

Firstly we have only been presented with one option which is the pylons. It seems ridiculous that other options haven't been presented to the public. We live in a zone which has been earmarked for underground cables coming into the substation but the cables leaving the substation are all on pylons and clearly visible. In retrospect a bit futile. We also have an ancient woodland next to us which was described by NG as a hedge, it is certainly not a hedge. It is full of ancient oaks, elm and full of diverse wildlife. There has been recent bat surveys which show healthy colonies of bats and is also home to species like woodpecker, buzzards, kites, sparrow hawk and many others. This woodland is to be decimated regardless it seems and would be an absolute travesty and simply cannot happen.
