

I would like to comment about the huge impact the substation will have on my businesses.

I run 3 businesses from [REDACTED] where it meets the A583 Blackpool Road.

My caravan Park, situated to the rear of my land ,would be overshadowed by the facing substation.

My plant nursery,eggs and vegetable sales business, situated to the front of my land,will be impacted by traffic control from the A583. Thus stopping visiting traffic to all my businesses.

I propose the substation should be contained underground to minimise visual impact and for health and safety reasons.

There is certainly reasonable incline of the land to enable this to happen, this would also benefit further from a free fall drainage aspect.

Situated within the land would mean it would still be able to be grazed by animals and kept as green as nature intended.

It would greatly affect my already ,thriving businesses should the substation be placed as currently suggested,creating an eyesore of bricks for all to see.

Submission ID: 37744

I would like to know if confirmation of any other cables,from any other companies, would have the rights to use these substations once built.
