

I believe that the application for the Morgan and Morecambe windfarm should be refused as there has been a flawed consultation process. There are many people in the area that are not aware of these plans and those who are aware find the plans lack detail and are difficult to interpret.

It seems that the applicants have not done their homework thoroughly which you will become aware of when reading all the submissions and in particular have refused to consider a cheaper and more viable route. It seems that the route chosen by them has been dictated to them and they have had closed minds when presented with a perfectly reasonable alternative route which would save huge amounts of money. It is perfectly clear that causing so much destruction to greenbelt land, peoples homes and the general environment is entirely unnecessary and the Examining Authority need to make sure the alternative route suggested is thoroughly looked into before this application proceeds. It is clear that Morgan and Morecambe's application has been submitted without due care and in haste and not showing enough respect to those who would be affected. In my opinion they have not done their homework thoroughly enough. Must do better!
