

There are so many things wrong with this project I can't possibly name them all but things that are protected should remain protected no ifs or buts but your not coming near
the sand dunes are our only sea defence for this part of the coast and they should not be allowed to be breached in any way and I'm still concerned if something was to go wrong which I suspect it could what would happen we end up with a concrete sea defence ?
this is the wrong route and a bad design which I feel has been demonstrated throughout the hearings So my strong feeling is it needs to go back to the drawing board and start again and actually put forward a project that we can have confidence in to be delivered
it's the fact that this project is independent companies with different moving parts trying to be one DCO which I don't think will work or has been demonstrated that it even can
we don't want unpresented the people of the fylde who are about to have their lives and businesses ruined and we still don't know for how long ? deserve better
and industrialising our green spaces and land grabbing is unacceptable and these projects should be utilising brownfield sites and land that people are happy for it to be used and not just using compulsory acquisitions
The test that have been carried out from
aug to oct once again it proves how little confidence the public have in the applicants to deliver this project saftley I know you are aware of these incidents and they should be red flags
bird strike risk could be a real threat and I don't feel it can be mitigated
due to the amount of geese and birds in the area and not knowing how they will behave to this disruption of the land
And the SABIC pipeline have agreed terms but along this route there are clear signs no excavation to take place again an accident waiting to happen hidden behind NDAs and the people of the fylde need to have their health and safety taken seriously
I still have concerns around the equality act and people with special characteristics they were excluded they will be affected by this running past their homes with noise and vibration etc and have not been in a position to have their say also the impact on the Wrea Green Equitation Centre
Which could close due to this project because of the affects it will have on the horses it would be a big loss to the fylde and all the people who use this facility especially the riders who fall under people with special characteristics
I hope that you have had a glimpse of the inability to accept advise and engage with people
these applicants representatives seem to have been incapable to do so and they just think they know the fylde and it's land best and they can't even do a local impact assessment on our area only for tourism and businesses they would be happy to ruin our economy
when they think they are right about something they just double down
they might have had a more positive response from the public if they had conducted a proper consultation and answered questions and not just dismissed people and try and keep everything on the down low
we are just expected to except what they want to unleash on us for years
Maybe this approach has worked for them in the past but I just find it disgusting they should have been trying to get people onboard with renewable energy and it's Infrastructure not turning them against
I don't think they have proved they can deliver what they say there are still too many
Uncertainties
