

Nobody seems to care about the human impacts of this project
all the landowners who's land they want and the anguish now that they are going through being put in a position where they don't want to agree terms but feel bullied into doing so for fear of compulsory acquisition and this has been evident at the hearings
just try and put yourself in their shoes
The people making these decisions will never be in this position but I feel people will not forget
The substations they are not just little structures but monstrosities and nobody knows the long term health implications of living next to these structures never mind having to look at them from their homes ask yourself again would you like this imposed on your life
And still people have not been shown how they will look in the landscape at the very least a big project like this could have supplied a model
it's been disgusting and they have never asked the community or considered their input in anyway
the consultation was inadequate I know you don't like hearing this but people have said it over and over again throughout this process but in your haste you excepted it for examination
I don't think it should have been excepted until the consultation had been rectified they can show you posters in the DCO of what they say they did when in reality the people in the fylde didn't see any and even their representatives stated that leaflets that should have come to communities went to the wrong place
it's been a farce from start to finish and I'm really hoping that you have some sense to realise how bad we have been treated.
We still don't know the basic time scales of this project which is just not acceptable
They didn't put in any effort because they believe it is a done deal and in truth it probably is
And I'm questioning my faith in this process
This project in its current form does not make the grade and it needs to be rejected
