Virgin Media

Statement of Common Ground

1. Purpose of the Statement of Common Ground

This Statement of Common Ground (SoCG, which can also be referred to as an interface agreement) has been prepared to outline the areas of agreement and any outstanding points of discussion between National Grid and Virgin Media regarding utilities interfaces in relation to the proposed Norwich to Tilbury Project.

The aim is to clarify the shared understanding of any issues and facilitate an efficient resolution process.

2. Parties to the SoCG

This SoCG is agreed between National Grid and Virgin Media (VMED O2 UK Limited).

3. Background

3.1 Description of the Project/Development

National Grid Electricity Transmission plc ('National Grid') owns and maintains the national high voltage electricity transmission network throughout England and Wales. The transmission network connects the power from where it is generated to the regional Distribution Network Operators who then supply businesses and homes.

National Grid holds the Transmission Licence for England and Wales, and its statutory duty is to develop and maintain an efficient, coordinated and economical system of electricity transmission and to facilitate competition in the generation and supply of electricity, as set out in the Electricity Act 1989.

National Grid has developed plans for Norwich to Tilbury (referred to as the 'Project'). The Project would support the UK's net zero target through the connection of new low carbon energy generation in East Anglia and by reinforcing the transmission network.

The Project comprises reinforcement of the transmission network between the existing Norwich Main Substation in Norfolk and Tilbury Substation in Essex, via Bramford Substation, the new East Anglia Connection Node (EACN) Substation and the new Tilbury North Substation.

The reinforcement is needed because the existing transmission network, even with current upgrading, will not have sufficient capacity for the new renewable energy (a substantial proportion of which would be generated by offshore wind) that is expected to connect to the network over the next 10 years and beyond. Completion of the Project, together with other new

reinforcements across the country, will meet this future energy transmission demand both in East Anglia and across the UK.

The Project is a Nationally Significant Infrastructure Project (NSIP), and National Grid is seeking development consent under statutory procedures set by government. NSIPs are projects of certain types, over a certain size, which are considered by the government to be of national importance, hence permission to build them needs to be given at a national level, by the relevant Secretary of State (in this case the Secretary of State for Energy Security and Net Zero). Instead of applying to the local authority for planning permission, the developer must apply to the Planning Inspectorate for a Development Consent Order (DCO) that would grant development consent.

National Grid has submitted an application for development consent to the Planning Inspectorate. The Examining Authority (consisting of five examining inspectors), after a period of public examination, will make their recommendation to the Secretary of State for Energy Security and Net Zero, who in turn will decide on whether development consent should be granted for the Project.

The Project is identified as critical to delivering a network which supports the clean power pathways for 2030 delivery.

The Planning Act 2008 places duties on National Grid as the Applicant for development consent to consult with prescribed or affected persons as well as to take account of responses to consultation and publicity. In accordance with these statutory requirements, National Grid has undertaken two non-statutory and one statutory consultation to inform its proposals, with further targeted consultations.

4. Stakeholder Interests

Virgin Media is telecommunications provider. 66 individual interfaces between the Norwich to Tilbury Project and Virgin Media assets have been identified. Engagement with Virgin Media is sought to establish the nature of the interfaces and any assets or rights potentially impacted by the Project, and to agree the form of any required or recommended mitigations prior to DCO submission.

5. Matters Agreed

ID	Issue	Agreement reached	Date agreed	Relevant documentation
5.1	Interface Identification and Categorisation	Following development of the Project design and the undertaking of utilities searches, 66 individual interfaces have been identified between the Project and Virgin Media assets. These include the following crossing types: • 16 with the proposed overhead transmission line • 3 with underground transmission cables • 13 with the Project haul road and bellmouth junctions • 28 with Distribution Network Operator (DNO) mitigation works • 1 with a pylon work area • 1 with a construction laydown area • 2 with crossing protection • 2 with trackways Further detail is provided within the relevant documentation.	08/05/26	Norwich to Tilbury Interface Schedule with Virgin Media Jun25; Crossing Points KLZ and GIS files (shared in confidence)
5.2	Potential Project Impacts on Stakeholder Assets and Associated Mitigations	National Grid recognises the potential for the Project to impact Virgin Media assets and their function during construction and/or operational phases. Both parties agree that standard construction practises will be adequate to protect and maintain access to their assets but recognises the potential for diversionary works or other additional measures to be sought, dependent on impacts. National Grid anticipates the detail and implementation of such measures will be agreed via future liaison between the National Grid construction contractor and Virgin Media. Should Virgin Media have bespoke mitigation requirements, National Grid requests these	08/05/26

		are shared for early review and mutual agreement, including in relation to associated matters of costs, liability and consents.		
5.3	Potential Project Impacts on Stakeholder Rights	National Grid has not identified Virgin Media land holdings that may be affected by the Project, but requests any further information on land or rights matters, to be provided as relevant.	08/05/26
