

Why is the Applicant not following the Green Book

Why is the Applicant not taking notice of the Hirons report

Why are we not pausing to do this project properly and future proof it

Why is The Applicant not taking any notice of Wildlife, Historic Buildings, Industrialising the countryside when there is a viable alternative

The Applicant decided on pylons in 2022. Why have we not been given an alternative?

Subjects that have not been looked at properly - haul roads in tiny villages. Cotton will be engulfed by industrialisation with the erection of pylons RG128/9/30. Traffic along the roads of this tiny village with no pavements will be dangerous to the people who live here. Footpaths will be closed and historic houses ignored for their settings. Mental health in this village has taken a downturn. the Applicant has not listened to us at all and is wearing us down with this long process in the hope that we will give up. The East Anglian countryside is too important to give up as we see from the Fire at Dunwich Heath. Why would we risk more fires by having pylons marching across parched fields when we can bury the cables with HVDC? If we believe our weather is getting hotter and wildfires are to become the norm, then why do we not build with that in mind as we have the equipment? Future proof the grid - do not patch. it up
