

I have seen and heard nothing over the past few months which details the supposed mitigations to:

Up to 11 years of disruption and ultimate destruction of the green belt and farming community and businesses on the proposed route

Up to 11 years of disruption and ultimate destruction of SSSIs

Up to 11 years of road congestion and traffic gridlock in the knock on effects to local businesses and tourism

The bird strike risk to Bae and those of us who live below the flight path, especially from migrating geese

There is a viable alternative - Stanah Hill House:

Shorter

Significantly cheaper - infrastructure is already in place

Employment opportunities

Benefits to the local economy

Why on earth would you continue to flog the dead horse that is the current proposal?
