

I would like to reiterate my concerns should the project obtain consent. I am a category three person who raised issues last year together with the fact that I do not appear to have been able to find any photos of the sealing cable end that will be placed right in my line of view in the enquiries online. As an individual who has tried to navigate the countless updates received regarding the project I do not feel that this has been made public knowledge. I have seen images of the main new pylon route in my area from ground level but not the existing UK power network amendments that are to take place. I have tried to contact N2T project to establish exactly where the CSE will be placed but have been advised it is still in planning and no exact location has been determined yet. I have been given a possible image of the CSE but no confirmation still down the line that is what it will be. I have seen people take photos of my area but when I enquired to see these I was told no one took any photos.

I want to point out the destruction to the countryside, the hedgerows, trees and habitats of animals this will have and the area of natural beauty the amendments will destroy.

The area is stunning and there are alternatives that can be made that will not reduce the electricity generated. With the temperature increasing every year the risk of fires to fields and structures are more likely. There are more modern, safer and a lot less intrusive alternatives that I would ask you to consider when looking at everything.

Please review my comments from last year and above from a very concerned person.
