applicant arrives at any proposals for new electricity circuits. Assessment of compliance with national guidance and policies is key to the Applicant's approach. The UK has a carefully thought-out set of policies

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	for managing EMFs, which includes both numerical exposure guidelines to protect against established, acute effects of EMFs, and precautionary policies to provide appropriate protection against the possibility of chronic effects of EMFs at lower levels, including, specifically, the possibility of a risk for childhood leukaemia. These are incorporated into the decision-making process for Development Consent in National Policy Statement EN-5. The Applicant's approach ensures all of its transmission assets comply with those policies, which are set by Government on the advice of their independent advisors UKHSA. This ensures that health concerns are properly and adequately addressed. The evidence concerning compliance with these policies, including the numerical guidelines, is included in the 7.8 Electric and Magnetic Field Compliance Report (Rev B) [REP3-034]. UK Government, acting on the advice of authoritative scientific bodies, has put in place appropriate measures to protect the public from EMF. These measures comprise compliance with the relevant exposure limits, and one additional precautionary measure, optimum phasing, applying to high voltage power lines. This policy is incorporated in NPS EN-5 (DESNZ, 2024a). Components associated with the Project would be fully compliant with the UK Government policies on EMFs. Specifically, all the EMFs produced would be below the relevant exposure limits, and the proposed overhead lines would comply with the policy on optimum phasing. If these requirements are met, NPS EN-5's Simplified Route Map for dealing with EMFs states that 'EMF effects are minimal' and therefore, there would be no significant EMF effects resulting from the Project. APs have also objected to the Applicant's request to seek authorisation for powers of compulsory acquisition on grounds that the Project will be harmful to animal health. In response, the Applicant notes that, as well as possible effects on humans, possible effects of Electric and Magnetic Fields (EMFs) on various animals have been studied. No proven effects of EMFs have been found in any species at levels below the guidelines. This is confirmed in National Policy Statement (NPS) EN-5 which states: "There is little evidence that exposure of crops, farm animals or natural ecosystems to transmission line EMFs has any agriculturally significant consequences." Although horses are not directly mentioned, there is no evidence to suggest they are any different to other animals. As well as the possible direct biological or health effects addressed above, indirect effects such as microshocks can occur as a result of electric fields. Microshocks are small spark discharges which are similar to a static shock after walking across a nylon carpet for example. The Project will be designed in accordance with the principles of the Government's Code of Practice 'Power Lines: Control of Microshocks and

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

other indirect effects of public exposure to electric fields' to ensure these are mitigated, which include equestrian activities.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have restated general concerns as to the potential impact of the Project on existing agricultural operations. It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction corridor re-fencing and health and safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the construction to provide a more detailed understanding of the time when any construction works will take place. The Applicant remains committed to exploring appropriate and proportionate options to mitigate the effects of the project during

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

construction, including temporary severance of land. The Applicant will not be able to settle the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land) assessed on a case-by-case basis.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential for an offshore solution to satisfy the existing needs case. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that it is by no means easier or quicker to obtain, whether by compulsion or otherwise, the rights associated with subsea routeing options. Those subsea routeing options would likely interface with gas pipelines, telecommunications equipment, and other utilities infrastructure. Crown licences would also be required. The Applicant is required to develop proposals in line with national policy and its regulatory duties. 5.15 Design Development Report **[APP-122]** paragraphs 2.5.5 to 2.5.11 set out the relevant context for onshore schemes which starts from the Government's strong starting presumption in NPS EN-5 (2024) paragraph 2.9.20 for the use of overhead lines which form the basis of the Project with change where justified by consideration of the mitigation hierarchy. Paragraphs 2.5.13 to 2.5.18 go on to explain why offshore technology and onshore options not including pylons are not preferred. The Applicant considers its proposals to be the appropriate means to meet the need case in the context of policy and regulatory environments. National Grid considered alternatives in 7.19 2023 - Strategic Options Backcheck and Review **[APP-357]**, with all onshore alternatives of AC overhead line, AC cable, AC gas insulated line and HVDC Options, and offshore options of AC subsea cables and HVDC alternatives. In all cases the HVDC onshore and offshore alternatives were significantly more expensive than overhead line alternatives whilst not providing the system flexibility and full capacity as the AC alternative. The Development Consent Order (DCO) Project has been developed in accordance with the Holford and Horlock Rules. The Applicant has used the Environmental Impact Assessment (EIA) to inform the balance and define the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

proposals taken forward. Feedback at all stages has been comprehensively reviewed with the Applicant responding to consultation feedback received covering changes ranging from route alternatives, to individual pylons and temporary works locations. This has resulted in a substantial number of modifications being made to reduce effects on individual property, land or business, as well as on specific landscape and other environmental (including socio-economic) features. The Applicant's response to those suggested changes was set out in detail in the 5.1 Consultation Report **[APP-066]** and Design Development Reports **[2025 in APP122, 2024 in APP-359 and 2023 in APP-358]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

The Applicant notes concerns raised by certain APs regarding the potential for construction activities associated with the Project to cause damage to agricultural and other land. Although not directly related to the Applicant's request for authorisation of CA and TP powers, the Applicant's approach to soil handling is set out in **7.2 Outline Code of Construction Practice Appendix C – Outline Soil Resource Plan [Revision D]**. This is based on published good practice and is designed to enable soils which have been handled and stockpiled to be reinstated to return land to its pre-construction condition. This includes aspects of preparing the subsoil which has become compacted prior to placement of topsoil. This plan also confirms that topsoil and subsoil should be stockpiled on like for like (i.e. topsoil can be stored on topsoil). This will limit the potential for subsoil or clay migration into topsoil resources. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including damage caused by the works) assessed on a case-by-case basis.

88. AP 88 - Christopher John Thorogood

88.1 Person with Interest in Land (PIL) Reference ID: 9128

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Heads of terms are not acceptable	Summary of Objection The AP has summarised their reasons for objection as follows: The Heads of Terms are not acceptable. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation, and Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), and (c) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response With regard to the specific engagement with this AP, Version 1 of the Heads of Terms was issued in October 2025 and Version 2 was issued in April 2026. A Heads of Terms meeting was held with the landowner and their agent Grace Gardiner (Whirlledge & Nott) on 24th February 2026 to discuss accommodation works in greater detail, including crossing points and site security. The AP was at that time taking advice from their land agent on their HoTs position. Accommodation-related requests have been captured on the LIRA, awaiting approval. The Applicant reiterates its commitment to continuing to progress towards a voluntary agreement.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

89. AP 89 - Gillian Mather

89.1 Person with Interest in Land (PIL) Reference ID: 8424

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We are hampered in making any arguments over any application by National Grid to acquire compulsory rights over our land since we don't know what exactly National Grid propose to do or how they propose to overcome any of the physical obstacles which the site presents since they do not engage with us and ignore representations we have made in responses to consultations etc. To be explicit, the site may ultimately require HDDing rather than trenching, but National Grid won't discuss this, although in one of their documents put out several years ago they did propose HDDing under the Blackbrook Stream at Langham and therefore under our land immediately to the south of the Blackbrook. However, they withdrew this plan without explanation or notice. We have attempted to query with National Grid at various stages including at an early stage how they plan to tackle the physical complications of laying cables under the undulating, hilly site including Blackbrook	Summary of Objection The AP has summarised their reasons for objection as follows: The AP are unable to make the necessary objections because the Applicant does not engage nor respond to their representations made. They note that the site may ultimately require Horizontal Directional Drilling ("HDD"), given the presence of Blackbrook Hill, the Blackbrook Stream, and a high-pressure gas main. They state that the Applicant previously withdrew plans without explanation. They assert that any attempt to seek compulsory rights would require a final decision has been made on the construction methodology, as rights to trench or HDD would need to be worded differently. They confirm willingness to enter into a voluntary agreement and that their land agents are working to agree Heads of Terms, though no agreement has been reached. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation, and Restrictive Covenants. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response With regard to the specific engagement with this AP, Version 2 of the Heads of Terms was issued on 26th March 2026. The Applicant remains in dialogue with the AP's agent to

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Hill, the Blackbrook Streat, our land and the high-pressure gas main to the south but without response. In view of the above, any attempt to seek compulsory rights would be premature until National Grid have made a final decision how to go about the laying of cables under our land, since it is assumed that rights to trench or alternatively HDD would have to be worded differently. We have already communicated to National Grid that we are willing to enter into a reasonable agreement to grant them necessary and reasonable rights therefore compulsory action should be unnecessary. Our land agents are in the process of attempting to agree Heads of Terms with National Grid though there is no agreement at the moment. Whether National Grid have taken all necessary prescribed steps before making any application(s) to compulsorily acquire rights over our land and considered all other options is a huge technical question given the size of the Norwich to Tilbury project and the amount of paperwork and information so far generated. I can't answer the point.	negotiate the HoTs and remains committed to reaching a voluntary agreement. The most recent meeting held was on 4th June 2026, with revised terms to be issued shortly thereafter. The Applicant is aware of the issues raised by the AP from a site meeting and believes that answers have been provided by the design team. In response to the AP's concerns regarding the construction methodology at Black Brook, the Applicant confirms that it is proposing to undertake the crossing of Black Brook and the associated constraints in this area via open cut trenching. As indicated within Page 511 of the Application Document 8.4.1 Applicant's Response to Relevant Representations [REP2-023], the potential to cross Black Brook using trenchless techniques has been considered but it was concluded that with around 80m spacings between residential property and the veteran tree, there is insufficient space to accommodate Horizontal Directional Drilling which needs cables (of which there are 18) to be separated by 10m to allow for directional variability. This requires an overall cable swathe of around 170m width compared with approximately 55m cable swathe for open cut installation. The Applicant is aware of the significant constraints in this area including the gas pipeline, topography, overhead line and Black Brook itself and is working with stakeholders to address these challenges. The Applicant has experience of installing cables through constrained locations and is confident that the approach proposed is viable. The Applicant will produce further detail at the detailed design stage of the project and will continue to look for opportunities to minimise impacts at this pinch point crossing location. A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs. Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level. The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential to underground additional sections of the Project alignment. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that the delivery of any alternative solution would also inevitably require the acquisition of land and rights in the ownership of parties other than the Applicant. For example, an increased extent of undergrounding would invariably require the authorisation of CA powers over a larger extent of land, noting that the Order limits for underground cable swathes are typically wider than those required for overhead line. The Applicant also notes that the Project's development has been undertaken within the context of the relevant planning policy, in this case NPS EN-1 and EN-5. These define a strong starting presumption for the use of overhead lines with

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

underground cable where routes unavoidably cross nationally designated landscapes and under certain other circumstances. The Applicant is clear that the land or area identified in the AP's objection does not meet the criteria (i.e. it is not subject to a national landscape designation nor meets the threshold under paragraph 2.9.23) to justify a change to underground cable.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential for an offshore solution to satisfy the existing needs case. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that it is by no means easier or quicker to obtain, whether by compulsion or otherwise, the rights associated with subsea routeing options. Those subsea routeing options would likely interface with gas pipelines, telecommunications equipment, and other utilities infrastructure. Crown licences would also be required. National Grid considered alternatives in 7.19 2023 - Strategic Options Backcheck and Review **[APP-357]**, with all onshore alternatives of AC overhead line, AC cable, AC gas insulated line and HVDC Options, and offshore options of AC subsea cables and HVDC alternatives. In all cases the HVDC onshore and offshore alternatives were significantly more expensive than overhead line alternatives whilst not providing the system flexibility and full capacity as the AC alternative.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

90. AP 90 - Stuart Philpot (SJR Farming Ltd)

90.1 Person with Interest in Land (PIL) Reference ID: 10273

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We do not want this on our land, thank you.	Summary of Objection The AP has summarised their reasons for objection as follows: They do not want the Project on their land. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation, and Restrictive Covenants. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), and (d) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response With regard to the specific engagement with this AP, Version 1 of the Heads of Terms was issued in October 2025, with revised Version 2 issued in April 2026. No site meeting has been held following the issuance of those terms. Multiple requests for a HoTs meeting have been made through the AP's agent Grace Gardiner (Whirledge & Nott), the most recent of which was on 18th May 2026. The Applicant notes that the AP is impacted by the alignment and number of towers across their holding and continues to pursue a meeting to discuss alignment and accommodation concerns. The Applicant reiterates its commitment to reaching

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

a voluntary agreement and its continued efforts to secure a meeting with the AP and their agent.

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project.

91. AP 91 - Richard Turner

91.1 Person with Interest in Land (PIL) Reference ID: 14378

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Boxted Airfield Museum. The erection of the pylons and the construction works beforehand would seriously disrupt our openings in the following ways. The roadways on site date from WW2 and we take visitors on guided walks, these are single carriageway so there would be a risk to the walkers from construction vehicles. This WW2 Airfield site was the base for the Most important American Fighter Aircraft Group serving in Europe. Visitors and relatives of the men who served come to the Museum to get the feel of what their Grandfathers and fathers experienced. 12000 men were stationed here during the course of the second world war. The erection of the pylons would completely spoil the views and destroy the enjoyment for these families. We have then and now pictures on our website and within the Museum and to have those showing pylons I am sure would put visitors off and seriously affect our revenue. The National Lottery recognized this as a Heritage site	Summary of Objection The AP has summarised their reasons for objection as follows: On behalf of Boxted Airfield Museum, they object on the basis that the erection of pylons and associated construction works would seriously disrupt the museum's operations and the grass airstrip in the summer months, used by a flying club, including visiting aircraft displayed on special open days. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds a Category 2 interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), and (c) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where applicable, may be entitled to compensation under the statutory compensation code should

Please summarise (in no more than 1500 words) the reason(s) for your objection

helping us with financial grants over the years.

In the summer months a grass airstrip is established behind the Airfield memorial off Park Lane and is used by a flying club, the pylons would seriously affect this activity. We also have visiting aircraft display on special open days.

Applicant's Response

they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project.

Consolidated Response

In relation to the concerns raised regarding the Boxted Airfield Museum, potential impacts on the museum have been assessed through the Environmental Impact Assessment (EIA) process. 6.15 Environmental Statement Chapter 15 - Socio-economics, Recreation and Tourism **[Revision C]** presents an assessment of potential impacts on built assets (which includes tourism and community facilities) during both the construction and operational phases of the Project. During the construction period, it is noted that the direct access to the museum is along a minor road which falls within the Order Limits; however, access to the Museum would be maintained at all times during construction. Relevant mitigation measures are set out in 7.2 Outline Code of Construction Practice **[Revision G]** and 7.3 Outline Construction Traffic Management Plan (CTMP) **[Revision F]**. During the operational phase of the Project there would be a permanent acquisition of rights of access in relation to an existing access track; however, no physical works are proposed and routine inspections and maintenance activities are not expected to occur frequently during the operation period. As such, no significant effects are anticipated on the Airfield Museum during either the construction or operation phase of the Project.

Concerning the potential impacts of the Project on aviation, please refer to 6.15.A2 Environmental Statement Appendix 15.2 – Review of Aviation Impact **[Revision C]**. It identifies Boxted airfield as not operational. This followed engagement with former users who previously hosted aviation events at the site and advised that the runway was no longer useable. It is listed as disused on current aviation charts. Early engagement with the site owner did not reveal aviation concerns in relation to the Project. No impacts on the safety or operation of the airfield have therefore been assessed. See also page 246 of 8.8.1 Applicant's Comments on Written Representations **[REP2-029]**, responding to **[REP1-209]**.

There is no alternative route available to the Project to the north side of Colchester, and in light of the aviation situation, an overhead line solution is preferred and is consistent with policy. Routes to the south of Colchester affect areas designated as Special Protection Areas that are to be avoided where other options are available.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in [REP1-138], the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance. Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

92. AP 92 - Tamasyn Holland

92.1 Person with Interest in Land (PIL) Reference ID: 28603, 20989

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I strongly object to the proposed pylons being located on or affecting my land due to the significant visual, environmental, and property impacts. This proposal would cause unacceptable harm to my property rights, amenity, and the surrounding landscape.	Summary of Objection The AP has summarised their reasons for objection as follows: The proposed pylons would impact their land visually, environmentally, as well as their property rights. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: Class 2 (overhead line infrastructure), Class 3 (underground cable infrastructure), Class 4 (overhead line and underground system), Class 5 (access). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought). The APs have an interest in plots E-1/39, E-1/56, E-1/69-70, E-1/72-73, E-1/77-81, E-1/83-89, E-2/12, E-2/15, E-2/16, E-2/19-20, E-2/26-27, E-2/31, E-2/33, E-2/35-36, E-2/38 E-2/41, E-2/44, E-2/59, E-2/61, E-2/73, E-2/75-78, E-2/82, E-2/85, E-2/87, E-2/90, E-2/98, E-2/110 Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026 The Applicant has sought to reduce, as far as practicable, potential impacts on landscape and visual receptors, through routeing and siting of infrastructure. The rural landscape will remain in place beneath and around the proposed overhead line, albeit there will be significant

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

effects on landscape character and visual amenity as reported in the Landscape and Visual Impact Assessment (LVIA) in **6.13 Environmental Statement Chapter 13 - Landscape and Visual [Revision B]**.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have sought to argue that the future exercise of those acquired rights and consented powers will cause damage to the environment. In response, the Applicant notes that an Environmental Impact Assessment (EIA) has been undertaken for the Project in accordance with the Infrastructure Planning (EIA) Regulations 2017. The Environmental Impact Assessment is detailed within the Environmental Statement (ES) that was submitted as part of the application for development consent. The ES can be found in Volume 6 of the application documents. The ES assesses the impact of Norwich to Tilbury on a number of topics which are of direct relevance to those holding interests within the Order Land, including: air quality, agriculture and soils, ecology and biodiversity, contaminated land geology and hydrogeology, health and wellbeing, historic environment, hydrology land drainage and flood risk, landscape and visual, noise and vibration, socio-economics recreation and tourism, and traffic and transport. Where potential effects on the environment have been anticipated, mitigation has been designed to avoid, prevent, reduce and offset impacts. Mitigation measures are set out and secured in 7.2 Outline Code of Construction Practice (Final Issue E) **[REP5-139]**, 7.3 Outline Construction Traffic Management Plan (Final Issue D) **[REP5-149]**, 7.4 Outline Landscape and Ecological Management Plan (Final Issue E) **[REP5-157]**, Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (Final Issue B) **[REP5-161]** and Outline Public Rights of Way Management Plan (Final Issue C) **[REP5-163]**. Residual effects (following the implementation of mitigation measures) of the Project are set out in each individual environmental statement topic chapter.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
There are still important points outstanding and the Heads of Terms have not yet been sufficiently progressed	Summary of Objection The AP has summarised their reasons for objection as follows: Still important points outstanding and the Heads of Terms have not yet been sufficiently progressed. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Freehold and Occupation. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Correspondence has been had with the APs representative regarding queries raised specifically for the AP. Continued engagement with the APs representative is underway regarding HOTS negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed. In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Summary of Objection No written reasons for objection have been provided by the AP. Land Rights Sought The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle. Consolidated Response The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026. The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Summary of Objection

No written reasons for objection have been provided by the AP.

Land Rights Sought

The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure) (c) Class 4 (overhead line and underground cable infrastructure), (d) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest.

Consolidated Response

The AP's representative attended an Agent's Group Meeting with Fisher German and National Grid on both 20 April 2026 & 4 June 2026. Continued engagement with the APs representative is underway regarding HOTs negotiations, with the latest meeting held with The Applicant, the Applicant's representative and the AP applicant on 15 July 2026.

The AP has not made clear the specific basis on which they object to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP") and, therefore, the Applicant assumes that the AP's objection is one of principle.

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) which acknowledges that for long, linear schemes it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset. The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1, the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and have been sought proportionately. The CA and TP powers sought prioritise temporary possession during construction and secure only the smallest necessary permanent land and rights afterwards.

The Applicant is satisfied that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met, as set out in detail in the 4.1 Statement of Reasons (Issue B) **[REP3-010]** and its submissions at Compulsory Acquisition Hearing 1. The Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily. Similarly, the Applicant is satisfied that the requirements of Section 123 of the Planning Act 2008 are met, as a request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project.

96. AP 96 - F H Easton Limited

96.1 Person with Interest in Land (PIL) Reference ID: 10198

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I am not familiar the various Acts, Sections etc listed above no more than NG are familiar with the growth stages of winter wheat. Without more detail it is difficult to articulate objections precisely on the consequences of what such interference to our land will have. At best compulsory rights will add or bring nothing to the farm and at worst blight and devalue the holding. Those acquiring temporary rights will have little to no interest in the long term effect they may have on the land and it will take a long time, possibly decades to recover from any works. This prediction is based upon more than one poor experience with civil contractors working on our farm.	Summary of Objection The AP has summarised their reasons for objection as follows: The AP states that compulsory rights will devalue the holding, and that the Applicant will have little to no interest in the long-term effect on the land. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation, and Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 3 (underground cable infrastructure), (c) Class 4 (overhead line and underground cable infrastructure), and (d) Class 5 (access). The Applicant is also seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure) and (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response With regard to the specific engagement with this AP, discussions are ongoing with this party and their agent Richard Prentice. Version 2 of the Heads of Terms was issued on 9th April 2026. The Applicant attended a meeting with the AP on 21st January 2025 to discuss accommodation works that could be put in place to mitigate identified issues and ensure the AP could continue their agricultural operations. Ongoing concerns regarding the Project were noted at that time and relayed back to National Grid. Following this, the Applicant met with the AP's agent on 26th May 2025 to discuss reducing the grantor's land shown on the HoTs plans

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and to confirm the severed areas. The Applicant also attended the Agents Group Meeting on 4th June 2026 where the wider terms of the HoTs were discussed.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Some APs have asserted that the Project will have a negative impact on the value of their property. Whilst the Applicant recognises that there will inevitably be some impact on property values arising from a project of this nature, the Applicant does not consider that this, of itself, provides grounds upon which the authorisation of CA and TP powers should be refused. It should be noted that the Applicant has in place a Voluntary Compensation Scheme for those residential properties affected by the Project and has issued guidance on what the scheme entails. Affected persons are directed to the Applicant's website for further information on the scheme. The Applicant also notes that a statutory blight scheme exists for those properties where there is a qualifying interest, and the Applicant has engaged and continues to engage with those affected persons who have asserted their interest in pursuing a blight claim. Owners of qualifying agricultural properties who live within the agricultural unit may also benefit from the blight regime, subject to the satisfaction of the relevant criteria. The Applicant

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

acknowledges that there is no statutory compensation for loss of value to dwellings arising from the use of a development (in this case the construction and/or operation of the Project). However, the Applicant has chosen to go beyond the statute and has in place a Voluntary Compensation Scheme for qualifying residential properties affected by the Project.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular,

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have restated general concerns as to the potential impact of the Project on existing agricultural operations. It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction corridor re-fencing and health and safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the construction to provide a more detailed understanding of the

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

time when any construction works will take place. The Applicant remains committed to exploring appropriate and proportionate options to mitigate the effects of the project during construction, including temporary severance of land. The Applicant will not be able to settle the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land) assessed on a case-by-case basis.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

The Applicant notes concerns raised by certain APs regarding the potential for construction activities associated with the Project to cause damage to agricultural and other land. Although not directly related to the Applicant's request for authorisation of CA and TP powers, the Applicant's approach to soil handling is set out in 7.2 Outline Code of Construction Practice Appendix C – Outline Soil Resource Plan **[APP-303]**. This is based on published good practice and is designed to enable soils which have been handled and stockpiled to be reinstated to return land to its pre-construction condition. This includes aspects of preparing the subsoil which has become compacted prior to placement of topsoil. This plan also confirms that topsoil and subsoil should be stockpiled on like for like (i.e. topsoil can be stored

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	on topsoil). This will limit the potential for subsoil or clay migration into topsoil resources. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including damage caused by the works) assessed on a case-by-case basis.

97. AP 97 - British Pipeline Agency Limited (BPA) as agents for and on behalf of United Kingdom Oil Pipelines Limited (UKOP)

97.1 Person with Interest in Land (PIL) Reference ID: 21224

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant’s Response
UKOP is the owner of the 14-inch Thames to Epping high pressure multi fuel pipeline (hereafter called the "Pipeline") and benefits from the associated land rights relating to the Pipeline. BPA is employed as agent by UKOP to operate and maintain the Pipeline and act on its behalf in this DCO process. The below summary is by way of update to the presentations and submissions made on behalf of BPA / UKOP to date including RR-0413, PDA-011, AS-086, REP1-235-238 (inclusive), REP3-121 and the oral submissions made by Fieldfisher on behalf of BPA / UKOP at CAH1. With reference to whether the purposes for which compulsory acquisition powers are sought comply with section 122(2) of the Planning Act 2008 and whether the compelling case in the public interest test	Summary of Objection The AP has summarised their reasons for objection as follows: BPA, as agent for UKOP, raises an objection in its capacity as operator and owner respectively of fuel pipeline asset (the "Pipeline"). They note that the proposed compulsory acquisition in the current form of the draft DCO poses an unacceptable risk to the safety of the Pipeline and by extension to the environment. UKOP requires the rights sought in the Change Request accepted into the Examination to enable it to carry out the works proposed under Work [17A]. The AP contends that UKOP is the owner of nationally significant high pressure fuel infrastructure that should be treated equivalently to a Statutory Undertaker, and that it requires an asset protection agreement to ensure appropriate protection for the UKOP apparatus. The AP maintains its objection until adequate mitigation measures and long-term safeguards are guaranteed and formalised. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker): Easement Right or Privilege and Restrictive Covenants. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response

Please summarise (in no more than 1500 words) the reason(s) for your objection

under s122(3) of the Planning Act has been met, UKOP's position is as follows:

1.1 The private loss which may be suffered by BPA and UKOP (as well as the consequential impacts to persons, the environment, and the key end users operating crucial national infrastructure) are of vital importance as to whether considering whether there is a compelling case for compulsory acquisition.

1.2 BPA and UKOP remain of the view that, absent the Order being confirmed with the benefit of the change request as applied for, and further agreements being entered into with the Applicant, the proposed compulsory acquisition in the current form of the dDCO pose an unacceptable risk to the safety of the Pipeline and by extension the environment.

1.3 UKOP requires the rights sought in the Change request which has now been accepted into the Examination to enable it to carry out the works proposed under Work [17A].

1.4 Section 127(5) Planning Act 2008 states that in the case of statutory undertakers the SoS should be satisfied that the rights can be purchased without any serious detriment to the carrying on of the undertaking and that any consequential detriment to the carrying on of the undertaking can be made good by the undertaker by the use of other

Applicant's Response

The Applicant has been engaging with BPA/UKOP asset protection teams significantly since 2023 to identify, de-risk and manage the interactions between BPA/UKOP existing apparatus and the Applicants proposed scheme. This engineering engagement culminated in Change Application 1 which both parties engineering disciplines had substantial involvement in.

A Change Application has been submitted to, and accepted by, the Examination Authority as part of the draft DCO for consideration, which seeks to further address those concerns raised by BPA/UKOP and enable Work 17A to be carried out. In respect of the AP's concerns regarding the Pipeline and the legal protections being sought, the Applicant and BPA/UKOP have agreed the terms of a legal agreement which is now being entered into between the parties to mitigate the concerns raised by BPA/UKOP and secure the removal of their objection to the draft DCO. To the extent that the parties have not finished the process of execution of the agreement before Deadline 7, Protective Provisions for the benefit of BPA/UKOP will be included in the draft DCO until such time as the agreement is completed.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

land belonging to or available for acquisition by the undertaker.

1.5 UKOP is not a Statutory Undertaker BUT it is the owner of Nationally Significant high pressure fuel infrastructure and as such it and the risks associated with its infrastructure, should be treated equivalently. There is a very real need to ensure robust protections (both practically and in terms of legal rights) to ensure the ongoing use and maintenance of the Pipeline given the reasons of national energy security. In addition to the legal rights sought via the change request UKOP require the Applicant to enter into an asset protection agreement to ensure appropriate protection for the UKOP apparatus.

1.6 BPA/UKOP need to ensure that the necessary rights can be guaranteed to be obtained via the Order powers in accordance with the change request to ensure that that:

(a) the Order can deliver the necessary powers to cross the Pipeline without serious detriment; or

(b) it has or can acquire the necessary land to deliver such mitigation as may be necessary.

While BPA / UKOP continue not to have objections to the Project in principle, they do require the Order, as amended by the change request, to be confirmed to ensure

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

that their concerns are fully addressed and suitable protections are secured, preferably by private treaty.

BPA / UKOP acknowledge the Applicant's constructive engagement, regular meetings and ongoing efforts to agree contractual protections for the Pipeline, with the aim of reaching a settlement by Deadline 6 so that the objection can be withdrawn.

However, until adequate mitigation measures and long-term safeguards are guaranteed and formalised, BPA / UKOP maintain their objection in light of the significant risk of damage to the Pipeline, including accelerated corrosion, which could endanger the public, the environment, and the resilience of nationally significant fuel infrastructure until the Asset Protection Agreement is in place. Those risks and

98. AP 98 - Mr Toby Reeves

98.1 Person with Interest in Land (PIL) Reference ID: 15979

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
All myself and other parties on the site would like is a transparent view on what the project entails. I had a teams meeting with a chap based in bury st Edmunds named Toby who stated wooden pylons in the field adjacent would be removed and replaced with an underground system but this was some time ago. Has this changed since as the project moves forward at your end? The letters you send us tell us nothing at all in real terms. If we can be confident in your proposal then this moves forward along quite nicely but if you are not clear with us then naturally this will slow things down. Nobody wants this. It actually prevents us and others from listing our properties, should we wish to do so as well as being unsettling as to both current and future values of our homes. Homes we have worked our whole lives for.	Summary of Objection The AP objects to: (1) the lack of clarity about what the project will involve; (2) uncertainty about whether the proposed replacement of a nearby wood pole line with an underground cable is still part of the proposal; (3) the possibility of future works, and the lack of detail about them; (4) the lack of detail in letters sent by National Grid to the AP so that the AP cannot have confidence about how the project will affect them. (5) uncertainty caused by the project which could impact the current and future value of the AP's home. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, and a right of Easement. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds a Category 2 interest: Class 3 (underground cable infrastructure), Class 4 (overhead line and underground cable infrastructure). The Applicant is seeking to acquire the following permanent rights for UKPN in connection with this project over land in which this AP holds an interest: Class 3 (underground cable infrastructure), and Class 4 (overhead line and underground cable infrastructure) Category 2 Persons with an Interest in Land are identified and consulted in accordance with the requirements of the Planning Act 2008. However, populated Heads of Terms are not ordinarily issued to Category 2 interests because the land rights required for the Project are secured through engagement with the relevant Category 1 interest holder, or through the exercise of the powers sought in the Order, rather than through a separate voluntary agreement with each individual Category 2 interest. Whilst Heads of Terms are not generally required, Category 2 persons remain entitled to participate in the DCO process and, where

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
Please rectify this matter by contacting myself on either [REDACTED]	applicable, may be entitled to compensation under the statutory compensation code should they suffer loss arising from the exercise of the Order powers. The Applicant will continue to engage with affected persons throughout the Examination and implementation of the Project Consolidated Response In relation to the AP's concerns: Update on the placement of the wood pole line - The proposal to underground the existing 11kv wood pole line is part of the Project. The existing line is situated in scrub area between the access to the properties to the east and the agricultural land to the west. The Applicant and UKPN will continue to engage with the AP as the UKPN's detailed design and construction methodology for the necessary works progresses. Giving the AP greater certainty; further discussions - Conversations with APs about the detail of proposals help to answer questions and can resolve many concerns. The Applicant agrees with the AP's suggestion that further discussions could be useful. Contact will be made shortly to arrange a discussion and/or a meeting with the relevant team members. The Applicant recognises that visual impact from overhead lines and pylons can cause concern for communities and may lead to perceptions of property value loss. However, property values are influenced by many factors, making it hard to attribute depreciation to a single cause like infrastructure development. UK law does not include for compensation in cases of a loss of view or changes to a view. Under the Compulsory Purchase Code, property owners and businesses may be able to claim compensation for any loss in value directly caused by the Project if they meet the criteria A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]) are also of direct relevance in demonstrating both the need for CA

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons – Appendix A – Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (*emphasis added*): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset.”

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have sought to argue that the future exercise of those acquired rights and consented powers will cause damage to the environment.

In response, the Applicant notes that an Environmental Impact Assessment (EIA) has been undertaken for the Project in accordance with the Infrastructure Planning (EIA) Regulations 2017. The Environmental Impact Assessment is detailed within the Environmental Statement (ES) that was submitted as part of the application for development consent. The ES can be found in Volume 6 of the application documents. The ES assesses the impact of Norwich to Tilbury on a number of topics which are of direct relevance to those holding interests within the Order Land, including: air quality, agriculture and soils, ecology and biodiversity, contaminated land geology and hydrogeology, health and wellbeing, historic environment, hydrology land drainage and flood risk, landscape and visual, noise and vibration, socio-economics recreation and tourism and traffic and transport. The scope of the EIA was set out and agreed within 6.19 Scoping Report – including appendices B to K (Final Issue A) **[APP-296]** and 6.20 Scoping Opinion (Final Issue A) **[APP-297]**.

Where potential effects on the environment have been anticipated mitigation has been designed to avoid, prevent, reduce and offset impacts. Mitigation measures are set out and secured in 7.2 Outline Code of Construction Practice (Final Issue E) **[REP5-139]**, 7.3 Outline Construction Traffic Management Plan (Final Issue D) **[REP5-149]**, 7.4 Outline Landscape and Ecological Management Plan (Final Issue E) **[REP5-157]**, Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (Final Issue B) **[REP5-161]** and Outline Public Rights of Way Management Plan (Final Issue C) **[REP5-163]**. Residual effects (following the implementation of mitigation measures) of the Project are set out in each individual environmental statement topic chapter. Residual effects are stated to be significant or not-significant in accordance with the methodology the assessments have been undertaken in accordance with.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential for an offshore solution to satisfy the existing needs case. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that it is by no means easier or quicker to obtain, whether by compulsion or otherwise, the rights associated with subsea routeing options. Those subsea routeing options would likely interface with gas pipelines, telecommunications equipment, and other utilities infrastructure. Crown licences would also be required.

The Applicant is required to develop proposals in line with national policy and its regulatory duties. 5.15 Design Development Report **[APP-122]** paragraphs 2.5.5 to 2.5.11 set out the relevant context for onshore schemes which starts from the Government's strong starting presumption in NPS EN-5 (2024) paragraph 2.9.20 for the use of overhead lines which form the basis of the Project with change where justified by consideration of the mitigation hierarchy. Paragraphs 2.5.13 to 2.5.18 go on to explain why offshore technology and onshore options not including pylons are not preferred. The Applicant considers its proposals to be the appropriate means to meet the need case in the context of policy and regulatory environments.

National Grid considered alternatives in 7.19 2023 – Strategic Options Backcheck and Review **[APP-357]**, with all onshore alternatives of AC overhead line, AC cable, AC gas insulated line and HVDC Options, and offshore options of AC subsea cables and HVDC alternatives. In all cases the HVDC onshore and offshore alternatives were significantly more expensive than overhead line alternatives whilst not providing the system flexibility and full capacity as the AC alternative.

The Development Consent Order (DCO) Project has been developed in accordance with the Holford and Horlock Rules. The Applicant has used the Environmental Impact Assessment (EIA) to inform the balance and define the proposals taken forward. The Applicant has also received extensive input from feedback with stakeholders ranging from landowners, residents, non-statutory and statutory bodies. Feedback at all stages has been comprehensively reviewed with the Applicant responding to consultation feedback received covering changes ranging from route alternatives, to individual pylons and temporary works locations. This has

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	resulted in a substantial number of modifications being made to reduce effects on individual property, land or business, as well as on specific landscape and other environmental (including socio-economic) features. The Applicant's response to those suggested changes was set out in detail in the 5.1 Consultation Report [APP-066] and Design Development Reports [2025 in APP-122, 2024 in APP-359 and 2023 in APP-358]. Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement [REP3-016] clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

99. AP 99 - Oliver Lukies

99.1 Person with Interest in Land (PIL) Reference ID: 10225

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We act on behalf of our client Seventyholds Ltd, whose freehold land is impacted by the proposed Norwich to Tilbury scheme. On behalf their behalf, we object to the proposed interference with their land and rights in relation to the Planning Act 2008. Seventyholds Ltd has been promoting, for over 10 years, a comprehensive scheme for the delivery of Southfields Village and Country Park in Thurrock. The current alignment of the proposed overhead line would have a fundamental and unacceptable impact on the deliverability of the scheme. The Southfields proposal comprises a residential-led development of approximately 800 dwellings and a Country Park, including the restoration and long-term public use of an approximately 80-acre former landfill site owned by Thurrock Council. The proposal has been subject to extensive technical work and engagement and represents a deliverable scheme bringing clear housing, environmental and community benefits. The Country Park	Summary of Objection The Applicant notes that Oliver Lukies acts on behalf of Seventyholds Ltd, whose freehold land is impacted by the proposed Norwich to Tilbury scheme. The AP objects to (1) the proposed interference with their land and rights; (2) the significant impact that the Norwich to Tilbury project will have on the proposed 800 dwelling Southfields Village and Country Park, which will be made commercially unviable because of land occupied, visual intrusion across the wider site, and market perception; (3) the sterilisation of a well-developed scheme which would deliver substantial public benefits including housing, environmental regeneration and community benefits; (4) the failure to use a reasonable alternative alignment further south along the east side of Buckingham Hill Road, crossing just south of the Holford Road junction; (5) the absence of compelling case in the public interest to justify compulsory acquisition, and the use of statutory powers in s122 and s123 Planning Act 2008. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, occupation, and a right of Easement. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: Class 1 (compulsory acquisition of land); Class 2 (overhead line infrastructure); Class 3 (underground cable infrastructure); Class 4 (overhead line and underground cable infrastructure); Class 5 (access); Class 6 (drainage infrastructure), and Class 7 (Powers of temporary possession). The Applicant is seeking to acquire the following permanent rights for UKPN in connection with this project over land in which this AP holds an interest: Class 7 (Powers of temporary possession)

Please summarise (in no more than 1500 words) the reason(s) for your objection

forms part of an agreed regeneration approach involving Thurrock Council.

As currently shown, the proposed 400kV overhead line crosses the southern part of the Southfields site and affects the adjacent landfill regeneration area through the location of new pylons. The effect would be to blight the site to the extent that the residential development would be commercially unviable. The impact is not limited to the land directly occupied, but extends across the wider site through visual intrusion and market perception. In addition, the proposed pylon positions would prejudice the agreed regeneration of the landfill site and restrict the delivery of the Country Park. Taken together, the current alignment would sterilise a well-developed scheme which would otherwise deliver substantial public benefits.

A reasonable alternative alignment is available. The line could continue further south along the east side of Buckingham Hill Road, crossing just south of the Holford Road junction. This would remove the blighting effect upon the proposed village site, and the regenerated for recreation purposes Buckingham Hill Road Council-owned refuse tip, while occupying land which is presently vacant and unlikely to ever be considered for residential development. There is no evident reason

Applicant's Response

Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought).

Consolidated Response

With regard to the specific engagement with this AP, the most recent meeting was held on 19th June 2026; there had been previous attempts at meetings, although this is the most recent. BCLP are instructed for the Heads of Terms (currently pending from Project Manager). The AP has concerns over the construction methodology, the location of pylon TB224, and the potential impact on PV panels and shading. The current design is being reviewed to assess whether changes can be made to accommodate these concerns, although other issues would arise from any movement, such as SUDs relocation.

The Applicant has sought to reduce, as far as practicable, potential impacts on landscape and visual receptors, through routing and siting of infrastructure. The Applicant notes the concern related to views from the proposed Southfields Village and Country Park. Effects on visual receptors are set out under Visual Receptor Area (VRA) H6 Southfields (paragraphs 13.11.64 to 13.11.75) and VRA H7 Linford (paragraphs 13.11.76 to 13.11.87) in Section 13.11 in **6.13.A3 Environmental Statement Appendix 13.3 - Visual Baseline and Assessment - Part 1 of 4 [Revision B]**. Significant visual effects are identified within approximately 1.5 km of the Project. Effects on landscape receptors within the area are set out in **6.13.A2 Environmental Statement Appendix 13.2 – Landscape Baseline and Assessment [Revision B]** under Landscape Character Area (LCA) H1 East and West Tilbury Open Undulating Farmland in paragraphs 13.3.1033 to 13.3.1049. Significant effects are identified within approximately 1.5 km of the Project. The cumulative effect between the Project and the Southfields proposal is set out in **6.17.A3 Environmental Statement Appendix 17.3 - Inter-Project Cumulative Effects [APP-284]** and **6.17.1 Environmental Statement Chapter 17 - Cumulative Effects - Response Update [Revision B]** and concludes that there would be significant residual inter-project cumulative landscape and visual effects.

The cumulative effect between the Project and the Southfields proposal as set out in **6.17.A3 Environmental Statement Appendix 17.3 - Inter-Project Cumulative Effects [APP-284]** and **6.17.1 Environmental Statement Chapter 17 - Cumulative Effects - Response Update [Revision B]** also includes an assessment of cumulative effects as they relate to socio-economics, recreation and tourism. No significant cumulative effects have been identified.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
why this alternative would result in any material increase in construction cost or complexity. Again, the current positing of the pylons and overhead lines cannot be regarded as the least harmful option. The proposal falls to be considered under the Planning Act 2008. Section 122 provides that compulsory acquisition may only be authorised where the land is required for the development and there is a compelling case in the public interest. The requirement that land is "required" is a substantive test. Where a reasonable alternative exists which avoids significant harm, it is difficult to conclude that land in this location meets that test. The public interest test requires the benefits of the scheme to be weighed against the harm. Here, that harm includes the loss of a viable housing and regeneration scheme, which weighs heavily against the current alignment. Section 123 further requires that compulsory acquisition is properly justified. Given the availability of a less harmful alternative, the inclusion of the Southfields land within the Order limits cannot be regarded as justified or proportionate. Government guidance reinforces these principles, requiring a clear justification for all land included and a proper balance between public benefit and private loss, taking account of alternatives. The availability of a reasonable alternative alignment significantly weakens any case	In relation to the AP's proposed alternative alignment, the Applicant notes that the suggested alternative was also less preferred as it required a pylon within, and oversailing of, an active minerals site. Additionally, the crossing of the landfill and Buckingham Hill Road further south would require extremely tall pylons (both E12 extensions). On balance, the proposed alignment was preferred, noting that the overhead line broadly follows the existing gas pipeline within the Southfields site itself. The Applicant's position is that it has been engaging with representatives of the Southfields development since the first non-statutory consultation and prior to the site's identification as an Opportunity Area. In previous iterations of possible masterplans the Applicant has been advised of the lack of interaction and it is only recently that more extensive interface has been identified. The Applicant does not agree that the Project will impact the whole site and can provide examples where residential property safely co-exists within 30m or so of overhead lines. The alternative routes suggested present additional technical risks and are not preferred, with the impact transferring to other established aggregates businesses. The Applicant continues to engage with the developer to seek to agree a mutually agreed position. A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
that the current land take is necessary. The Southfields scheme would deliver substantial housing and environmental benefits. The current alignment would prevent this, whereas the alternative alignment would allow both schemes to proceed. Seventyholds therefore requests that the alignment be amended to follow the alternative route.	of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of [REP3-010] makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need. The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations. The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Some APs have asserted that the Project will have a negative impact on the value of their property. Whilst the Applicant recognises that there will inevitably be some impact on property values arising from a project of this nature, the Applicant does not consider that this, of itself, provides grounds upon which the authorisation of CA and TP powers should be refused. It should be noted that the Applicant has in place a Voluntary Compensation Scheme for those residential properties affected by the Project and has issued guidance on what the scheme entails. Affected persons are directed to the Applicant's website for further information on the scheme. The Applicant also notes that a statutory blight scheme exists for those properties where there is a qualifying interest, and the Applicant has engaged and continues to engage with those affected persons who have asserted their interest in pursuing a blight claim.

Owners of qualifying agricultural properties who live within the agricultural unit may also benefit from the blight regime, subject to the satisfaction of the relevant criteria. The Applicant acknowledges that there is no statutory compensation for loss of value to dwellings arising from the use of a development (in this case the construction and/or operation of the Project). However, the Applicant has chosen to go beyond the statute and has in place a Voluntary Compensation Scheme for qualifying residential properties affected by the Project.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons - Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not

only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

[REP1-138]) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in [REP1-138], the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have sought to argue that the future exercise of those acquired rights and consented powers will cause damage to the environment. In response, the Applicant notes that an Environmental Impact Assessment (EIA) has been undertaken for the Project in accordance with the Infrastructure Planning (EIA) Regulations 2017. The Environmental Impact Assessment is detailed within the Environmental Statement (ES) that was submitted as part of the application for development consent. The ES can be found in Volume 6 of the application documents. The ES assesses the impact of Norwich to Tilbury on a number of topics which are of direct relevance to those holding interests within the Order Land, including: air quality, agriculture and soils, ecology and biodiversity, contaminated land geology and hydrogeology, health and wellbeing, historic environment, hydrology land drainage and flood risk, landscape and visual, noise and vibration, socio-economics recreation and tourism, and traffic and transport. Where potential effects on the environment have been anticipated, mitigation has been designed to avoid, prevent, reduce and offset impacts. Mitigation measures are set out and secured in 7.2 Outline Code of Construction Practice (Final Issue E) [REP5-139], 7.3 Outline Construction Traffic Management Plan (Final Issue D) [REP5-149], 7.4 Outline Landscape and Ecological Management Plan (Final Issue E) [REP5-157], Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation (Final Issue B) [REP5-161] and Outline Public Rights of Way Management Plan (Final Issue C) [REP5-163]. Residual effects (following the implementation of mitigation measures) of the Project are set out in each individual environmental statement topic chapter. A number of APs have restated general concerns as to the potential impact of the Project on existing agricultural operations. It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

corridor re-fencing and health and safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the construction to provide a more detailed understanding of the time when any construction works will take place. The Applicant remains committed to exploring appropriate and proportionate options to mitigate the effects of the project during construction, including temporary severance of land. The Applicant will not be able to settle the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land) assessed on a case-by-case basis.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential for an offshore solution to satisfy the existing needs case. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that it is by no means easier or quicker to obtain, whether by compulsion or otherwise, the rights associated with subsea routeing options. Those subsea routeing options would likely interface with gas pipelines, telecommunications equipment, and other utilities infrastructure. Crown licences would also be required. The Applicant is required to develop proposals in line with national policy and its regulatory duties. 5.15 Design Development Report **[APP-122]** paragraphs 2.5.5 to 2.5.11 set out the relevant context for onshore schemes which starts from the Government's strong starting presumption in NPS EN-5 (2024) paragraph 2.9.20 for the use of overhead lines which form the basis of the Project with change where justified by consideration of the mitigation hierarchy. Paragraphs 2.5.13 to 2.5.18 go on to explain why offshore technology and onshore options not including pylons are not preferred. The Applicant considers its proposals to be the appropriate means to meet the need case in the context of policy and regulatory environments. National Grid considered alternatives in 7.19 2023 - Strategic Options Backcheck and Review **[APP-357]**, with all onshore alternatives of AC overhead line, AC cable, AC gas insulated line and HVDC Options, and offshore options of AC subsea

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

cables and HVDC alternatives. In all cases the HVDC onshore and offshore alternatives were significantly more expensive than overhead line alternatives whilst not providing the system flexibility and full capacity as the AC alternative. The Development Consent Order (DCO) Project has been developed in accordance with the Holford and Horlock Rules. The Applicant has used the Environmental Impact Assessment (EIA) to inform the balance and define the proposals taken forward. Feedback at all stages has been comprehensively reviewed with the Applicant responding to consultation feedback received covering changes ranging from route alternatives, to individual pylons and temporary works locations. This has resulted in a substantial number of modifications being made to reduce effects on individual property, land or business, as well as on specific landscape and other environmental (including socio-economic) features. The Applicant's response to those suggested changes was set out in detail in the 5.1 Consultation Report **[APP-066]** and Design Development Reports **[2025 in APP122, 2024 in APP-359 and 2023 in APP-358]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

The Applicant notes concerns raised by certain APs regarding the potential for construction activities associated with the Project to cause damage to agricultural and other land. Although not directly related to the Applicant's request for authorisation of CA and TP powers, the Applicant's approach to soil handling is set out in 7.2 Outline Code of Construction Practice Appendix C – Outline Soil Resource Plan **[APP-303]**. This is based on published good practice and is designed to enable soils which have been handled and stockpiled to be

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

reinstated to return land to its pre-construction condition. This includes aspects of preparing the subsoil which has become compacted prior to placement of topsoil. This plan also confirms that topsoil and subsoil should be stockpiled on like for like (i.e. topsoil can be stored on topsoil). This will limit the potential for subsoil or clay migration into topsoil resources. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including damage caused by the works) assessed on a case-by-case basis.

100. AP 100 - Henrietta Mary Guest

100.1 Person with Interest in Land (PIL) Reference ID: 2386

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
The acquisition of rights over our land materially interferes with our ability to farm and the enjoyment that an owner should rightfully have over their land. We believe that as per section 123 subsection 4 we do believe that the prescribed procedure has been followed in relation to the land.	Summary of Objection The AP objects to (1) the impact the project has on the APs ability to farm, and an owner's right to enjoy their land, and (2) The procedures required by s123(4) have not been followed. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, occupation, and a right of Easement. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: Class 2 (overhead line infrastructure); Class 3 (underground cable infrastructure); and Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN in connection with this project over land in which this AP holds an interest: Class 2 (overhead line infrastructure); Class 3 (underground cable infrastructure); and Class 7 (Powers of temporary possession). Consolidated Response With regard to the specific engagement with this AP, a Heads of Terms meeting was held on 28th May 2026 at which the Applicant discussed with the AP how they would continue to work the farm around the Project proposals. The AP advised that they produce blackcurrants, which take a long time to establish, and noted that the current proposals pass through the centre of the fruit crop. The Applicant acknowledges the significance of this concern and will continue to engage with the AP to explore appropriate mitigation options at the detailed design stage, including the positioning of infrastructure to minimise disruption to established crops where technically and constructively feasible.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	Section 123(1) specifies that only one of the conditions set out in s123 need to apply at any one time. The application includes a request for the authorisation of compulsory acquisition in accordance with s123(2) which will be determined by the Secretary of State on the advice of the Examining Authority. In these circumstances the provisions of s123(4) do not need to be met. A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of [REP3-010] makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need. The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response

(captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons' queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced-based and quantifiable submissions, with a view to attempting to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) [REP3-010], and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons -

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Appendix A - Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]**: "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response

seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means. The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset." For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have restated general concerns as to the potential impact of the Project on existing agricultural operations. It is not disputed that, during construction of the Project, there may be a period of time where access to agricultural land is reduced due to construction corridor re-fencing and health and safety management associated with the construction apparatus. However, regular information regarding project programme will be communicated in advance of and during the construction to provide a more detailed understanding of the time when any construction works will take place. The Applicant remains committed to exploring appropriate and proportionate options to mitigate the effects of the project during construction, including temporary severance of land. The Applicant will not be able to settle the precise mitigation measures with the affected persons until the detailed design stage of the project where the more detailed construction methodology, land areas and timescales are known. The Applicant will endeavour to facilitate crossing points with suitable fencing and gates to ensure parts of the field will remain available for use for appropriate agricultural machinery. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including severance of land) assessed on a case-by-case basis.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response

doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

The Applicant notes concerns raised by certain APs regarding the potential for construction activities associated with the Project to cause damage to agricultural and other land. Although not directly related to the Applicant's request for authorisation of CA and TP powers, the Applicant's approach to soil handling is set out in 7.2 Outline Code of Construction Practice Appendix C – Outline Soil Resource Plan **[APP-303]**. This is based on published good practice and is designed to enable soils which have been handled and stockpiled to be reinstated to return land to its pre-construction condition. This includes aspects of preparing the subsoil which has become compacted prior to placement of topsoil. This plan also confirms that topsoil and subsoil should be stockpiled on like for like (i.e. topsoil can be stored on topsoil). This will limit the potential for subsoil or clay migration into topsoil resources. The Applicant adheres to the Compensation Code and will compensate for qualifying losses where they can be demonstrated and are directly attributable to the Project (including damage caused by the works) assessed on a case-by-case basis.

101. AP 101 - Rex Webster and G Webster and Son Ltd

101.1 Person with Interest in Land (PIL) Reference ID: 5622, 7360

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I object to the proposed compulsory acquisition of land and rights affecting Flordon Hall and Farm on the basis that the Applicant has failed to demonstrate compliance with the requirements of Sections 122 and 123 of the Planning Act 2008 and the relevant guidance contained in the Department for Communities and Local Government's Planning Act 2008: The proposed acquisition of rights over Flordon Hall, Farm and tenanted properties would permanently interfere with established property rights, agricultural operations, estate management, and future use of the land. Such interference engages fundamental property rights and should not be authorised unless the Applicant demonstrates that the acquisition is necessary and proportionate. ECHR: Under Article 1 of Protocol 1 and Article 8 of the European Convention on Human Rights, the acquisition of rights over private land and the imposition of permanent restrictions must be shown to be necessary and proportionate. The Applicant has not	Summary of Objection The Applicant notes the objection raised by Rex Webster and G Webster and Son Ltd in relation to their land interests at Flordon Hall and Farm. The AP objects on the basis that the Applicant has (1) failed to demonstrate compliance with Sections 122 and 123 of the Planning Act 2008 and the relevant DCLG guidance. (2) The AP beleives that the proposed compulsory acquisition of rights over Flordon Hall, Farm and tenanted properties would permanently interfere with established property rights, agricultural operations, estate management, and the future use of the land. (3) The AP further beleives that the Applicant has not demonstrated that the rights sought have been reduced to the minimum necessary, and (4) failed to adequately explain why alternative routing, engineering solutions, reduced easement widths, or other less intrusive approaches could not be adopted. (5) Human rights grounds are also raised under Article 1 of Protocol 1 and Article 8 of the European Convention on Human Rights, with the AP contending that the Applicant has failed to balance fairly the public benefits of the Project and the prejudice suffered by the landowner. (6) The proposed works are said to have significant adverse impacts on agricultural productivity, farm business operations, landscape character, biodiversity, heritage interests and future development opportunities. Land Rights Sought The Applicant understands that the AP's objection concerns the following land interests held within the Project Order Limits (as per the Land Rights Tracker). The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: Class 2 (overhead line infrastructure), Class 3 (underground cable infrastructure), Class 4 (overhead and underground infrastructure), Class 5 (access), The Applicant is seeking to acquire the following permanent rights for UKPN over land in which

Please summarise (in no more than 1500 words) the reason(s) for your objection

demonstrated that the rights sought over Flordon Hall and Farm have been reduced to the minimum necessary. Nor has it adequately explained why alternative routing, engineering solutions, reduced easement widths, or other less intrusive approaches could not be adopted. Without such evidence, the proposed acquisition cannot be regarded as the minimum interference necessary to deliver the project.

Section 123 PA 08 permits the compulsory acquisition of rights rather than land itself but this does not reduce the Applicant's burden of justification. The rights proposed over Flordon Hall and Farm would impose significant and enduring restrictions on ownership and occupation. The Applicant has not provided sufficient evidence that the rights sought have been carefully tailored to what is genuinely required for the project. For the purposes of Sections 122 and 123 of the Planning Act 2008 and the Department for Communities and Local Government Guidance on compulsory acquisition, the Applicant has failed to demonstrate:

- that the rights sought over Flordon Hall and Farm are strictly necessary;
- that the extent of the proposed acquisition has been minimised;

Applicant's Response

this AP holds an interest: (a) Class 3 (underground cable system) and (b) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Certain parcels of land in which the AP holds an interest fall within Class 8 (land where no powers of compulsory acquisition or temporary possession are sought).

Consolidated Response

Regular engagement has been held with the APs representative, with the latest meetings being held on 26 May 2026 to discuss route alignment and siting and 12 June 2026 to continue discussions regarding construction and accommodation works. The Applicant continues to engage with the AP representative on HOTs negotiations.

The Applicant has sought to reduce, as far as practicable, potential impacts on landscape and visual receptors through the routing and siting of infrastructure. Effects on landscape receptors around Flordon Hall are set out in **6.13.A2 Environmental Statement Appendix 13.2 – Landscape Baseline and Assessment [Revision B]** under Landscape Character Area (LCA) B1 Tas Tributary Farmland (paragraphs 13.3.111 to 13.3.125) and LCA D1 Wymondham Settled Plateau Farmland (paragraphs 13.1.1 to 13.3.42). Significant effects are identified within approximately 1.5 km of the Project. The rural landscape will remain in place beneath and around the proposed overhead line, albeit there will be significant effects on landscape character as stated above.

The design process has taken account of existing biodiversity, the natural environment and, where practicable, has sought to reduce impacts on areas of ecological sensitivity, through avoidance or mitigation in line with the mitigation hierarchy. **6.8 Environmental Statement Chapter 8 – Ecology and Biodiversity [Revision C]** assesses the effects on important ecological receptors. As part of the Environmental Impact Assessment (EIA) process for the Project, a suite of ecological surveys have been undertaken over the 2022–2025 period, the findings of which have informed the design and approach to mitigation. **7.4 Outline Landscape and Ecological Management Plan [Revision G]** and **7.2 Outline Code of Construction Practice [Revision G]** contain a list of relevant good practice measures to avoid or reduce impacts on protected species and additional mitigation measures, as appropriate. Following the implementation of mitigation, no significant residual effects on ecology receptors have been identified as a result of construction or operation (and maintenance) of the Project.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
- that the interference with private property rights is proportionate; - that a fair balance has been struck between the public benefits of the project and the substantial prejudice suffered by the landowner. The proposed works would interfere materially with the ownership, occupation, management, enjoyment, and future use of Flordon Hall, Farm and tenanted properties. The proposed route would result in significant adverse impacts on agricultural productivity, farm business operations, landscape character, biodiversity, heritage interests and future development opportunities associated with Flordon Hall and Farm.	During route optioneering the impacts on agricultural land, including on agricultural land-take and on agricultural activities/operations, as far as was understood based on the data available at the time, were a consideration in the route selection process, as outlined in 6.3 Environmental Statement Chapter 3 – Alternatives [Revision B]. The Applicant has sought to minimise impacts on Best and Most Versatile land and proposes to implement mitigation measures to protect soil resources (5.6 Planning Statement [Revision B]). During the construction stage of the Project, there would be areas of agricultural land that would be temporarily disrupted. The Applicant would only use land that is required as part of the Project and would seek to minimise the use of agricultural land where reasonable and safe to do so. National Grid is and will continue to work with all landowners including farmers who may be affected by the proposals to understand the impacts on their operations and to work with them as the Project is developed. The Applicant would seek to work with the farming community to limit disruption where practicable. This includes providing prior warning of works which may result in the need to move livestock. Compensation claims (as stated in 6.6 Environmental Statement Chapter 6 – Agriculture and Soils [Revision B]) for disturbance are considered on a case-by-case basis, if negative impact on farming operations can be proven. Particular agricultural matters can also be addressed through voluntary land agreements. 7.2 Outline Code of Construction Practice Appendix C – Outline Soil Resource Plan [Revision D] provides strategy, guidance and methodology in relation to the key soil mitigation measures required to protect soil resources and ensure the land can be restored (i.e., for temporary haul routes) to its previous condition, or as agreed with the landowner. These measures, including the aftercare period, will ensure the soils have returned to their pre-construction condition. The matters raised in respect of Flordon Hall (1050698) and the farms: Piggery 60 Yards South of Flordon Hall (1172231) and Barn to Flordon Hall (1373055) have previously been considered and addressed in 8.4.13.1 Applicant's Response to Pylons East Anglia's Comments on its ExQ1 Responses [REP5-202], section 3; 8.4.10.1 Applicant's Comments on Pylons East Anglia Response to ExQ1 [REP4-300], section 9; and 8.5.5 Applicant's Response to the Oral Submissions Made at the Open Floor Hearings [REP2-028], pages 140–143. The Applicant has also responded regarding the assessment of groups of heritage assets and cumulative effects in ExQ2 HE2.3 of 8.9.2 Applicant's Responses to Second Written Questions [REP5-211], question 4 of 8.17 Response to Rule 17 Letter – Historic Environment [REP4-318], and ExQ1 HE1.8 of 8.9.1 Applicant's Responses to First Written Questions [REP3-074]. The assessment of these assets was undertaken in accordance with the methodology set out

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	in 6.11 Environmental Statement Chapter 11 – Historic Environment [Revision C], including reference to Historic England's GPA3 guidance on the Setting of Heritage Assets. The Applicant recognised the importance of the shared setting of Flordon Hall, the Piggery and the Barn, and assessed both the contribution of that setting to significance and the effects of the Project upon it. The Applicant's assessment was informed by walkover surveys, aerial and street-view imagery, and viewpoint assessment, including Historic Environment Viewpoint HE1. The assessment concluded that the intervening landscape, including buildings, copses and mature tree-lined hedgerows, interrupts and breaks up views towards the Project. The principal elevation of Flordon Hall faces east and its relationship and intervisibility with the Piggery and Barn would not be affected by the Project. The Applicant concluded in 6.11.A2 Environmental Statement Appendix 11.2 - Historic Environment Assessment Tables [Revision D], 6.11.A7 Environmental Statement Appendix 11.7 - Assessment of Harm to Designated Heritage Assets [Revision B], and 6.11 Environmental Statement Chapter 11 - Historic Environment [Revision D] that Flordon Hall would experience a moderate adverse significance of effect and Mid Less Than Substantial Harm during both construction and operation. The Piggery and Barn were assessed as experiencing moderate adverse significance of effect and Mid Less Than Substantial Harm during construction, reducing to minor adverse significance of effect and Lower Less Than Substantial Harm during operation. The Applicant considers that these conclusions are proportionate and appropriate and notes that Historic England agreed with the assessment of Flordon Hall in its Written Representation [REP1-191]. The Applicant also considered embedded mitigation through the design development process, including alternative alignments in the vicinity of Flordon Hall, and standard mitigation secured through the 7.2 Outline Code of Construction Practice [Revision G] and 7.4 Outline Landscape and Ecological Management Plan [Revision G]. The Applicant concluded that additional mitigation measures would not materially alter the assessed effects and, given the level of harm identified and the application of the mitigation hierarchy, no further mitigation was considered necessary. The Applicant also considered alternative alignments in the vicinity of Flordon Hall as part of the design development process. As set out in 5.15 Design Development Report [APP-122], a localised diversion to the north-west between RG20 and RG22 was considered but would have

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

required two additional angle pylons and was not taken forward. Moving the alignment to the east would take the route through woodland with various ecology concerns. Moreover, an alternative diversion to the west, between RG18/RG19 and RG24, was also considered but given blocks of woodland and a solar farm proposal, this required a longer route length and additional angle pylons, which is considered to be less compliant with the Holford Rules. The Applicant therefore considers that alternatives and embedded mitigation were appropriately considered during the design development process before the preferred alignment was identified.

The Applicant does not have any further submissions to make on this matter at this time and maintains the position set out in the submissions referenced above.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need. The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations. The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance. Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) [REP3-010], and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons – Appendix A – Compulsory Acquisition Schedule [REP5-066], which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context. Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions. In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]). In particular, the Applicant repeats the following submission as set out in [REP1-138] (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Although not directly related to the Applicant's request for authorisation of CA and TP powers, a number of APs have sought to argue that the future exercise of those acquired rights and consented powers will cause damage to the environment.

In response, the Applicant notes that an Environmental Impact Assessment (EIA) has been undertaken for the Project in accordance with the Infrastructure Planning (EIA) Regulations 2017. The Environmental Impact Assessment is detailed within the Environmental Statement (ES) that was submitted as part of the application for development consent. The ES can be

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	found in Volume 6 of the application documents. The ES assesses the impact of Norwich to Tilbury on a number of topics which are of direct relevance to those holding interests within the Order Land, including: air quality, agriculture and soils, ecology and biodiversity, contaminated land geology and hydrogeology, health and wellbeing, historic environment, hydrology land drainage and flood risk, landscape and visual, noise and vibration, socio-economics recreation and tourism and traffic and transport. The scope of the EIA was set out and agreed within 6.19 Scoping Report – including appendices B to K (Final Issue A) [APP-296] and 6.20 Scoping Opinion (Final Issue A) [APP-297]. Where potential effects on the environment have been anticipated mitigation has been designed to avoid, prevent, reduce and offset impacts. Mitigation measures are set out and secured in 7.2 Outline Code of Construction Practice [Revision G], 7.3 Outline Construction Traffic Management Plan [Revision F], 7.4 Outline Landscape and Ecological Management Plan [Revision G], 7.5 Outline Archaeological Mitigation Strategy and Outline Written Scheme of Investigation [Revision C] and 7.6 Outline Public Rights of Way Management Plan [Revision D]. Residual effects (following the implementation of mitigation measures) of the Project are set out in each individual environmental statement topic chapter. Residual effects are stated to be significant or not-significant in accordance with the methodology the assessments have been undertaken in accordance with. A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential for an offshore solution to satisfy the existing needs case. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that it does not support that proposition, noting that it is by no means easier or quicker to obtain, whether by compulsion or otherwise, the rights associated with subsea routeing options. Those subsea routeing options would likely interface with gas pipelines, telecommunications equipment, and other utilities infrastructure. Crown licences would also be required. The Applicant is required to develop proposals in line with national policy and its regulatory duties. 5.15 Design Development Report [APP-122] paragraphs 2.5.5 to 2.5.11 set out the relevant context for onshore schemes which starts from the Government's strong starting

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	presumption in NPS EN-5 (2024) paragraph 2.9.20 for the use of overhead lines which form the basis of the Project with change where justified by consideration of the mitigation hierarchy. Paragraphs 2.5.13 to 2.5.18 go on to explain why offshore technology and onshore options not including pylons are not preferred. The Applicant considers its proposals to be the appropriate means to meet the need case in the context of policy and regulatory environments. National Grid considered alternatives in 7.19 2023 – Strategic Options Backcheck and Review [APP-357], with all onshore alternatives of AC overhead line, AC cable, AC gas insulated line and HVDC Options, and offshore options of AC subsea cables and HVDC alternatives. In all cases the HVDC onshore and offshore alternatives were significantly more expensive than overhead line alternatives whilst not providing the system flexibility and full capacity as the AC alternative. The Development Consent Order (DCO) Project has been developed in accordance with the Holford and Horlock Rules. The Applicant has used the Environmental Impact Assessment (EIA) to inform the balance and define the proposals taken forward. The Applicant has also received extensive input from feedback with stakeholders ranging from landowners, residents, non-statutory and statutory bodies. Feedback at all stages has been comprehensively reviewed with the Applicant responding to consultation feedback received covering changes ranging from route alternatives, to individual pylons and temporary works locations. This has resulted in a substantial number of modifications being made to reduce effects on individual property, land or business, as well as on specific landscape and other environmental (including socio-economic) features. The Applicant's response to those suggested changes was set out in detail in the 5.1 Consultation Report [APP-066] and Design Development Reports [2025 in APP-122, 2024 in APP-359 and 2023 in APP-358]. Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project. The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that RIIO4 funding has already been provided from central government, and the Project has also been designated as

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

102. AP 102 - Katharine Elizabeth Allan

102.1 Person with Interest in Land (PIL) Reference ID: 3432

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
I object to the proposed Compulsory Acquisition (CA), Compulsory Acquisition of rights, and Temporary Possession (TP) of my land and rights for the Norwich to Tilbury project. The Applicant has not demonstrated compliance with the statutory tests in Sections 122 and 123 of the Planning Act 2008, nor with the requirements of the DCLG Guidance (September 2013) on compulsory acquisition. 1. Section 122(2): The land has not been shown to be “required” for the development. Section 122(2) requires the Applicant to show that the land is required, necessary to facilitate, or incidental to the development. The DCLG Guidance (paras 11–13) stresses that the land take must be the minimum reasonably necessary and supported by clear evidence. The Applicant has not demonstrated why the full extent of the land and rights sought over my property are required. The scope of the proposed rights is excessive,	Summary of Objection The AP objects to the proposed compulsory acquisition, compulsory acquisition of rights, and temporary possession of her land and rights on the following grounds (1) The Applicant has not demonstrated compliance with the statutory tests in Sections 122 and 123 of the Planning Act 2008, nor with the requirements of the DCLG Guidance (September 2013) on compulsory acquisition (2) Section 122(2): The land has not been shown to be “required” for the development. (3) Section 122(3): No “compelling case in the public interest” and the Applicant has not demonstrated that the interference with my land and rights is proportionate (4) Section 123: Failure to attempt acquisition by agreement (5) Lack of clarity and justification for the rights sought. Insufficient assessment of alternatives. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation, Easement Right or Privilege. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 2 (overhead line infrastructure), (b) Class 4 (overhead line and underground cable infrastructure), (c) Class 5 (access). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response In relation to ongoing land negotiations, a Heads of Terms (HoTs) meeting was held on 28 May 2026, conducted through the AP's agent Grace Gardiner (Wilkes & Northwood), to run

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
insufficiently justified, and not supported by plot-specific evidence. No adequate explanation has been provided as to why less intrusive alternatives—such as micro-siting, design adjustments, or alternative access arrangements—cannot be used. Without clear justification, the statutory test of necessity is not met. 2. Section 122(3): No “compelling case in the public interest” Section 122(3) requires the decision-maker to be satisfied that the public benefits clearly outweigh the private loss. The DCLG Guidance (paras 12–13, 17–19) emphasises that compulsory acquisition is a last resort and must be proportionate. The Applicant has not demonstrated that the interference with my land and rights is proportionate. The impacts on the use, enjoyment, and value of my land are significant, yet the Applicant has not provided sufficient detail on the nature, duration, or consequences of the proposed works. Without clear evidence that the public benefits outweigh the harm, the test of proportionality is not satisfied. 3. Section 123: Failure to attempt acquisition by agreement Section 123 requires the Applicant to show that it has made genuine attempts to acquire the land	through accommodation works. Discussions included how the AP will continue to work the farm around the proposals, with further time required to confirm crossing points and related matters. The Applicant notes that the AP produces blackcurrants, which take a long time to establish, and that the current proposals would pass through the centre of the AP's fruit crop. A further meeting is to be scheduled to continue discussions on accommodation works. In relation to the alignment and routeing of the overhead line, the alignment has been developed following an extensive, multi-stage routeing and siting process, informed by environmental assessment, engineering constraints, land use considerations and consultation feedback. Feedback provided throughout the development of the Project was responded to in the various consultation reports which can be found in 5.1 Consultation Report [APP-066] and associated appendices. The routeing of the Project is set out in the 7.18 2022 – Corridor and Preliminary Routeing and Siting Study [APP-356], the Design Development Reports published during consultation [APP-358 to APP-360], and the Design Development Report submitted with the application for development consent (5.15 Design Development Report [APP-122]). A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP"). The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) [REP3-010] which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied. As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
by agreement. The DCLG Guidance (paras 25–28) requires early, meaningful, and ongoing engagement. The Applicant has not engaged constructively with me. Communications have been limited, generic, and lacking in detail. No reasonable offer or explanation of the rights sought has been provided, nor has the Applicant demonstrated that voluntary agreements or reduced-impact alternatives have been explored. The statutory requirement for negotiation has not been met. 4. Lack of clarity and justification for the rights sought The Guidance (paras 13, 20–23) requires clear explanation of why each plot and each right is needed. The Applicant has not provided adequate detail on the extent, purpose, or duration of the rights sought, preventing proper assessment of their necessity or proportionality. 5. Insufficient assessment of alternatives The Applicant has not demonstrated that reasonable alternatives—route adjustments, engineering solutions, reduced land take, or temporary rather than permanent rights—have been properly considered, contrary to the Guidance (paras 13, 18, 21). Conclusion - The Applicant has not shown that the land is required, that the	to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013). The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of [REP3-010] makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need. The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession. As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement. The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations. The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement. Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
interference is necessary or proportionate, that a compelling case in the public interest exists, or that reasonable efforts have been made to acquire the land by agreement. The statutory tests in Sections 122 and 123 are not met, and I therefore object to the CA, CA of rights, and TP of my land.	Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant. A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met. The Applicant respectfully disagrees with those assertions. As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) [REP3-010], and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons – Appendix A – Compulsory Acquisition Schedule [REP5-066], which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered. Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context. Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008. Once again, the Applicant respectfully disagrees with those assertions.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1--138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
	A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential for an offshore solution to satisfy the existing needs case. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 [REP1-138]), in which the Applicant explained that it does not support that proposition, noting that it is by no means easier or quicker to obtain, whether by compulsion or otherwise, the rights associated with subsea routeing options. Those subsea routeing options would likely interface with gas pipelines, telecommunications equipment, and other utilities infrastructure. Crown licences would also be required. The Applicant is required to develop proposals in line with national policy and its regulatory duties. 5.15 Design Development Report [APP-122] paragraphs 2.5.5 to 2.5.11 set out the relevant context for onshore schemes which starts from the Government's strong starting presumption in NPS EN-5 (2024) paragraph 2.9.20 for the use of overhead lines which form the basis of the Project with change where justified by consideration of the mitigation hierarchy. Paragraphs 2.5.13 to 2.5.18 go on to explain why offshore technology and onshore options not including pylons are not preferred. The Applicant considers its proposals to be the appropriate means to meet the need case in the context of policy and regulatory environments. National Grid considered alternatives in 7.19 2023 – Strategic Options Backcheck and Review [APP-357], with all onshore alternatives of AC overhead line, AC cable, AC gas insulated line and HVDC Options, and offshore options of AC subsea cables and HVDC alternatives. In all cases the HVDC onshore and offshore alternatives were significantly more expensive than overhead line alternatives whilst not providing the system flexibility and full capacity as the AC alternative. The Development Consent Order (DCO) Project has been developed in accordance with the Holford and Horlock Rules. The Applicant has used the Environmental Impact Assessment (EIA) to inform the balance and define the proposals taken forward. The Applicant has also received extensive input from feedback with stakeholders ranging from landowners, residents, non-statutory and statutory bodies. Feedback at all stages has been comprehensively reviewed with the Applicant responding to consultation feedback received covering changes ranging from route alternatives, to individual pylons and temporary works locations. This has

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

resulted in a substantial number of modifications being made to reduce effects on individual property, land or business, as well as on specific landscape and other environmental (including socio-economic) features. The Applicant's response to those suggested changes was set out in detail in the 5.1 Consultation Report **[APP-066]** and Design Development Reports **[2025 in APP-122, 2024 in APP-359 and 2023 in APP-358]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.

103. AP 103 - John Mather

103.1 Person with Interest in Land (PIL) Reference ID: 5872

Please summarise (in no more than 1500 words) the reason(s) for your objection	Applicant's Response
We are hampered in making any arguments over any application by National Grid to acquire compulsory rights over our land since we don't know what exactly National Grid propose to do or how they propose to overcome any of the physical obstacles which the site presents since they do not engage with us and ignore representations we have made in responses to consultations etc. To be explicit, the site may ultimately require HDDing rather than trenching, but National Grid won't discuss this, although in one of their documents put out several years ago they did propose HDDing under the Blackbrook Stream at Langham and therefore under our land immediately to the south of the Blackbrook. However, they withdrew this plan without explanation or notice. We have attempted to query with National Grid at various stages including at an early stage how they plan to tackle the physical complications of laying cables under the undulating, hilly site including Blackbrook	Summary of Objection The AP objects on the basis that he has been unable to engage meaningfully with the Applicant regarding how the proposed route will overcome the physical obstacles on his site, including Blackbrook Hill, the Blackbrook Stream, and a high-pressure gas main. The AP has queried at various stages whether the Applicant proposes to use horizontal directional drilling (HDD) or open-cut trenching in this location, noting that the Applicant had previously proposed HDD under the Blackbrook Stream but withdrew that plan without explanation. The AP contends that any compulsory acquisition would be premature until the Applicant has made a final decision on its construction methodology in this location, as the rights required for trenching and HDD would need to be worded differently. The AP notes that he is willing to enter into a reasonable voluntary agreement and states that his land agents are in the process of attempting to agree Heads of Terms with the Applicant, though no agreement has been reached. Land Rights Sought The Applicant understands that the Affected Person's ("AP") objection concerns the following land interests held by the AP within the Project Order Limits (as per the Land Rights Tracker): Freehold, Occupation, Restrictive Covenants. The Applicant is seeking to acquire the following permanent rights for National Grid over land in which this AP holds an interest: (a) Class 3 (underground cable infrastructure), (b) Class 4 (overhead line and underground cable infrastructure). The Applicant is seeking to acquire the following permanent rights for UKPN over land in which this AP holds an interest: (a) Class 4 (overhead line and underground cable infrastructure). Powers of temporary possession (Class 7) are also sought for National Grid in connection with the Project over land in which this AP holds an interest. Consolidated Response

Please summarise (in no more than 1500 words) the reason(s) for your objection

Hill, the Blackbrook Streaan, our land and the high-pressure gas main to the south but without response.

In view of the above, any attempt to seek compulsory rights would be premature until National Grid have made a final decision how to go about the laying of cables under our land, since it is assumed that rights to trench or alternatively HDD would have to be worded differently.

We have already communicated to National Grid that we are willing to enter into a reasonable agreement to grant them necessary and reasonable rights therefore compulsory action should be unnecessary. Our land agents are in the process of attempting to agree Heads of Terms with National Grid though there is no agreement at the moment.

Whether National Grid have taken all necessary prescribed steps before making any application(s) to compulsorily acquire rights over our land and considered all other options is a huge technical question given the size of the Norwich to Tilbury project and the amount of paperwork and information so far generated. I can't answer the point.

Applicant's Response

In relation to land negotiations, Version 2 Heads of Terms were issued on 26 March 2026. The Applicant remains in dialogue with the AP's agent (Nick Robinson) to negotiate the Heads of Terms, and remains committed to reaching a voluntary agreement. The most recent meeting was held on 4 June 2026, with revised terms to be issued shortly. The Applicant is aware of the issues raised by the AP from a site meeting and believes answers have been provided by the design team.

In relation to the proposed methodology for crossing Black Brook and the associated site constraints, the Applicant is proposing to undertake the crossing of Black Brook and the associated constraints in this area via open-cut trenching. As indicated on page 511 of **Application Document 8.4.1 Applicant's Response to Relevant Representations [REP2-023]**, the potential to cross Black Brook using trenchless techniques has been considered but it was concluded that with around 80m spacings between residential property and the veteran tree, there is insufficient space to accommodate Horizontal Directional Drilling, which needs cables (of which there are 18) to be separated by 10m to allow for directional variability. This requires an overall cable swathe of around 170m width compared with approximately 55m cable swathe for open-cut installation. The Applicant is aware of the significant constraints in this area including the gas pipeline, topography, overhead line and Black Brook itself, and is working with stakeholders to address these challenges. The Applicant has experience of installing cables through constrained locations and is confident that the approach proposed is viable. The Applicant will produce further detail at the detailed design stage of the Project and will continue to look for opportunities to minimise impacts at this pinch point crossing location.

A number of APs have asserted that the Heads of Terms ("HoTs") offered by the Applicant are either not acceptable or not yet sufficiently progressed.

In response, the Applicant would reiterate that it has implemented a comprehensive negotiation strategy supported by dedicated land teams. Negotiations are being undertaken at both strategic and individual levels. This approach includes engagement with representative land agents acting for large groups of affected landowners; direct negotiations with individual landowners; ongoing review of land rights requirements; consideration of accommodation works requests; and progression of HoTs towards binding legal agreements. The Applicant has undertaken an extensive, structured and well-resourced programme of negotiations to

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

secure progress on voluntary agreements, engaging with land agents on behalf of 801 APs across 545 HoTs.

Engagement has included issuing template HoTs and subsequent revised versions, holding meetings with agents and landowners to discuss terms and land-specific matters, inviting feedback and incorporating amendments where appropriate, and continuing dialogue through their land agent (Fisher German) to progress both generic and site-specific issues. It is the Applicant's view that through proactive engagement, substantial amendments have been made to the HoTs and that there are few substantive points that remain outstanding. The Applicant confirms that negotiations have intensified in recent months, reflecting the need to address outstanding issues and move towards agreed positions. This includes ongoing discussions with agents at both a generic and landholding-specific level.

The Applicant will continue to engage with agents and representative bodies to provide updates on the status of HoTs negotiations where possible, while feedback on outstanding generic provisions continues to be reviewed with legal and technical teams and site-specific matters are progressed in parallel through direct engagement with landowners and their agents. The Applicant considers that continuing to issue and refine HoTs, while engaging on both generic and site-specific matters in parallel, remains an appropriate and proportionate approach to progressing voluntary agreements across a project of this scale.

A number of APs have objected, often in general terms, to the Applicant's request to seek authorisation for powers of compulsory acquisition ("CA") and temporary possession ("TP").

The Applicant refers, in response, to the 4.1 Statement of Reasons (Issue B) **[REP3-010]** which clearly establishes (including at Section 6) why powers of CA and TP are justified in the context of the Project and, in particular, why there is a compelling case in the public interest for land and/or rights to be acquired compulsorily. The Applicant's submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) are also of direct relevance in demonstrating both the need for CA and TP powers (and, by extension, the absence of a suitable alternative) and the fact that all relevant and applicable threshold legislative and policy tests are satisfied.

As those documents together make clear, the Applicant's strong preference on this Project (and indeed on all of its projects) is to acquire land and rights voluntarily. However, given the criticality of the need case underpinning the Project, powers of CA and TP are sought as a

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

necessary fall-back mechanism in the event that voluntary negotiations to acquire land by agreement are unsuccessful in relation to any part of the land. The Applicant submits that its approach in this respect is fully in accordance with extant guidance including, but not limited to, Paragraph 25 of "Planning Act 2008: Guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013).

The Applicant has explored, and will continue to explore, all reasonable alternatives to the use of CA and TP powers. As Paragraph 6.4.9 of **[REP3-010]** makes clear, the Applicant will only exercise CA and TP powers where it appears that negotiations are unlikely to be completed or to be completed to a timetable which facilitates the delivery of the Project in a manner which avoids stymieing the meeting of a clear, compelling and established national need.

The Applicant notes that some APs have raised concerns as to the extent of land and/or rights sought to be acquired or subject to temporary possession.

As explained in detail by the Applicant in its response to Action No. 1a arising following Compulsory Acquisition Hearing 1 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant's view is that land and rights required for the purposes of the Project are reasonably necessary and at all times have been sought proportionately based on the Applicant's experience of other DCOs, including the Bramford to Twinstead Reinforcement.

The Applicant submits that the CA and TP powers sought are proportionate, using a strategy which prioritises temporary possession during construction and securing only the smallest necessary permanent land and rights afterwards. This approach reduces long-term impacts on landowners, while retaining construction flexibility. Permanent acquisition is limited to areas where land use will permanently change, including for the principal permanent assets such as the cable sealing end compounds and substations.

The Applicant acknowledges affected persons queries regarding 'compensation'. The Applicant's 'Land Rights Strategy' developed in 2010 (updated in 2024), provides a consistent methodology for acquiring rights for Development Consent Order (DCO) projects, and includes a discretionary payment schedule for the land rights sought, where these rights are secured via voluntary agreement.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Where affected persons have wider concerns about financial matters e.g. loss of earnings due to perceived disruption by the Project during construction and/or operation, the Applicant remains committed to reviewing any evidenced based and quantifiable submissions, with a view to attempt to mitigate those perceived losses in the first instance.

Furthermore, those directly affected by the Order (i.e. affected persons and those with interests in the land required for the Project) will, in principle, be entitled to statutory compensation in accordance with the Compensation Code for e.g. loss or damage caused by the exercise of powers by the Applicant.

A number of APs have asserted that the Applicant has failed to satisfactorily demonstrate that the proposed interference with land and rights is necessary or proportionate and that, as a consequence, the statutory tests under Section 122 of the Planning Act 2008 are not met.

The Applicant respectfully disagrees with those assertions.

As explained at Section 6 of the 4.1 Statement of Reasons (Issue B) **[REP3-010]**, and as further developed in its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), the Applicant considers that the relevant tests set out in Section 122 of the Planning Act 2008 are conclusively met. With reference to 4.1 Statement of Reasons – Appendix A – Compulsory Acquisition Schedule **[REP5-066]**, which outlines the specific purpose(s) for which each individual plot of land is required, the Applicant considers it has demonstrated that: (1) all of the Order Land is either required for the Project or is required to facilitate, or is incidental to the Project; and (2) there is a compelling case in the public interest for the land to be acquired compulsorily in order to ensure the Project can be delivered.

Not only has the Applicant adopted a land rights strategy which places significant reliance upon the use of temporary possession powers during construction, with the aim of securing only the smallest necessary permanent land and rights thereafter, but the Applicant has also sought to proactively remove parcels of land from the overall extent of Order Land where it has become apparent, whether through iterative design development or ongoing stakeholder engagement, that there is no longer a justified need to acquire rights or exercise powers over the land parcels in question. The Examining Authority will be fully aware of the widespread deployment of Class 8 ("white land") in this context.

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

Similar assertions have been made by APs regarding the Applicant's perceived failure to satisfy the statutory test under Section 123 of the Planning Act 2008.

Once again, the Applicant respectfully disagrees with those assertions.

In doing so, the Applicant would draw the Examining Authority's attention to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**). In particular, the Applicant repeats the following submission as set out in **[REP1-138]** (emphasis added): "Section 123 of the PA 2008 provides the further procedural condition that a development consent order may only include CA powers where the Secretary of State is satisfied that one of three statutory conditions is met. The first of those conditions requires the Applicant to have included a request for powers authorising the CA of land (including rights over land) as part of its application for development consent. Other alternative conditions are: (i) that there is consent from persons with an interest in land to the inclusion of the CA provision, or (ii) that the appropriate CA procedure has been followed. A request for the authorisation of CA powers was made by the Applicant as part of its development consent application for the Project, and therefore Section 123 is also met."

A number of APs have also asserted that the Applicant has failed to act in accordance with "Planning Act 2008: guidance related to procedures for the compulsory acquisition of land" (MHCLG, 2013) (the "Guidance"). In particular, it is suggested that the Applicant's request to seek authorisation for powers of CA and TP is premature, on the basis that the Applicant has not made adequate attempts to acquire the land and/or rights in question through voluntary means.

The Applicant refers, in response, to its submissions at Compulsory Acquisition Hearing 1 in respect of Agenda Item 3 (captured in full in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**) and, in particular, to its submissions regarding Paragraph 25 of the Guidance. It is worth re-emphasising that, as well as articulating the general rule that CA and TP powers should be a matter of last resort, Paragraph 25 also says that "[where] proposals would entail the compulsory acquisition of many separate plots of land (such as for long, linear schemes) it may not always be practicable to acquire by agreement each plot of land. Where this is the case it is reasonable to include provision authorising compulsory acquisition covering all the land required at the outset."

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

For the reasons set out in **[REP1-138]**, the Applicant considers that it has acted, and continues to act, in full accordance with the Guidance.

A number of APs have indicated that the Applicant has failed to consider reasonable alternatives, including the potential for an offshore solution to satisfy the existing needs case. In response, the Applicant refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that it does not support that proposition, noting that it is by no means easier or quicker to obtain, whether by compulsion or otherwise, the rights associated with subsea routeing options. Those subsea routeing options would likely interface with gas pipelines, telecommunications equipment, and other utilities infrastructure. Crown licences would also be required.

The Applicant is required to develop proposals in line with national policy and its regulatory duties. 5.15 Design Development Report **[APP-122]** paragraphs 2.5.5 to 2.5.11 set out the relevant context for onshore schemes which starts from the Government's strong starting presumption in NPS EN-5 (2024) paragraph 2.9.20 for the use of overhead lines which form the basis of the Project with change where justified by consideration of the mitigation hierarchy. Paragraphs 2.5.13 to 2.5.18 go on to explain why offshore technology and onshore options not including pylons are not preferred. The Applicant considers its proposals to be the appropriate means to meet the need case in the context of policy and regulatory environments.

National Grid considered alternatives in 7.19 2023 – Strategic Options Backcheck and Review **[APP-357]**, with all onshore alternatives of AC overhead line, AC cable, AC gas insulated line and HVDC Options, and offshore options of AC subsea cables and HVDC alternatives. In all cases the HVDC onshore and offshore alternatives were significantly more expensive than overhead line alternatives whilst not providing the system flexibility and full capacity as the AC alternative.

The Development Consent Order (DCO) Project has been developed in accordance with the Holford and Horlock Rules. The Applicant has used the Environmental Impact Assessment (EIA) to inform the balance and define the proposals taken forward. The Applicant has also received extensive input from feedback with stakeholders ranging from landowners, residents, non-statutory and statutory bodies. Feedback at all stages has been comprehensively

Please summarise (in no more than 1500 words) the reason(s) for your objection

Applicant's Response

reviewed with the Applicant responding to consultation feedback received covering changes ranging from route alternatives, to individual pylons and temporary works locations. This has resulted in a substantial number of modifications being made to reduce effects on individual property, land or business, as well as on specific landscape and other environmental (including socio-economic) features. The Applicant's response to those suggested changes was set out in detail in the 5.1 Consultation Report **[APP-066]** and Design Development Reports **[2025 in APP-122, 2024 in APP-359 and 2023 in APP-358]**.

Some APs have asserted that the Applicant has failed to demonstrate that adequate funding is likely to be available to enable the compulsory acquisition of land and/or rights required for the purposes of the Project.

The Applicant respectfully disagrees with those assertions and, in doing so, refers to its submissions during Compulsory Acquisition Hearing 1 (summarised in 8.5.2 Applicant's Written Summary of Oral Submission and Response to Action Points for Compulsory Acquisition Hearing 1 **[REP1-138]**), in which the Applicant explained that RII04 funding has already been provided from central government, and the Project has also been designated as an Accelerated Strategic Transmission Investment project which means it is considered to be of the highest criticality from the perspective of Government, Ofgem and other stakeholders. The 4.2 Funding Statement **[REP3-016]** clearly demonstrates that funding will be available for the acquisition of any land and other interests required for the Project, for any compensation or blight claims brought by those interested in the land affected by the DCO, and for the costs of implementing the Project.
