Can I ask what is going to be done about the damage to a well used bridle path in Freckleton that has been totally ripped up following a company drilling for core samples?

This is a disgrace and is now just a muddy mess for walkers/horseriders that use it regularly including myself

Thanks

The rig to drill the core samples for the larger of the two substations site is in a ditch next to the planned location.

This is in the NE corner of Freckleton Parish, where it meets Kirkham and Newton parishes. It's on the loop track that goes off Lower Lane and back again nearer Kirkham Prison.

Look at the damage to our Bridle Path.

I usually see at least 10 hares on this walk. Last week I saw none. 🙄
