

You should consider visiting all the homes, businesses and schools which will be affected by this application. Here's a tiny group of suggestions:

- Equestrian centres in Blackpool and Wrea Green. Horses are amazingly sensitive to EMF and noise.
- Primary schools including Strike Lane, who will be metres from one of the substations.
- Senior schools including Carr Hill, who will be within earshot of the larger substation all day, every day.
- Nurseries, who could be affected by EMF.
- Helical Technology Technical Centre.
- BAE Systems, who's employees take more than an hour to get off site if there's a small problem with traffic lights.
- Residents of Woodland Close in Newton who will suffer 4-6 years of construction 6 days a week from 7am til 7pm, then constant buzzing from the substations.

The destruction this application brings just does not make sense, it doesn't feel humane in any way.
