

Please take into serious consideration that -

- National Grid have not properly and seriously considered any alternatives to the use of pylons.
- Cheapest is rarely best especially with on-going maintenance costs over a period of time.
- National Grid seem to have ignored current and future technical developments in electricity distribution.
- Pylons are an excellent target for enemy disruption and sabotage.
- National Grid seem not have been honest in acknowledging the negative aspects of their scheme which is subject to well-founded, justifiable and widely based public criticism.
