7.5.10 With the placement of limits on noise emissions from plant and equipment at source, in addition to screening or orientating plant within the Site away from sensitive receptors, operational noise levels are anticipated to be reduced such that significant effects would be avoided. Sound reductions required to mitigate operational sound will be considered further as the Production Facility design progresses and will be presented in the ES.

7.6 Ecology and Nature Conservation (including Aquatic Ecology)

Introduction

7.6.1 Chapter 12: Ecology and Nature Conservation (including Aquatic Ecology) (PEI Report, Volume I) presents the findings of a preliminary assessment of the potential significant effects from the Proposed Development on terrestrial and aquatic ecological features (habitats and protected species, including bats).

7.6.2 The assessment of likely significant effects has taken a precautionary approach and presents a worst-case scenario as surveys to inform the assessment are currently ongoing, and the Proposed Development design is still being developed. Effects will be re-evaluated during the EIA following the definition of site-specific mitigation measures.

Effects During Construction

7.6.3 During construction, ecological effects could be generated due to the following:

- direct or indirect habitat loss/modification;
- loss of functionally linked land to statutory designated sites;
- direct harm from noise and visual disturbance of species;

- physical or chemical pollution resulting in degradation of habitats;
- changes in air quality from construction dust;
- changes in hydrology;
- changes in water quality (chemical or physical) of watercourses resulting from their crossings (open-cut or otherwise) or a pollution event or mobilisation of sediment;
- crossing or culverting of watercourses; and
- encroachment of machinery, compaction of soil, or a pollution event resulting in damage.

7.6.4 The Proposed Development construction works will be undertaken in a manner that aims to avoid impacts to ecological receptors – this includes the use of trenchless technologies where possible, using existing infrastructure, implementation of the CEMP, and the presence of an Environmental or Ecological Clerk of Works during the construction works.

7.6.5 Nevertheless, at present, the preliminary assessment indicates that the Proposed Development construction activities have the potential to generate a range of potentially significant adverse effects on a range of ecological habitats, including designated and non-designated sites, as well as protected species. This is a precautionary assessment before taking into consideration site-specific mitigation and habitat management measures. Such measures are being developed in consultation with Natural England and other stakeholders and would be reported in the ES. As such, it is anticipated that predicted ecological effects to be reported in the ES will be less than those presented in Chapter 12: Ecology and Nature Conservation (PEI Report, Volume I).

Effects During Operation

7.6.6 During operation, potentially significant adverse effects could be generated due to:

- loss of functionally linked land to statutory designated sites;
- noise and visual disturbance of species within statutory designated sites; and
- changes in air quality at statutory and non-statutory designated sites.

7.6.7 The Proposed Development includes measures that aim to minimise impacts upon ecological receptors. This includes avoidance of sensitive ecological habitats, appropriate lighting design, and optimisation of the Proposed Development's stack height. Detailed dispersion modelling of emissions to air will be undertaken during EIA to determine potential impacts on ecological features and design mitigation measures (such as stack height considerations whilst balancing other impacts). Further mitigation would be provided within the ES following completion of surveys and Proposed Development design.

7.6.8 The creation of new habitats as associated with the Proposed Development design has the potential to deliver some potentially significant beneficial effects – this

includes effects on open mosaic habitat on previously developed land, ponds and other habitats of local or above importance.

7.6.9 Biodiversity Net Gain (BNG) consists of a new obligation on all planning permissions and DCOs to improve the environment by at least 10% as a compulsory planning condition; details are set out in the Environment Act 2021, sections 98 and 99, therefore the Applicant will aim to achieve BNG as part of the habitat creation associated with the Proposed Development.

7.7 Ornithology

Introduction

7.7.1 Chapter 13: Ornithology (PEI Report, Volume I) presents the findings of a preliminary assessment of the potential significant effects associated with the Proposed Development on ornithological features (breeding and wintering birds).

7.7.2 The Proposed Development Site is located within the Teesmouth and Cleveland Coast SPA/Ramsar site and the Teesmouth and Cleveland Coast SSSI.

Effects During Construction

7.7.3 During construction, ornithological effects could be generated due to the following:

- temporary habitat losses and functionally linked land resulting in losses of breeding, roosting and/ or feeding habitats;
- noise and visual disturbance of non-breeding and breeding birds and their dependent young;
- degradation of habitats used by feeding and breeding birds from physical or chemical pollution from emissions of dust and/or particulates and chemical spills to groundwater and/or water;
- increased surface water runoff and flood risk resulting in degradation of nesting and feeding habitats of breeding birds and/or loss of nests;
- morphological and hydrological effects on surface waters resulting in dewatering of wetland habitats used by birds;
- destruction of breeding bird nests, eggs and young; and
- changes in air quality resulting in changes to habitat structure, with resulting effects on nesting and feeding habitats.

7.7.4 The Proposed Development construction works will be undertaken in a manner that aims to avoid impacts to birds. This includes implementation of the CEMP, and the presence of an Environmental or Ecological Clerk of Works during construction.

7.7.5 The preliminary assessment indicates that without the specification of further site-specific mitigation measures, Proposed Development construction activities have the potential to generate a range of potentially significant adverse effects on ornithological features, including birds using designated and non-designated sites. This is a precautionary assessment before taking into consideration site-specific mitigation and habitat management measures. Such measures will be developed in

consultation with Natural England and other stakeholders and reported in the ES. As such, it is anticipated that predicted ornithological effects to be reported in the ES would ill be less than those presented in Chapter 13: Ornithology (PEI Report, Volume I).

Effects During Operation

- During operation, without mitigation, effects on ornithological features could arise due to permanent habitat losses including within statutory and non-statutory designated sites, adversely affecting breeding, roosting and feeding species;
- permanent losses of functionally linked land to statutory and non-statutory designated sites adversely affecting breeding, roosting and feeding species;
- noise and visual disturbance causing displacement of birds and brood failures;
- changes in air quality as a result of process emissions and vehicular traffic causing degradation of habitats;
- increased surface water runoff and flood risk resulting in degradation of nesting and feeding habitats and/or loss of nests;
- chemical contamination of Tees Bay marine waters resulting from process wastewater discharges and effects on fish and other prey stocks used as a foraging resource by birds; and
- morphological and hydrological effects on surface waters resulting in dewatering of wetland habitats used by birds.

7.7.6 The Proposed Development includes measures that aim to minimise impacts on birds and their habitats. This includes avoidance of sensitive ecological habitats, appropriate lighting design, and optimisation of the Proposed Development's stack height. Detailed dispersion modelling of emissions to air will be undertaken during the EIA to determine potential impacts on ornithological features and design mitigation measures (such as stack height considerations whilst balancing other impacts).

7.7.7 At present the preliminary assessment indicates that without the specification of further site-specific mitigation measures, Proposed Development operation has the potential to generate a range of potentially significant adverse effects upon ornithological receptors, including birds using designated and non-designated sites. This is a precautionary assessment before taking into consideration site-specific mitigation and habitat management measures. Such measures would be developed in consultation with Natural England and other stakeholders and reported in the ES. As such, it is anticipated that predicted ornithological effects to be reported in the ES will be less than those presented in Chapter 13: Ornithology of this PEI Report.

7.8 Marine Ecology

Introduction

7.8.1 Chapter 14: Marine Ecology (PEI Report, Volume I) presents the findings of a preliminary assessment of the potential significant effects associated with the Proposed Development on marine ecology.

7.8.2 The Proposed Development is situated within the Teesmouth and Cleveland Coast SPA/Ramsar/SSSI and the Teesmouth NNR which are in place, in part, for the protection of seals, providing refuge at important haul-out sites.

7.8.3 A number of protected or notable marine animal species have been identified as present, or potentially present, within the marine ecology study area. These include harbour porpoise, minke whale, bottlenose dolphin and white-beaked dolphin, grey seal and harbour (or common) seal. In addition, several protected or notable migratory and commercial fish species have been identified.

Effects During Construction

7.8.4 During construction, potential impacts to marine ecological receptors include:

- indirect impacts upon marine ecology from changes in water quality as a result of polluted surface water runoff;
- impacts on hauled-out or surfaced seals from changes in airborne soundscape and visual cues.

7.8.5 The Proposed Development construction works will be undertaken in a manner that aims to avoid and minimise effects upon marine ecology. This includes the selective use of trenchless technologies for watercourse crossings, specified construction hours, controlled use of construction lighting and other measures to be detailed in the CEMP. With the implementation of such measures, and due to the temporary and short-term nature of potential construction impacts, both direct and indirect effects upon marine ecology predicted to be not significant.

Effects During Operation

7.8.6 No potential impacts to marine ecology receptors have been identified during the Proposed Development operational phase and as such there is no potential for any potentially significant effects.

7.9 Traffic and Transport

Introduction

7.9.1 Chapter 15: Traffic and Transport (PEI Report, Volume I) identifies the potential effects of the Proposed Development on traffic and transport in the surrounding area. The assessment considers the predicted number of vehicle movements generated during the construction and operation of the Proposed Development, and the sensitivity (including pedestrian and cyclist safety) and capacity of the local road network.

Effects During Construction

7.9.2 The additional traffic due to the Proposed Development construction activities would result in small, temporary increases in traffic flows, including Heavy Goods Vehicles (HGVs), on the roads leading to the Main Site and Connection Corridor areas north and south of the River Tees. However, due to the low sensitivity of the road links used, and the volume of associated traffic, no significant effects are expected.

7.9.3 Notwithstanding this, traffic management measures would be implemented during the construction of the Proposed Development to minimise traffic impacts on the local road network. These measures include:

- implementation of a Construction Worker Travel Plan (CWTP);
- the appointed construction contractor to assess the potential for implementing construction worker minibuses and car sharing options (to be included in the CWTP);
- implementation of a Construction Traffic Management Plan (CTMP) to control the impact of HGVs on the local road network during construction; and
- working with suppliers to ensure that materials classified as hazardous that are being brought to the Proposed Development Site are transported in compliance with applicable regulations.

7.9.4 The construction contractor would also review options for the use of rail and water transport when sourcing construction materials. The contractor would review the use of rail travel for construction staff accessing the Proposed Development Site using the existing Redcar British Steel railway station (currently mothballed).

Effects During Operation

7.9.5 Once operational, the Proposed Development would employ up to 130 full-time staff who would work shifts at the Main Site. During infrequent periods of periodic maintenance this could increase. Due to the very low traffic flows to be generated during operation, Proposed Development operation would not generate any significant transportation effects. A Travel Plan for the operational Production Facility would be prepared and agreed with the Local Planning Authority (LPA) prior to operations commencing.

7.10 Landscape and Visual Amenity

Introduction

7.10.1 Chapter 16: Landscape and Visual Amenity (PEI Report, Volume I) presents the findings of a preliminary assessment of the potential effects of the Proposed Development on landscape character and visual amenity.

7.10.2 The study area for landscape and visual effects includes areas where it is considered that there is potential for significant direct or indirect effects on landscape character or sensitive views due to the construction/decommissioning or operation of the Proposed Development.

7.10.3 The assessment is based on the largest possible dimensions for the Proposed Development and on a worst-case flare stack height of up to 100 m above ground level. There is anticipated to be either a single flare stack or two stacks (one per phase) in the Proposed Development.

Effects During Construction

7.10.4 Although construction activities associated with the Proposed Development would impact several landscape receptors, impacts would be temporary and experienced in the context of other large-scale industrial developments. Therefore, no significant effects are predicted to landscape character during Proposed Development construction.

7.10.5 The assessment indicates that construction activities have the potential to generate temporary moderate adverse (significant) effects at two selected viewpoints, one of which is recreational (viewpoint 7 - England Coast Path, Warrenby) and one which is recreational and residential (viewpoint 8 - Redcar seafront). This is due to their proximity to the Main Site and limiting intervening vegetation. It is considered that such effects are difficult to mitigate due to the proximity of these viewpoints to the Proposed Development and the scale of the associated structures.

7.10.6 Although construction activities would be visible from other visual receptors, they would be viewed in the context of an area containing a high number of large-scale industrial structures. For some viewpoints, such as Viewpoint 3 – Teesmouth National Nature Reserve, England Coastal Path and Viewpoint 5 – South Gare Breakwater, low level construction activities would be screened by intervening landform and vegetation.

Effects During Operation

7.10.7 Although the Proposed Development will introduce additional built development and infrastructure to a number of landscape receptors, this would occur within the context of previous and existing similar development. Therefore, no significant effects are predicted to landscape character during the operation of the Proposed Development.

7.10.8 The assessment indicates that moderate adverse (significant) effects are expected at one recreational viewpoint (Viewpoint 7 – England Coast Path, Warrenby) during operation. This is due to the proximity of the viewpoint to the Main Site and the prominence of structures associated with the Proposed Development. No significant visual effects are expected at residential receptors during Proposed Development operation.

7.10.9 For some visual receptors, such as Viewpoint 3 – Teesmouth National Nature Reserve, England Coastal Path and Viewpoint 14 – Viewpoint at Saltholme Wildlife Reserve and Discovery Park (RSPB), the majority of low-level structures on the Main Site would be screened by intervening landform and vegetation. Although larger structures, stacks and plumes associated with the flare would be visible, this would be in the context of existing large-scale industrial structures within the wider view.

7.11 Cultural Heritage

Introduction

7.11.1 Chapter 17: Cultural Heritage (PEI Report, Volume I) presents the findings of a preliminary assessment of the potential effects to cultural heritage assets which comprise archaeology, built heritage and historic landscape as associated with the Proposed Development. A summary of cultural heritage receptors is outlined in Section 4 of this NTS.

7.11.2 A number of mitigation measures have been incorporated into the design and construction methodologies of the Proposed Development, to avoid impacts to known or unrecorded heritage assets. During the construction period these include:

- refining connection corridor routes where practicable;
- use of existing pipeline infrastructure and established corridors where practicable;
- siting much of the Hydrogen Pipeline Connection in an existing above ground pipeline racking network;
- use of trenchless technologies, including horizontal directional drilling (HDD) or a micro-bored tunnel (MBT) for the Hydrogen Pipeline and other connection corridors;
- use of brownfield sites or existing hard standing areas, where practicable within the Proposed Development Site for construction laydown areas.

Effects During Construction

7.11.3 Features relating to a Romano-British settlement have been recorded within the Hydrogen Pipeline Corridor and there is potential for additional features relating to this settlement to extend into the Hydrogen Pipeline Corridor. These previously unrecorded remains have the potential to be of low to medium heritage value. Due to being underground within the vicinity of the settlement, construction of the Hydrogen Pipeline Corridor has the potential to result in the permanent loss of such remains – this would result in a major adverse (significant) effect if left unmitigated. No other potentially significant cultural heritage effects have been identified.

7.11.4 Given the above, a programme of archaeological evaluation and mitigation will be undertaken, consisting of excavation and recording which will be carried out prior to the start of construction. The archaeological investigation will be carried out in accordance with a Written Scheme of Investigation agreed (WSI) with relevant archaeology officers and local authorities. A protocol will also be included in the CEMP that will include procedures for the reporting, protection and management of unexpected archaeological discoveries. With the implementation of the proposed mitigation, no significant residual effects upon heritage assets are expected.

Effects During Operation

7.11.5 Operation of the Proposed Development would not have any impacts upon buried archaeological remains. The Proposed Development will represent a new component

into an existing industrial landscape. However, its inclusion within the visual setting of existing heritage assets would not result in significant changes to these asset's setting or value. As such, no potentially significant cultural heritage effects have been identified during the operation of the Proposed Development.

7.12 Socioeconomics and Land-Use

Introduction

7.12.1 Chapter 18: Socioeconomics and Land-Use (PEI Report, Volume I) presents the findings of a preliminary assessment of the potential effects of the Proposed Development on employment, local businesses and the local population. The assessment takes into account the demographics of the area surrounding the Proposed Development Site.

7.12.2 The design of the Proposed Development aims to minimise potential socioeconomic impacts by:

- minimising impacts on any PRoW that cross the Proposed Development Site;
- use of construction methods that minimise local disruption, including methods for the hydrogen pipeline crossing under the River Tees.

Effects During Construction

7.12.3 A total of 675 net construction jobs are expected to be generated during the Proposed Development construction phase, of which 506 are expected to be within the Middlesbrough and Stockton area. Construction employment created by the Proposed Development construction phase is predicted to have a moderate beneficial (significant) short-term effect on local employment.

7.12.4 No potentially significant effects are predicted associated with wider socioeconomic impacts to agricultural and industrial land, PRoW, private assets, education and community facilities, development land, temporary workers accommodation, or demographic effects and community disruption.

Effects During Operation

7.12.5 A total of 61 net operational jobs are expected to be generated during the Proposed Development operation, with 46 of these estimated to be filled by residents of the Middlesbrough and Stockton area. This would result in a minor beneficial effect (not significant).

7.12.6 No significant socioeconomic effects are expected during Proposed Development operation.

7.13 Climate Change

Introduction

7.13.1 Chapter 19: Climate Change (PEI Report, Volume I) presents the findings of a preliminary assessment which considers the potential effects of the Proposed Development on the climate and the effect of future climate change on the Proposed Development and the surrounding environment.

7.13.2 The assessment includes:

- Lifecycle greenhouse gas (GHG) impact assessment (the potential effect the Proposed Development may have on GHG emissions and therefore climate change); and
- Climate change resilience assessment (the resilience of the Proposed Development to future projections for climate change).

7.13.3 Due to the preliminary nature of this assessment, it is not currently possible to undertake a full in-combination climate change impacts assessment (the combined effect of the Proposed Development and climate change on surrounding receptors). However, during the EIA, the assessment will identify the likely in combination impacts and effects. The results will be presented in the ES.

GHG Assessment

7.13.4 The receptor for GHG emissions associated with the Proposed Development is the global climate.

7.13.5 GHG emissions associated with the Proposed Development have been examined for their significance against the UK Carbon Budgets. The preliminary assessment indicates that the GHG emissions from hydrogen production and distribution are Minor to Moderate adverse. However, when looking at the ability of the hydrogen produced to enable a transition to a lower carbon economy, the Proposed Development has a net benefit due to the reduced carbon emissions when compared to use of natural gas or diesel.

Climate Change Resilience

7.13.6 The potential impacts and effects of projections for climate change on the Proposed Development have been assessed, taking into account resilience measures that have been incorporated into the Proposed Development design.

7.13.7 With mitigation measures embedded in the Proposed Development design, no significant resilience risks have been identified as these are deemed sufficient to reduce the likelihood or consequence of an impact occurring from projected climate hazards.

7.14 Major Accidents and Disasters

Introduction

7.14.1 Chapter 20: Major Accidents and Disasters (MA&Ds) (PEI Report, Volume I) presents the findings of a preliminary assessment which considers the MA&Ds that have the potential to arise during the construction, operation (including maintenance) and decommissioning of the Proposed Development.

7.14.2 Major accidents are incidents such as fires and explosions that could result in serious harm to people. They also have the potential to cause widespread damage to property and the environment. Disasters can be naturally occurring events, such as earthquakes, landslides and flooding. The impact of MA&Ds can be very significant, but the likelihood of their occurrence is generally low.

7.14.3 There are a number of sites regulated by the Control of Major Accidents Hazard (COMAH) Regulations 2015 within 5 km of the Proposed Development Site. Together these sites form a 'domino group' where the risks or consequences of a major accident may be increased due to the proximity of the sites to each other. There are also a number of sensitive receptors which could be vulnerable to MA&D risks. These include private residences, community and local economic receptors, the historical and cultural environment, the water environment, designated ecological sites, and infrastructure and the built environment.

7.14.4 The Proposed Development is anticipated to be an Upper Tier COMAH (defined as facilities that store, handle, or process significant quantities of hazardous substances) installation due to the substances that would be present on-site. This status will be reviewed as the design develops. Appropriate COMAH notifications, with supporting risk assessments and a Major Accident Prevention Plan, would be submitted to the relevant authorities for approval prior to construction.

Effects During Construction

7.14.5 Credible scenarios for construction phase risk events include:

- ground instability;
- structural collapse/accidental impact;
- utility (pipeline or electrical cable) strike/unexploded ordnance (UXO) impact; and
- release of ground contamination existing within the Main Site given the legacy of its historical industrial use.

7.14.6 Best practice industry codes, standards and methods will be used during the Proposed Development construction phase. Construction methods and site clearance works would be informed by ground investigation work, while a CEMP would be in place to control the potential environmental impacts related to the construction works. Consultation would also be carried out with appropriate stakeholders such as National Grid Gas Transmission and the Environment Agency in relation to working close to live pipelines.

7.14.7 With these mitigation measures in place, all assessed credible scenarios during the construction phase have been assessed as having a tolerable level of risk, and thus residual effects are considered not significant.

Effects During Operation

7.14.8 During operation, effects could arise due to:

- fire caused by loss of containment of flammable gas;
- explosion;
- toxic gas release;
- asphyxiant gas release;
- domino effect (to and from neighbouring facilities); and

- flooding.

7.14.9 The design of the Proposed Development take into account industry standards and potential MA&Ds risks during operation to ensure these risks are minimised to an acceptable level. This includes for example fire detection and protection measures, gas detection and pressure monitoring, and locating electrical equipment above predicted flood levels. Hazardous Substances Consent would be obtained from the local planning authority (RCBC) who would consult with the HSE.

7.14.10 With regards to a potential 'domino effect', it is a requirement of the COMAH Regulations that neighbouring upper tier sites should review and update their off-site emergency plans and safety reports to consider the potential impact of domino sites. As such, the existing safety precautions at neighbouring industrial sites would mitigate the risk of domino effects occurring. The Cleveland Emergency Planning Unit (CEPU) provides an emergency planning service to ensure local authorities are prepared to respond to emergencies and to support emergency services and the community.

7.14.11 It is considered that all MA&D risk events (following the implementation of defined mitigation measures) identified during the operation of the Proposed Development would be tolerable as they have been reduced to a level that is As Low As Reasonably Practicable ('the ALARP principle'). As the Proposed Development design is still in development, further mitigation measures would be defined and reported in the ES.

7.15 Materials and Waste

Introduction

7.15.1 Chapter 21: Materials and Waste (PEI Report, Volume I) presents the findings of a preliminary assessment of the potential effects associated with the use of materials and waste production. The materials and waste assessment considers the consumption of key construction materials and the generation and management of waste during the construction, operation (including maintenance) and decommissioning of the Proposed Development.

7.15.2 The baseline has been determined taking into account the following:

- national (UK or GB) and regional consumption/sales for key construction materials (steel, aggregates, asphalt and concrete);
- Mineral Safeguarding Areas (MSAs) and allocated/safeguarded mineral and waste sites;
- landfill void capacity in Yorkshire and the Humber and the North East (non-hazardous and inert landfill void capacity), and England (hazardous landfill void capacity); and
- waste received at relevant hazardous waste management facilities nationally.

7.15.3 Construction and operational waste arisings have been estimated and as a reasonable worst-case it has been assumed that all waste would be sent to landfill.

Effects During Construction

7.15.4 During construction, effects could arise due to:

- changes in demand for materials; and
- changes in available landfill void capacity.

7.15.5 Potential effects arising from changes in demand for materials are not considered to be significant.

7.15.6 During construction, waste is expected to arise due to excavations and construction of the Proposed Development. Some waste materials arising from excavation works have the potential to be contaminated such that the material would be classed as hazardous. If such material was disposed to hazardous waste landfill, this has the potential to have a moderate adverse (significant) effect. In practice, a proportion of contaminated material from the Proposed Development could be non-hazardous and/or likely to be sent to a waste management facility rather than being disposed to landfill, reducing the overall quantities of waste for disposal and associated effects.

7.15.7 No other significant adverse residual waste effects resulting from the construction of the Proposed Development have been identified.

7.15.8 A further assessment of potential material and waste effects would be undertaken and reported in the ES when further details of construction material requirements and potential waste arisings are available.

Effects During Operation

7.15.9 During operation, effects could arise due to:

- changes in available landfill void capacity; and
- changes in available hazardous waste management facility capacity.

7.15.10 Operational waste from the Proposed Development would comprise waste from site offices and waste from the Production Facility (including thermal reclamation waste) processes which may be hazardous waste. Amine storage would be appropriately bunded and accidental spills would be cleaned and go to a separate closed drainage system. From here, it would be recovered and recycled for use within the process, or otherwise taken off-site by tanker to a specialist treatment plant.

7.15.11 The main waste types and quantities of operational waste are not yet confirmed. However, based on worst case assumptions, no significant adverse material and waste effects resulting from the operation of the Proposed Development have been identified.

7.16 Human Health

Introduction

7.16.1 Chapter 22: Human Health (PEI Report, Volume I) identifies the potential effects of the Proposed Development upon human health, taking into account information from other technical assessments that are relevant to human health.

7.16.2 The assessment considers potential effects on the health and wellbeing of those communities likely to be impacted by the Proposed Development in the Hartlepool, Redcar and Cleveland, and Stockton-on-Tees districts and Teesside.

7.16.3 The Proposed Development incorporates embedded mitigation measures that aim to avoid any significant human health effects, including (but not limited to):

- mitigation measures as detailed in Chapter 8: Air Quality, Chapter 11: Noise and Vibration, Chapter 15: Traffic and Transportation, Chapter 18: Socioeconomics and Land Use and Chapter 19: Climate Change (PEI Report, Volume I);
- construction works to be undertaken in accordance with the CEMP;
- the Production Facility would require an Environmental Permit and would comply with this under the Environmental Permitting (England and Wales) Regulations 2016.
- a DEMP would be prepared which would consider in detail all potential environmental risks during Proposed Development decommissioning.

7.16.4 Electromagnetic Field (EMF) effects must be controlled in accordance with the Control of Electromagnetic Fields at Work Regulations 2016, which sets out how employers must make and implement action plans to ensure compliance with the defined exposure limits. It is likely that all electrical and control system cables would be installed below ground or at ground level with no new overhead transmission lines proposed. Therefore, it is considered that with appropriate Proposed Development design, significant effects on human health associated with EMFs would be avoided. This would be further assessed during the EIA and reported in the ES.

Effects During Construction

7.16.5 The mitigation measures as detailed above reduce environmental effects during the construction of the Proposed Development which in turn mitigate the effects on the local community and existing facilities from a human health perspective. As such, no significant effects on human health have been identified during construction.

Effects During Operation

7.16.6 The mitigation measures proposed in other technical assessments to reduce effects from the operation of the Proposed Development on the environment would in turn mitigate the effects on the local community and existing facilities from a human health perspective. As such, no significant effects on human health have been identified during the operation of the Proposed Development.

7.17 Cumulative and Combined Effects

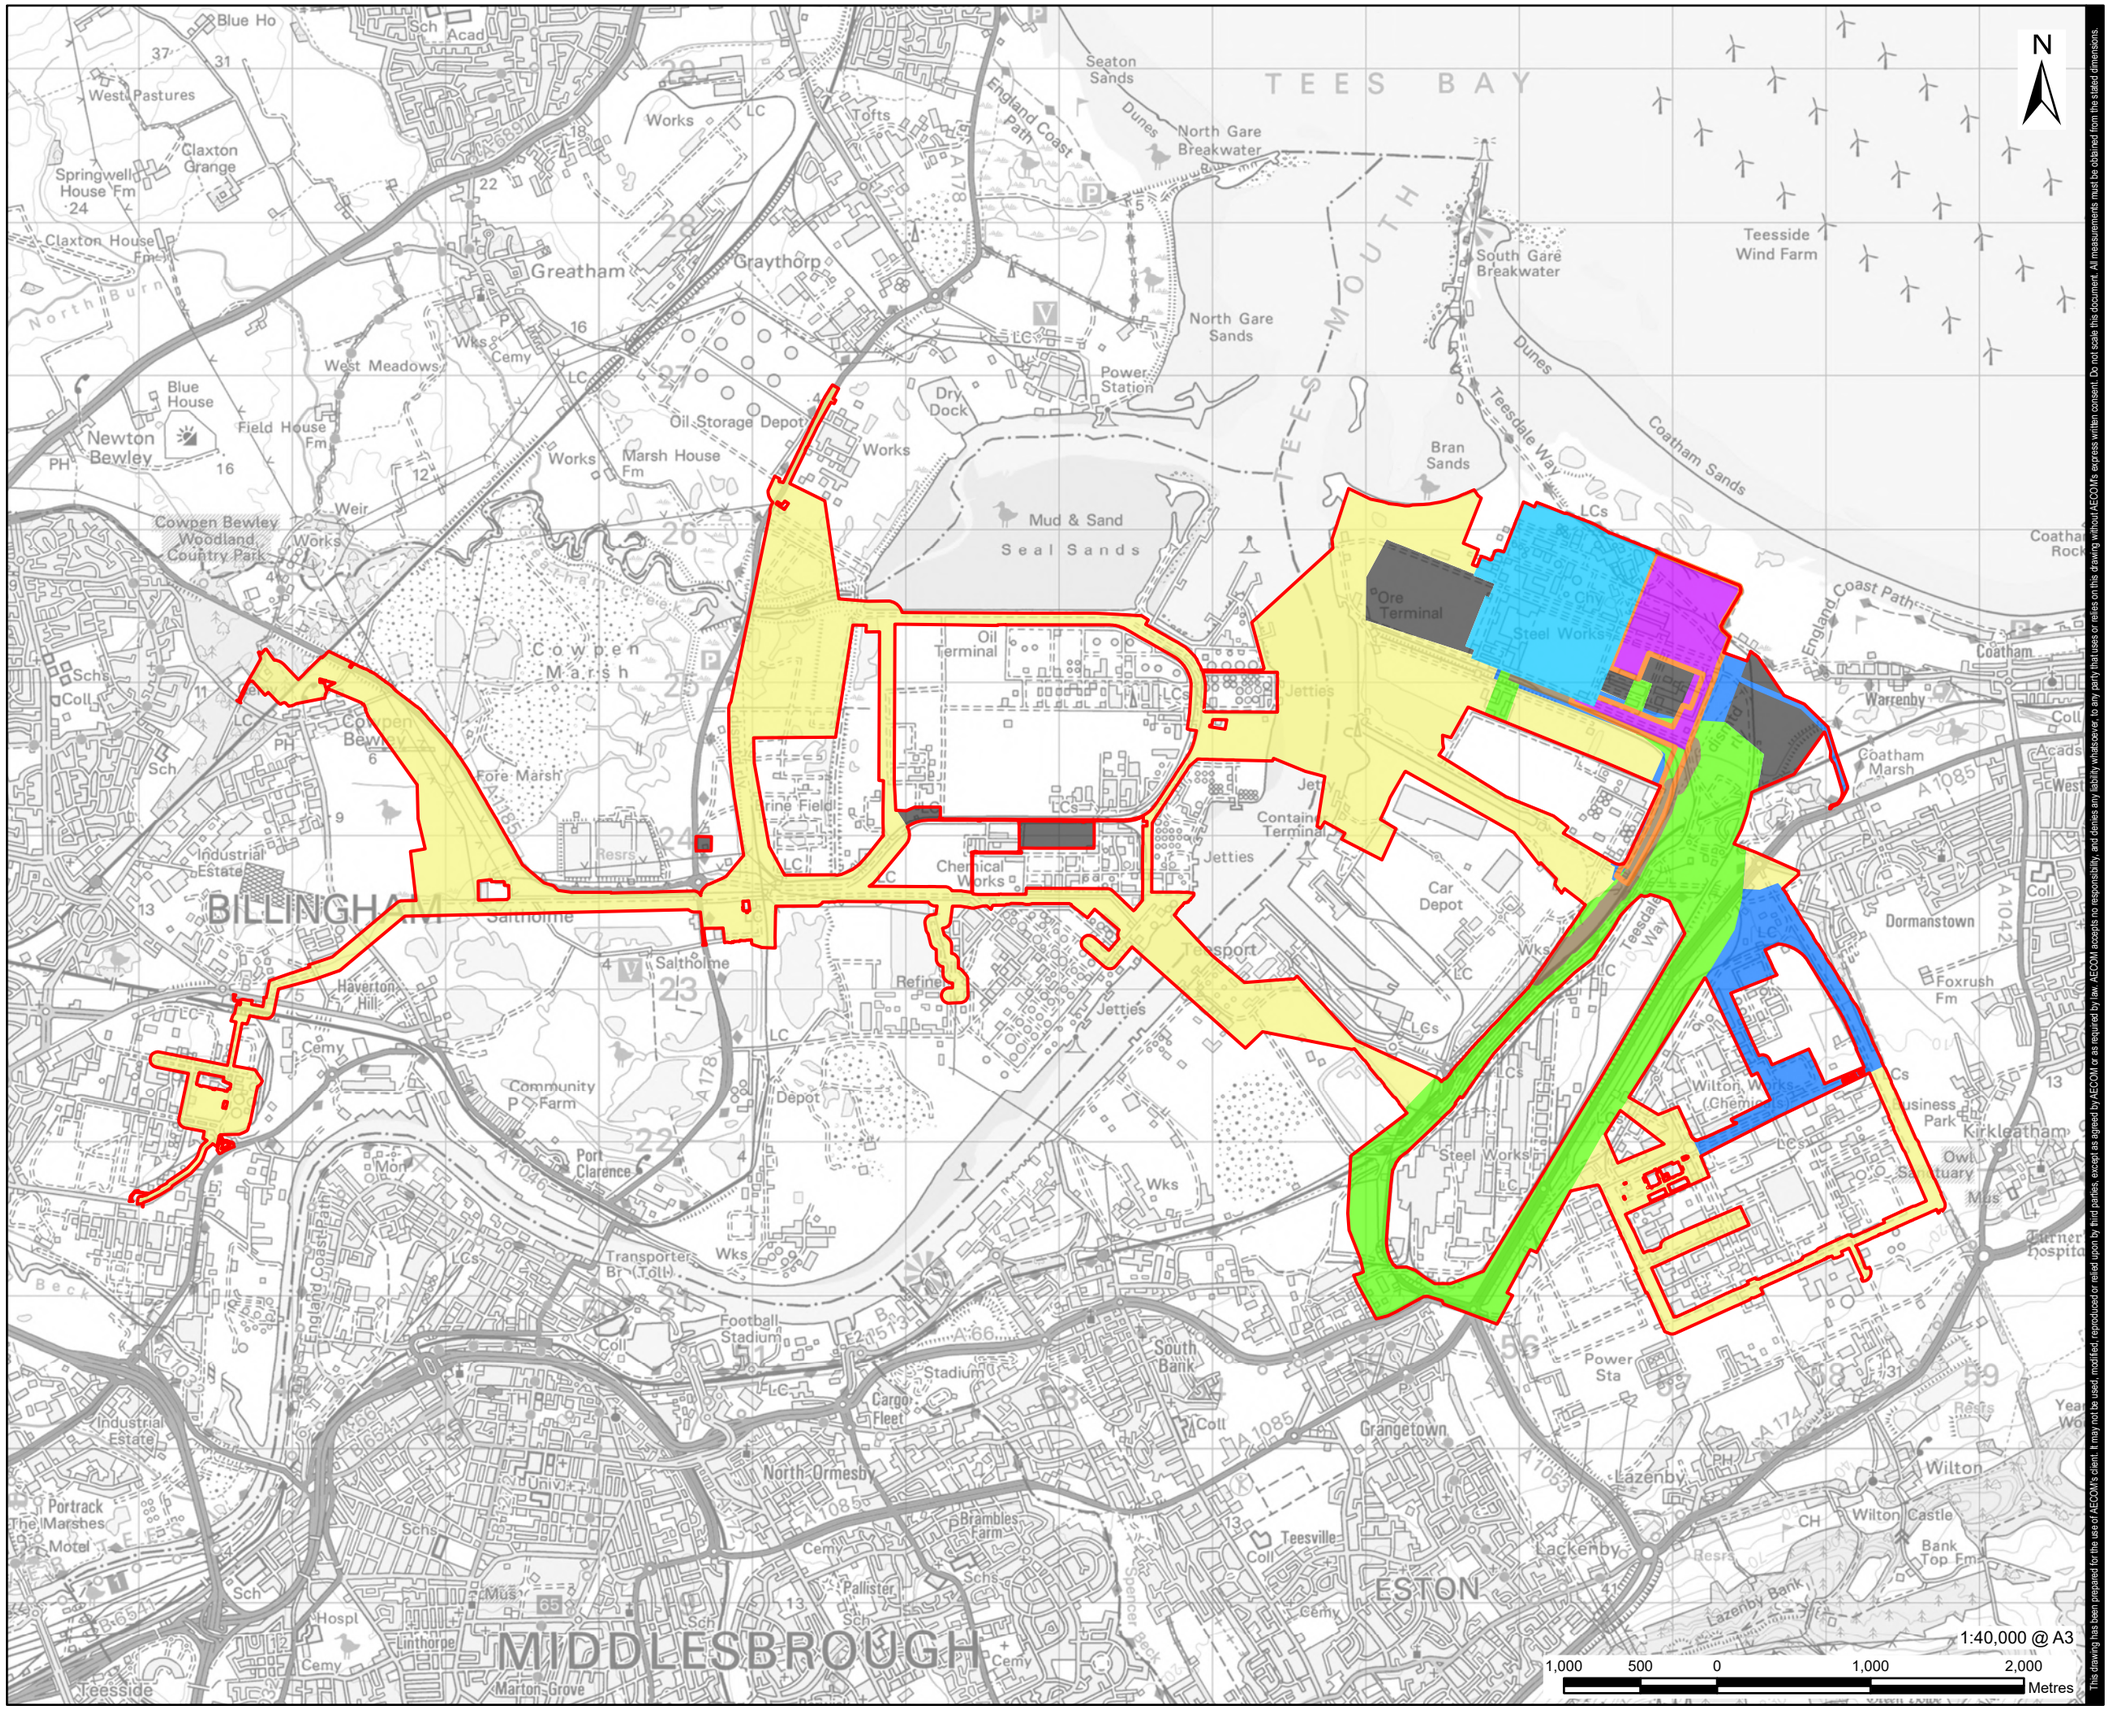
7.17.1 Chapter 23: Cumulative and Combined Effects (PEI Report, Volume I) describes the approach for the assessment of cumulative and combined effects as a result of the Proposed Development.

7.17.2 The assessment of Cumulative and Combined Effects will include:

- cumulative effects: these occur when the environmental impacts of the Proposed Development interact with those associated with other planned projects and developments located within a realistic geographical scope where environmental impacts could act together to result in a greater significance of effect on environmental resources and/or receptors; and
- combined effects: these are effects resulting from a single development (i.e., the effects of the Proposed Development) on any one receptor that may collectively cause an effect or effects of greater significance on environmental resources and/or receptors.

7.17.3 There are several developments in the vicinity of the Proposed Development that have the potential to generate cumulative impacts in association with the Proposed Development. Chapter 23: Cumulative and Combined Effects (PEI Report, Volume I) has established a long list of potential developments which will be further updated during the EIA.

7.17.4 A detailed assessment of the cumulative and combined effects will take place during the EIA and reported in the ES.



8.0 SUMMARY AND CONCLUSIONS

8.1.1 This NTS and the associated PEI Report present a preliminary assessment of the potential environmental effects of the Proposed Development based on the design and information at the time of writing (August 2023). Following statutory consultation, further assessments will be undertaken during the EIA to inform the ES for the DCO Application, and which would also take account of responses to this consultation.

8.1.2 Potential environmental impact avoidance, design and mitigation measures have been identified to mitigate and control environmental effects during construction, operation (including maintenance) and decommissioning of the Proposed Development. These will be reviewed and refined, and additional mitigation provided where necessary, and presented in the ES.

APPENDIX 11.1: FIRST CONSULTATION – EXAMPLE EMAILS TO LOCAL POLITICAL REPRESENTATIVES

[redacted]

From: info h2teesside <info@h2teesside.net>
Sent: 23 September 2023 16:16
To: [redacted]
Subject: H2Teesside - statutory consultation

This Message Is From an Untrusted Sender
You have not previously corresponded with this sender.

Report Suspicious

Dear [redacted]

I am writing to you in your capacity as Chair of Billingham Town Council as we have recently launched a statutory consultation for our H2Teesside project – a proposed blue hydrogen facility.

The Town Council will have received a formal consultation letter via post and email which provides information on the statutory consultation. Residents within Billingham will have received this leaflet: https://www.bp.com/content/dam/bp/country-sites/en_gb/united-kingdom/home/h2teesside/h2teesside-statutory-consultation-leaflet.pdf

We're holding public consultation events at St Aidan's Church Hall in Billingham on Monday 25th September and Friday 6th October, but wanted to offer the Town Council the opportunity to meet with the project team separately, either at one of your meetings or a separate meeting.

Please let us know if this would be of interest.

Kind regards,

H2Teesside project team

Dear [redacted]

I am writing to you in your capacity as Chair of Greatham Parish Council as we have recently launched a statutory consultation for our H2Teesside project – a proposed blue hydrogen facility.

The Parish Council will have received a formal consultation letter via post and email which provides information on the statutory consultation. Residents closest to the project will have received this leaflet: https://www.bp.com/content/dam/bp/country-sites/en_gb/united-kingdom/home/h2teesside/h2teesside-statutory-consultation-leaflet.pdf

We're holding a number of public consultation events as detailed in the leaflet, but wanted to offer the Parish Council the opportunity to meet with the project team separately, either at one of your meetings or a separate meeting.

Please let us know if this would be of interest.

Kind regards,

H2Teesside project team

Dear [redacted]

Thank you for attending one of our HyGreen Teesside consultation events in June, I hope you found the event useful. We are currently working through the responses to the consultation and finalising our design with a view to submit a planning application for HyGreen Teesside in November.

You may remember that in addition to the green hydrogen facility, we are also progressing plans for H2Teesside, a blue hydrogen facility. H2Teesside aims to be one of the UK's largest blue hydrogen production facilities, delivering economic growth for Teesside and the domestically produced low carbon hydrogen that the UK needs. This is a

separate project that requires a different type of consent, known as a Development Consent Order under the Planning Act 2008.

We are planning to launch a statutory consultation for H2Teesside on Thursday 14th September to gain feedback from the public and stakeholders before submitting our application for development consent. We will be sending the attached leaflet to local residents in your ward to inform them of the consultation and how they can get involved, as well as additional publicity such as adverts in local newspapers.

We would like to invite you to an online briefing for local elected members on **14th September at 18:00**. During this briefing, members of our team will deliver a presentation explaining our proposals for H2Teesside, the purpose of the consultation and the anticipated timescales for the project. There will also be an opportunity to ask questions after the presentation. If you would like to join this session, please let me know and I will arrange for the meeting invite to be sent to you.

Please do not hesitate to contact me should you have any questions.

Kind regards,

[redacted]

BP launches consultation on H2Teesside

This website uses cookies to improve your experience. We'll assume you're ok with this, but you can opt-out if you wish. Accept Read More

capacity of 1.2 GW. Like grey hydrogen, companies such as BP make blue hydrogen using natural gas, but most of the usual carbon emissions will be captured and sequestered in underground reservoirs. The produced low-carbon hydrogen will then be used in hard-to-electrify industries, such as the steel industry and long-distance haulage.

During the consultation, BP will invite feedback from the community about its preliminary project design. The company will then incorporate this into the final design, before applying for permission to construct and manage the plant. The consultation will officially end when midnight strikes on October 27.

BP's UK head of hydrogen, Matt Williamson, said the company was helping the country and Teesside in particular to decarbonise its transport and industry by supporting hydrogen, adding:

> *"H2Teesside is a key part of our plans to help build the region into the UK's leading hydrogen hub. We've been greatly encouraged by the interest from the community and stakeholders in our recent consultation on HyGreen Teesside and we are now looking forward to hearing people's views on these proposals."*

At TrAchem, we include BP's lubricant range, such as Castrol Magnatec and Castrol Hysol, among the many products we offer, so consult our expert team to explore which products will best suit your application.

Why this ad?

H2Teesside aims to be one of the UK's largest blue hydrogen production facilities, targeting 1.2GW of hydrogen production by 2030, equating to over 10% of the UK Government's hydrogen target of 10GW by the same year.

Blue hydrogen is obtained from natural gas and uses carbon capture and storage technology to prevent carbon emissions from entering the atmosphere. It can play a crucial role in helping carbon intensive sectors decarbonise, particularly in industries that are difficult to electrify.

The project could support around 1300 jobs (both direct and indirect) during the construction phase, and up to 130 jobs during the operational phase, as well as approximately 600 broader supply chain roles.

The consultation will run until 23:59 on 26 October, and follows on from bp's recent consultation on the sister project, HyGreen Teesside. bp will share its initial design for the facility with the community and invite feedback, before finalising the design and preparing an application for consent to build and operate the facility.

Matt Williamson, UK head of hydrogen at bp, said: "We're backing hydrogen to help Teesside and the UK decarbonise its industry and mobility. H2Teesside is a key part of our plans to help build the region into the UK's leading hydrogen hub. We've been greatly encouraged by the interest from the community and stakeholders in our recent consultation on HyGreen Teesside and we are now looking forward to hearing people's views on these proposals."

bp launches community consultation on blue hydrogen project on Teesside

- The H2Teesside consultation will run for six weeks.
- H2Teesside, with its sister project HyGreen Teesside, could play an essential role in decarbonising industry and heavy transport and help the region become the leading UK hydrogen hub.
- bp is holding a series of events where the public can have their say on project plans.

bp has today launched a six-week consultation on their proposals for H2Teesside, a facility which will produce blue hydrogen and enable large scale decarbonisation of local industry.

H2Teesside aims to be one of the UK's largest blue hydrogen production facilities, targeting 1.2GW of hydrogen production by 2030, equating to over 10% of the UK Government's hydrogen target of 10GW by the same year.

Blue hydrogen is obtained from natural gas and uses carbon capture and storage technology to prevent carbon emissions from entering the atmosphere. It can play a crucial role in helping carbon intensive sectors decarbonise, particularly in industries that are difficult to electrify.

The project could support around 1300 jobs (both direct and indirect) during the construction phase, and up to 130 jobs during the operational phase, as well as approximately 600 broader supply chain roles.

The consultation will run until 23:59 on 26 October 2023. It follows on from bp's recent consultation on sister project, HyGreen Teesside. bp will share its initial design for the facility with the community and invite feedback, before finalising the design and preparing an application for consent to build and operate the facility.

Matt Williamson, UK head of hydrogen, bp, said: "At bp, we're backing hydrogen to help Teesside and the UK decarbonise its industry and mobility. H2Teesside is a key part of our plans to help build the region into the UK's leading hydrogen hub. We've been greatly encouraged by the interest from the community and stakeholders in our recent consultation on HyGreen Teesside and we are now looking forward to hearing people's views on these proposals."

The consultation materials and further information is available on the H2Teesside website www.h2teesside.co.uk. The public information events will take place on the following dates:

Date	**Timings**	**Location**

About bp

bp intends to invest up to £18 billion in the UK's energy system by the end of 2030, demonstrating bp's firm commitment to the UK, and helping the country to deliver on its bold ambitions to boost energy security and reach net zero. As one of the largest oil and gas producers in the UK, bp intends to continue investing in North Sea oil and gas, while driving down operational emissions. bp is also in action on a range of lower carbon energy investments in the UK, which are expected to bring jobs and develop new skills and capabilities.

H2 Teesside

bp

Statutory consultation

Have your say on our proposed new blue hydrogen production facility

At bp we're backing hydrogen and carbon capture and storage to help Teesside and the UK decarbonise its industry. As part of that commitment, we're planning a new blue hydrogen production facility in Teesside which will provide low carbon energy.

We're holding a statutory consultation on our proposals from 14 September 2023 to 26 October 2023. Here's how you can find out more about our proposals:

View our consultation page and virtual consultation room: www.h2teesside.co.uk

Register at www.h2teesside.co.uk for our webinar on 28 September 2023 at 18:00

Come and meet the project team at one of our consultation events:

Venue	Dates and times		Address
Seaview Business Centre, Redcar	Thursday 21st September Saturday 23rd September	15:00 – 19:00 13:00 – 17:00	Turner Street, Redcar, TS10 1AZ

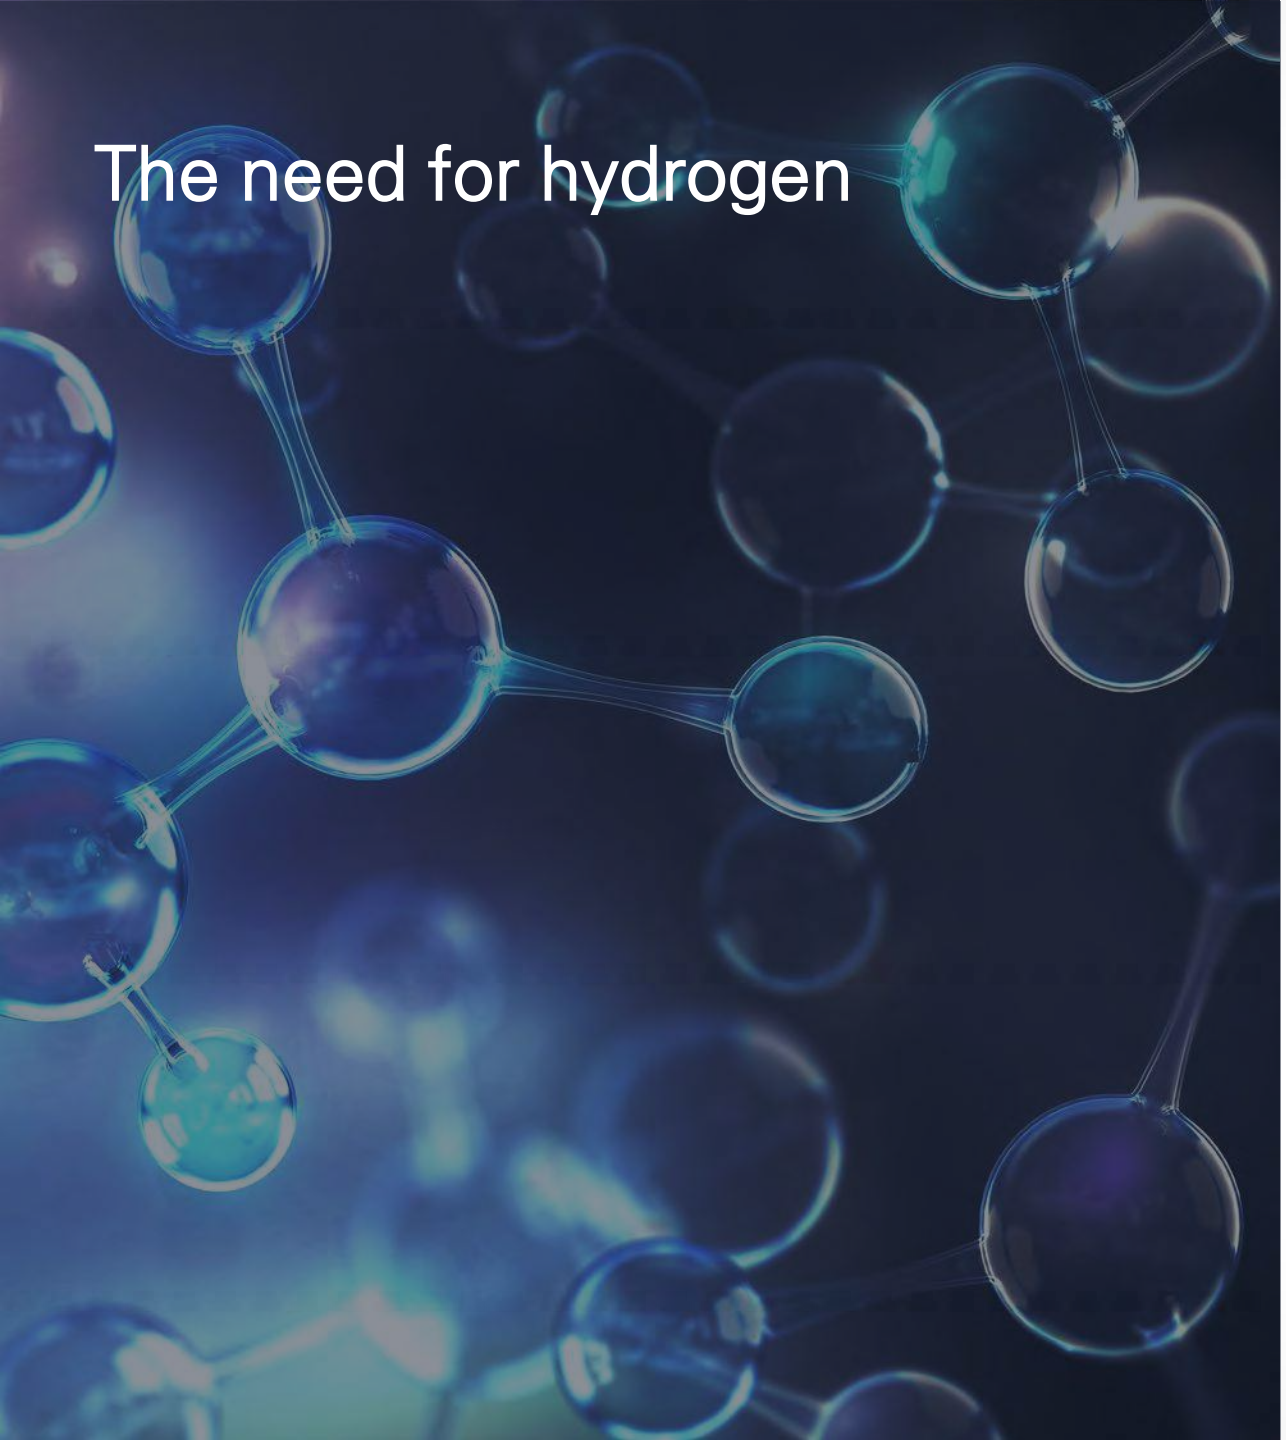
APPENDIX 11.6: FIRST CONSULTATION – PUBLIC WEBINAR PRESENTATION

H2Teesside



Statutory consultation Webinar

Thursday 28th September - 18:00

Agenda

1. Welcome & housekeeping
2. Hydrogen and Teesside
3. H2Teesside proposals
4. Preliminary Environmental Information
5. The planning process and consultation
6. Benefits for Teesside
7. Q&A

The need for hydrogen

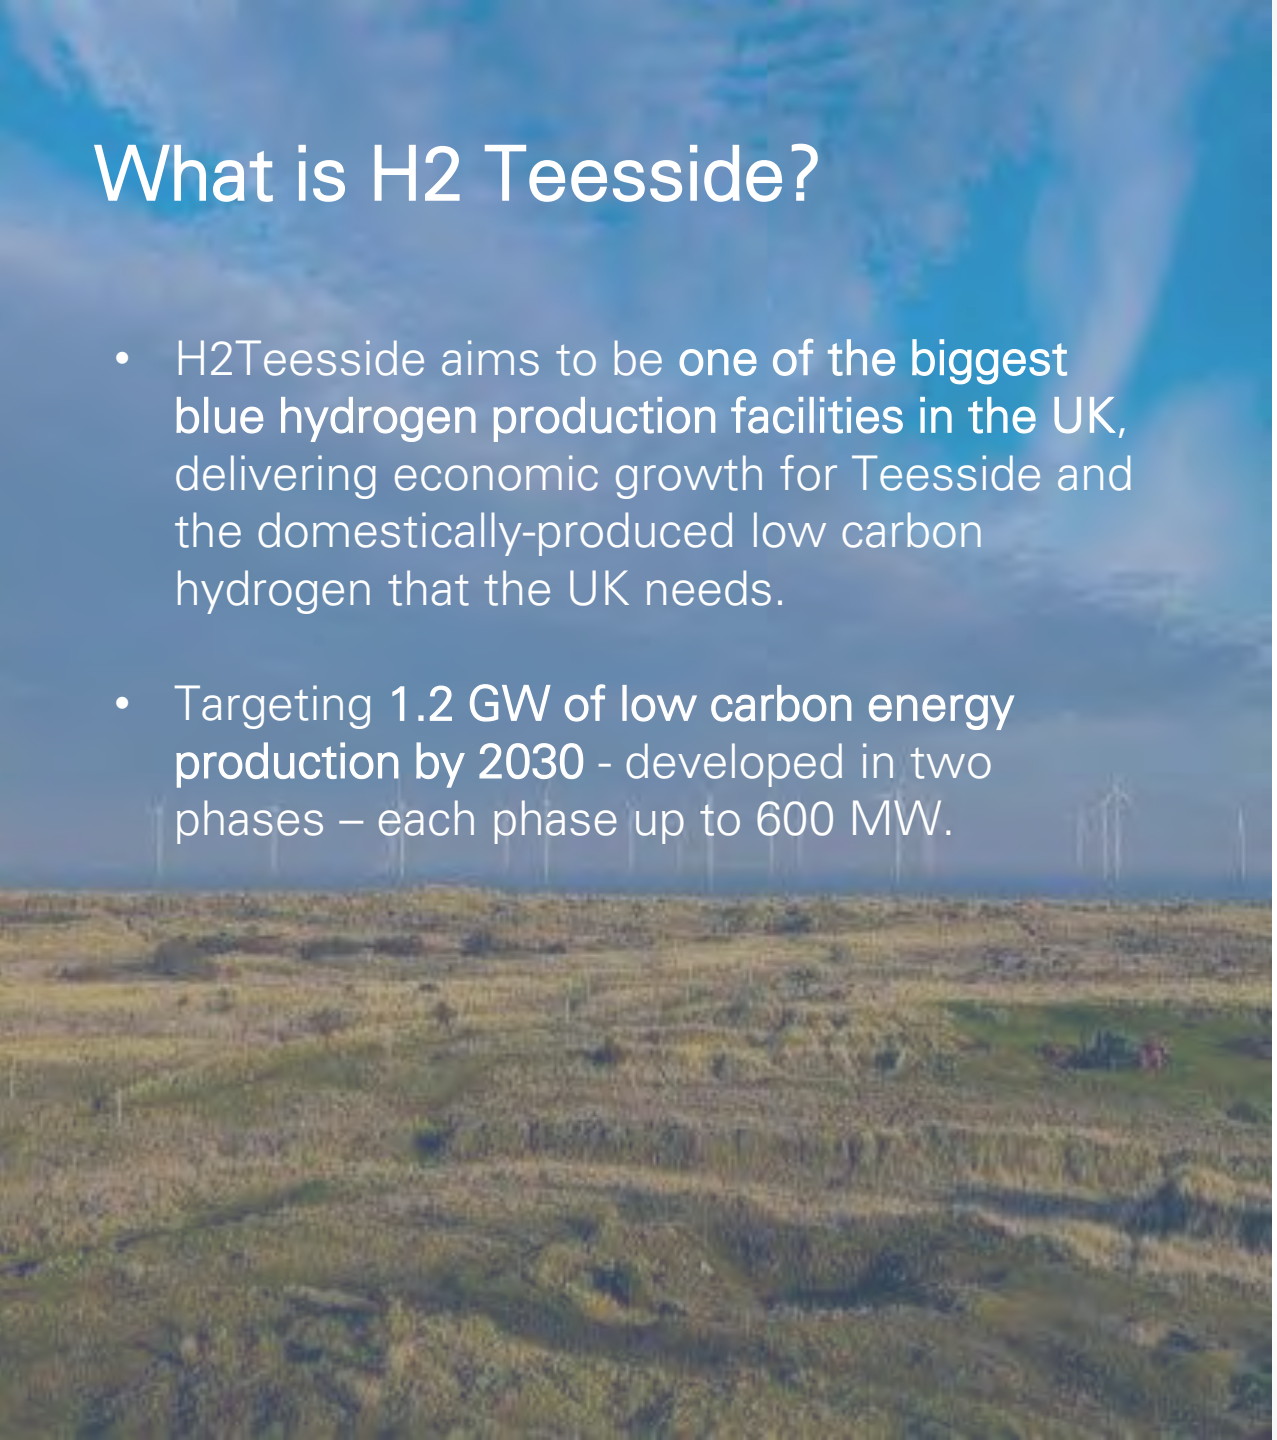
- Hydrogen is the **number one industrial decarbonization solution**, generating energy intensity that electricity cannot match.
- The UK government has made a legally binding commitment to reaching **Net Zero by 2050**.
- Low carbon blue hydrogen produced at **H2Teesside** will help surrounding industrial companies meet their commitments to reducing their greenhouse gas emissions by switching from natural gas, and support the decarbonisation of Teesside's industry.

bp on Teesside

Teesside has all the attributes of a world-class clean hydrogen hub – the right natural resources, concentrated demand, hydrogen storage and pipelines, ample access to carbon capture, utilisation and storage (CCUS), and people with the skills that we need.

Alongside H2Teesside, our Teesside activity includes:

Northern Endurance Partnership



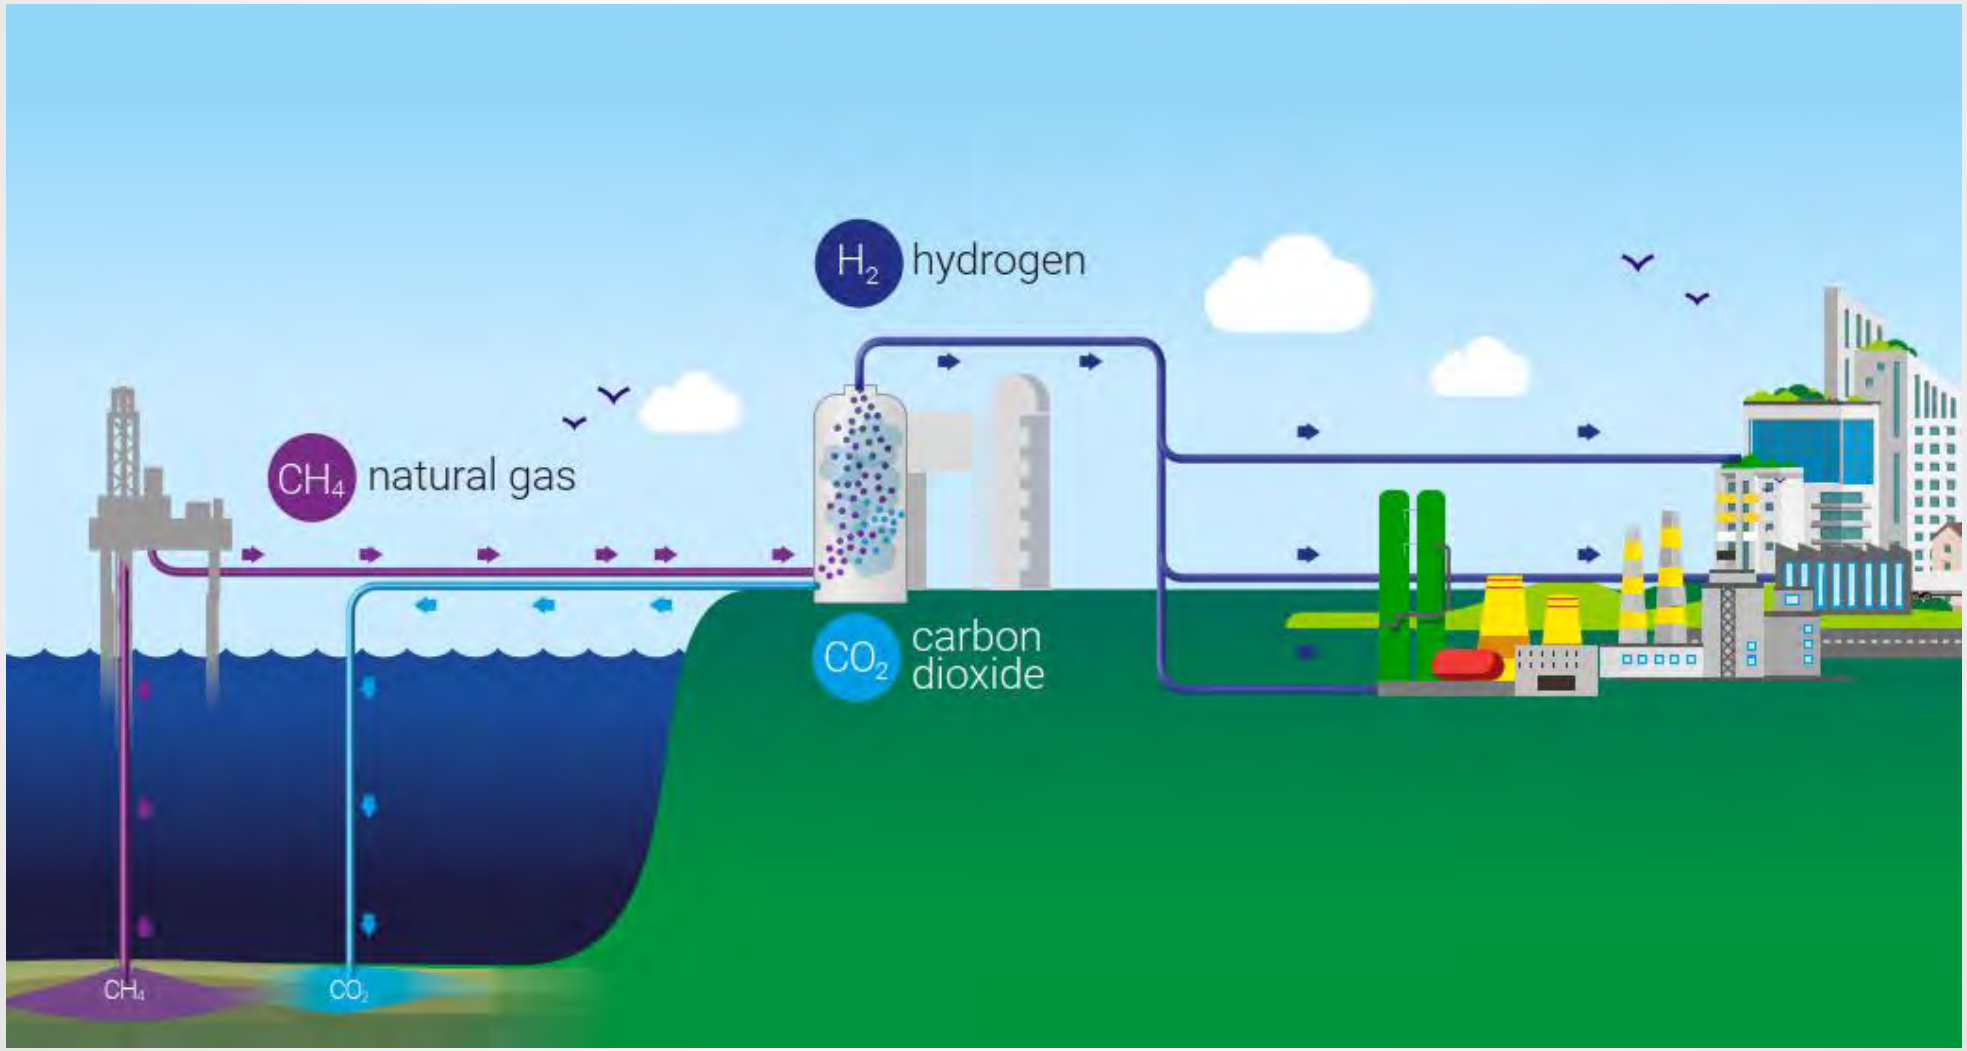
Operator of the Northern Endurance Partnership

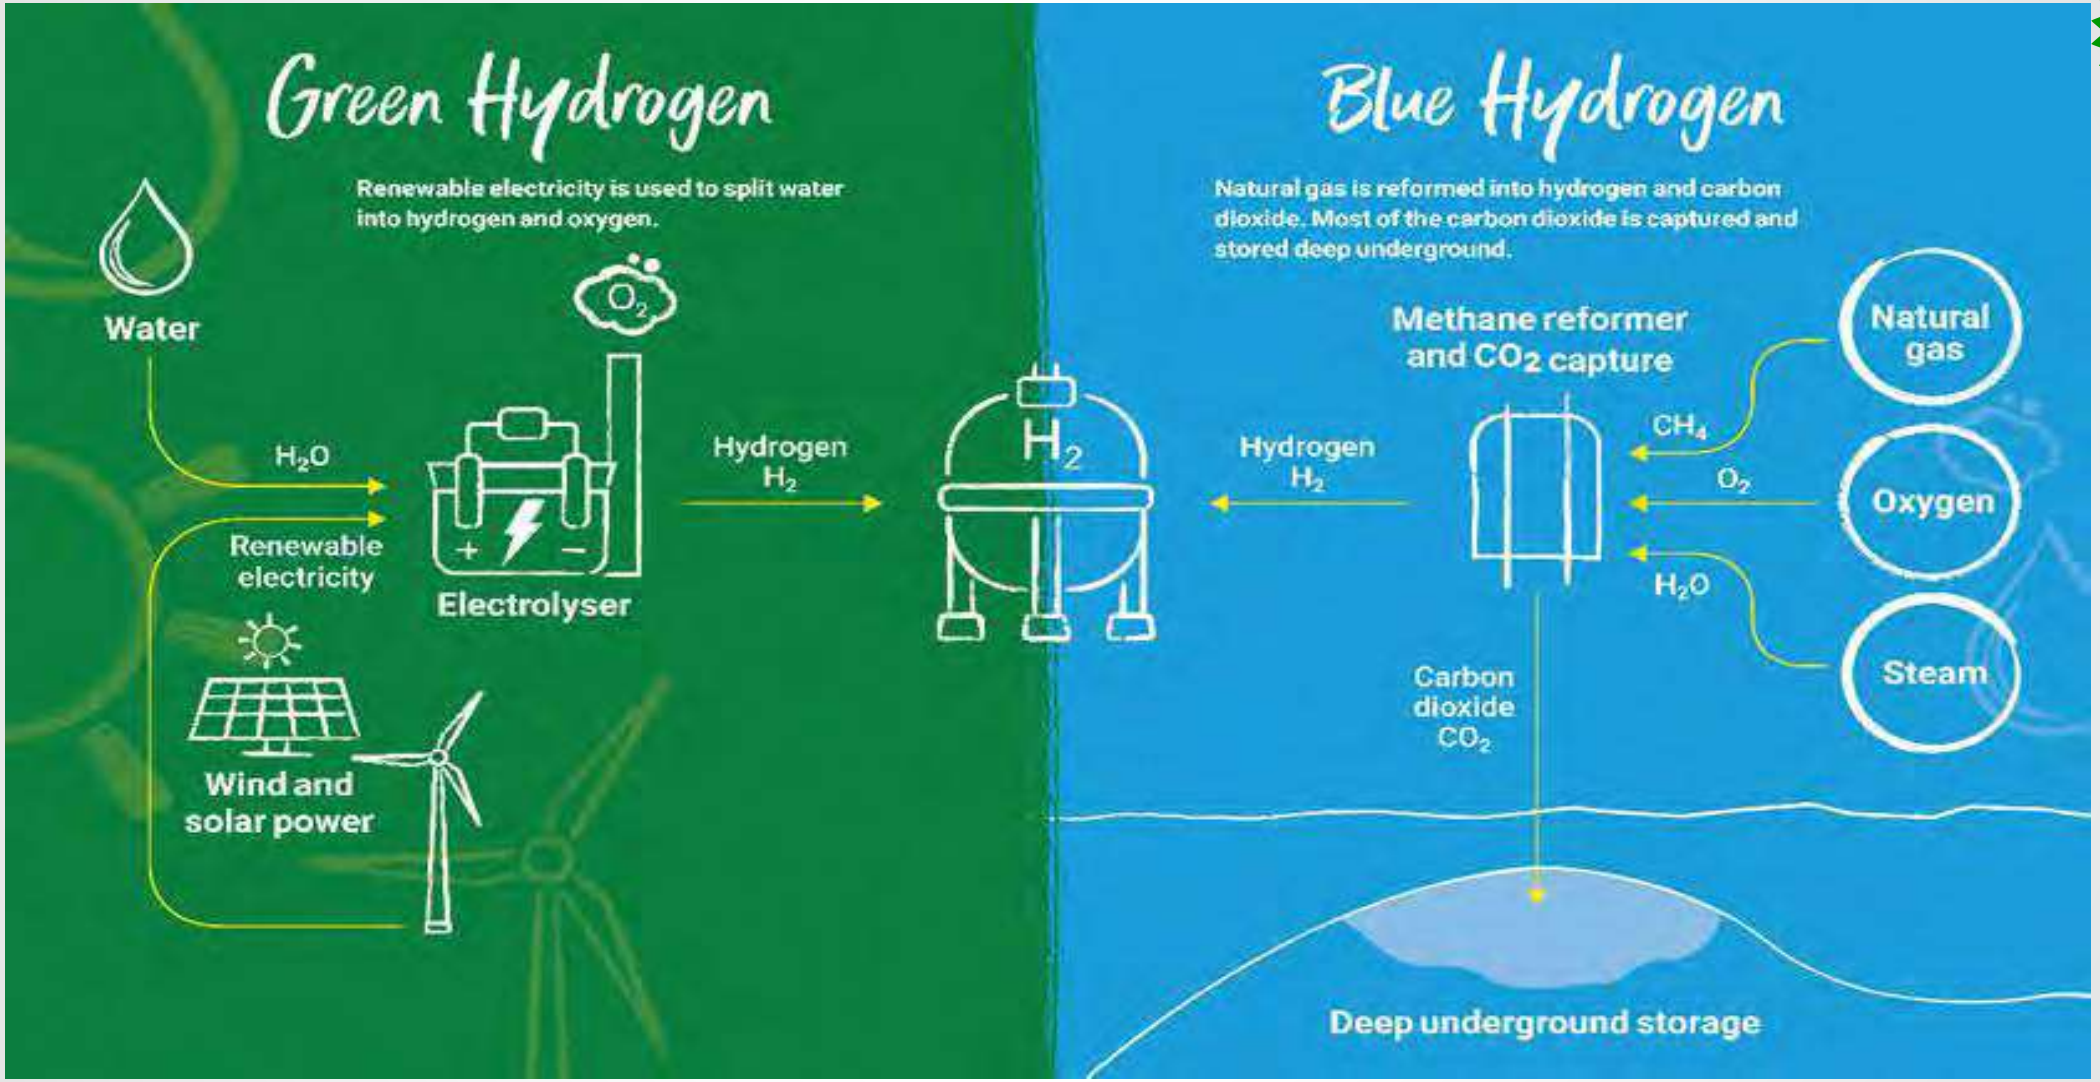
Net Zero Teesside

Lead developers of NZT Power

HyGreen Teesside

Developing HyGreen Teesside





What is H2 Teesside?

- H2Teesside aims to be **one of the biggest blue hydrogen production facilities in the UK**, delivering economic growth for Teesside and the domestically-produced low carbon hydrogen that the UK needs.
- Targeting **1.2 GW of low carbon energy production by 2030** - developed in two phases – each phase up to 600 MW.

- H2Teesside could deliver **over 10% of the UK Government's target of developing 10 GW of hydrogen** production by 2030.
- Capturing emissions from H2Teesside will **store two million tonnes of CO_2 per year**, equivalent to the emissions produced by heating one million households in the UK.
- We're seeing strong interest from potential industrial users (known as offtakers) for hydrogen from H2Teesside to help decarbonise industry.

Preliminary Environmental Information

- An Environmental Impact Assessment (EIA) is being undertaken to consider the potential effects of H2Teesside on the environment and to develop measures to avoid or reduce those effects (mitigation)
- The EIA has been informed by a Scoping Opinion received from the Planning Inspectorate in May 2023.
- We have developed a Preliminary Environmental Information Report (PEIR) which sets out the potential environmental effects of H2Teesside across several different topics, based on the preliminary assessment work we've done to date.
- The PEIR is available to view as part of this consultation and will be updated to form an updated EIA within the Environmental Statement which will accompany the DCO application.

DCO Application Process

- The Secretary of State for Energy Security and Net Zero has directed that H2Teesside is a project of national significance which should be consented through a type of planning consent called a Development Consent Order (DCO).
- Secretary of State for Energy Security and Net Zero ultimately responsible for deciding whether development consent should be granted.
- Local Authorities play a key role in the process.

EIA Scoping Opinion
17 May 23

Statutory consultation
14 Sept – 26 Oct

Have regard to consultation responses, prepare DCO application

Submit DCO application
Early 2024

PEIR Submitted

Timeline – application onwards

Early 2024	We plan to submit our Development Consent Order application to the Planning Inspectorate. They will review the application to determine whether it should be accepted for examination and will invite Interested Parties to submit representations.
Mid 2024	Six month examination period starts.
Late 2024	The Planning Inspectorate will conclude their examination of our DCO application.
2025	The Secretary of State will announce their decision as to whether to grant development consent for H2Teesside.
	Subject to the DCO application being granted, construction of H2Teesside is planned to commence in 2025.
2028	It is planned that H2Teesside would start commissioning by 2028.

Statutory consultation

- Consultation is a key part of the DCO process.
- Our statutory consultation will run from 14 September to 26 October.
- We'll review all consultation responses and prepare a Consultation Report showing how we have considered the feedback received and any changes made as a result.

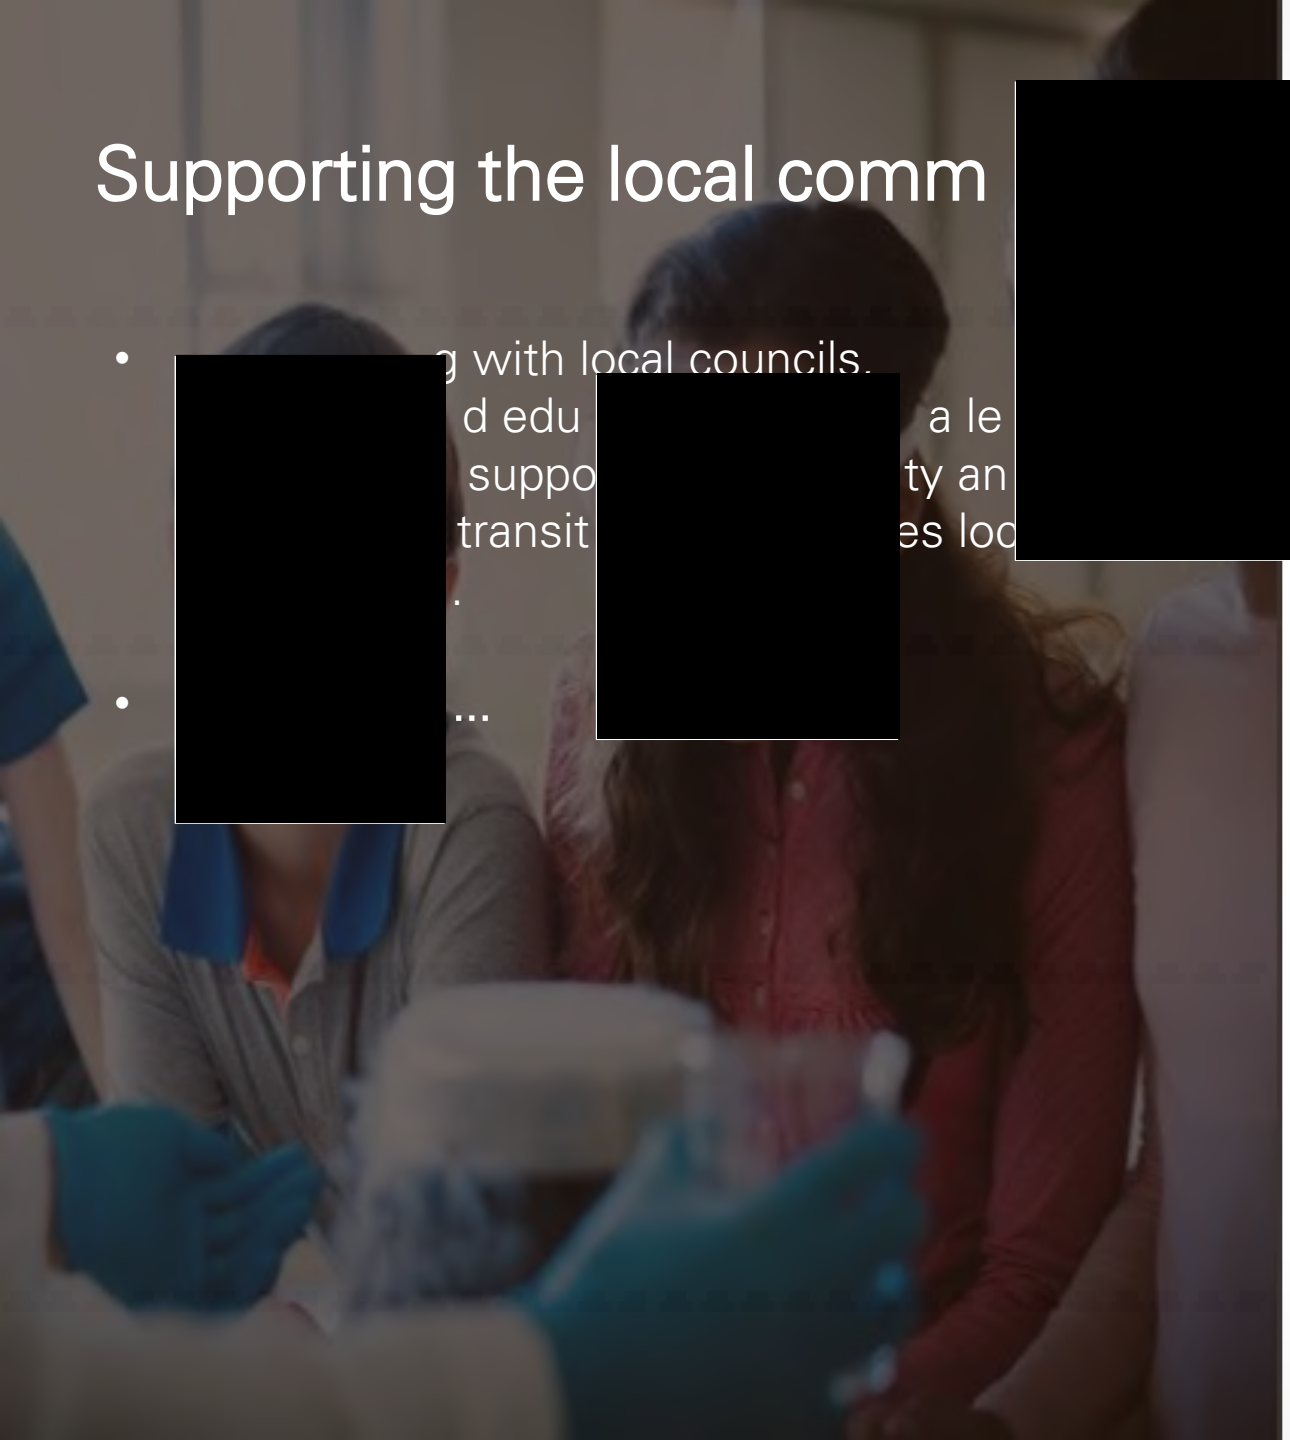
In-person consultation events

Public webinar



The team can be contacted at 0800 0803028, info@h2teesside.net or FREEPOST H2Teesside if anyone needs help accessing our consultation.

Benefits for Teesside

- bp's plans for H2Teesside, HyGreen Teesside and NZT Power can create high-quality jobs in both construction and operation phases, support local education, skills development and catalyze a highly skilled UK-based hydrogen and CCS supply chain.
- H2Teesside will...
  - **Support economic development and regeneration** in the Teesside area, strengthening Teesside's development into the UK's leading hydrogen hub.
  - Support the development of a **highly skilled UK-based hydrogen supply chain.**
  - Help safeguard jobs in existing local industries, by helping Teesside **decarbonise its industry and attract new businesses to the region.**
  - **Support approximately 1300 jobs** (direct and indirect) during its construction phase. It will also support up to 130 permanent jobs once both phases are operational.
  - Assist with the **regeneration of the former steelworks site.**

Supporting the local comm

- g with local councils.
  d edu a le
  suppo ty an
  transit es loc
  .
- ...

- Investing £19.5 million in social investment programmes including community education and skills initiatives with aims to reach more than 5,000 people.
- Supporting the development of the new Clean Energy Education Hub at Redcar & Cleveland College, which also includes funding a Clean Energy Technician scholarship programme which offers 21 students the chance to earn while they learn on a two-year engineering programme.
- Expanding our collaboration with the Skills Builder Partnership to support schools in Teesside to help primary school students to build essential future life skills.
- Supporting local communities to participate in and benefit from the energy transition to net-zero in Teesside.

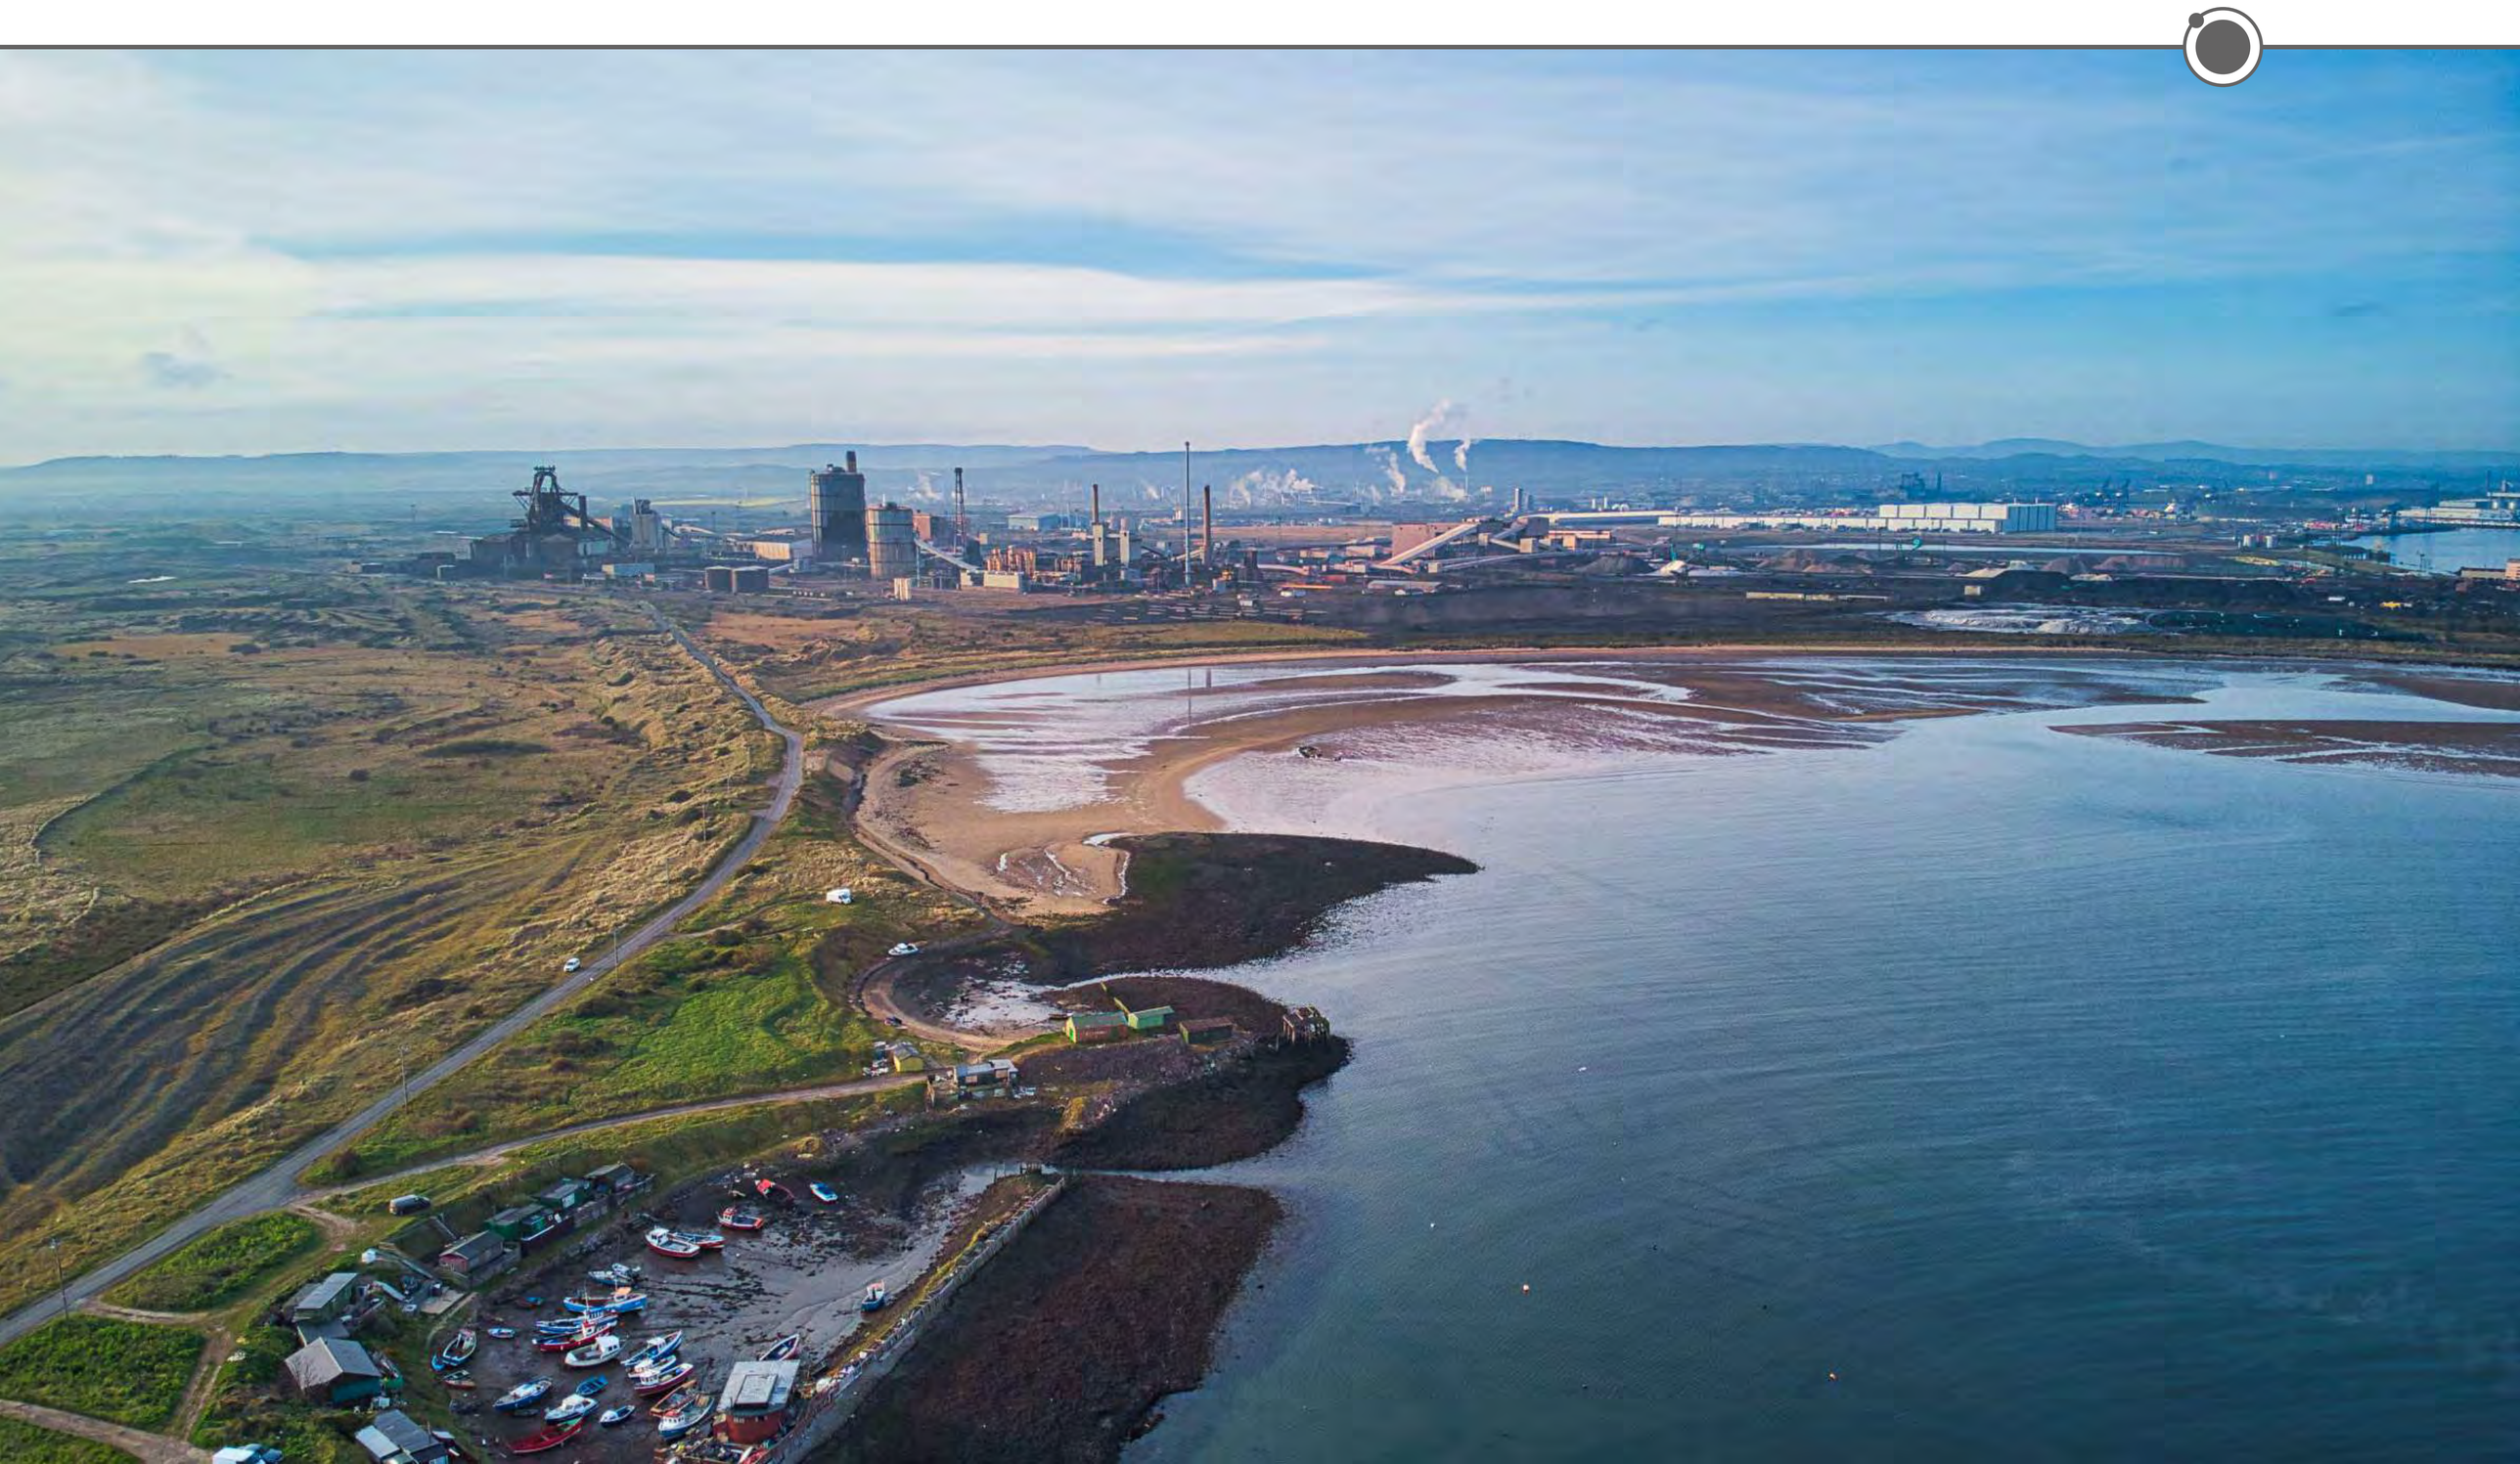
APPENDIX 11.8: FIRST CONSULTATION – INFORMATION BOARDS AND QUESTION AND ANSWER DOCUMENT.

Welcome



At bp, we're taking action through transformative projects that will help us to achieve our net zero ambitions.

We're backing hydrogen with carbon capture and storage to help decarbonise industry in Teesside and the UK.
As part of this, we're proposing to build and operate H2Teesside – a blue hydrogen production facility on Teesside.

Hydrogen is set to play an essential role in decarbonising industries in the UK, particularly those that are difficult to electrify.

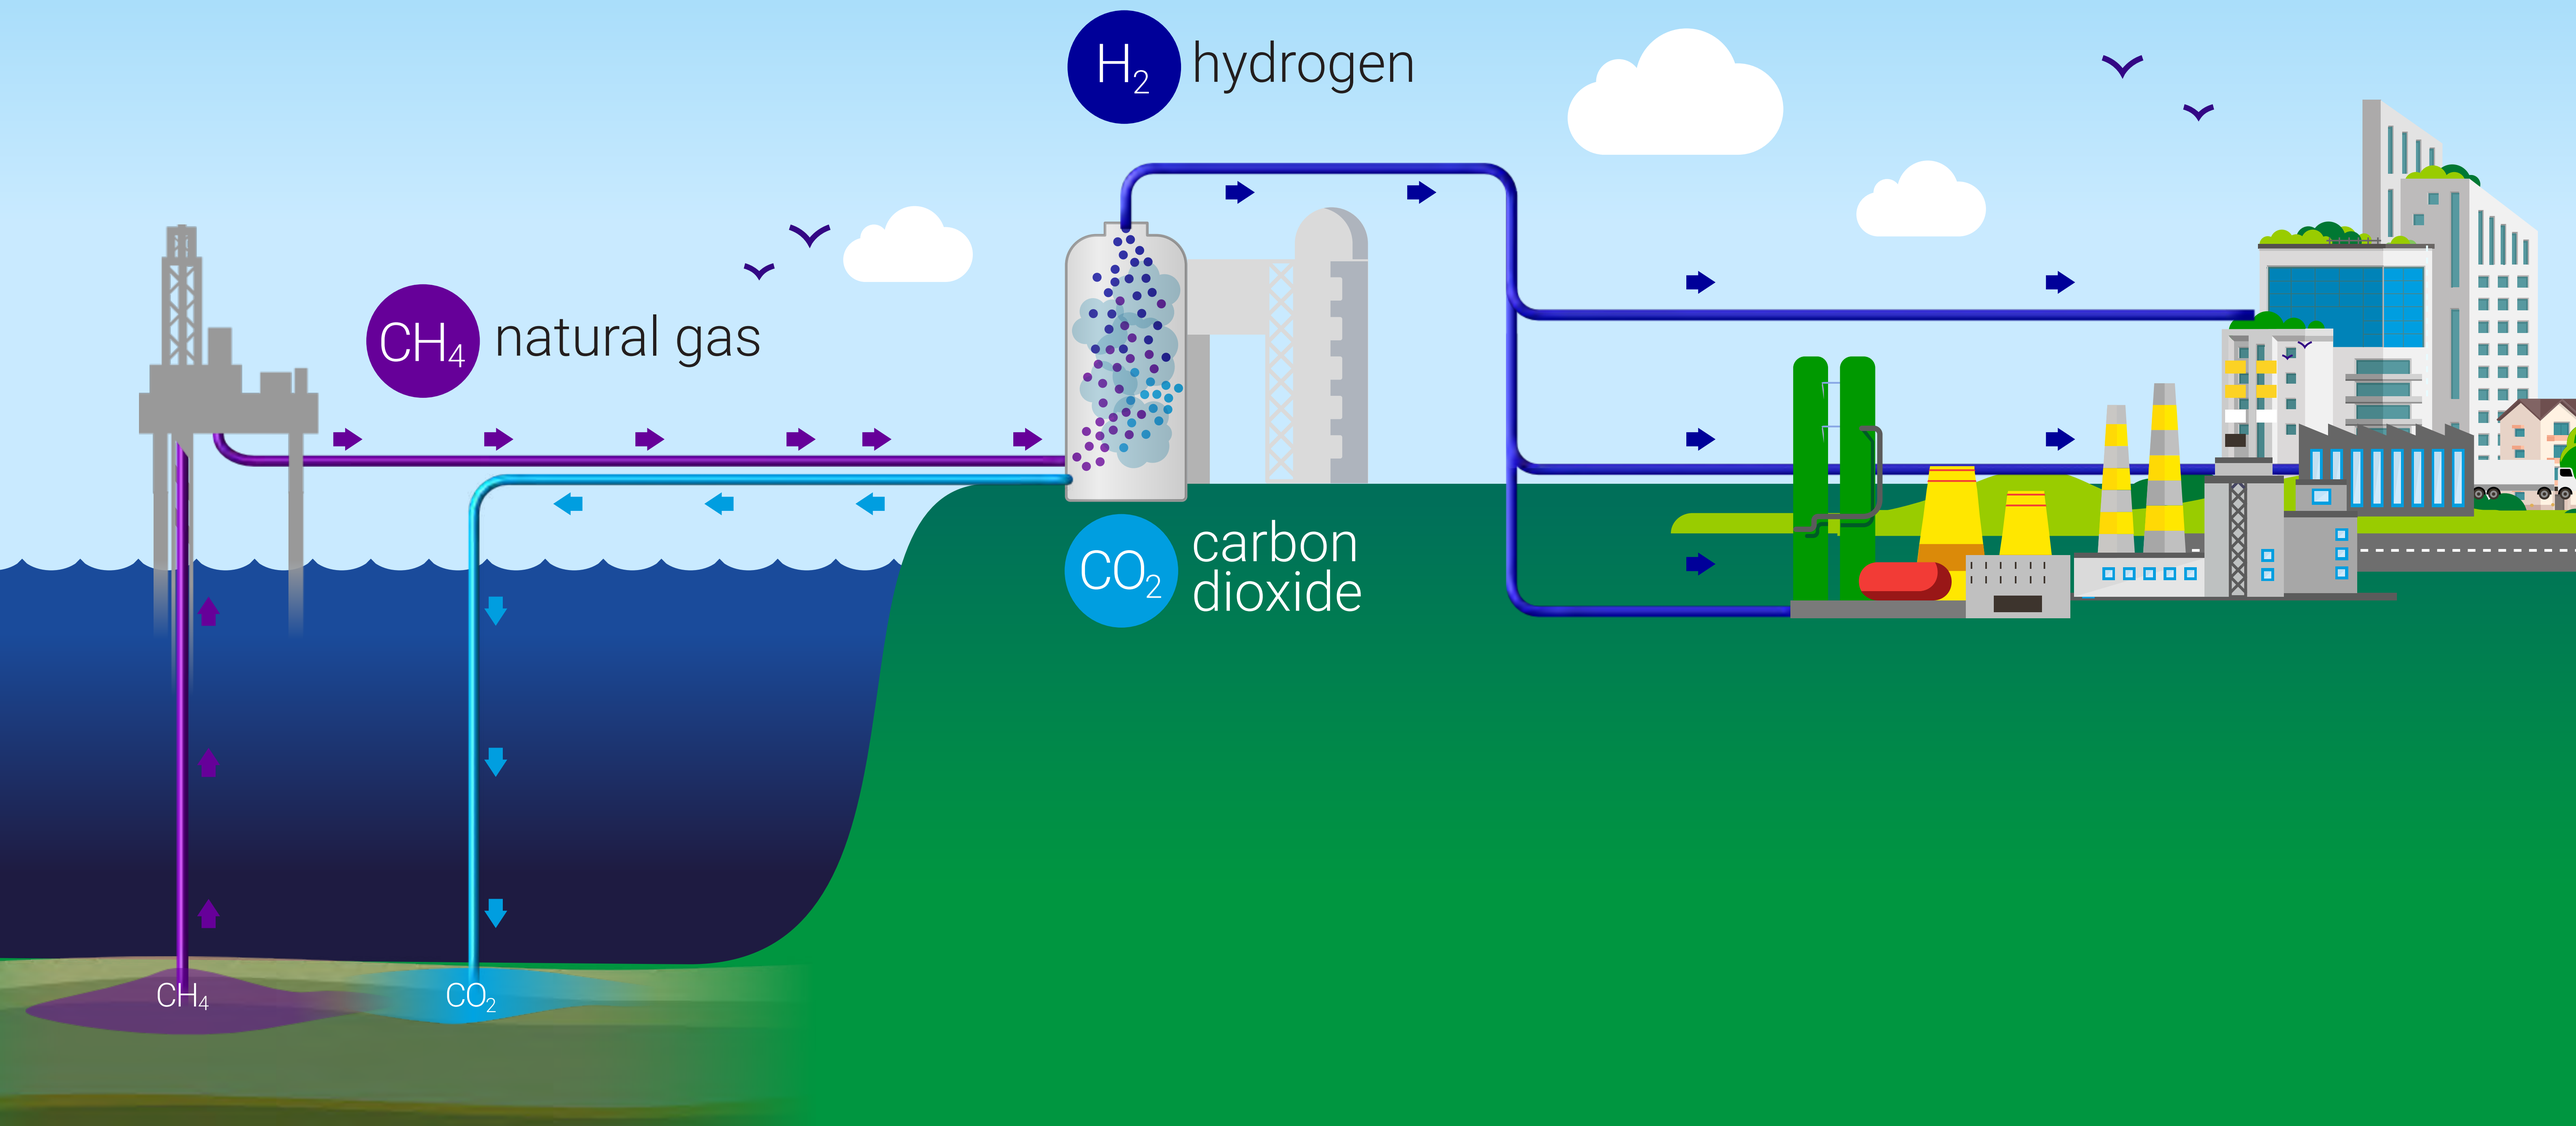
H2Teesside aims to be one of the biggest blue hydrogen production facilities in the UK, delivering economic growth for Teesside and the domestically-produced low carbon hydrogen that the UK needs.

Along with its sister project HyGreen Teesside and a number of other proposed projects in the area, H2Teesside can strengthen Teesside's development into the UK's leading hydrogen hub, creating new high-quality jobs, supporting local education and skills development and kick-starting a highly-skilled UK-based hydrogen supply chain.

H2 Teesside

bp

H2Teesside is a proposed large-scale blue hydrogen production facility, to be located on derelict industrial land on Teesside.



Low carbon hydrogen can help us get to net zero:

- It can play an essential role in decarbonising industries that are difficult to electrify – for example chemicals production or as feedstock for fertiliser production.
- Blue hydrogen, integrated with carbon capture and storage, can provide the scale and reliability required for industrial processes.
- It can also be used as a low-carbon fuel for power generation.
- Hydrogen can also help to decarbonise transport, such as heavy-duty fleets.

Hydrogen will be key to a net zero future, but does not occur in sufficient quantities in nature. This means it must be produced through industrial practices.

What is Blue Hydrogen?

- Blue hydrogen, sometimes referred to as carbon capture and storage enabled low carbon hydrogen, is hydrogen that is obtained from natural gas (methane).
- H2Teesside will convert methane in natural gas into CO_2 and H_2.
- At least 95% of the CO_2 produced as part of this process will be captured and stored permanently beneath the North Sea, preventing it from entering the atmosphere.
- H2Teesside will capture and send for storage approximately two million tonnes of CO_2 per year.

H2 Teesside

bp

Capturing carbon

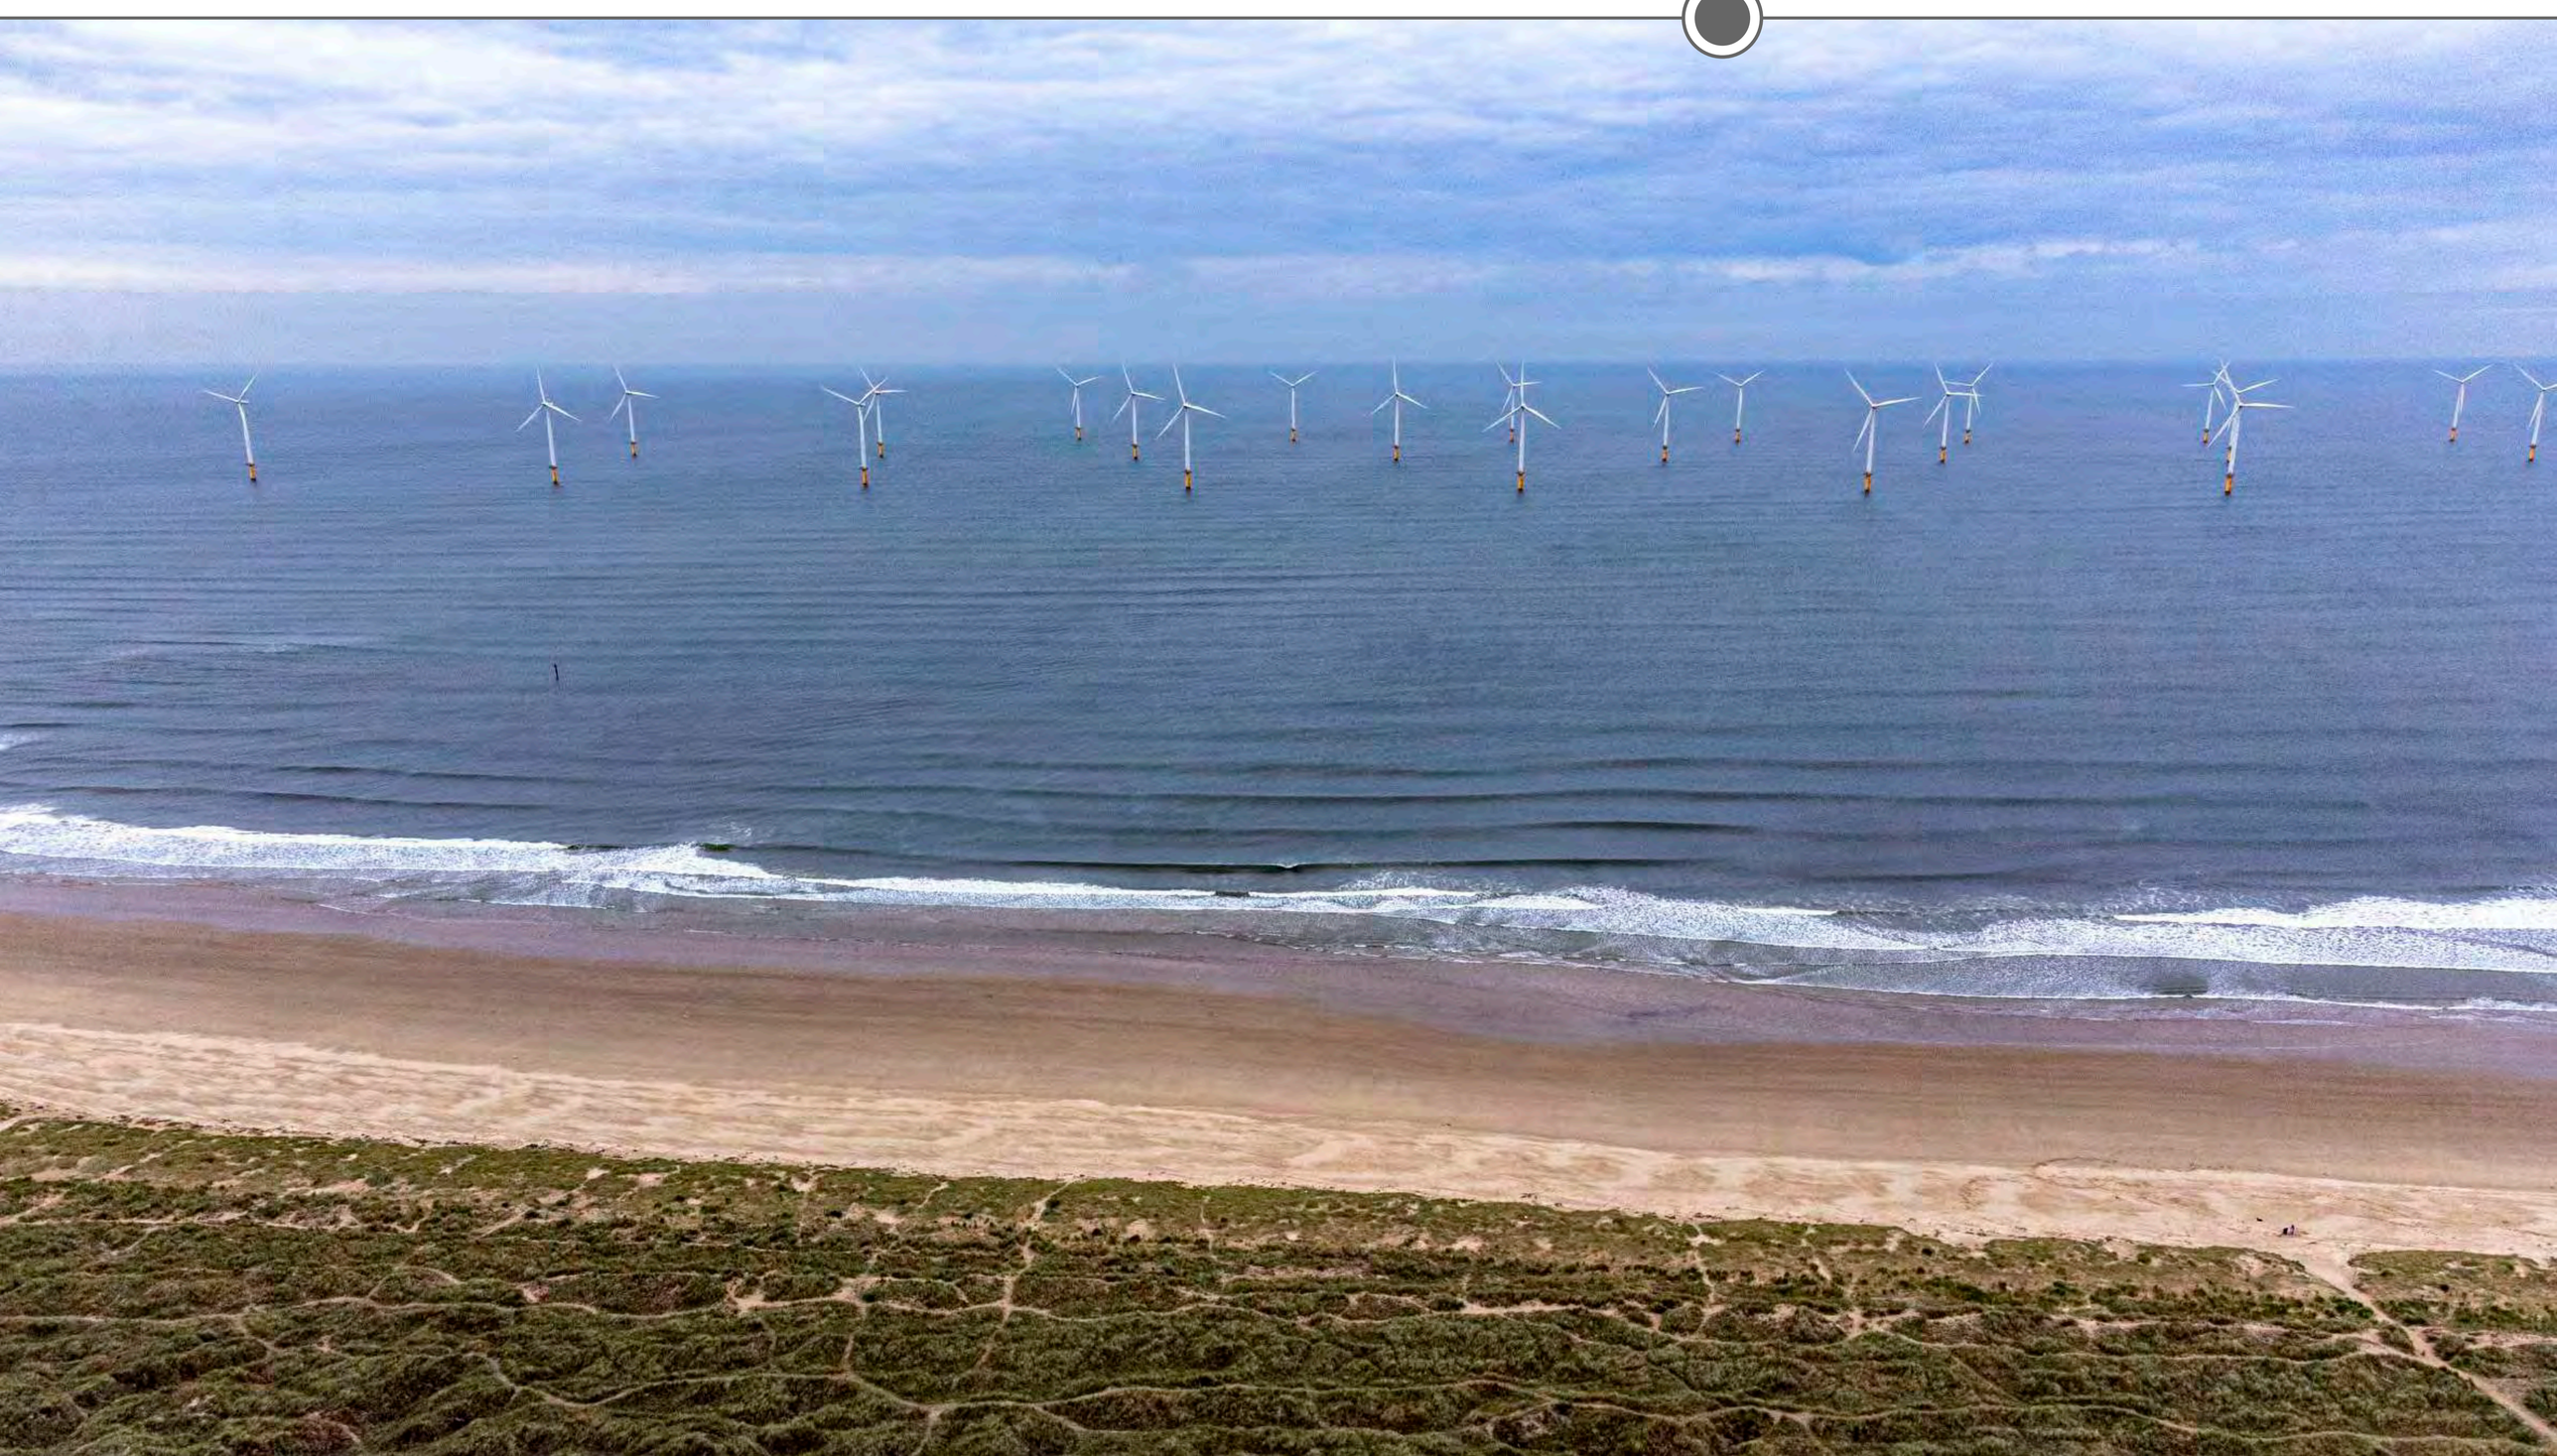
Carbon Capture and Storage (CCS) is the term for a group of technologies that remove CO_2 from sources such as industrial processes and power plants, transport it – most often by pipeline – and then securely store it. These technologies remove the majority of CO_2 emissions at source.

CO_2 is compressed, transported, and injected into rock formations. These rock formations have interconnected pores where the CO_2 becomes trapped and locked in place, preventing it from being released into the atmosphere.

H2Teesside and CCS

The CO_2 captured by H2Teesside will be sent for secure long-term storage to the **Endurance store**, located approximately 145km off the coast of Teesside under the North Sea, via the **Northern Endurance Partnership pipeline**.

The Northern Endurance Partnership (NEP) is the CO_2 compression, transportation and storage project which will deliver the onshore and offshore infrastructure needed to capture carbon from a range of emitters across Teesside and the Humber and transport it to the Endurance store.



The Endurance carbon store is the name of a geological feature – a saline aquifer – under the North Sea. It has the capacity to store 450 million tonnes of CO_2.

Why blue hydrogen?

In the UK Hydrogen Strategy (published August 2021), the UK Government set out an approach to support green hydrogen and blue hydrogen in parallel, aiming to enable the rapid growth of the sector while bringing costs down.

Producing green hydrogen relies on the availability of a sufficient, reliable supply of low carbon electricity, produced via methods such as wind and solar power. The current scale at which renewable and low carbon energy is produced, presents significant challenges to producing green hydrogen at an industrial scale, in the timescales in which it is required.

Blue hydrogen is being promoted as a necessary and low cost option, which can make use of existing infrastructure across the Teesside region, advancing the UK's energy transition.

H2 Teesside

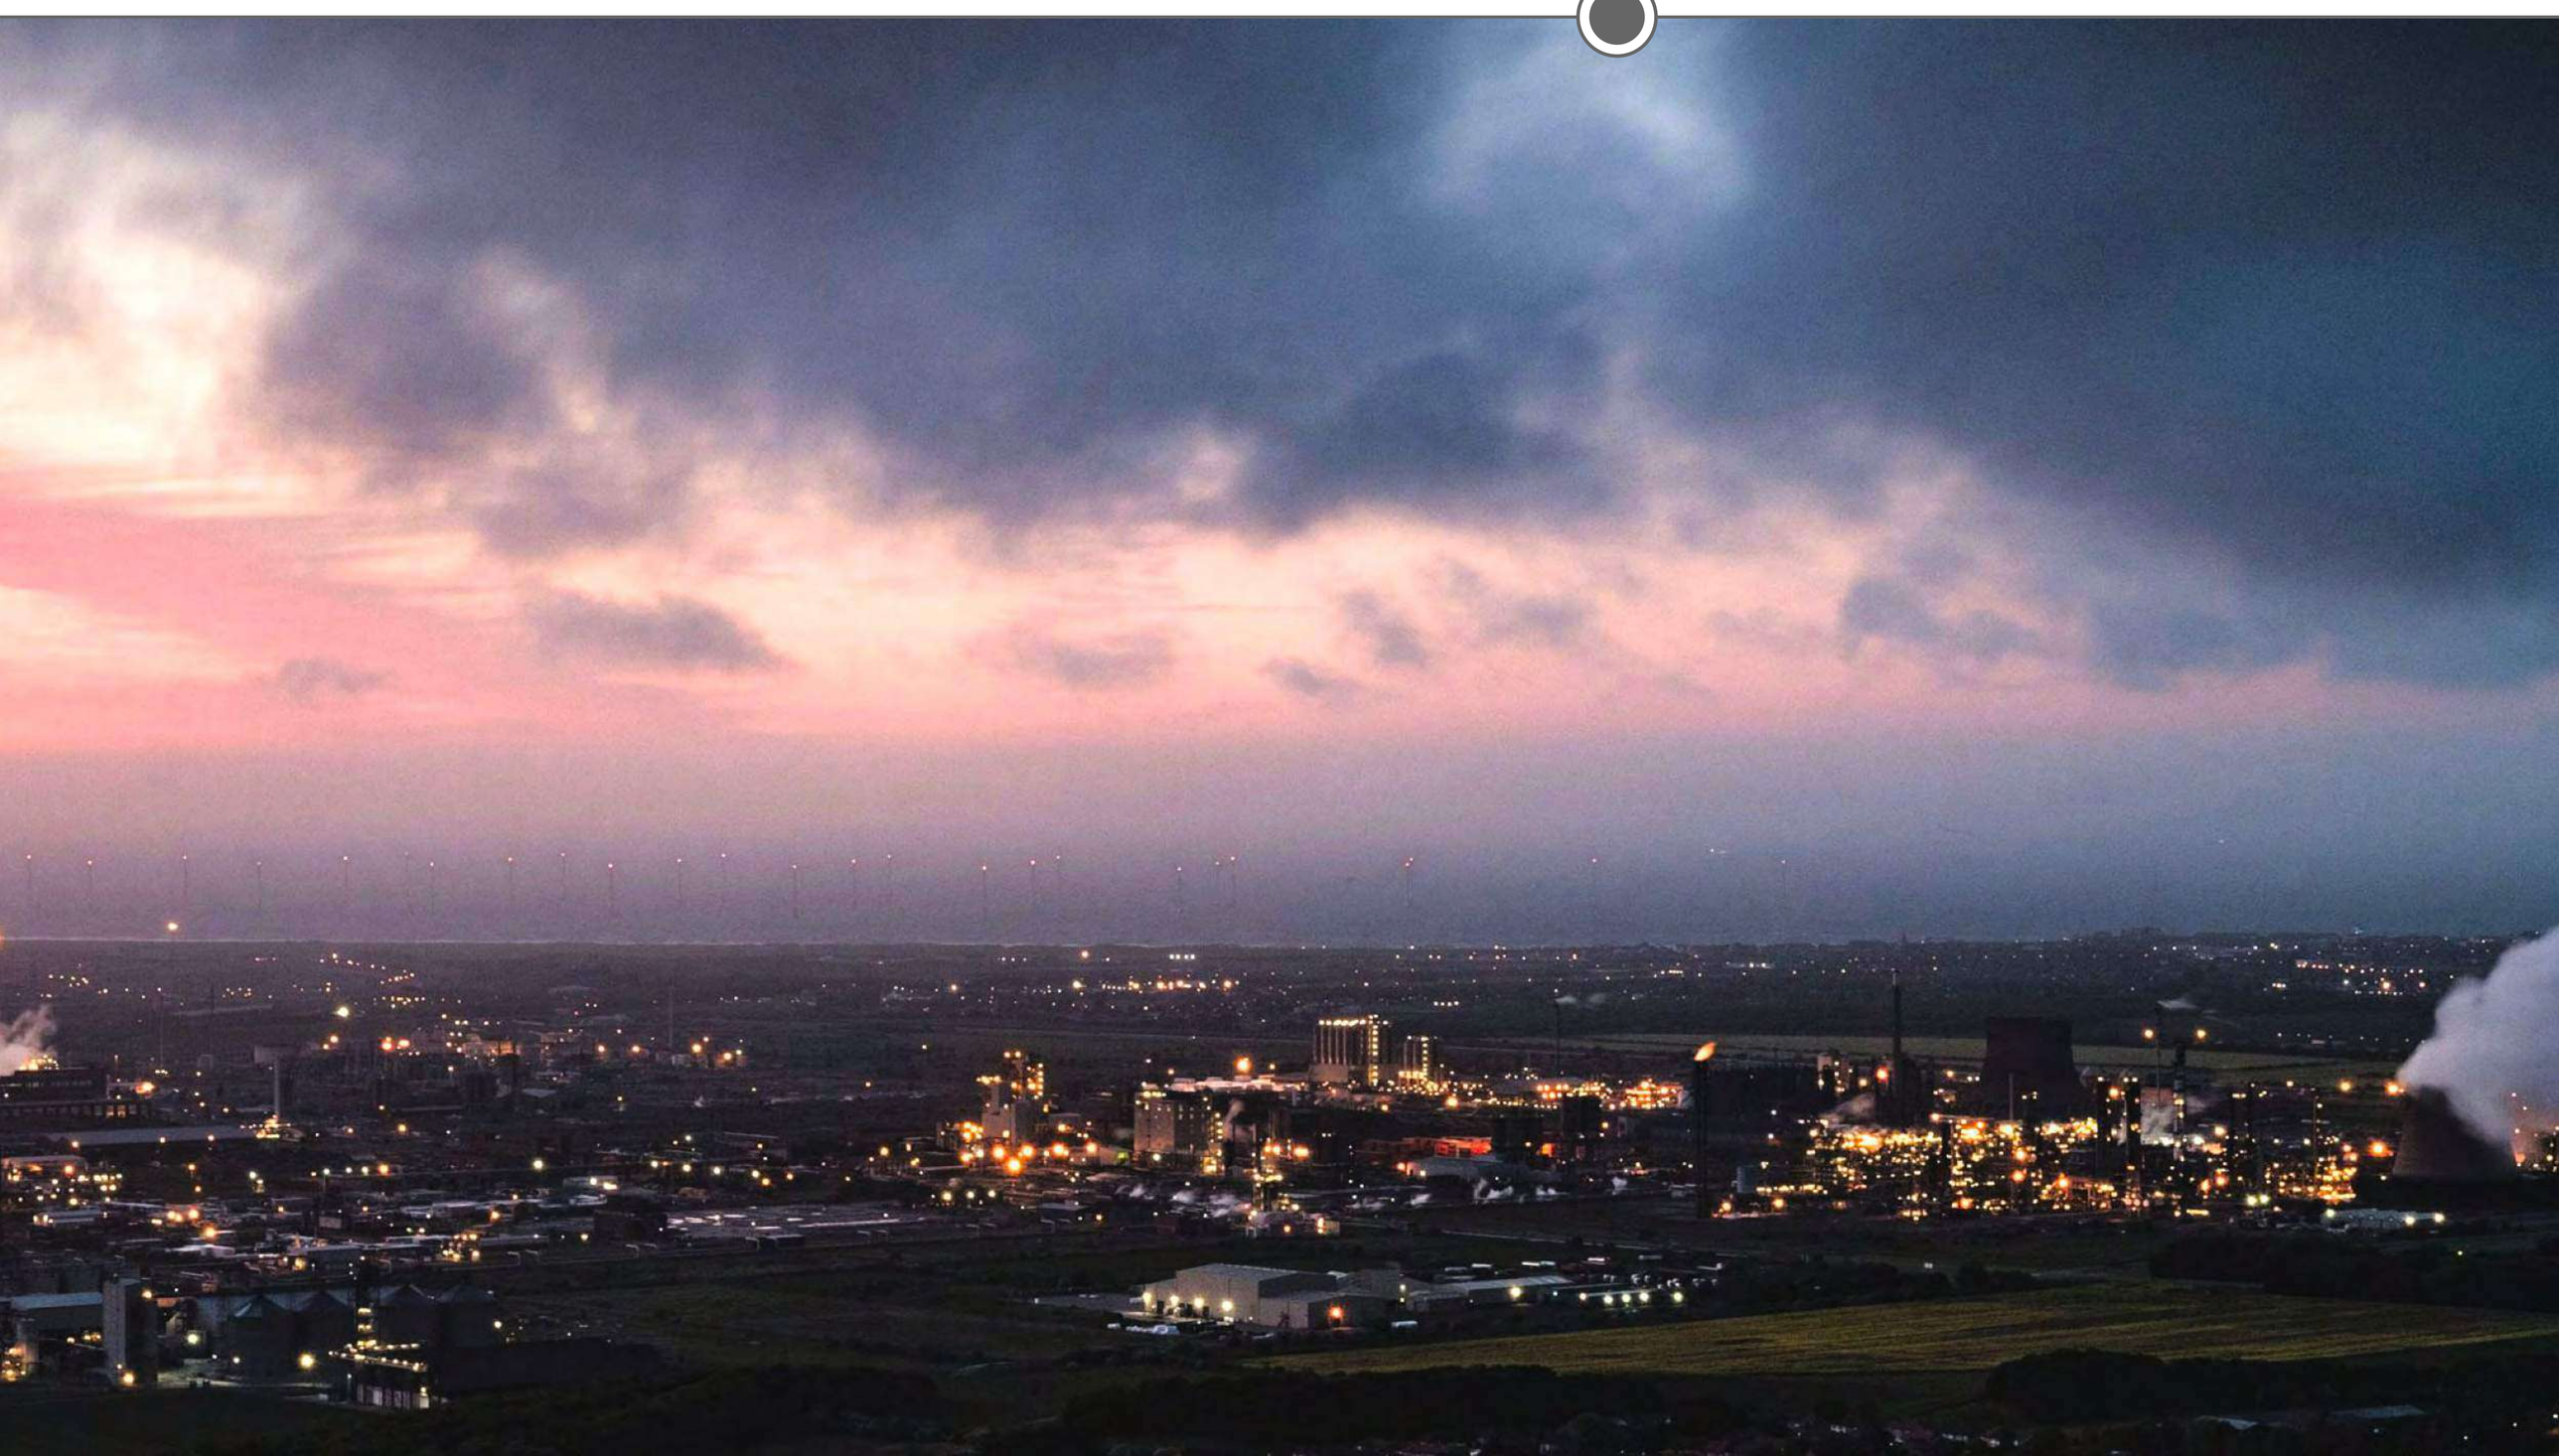
bp

Why Teesside?

Teesside has a long and proud history of industrial activity, ranging from steelmaking to chemicals. The region continues to play a key role in UK industry today, with Teesside's leading industrial businesses contributing millions of pounds to the local and UK economy each year.

Key to achieving the UK government's commitment to net zero by 2050 will be ensuring carbon intensive sectors in areas like Teesside, which accounts for around 5% of the UK's industrial emissions, are able to decarbonise.

The Teesside industrial cluster is a tightly packed area, making it a great location to decarbonise effectively and efficiently. Low carbon blue hydrogen produced at H2Teesside will help surrounding industrial companies meet their commitments to reducing their greenhouse gas emissions, and support the decarbonisation of Teesside's industry.



We're seeing strong interest from potential industrial users (known as offtakers) for hydrogen from H2Teesside to help decarbonise industry.

Developing a world-class hydrogen and CCS hub

Teesside is already a UK energy hub, with access to gas from UK gas fields and offshore wind supply, helping ensure national energy security. H2Teesside along with its sister project HyGreen Teesside and other proposed projects in the area can help Teesside become the UK's leading hydrogen hub.

H2Teesside could deliver over 10% of the UK Government's target of developing 10GW of hydrogen production by 2030.

The low carbon hydrogen produced by bp's projects on Teesside will play an important role in delivering on the country's bold ambitions to boost energy security.

H2 Teesside

bp

The project site

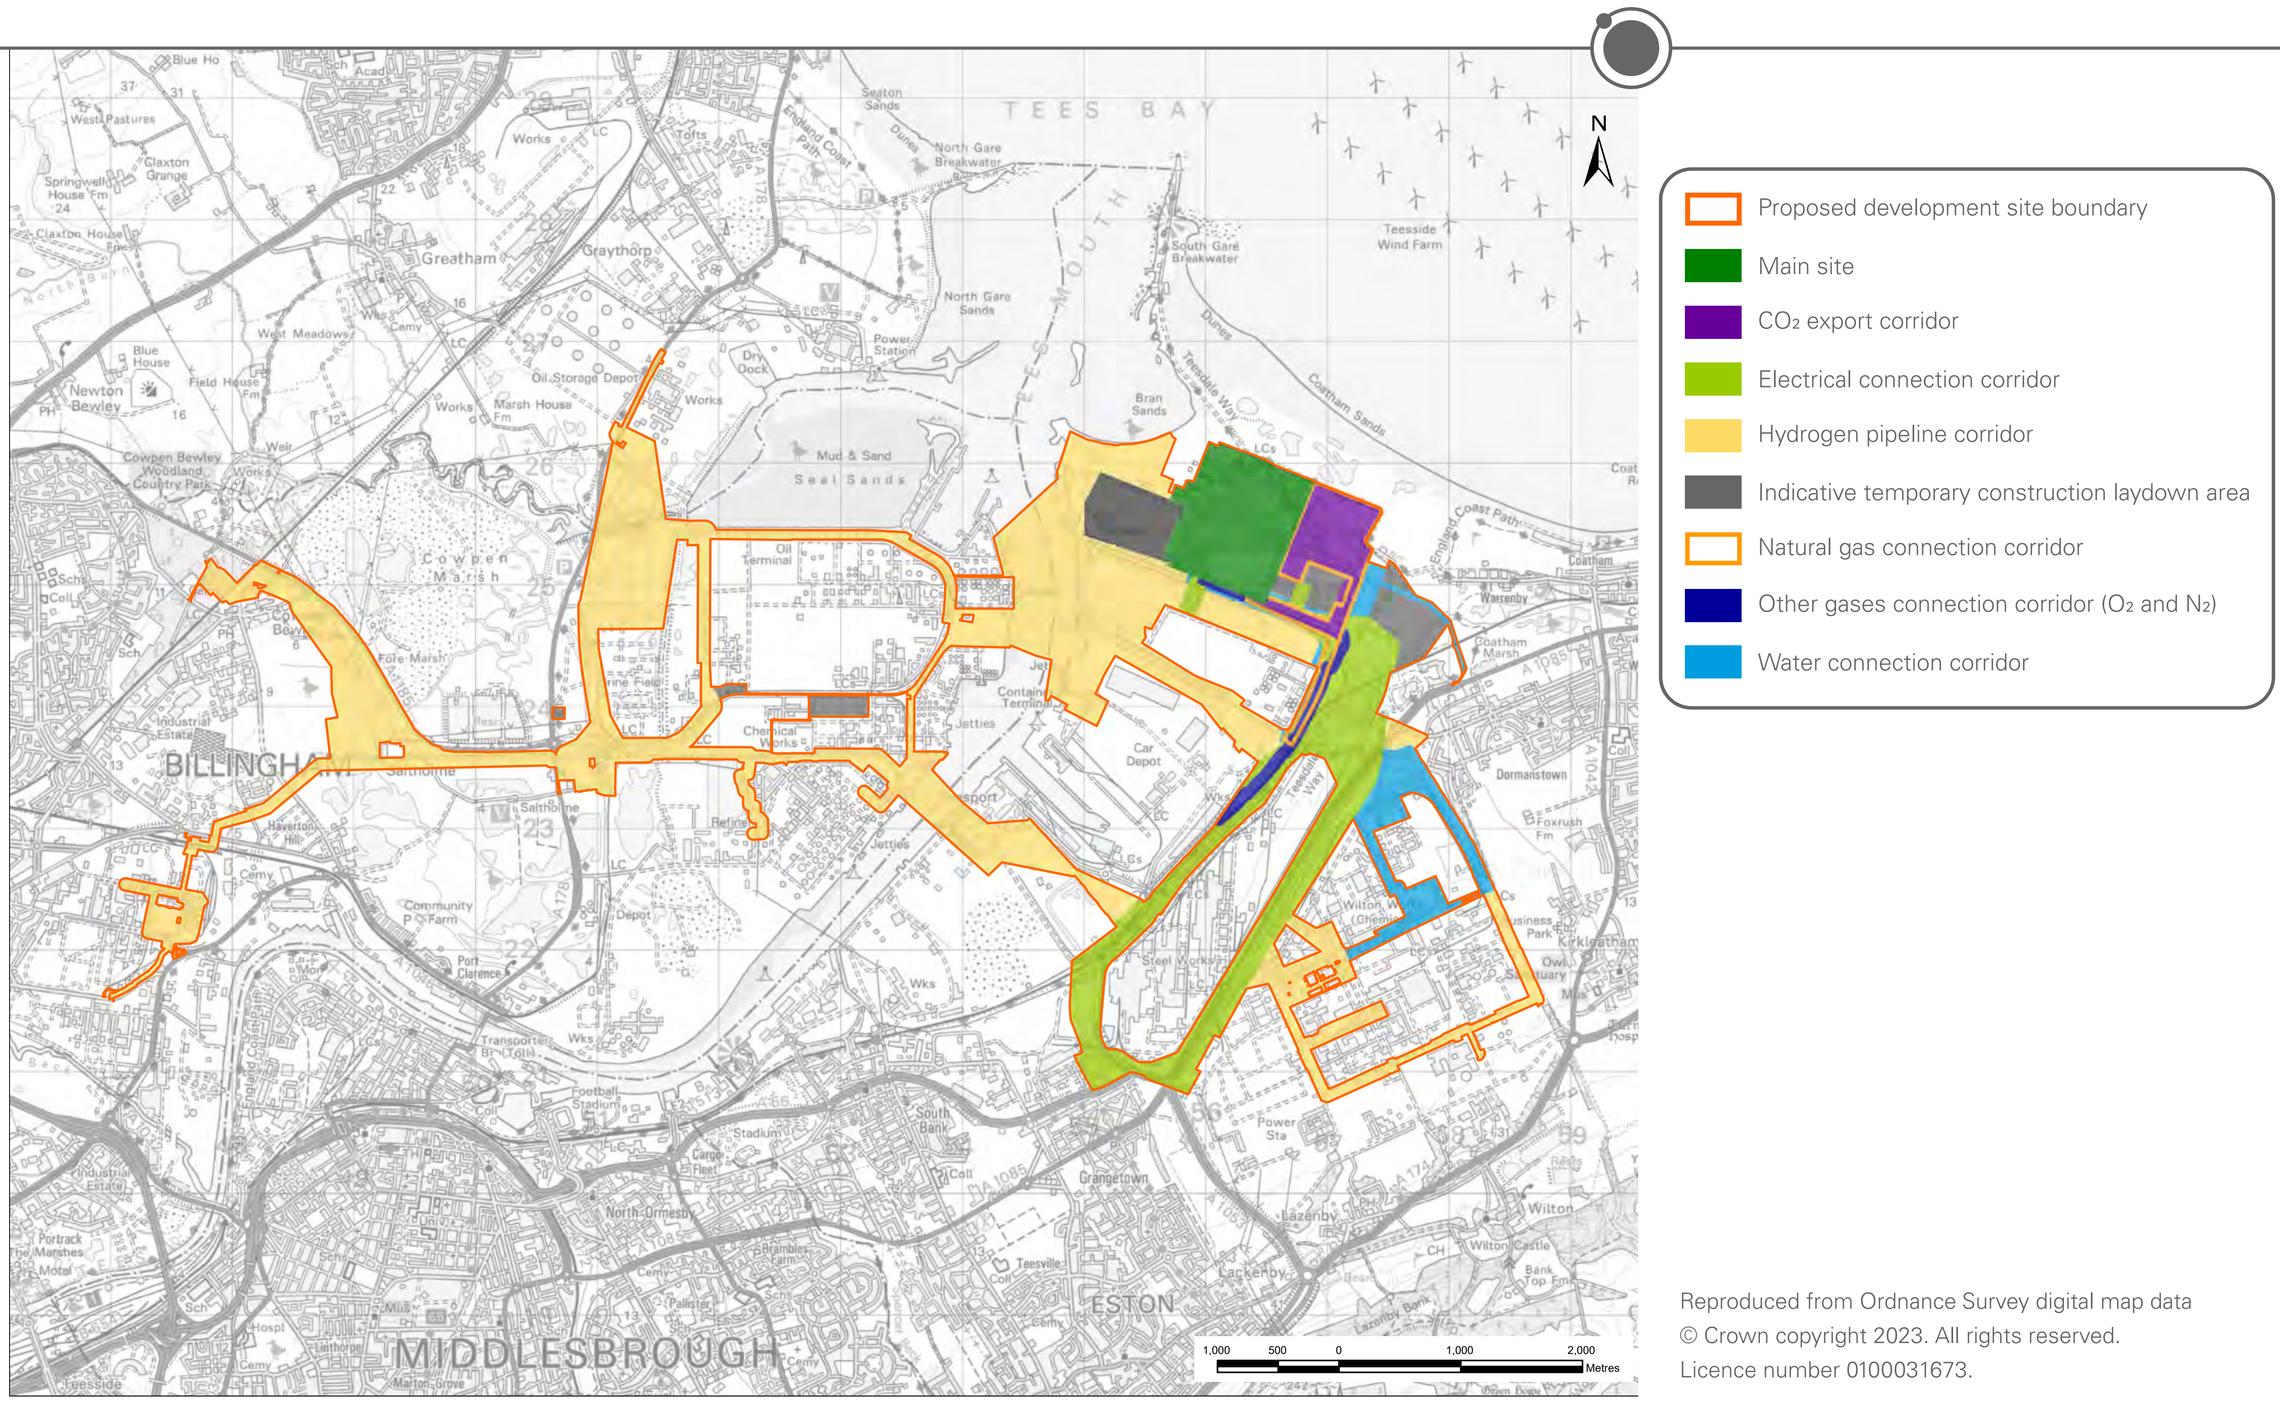
Land at the former Redcar Steelworks will contain the main blue hydrogen production facility and ancillary infrastructure.

The pipeline and connection corridors

To allow the facility to operate and connect to hydrogen offtakers, a number of pipeline connections need to be developed. These consist of five main connections, corridors for which have been identified:

Hydrogen export pipeline: This pipeline network would be used to transport hydrogen to potential offtakers across the Tees valley.

Natural gas supply connection: This pipeline would be used to transport natural gas from the existing national gas transmission network to the production facility.



Electrical Connection: These connections would bring electrical power to the production facility.

Water connection: These connections would be used to supply water to the production facility and to discharge treated waste water from the production facility.

CO_2 export connection: This pipeline would be used to transport CO_2 captured at H2Teesside, to the NEP development to the east. Compression, transportation and geological storage of CO_2 from H2Teesside will be managed and operated by NEP and is not part of the H2Teesside project.

Land will also be required for construction working areas and compounds, and accesses by land and water. Other connections (such as for other gases) may also be required.

Please note that these corridors, which are shown on the plan below, are areas that our pipelines and connections would be placed within. As we continue to engage with stakeholders and progress our design, we will refine and reduce these areas accordingly.

Licence number 0100031673.

Making blue hydrogen

Step 1

Natural gas would be transported to the main site via a pipeline, where it will be pre-reformed with steam over a catalyst bed, to break down the methane to carbon oxides (CO/CO_2) and hydrogen (H_2).

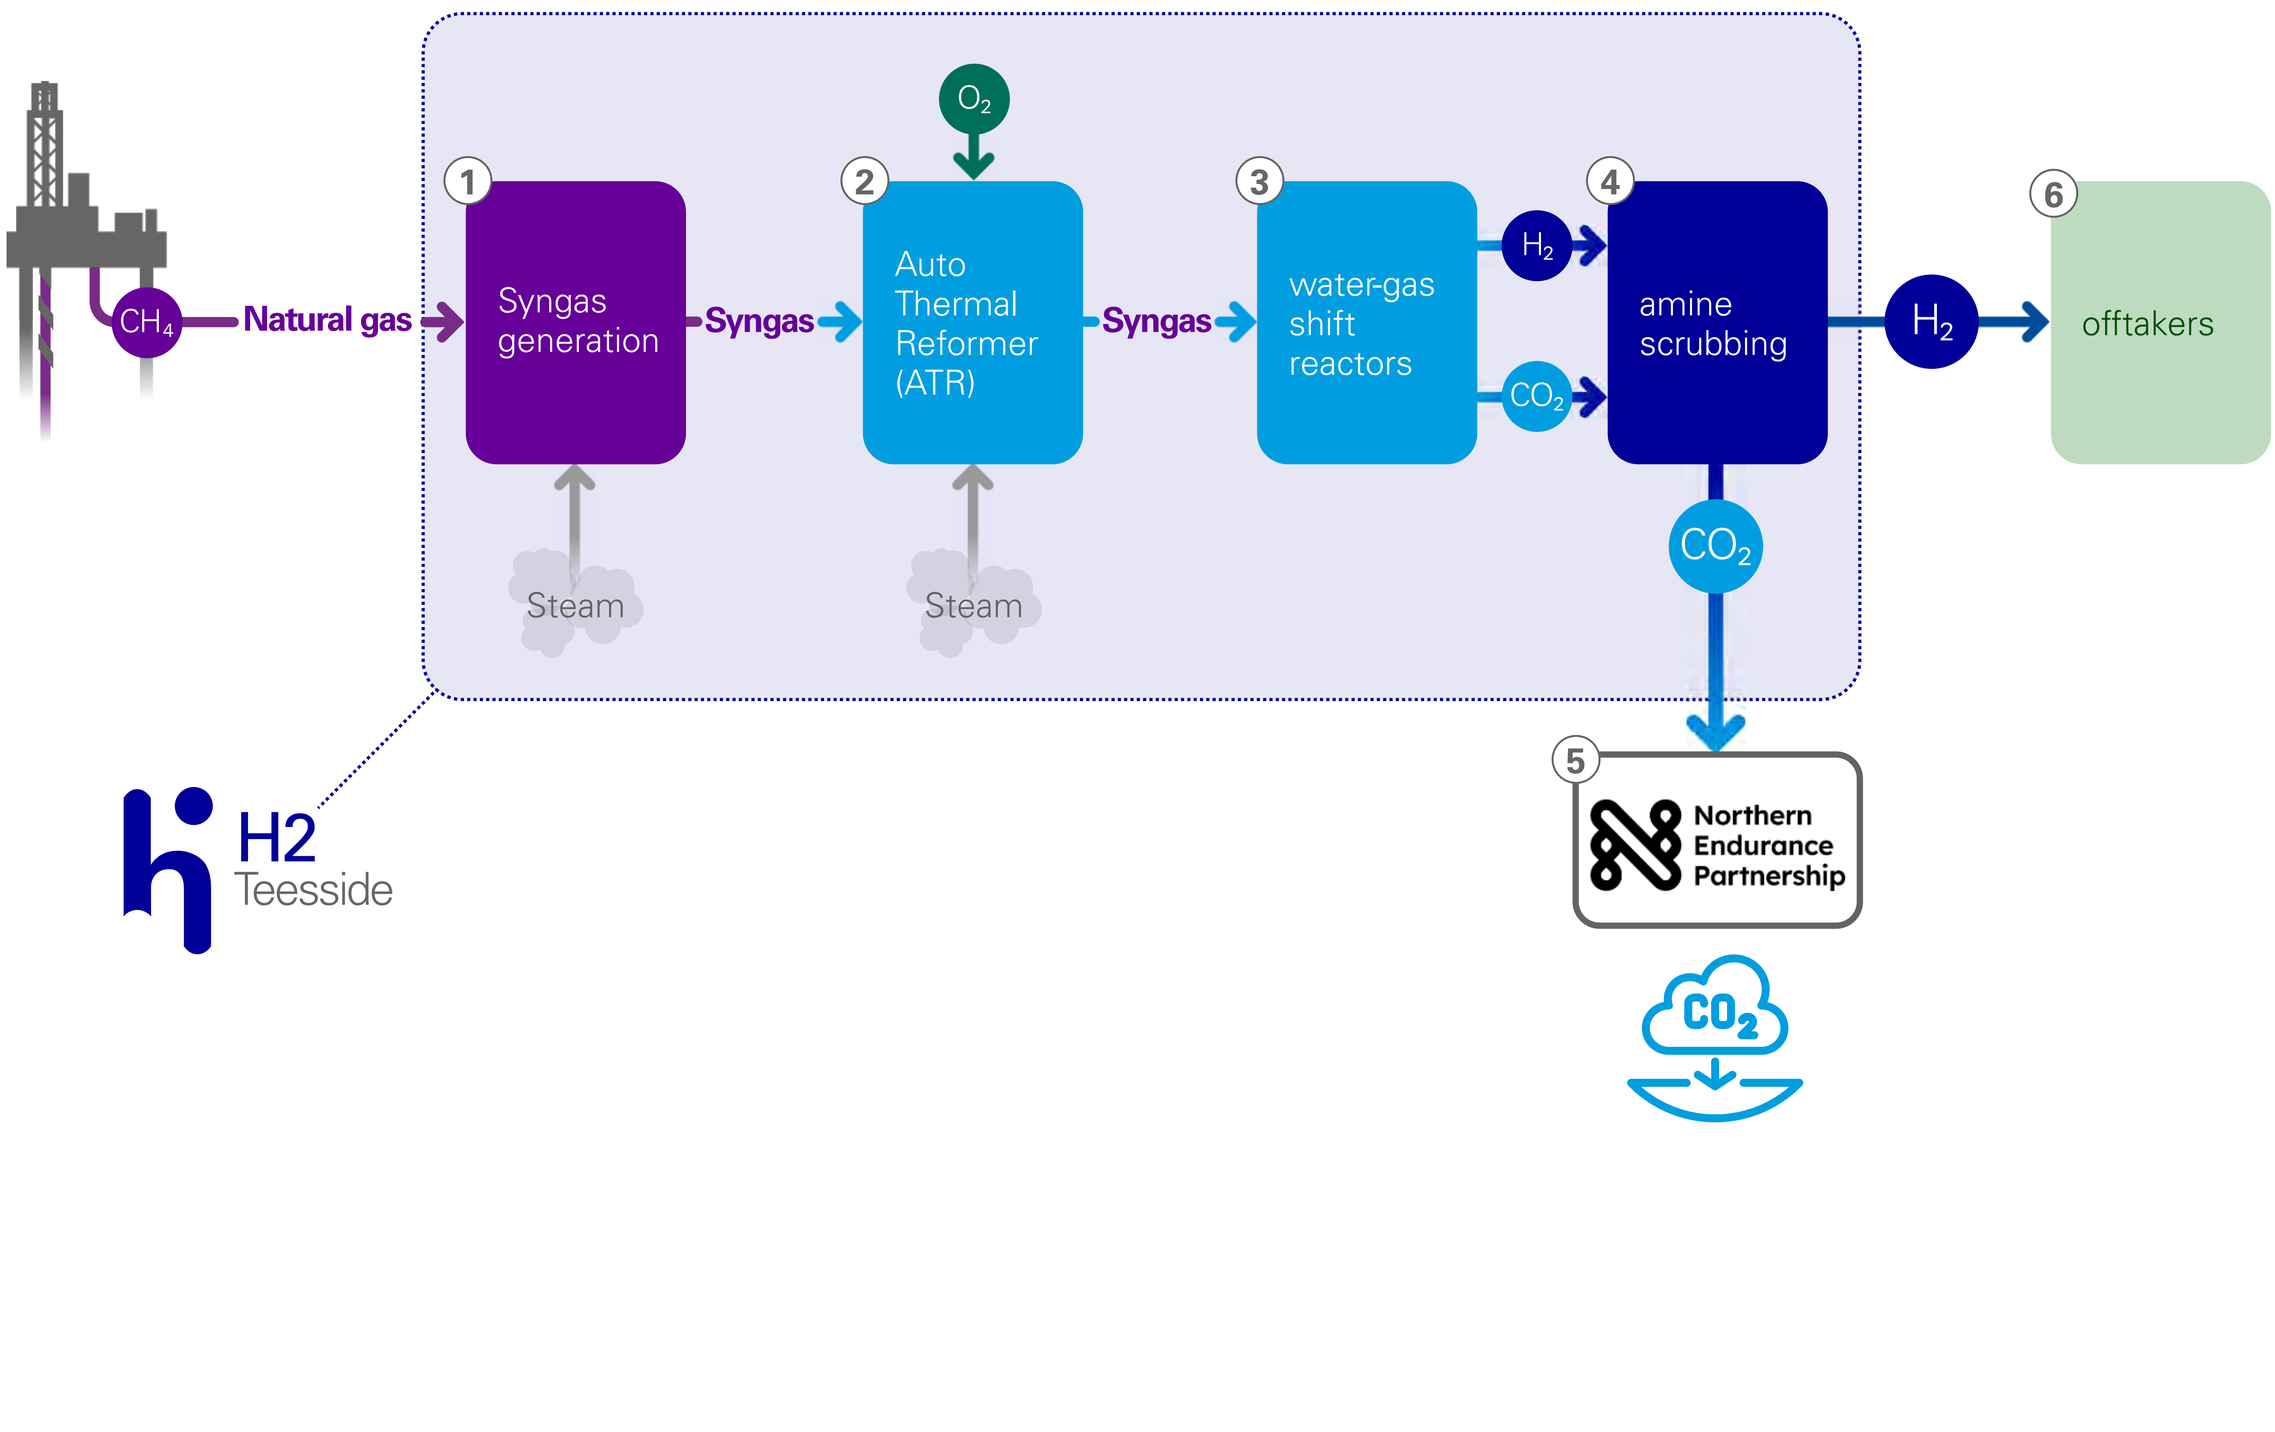
Step 2

This gas, known as syngas, would then be reformed further using pure O_2 and more steam in an Auto Thermal Reformer (ATR).

Step 3

After cooling, the syngas would be reacted in water-gas shift reactors, to generate H_2 and CO_2.

Step 4



The CO_2 would be removed from the gas via scrubbing with amine, which will be regenerated to yield a CO_2 stream.

Step 5

This CO_2 would be compressed, dehydrated and then exported utilising NEP infrastructure on the Net Zero Teesside site to the east of the Main Site. The captured CO_2 will be further compressed by NEP to be in dense phase for transportation and will be exported using infrastructure to the NEP Endurance store beneath the North Sea. The infrastructure required for export and storage is subject to a separate consent.

Step 6

The resulting low carbon H_2 would be purified and compressed and conditioned, before exporting to potential offtakers, via the new proposed hydrogen pipeline system.

H2 Teesside

bp

Preliminary Environmental Information

We are undertaking an Environmental Impact Assessment (EIA) that enables us to understand and assess the potential effects of the construction and operation of H2Teesside on local communities and the environment. It will also help us identify the ways impacts can be avoided or reduced.

The findings of our EIA will be presented in a document known as an Environmental Statement (ES), which will be submitted as part of our Development Consent Order application. To help inform this consultation, we have undertaken a preliminary assessment of the likely significant effects and details can be found in the Preliminary Environmental Information Report.

What is a Preliminary Environmental Information Report?

The Preliminary Environmental Information Report (PEIR) details our initial environmental assessment, the potential environmental effects of H2Teesside and the mitigation measures we propose to take. 'Significant effects' is a technical term, which is used in EIA to identify environmental factors that require further assessment. Identifying a 'significant effect' in the PEIR does not mean it will definitely happen. By identifying them at this stage, we can explore opportunities to manage the potentially significant effects.

Find out more

- View the 'Preliminary Environmental Information' section of our Consultation Brochure for a summary of each topic.
- Read the PEIR Non-Technical Summary that provides a shorter summary of the PEIR using less technical language.
- View the full Preliminary Environmental Information Report (PEIR).

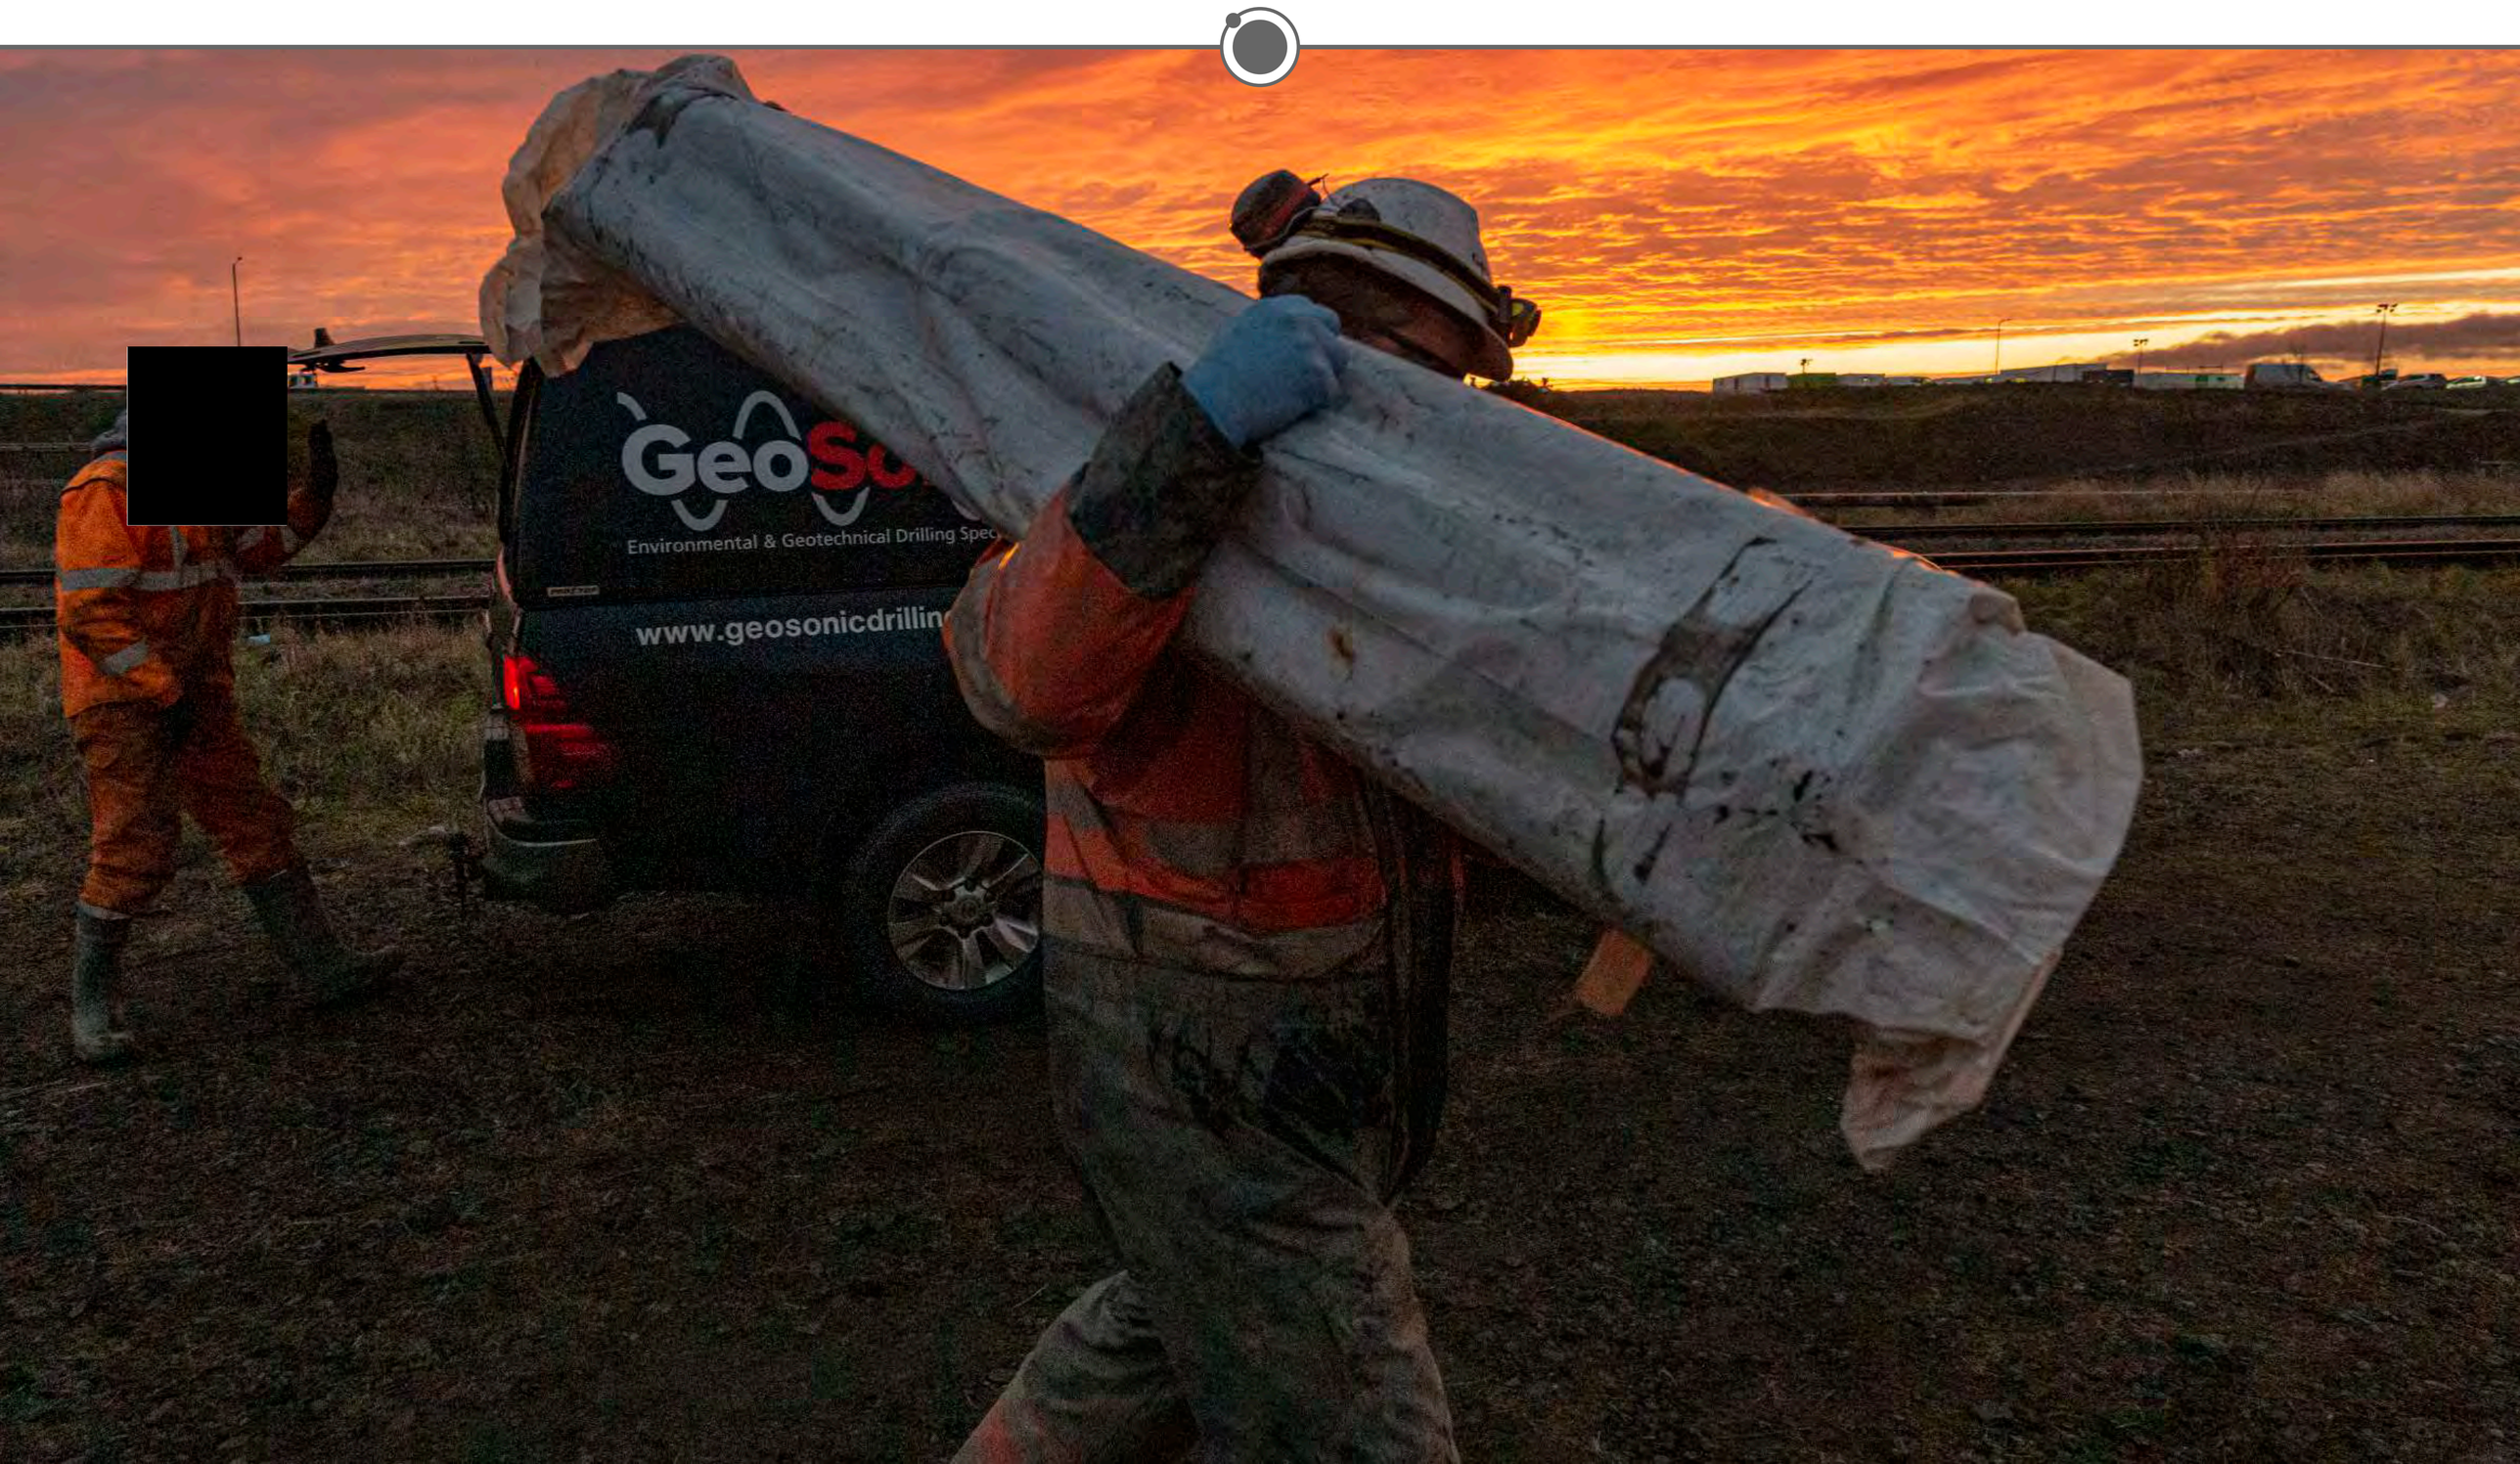
These documents are available to view at our events or online at www.h2teesside.co.uk

H2 Teesside

bp

Minimising disruption

As with any large project, we understand there may be some disruption during the construction stage, and we'll be seeking to minimise this wherever possible.



A Construction Environmental Management Plan (CEMP) will be produced as part of the DCO, which would ensure that any adverse effects of construction on the environment and local communities are minimised. The CEMP establishes a framework, within which an appointed contractor will plan, implement, and deliver environmental management, mitigation and monitoring requirements during construction.

Examples of controls and procedures in the CEMP would include:

- Measures to minimise noise and vibration, such as using quiet and low vibration equipment, acoustic barriers and considering construction methodology to reduce noise levels where possible.
- Measures for protection of any sensitive/protected species that may be encountered during construction works, to ensure compliance with relevant legislation and best practice.
- Measures to control and limit dust, such as using wheel washing for vehicles entering and leaving construction sites, and the use of road sweepers to remove any material from local roads.
- Minimising visual disturbance by ensuring temporary site lighting is only used where necessary for safety and security.

In addition to the CEMP, we will also prepare a Construction Traffic Management Plan which will set out measures to reduce the impact of traffic during the construction period, such as specifying haulage routes to keep construction traffic on the most suitable roads.

The final routeing for the project connections and the construction methodology will take account of existing apparatus and pipelines, and we will seek to avoid and manage any potential conflicts.

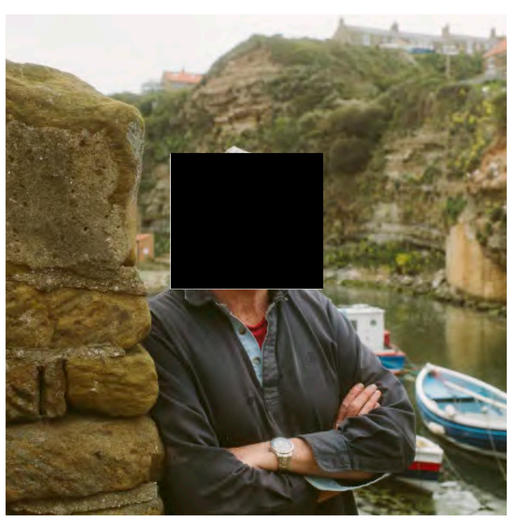
H2 Teesside

bp

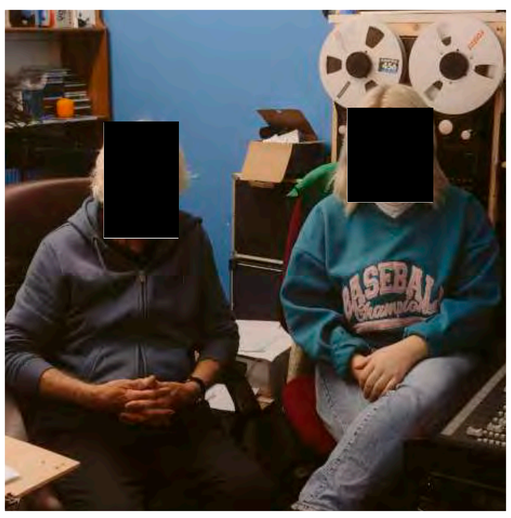
Benefits for Teesside

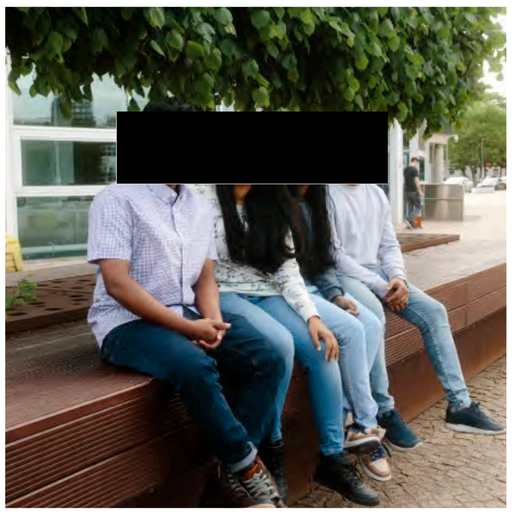
We believe our proposals have the potential to deliver significant benefits to Teesside and the local community.

H2Teesside will:



- Support economic development and regeneration in the Teesside area, strengthening Teesside's development into the UK's leading hydrogen hub.
- Support the development of a highly skilled UK-based hydrogen supply chain.
- Help safeguard jobs in existing local industries, by helping Teesside decarbonise its industry and attract new businesses to the region.
- Support approximately 1300 jobs (direct and indirect) during its construction phase. It will also support up to 130 permanent jobs once both phases are operational.
- Assist with the regeneration of the former steelworks site.





Investing in green skills

We're working with local authorities and educational institutions to create a legacy in the region. This includes:

- Investing in green skills by launching a **dedicated skills programme for H2Teesside**. The programme will provide £19.5 million in funding and aim to reach more than 5,000 people, inspiring the next generation of talent, ensuring local people benefit from job opportunities and seeding knowledge and innovation.
- Supporting the development of the new **Clean Energy Education Hub at Redcar & Cleveland College**.
- Supporting the **Redcar & Cleveland College Teesside Clean Energy Technician scholarship programme** which will offer 20 school leavers the chance to earn while they learn on a bespoke two-year engineering programme.
- Expanding our collaboration with the **Skills Builder Partnership** to support schools on Teesside. The programme brings together educators, employers and skills-building organisations around a shared approach to building the essential skills for success.

H2 Teesside

bp

The planning process

The Secretary of State for Energy Security and Net Zero has directed that H2Teesside is a project of national significance which should be consented through a type of planning consent called a Development Consent Order (DCO).

We therefore need to make an application for a DCO to the Planning Inspectorate who are responsible for administering the application process on behalf of the Secretary of State, who is ultimately responsible for deciding whether development consent should be granted.

Consulting local communities and stakeholders before applying for a DCO is a key part of the process. This current consultation is known as a statutory consultation and is your opportunity to comment on our proposals so we can consider your feedback as we finalise the project and the DCO application.

When we submit our application, the Planning Inspectorate will review it and determine whether it meets the requirements to be accepted for examination. If it does, one or more planning inspectors, known as the Examining Authority, will be appointed to examine the application. Anyone with an interest in the application can register to take part in the process and make representations in writing or at a hearing.

Following the examination process, the Examining Authority will prepare a report setting out a recommendation as to whether development consent should be granted. The Secretary of State will then consider this recommendation and make the final decision on whether to grant development consent.

2023

We're holding our statutory consultation on our proposals for H2Teesside.

2024

We plan to submit our Development Consent Order application to the Planning Inspectorate. They will review the application to determine whether it should be accepted for examination and will invite Interested Parties to submit representations.

Six month examination period starts.

2025

The Planning Inspectorate will conclude their examination of our DCO application.

The Secretary of State will announce their decision as to whether to grant development consent for H2Teesside.

Subject to the DCO application being granted, construction of H2Teesside is planned to commence in 2025.

2028

It is planned that H2Teesside would start commissioning by 2028.

H2 Teesside

bp

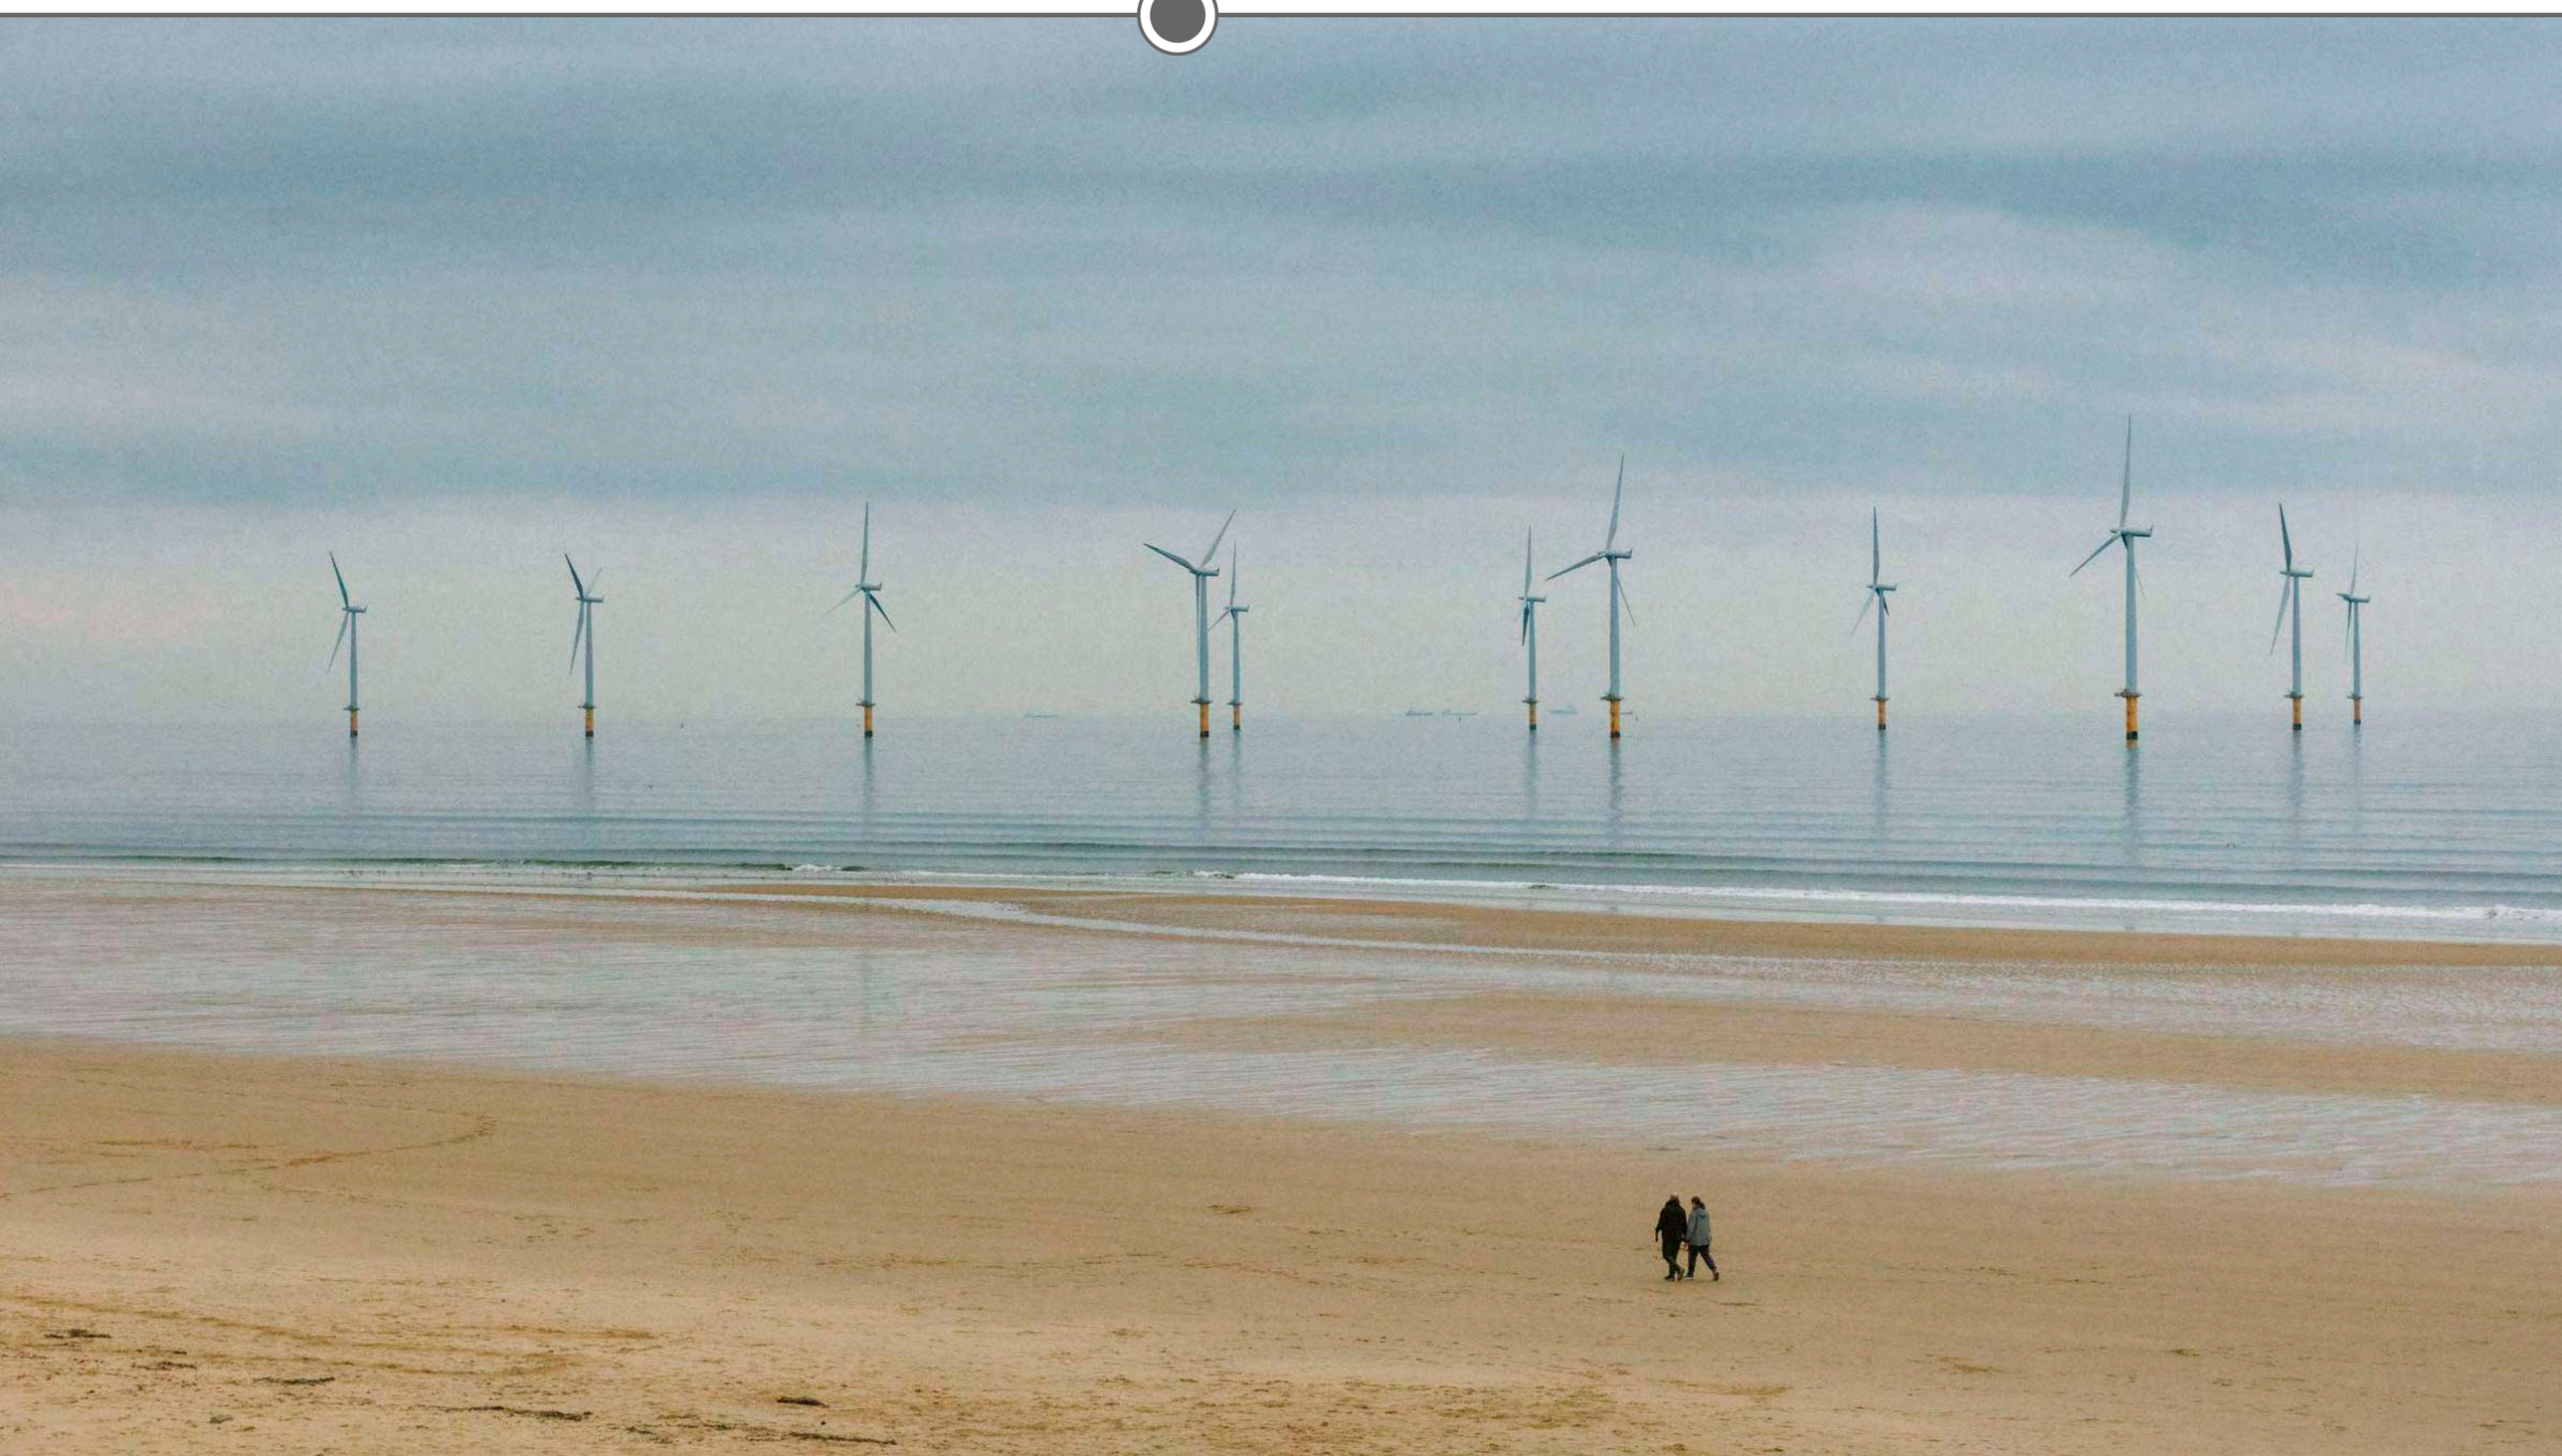
Have your say

We want to hear your views on our proposals for H2Teesside.
You can respond to this consultation in the following ways:

Online Fill in our online response form at **www.h2teesside.co.uk**

In person Fill in a hard copy response form at one of our consultation events.

Post Write to us or send your response form to **FREEPOST H2Teesside**



Email Write to us or send your completed response form to **info@h2teesside.net**

Please submit your feedback by 26 October 2023

Next steps

Once the consultation closes on 26 October 2023, we'll review all feedback and have regard to it in finalising the design of H2Teesside and our DCO application.

We'll set out a summary of the responses and share how your feedback has helped shape our proposals in a Consultation Report which will be submitted as part of our DCO application.

H2Teesside

Statutory Consultation – Questions and Answers

We've created this document to answer some of the most commonly asked questions about H2Teesside.

If you have any questions that are not answered, you can contact our project team by email at info@h2teesside.net or by phone on 0800 0803028.

What is H2Teesside?
H2Teesside is a proposed large-scale blue hydrogen production facility in the Tees Valley. It aims to be one of the largest blue hydrogen production facilities in the UK. The development is targeting up to 1.2 Gigawatt (GW) of hydrogen production across the two phases of development.

What is blue hydrogen?
Blue hydrogen, or CCUS-enabled hydrogen, is hydrogen that is extracted from natural gas, but the vast majority of CO2 produced during this process is captured and stored permanently.

Green hydrogen, commonly defined as electrolytic low carbon hydrogen, is made by water electrolysis using renewable and low-carbon electrical power sources such as solar and wind.

Electrolysis is the process by which an electric current is passed through a substance to effect a chemical change. In this case, splitting water molecules (H2O) into hydrogen (H2) and oxygen (O2).

Why is blue hydrogen needed? Can't you produce green hydrogen instead?
In the UK Hydrogen Strategy (published August 2021), the UK Government set out an approach to support green hydrogen and blue hydrogen in parallel, aiming to enable the rapid growth of the sector while bringing costs down.

Producing green hydrogen relies on the availability of a sufficient, reliable supply of low carbon electricity, produced via methods such as wind and solar power. The current scale at which renewable and low carbon energy is produced presents significant challenges to producing green hydrogen at an industrial scale, in the timescales in which it is required.

Blue hydrogen is being promoted as a necessary and low cost option, which can make use of existing infrastructure across the Teesside region, advancing the UK's energy transition.

Who will use the hydrogen produced at H2Teesside?
We're seeing strong interest from potential industrial users (known as offtakers) for hydrogen from H2Teesside to help decarbonise industry. H2Teesside can supply a diverse range of customers, those already established in Teesside as well as new businesses attracted to this low carbon hydrogen produced at scale.

Where will the carbon be stored?
The CO_2 captured by H2Teesside will be sent for secure long-term storage to the Endurance store, located approximately 145 km off the coast of Teesside under the North Sea, via the Northern Endurance Partnership pipeline.

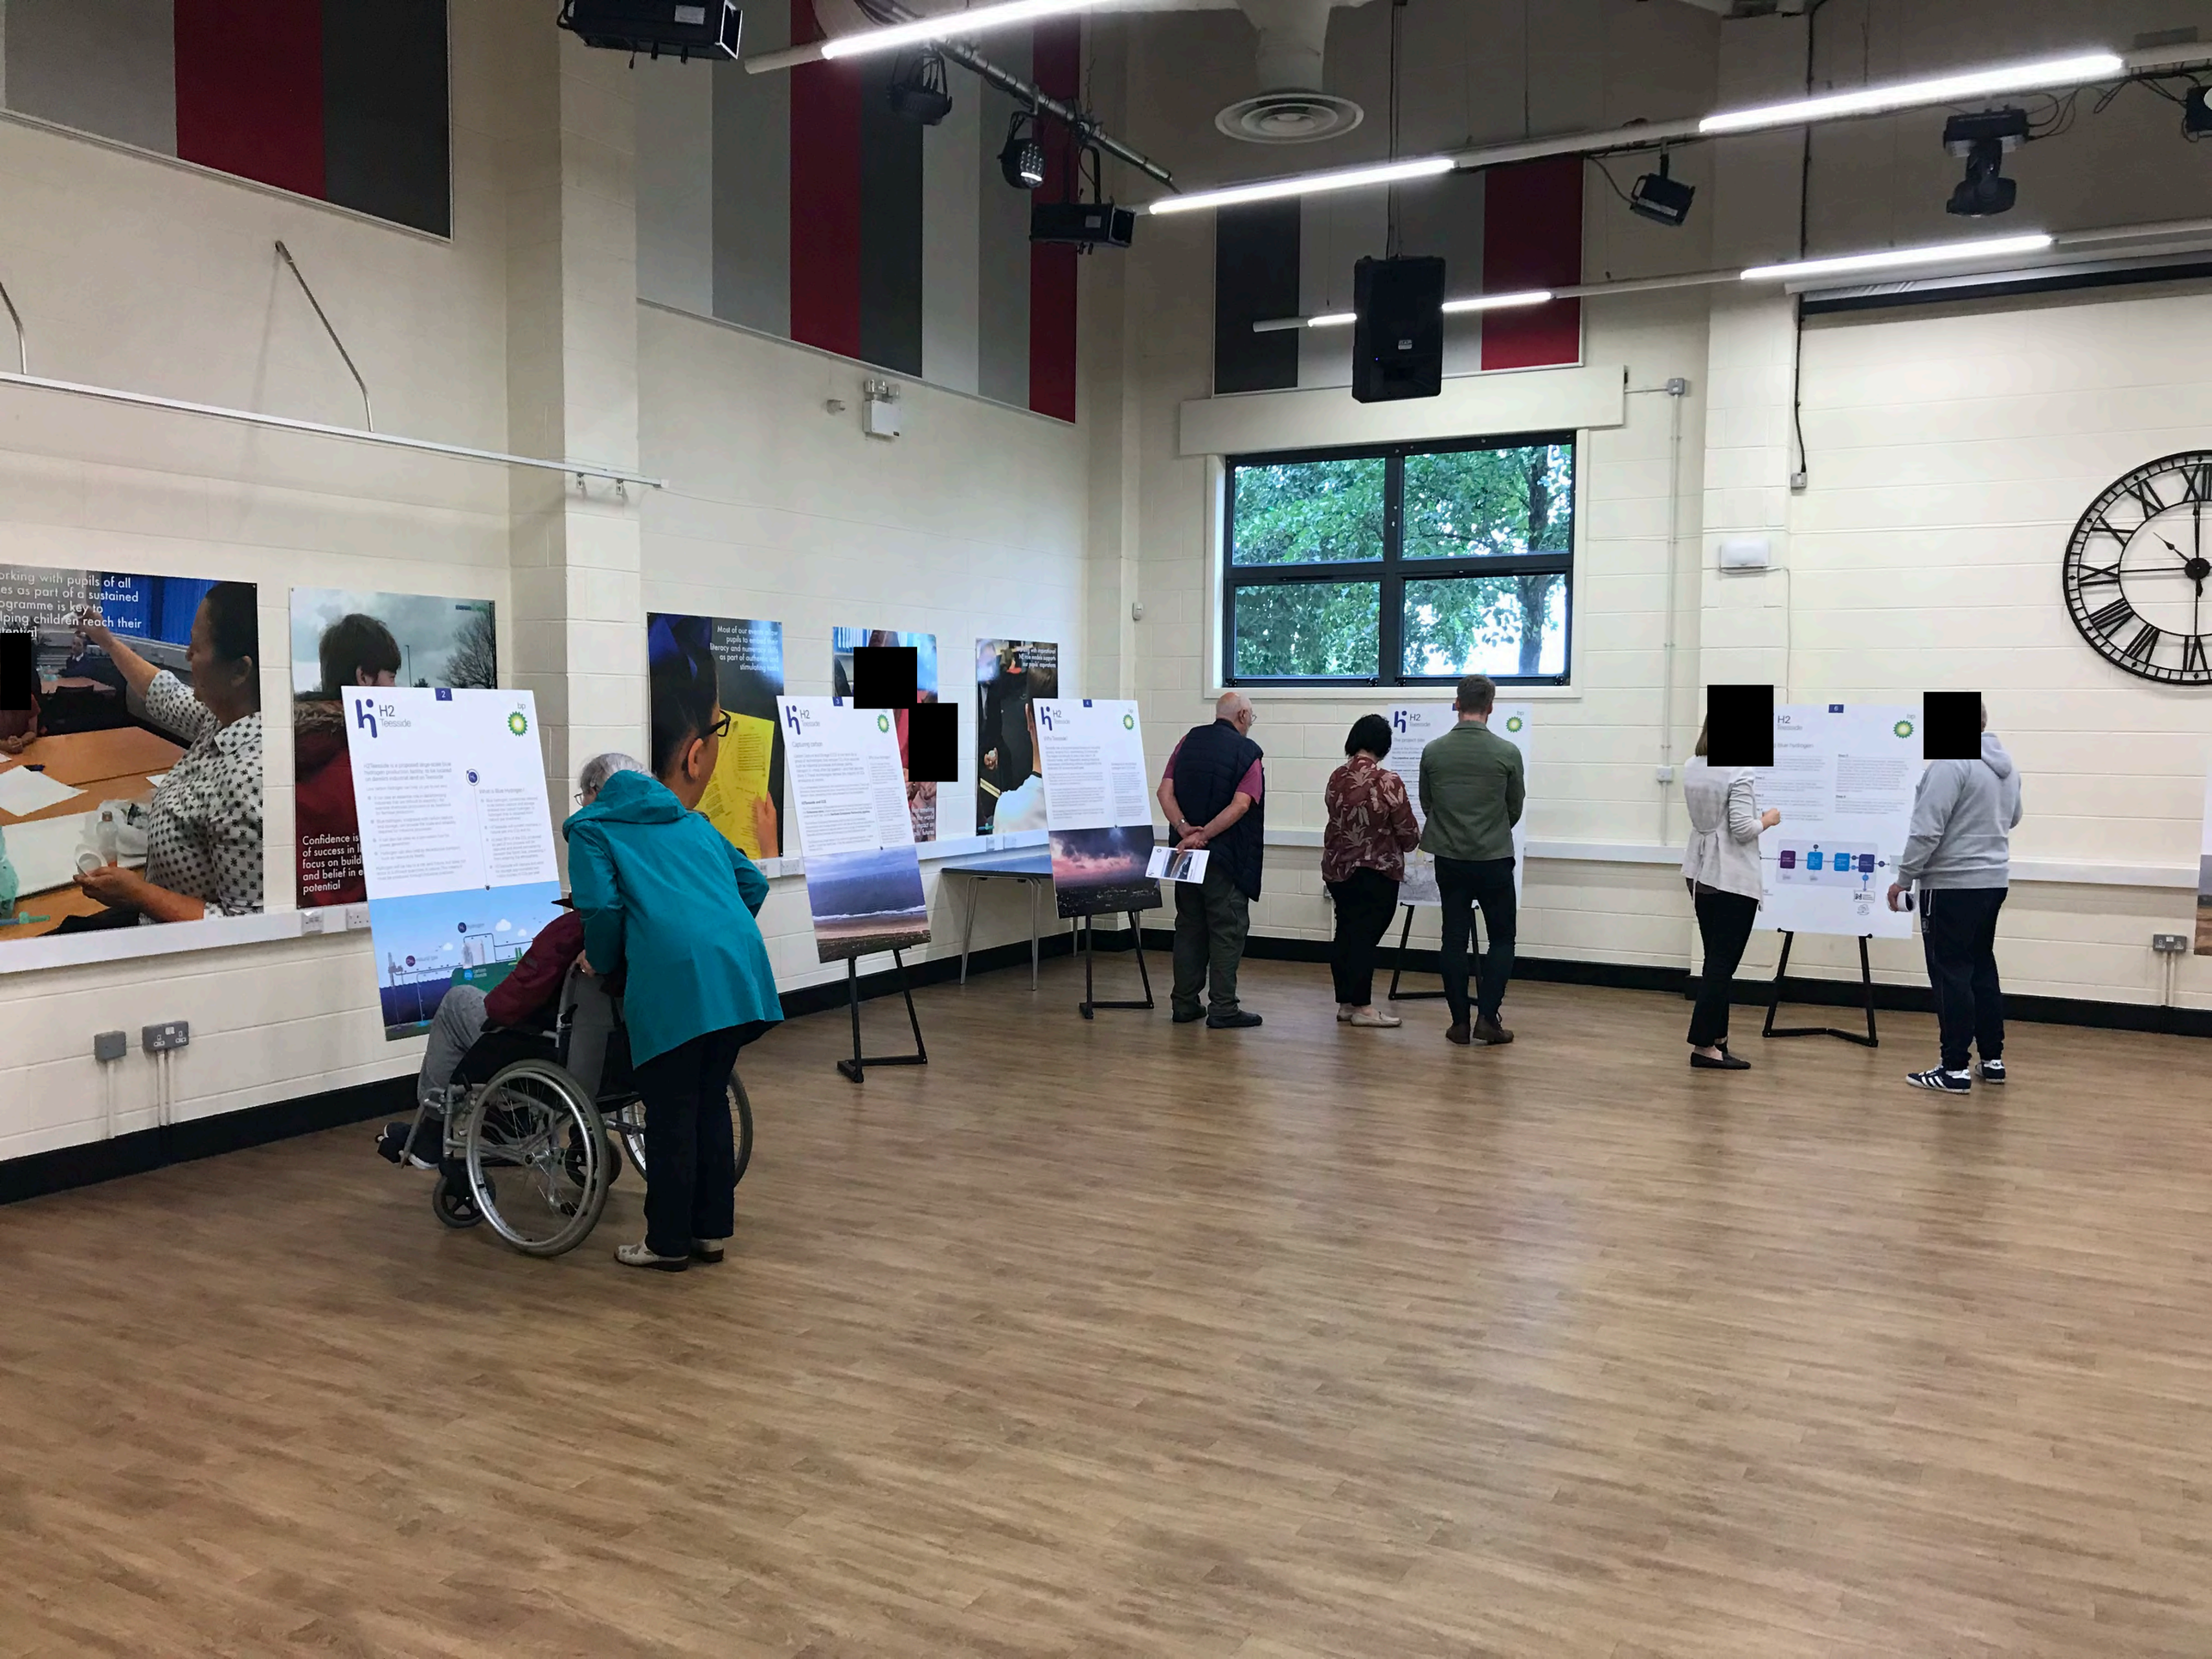
The Northern Endurance Partnership (NEP) is the CO_2 compression, transportation and storage project which will deliver the onshore and offshore infrastructure needed to capture carbon from a range of emitters across Teesside and the Humber and transport it to the Endurance store. The Endurance carbon store is the name of a geological feature – a saline aquifer – under the North Sea. It has the capacity to store 450 million tonnes of CO_2.

How safe is the use of hydrogen?
Safety is bp's number one priority and as part of our project proposals we have developed a Design Hazard Management Plan. This plan identifies, confirms and assesses the hazards related to the project, and ensures that there are processes in place to manage these hazards appropriately, during the operation of H2Teesside.

bp has been operating hydrogen production plants within our refineries for many decades. It will use its years of experience to ensure that H2Teesside is operated strictly in line with its operating management system, to ensure that there is zero harm to people and the environment.

What is the planning process for the project? Who will make the ultimate decision on whether H2Teesside should go ahead?
The Secretary of State for Energy Security and Net Zero has directed that H2Teesside is a project of national significance which should be consented through a type of planning consent called a Development Consent Order (DCO).

We need to make an application for a DCO to the Planning Inspectorate who are responsible for administering the application process on behalf of the Secretary of State, who is ultimately responsible for deciding whether development consent should be granted.



What will you do with my feedback?
Once the consultation closes on 26 October 2023, we'll review all feedback and have regard to it in finalising the design of H2Teesside and our DCO application.

We'll set out a summary of the responses and set out how your feedback has helped shape our proposals in a Consultation Report which will be submitted as part of our DCO application.

Consultation events where the documents will be on display and members of the project team will be available to answer questions.

Document inspection venues where copies of the consultation documents can be viewed on a publicly accessible computer.

The project website includes details of the consultation events, the document inspection venues and a copy of the Statement of Community Consultation. These can also be obtained by calling **0800 0803028** or writing to using the contact details provided below.

How to give us your views

You can respond to this consultation in the following ways:

Online fill in an online version of this form at **www.h2teesside.co.uk**

Freepost send your completed form to **FREEPOST H2Teesside**

Fill in this form and hand it in at one of our consultation events.

Email Send your response to **info@h2teesside.net**

If you are unable to provide feedback through the channels above, please call us on **0800 0803028** to discuss alternative ways of giving your feedback.

The closing date for responses is **23:59 on 26 October 2023**

14 September to 26 October 2023 **Have your say in this form**

H2Teesside feedback form A4 4pp CMYK 2 13/09/2023 10:12

1. Our proposals

Do you support our aims to help Teesside decarbonise its industry?

◯ Strongly support ◯ Support ◯ Neither support nor oppose ◯ Oppose ◯ Strongly oppose

Do you support our proposals for H2Teesside?

◯ Strongly support ◯ Support ◯ Neither support nor oppose ◯ Oppose ◯ Strongly oppose

Please use the space below to tell us more about why you gave these responses:

Do you have any comments on our proposed blue hydrogen production facility?
You can find information on our proposed hydrogen production facility on page 8 of our consultation brochure.

Do you have any comments on our proposed pipeline and connection corridors?
You can find information on our proposed pipeline and connection corridors on pages 9 and 10 of our consultation brochure.

2. Minimising our impact

Do you have any comments on the Preliminary Environmental Information Report, its Non-Technical Summary or the environmental mitigation measures proposed in these documents?

As part of our application for development consent we will be producing an Outline Construction Traffic Management Plan and a Framework Construction Environmental Management Plan.

Is there anything you would like us to consider as part of this?
For more information see page 19 in our consultation brochure.

3. Local community benefits

We are committed to bringing benefits to the local community as we develop H2Teesside and we have presented some of our plans for the local community on page 20 of our consultation brochure.

Do you have any comments on our plans, or any further ideas or suggestions on how we could support the local community?

APPENDIX 11.12: FIRST CONSULTATION – FEEDBACK FORM RESPONSES

How could feedback be provided/deadline for comments

The consultation materials advised the local community that feedback on the Proposed Project could be provided by the following means:

Post: freepost to H2Teesside;

E-mail: info@h2teesside.net;

Website: www.h2teesside.co.uk; or

Providing feedback at the public consultation events.

The consultation materials clearly stated that the deadline for the receipt of responses was 23:59 26 October 2023, therefore providing people with a period of longer than 28 days from the start of the consultation to respond.

Response to the Consultation

Over the First Consultation period and its four public exhibition events, a total of 60 feedback form responses were received. Of these, 5 hardcopy comments forms were received via FreePost or from events exhibition events and 55 digital forms were submitted online. The feedback form asked five questions each containing several parts. The responses received to these questions are detailed below.

1. **Our proposals**

Q1 – Do you support our aims to help Teesside decarbonise its industry?

Question 1 firstly asked respondents 'Do you support our aims to help Teesside decarbonise its industry?'. 8 respondents answered 'Support' and 36 respondents answered 'Strongly support'. 2 respondents answered 'Oppose' and 6 respondents answered 'Strongly oppose'. 5 respondents answered, 'Neither support nor oppose'. Table 1.1 below provides a breakdown of how respondents answered – please note that a total of 57 responses were received from 60 Comments Forms.

Table 1.1: Q1 – Number of Responses Received

RESPONSE	NUMBER OF RESPONSES
Strongly support	36
Support	8
Strongly oppose	6
Oppose	2
Neither support nor oppose	5

Q2 – Do you support our proposals for H2Teesside?

The second part to Question 1 subsequently asked 'Do you support our proposals for H2Teesside?' 20 respondents answered 'Strongly support'. Of these respondents, all of them responded with 'Strongly support' to Part 1.

5 respondents answered 'Support'. Of these respondents, 2 responded with "Strongly support" and 3 responded with "Support" to Part 1.

20 respondents answered 'Strongly support' and 6 respondents answered 'Support'.1

2 respondents answered 'Strongly oppose', 2 respondents answered 'Oppose' and 6 respondents answered 'Neither support nor oppose'. Of these respondents, 9 of them answered 'Support' or 'Strongly Support' to part 1. The remaining respondents answered this question with text.

Of the 5 respondents who answered ‘Neither support nor oppose’ to the part 1, 2 respondents answered ‘Strongly Oppose’, 1 respondent answered ‘Oppose’, 1 respondent answered ‘Neither support nor oppose’ again and 1 respondent answered with duplicated text.

Table 1.2 below provides a breakdown of how respondents answered – please note that 45 responses were received from 60 Comments Forms with an additional 9 text responses received. In total, 54 responses were received.

Table 1.2: Q2 - Number of Responses received

RESPONSE	NUMBER OF RESPONSES
Strongly support	20
Support	5
Strongly oppose	12
Oppose	2
Neither support nor oppose	6

Please use the space below to tell us more about why you gave these responses:

The third part to Question 1 gave respondents an opportunity to explain their responses to the previous part. A total of 49 responses were received providing different explanation. Overall, a total of 28 responses contained positive comments, 14 contained negative concerns and 7 contained neutral themes.

The responses to this question have been categorised into Positive topics/themes, shown in Table 1.3, Negative topics/themes in Table 1.4 and neutral topics/ themes in Table 1.5. Table 1.6 provides a list of positive, neutral, and negative example questions received.

Table 1.3: Q2 - Positive Comment Topics/Themes received about the Project and Consultation

POSITIVE TOPICS/THEMES	NUMBER OF RESPONSES
Employment opportunities	14
Decarbonising industry / net zero objectives	8
Investment / Business opportunities in Teesside	4
Provision of industrial development in Teesside	1

Table 1.4: Q2 - Negative Comment Topics/Themes received about the Project and Consultation

NEGATIVE TOPICS/THEMES	NUMBER OF RESPONSES
Disagree with the need for the Project	2
Inadequate consultation	2
Safety concerns with hydrogen gas	2
Carbon Dioxide emissions form the Proposed Development	1
Diversion of investment in better decarbonisation technologies	1

Table 1.5: Q2 - Neutral Comment Topics/Themes received about the Project

OTHER TOPICS/THEMES	NUMBER OF RESPONSES

Impact on domestic energy prices and domestic Hydrogen heating	2
Clarification of 'secure long term offshore Storage'	1
Impact on property values	1
Impacts on Cowpen Bewley	1

Table 1.6: Q2 - Examples of Positive, Negative and Neutral Comments/ Questions Received

	EXAMPLE QUESTION/ COMMENTS
Positive	*"British steel put teesside on the world map, however the decline in the steel industry here has taken its toll, this proposed development will be a great asset to teesside's industrial heritage and portfolio of great investment and business development."* *"After the losses of other industry to the area it is very welcome to see new investment in decarbonising methods coming to Teesside. I believe hydrogen must be an important part of decarbonisation of both transport and industry, not everything can go electric. What better place than the previous iron works to build a plant to help power the future."* *"The area is underfunded and needs an influx of development and jobs, this will provide it and work towards bringing Redcar and the area back to its seaside town it was in the 60s."* *"Not only would it be good to have the land brought back to life, it will support more jobs that are needed within this area, it would be nice to have things going on in and around us."* *"I strongly support the cause to decarbonise industry."*
Neutral	*Can you guarantee that we will not pay anymore in prices than the gas is in the future. Will the price of our gas meter rental go down.* *"Secure long-term storage under the sea needs to be qualified."*
Negative	*"Nobody has been to see the residents in their homes I am 73."* *"it seems your trying to steamroll this thro with or without our consent"* *"This project seems ill concieved and probabaly driven by political rather than economic reasons."* *"I am concerned that the use of Hydrogen in the wider community is not well understood, and i am concerned about safety in particular. This has not been well publicised, and I am concerned that it will lead to being used for domestic use without my knowledge or consent and we will be treated as lab rats."* *"A hydrogen facility is open to computer and/or human error which could result in the whole area being wiped out."*

	"Producing hydrogen from natural gas is however not a long term solution and money directed this way can often be better used for developing or deploying existing technologys that can last more or less forever." *"As I live in Cowpen Bewley, I would like to know what impact the construction and the running of the pipeline on village life and property."*

Q3– Do you have any comments on our proposed blue hydrogen production facility?

The fourth part to Question 1 gave respondents an opportunity to comment on the Proposed Development's Blue Hydrogen Production Facility. A total of 31 responses were received identifying different issues. Overall, a total of 14 responses contained positive comments, 11 contained negative concerns and 6 contained neutral themes (primarily comprised of requests for clarification) were received.

The responses to this question have been categorised into Positive topics/themes, shown in Table 1.7, Negative topics/themes in Table 1.8 and neutral topics/ themes in Table 1.9. Table 1.10 provides a list of positive, neutral, and negative example questions received.

Table 1.7: Q3 - Positive Comment Topics/Themes received about the Project and Consultation

POSITIVE TOPICS/THEMES	NUMBER OF RESPONSES
Use of former steelwork site and existing infrastructure	4
Use of local companies to provide building materials	1
Carbon capture	2
Employment opportunities	1
Blue hydrogen being the future	1

Table 1.8: Q3 - Negative Comment Topics/Themes received about the Project and Consultation

NEGATIVE TOPICS/THEMES	NUMBER OF RESPONSES
Critical of the location of the Proposed Development	2
Consultation will not impact the Development	1
Disagree with need for Blue Hydrogen Facility	1
Disagree with use of hydrogen for industrial heating	1

Table 1.9: Q3 - Neutral Comment Topics/Themes received about the Project

OTHER TOPICS/THEMES	NUMBER OF RESPONSES
Clarification of 'secure long term offshore Storage'	1
Impacts of Water consumption and discharge	1
Clarification of noise impact	1

Table 1.10: Q3 - Examples of Positive, Negative and Neutral Comments/ Questions Received

	EXAMPLE QUESTION/ COMMENTS
Positive	*"This is a great area to build the facility. It has a lot of infrastructure already in place."* *"I believe the object of this entire project is for a low carbon footprint but in terms of deliverable via hydrogen but also in terms of using local companies to support such as British steel, Tata and of course ourselves as SMR reformer tube manufactures. We believe being able to supply the tubes made here in Teesside to produce the blue hydrogen that we ultimately can use to drive the next major step towards our decarbonisation is a truly circular story and something we locals could be proud of."* *"Again it's nice to have the land used to support many people with work that can only be a good thing, we also need to have more of these sites across the country to help build our industry and to help make the future a better place by using or and adapting carbon cap."* *"All new industry is most welcome and is to be encouraged for the future."*
Neutral	*"Why does the facility need both a freshwater connection and a discharge for treated water? Is the treated water not clean enough to be reused in the facility, and if it is too dirty, why do you discharge it into the environment?* *There is no water shortage in sight in our region according to Anglian Water, but in our rapidly changing environment, should there ever be a shortage, what are the plans? Specifically who will reduce water usage first, households or h2teesside? Does h2teesside pay for freshwater usage, how much, compared to households and other industial water usage?"* *"The outline maps of the Main Site show it bordering/crossing the Teesdale Way route. Is there any provision for protection of this public byway?"* *"Given the use of natural gas, and the new implementation of carbon capture, if the carbon capture proves to be unreliable, too expensive, or otherwise does not perform what will become of the project? Will it be cancelled or allowed to run without carbon capture? Also, given the interim status of 'blue' hydrogen, does this not give the plant a much shorter lifespan, being ovetaken by greener alternatives in a short space of time?"*
Negative	*"It doesnt matter what we say you will go ahead.Why are we the only area that has been picked to test this"* *"Until it happens down south I don't want it"* *"Secure long-term storage under the sea needs to be qualified"* *"ii doubt other major countries or economies are taking this gung ho approach giving them bigger advantage in trade making our products more costly than theirs"* *"Regarding hydrogen usage it should not be used for heating (residential or industrial) as this would be more co2 intensive than directly using electricity on average from 2029 as you wrote in your documents. About half of hydrogen usage worldwide currently goes to refineries but those should mostly close in the coming decades (I think years but I am realistic that many*

	do not want that). Their products get burned after usage, either directly as fuel or a bit later as e.g. plastics. H2Teesside should in this case not try to sell the h2 to residential heating as compensation, producing 70gco2eq or more per kwh. Direct electricity would be more efficient, heat pump would be 3 or more times as efficient, with higher initial investment than direct electricity. *I see the case for using h2 for npk fertiliser production. There it should be noted that in the long term nitrogen fertiliser should be reduced because currently worldwide about double the N is used as the border for stable ecosystems is. ("The science suggests that a safe level of nitrogen use would be about 25% of current production." https://earthbound.report/2013/06/11/planetary-boundaries-2-nitrogen/ "The planetary nitrogen boundary has been substantially transgressed" https://www.nature.com/articles/s43016-021-00366-x).*

Q4 – Do you have any comments on our proposed pipeline and connection corridors?

The fifth part to Question 1 gave respondents an opportunity to comment on the Proposed Development's Pipeline and connection corridors. A total of 26 responses were received identifying different issues. Of these, 5 responses contained positive comments, 10 contained negative comments and 11 contained neutral comments.

Table 1.11: Q4 - Positive Comment Topics/Themes received about the Project and Consultation

POSITIVE TOPICS/THEMES	NUMBER OF RESPONSES
Utilisation of existing industrialised areas	1
Necessary requirement for the Project	1

Table 1.12: Q4 - Negative Comment Topics/Themes received about the Project and Consultation

NEGATIVE TOPICS/THEMES	NUMBER OF RESPONSES
Pipeline safety	5
Environmental impact	1
Heritage and archaeology concern	2

Table 1.13: Q4 - Neutral Comment Topics/Themes received about the Project

OTHER TOPICS/THEMES	NUMBER OF RESPONSES
Pipeline location	4

Table 1.14: Q4 - Examples of Positive, Negative and Neutral Comments/ Questions Received

	EXAMPLE QUESTION/ COMMENTS
Positive	*"This is obviously a requirement for this project and is necessary."* *"Billingham i believe is one of the first corridors that will become available with Blue hydrogen and is also the home of Paralloy and our foundries. if this corridor comes online first then that would enable us to become one of the first maybe the first foundry in the UK to fully decarbonise."* *"Supporting the project for decarbonising the Teeside industry."*

	"Makes sense to utilise the previous areas of industrialisation."
Neutral	*"Yes, why cant the pipeline be located north of the A1185 and then under the railway line and after that south of the A1185 direct to the Cowpen gas hub?"* *"The decision of where to deposit dredged (capital) material from Phase 1 of the South Bank I.e. landfill or Tees Bay C out at sea, relied on a number of sediment tests and CEFAS action levels (https://assets.publishing.service.gov.uk/media/5a8198e0ed915d74e6233203/Appendix_B_Action_Levels.pdf). Only when CEFAS action level 2 was exceeded would sediments be sent to landfill. The problem with this approach, however, is that over half of the determinants don't have an action level 2 assigned. What other limits are you going to use therefore, to avoid a toxic response from benthic organisms during the construction of the Hydrogen Pipeline and other gas/ utility connection corridors?"* *"Yes you intend to run pipes through fields of Cowpen Bewley Village as above a conservation area. I believe you could route along A1185 and under railways into gas works without [unsure on word] so."* *"As long as the road to the South Gare is not compromised."*
Negative	*"pipelines can develop leaks, which could lead to a hydrogen explosion."* *"Again huge pipe lines affecting our en"[vironment?]* *"As a resident of Cowpen Bewley Heritage Conservation Village. I object to the pipe corridor route deviating away from the Seal Sands A1185 as proposed behind heritage properties in Cowpen Bewley Heritage Conservation Village. This route runs approximately 43 metres behind my property (The Bullpens) on conservation agricultural land with archaeology in situ. (i.e. Tudor field drains and rig and furrow Saxon fields). Surely a alternative route can be made not behind the Heritage Conservation Village such as -- Routing it below ground alongside the Seals Sands A1185 embankment and crossing the railway at the A1185 road bridge and into the woodland park utilising the fire breaks in the trees for a direct route to the Cowpen Bewley gas service works. This would reduce the impact on the heritage village/properties/livestock and any archaeological damage."* *"I address specifically the routing of the proposed H2 pipeline near the village of Cowpen Bewley. There are a number of issues related mainly to safety I would wish to raise.* *a) The proposed routing lies very close to the rear of properties in the village. The resolution of the maps provided in print or online unfortunately does not allow an assessment of the prevailing distances other than the line would be "close" to residential properties.* *b) There does not seem to be any clear recommendation for an "exclusion zone" around high pressure H2 pipelines. It is noted also that regulations for safe use and pipeline transport of hydrogen remain in a state of flux [1,2]. It is reasonable to assume that safety regulations and recommended practice will become tighter as the H2 economy expands. This is discussed further below.* *c) Representatives from H2Teesside attended a Residents' Association meeting in Cowpen Bewley on Oct 16th. They unfortunately provided misleading information. They stated that there was no risk of explosion, rather only fire/flames. This is incorrect.* *i. According to the well-established explosion triangle an ignition source is required for fire / explosion. Given the routing of the proposed*

	pipeline the most likely ignition source would be an electrical or gas fitting in the nearby residential properties. *ii. As evidence, there is a growing register of hydrogen related safety incidents [3]* *d) I have not seen any indication that dispersion calculations have been completed for multiple scenarios to instil any confidence that hydrogen / air mixtures in the flammable range (4-75%) could not approach residential dwellings or outbuildings, hence a source of ignition in the event of a leak.* *i. Such delayed explosions of hydrogen are a well known phenomenon [4]* *ii. While some sensors are able to determine catastrophic loss of containment, I do not believe smaller egress rates are detectable in a long pipeline.* *iii. There does therefore not seem to be any reasonable mitigation against persistent low-level leaks, which bearing in mind the notoriety of hydrogen [1] is concerning given the previous points* *e) A study has however evaluated a recommended exclusion distance for H2 refuelling stations of 35m [5], noting however some caveats. Among these are that delayed ignition (allowing the form of a flammable cloud) can significantly exacerbate this, extending the radius of the 1 percentile fatality distance.* *f) A number of sources [1,2] indicate that current safety guidelines and regulations for pipelines are largely based on considerations for methane / natural gas that they may not be adequate to address the risks of a hydrogen network, and indeed that the safety implications of more widespread transportation and storage of hydrogen are not yet well understood. This should mean that a conservative approach to design and routing is taken, applying reasonable design margins in the case of, specifically in the present context, proximity t residential dwellings.* *g) There would appear to be other options for routing the pipeline in the vicinity of Cowen Bewley, such as north of the railway or A1185 that would increase the distance and present natural protective barriers.* *In conclusion a hydrogen pipeline incurs a number of risks. It would be reasonable to assume that at this stage detailed safety assessments have not yet been completed. It is difficult to understand, given the risks and safety issues highlighted above, why the preferred route passes so close to residential properties. I would urge you therefore to reconsider this aspect of the pipeline routing and move it to a safer distance from the residents."*

2. Minimising our impact

Q5 – Do you have any comments on the Preliminary Environmental Information Report, its Non-Technical Summary or the environmental mitigation measures proposed in these documents?

The first part to Question 2 gave respondents an opportunity to comment on the PIER, NTS or proposed environmental mitigation within the statutory consultation documents. A total of 14 responses were received providing different explanation. Overall, a total of 4 responses contained positive comments, 3 contained negative concerns and 7 neutral themes (primarily comprised of requests for clarification) were received.

The responses to this question have been categorised into Positive topics/themes, shown in Table 2.1, Negative topics/themes in Table 2.2 and neutral topics/ themes in Table 2.3. Table 2.4 provides a list of positive, neutral, and negative example questions received.

Table 2.1: Q5 - Positive Comment Topics/Themes received about the Project and Consultation

POSITIVE TOPICS/THEMES	NUMBER OF RESPONSES
Robustness	1

Table 2.2: Q5 - Negative Comment Topics/Themes received about the Project and Consultation

NEGATIVE TOPICS/THEMES	NUMBER OF RESPONSES
Disturbance to local residents	1
Unnecessary need for hydrogen	1

Table 2.3: Q5 - Neutral Comment Topics/Themes received about the Project

OTHER TOPICS/THEMES	NUMBER OF RESPONSES
Clarification about all environmental impact considerations	2
Request for more trees in the development	1
Clarification about compensation for damage and scope of remediation	1

Table 2.4: Q5 - Examples of Positive, Negative and Neutral Comments/ Questions Received

	EXAMPLE QUESTION/ COMMENTS
Positive	*“it sounds robust”* *“With the demolition and clearance of the steelworks there is a giant building site already BP will just be an addition to this and should be accepted.”*
Neutral	*“I’d like to see more trees as part of the development”* *“Not sure this is the correct box but, the vibration and noise will be an issue, has this been assessed with regards to vibration on the foundations (or lack of), on the old village housing stock?* *The noise during construction especially when 24hr working alongside lighting etc What mitigation is being employed?”*

Negative	*"It does not make very clear that the project still needs Natural Gas as an input: with the extraction and environmental costs this entails."* *"Until London have this type of energy then leave Redcar alone"*

Q6 – We will be producing an Outline Construction Traffic Management Plan and a Framework Construction Environmental Management Plan. Is there anything you would like us to consider as part of this?

The second part to Question 2 gave respondents an opportunity to state if there is anything they would want to be considered in the Outline Construction Traffic Management Plan (OCTMP) and Framework Construction Environmental Management Plan (Framework CEMP). A total of 18 responses were received providing different explanation. Overall, a total of 2 responses contained positive comments, 4 contained negative concerns and 12 contained neutral themes (primarily comprised of requests for clarification) were received.

The responses to this question have been categorised into Positive topics/themes, shown in Table 2.5, Negative topics/themes in Table 2.6 and neutral topics/ themes in Table 2.7. Table 2.8 provides a list of positive, neutral, and negative example questions received.

Table 2.5: Q6 - Positive Comment Topics/Themes received about the Project and Consultation

POSITIVE TOPICS/THEMES	NUMBER OF RESPONSES
Necessary development	1

Table 2.6: Q6 - Negative Comment Topics/Themes received about the Project and Consultation

NEGATIVE TOPICS/THEMES	NUMBER OF RESPONSES
Existing weight limit in village unsuitable for heavy plant	1

Table 2.7: Q6 - Neutral Comment Topics/Themes received about the Project

OTHER TOPICS/THEMES	NUMBER OF RESPONSES
Measures to minimise disruption	1
Access to the South Gare	2
Construction vehicle routing and arrangements near Cowpen Bewley	1
Absence of information	1
Contamination during construction	1

Table 2.8: Q6 - Examples of Positive, Negative and Neutral Comments/ Questions Received

	EXAMPLE QUESTION/ COMMENTS
Positive	*"Residential areas are unlikely to be affected apart for those around the perimeter of the site."* *"Again, this will be necessary and will indeed require more traffic throughput."*

Neutral	*"Not sure if this is connected but important that public retain access to the South Gare."* *"Suggest this is widely published to prevent inconvenience."* *"During the Construction phase, land to be developed will have an amount of contaminated surface soil removed, the subsurface capped and then covered by clean material. Can you explain how you are going to prevent contaminants below the cap from contaminating the ground waters/ aquifers which could then affect sensitive ecosystems in the Tees Estuary and/ or coastline immediately adjacent? Vibrations ranging from minor disturbances, such as local traffic, to major ones - explosive demolitions - will no doubt have adverse effects on subsurface movement and promote such contamination."*
Negative	*"Minimise disruption"* *"What is the access and egress to the site near Cowpen Bewley?* *Where will the welfare cabins be?* *There is a 7.5 tonne limit on the village roads accept for access, this is for delivery only and not a full scale construction site, also the roads are not suitable for heavy plant."* *"Our experience of traffic management and routing during major construction projects is not good, with construction-material HGVs passing through residential areas irrespective generally with the driver having been misdirected by the site representatives. Plans need to implemented, communicated and monitored. I would hope to see detail of these aspects in future proposal documentation"*

3. Local community benefits

Q7 – Do you have any comments on our plans, or any further ideas or suggestions on how we could support the local community?

Question 7 gave respondents an opportunity to provide any further comments on the plans or any further suggestions for supporting the local community. A total of 28 responses were received providing different explanation.

The responses to this question have been categorised into themes, shown in Table 3.1, Table 3.2 provides a list of topics received.

Table 3.1: Comment Topics/Themes suggested

THEMES	NUMBER OF RESPONSES
Local employment / apprenticeship opportunities.	13
Business opportunities for local companies	1
The Proposed Development is not wanted by the community	1
Redevelopment of Redcar sea front and town centre	1
Improvement of local transport infrastructure	1
Support / grants for community groups and charities	1
Compensation on disruption	1

Table 3.2: Examples of Themes suggested

	EXAMPLE COMMENTS
Comment	*"Offer local school leavers a better opportunity to progress into a career in the proposed development, rather people from outside the area to ensure a good standard of life for there future, teesside needs it"* *"Apprenticeships and good quality jobs"* *"Please ensure local companies are given a fair chance to bid and participate in the construction and ongoing operation of this project."* *"Help booster the infrastructure, the business and supporting of such things like roads, cycle ways, traffic lights as the increased traffic comes in car park built"* *"Plenty of charities you could support"*

4. Other feedback:

Question 8 gave respondents the opportunity to provide any further comments on the Project. A total of 21 responses were received providing different explanation. Overall, a total of 6 responses contained positive comments, 3 contained negative concerns and 12 contains neutral themes (primarily comprised of requests for clarification) were received.

The responses to this question have been categorised into Positive topics/themes, shown in Table 4.1, Negative topics/themes in Table 4.2 and neutral topics/ themes in Table 4.3. Table 4.4 provides a list of positive, neutral, and negative example questions received.

Table 4.1: Positive Comment Topics/Themes received about the Project and Consultation

POSITIVE TOPICS/THEMES	NUMBER OF RESPONSES
Support investment in Teesside	1

Table 4.2: Negative Comment Topics/Themes received about the Project and Consultation

NEGATIVE TOPICS/THEMES	NUMBER OF RESPONSES
Abandon the Project	1
Nuisance	1
Access	1
Conservation	1

Table 4.3: Neutral Comment Topics/Themes received about the Project

OTHER TOPICS/THEMES	NUMBER OF RESPONSES
Clarification on air quality emissions	1
Request lower domestic energy prices	1

Table 4.4: Examples of Positive, Negative and Neutral Comments/ Questions Received

	EXAMPLE QUESTION/ COMMENTS
Positive	*"I'm all for it, good to see investment in the area"* *"All in all this has to be good for the area and the country as a whole. You have my full support"* *"I've felt for a while that hydrogen is the way forward, yes it's different but it's cleaner than any existing fuels. I feel proud that Teesside is leading the way."*
Neutral	*"Do you have any emissions to the air? Is there for example a stream with low contents of co2 or amine (don't know if you use it or the word is correct) to the atmosphere? Do you use a big stack for it (I have no concerns about its appereance, only want to know what is going on). Which pollutants or co2 or amine are in your wastewater before and after treatment? Will there remain access to the southern point where the Tees meets the North Sea? I want that access to remain."* *"We should get consideration and cheaper tarriffs seeing as how you want us to be guinea pigs"* *"I see that the footprint of your plant and the Carbon Capture facility, actually covers current roads and footpaths to the South Gare. There's no mention of this in your documents. I just want to make sure they are retained for access to South Gare.* *I have a little worry about storing CO2. Could it be released as a result of*

	earthquakes or some other unknown disaster. What would be the effect of a massive release of CO2."
Negative	*"shelve [it] we didn't vote for this at election time "* *"I Do not want hydrogen"* *"As a resident of Cowpen Bewley Conservation Village if the route proposed goes ahead behind properties at Cowpen Village my concerns are -* *1. Access which has not been established and works traffic to and from the site affecting the village in general which has a 7.5 ton limit in place.* *2. Nuisance noise while work takes place as well as stress to livestock.* *3. Who is responsible for damage to heritage buildings if vibration causes any damage to sensitive historic buildings.* *4. Additionally i would like to know if any other residential buildings are as close to the actual pipeline as proposed in other areas in Teesside.* *5. Is any additional periodic pressure releases planned to be made at Cowpen Gas Service works as this would certainly effect the Heritage Conservation Village with noise pollution as well as effecting nature ,and causing stress to livestock. (Additionally they is a working graveyard close by the works which should be considered)* *6. Is their any service compounds ,structures/ signage after completion of project to remain seen within the village conservation boundaries ?.* *7. I would expect all conservation rules will be adhered too while work takes place and after, as do the residents .* *8. The Impact on property values and sales. Has any assessment been made and is any funding for compensation available.?"* *"Do you have any emissions to the air? Is there for example a stream with low contents of co2 or amine (don't know if you use it or the word is correct) to the atmosphere? Do you use a big stack for it (I have no concerns about its appereance, only want to know what is going on). Which pollutants or co2 or amine are in your wastewater before and after treatment? Will there remain access to the southern point where the Tees meets the North Sea? I want that access to remain."*

5. About You:

Question 9 sought further information on respondents and to classify. Parts A, B and C asked for personal information which has not been reproduced in this document.

Part D asked respondents if they are responding on behalf of an organisation, business or campaign group? A total of 3 respondents responded positively. The organisations they responded on behalf were Alfanar Energy Limited, promoter of the Lighthouse Green Fuels project; Tees River research group; and, Paralloy Limited.

Q10 – How would you describe your interest in the project?

The fifth part of Question 5 asked respondents to describe their interest in the project from the following options:

- Statutory Consultee
- Local Resident
- Local Elected Representative
- Member of Interest group (please state)

- Landowner
- Local Business Owner
- Other (please state)

60 respondents answered this question. A total of 62 responses were received. Of these, 1 respondent answered ‘Statutory Consultee’; 53 respondents answered ‘Local Resident’, no respondents answered ‘Local Elected Representative’, 2 respondents answered ‘Landowner potentially impacted by the project’, 3 respondents answered ‘Local Business Owner’, and 4 respondents answered ‘Other’ including 1 respondent that answered ‘aware of notices in local press’. Table 5.1 sets out the breakdown of each respondent’s interest in the project.

APPENDIX 12.1: FIRST CONSULTATION – COMBINED SECTION 42, 47 AND 48 NOTICE AND PUBLISHED NOTICES

THE H2TEESSIDE PROJECT

The Planning Act 2008 – Sections 42, 47 and 48

The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4

The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13

NOTICE OF PUBLICATION OF A STATEMENT OF COMMUNITY CONSULTATION AND NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').

2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.

3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

    - Mid-point – 454538 524086
    - North – 451524 526936
    - East – 458780 521588

- South – 456998 520748
- West – 446938 521612

5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.

6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:

   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. hydrogen storage;
   g. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.

10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Documents

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.

12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.

13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.

14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.

15. The consultation on the proposed application will take place between **14 September and 26 October 2023**.

16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk

17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge.

Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

18. Paper and digital copies of the SoCC and SoCC Notice and digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 26 October 2023:

Inspection Location	**Opening Times**
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: **info@h2teesside.net**

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023**. Responses received after this date may not be considered.

22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

'UNPRECEDENTED' SILENCE FROM MINISTER

SEE PAGE 3

'Unfair and unworkable'

PART OF THE UK pelagic fleet was in court last week, arguing that new provisions in their licence conditions, increasing the proportion of catches they must make into Scotland, to the benefit of fishing communities, were unfair.

Their lawyers argued that the new conditions are not justified under the Fisheries Act, were the result of unsafe consultation processes, and infringed European human rights legislation – arguments robustly refuted by lawyers acting for the Scottish government.

THE H2TEESSIDE PROJECT, THE PLANNING ACT 2008 – SECTIONS 42, 47 AND 48, THE INFRASTRUCTURE PLANNING (APPLICATIONS: PRESCRIBED FORMS AND PROCEDURE) REGULATIONS 2008 – REGULATION 4, THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017 – REGULATION 13

NOTICE OF PUBLICATION OF A STATEMENT OF COMMUNITY CONSULTATION AND NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point – 454538 524086
   - North – 451524 526936
   - East – 458780 521588
   - South – 456998 520748
   - West – 446938 521612
5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. hydrogen storage;
   g. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
7. 7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
8. 8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.
10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Documents

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.
12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.
13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.
14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
15. The consultation on the proposed application will take place between **14 September and 26 October 2023.**
16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk
17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge.
    Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
18. Paper and digital copies of the SoCC and SoCC Notice and digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 26 October 2023:

Inspection Location	Opening Times
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:
    Email: info@h2teesside.net
    Post: Freepost H2TEESSIDE
    Telephone: Freephone 0800 080 3028
    Project Website: www.h2teesside.co.uk
20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023**. Responses received after this date may not be considered.
22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

Sovcomflot transfers tankers to new non-sanctioned entity

RUSSIAN TANKER GIANT Sovcomflot has started to transfer vessels from its sanctioned Dubai-based operation, SUN Ship Management, into a newly created company called Oil Tankers (SCF) Management.

The new entity, also registered in Dubai, now controls a total of 18 ships that, until last month, were registered to and managed by SUN Ship Management.

Both Sovcomflot and SUN Ship Management are subject to US, UK and EU sanctions and asset freeze orders, however, the shift in registered ownership effectively puts a fleet of beneficially owned Sovcomflot vessels under the control of a UAE-based operation that is not currently sanctioned by any jurisdiction.

According to Sovcomflot, the transfers are part of an internal reorganisation that will see vessels continue to be reallocated to different technical supervision teams "depending on the trading geography, clients portfolio, vessels' age and commodities transported".

"This corresponds to SCF's historical mode of operations with several technical managers working under respective recognized brands. Each of them contributes to safety and quality of fleet's performance in line with highly rated SCF Group's united standard," Sovcomflot told Lloyd's List in a statement.

While the transfer has happened openly, with the Indian Register of Shipping confirming that the shift in registration will see the vessels enter into their books from tomorrow, the move has already raised concerns within the European Commission which had only recently targeted the same vessels under SUN Ship Management's control.

THE H2TEESSIDE PROJECT

The Planning Act 2008 – Sections 42, 47 and 48

The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4

The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13

NOTICE OF PUBLICATION OF A STATEMENT OF COMMUNITY CONSULTATION AND NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').

2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.

3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

   - Mid-point – 454538 524086
   - North – 451524 526936
   - East – 458780 521588

- South – 456998 520748
- West – 446938 521612

5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.

6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:

   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. hydrogen storage;
   g. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.

10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Documents

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.

12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.

13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.

14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.

15. The consultation on the proposed application will take place between **14 September and 26 October 2023**.

16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk

17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge.

Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

18. Paper and digital copies of the SoCC and SoCC Notice and digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 26 October 2023:

Inspection Location	Opening Times
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023**. Responses received after this date may not be considered.

22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

ENVIRONMENTAL PROTECTION

THE H2TEESSIDE PROJECT
THE PLANNING ACT 2008 – SECTIONS 42, 47 AND 48
THE INFRASTRUCTURE PLANNING (APPLICATIONS: PRESCRIBED FORMS AND PROCEDURE) REGULATIONS 2008 – REGULATION 4
THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017 – REGULATION 13
NOTICE OF PUBLICATION OF A STATEMENT OF COMMUNITY CONSULTATION AND NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').

2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.

3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454538 524086
- North – 451524 526936
- East – 458780 521588
- South – 456998 520748
- West – 446938 521612

5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.

6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:

a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
d. an electricity grid connection to provide power to the Project;
e. water supply and treatment and wastewater infrastructure;
f. hydrogen storage;
g. CO capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO ;
h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.

10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Documents

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.

12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.

13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.

14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.

15. The consultation on the proposed application will take place between **14 September and 26 October 2023**.

16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk

17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

18. Paper and digital copies of the SoCC and SoCC Notice and digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 26 October 2023:

Inspection Location	Opening Times
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net
Post: Freepost H2TEESSIDE
Telephone: Freephone 0800 080 3028
Project Website: www.h2teesside.co.uk

20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023**. Responses received after this date may not be considered.

22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

TRANSPORT

HS2

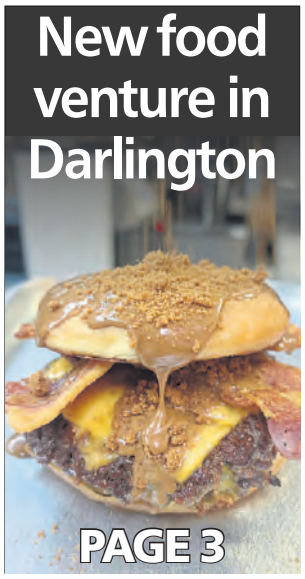
HIGH SPEED RAIL (WEST MIDLANDS - CREWE) ACT 2021
COMPULSORY PURCHASE (VESTING DECLARATIONS) ACT 1981
TO: PERSONS HAVING A RELEVANT INTEREST IN THE LAND DESCRIBED IN THE SCHEDULE HERETO

1. The High Speed Rail (West Midlands - Crewe) Act 2021 ("the High Speed Rail Act") received Royal Assent on 11 February 2021.

2. The Secretary of State for Transport (the "Acquiring Authority") is authorised under section 4 of the High Speed Rail Act to exercise powers under section 4(1) of the High Speed Rail Act to acquire compulsorily so much of the land within the limits of the High Speed Rail Act as may be required for Phase 2a purposes[1].

3. By virtue of section 4(4) of the High Speed Rail Act, the Compulsory Purchase (Vesting Declarations) Act 1981 ("the 1981 Act") applies as if the High Speed Rail Act were a compulsory purchase order.

4. Pursuant to section 3A of the 1981 Act[2] before making a general vesting declaration ("GVD") under section 4 of the 1981 Act the Acquiring Authority shall, in a notice which is (a) given to every person with a relevant interest in the land with respect to which a declaration is to be made (other than a mortgagee who is not in possession); and (b) published in the London Gazette, include the particulars in section 3A(3) of the 1981 Act[3].



5. Notice is hereby given pursuant to Section 3A of the 1981 Act[4] of the Statement of the Effect of Parts 2 and 3 of the 1981 Act which provides an explanation of the process for and the effect of a GVD in respect of the land described in Schedule 1 hereto.

SCHEDULE 1
Borough of Stafford

(1) Plot No.	(2) Description
127653	All interests in 1716.06 square metres, or thereabouts, of agricultural land (Eccleshall Road)
127654	All interests in 146.37 square metres, or thereabouts, of outbuilding, garden, hardstanding and hedgerow (Little Micklow Farm)
127982	All interests in 141207.82 square metres, or thereabouts, of agricultural land, ponds, copse, access tracks, hedgerows and public footpath (Stone Rural 32) (Walton Heath Farm)
127983	All interests in 884.28 square metres, or thereabouts, of agricultural land (Walton Heath Farm)
127985	All interests in 12567.86 square metres, or thereabouts, of agricultural land, access tracks, pond, copse and public footpath (Stone Rural 32), (Walton Heath Farm)
127986	All interests in 94796.21 square metres, or thereabouts, of agricultural land, copse, ponds, hedgerows and access tracks (Walton House Farm)
127987	All interests in 1979.16 square metres, or thereabouts, of agricultural land, garden and hedgerow (Walton Heath Farm)

THE H2TEESSIDE PROJECT

The Planning Act 2008 – Sections 42, 47 and 48

The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4

The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13

NOTICE OF PUBLICATION OF A STATEMENT OF COMMUNITY CONSULTATION AND NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point – 454538 524086
   - North – 451524 526936
   - East – 458780 521588
   - South – 456998 520748
   - West – 446938 521612
5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. hydrogen storage;
   g. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.
10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Documents

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.
12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.
13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.
14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
15. The consultation on the proposed application will take place between **14 September and 26 October 2023.**
16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk
17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge. Anydetails you provide to us via emailor telephone will be subject to ourPrivacy Notice: http://h2teesside.co.uk/privacy
18. Paperand digitalcopies ofthe SoCC and SoCCNotice and digital copies ofthe ConsultationDocumentswillalso be available to viewfree ofcharge atthe following inspection locationsuntil26 October 2023:

Inspection Location	Opening Times
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday9am to 5pm; Friday 9am to 6pm;Saturday9.30am to 12.30pm;Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday& Wednesday 8.30am to 6pm;Tuesday &Thursday 8.30am to 8pm; Friday8.30am to 6pm;Saturday 09.30am to 4pm;Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays9am to 4.30pm;Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: **info@h2teesside.net**

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: **www.h2teesside.co.uk**

20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023.** Responses received after this date may not be considered.
22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

TRAFFIC & Roads

national highways

ROAD TRAFFIC REGULATION ACT 1984 - SECTION 14
THE A1 TRUNK ROAD
(BURGHAM TO WEST MOOR)
(TEMPORARY RESTRICTION AND PROHIBITION OF TRAFFIC)

NOTICE IS HEREBY GIVEN that National Highways Limited intends to make an Order on the A1 Trunk Road and carriageway, in the County of Northumberland, to enable carriageway resurfacing works to be carried out in safety.

The works are expected to start on Saturday 6 October 2023 for 7 weeks, or until completed.

The effect of the Order will be, between 8pm and 6am, at times during the works to:

(i) impose a temporary 10mph speed restriction on the A1 northbound and southbound carriageway from 400 metres north of Helm Junction to 225 metres north of West Moor Junction, a distance of 2685 metres. The 10mph speed restriction will only apply when, for safety reasons, traffic has to be escorted through the works by a highway maintenance vehicle;

(ii) ban vehicles from entering or leaving the A1 carriageway as described in (i).

During the closures suitably signed alternative routes will be available.

It will also be necessary, for 24 hours a day, for the duration of the works, to:

(iii) impose a temporary 40mph speed restriction on the A1 northbound and southbound carriageway from 450 metres south of Helm Junction to 1115 metres north of West Moor Junction, a distance of 4425 metres;

(iv) close the laybys adjacent to the above lengths of carriageway as described in (i);

(v) impose an overtaking ban, on the A1 carriageway as described in (i).

Traffic management will be in force 24 hours a day and traffic signs will indicate the extent of the restrictions (which will not apply to emergency service vehicles or special forces vehicles) and prohibitions (which will not apply to emergency service vehicles or vehicles being used in connection with the said works or for winter maintenance or traffic officer purposes). Access will be maintained at all times to premises and property which are accessible from, and only from, the A1. The Order comes into force on 6 October 2023 and has a maximum duration of eighteen months.

The contact for any further information about this notice is Adam Hughes, telephone: 0300 470 2593, e-mail: info@nationalhighways.co.uk

RICHARD FOXTON, National Highways, 2 City Walk, LEEDS, LS11 9AR.

national highways

ROAD TRAFFIC REGULATION ACT 1984 - SECTION 14
THE A1(M) MOTORWAY (JUNCTION 51)
(TEMPORARY PROHIBITION OF TRAFFIC)

NOTICE IS HEREBY GIVEN that National Highways Limited intends to make an Order on the A1(M) Motorway, in the County of North Yorkshire, to enable Kerb works to be carried out in safety.

The works are expected to start on Monday 9 October 2023 for 1 night, or until completed, and will take place between 8pm and 6am.

The effect of the Order will be to close the A6055 from its junction with the A1(M) (Leeming Bar) southwards for a distance of 43 metres; during which times a suitable signed alternative route will be available.

Traffic signs will indicate the extent of the prohibition (which will not apply to emergency service vehicles or vehicles being used in connection with the said works or for winter service maintenance or traffic officer purposes). The order comes into force on 8 October 2023 and has a maximum duration of 18 months.

The project manager for this scheme is Michael Mccormack. For enquiries please contact the National Highways Customer Contact Centre on 03001235000 or info@nationalhighways.co.uk

Planning

THE H2TEESSIDE PROJECT
The Planning Act 2008 - Sections 42, 47 and 48
The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 - Regulation 4
The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 - Regulation 13
NOTICE OF PUBLICATION OF A STATEMENT OF COMMUNITY CONSULTATION AND NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point - 454538 524086
   - North - 451524 526936
   - East - 458780 521588
   - South - 456998 520748
   - West - 446938 521612
5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. hydrogen storage;
   g. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.
10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Document

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.
12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.
13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.
14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
15. The consultation on the proposed application will take place between **14 September and 26 October 2023**.
16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk
17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
18. Paper and digital copies of the SoCC and SoCC Notice and digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 26 October 2023:

Inspection Location	Opening Times
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:
    Email: info@h2teesside.net
    Post: Freepost H2TEESSIDE
    Telephone: Freephone 0800 080 3028
    Project Website: www.h2teesside.co.uk
20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023**. Responses received after this date may not be considered.
22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

Traffic & Roads

national highways

ROAD TRAFFIC REGULATION ACT 1984 - SECTION 14
THE A66 TRUNK ROAD (WARRENER LANE TO MOOR ROAD) (TEMPORARY 50 MILES PER HOUR SPEED RESTRICTION)

NOTICE IS HEREBY GIVEN that National Highways Limited has made an Order on the A66 Trunk Road, in the County of North Yorkshire, to enable local authority works to be carried out in safety.

The works are expected to start at 8am on Monday 18 September 2023 for 4 weeks, or until completed.

The effect of the Order will be to impose, 24 hours a day, at times during the works, a temporary 50mph speed restriction on the A66:

(i) eastbound carriageway from 30 metres east of Warrener Lane junction to 250 metres east of Moor Road junction, a distance of 3420 metres; and

(ii) westbound carriageway from 700 metres east of Hargill junction to 140 metres east of Warrener Lane junction, a distance of 3710 metres.

Traffic management will be in force 24 hours a day and traffic signs will indicate the extent of the restrictions (which will not apply to emergency service vehicles or special forces vehicles). The Order comes into force on 17 September 2023 and has a maximum duration of eighteen months.

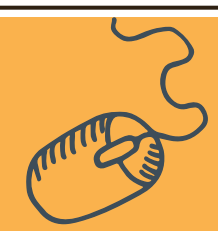
The contact for this scheme is Michael McCormack. For enquiries please contact the National Highways Customer Contact Centre on 03001235000 or info@nationalhighways.co.uk

RICHARD FOXTON, National Highways, 2 City Walk, LEEDS, LS11 9AR.

REDCAR AND CLEVELAND BOROUGH COUNCIL
CHAPEL STREET, LAZENBY (TEMPORARY PROHIBITION OF DRIVING) ORDER 2023

The Council has made an Order under the Road Traffic Regulation Act 1984 as amended because works are being or are proposed to be executed on or near the length of road specified below.

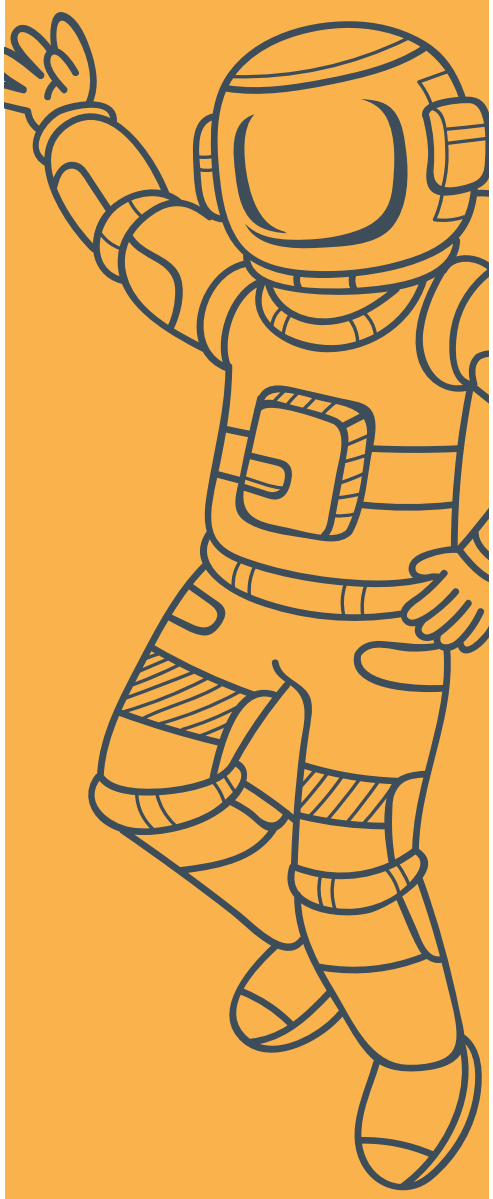
The effect of the Order will be to prohibit any vehicle from proceeding in the lengths of road specified in the schedule below. Access will be available to residents' properties within the closure. Local diversions will be in operation.



The Order came into operation on 8.9.23 and remain in operation for 18 months, although it is envisaged that the works will be completed within 10 working days.

SCHEDULE

Chapel Street, Lazenby from outside number 11 to the junction with New Row, Lazenby.



J Sampson, Managing Director, Redcar and Cleveland House, Kirkleatham Street, Redcar TS10 1RT

Starmer plots deal to take EU migrants

Labour believes sharing burden of asylum seekers is only way to fix small boats crisis

By **Charles Hymas**
HOME AFFAIRS EDITOR

A LABOUR government would accept migrants from Europe as part of a proposed deal with the EU to try and stop the small boats crisis.

The party is considering taking a share of asylum seekers reaching Europe as part of a deal where the bloc would take back migrants who illegally come to the UK across the Channel.

Senior party figures believe Britain is only likely to secure a returns deal, enabling it to deport Channel migrants, if it offers to share the burden of asylum seekers reaching the continent.

The plan emerged as Sir Keir Starmer, the Labour leader, arrived last night in The Hague to visit Europol, the EU agency for law enforcement co-operation, before a trip to see Emmanuel Macron, France’s president, next week.

Speaking in the Netherlands before talks, he said Labour would treat people smugglers like terrorists by giving the National Crime Agency (NCA) expanded powers to freeze their assets and place restrictions on their movement.

With immigration set to be a key battleground in the run-up to the election, Sir Keir aims to offer an alternative to the Government’s Rwanda scheme by redirecting its £140 million funds into a new cross-border NCA unit. He said Labour would drop the Conservatives’ plans to ban cross-Channel migrants from claiming asylum in Britain.

Sir Keir is also expected to set out plans tomorrow on how the party will reduce the asylum backlog and end the use of hotels, which cost £6 million a day to house 50,000 migrants. The moves are a challenge to Rishi Sunak, the Prime Minister, who made stopping the boats one of his five pledges.

The Government has claimed success by cutting Channel crossings by 20 per cent this year but more than 23,000 migrants have still reached the UK so far in small boats.

Rwanda flights have been grounded, pending the outcome of a Supreme Court ruling on their legality, and the EU has so far spurned any post-Brexit returns agreement with the UK.

It emerged yesterday that Sir Keir will meet Mr Macron at the Élysée next week as he “tests the waters” with France. It is believed Sir Keir requested the meeting and France agreed to protect the “strategic nature” of its relationship with Britain, whoever is in charge after the next general election.

It is thought a possible returns deal may be discussed. Sir Keir’s spokesman said: “The detail of those conversations will follow but it is clear that having a returns agreement is an essential part of being able to deal with the backlog and reduce the hotel bill.”

Asked about the possibility of taking a share of Europe’s migrants as a quid pro quo for a returns agreement, the spokesman said: “The exact way it would operate would have to be [up] for negotiation. The UK will always want to be a country that takes people through safe and legal routes as we have done most recently when it comes to Afghanistan and Ukraine, for example.”

Labour sources told *The Daily Telegraph* a scheme to take migrants from Europe would be tightly managed.

Party sources believe that if a returns agreement could be negotiated, it could “collapse” the people smugglers’ business model as migrants would know they faced deportation back to the country from which they came, where their asylum claim would be processed.

Last night, government sources seized on the plan as “open borders by the backdoor”. A source said: “Finally we get to see Sir Keir Starmer’s plan for illegal migration – he’ll make it legal.

“He’ll ignore the will of the British people to cut numbers, and instead cut a deal with the EU that would commit us to taking our ‘fair share’ of however many illegal migrants enter Europe.”

Duke and Duchess reunited

CHRIS JACKSON/GETTY IMAGES

The Duke and Duchess of Sussex pose with children at the Merkur Spiel-Arena in Düsseldorf during day four of the Invictus Games. The Duchess arrived late at the games on Tuesday, saying she had to spend time getting their ‘little ones settled at home’, but received a rapturous welcome as she got into the spirit of the competition. *Report: Page 5*

Schools need trans guidance, ministers told

By **Louisa Clarence-Smith** *and* **Catherine Lough**

THE Children’s Commissioner has criticised the Government for delaying transgender guidance for schools.

Dame Rachel de Souza told *The Daily Telegraph* there was “real confusion” in schools around how to respond to children questioning their gender identity, with head teachers forced to come up with their own policies.

Trans guidance for schools in England was promised before the end of the summer term but has been delayed by a Cabinet disagreement over the need for a law change to ban children from changing gender pronouns at school.

The delay means schools are in limbo over whether they can stop boys who identify as girls from using girls’ lavatories or joining girls’ sports teams.

The commissioner’s comments come as she begins the “Big Ambition” campaign today, to hear from children ahead of the next general election, and warns ministers that it is “shortsighted to neglect the needs of children” who continue to suffer from the impact of pandemic lockdowns.

Dame Rachel said: “I’m disappointed that the guidance isn’t out. We need that guidance.

“I think this has got to be one of the most challenging issues for heads, because it’s a fast-emerging issue and I think nobody feels that they don’t want to support any individual or any child, but they also feel strongly about needing clarity over safeguarding issues. As a head teacher, I could not give your child a spoon of medicine without your permission, and we know that in the absolute best-case scenario, parents, children and schools need to work together really closely, and at the moment I think there’s real confusion, so we need those guidelines.”

> ‘I think this has got to be one of the most challenging issues for head teachers’

The Cabinet is understood to be split on whether a law change is needed to ban so-called “social transitioning” – where children are treated as if they are the opposite gender – in schools. Rishi Sunak is said to be fearful of Tory splits on the issue being exposed if he attempts to change equality legislation.

Parents have said schools affirmed their child’s preferred gender pronouns without their consent and without first obtaining clinical or medical advice.

A government spokesman said: “Given the complexity and sensitivity of the issue, we’re taking the time to make sure any guidance we provide is as clear as possible.

“We’ve been repeatedly clear about the importance of biological sex and we advise that schools and colleges proceed with caution – prioritising the safeguarding and wellbeing of all children and involving parents in decisions relating to their child.”

British-made missiles used in strike on Russian submarine

By **Joe Barnes** *and* **James Kilner**

BRITISH-MADE Storm Shadow missiles were used in a Ukrainian strike that damaged a Russian submarine and ship at a naval port in Crimea.

Russian sources claimed a volley of 10 missiles and three unmanned naval drones were launched, in what appeared to be Kyiv’s most ambitious attack on the port city of Sevastopol since the start of the war.

Its defence ministry claimed seven of the missiles had been shot down and the unmanned drones had been destroyed.

But Ukrainian and British sources were reported as confirming the Storm Shadow missiles had successfully landed, in a strike that damaged one of Moscow’s most formidable submarines.

The vessel, believed to be an improved Kilo-class attack submarine, was hit in the overnight attack on Sevastopol, which also damaged a Russian amphibious landing ship. “Unfortunately, three Storm Shadow missiles reached their target. The landing ship ‘Minsk’ and the submarine ‘Rostov-on-Don’, which were in dry dock, received varying degrees of damage,” the Russian Rybar Telegram channel reported.

Mykola Oleshchuk, the head of the Ukrainian Air Force, appeared to confirm that Storm Shadow missiles were used in the strike when he praised his pilots for their “excellent combat work”. Storm Shadows are fired from Ukrainian fighter jets and have the longest range of all the missiles in Ukraine’s arsenal.

Since May they have been used to strike Russian supply depots and command posts behind the front lines.

Video showed large explosions and fires around the Sevmorzavod Shipyard in Sevastopol, which is used to repair Russian warships.

It had previously been identified as the base for Russia’s forthcoming programme to build maritime attack drones.

Mikhail Razvozhayev, the Russia-installed governor of Crimea, said air defence systems shot down seven of 10 Ukrainian missiles. Three marine drones

HMRC ‘failing taxpayers’ as thousands of staff shun office

By **Harry Brennan** *and* **Noah Eastwood**

THOUSANDS of HMRC staff are routinely failing to show up at the office even for one day a week as customer service falls to “unacceptable levels”.

As many as two in five HM Revenue and Customs workers did not go into the office at all in some of the tax authority’s regional offices in the year to March, figures obtained under Freedom of Information laws show.

It is the latest evidence of civil servants increasingly shunning the office to work remotely and comes despite post at the tax office going unanswered for months and call waiting times exceeding 20 minutes on average. It is likely to add to concerns in Whitehall about slumping productivity, as the Paymaster General pushes to get more mandarins back to their desks.

The revelations follow a separate Freedom of Information disclosure that showed hundreds of council staff were working abroad.

Sir Jacob Rees-Mogg, the former Cabinet Office minister, said: “It is increasingly clear that working from home leads to poorer public services. HMRC, which used to have a reasonable reputation, is failing taxpayers as its staff neither toil nor spin.”

In HMRC’s Northern Ireland office about two in five employees routinely failed to go into the office at all, the figures suggested, with 59 per cent of staff – 1,100 workers – going into the Belfast office at least once a week on average.

In its Cardiff centre, 39 per cent of staff shunned the office, with only 2,400 showing up at least once a week on average in the last year.

Chris Etherington of the tax firm RSM, which obtained the figures, said that the low levels of office attendance would “feel like salt in the wound” of taxpayers who have been grappling with delays and communication issues.

A spokesman for HMRC said: “Our advisers answer the same number of calls on average whether they are in the office or not.”

First dog-fox cross in world found in Brazil

The world’s first confirmed dog-fox hybrid has been found in Brazil. The animal was hit by a car in 2021 but veterinary hospital staff could not decide if it was a fox or dog. The female animal’s unusual characteristics piqued the interest of scientists, who analysed its genes, revealing its mother was a pampas fox and its father a domestic dog. Academics called it “Dogxim” as a merger of “dog” and “xim” from *Graxaim-do-camp,* the Portuguese name for the pampas fox.

Population decline is ‘positive for economy’

Population growth has led to a decline in living standards, the chief forecaster of the Government’s spending watchdog has said. Prof David Miles, of the Office for Budget Responsibility, has said rather than having a negative effect, shrinking populations could be positive for the world’s richest nations. In an academic paper falling birth rates, the economist concluded that “the economic impacts are likely, on balance, to be positive”, leading to a higher quality of life.

ChatGPT diagnosis as good as A&E doctors

ChatGPT is as good as A&E doctors at diagnosing patients, a study has suggested, with researchers saying that it could be used to cut waiting times. The study in the Netherlands compared the accuracy of diagnoses made by the language model, which is powered by AI, with those made by medics. Physicians’ notes on symptoms and examinations from 30 patients who visited an emergency department last year were entered into ChatGPT versions 3.5 and 4.0.

BP culture questioned after Looney’s exit

BP’s board was last night facing questions over the company’s culture and its handling of whistleblower complaints after the shock resignation of Bernard Looney, the chief executive. Mr Looney, 53, resigned on Tuesday after misleading the board about personal relationships with colleagues. The announcement took investors by surprise. However, industry sources claimed it had been “common knowledge” that Mr Looney had had relationships with colleagues.

Bridge news

The first of three weekends of the English Premier League has taken place, **writes Julian Pottage, Bridge Correspondent**. On the first weekend Division 1 played at Richmond Bridge Club while Division 2 played at the Young Chelsea BC and Division 3 played at Coventry BC.

The leaders after the first weekend are as follows:

Division 1

1st Team Black (Andrew Black, David Gold, Andrew McIntosh, Thomas Paske, Simon Cope and Peter Crouch) 87.89 VPs.

2nd Hinden (John Atthey, Graham Osborne, Neil Rosen, Frances Hinden and Chris Jagger) 81.79 VPs.

3rd Knottenbelt (Maggie Knottenbelt, Michael Byrne, Kieran Dyke, Ben Handley-Pritchard and Ed Jones) 77.64 VPs.

Division 2

1st Lee (Stephen Lee, Gad Chadha, Graham Orsmond, Ben Ritacca, Francois Picard and Nicolas Leprovost) 86.22 VPs.

2nd Nettleton (Ian Draper, Thomas Rainforth, Diana Nettleton, Anne Rosen and Joe Sivayogan) 75.08 VPs.

Division 3

1st Comfortably Numb (Marcia Green, Heather Dhondy, Joe Fawcett, Alastair Gidman and Ollie Burgess) 101.11 VPs.

2nd Miller (Robert Miller, Ufuk Cotuk, Tugrul Kaban and David Eddleston) 80.91 VPs.

The second weekend takes place in the middle of October and the third weekend at the start of November.

ONE HUNDRED YEARS AGO

The Daily Telegraph.

LONDON, FRIDAY SEPTEMBER 14, 1923

MILITARY COUP IN SPAIN.

BARCELONA SEIZED

A military revolution broke out in Spain on Wednesday night. The immediate scene of the revolt is Barcelona, which for several years past has been a hotbed of Communism and revolutionary and separatist propaganda, and the scene of almost innumerable murders and other outrages, the perpetrators of which have for the most part escaped punishment. The leader of the rising, which, it is explained, is not directed against the Throne, but rather against the present Cabinet under the Marquis de Alhucemas, is the Captain-General (Military Governor) of Barcelona. He has declared martial law, seized the post and telegraph office, and apparently intends to take over the whole administration of the district. There seems reason to believe, however, that the movement will spread to other great centres, as the heads of the military junta have made no attempt to disguise their line of conduct should certain circumstances arise.

Closely connected with the existing upheaval are the Moroccan campaign and the Nationalist movement in Catalonia (of which Barcelona is the capital), for what may be described as Home Rule. In regard to the former question recent telegrams from our correspondent in Spain have made it clear that a grave division of opinion existed in the Cabinet as to whether the operations against the Riffs should be pursued with energy or whether the Spanish efforts should be confined to holding the line already occupied. Supporters of the latter plan feared a repetition of the terrible disaster sustained by the army in the summer of 1921, when it was totally defeated with a loss of some 10.000 men killed, several thousands of prisoners, and a great deal of its munitions and supplies. Eventually three dissident Ministers resigned, including the Minister of Finance, who objected to the huge outlay which would be entailed by further active operations in Morocco.

The following telegrams from Reuter's correspondents reached us yesterday:

RISING AT BARCELONA.

BARCELONA. THURSDAY.

As a result of the proclamation by the Captain-General, Primo de Rivers, attacking the Government and announcing the decision of the military authorities to take over power, the Central Telephone Office has been occupied.

A hasty meeting of the Cabinet has been summoned at Madrid.

It is expected that martial law, which has practically been in force since early this morning, will be proclaimed at any moment. The military authorities have set up a censorship. It is stated that the garrisons at Madrid, Saragossa, and Seville are loyal to the movement.

A communiqué which has been issued states that proceedings are to be instituted against the Minister for Foreign Affairs and the President of the Council, and a government set up under the military authorities. Telephone communications have been cut by the military. The communiqué states that the movement is loyal to the King, as it is directed against the Government.

BARCELONA, THURSDAY (LATER).

Martial law was declared here this morning.

Acting on the orders of the Captain-General, Primo de Rivera, General Lossada has taken over the administration of the Province of Barcelona, dispossessing the present Governor. The military have also seized power in the Catalan provinces, and apparently without encountering any difficulty. The military authorities have not yet occupied the municipal,, provincial, and communal offices. The police, the Civil Guard, and other public authorities seem to have acquiesced in the new order of things.

ARMY LEADER'S MANIFESTO.

MADRID, THURSDAY.

The sitting of the Cabinet which was held in connection with the proclamation issued by the Captain-General of Barcelona lasted til the early hours of this morning, when the following statement was issued to the Press:

The Captain-General of Barcelona last night proclaimed, on his own responsibility, a state of siege in that district, seized the communications, and invited other districts to support his action. In order to explain this step, he published a manifesto to the country, declaring that the army called upon the Sovereign to save Spain, and asking for the dismissal of the present Ministers. In certain districts it appears that military forces are disposed to concur in this attitude of rebellion.

The Cabinet is in permanent session, and will maintain its position, which it will abandon only under force, should the promoters of this sedition decide to follow up their policy, with all its consequences. The King will arrive at Madrid to-day.

According to some of the newspapers, the garrison of San Sebastian has imprisoned Senor Alba, the Minister for Foreign Affairs, whilst others express the belief that the Minister has succeeded in crossing into France.

Dealer East — **Game All**

	♠ Q ♥ 10 9 3 2 ♦ J 7 5 2 ♣ 10 9 7 5	
♠ K J 8 6 3 ♥ 7 4 ♦ Q 4 ♣ K 8 4 2	N W E S	♠ 7 5 4 2 ♥ A K J 8 5 ♦ 9 6 ♣ J 3
	♠ A 10 9 ♥ Q 6 ♦ A K 10 8 3 ♣ A Q 6	

West	North	East	South
		pass	2NT(1)
pass	pass	dble(2)	pass
pass	pass	pass	

(1) 20-21 in principle, balanced
(2) For West's weaker major

Contract 2NT doubled
Declarer South
Opening Lead ♥7

MANY players jest about a double on the sequence 2NT-pass-pass. Dummy is sure to be weak on this auction, sometimes entryless. If declarer has no source of tricks, and is forced to lead repeatedly from hand, he will often end up two or three tricks light.

Few actually double, because it's not really a sensible move. More often than not, dummy does have an entry, enabling a critical finesse. One slip by the defence, or a favourable lie for declarer, and 2NT will come home. In general, at least at teams and rubber bridge, thin doubles into game are best avoided. They're not justified by the IMP (or total points) odds.

Our deal is from the Bermuda Bowl in Marrakech. Fortunately for those just visiting, the world championships finished a week before the earthquake.

Switzerland played Norway towards the end of the round-robin phase. Both teams were safely qualifying. At stake were picking rights for the knockouts.

North-South for Norway were Geir Helgemo and Tor Eivind Grude. (Tor Helness has retired.) East-West for Switzerland were the erstwhile top Dutch pair, Sjoert Brink and Bas Drijver. With 19 points, a five-card suit and good spots, Grude (South) stretched to open 2NT. Drijver passed as did Helgemo, hoping not to have missed 4♥.

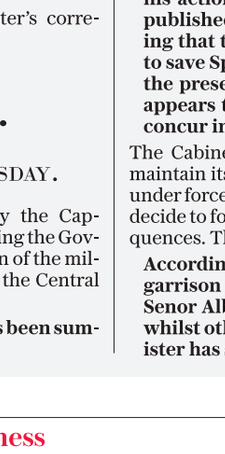
Now Brink (East) tried a double, a sporting effort to say the least. This was lead-directing, akin to a double of 1NT-3NT, requesting a lead of opener's weaker major. Some play it as for specifically a spade. All passed and Drijver led the ♥7. In the other room, with the ♦Q falling, 2NT had made nine on a spade lead – but undoubled.

Brink took the ♥K at trick one, and switched to the ♠7 (top of nothing) to the ♠9 and ♠K. Drijver switched back to the ♥4, to the ♥A and ♥Q. Now a second spade beats the contract, provided the defenders are careful with their spade spots. East must keep all his spades on the run of the diamonds. West, known to hold the ♣K as East passed as dealer, must throw two clubs and keep the ♠3. Only thus can they untangle all their winners, and avoid West being endplayed.

Brink, alas, cashed his ♥J at trick four, establishing dummy's ♥10. Now South had eight tricks. Eleven IMPs to Norway.

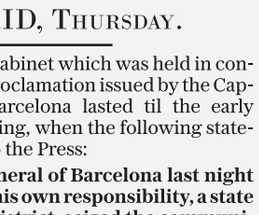
Norway 2NT doubled and made, N/S +690
Switzerland 2NT plus one, N/S +150

Chess



Carlsen's cruise control

By **Malcolm Pein**



MAGNUS Carlsen's winning streak continued, as he defeated Alireza Firouzja in the final of the Julius Baer Generation Cup to secure his third victory on the $2million Champions Tour, and augment his winnings with the $30,000 first prize. Carlsen is odds-on favourite to win the Champions Chess Tour a third time at the concluding event in Toronto in December. His opponents will include Hikaru Nakamura, Nodirbek Abdusattorov, Fabiano Caruana and Wesley So.

Carlsen's victory followed on from his triumphs at the Grand Chess Tour Rapid and Blitz in Zagreb and at the FIDE World Cup in Baku, the latter being the only major prize the 16th world champion had never won. Subsequently Carlsen tweeted: "Chess, completed it."

Carlsen was not at his best in the final, coming through 3-2 with victory in Armageddon.

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point - 454538 524086
   - North - 451524 526936
   - East - 458780 521588
   - South - 456998 520748
   - West - 446938 521612
5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. hydrogen storage;
   g. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.
10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Document

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.
12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.
13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.
14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
15. The consultation on the proposed application will take place between **14 September and 26 October 2023**.
16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk
17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
18. Paper and digital copies of the SoCC and SoCC Notice and digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 26 October 2023:

Inspection Location	Opening Times
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:
    Email: info@h2teesside.net
    Post: Freepost H2TEESSIDE
    Telephone: Freephone 0800 080 3028
    Project Website: www.h2teesside.co.uk
20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023**. Responses received after this date may not be considered.
22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

Cheers as housing scheme is rejected

By Stuart Minting
Local Democracy Reporter

A PLAN to build a housing estate across a popular greenfield site has been roundly rejected after 18 months of mounting tensions over the scheme.

North Yorkshire councillors yesterday unanimously refused Zetland Estates' plan for 32 homes over a popular open space on Richmond's western boundary at Hurgill Stables, off Westfields.

Opposition to the development had seen more than a thousand signatures added to a petition and a protest during a site visit by councillors last week. Yesterday the packed meeting room at Mercury House in Richmond erupted into cheers and applause as delighted residents shook hands and embraced each other.

After the meeting, former mayor of Richmond, Councillor Clive World, said residents hoped to be able to buy the land from Zetland Estates, to keep it as pasture in perpetuity, and that a crowdfunding campaign could be launched to raise the funds.

The meeting had heard officers recommending the plan be approved, after concluding it would cause less than substantial harm to Richmond's conservation area and that its merits, such as the provision of quality housing close to the town centre, outweighed its negative impacts. An agent for the developer told the meeting building the estate on the 4.6-acre site would have a positive trickle down effect on the local economy at a time of instability. Zetland Estates, of which the Marquess of Zetland's son, the Earl of Ronaldshay is a director, had claimed the development would "transform the lives of many" while providing "a transition to energy efficient building practices on a larger scale".

He said the applicant wanted to build a development that respected its context and that the scheme would deliver much-needed affordable housing as well as a 23 per cent biodiversity net gain, well above the required amount.

Precision ploughing at Hunton Steam Gathering
Picture: ANDY BURNS

Ploughing ahead

ORGANISERS say the weekend's Hunton Steam Gathering beat all previous events for entries and attendance figures.

Aided by the hot weather, Saturday was the busiest ever day for the fair, held in Hunton, between Bedale and Leyburn.

Crowds enjoyed live bands, a vintage tractor ploughing competition, showman's engines "Dreadnought" and "Perseverance The Second" and Howards original steam gallopers.

THE H2TEESSIDE PROJECT
The Planning Act 2008 – Sections 42, 47 and 48

The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4

The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13

NOTICE OF PUBLICATION OF A STATEMENT OF COMMUNITY CONSULTATION AND NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point – 454538 524086
   - North – 451524 526936
   - East – 458780 521588
   - South – 456998 520748
   - West – 446938 521612
5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. hydrogen storage;
   g. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.
10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Documents

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.
12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.
13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.
14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
15. The consultation on the proposed application will take place between **14 September and 26 October 2023.**
16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk
17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
18. Paper and digital copies of the SoCC and SoCC Notice and digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 26 October 2023:

Inspection Location	Opening Times
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 9.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net
Post: Freepost H2TEESSIDE
Telephone: Freephone 0800 080 3028
Project Website: www.h2teesside.co.uk

20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023.** Responses received after this date may not be considered.
22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

Officers from Cleveland Police were called to two properties in South Bank, Middlesbrough Pictures: TERRY BLACKBURN

Two women found dead

TWO people have died and four people have been arrested following two incidents in Middlesbrough.

Officers from Cleveland Police were called to a property in South Bank on Monday, and police say the body of a woman was found inside the building.

This was followed by another incident at around 10.30am on Tuesday, that saw officers called to a report of a sudden death elsewhere in South Bank where a second woman had died.

Enquiries into both deaths are continuing.

THE H2TEESSIDE PROJECT

The Planning Act 2008 – Sections 42, 47 and 48

The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4

The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13

NOTICE OF PUBLICATION OF A STATEMENT OF COMMUNITY CONSULTATION AND NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point – 454538 524086
   - North – 451524 526936
   - East – 458780 521588
   - South – 456998 520748
   - West – 446938 521612
5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. hydrogen storage;
   g. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.
10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Documents

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.
12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.
13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.
14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
15. The consultation on the proposed application will take place between **14 September and 26 October 2023**.
16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk
17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge.

    Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
18. Paper and digital copies of the SoCC and SoCC Notice and digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 26 October 2023:

Inspection Location	Opening Times
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: **info@h2teesside.net**
Post: **Freepost H2TEESSIDE**
Telephone: **Freephone 0800 080 3028**
Project Website: **www.h2teesside.co.uk**

20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023**. Responses received after this date may not be considered.
22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

TRAFFIC & Roads

national highways

ROAD TRAFFIC REGULATION ACT 1984 – SECTION 14
THE A19 TRUNK ROAD
(MURTON TO EASINGTON)
(TEMPORARY RESTRICTION AND PROHIBITION OF TRAFFIC)

NOTICE IS HEREBY GIVEN that National Highways Limited has made an Order on the A19 Trunk Road, in County Durham, to enable resurfacing works to be carried out in safety.

The works are expected to start at 8pm on Sunday 24 September 2023 for 1 month, or until completed.

The effect of the order will be, between 8pm and 6am, at times during the works, to close the A19;

(i) southbound carriageway from the exit slip road at Cold Hesledon Interchange to the entry slip road at Easington Interchange, a distance of 4460 metres;
(ii) southbound entry slip road at Cold Hesledon Interchange; and
(iii) southbound exit and entry slip roads at Easington Interchange.

During the closures suitably signed alternative routes will be available at all times.

It will be necessary to, for 24 hours a day, from Sunday 24 September 2023, to:

(iv) impose a temporary 50mph speed restriction on the A19 southbound carriageway from the exit slip road at Cold Hesledon to the entry slip road at Easington Interchange, a distance of 4460 metres;
(v) close the layby adjacent to the A19 southbound carriageway approximately 640 metres south of the A182 Cold Hesledon Interchange overbridge;
(vi) close the layby adjacent to the A19 southbound carriageway approximately 700 metres north of the Hall Walks overbridge;

Traffic management will be in force 24 hours a day and traffic signs will indicate the extent of the restrictions (which will not apply to emergency service vehicles or special forces vehicles) and prohibitions (which will not apply to emergency service vehicles or vehicles being used in connection with the said works or for winter maintenance or traffic officer purposes). The Order comes into force on the 23 September 2023 and has a maximum duration of eighteen months.

The contact for any further information about this notice is Mike Morgan, e-mail: info@nationalhighways.co.uk

POLICE FORCE MOVED OUT OF SPECIAL MEASURES

By STUART ARNOLD

CLEVELAND Police has been moved out of effective special measures after further improvements were made.

The force had been subject to enhanced monitoring by the police inspectorate after a 2019 report saw it graded as inadequate in all areas.

On being moved out of special measures, Cleveland Police Chief Constable Mark Webster said: "We will not lose sight of the fact there is still much more to be done."

Planning

THE H2TEESSIDE PROJECT
The Planning Act 2008 - Sections 42, 47 and 48
The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 - Regulation 4
The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 - Regulation 13
NOTICE OF PUBLICATION OF A STATEMENT OF COMMUNITY CONSULTATION AND NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point - 454538 524086
   - North - 451524 526936
   - East - 458780 521588
   - South - 456998 520748
   - West - 446938 521612
5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. hydrogen storage;
   g. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.
10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Documents

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.
12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.
13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.
14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
15. The consultation on the proposed application will take place between 14 **September and 26 October 2023**.
16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk
17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge.

Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

18. Paper and digital copies of the SoCC and SoCC Notice and digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 26 October 2023:

Inspection Location	Opening Times
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net
Post: Freepost H2TEESSIDE
Telephone: Freephone 0800 080 3028
Project Website: www.h2teesside.co.uk

20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023**. Responses received after this date may not be considered.
22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

Shock as allotments land is put up for sale

By Jan Hunter
News Correspondent

ALLOTMENT holders have spoken of their shock after the land housing their plots was put up for sale.

A "for sale" board appeared at a side entrance to the site on Guisborough Road, Great Ayton, on September 13.

The land is leased from the Marwood Estate by Great Ayton Parish Council. The day after the sale board went up, a notice from the parish council was placed on the "for sale" sign stating the freeholder of the allotments and adjoining grass paddock intended to place it on the open market, with bids requested on or before 12pm on October 20.

The notice continued: "Great Ayton Parish Council lease the land from the private freeholder on a self-renewing and annual basis (April to April) that continues until either party terminates it, after having given proper agreed notice. Any sale will complete with the parish council lease interest in place, and this means that the allotments will continue to be available certainly for the allotment year October 2023/2024 and we hope well beyond that time.

"Ultimately, as has always been the case, the longer-term future of this land may change but that would be subject to due process including planning and would take quite some time. At the present the council are monitoring the situation and will engage with any new owners in the event of a sale going through and will communicate any new information as it arises."

A for sale sign has gone up beside the allotments at Guisborough Road, Great Ayton

The 18.18 acres of land is being sold through Fordy Marshall, which states that parts offer "potential for longer term residential development, subject to planning". The firm is seeking offers over £445,000 for the whole lot, or split between the 10.34 acres containing the allotments for offers over £250,000, and the 7.84 acres of grassland for offers over £195,000.

The potential sale has left residents shocked, with many voicing their upset on a community Facebook page. One commenter wrote: "I first came to the allotments with my Dad when I was three. I'm now 81 and still keep hens and grow vegetables, fruit and flowers. The allotments need to be kept for local people." Another said: "The allotments are a community hub where people look out for each other. They were a lifesaver during lockdown."

Resident David Mason said: "Historically the Allotments Act 1922 provided allotment holders with some security of tenure by setting out specific periods of notice for ending a tenancy. Landlords could only end an allotment garden tenancy by giving the allotment holder a minimum of six months' notice. This was increased to 12 months by the Allotments Act 1950. In the Allotments act of 1925, the consent of the Secretary of State is needed for the disposal of allotment land for other purposes, and there must be adequate provision for the displaced holders, unless such provision is unnecessary or impractical."

An extraordinary meeting of the parish council was due to take place last night at Great Ayton Discovery Centre to discuss the issue.

THE H2TEESSIDE PROJECT

The Planning Act 2008 – Sections 42, 47 and 48

The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4

The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13

NOTICE OF PUBLICATION OF A STATEMENT OF COMMUNITY CONSULTATION AND NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), whose registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application (the 'Proposed Application') to the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. In accordance with Section 47(6) of the PA 2008, this notice publicises where and when the Statement of Community Consultation (SoCC) can be inspected. The SoCC sets out how the Applicant will undertake its consultation on the Proposed Application. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

4. The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 1,350 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point – 454538 524086
   - North – 451524 526936
   - East – 458780 521588
   - South – 456998 520748
   - West – 446938 521612
5. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
6. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with up to two million tonnes of CO2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. hydrogen storage;
   g. CO2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO2;
   h. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   i. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
7. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
8. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

9. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. The Project is therefore 'EIA development' for the purposes of the EIA Regulations and an ES will form part of the proposed application for development consent.
10. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary.

The SoCC and Consultation Documents

11. The Applicant has a duty under Section 47 of the PA 2008 to consult people living within the vicinity of the land to which H2Teesside relates about the Project prior to applying for development consent. Section 47(1) requires an applicant for development consent to prepare a statement (a 'Statement of Community Consultation' or 'SoCC') setting out how they propose to consult people living within the vicinity of the land to which their proposals relate. Section 47(7) requires the applicant to carry out the consultation in accordance with the proposals set out within the SoCC.
12. The Applicant has consulted the relevant local authorities on the SoCC in accordance with Section 47(1) of the PA 2008.
13. Section 47(6) of the PA 2008 requires an applicant for development consent to make the SoCC available for inspection by the public in a way that is reasonably convenient for people living in the vicinity of the land to which the project relates. In accordance with Section 47(6) this notice confirms when and how a copy of the SoCC, that has been prepared by the Applicant, can be inspected.
14. Additionally, in accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
15. The consultation on the proposed application will take place between **14 September and 26 October 2023.**
16. The SoCC and SoCC Notice, and the Consultation Documents (which comprise the PEIR, a Non-Technical Summary to the PEIR, Consultation Brochure, Consultation Leaflet and other documents relating to the Project, including plans and maps showing the nature and location of the Project), are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 26 October 2023. The SoCC and SoCC Notice and Consultation Documents will also be available to view free of charge at the consultation events being held during September and October 2023. Details of where and when the consultation events are taking place can be found on the Project Website: www.h2teesside.co.uk
17. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the SoCC and Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the SoCC and Consultation Documents free of charge.

    Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
18. Paper and digital copies of the SoCC and SoCC Notice and digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 26 October 2023:

Inspection Location	Redcar and Cleveland House,
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

19. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: **info@h2teesside.net**

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

20. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
21. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 26 October 2023.** Responses received after this date may not be considered.
22. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

H2 Teesside Limited

22 September 2023

DARLINGTON BOROUGH COUNCIL
ROAD TRAFFIC REGULATION ACT 1984
(TEMPORARY PROHIBITION OF TRAFFIC AND CLEARWAY) 2023
BLACKWELLGATE, GRANGE ROAD & CONISCLIFFE ROAD, DARLINGTON

Darlington Borough Council intend, has made an Order under the provisions of Section 14(1) of the Road Traffic Regulation Act, 1984, as amended, the effect of which will be:

To temporarily introduce no stopping at any time (clearway) and the prohibition of the driving of vehicles on the following roads:

SKINNERGATE
From its junction with Coniscliffe Road northwards for 15metres
It is anticipated that the closure will be effective between 1900hours and 0700hours only.

BLACKWELLGATE
From its junction with Coniscliffe Road eastwards to the western boundary of 40 Blackwellgate
An alternative route will be signed via Houndgate, Feethams, Victoria Road, West Street.
It is anticipated that the closure will be effective between 1900hours and 0700hours only.

CONISCLIFFE ROAD
From its junction with Skinnergate westwards to its junction with Hogarth Court
An alternative route will be signed via Blackwellgate, Houndgate, Feethams, Victoria Road, West Street.

GRANGE ROAD
From the north side of Northumberland Street junction northwards to its junction with Coniscliffe Road
An alternative route will be signed via Northumberland Street and West Street.

CONISCLIFFE ROAD
From its junction with Hogarth Court westwards to the junction with West Street
An alternative route will be signed via Blackwellgate, Houndgate, Feethams, Victoria Road, West Street.
Works to be carried out in phases as described above.

And to temporarily suspend the One Way on Northumberland Street from its junction with West Street eastwards to its junction with Grange Road and to implement One Way from its junction with Grange Road westwards to its junction with West Street to allow traffic to travel in the opposite direction as part of a diversion route.

The Order is necessary to allow highway refurbishment works.
The maximum duration of the temporary restrictions under this Order is 18 months commencing from 2nd October 2023, it is anticipated that the restrictions will be effective for 3 months.

Dear [redacted]

Planning Act 2008 and The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the EIA Regulations) – Regulation 10

Proposed application by H2 Teesside Ltd (the Applicant) for an Order granting Development Consent for the H2Teesside Project (the Proposed Development)

Issue of Scoping Opinion and list of the consultation bodies notified by the Secretary of State

Thank you for your letter received on 30 March 2023 requesting a Scoping Opinion under Regulation 10 of the EIA Regulations and for the Scoping Report entitled H2Teesside Project EIA Scoping Report dated April 2023.

In accordance with Regulation 10 of the EIA Regulations the Planning Inspectorate on behalf of the Secretary of State (SoS) has:

- consulted the consultation bodies;
- taken account of the consultation responses received within the prescribed time period; and
- taken account of the specific characteristics of the Proposed Development as described by the Applicant and the environmental features likely to be affected by the Proposed Development .

The attached document entitled 'Scoping Opinion - Proposed H2Teesside Project' and dated 17 May 2023 is the SoS's written opinion as to the information to be provided in

disability confident EMPLOYER

the Environmental Statement (ES) which must be submitted with an application for development consent. It should be read in conjunction with your EIA Scoping Report.

All consultation responses received up to and including 9 May 2023 from the consultation bodies have been appended to and form part of the Scoping Opinion.

Any late consultation responses the Planning Inspectorate receives will be forwarded to you for your consideration and made available via our website: https://infastructure.planninginspectorate.gov.uk.

Under Regulation 11(1)(b) of the EIA Regulations, the Planning Inspectorate on behalf of the SoS is required to notify the Applicant of the list of consultation bodies notified in accordance with Regulation 11 of the EIA Regulations. The Planning Inspectorate has notified these consultation bodies that the Applicant intends to provide an ES in respect of the Proposed Development. They have also been informed of their duty under Regulation 11(3) to enter into consultation with the Applicant regarding preparation of the ES, if requested. Please find this list enclosed.

To clarify, the Planning Inspectorate has not identified any persons under Regulation 11(1)(c) of the EIA Regulations, who may be affected by the Proposed Development.

Please be aware that it is the responsibility of the Applicant to ensure their consultation fully accords with the requirements of the Planning Act 2008 (as amended), and associated regulations and guidance. The enclosed list has been compiled by the Planning Inspectorate on behalf of the SoS in its duty to notify the consultees in accordance with Regulation 11(1)(a) and, whilst it can inform the Applicant's own consultation, it should not be relied upon for that purpose.

If you have any queries, please do not hesitate to contact us.

Yours sincerely

APPENDIX 13.1: SECOND CONSULTATION – EMAILS TO RCBC, STBC AND HBC DATED 28 NOVEMBER 2023

[redacted]

From: [redacted]
Sent: 28 November 2023 12:50
To: [redacted]
Cc:
Subject: H2Teesside Project - Further statutory consultation

Importance: High

Good afternoon.

I am writing to advise that H2 Teesside Limited, the Applicant will be carrying out further statutory consultation (the 'second consultation') on the H2Teesside Project from mid-December 2023 until late January 2024 in respect of a number of changes that have resulted to the proposed application site boundary as a result of further design development and technical assessments and responses to the statutory consultation (the 'first consultation') that took place between 14th September and 26th October 2023.

The second consultation will comprise of the following:

- The issue of letters to all the identified Section 42 consultees (including Redcar and Cleveland, Stockton-on-Tees and Hartlepool Councils) providing details of how to access the previous consultation documents, including the Preliminary Environmental Information Report ('PEIR'), as being still the preliminary environmental information of relevance to the H2Teesside Project and an Update Leaflet referred to below, which will include information on the extent to which changes to the proposed application site alter the environmental effects reported in the PEIR.

- For land interests, the Section 42 letter will include information (including supporting plans) on how the proposed application site boundary has changed in respect of their interests.

- Erection of Section 42 Site Notices around the proposed application site boundary.

- Publication of a further Section 48 Notice in the Telegraph, London Gazette, Fishing News and Lloyds List for one week and the Northern Echo, Teesside Gazette and Darlington and Stockton Times for two consecutive weeks.

- An Update Leaflet, which will accompany the Section 42 letters, be uploaded to the project website, advertised on social media and updates to the project website, and through letters to residents and businesses within the Inner Consultation Zone defined in the published Statement of Community Consultation ('SoCC').

Should you have any comments or questions with regard to the second consultation, please do let me know.

Kind regards

Attachments: H2T_2nd_Consultation_s46 Notification_Final.pdf

Importance: High

Dear [redacted]

Please find attached the Applicant's Section 46 notification in respect of its further (second) consultation on the H2Teesside Project.

The second consultation will commence on 13th December 2023 and run to 23rd January 2024.

The Consultation Letters and Consultation Documents for the second consultation can be downloaded via the link below to a secure fileshare site. The fileshare site also includes the consultation documents that were provided for the first consultation in September and October 2023.

https://dwd.ctit.co/url/fhjwzeicng2spvya

I would be grateful if you could confirm receipt of this email and the Section 46 notification and also that you are able to access the fileshare site and download the documents.

Importance: High

Dear [redacted]

Please find attached the Applicant's Section 46 notification in respect of its further (second) consultation on the H2Teesside Project.

The second consultation will commence on 13th December 2023 and run to 23rd January 2024.

The Consultation Letters and Consultation Documents for the second consultation can be downloaded via the link below to a secure fileshare site. The fileshare site also includes the consultation documents that were provided for the first consultation in September and October 2023.

https://dwd.ctit.co/url/fhjwzeicng2spvya

I would be grateful if you could confirm receipt of this email and the Section 46 notification and also that you are able to access the fileshare site and download the documents.

Kind regards

[redacted]

Dear [redacted]

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

NOTIFICATION IN ACCORDANCE WITH SECTION 46 'DUTY TO NOTIFY SECRETARY OF STATE OF PROPOSED APPLICATION' OF THE PLANNING ACT 2008

I write on behalf of H2 Teesside Limited (the 'Applicant') in connection with the H2Teesside hydrogen project (the 'Project').

The Applicant is proposing to submit an application (the 'Proposed Application') seeking development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State (the 'SoS') for the Department of Energy Security and Net Zero ('DESNZ') for the construction, operation and maintenance of the Project on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance store and other nearby CO_2 stores that NEP holds CO_2 storage licences for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total.

DWD is the trading name of DWD Property and Planning Limited a subsidiary of RSK Environment Limited.
Registered in England No. 15174312.
Registered Office: Spring Lodge, 172 Chester Road, Helsby, Cheshire, WA6 0AR

It is anticipated that the Proposed Application will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ, in Q1 2024.

The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

This letter represents the Applicant's notification to the SoS of the Proposed Application pursuant to Section 46 'Duty to notify secretary of state of proposed application' of the PA 2008.

Section 42 'Duty to consult' of the PA 2008 requires prospective applicants for development consent to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. The Applicant will commence the second consultation pursuant to Section 42 by issuing letters (the 'Consultation Letters') accompanied by consultation documents (the 'Consultation Documents') to the persons specified in the PA 2008 and in regulations made pursuant to the PA 2008 on or around 13 December 2023.

A notice pursuant to Section 48 'Duty to publicise' of the PA 2008 will be published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

In accordance with Regulation 13 'Pre-application publicity under Section 48 (duty to publicise)' of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017' (the 'EIA Regulations'), the Applicant will also send a copy of the Section 48 Notice to the relevant consultation bodies and to any person notified to the Applicant in accordance with EIA Regulation 11(1((c) on or around 13 December 2023.

The deadline stated in the Consultation Letters (and on the Section 48 Notice) for the receipt of comments and representations on the Proposed Application is **11:59pm on 23 January 2024**.

The Consultation Documents that are to be provided to the persons specified in the PA 2008 and in regulations made pursuant to the PA 2008 (and other 'non-prescribed persons') will be accessible via the download link that accompanies their Consultation Letter (and via the Project Website: www.h2teesside.co.uk) and include:

- a plan showing the extent of the proposed Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;

- land interest plans that have been sent to landowners showing how their land interests have been affected by the changes to the Project Site boundary (these plans are only being sent to landowners who have land that has either been removed from the proposed Project Site boundary or is within it);

- a Community Update Letter being sent to residents and businesses within the vicinity of the Project Site;

- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which will be available on the Project Website;

- the Section 48 Notice that is being published for the second consultation;

- the published Statement of Community Consultation ('SoCC') dated September 2023.

- the PEIR and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;

- the Consultation Brochure produced for the first consultation; and

- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site.

The above Consultation Documents, along with example versions of the Consultation Letters can be downloaded from the following fileshare link:

https://dwd.ctit.co/url/fhjwzeicng2spvya

I look forward to receiving the SoS's acknowledgement of the Applicant's notification to the SoS of the Proposed Application pursuant to Section 46 'Duty to notify secretary of state of proposed application' of the PA 2008. In the meantime, should you have any questions please do not hesitate to contact with myself or my colleague [redacted]

Yours sincerely,

[redacted]

[redacted]
Director – Head of Planning
DWD – on behalf of H2 Teesside Limited

APPENDIX 13.3: SECOND CONSULTATION – SECTION 42 LETTERS 1 TO 4

Date: 13 December 2023

Insert address

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

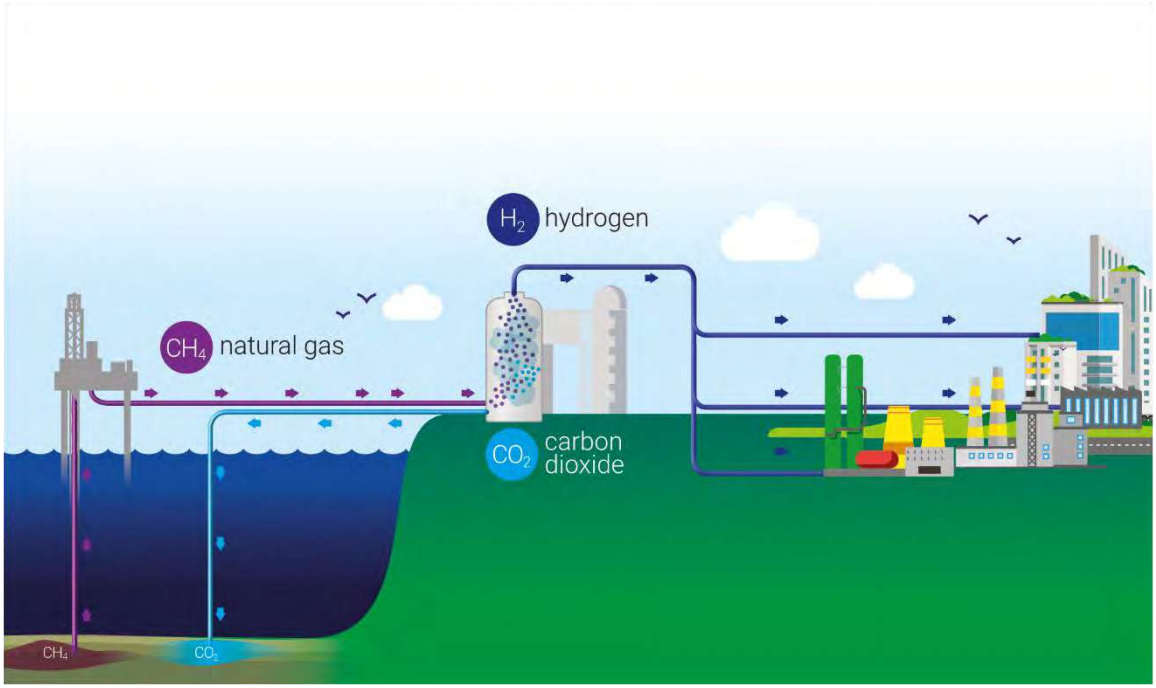
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance store and other nearby CO_2 stores that NEP holds CO_2 storage licences for.

These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by the Project will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **23 January 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & EIA Regulation 13 'Pre-application publicity under Section 48 (duty to publicise)'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

The Applicant has identified a number of persons and organisations, which it is required to consult for the purposes of Section 42 of the PA 2008. It has been determined that you or your organisation is, or may be, a 'prescribed person' for the purposes of Section 42. The Applicant therefore wishes to seek your views on its latest proposals for H2Teesside.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017' (the 'EIA Regulations') requires applicants, at the same time as publishing the Section 48 Notice, to send a copy of that notice to the 'consultation bodies' and to any person notified to the applicant by the SoS under EIA Regulation 11(1)(c).

A copy of the Section 48 Notice that is being published is appended to this letter in accordance with EIA Regulation 13.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and

responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Enc. Section 48 Notice

Date: 13 December 2023

Insert address

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008

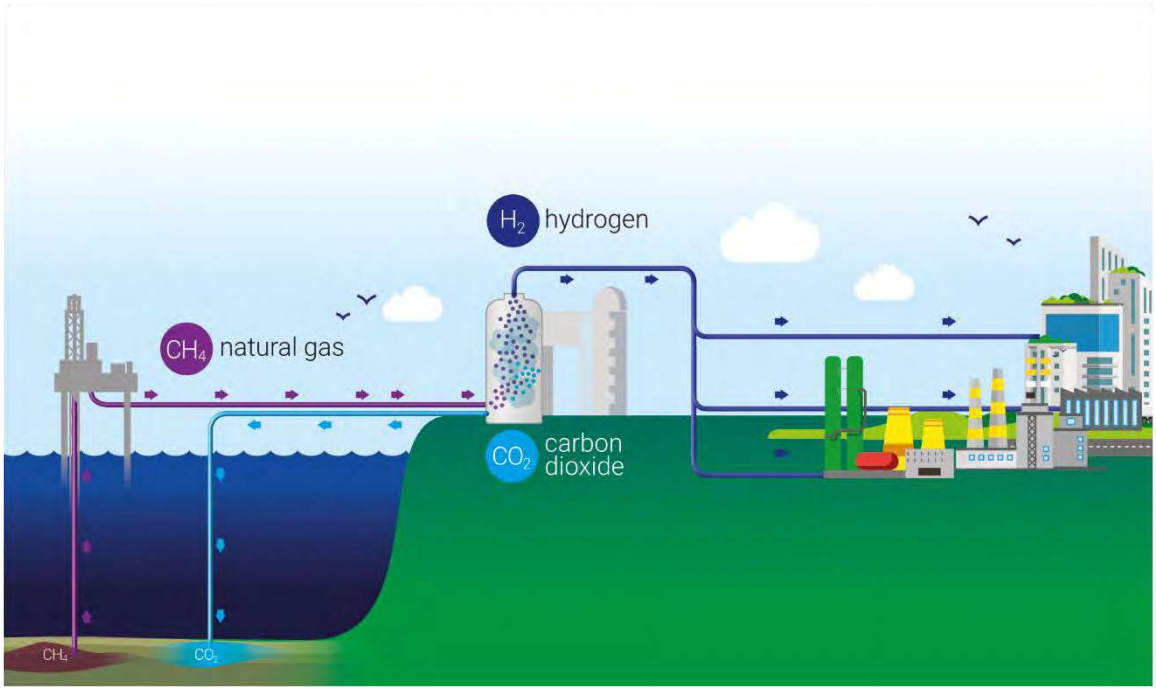
H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance store and other nearby CO_2 stores that NEP holds CO_2 storage licences for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **23 January 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent to consult on their proposed application with those persons specified in the PA 2008

and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

Although you do not fall within any of the categories of person specified by the PA 2008 and in regulations made pursuant to the Act, the Applicant considers that you may still have an interest in the Project and accordingly wishes to seek your views on its latest proposals for H2Teesside.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft

landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated and ancillary development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until **23 January 2024**.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: **info@h2teesside.net**

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Enc. Section 48 Notice

Date: 13 December 2023

Insert address

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

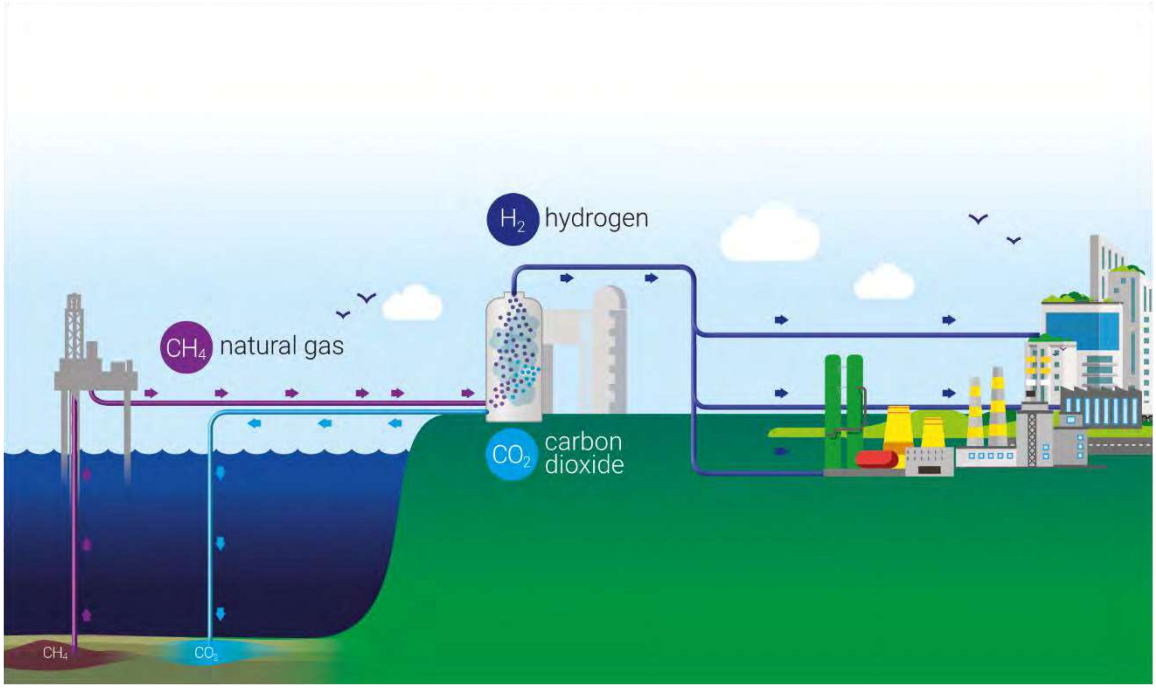
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences

for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **23 January 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project.

Following that first consultation and pursuant to that Section 42 duty, the Applicant wishes to now seek your views through the second consultation on the Project as it is considered that the changes to the proposed Order Limits for the Project, which are described in this second consultation affect land in which you hold an interest.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587

- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below and a plan showing how the changes to the proposed Order Limits affect land in which you hold an interest is provided with this letter.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a plan showing the extent of your landholding.
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Enc. Section 48 Notice
Landholding Plan

Date: 13 December 2023

Insert address

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

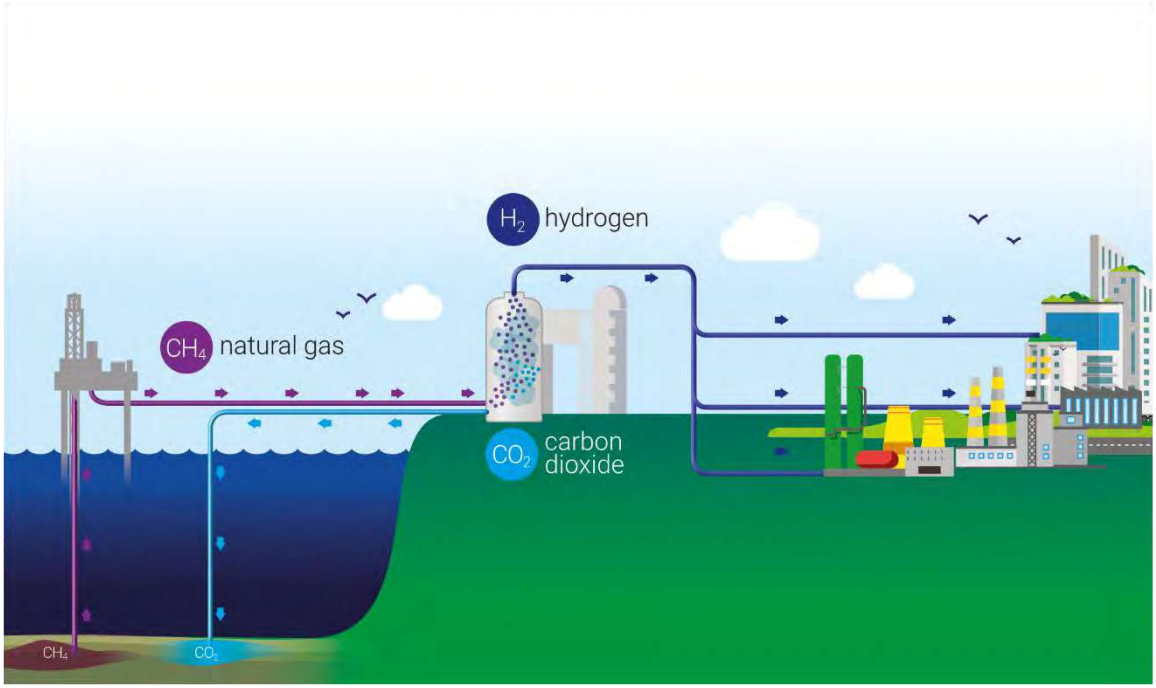
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences

for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **23 January 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project. Since the first consultation the Applicant has made a number of changes to the Project Site boundary. The Applicant's review of landownership indicates that your landownership/interest in land is no longer within the proposed Project Site boundary following those changes. However, the Applicant still wishes to provide the opportunity for you/your organisation to make comments on the changes.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476

- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares, including the land in which you hold and interest.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence

relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Enc. Section 48 Notice

APPENDIX 13.4: SECOND CONSULTATION – PLAN SHOWING THE CHANGES AND H2TEESSIDE PROJECT UPDATE BROCHURE

H2Teesside consultation December update

As one of the UK's largest low carbon hydrogen production facilities, H2Teesside aims to bring jobs, customers and investment to Teesside.

H2Teesside aims to be one of the biggest blue hydrogen production facilities in the UK, delivering economic growth for Teesside and the domestically-produced low carbon hydrogen that the UK needs.

It will produce approximately 160,000 tonnes of low carbon hydrogen per annum, which will displace existing natural gas consumption by industrial emitters in Teesside, and capture and send for secure long-term storage approximately two million tonnes of CO_2 per year.

Along with its sister project HyGreen Teesside and a number of other proposed projects in the area, H2Teesside can strengthen Teesside's development into the UK's leading hydrogen hub, creating new high quality jobs, supporting local education and skills development and kick-starting a highly-skilled UK-based hydrogen supply chain.

bp will also invest in green skills by launching a dedicated education skills programme for H2Teesside. The programme will aim to reach more than 5,000 people to help inspire the next generation of talent, ensuring local people benefit from near-term job opportunities and advancing social mobility.

Our vision

At bp, we are taking action through transformative projects that will help us achieve our net zero ambition.

As operator of the Northern Endurance Partnership, we are helping build the infrastructure needed to safely capture, transport and store CO_2 from a range of power, hydrogen and industrial businesses in Teesside and the Humber who together make up the East Coast Cluster (ECC). The ECC aims to remove up to 27 million tonnes of CO_2 emissions a year by 2030.

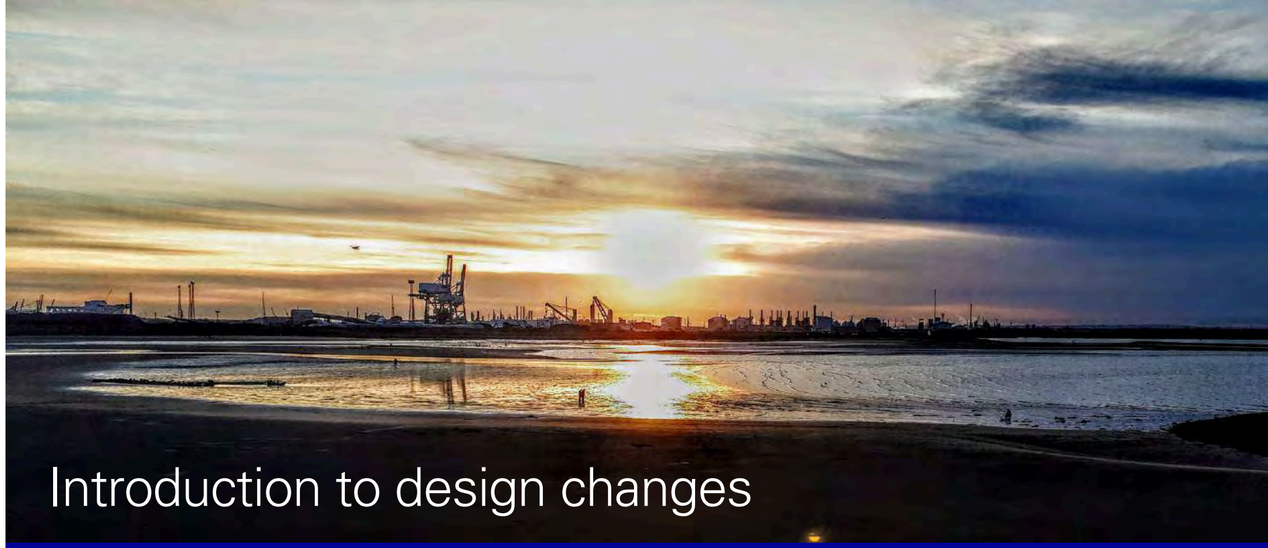
We're also operators of Net Zero Teesside Power which will be the world's first commercial scale, gas-fired power station with carbon capture technology, capable of capturing approximately two million tonnes of CO_2 a year.

In addition to H2Teesside, Teesside is also the planned location of bp's green hydrogen project – HyGreen Teesside. Together, H2Teesside and HyGreen Teesside, could deliver over 15% of the UK Government's target of developing 10GW of hydrogen production by 2030.

Next steps

Thank you to everyone who took part in our statutory consultation for the H2Teesside proposed development between 14 September and 26 October 2023.

The feedback from that consultation has been considered and we have carried out further technical work. This has allowed us to review our project design. We have identified several revisions on which we are now consulting.



This second round of consultation is open between 13 December 2023 and 23 January 2024.

In advance of our first consultation round, we published a Preliminary Environmental Information (PEI) Report, when the Proposed Development for H2Teesside was in an early stage of design development. The PEI Report presented an assessment based on a worst-case scenario for the Proposed Development and the Order Limits presented in the PEI Report gave flexibility for further design development to take place. As a result of our further technical works, the design of the Proposed Development has now developed, demonstrated by the amount of area removed from the Order Limits, shown in black hatching on Figure 1 (overleaf). These changes are minor and have no worsening effect than that previously identified in the PEI Report.

There are seven proposed additions (shown in yellow hatching on Figure 1) to the Order Limits for which greater details are provided below, these changes have come about as a result of further technical and design work, assessment and in response to feedback received during the first round of statutory consultation.

In addition, there have been a number of small changes made to the Order Limits that are not covered in detail below. These minor changes predominantly relate to enabling the use of existing access roads required to deliver the Proposed Development. These changes are minor in nature and have no worsening effect than that previously identified in the PEI Report.

These small changes can be seen in greater detail **here**.

Introduction to design changes

The following sections outline the seven proposed additions to the new Order Limits, including a description of the works taking place and a comparison of effects to that reported in the PEI Report.

Some of the changes comprise the inclusion of Above Ground Installations (AGIs). AGIs are made up of a range of structures and pieces of equipment that are designed to be kept at a low level – usually around two metres tall. AGIs comprise:

- Pressure reduction units that control the flow or pressure of hydrogen into the network.
- Instrument and control kiosks that house the equipment that monitors parameters like flow, pressure and temperature of the hydrogen.
- Facilities that enable inspection and cleaning of the pipeline.

Where a topic is not mentioned in the tables below, there are no differences of effect against what has been assessed and presented within the PEI Report and previously consulted on.

This document is intended as an update to what has been assessed and presented within the PEI Report. Please read this document alongside the PEI Report, located **here** to get a full picture of the Proposed Development and its potential environmental effects.

Figure 1: Map displaying the proposed additions and removals to the Order Limits since the publishing of the PEIR.

Key: **Red line boundary** **Area added:** Total 70.55 acres **Area removed:** Total 2166.42 acres

change 1

Area at Venator

Description of works

Installation of Above Ground Installation (AGI) within the Venator site on the area of land highlighted in yellow.

Potential environmental effects

Ecology and nature conservation

Although this land has not been subject to detailed baseline survey, there are unlikely to be any new or different significant effects from that reported in the PEI Report from this change. This area is predominantly hardstanding and directly adjacent to areas of land in similar use and similar works are already considered in the PEI Report. Potential significant effects to the nearby Special Protection Area (SPA) and adjacent habitats have already been reported. Site-specific mitigation will be developed in consultation with Natural England and other stakeholders. The results of all surveys and mitigation measures will be provided within the Environmental Statement (ES).

change 2 North of Seal Sands roundabout

Description of works

Areas in yellow required for natural gas distribution network connection. These areas would be required for pipe works to support installation of the trenchless crossing to the existing NGN AGI located approx. 350m to the east.

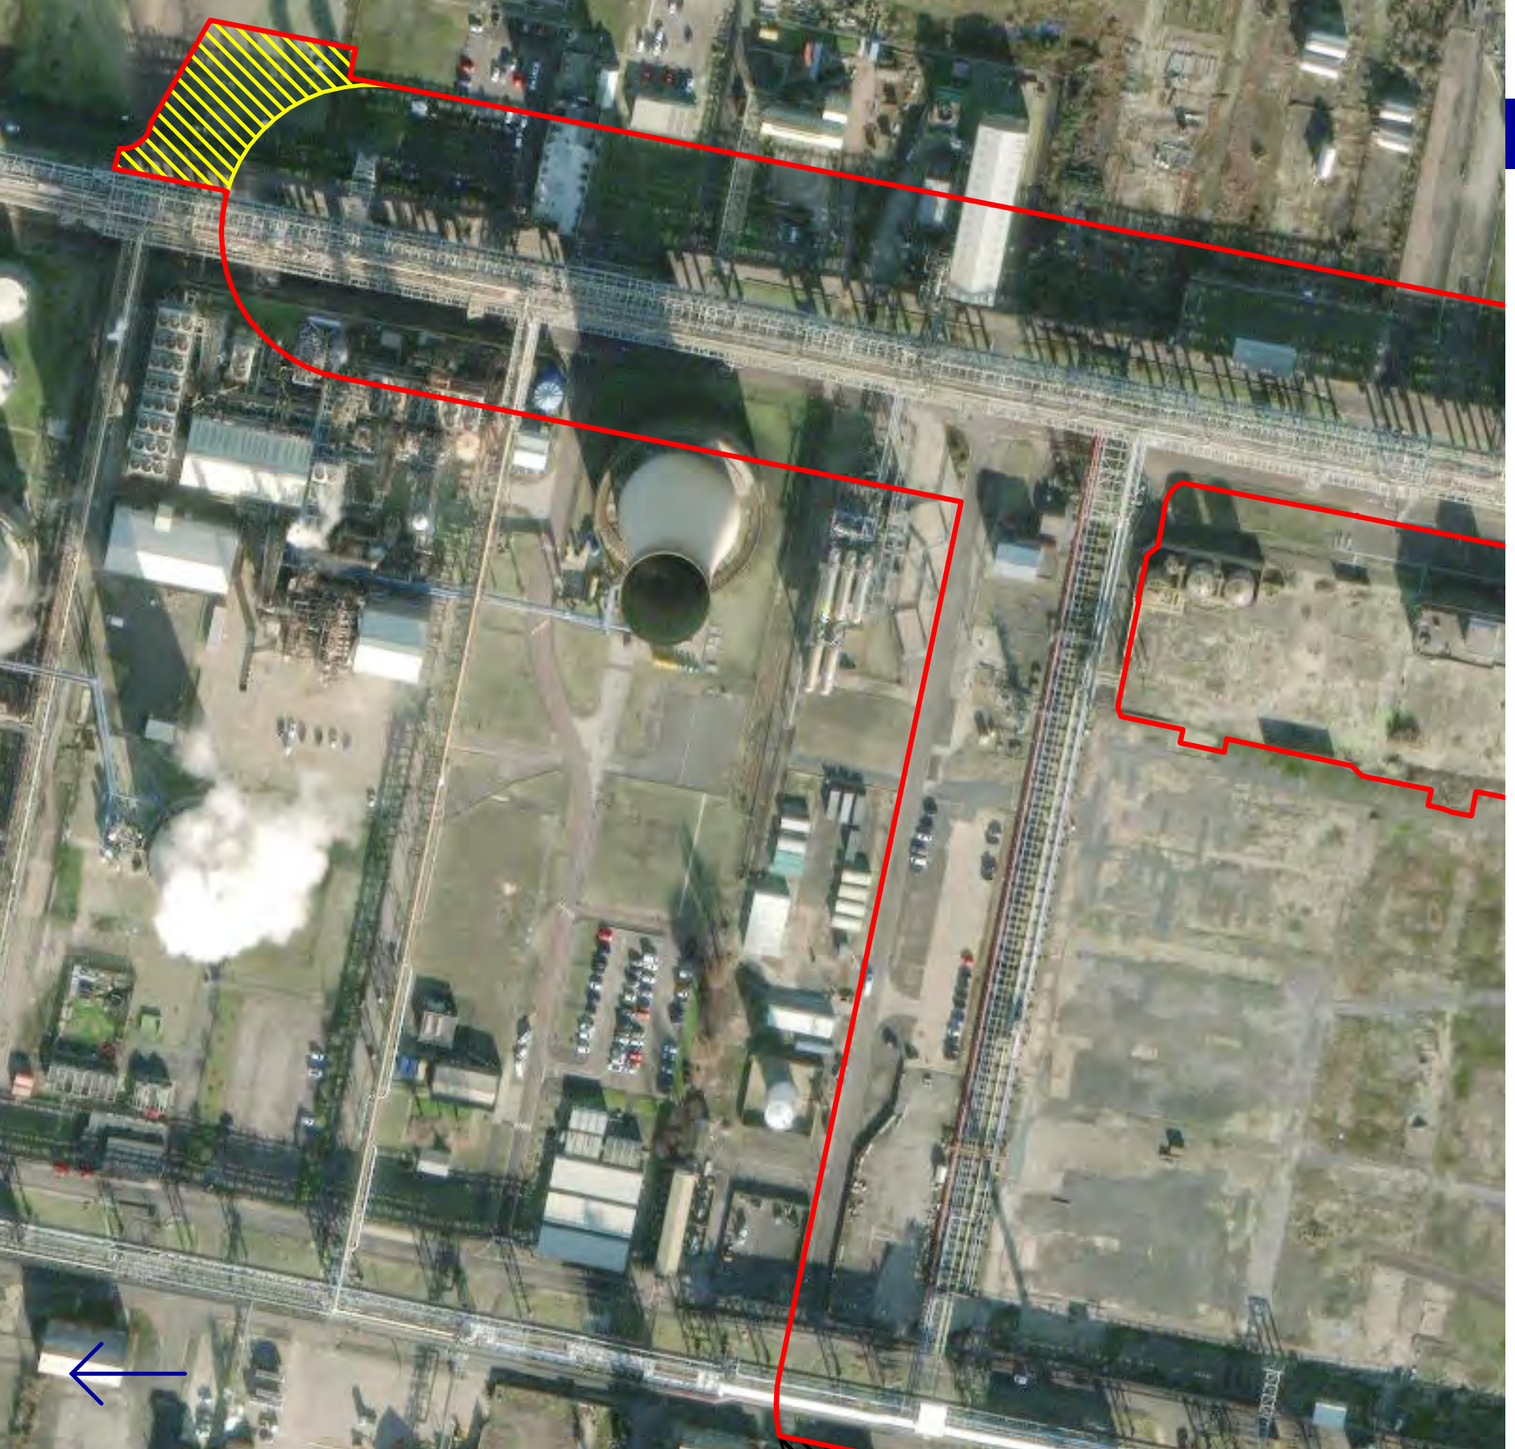
Potential environmental effects

Ecology and nature conservation

This area comprises hardstanding but is immediately adjacent to a waterbody that is likely to be used by birds. This area (including the waterbody) will be surveyed to ascertain how it is used.

There are unlikely to be any new or different significant effects from that reported in the PEI Report as works have been designed to utilise existing hardstanding and minimise potential impacts. Potential significant effects to the nearby SPA and adjacent habitats have already been reported in the PEI Report and impacts to potential habitat such as the adjacent waterbody will be mitigated using the same measures as are referenced in the PEI Report. Site-specific mitigation will be developed in consultation with Natural England and other stakeholders. The results of all surveys and mitigation measures will be provided within the ES.

change 3



North-west of A174/A102 roundabout

Description of works

Installation of AGI in the area highlighted in yellow.

Potential environmental effects

This area is predominantly hardstanding and directly adjacent to areas of land in similar use and similar impacts are already considered in the PEI Report. There are unlikely to be any new or different significant effects from that reported in the PEI Report arising from this change.

change 4

Area at SNF Oil and Gas Ltd

Description of works

Installation of AGI in the area highlighted in yellow.

Potential environmental effects

This area is predominantly hardstanding and directly adjacent to areas of land in similar use and similar impacts are already considered in the PEI Report. No changes to the conclusions of the PEI Report arise from this change.

change 5

Area at Furatom (UK) Ltd. on the B1275

Description of works

Installation of AGI on the land highlighted in yellow.

Potential environmental effects

Ecology and nature conservation

Although this land has not been subject to either detailed baseline survey or bat roost assessment, there is unlikely to be any new or different significant effects from that reported in the PEI Report. The area is directly adjacent to areas of land in similar use. Potential significant effects to habitats have already been reported in the PEI Report. This initial precautionary conclusion is reached before taking into consideration site specific mitigation and habitat management measures. Site specific mitigation will be developed in consultation with Natural England and other stakeholders, as required. Mitigation measures will be provided in the ES.

change 6

Area west of A1185/ East of Cowpen Bewley

Description of works

Amendment to pipeline routing to avoid ponds and other areas of habitat creation within RSPB reserve land shown in image on the area highlighted yellow.

Potential environmental effects

Ecology and nature conservation

The proposed change has the potential to reduce effects upon habitats and birds due to the removal of land to the east from the RLB. Although the proposed additional land has not yet been surveyed to confirm habitat condition and to check for ecological constraints, there are unlikely to be any new or different significant effects from that reported in the PEI Report. The area is directly adjacent to similar works already assessed. Potential significant effects to habitats have already been reported in the PEI Report. This initial precautionary conclusion is reached before taking into consideration site-specific mitigation and habitat management measures. Site-specific mitigation will be developed in consultation with Natural England and other stakeholders, as required. Mitigation measures will be identified in the ES.

Cultural heritage

The proposed change has the potential to cross an area of known non-designated medieval field systems of Cowpen Bewley included in the Historic Environmental Record. The area has not been subject to geophysical survey and is in relative proximity to a Roman settlement. This route option has the potential to result in additional effects to those considered in the PEIR. However, these will be able to be managed through mitigation secured by a requirement in the Development Consent Order. A significant residual effect cannot be ruled out at this stage and will be confirmed by a geophysical survey. However, this will be undertaken before submission of the application to confirm the design in this area.

change 7

Area north of Redcar British Steel train station

Description of works

Yellow area at the top (north) of the image on the left added to cover rerouting of water connection taking into account feedback received from Teesworks.

Yellow area at the bottom (south) of the image required to pipeline connections (shown in greater detail on the right).

Potential environmental effects

Surface water, flood risk and water resources:

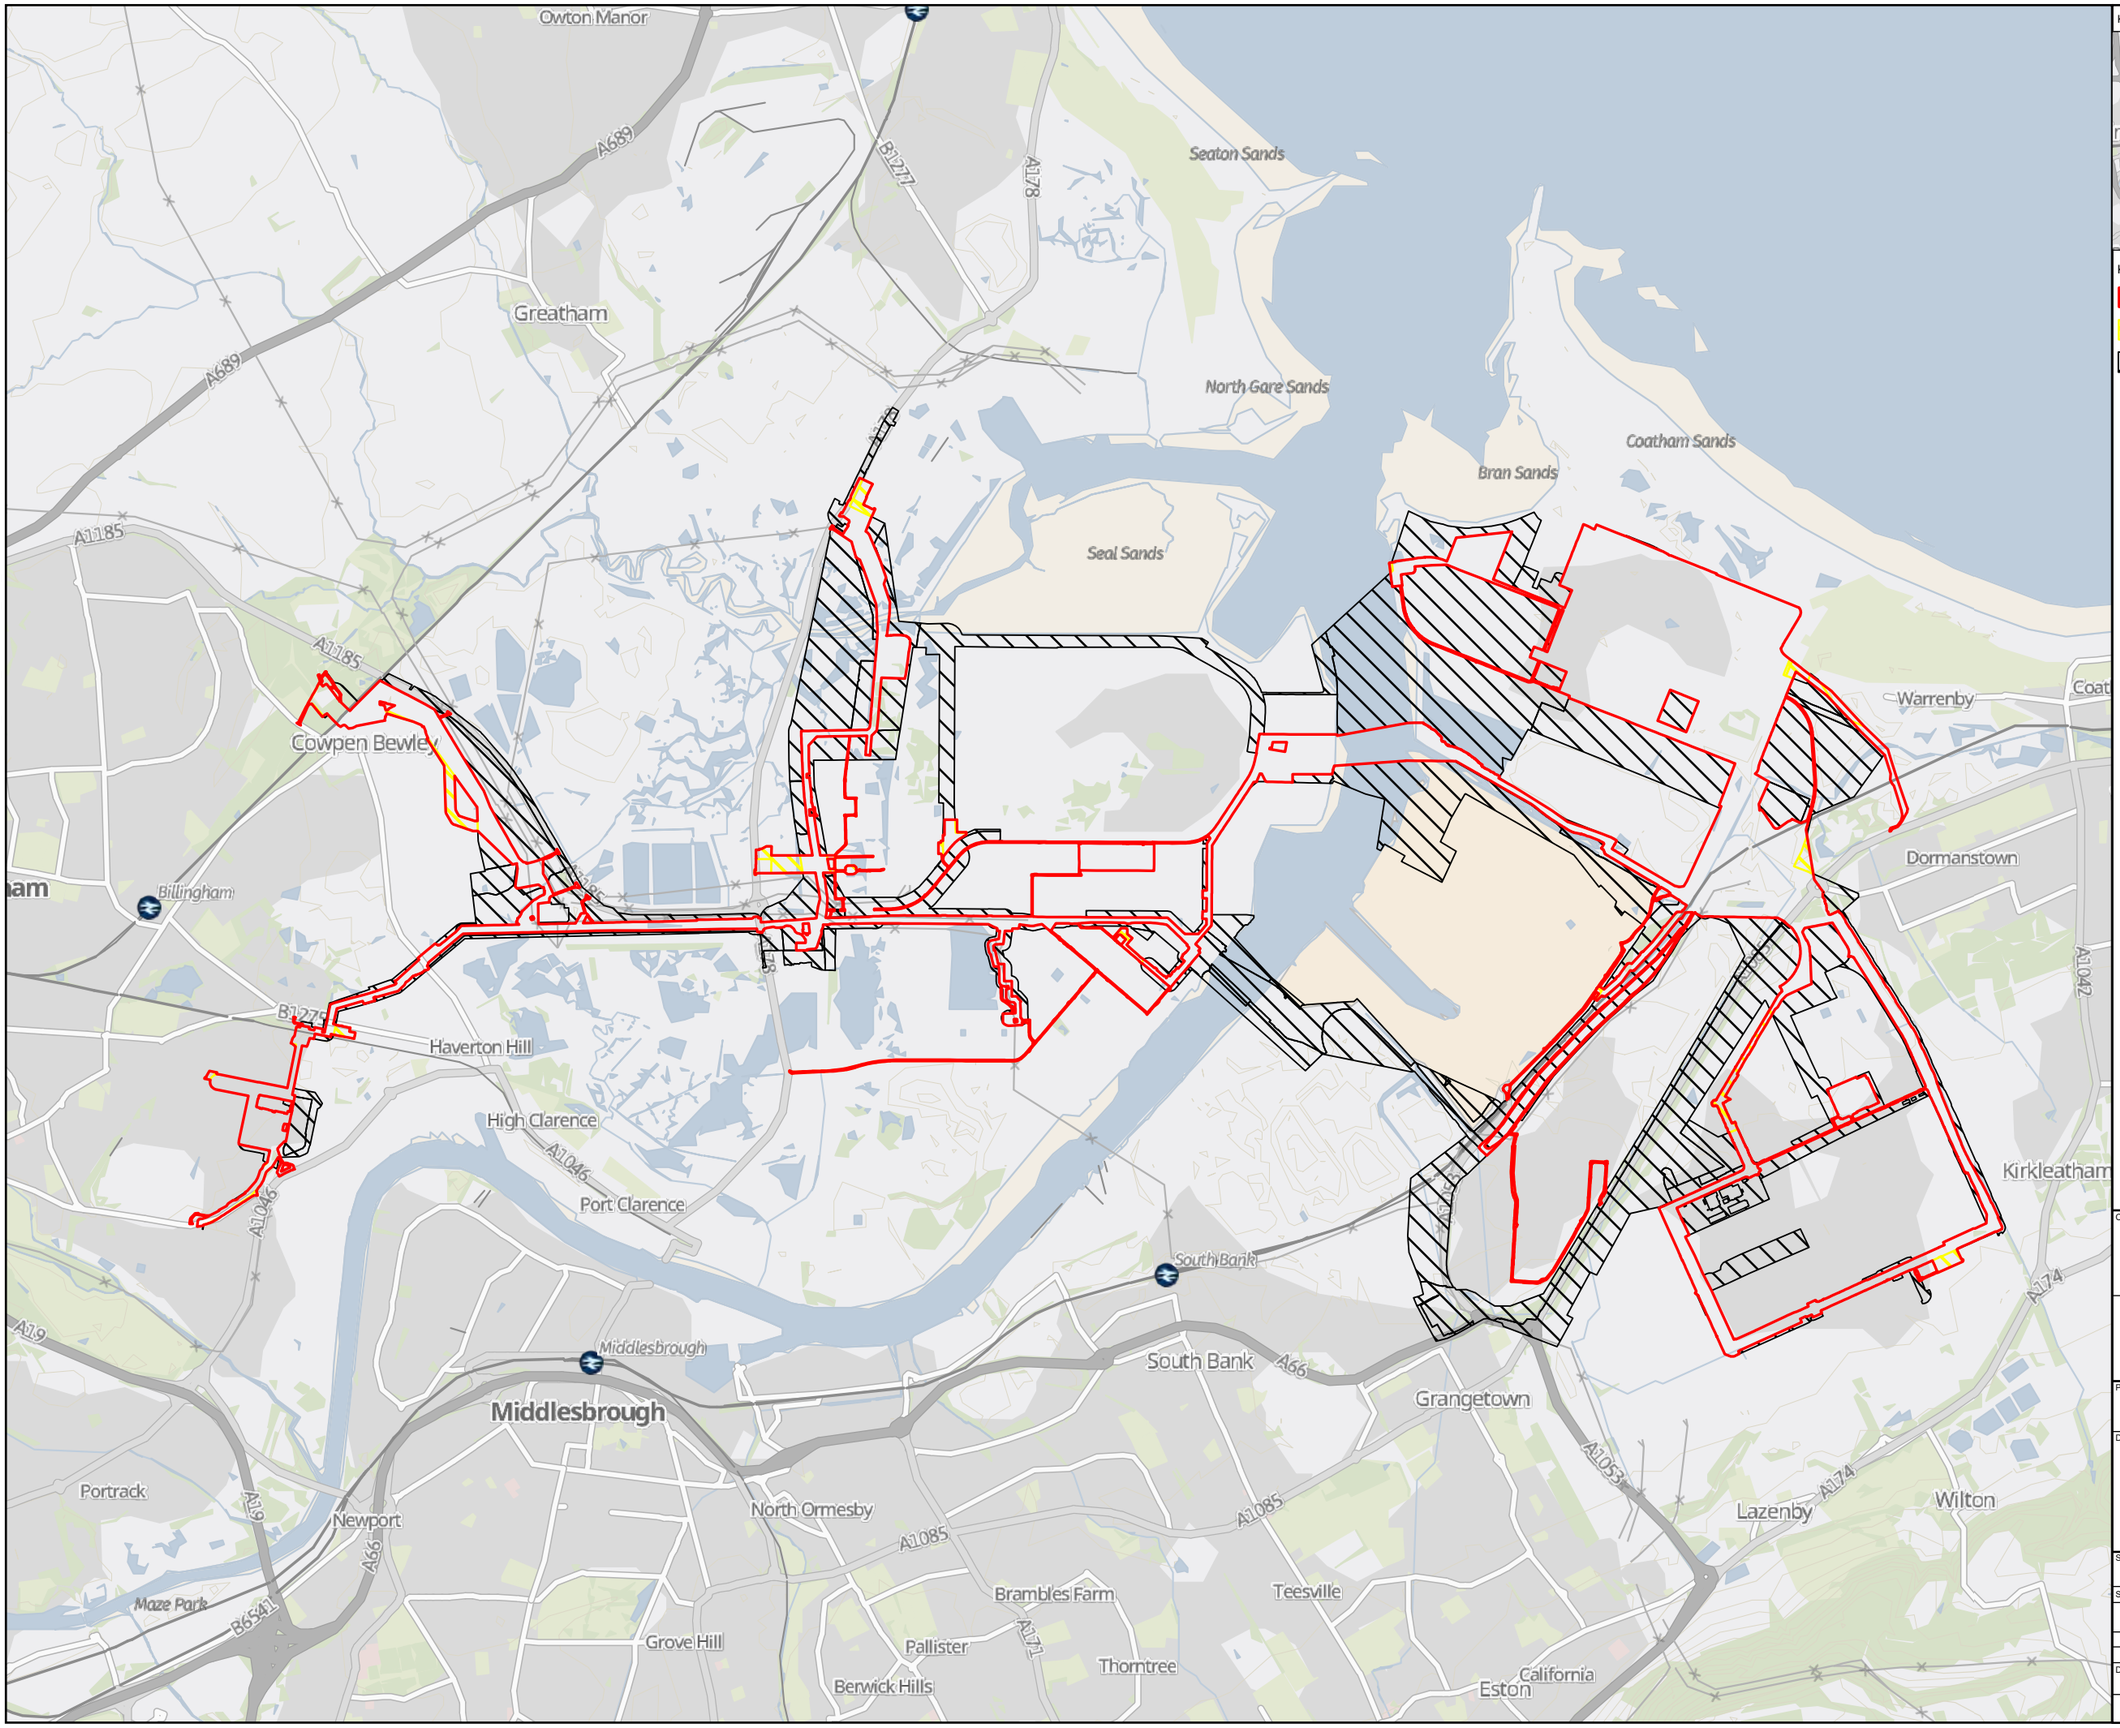
This area has potential for interactions or crossings with Ash Gill. Further information is required to assess the full extent of any impact, which will be reported within the Environmental Statement. However, the watercourse is of low morphological importance due to the industrial nature of the surrounding area, and it is anticipated that any crossings or interactions with Ash Gill as a result of this additional area would be managed in accordance with best practice guidance, secured through the Framework CEMP being submitted as part of the DCO Application. Taking this into account, there is unlikely to be any new or different potential residual significant effects over and above what was reported in the PEI Report.

Have your say

Do you have any comments on H2Teesside and our proposed changes? If so, we want to hear your views. You can respond to our consultation in the following ways:

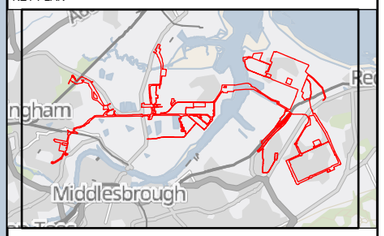
Online fill in the response form here or at our website **www.h2teesside.co.uk**

Post: Write to us or send send a completed copy of the response form to **FREEPOST H2Teesside**



Email: Write to us or send a completed copy of the response form to **info@h2teesside.net**

Please submit your feedback by 23:59 on 23 January 2024



Next steps

Your feedback will inform the progression of the Proposed Development. Each proposed revision detailed above, will be assessed and reported in full (including accounting for within baseline surveys) in the Environmental Statement that accompanies the application for development consent. Once we have taken your feedback into consideration, we plan to submit our application in Q1 2024.

APPENDIX 13.5: SECOND CONSULTATION – SECTION 42 SITE NOTICE AND SITE NOTICE LOCATIONS PLAN

THE H2TEESSIDE PROJECT

The Planning Act 2008 – Sections 42 and 48

The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4

The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13

NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').

2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.

3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.

4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

    - Mid-point – 454719 524286
    - North – 451309 526476

- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.

7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:

   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
   c. an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.

11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.

12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.

14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.

15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.

16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	**Opening Times (subject to opening hours over the Christmas holiday period)**
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed

Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

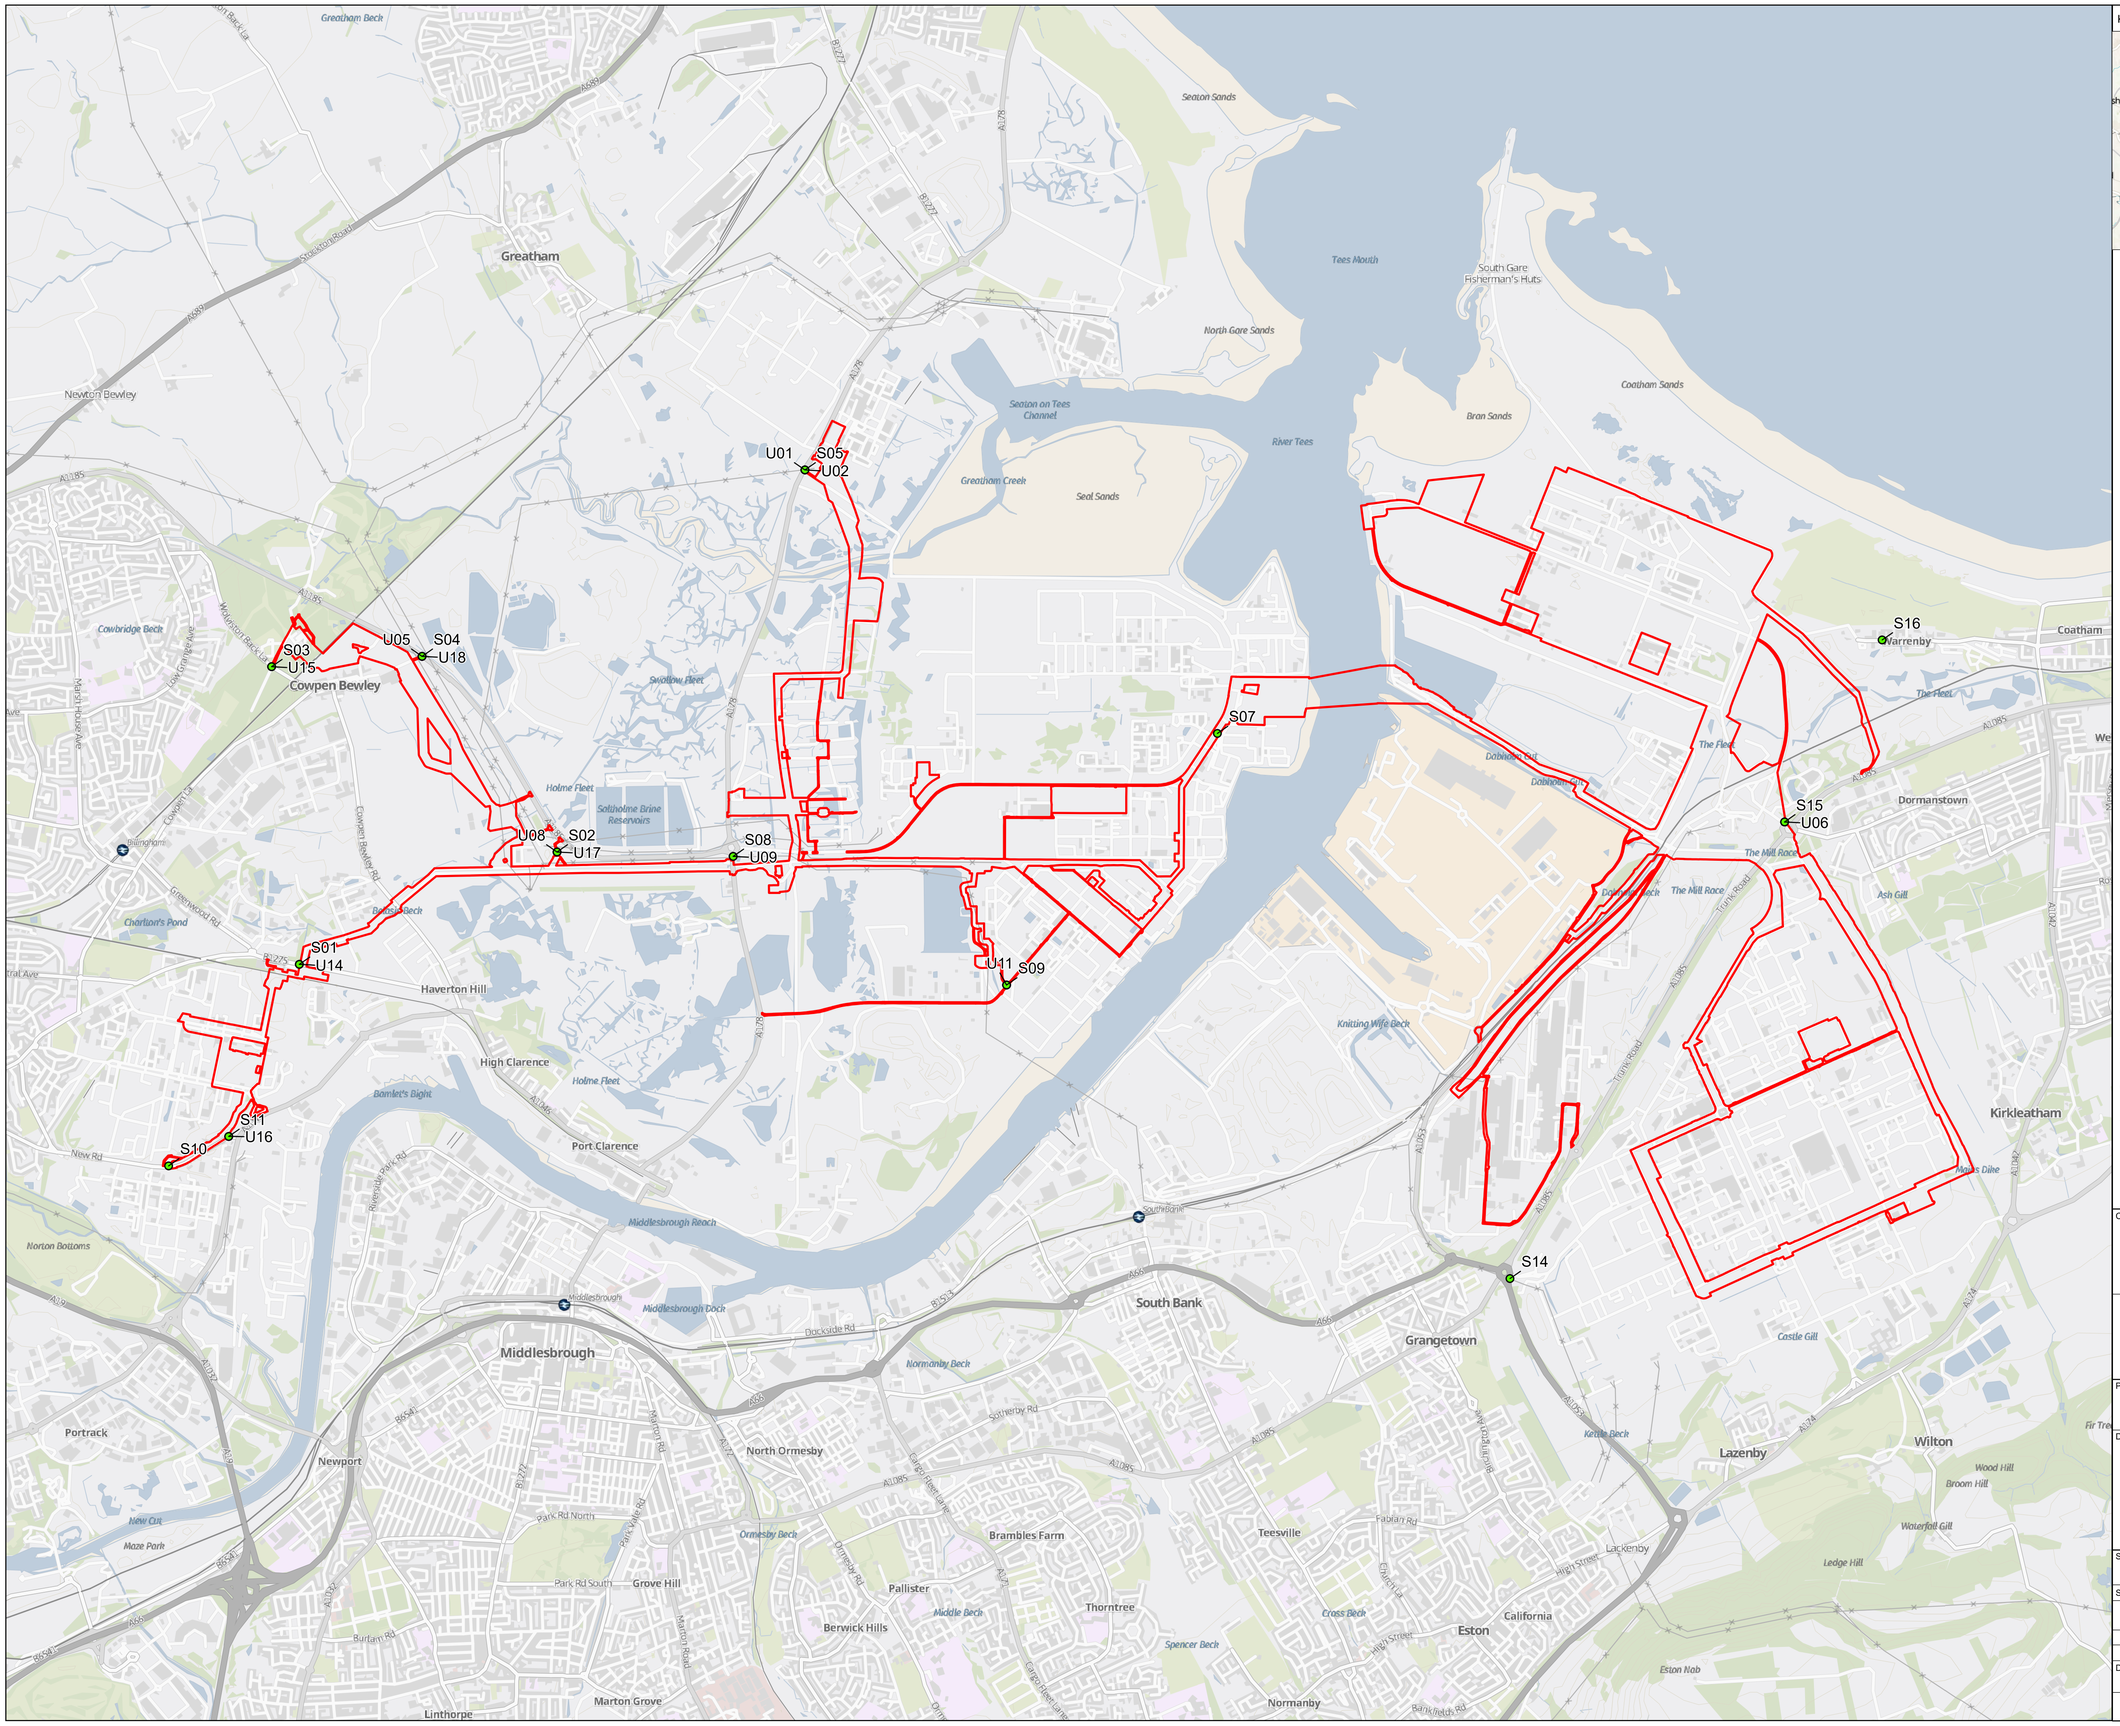
18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk



19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.

21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

APPENDIX 13.6: SECOND CONSULTATION – SECTION 48 NOTICE AND COPIES OF PUBLISHED NOTICES

THE H2TEESSIDE PROJECT

The Planning Act 2008 – Section 48

The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4

The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13

NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').

2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.

3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.

4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

    - Mid-point – 454719 524286
    - North – 451309 526476
    - East – 458760 521587
    - South – 457001 520748
    - West – 446938 521613

6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.

7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:

    a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
    b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
    c. an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
    d. an electricity grid connection to provide power to the Project;
    e. water supply and treatment and wastewater infrastructure;
    f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
    g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
    h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction

laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.

11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.

12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.

14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.

15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.

16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	**Opening Times (subject to opening hours over the Christmas holiday period)**
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed

How to respond to this notice

18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.

21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

Britain to build next generation fighter jets

UK-based project with Japan and Italy aims to create new supersonic aircraft by 2035

By **Danielle Sheridan** DEFENCE EDITOR

BRITAIN is to spearhead a new fighter jet project for the first time under a treaty to be signed with Japan and Italy today.

The agreement reveals that the UK will host the headquarters of the Global Combat Air Programme (GCAP), where all major decisions about the project will be made.

Britain, Japan and Italy have joined forces to develop the next generation of fighter jets. The aim of the project, announced last December and previously known as Tempest, is to create a supersonic aircraft that takes to the skies by 2035. Grant Shapps, the Defence Secretary, is to meet his Japanese and Italian counterparts in Tokyo today to sign the treaty formalising the agreement, which states that the headquarters will be in the UK.

Writing in *The Daily Telegraph*, Mr Shapps says that the GCAP aims to "engineer strengthened collective security".

He writes: "This effort comes as we face growing dangers in the skies and international airspace is increasingly contested, not least from the threats posed by Russia and China.

"In a more dangerous age, the new fighter jet is being designed to form the backbone of our future air fleets. It will place our nations at the centre of air combat capability. And it will enhance regional security both in the Indo-Pacific and Europe."

Tokyo has never collaborated on such a project before. In May, Rishi Sunak signed the Hiroshima Accord, which pledged to build a stronger defence relationship with Japan over fears of Chinese aggression in the Indo-Pacific region. It agreed to increase defence cooperation and improve supply chains with the country.

Britain has participated in previous multinational fighter jet programmes but has never hosted a headquarters for such a project. The Tornado and Typhoon headquarters were in Germany, and the headquarters of the F-35 project was in the US. The new jet will replace the Typhoon. The last time the UK designed and built an aircraft was the Harrier.

One senior defence source described basing the project in the UK as "a coup". "It means when other nations come to talk about GCAP, they come to the UK. For us to be at the centre and managing this programme means we will get more influence," they said.

While the deal has been signed between the UK, Italy and Japan, it could expand to include other nations.

Earlier this year, *The Daily Telegraph* revealed that Britain and Italy were eager to help Saudi Arabia play a greater role in Western defence partnerships, partly to coax the kingdom away from Chinese influence, and were studying a proposal for it to join GCAP.

Companies from the UK involved in the effort to develop the new jet include BAE Systems, Rolls-Royce, Leonardo UK and MBDA UK. They will work with companies from Japan and Italy to progress the design and development of the supersonic stealth jet that will use a radar that can provide 10,000 times more data than current systems.

While the UK will host the headquarters, which will in turn support hundreds of UK jobs, the first chief executive will come from Japan.

It is likely that the Tempest jets to be used by the Royal Air Force will also be built in Britain.

Mr Shapps is expected to say: "Today in Tokyo, in the small hours of the morning UK time, I signed a treaty that puts pedal to the metal on another great partnership between our three nations.

"Faster than a speeding Formula One car, this major programme will see Japan, Italy and the UK engineer an entirely new type of stealth fighter.

"Sixth-generation, supersonic and equipped with state-of-the-art sensors: it will set the standard for fighter jets of the future."

He adds: "The stealth jet will demonstrate our capacity to project power across the skies for decades to come."

Police step up hunt for missing mother

Police have released CCTV footage of Gaynor Lord's last known movements after the 55-year-old went missing from the centre of Norwich last week. The mother of three failed to return home from work on Friday evening. *Report: Page 6*

Vallance's pandemic diary to be kept secret

By **Blathnaid Corless** *and* **Gordon Rayner**

SIR PATRICK VALLANCE'S full pandemic diary is to be kept secret by the Covid Inquiry, it has emerged.

Lawyers acting for the former chief scientific adviser have argued that publishing his nightly notes, written between January 2020 and December 2021 while he was advising the Government, in their entirety would breach his human rights. Extracts from the diary shown during inquiry hearings have provided an unique insight into the relationship between scientists and ministers, with Sir Patrick writing of Boris Johnson's "bipolar decision-making" and "impossible flip-flopping".

Despite requests from the press to reveal the diary in full, including by *The Daily Telegraph*, the chairman of the inquiry has indicated that nothing beyond the excerpts shown during hearings will be published.

Critics have argued that the public deserves to "know the truth" of how pandemic decisions were made. It comes amid concerns the inquiry might be biased towards those in favour of lockdowns. Oxford academics Prof Carl Heneghan and Dr Tom Jefferson wrote to the inquiry accusing its chair Baroness Hallett of favouring scientists who backed tough restrictions.

A senior Tory MP said: "Transparency is supposed to be fundamental to what government does... and in an inquiry like this there should be a high bar to any refusal to release material. The public are entitled to know the truth of how these decisions were made and especially how expert advice was weighed before decisions were taken that robbed us all of our freedoms."

Two million people will be told to increase statin dose

By **Laura Donnelly** HEALTH EDITOR

TWO million people will be advised to boost their statin dose in order to reduce their cholesterol levels under NHS targets.

The National Institute of Health and Care Excellence (Nice) said the guidance could mean about 145,000 fewer heart attacks, strokes and other cardiac incidents in the next decade.

For the first time, Nice has set specific cholesterol targets for those who have already suffered a cardiovascular event, such as a heart attack or stroke. GPs will be told to offer higher doses of statins to such patients during their check-ups.

Nice had previously called for such patients to aim for at least a 40 per cent reduction in non-high-density lipoprotein (non-HDL) cholesterol.

But under the new guidance, about two million people already taking statins will be advised to take heavier doses or be prescribed additional drugs, including injections, to cut their risk.

For low-density lipoprotein (LDL) cholesterol levels, often known as bad cholesterol, the target is 2.0 millimoles per litre (mmol/L) or less.

The target for non-HDL will be 2.6 mmol/L or less. The targets are far lower than the general advice to the public, which says LDL levels should be below 3.0 mmol/L, while non-HDL levels should be below 4.0.

The guidance says treatments to cut cholesterol should be "escalated" to hit the new targets. For those who have had a heart attack or stroke, 80mg of atorvastatin will be offered by GPs, unless there is thought to be a high risk of adverse effects or a reaction with other drugs.

If statins are not enough, other treatments should be considered. These include a prescription-only tablet that helps stop the body from taking in cholesterol from food (ezetimibe), a lipid-lowering injection called inclisiran, or two drugs known as PCSK9 inhibitors (alirocumab and cvolocumab), which block a protein made in the liver linked to high cholesterol.

The new guidance means GPs will need to keep a close check on cholesterol levels. While healthy people are expected to get their cholesterol checked by GPs every five years from the age of 40, annual checks should be carried out for those who have suffered a cardiac event.

Nice said up to 2.1 million people could benefit from the new targets. It said that between 50,000 and 145,000 heart attacks, strokes, deaths and other cardiovascular events, such as angina, could be prevented in the next decade if more patients hit the target.

Earlier this year, Nice said that anyone who wants to take statins to ward off heart disease should have the option to do so, amid concern about surging deaths among the middle-aged. Heart disease is the cause of one in four deaths in England. Prof Jonathan Benger, Nice's chief medical officer, said: "Improving the control of cholesterol in a larger number of people will further reduce deaths from heart attacks and strokes. This guideline will help clinicians talk through the options with their patients to achieve the best outcomes."

Those being offered statins should be advised that the risk of side-effects such as muscle pain, tenderness or weakness is "small" with an "extremely low" risk of muscle breakdown, Nice said.

Last year, a study by Oxford University found that the drugs cause muscle pain for one in 100 people. In most cases when people taking statins had aches and pains, the cause was old age, researchers concluded.

Netflix reveals viewing habits for first time

A little-hyped spy thriller has topped the list of Netflix's most-watched shows as the streaming platform released viewing figures for its entire catalogue for the first time. The US series *The Night Agent* was crowned as the most-watched show on the streaming platform. The data also showed that the drama *Suits*, which starred the Duchess of Sussex, racked up nine times more viewing hours on the platform than her own documentary series with Prince Harry.

Lineker likely broke BBC rules, says chief

Gary Lineker's tweets may have broken BBC guidelines, according to the corporation's new chairman. The *Match of the Day* host signed an open letter criticising the Government's Rwanda policy this week, and used social media to seemingly mock Tory MPs. Samir Shah, the incoming BBC chairman, told MPs Lineker's mockery was likely to be in breach of social media guidelines largely brought in to prevent any further controversy being provoked by his political views.

Court Circular

BUCKINGHAM PALACE
December 13th
His Excellency Mr Stefan Gullgren was received in audience by The King today and presented the Letters of Recall of his predecessor and his own Letters of Credence as Ambassador from the Kingdom of Sweden to the Court of St James's.

Mrs Alla Logova was also received by His Majesty.

His Excellency General Cheikh Wade was received in audience by The King and presented the Letters of Recall of his predecessor and his own Letters of Credence as Ambassador from the Republic of Senegal to the Court of St James's.

Mrs Wade was also received by His Majesty.

Ms Harriet Matthews (Director General, Africa and the Americas, Foreign, Commonwealth and Development Office) was present.

The King this afternoon received United Kingdom Community and Faith Leaders.

Her Excellency Ms Rachér Croney was received in audience by The King upon her appointment as British High Commissioner to Grenada.

The King held a Council at 4.00pm.

There were present: the Rt Hon Penelope Mordaunt MP (Lord President), the Rt Hon Claire Coutinho MP (Secretary of State for Energy Security and Net Zero), the Rt Hon Michael Gove MP (Secretary of State for Levelling Up, Housing and Communities) and the Rt Hon Mark Harper MP (Secretary of State for Transport).

Mr Richard Holden MP and Ms Laura Trott MP were sworn in as members of His Majesty's Most Honourable Privy Council.

Mr Richard Tilbrook was in attendance as Clerk of the Council.

The Rt Hon Sir Clive Alderton (Principal Private Secretary to Their Majesties) was in attendance.

The Rt Hon Penelope Mordaunt MP had an audience of His Majesty before the Council.

Later the Rt Hon Rishi Sunak MP (Prime Minister and First Lord of the Treasury) had an audience of The King.

ST JAMES'S PALACE
December 13th
The Duke of Edinburgh, Colonel-in-Chief, this morning visited The Queen's Royal Hussars (The Queen's Own and Royal Irish) at the Regimental Headquarters, Assaye Barracks, Tidworth Garrison, Wiltshire.

The Duchess of Edinburgh this morning attended the retirement at Windsor Castle of the Royal National Lifeboat Institution lifeboat, *HM The Queen*, from Operational Service.

Her Royal Highness, Patron, this afternoon visited Disability Initiative, Resource Centre, Knoll Road, Camberley, and was received by His Majesty's Lord-Lieutenant of Surrey (Mr Michael More-Molyneux).

ST JAMES'S PALACE
December 13th
The Princess Royal, Patron, Catch22, this morning visited Include London at 191 Freston Road, London W10, and was received by the Earl Cadogan (Deputy Lieutenant of Greater London).

Her Royal Highness, President, Racing Welfare, today attended a Beneficiaries' Christmas Luncheon at Epsom Racecourse and was received by Mr Peter Lee (Deputy Lieutenant of Surrey).

The Princess Royal this afternoon received Captain Marcus Hember RN upon relinquishing his appointment as Commanding Officer, HMS *Albion*.

Her Royal Highness, Chancellor, University of London, this evening attended a Dinner at Mansion House, London EC4, to mark the Two Hundredth Anniversary of Birkbeck.

KENSINGTON PALACE
December 13th
The Duke and Duchess of Gloucester this evening attended the Presentation of the "Story of Christmas" at St George's Church, Hanover Square, London W1.

Today's birthdays

Mr Peter Jones, Director, Goodwood Racecourse, 2008-18; Chairman, Horserace Totalisator Board (the Tote), 1997-2007, is 81; **Lord McAvoy**, 80; **Sir Antony Beevor**, military historian and author, 77; **Mr Stan Smith**, former tennis player; Wimbledon Men's Singles Champion, 1972, 77; **Lord Stewart**, a former Senator of the College of Justice in Scotland, 77; **Mr Phil Orr**, former Ireland and Lions rugby international, 73; **Mr Chris Waddle**, former England football international, 63; **Mr Yotam Ottolenghi**, chef, restaurateur and food writer, 55; **Mr Stuart Pringle**, Secretary, British Racing Drivers' Club, 2007-15, 52; **Miss Miranda Hart**, actress, comedian and writer, 51; **Mr Ben Kay**, former England and Lions rugby union international, 48; **Mr Jamie Peacock**, former England and Great Britain rugby league international, 46; **Mr Michael Owen**, former England football international; now commentator and racehorse breeder/owner, 44; and **Mr Matthew Ball**, Principal Dancer, Royal Ballet, 30.

Today is the anniversary of the death of the Prince Consort in 1861.

Forthcoming marriage

Mr S.P.J. Palmer and Miss S.L. Wimble
The engagement is announced between Shamus, middle son of Mr and Mrs David Palmer, and Sophie, daughter of Mr and Mrs Andrew Wimble.

Chester Business Club
The Bishop of Chester and Mrs Tucker were the hosts at a Christmas reception held by Chester Business Club yesterday evening at Bishop's House, Chester. Ms Jan Chillery, Chairman, welcomed the guests and presented the Bishop with a donation in aid of the Cathedral Choir.

Dinner

Armed Forces Parliamentary Trust
The Armed Forces Parliamentary Trust held its annual Armed Forces Parliamentary Scheme Graduation Dinner last night at the Army and Navy Club. Mr James Gray, MP, Chairman, presided. Thirty MPs and six Peers received their graduation certificates.

Vice-Adml Martin Connell, Second Sea Lord, Maj Gen the Rt Hon The Lord Lancaster of Kimbolton, Director Reserves, and AVM Tim Jones, Assistant Chief of the Air Staff, were among others present.

Clergy appointments

Revv Shirley Hebden, distinctive dn, Beeford with Frodingham and Foston, and Brandesburton and Leven (York), to be p-in-c (hfd), Beeford with Frodingham and Foston (same dio); Mark Griffin, r, St Martin and St Paul, Canterbury (Canterbury), to be p-in-c, Beeley and Edensor (Derby); Stewart Carolan-Evans, ap, Bewsborough (Canterbury), to be r, St John, Burlington (Niagara).

Bridge news

Once again Baron Kalms of Edgware kindly sponsored the annual Lords v Commons Bridge match, **writes Julian Pottage, Bridge Correspondent**.

After 18 of the scheduled 24 boards the Commons was ahead by 4 IMPs (international match points). There was then a vote in the Commons, which several players needed to attend. Initial indications were that this would result in a delay of only 20 minutes but subsequent information was that the voting would last an hour, with the consequence that the Lords won the match on a walkover.

Sally Brock adjudged Richard Cumming-Price as the winner of the Anthony Berry Award for the best bid hand because his choice of opening bid enabled the partnership to bid a making slam not found at other tables.

ONE HUNDRED YEARS AGO

The Daily Telegraph.

LONDON, FRIDAY DECEMBER 14, 1923

GOVERNMENT AND FOOT-AND-MOUTH DISEASE

£1,500,000 COMPENSATION

The steps being taken by the Government to deal with the present outbreak of foot-and-mouth disease were, explained, by the Minister for Agriculture, Sir Robert Sanders, at a meeting of the Council of Agriculture for England held yesterday at Middlesex Guildhall under the chairmanship of Sir Douglas Newton, The Ministry, he said, were prepared to adhere to the policy of slaughter and to pay by way of compensation at least £1,500,000; they were expediting the slaughter in the badly-affected areas of Shropshire and Cheshire; and were consulting the highest medical authority on the matter of investigation and research.

The subject was raised on a resolution moved by Mrs. Hugh Middleton (Northumberland), asking that the policy of slaughtering infected animals should be discontinued in favour of isolation, and that no further compensation be paid.

The following important statement by Sir William Joynson-Hicks, Minister of Health, on the subject of the disease as affecting man was issued last night:

Having regard to the recent statement of the President of the Royal Society of Medicine that doctors were willing to co-operate with the veterinary profession in the prevention and cure of animal diseases, and in view of the suspicion that foot-and-mouth disease may extend from animals to man, I have inquired into the present position, I find that while there is evidence that the disease can be communicated from animals to man, mainly through the secretions from the mouth of the infected animals to the dairyman, cowkeeper, or other persons in very close contact with them, the occurrence of such eases is rare, the illness has been very mild, and in this country there is no instance of death having resulted.

ISOLATION ADVOCATED

In introducing her motion at the meeting of the Council of Agriculture, Mrs. MIDDLETON said they were all full of gratitude for what the Ministry had endeavoured to do, but the machinery did not work. There had been a very valuable report by a Departmental Committee, but Apparently nobody was following anti that Committee's instructions. Very great stress was laid on the proper disinfection of weighbridges, railway docks, trucks, and so on, but it was not carried out. At the present time the disease existed on 978 premises, and since August and Dec. 11 Cattle 32,132, Sheep 15,443, Pigs 17,769 had been slaughtered. In compensation £950,009 had been paid, and the estimated receipts from salvage were £200,000, leaving £750,000 net compensation. In addition, there were many indirect expenses. It had been worked out carefully, for instance, that the exact cost of exporting cattle from Dublin to England via Glasgow was £4 17a a head, and this charge was eventually paid by the consumer. Far more important than the money aspect was the fact that our very valuable live stock was being depleted, and cattle was becoming scarcer and scarcer.

Mrs. Middleton complained of the utter brutality of the slaughter, and declared that the hides of slaughtered animals were sometimes left lying about for a long time. She strongly advocated the policy of isolation, and, with the cessation of slaughter, the stoppage of compensation. It was her considered opinion, she said, that the high rate of valuation placed upon slaughtered stock did not conduce to exceptional precautions being taken against infection.

MINISTER'S PROTEST.

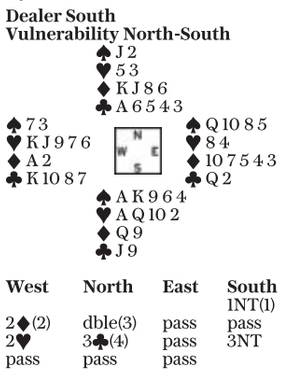
Sir ROBERT SANDERS (Minister for Agriculture) said he could not let Mrs. Middleton's statements go by without a word of protest. He was informed there were no grounds whatever for allegations of cruelty in the slaughtering; in most cases the humane killer was used, and in all cases every precaution was taken to see that there should be no cruelty at all.

With regard to disinfection and the burying of the hides, his information was exactly the opposite to what had been stated. Compensation was left in the hands of expert valuers, and he had quite as many complaints that the compensation was too small as he had that it was too big. The experience of those who bad tried it was that isolation on a big scale broke down. They could isolate a pedigree herd, because the people who kept pedigree herds generally had the very best equipment and a fairly ample staff of men; but to isolate in every case with an enormous number of outbreaks was quite impossible. In the countries where it had been tried the result was that, instead of spasmodic outbreaks, the disease became permanent and irremediable.

The alternative was not between slaughter and isolation, but between slaughter and "letting the thing rip." It would mean the practical extinction of our export trade in cattle. In England, up to March last, the cost had been just under £1,000,000 in thirty-one years, whereas the annual loss to farmers in Holland, where they had tried isolation and found it a failure, was £2,500,000. In France in one year they had lost £5,000,000, and in the United States they had a bad outbreak in 1916, and spent £1,500,000 and succeeded in clearing the country of it.

An amendment moved by Sir MEYRICK BURRELL urged the Ministry to continue the policy of slaughter until advised otherwise by veterinary authorities.

Mr. HARRY GERMAN (president of the National Farmers' Union), seconding, said it was ridiculous to talk about "wholesale slaughter" when the 32,000 cattle mentioned by Mrs. Middleton represented only 0.45 per cent, of the total cattle in the country, the 15,000 sheep only 0.07 per cent., and the 17,600 pigs only 0.63 per cent.



Mrs. Middleton's motion was heavily defeated, and Sir Meyrick Burrell's amendment was carried.

Contract 3NT by South
Opening Lead ♥6

FROM the Soloway Knockout Teams in Atlanta. Knottenbelt (England and Zia) played Bremark (Sweden and Portugal) in the round-of-16. The other surviving team with British players was Connie Goldberg's, containing Simon Cope and Thomas Paske. They took on the mighty Zimmermann.

My own team, Dyson, lost to Amoils the day before. The Coca-Cola museum awaited, with the Blue Ribbon Pairs to follow. One great thing about North American bridge is that there is always a strong national event to play in, even if you get knocked out from time to time. For non-expert players, there's an equally good Flight B scene.

North-South were Maggie Knottenbelt and Michael Byrne. East-West were Lars Bremark and Simon Hult. Byrne's bid of 1NT, with 5-4 in the majors, may not win widespread theoretical approval, but was a sound practical choice.

South's problem was the likely uncontested sequence 1♠-1NT-2♥. Responder might pass this with 3NT on. Alternatively, he might give preference to 2♠. Then does opener push on to 2NT? That's quite a lot with 16 points. At this stage, he might be wishing he'd opened 1NT for starters.

Byrne got the ♥6 lead to 3NT, and played the ♦Q to West's ♦A. He put the ♦K on the safe ♦2 return, advanced the ♠J from dummy, and let East hold the ♠Q. Michael ducked the heart return, and got a spade back from Hult (club or heart was more challenging, but how could he tell South's distribution?). This made it easy-peasy. Byrne showed his hand, claiming at least the contract. If the ♦10 happened to fall, not that he expected it, he would have scored up an overtrick.

West in the replay was Stefano Tommasini, partnering Ben Norton. Stefano bid 1♥ over South's strong club, and found himself on lead to 3NT. Since his hearts had gone unsupported, he tried a club lead instead. This made defending very easy. Norton scored the ♣Q at trick one, and fired through a heart. That put down two in the picture, but down one was quite enough. The swing was 12 IMPs to Knottenbelt.

COWEN.—Heather Cowen passed away peacefully on 29th November 2023. She will be greatly missed by her friends and family. Funeral will be held at GreenAcres Chiltern, Potkiln Lane, Jordans, Beaconsfield, Buckinghamshire HP9 2XB on 20th December at 11 a.m.
Online Ref: WO018966

DAVEY.—Richard John Chatterton died aged 82 on 29th November following an operation. A dear husband to Helen, father to Sarah, Katharine and Georgina, and grandfather to six. May he rest in peace. Funeral at 12.40 p.m. on 18th December at Barham Crematorium, Kent.
Online Ref: WO019012

FRASER.—Viola 'Vee' Fraser (née Fuller), sadly died on Thursday 7th December 2023 aged 96. Devoted wife to the late Ian Fraser, she will be greatly missed by her family, David, Amanda, Katie and Patrick.
A Thanksgiving Service will take place on 19th January 2024 at 12.30 p.m., St Andrew's Church, Donhead St Andrew, SP7 9EB. No flowers please.
Online Ref: WO019024

GEMMELL.—John Grigor, of Solihull on 4th December 2023, aged 69. Beloved son, brother, husband, father and grandfather. Funeral on 28th December at 11.30 a.m. at Robin Hood Crematorium, Solihull. All enquiries to Bastock and Bruce. Tel: 01564 335577.
Online Ref: WO018990

GUISELEY.—On December 1st 2023, at home Doris Edith (née Vaughan-Bentley) aged 96. Dearly loved wife of the late Eric, loved and loving mother of Eden, and mother-in-law of Janet. Sometime of Guiseley, Southport and latterly Harrogate. Funeral private.
Online Ref: WO018965

KERR.—Richard Buchanan died unexpectedly but peacefully on 8th December 2023. Adored husband of Charlotte and dog father to his beloved Welsh Terriers; Chester, Buddy and Dodger. A humble but talented and much respected songwriter, his music will be his lasting legacy.
Online Ref: WO018963

LUCE.—Rose died peacefully on 8th December aged 86. Wife of Richard, mother of Alexander and Edward, grandmother of Mimi. Funeral and Thanksgiving at St Mary Magdalene, Bolney, RH17 5QR at 12.30 p.m. on Friday 19th January. No flowers. For those wishing to attend please contact sharon@swanva.co.uk or Freeman Brothers, 126 High Street, Hurstpierpoint, BN6 9PX. Telephone: 01273 831497.
Online Ref: WO019015

NICHOLS.—Audrey of Thropton, peacefully at home on 6th December aged 97 years. Much loved and loving wife of the late Ted. A loving mum, gran and friend who will be sadly missed. A long life well lived. Friends, please meet for Funeral Service at West Road Crematorium on Thursday 21st December at 12.45 p.m. Family flowers only. Donations in lieu to Cancer Research UK. A donation box will be available at the service. All welcome following the service to the family home for refreshments.
Online Ref: WO018996

ORFEUR.—Bridget (née Burrows) died peacefully on 2nd December 2023, aged 90 years. Cherished wife of the late Bernard, loving and dearly loved mother of Peter and Caroline, proud grandmother of Hannah, Christopher, Lois and Charlotte, and great grandmother of Max. Private family funeral. A service to commemorate Bridget's life will be held in Pitney, Somerset in May 2024. For further information please contact Caroline by email: theorfeurs@gmail.com Donations, if desired, to Dementia UK.
Online Ref: WO018896

RAWLL.—Major Peter Leslie RM (Retd). Beloved husband of Cicely and wonderful father to Andrew and Katie, died peacefully on 5th December 2023 aged 96. Private Funeral at Coney Hill Crematorium, Gloucester GL4 4PA on Monday 18th December 2023 at 2.30 p.m. Thanksgiving Service at St Cyr's Church, Stonehouse GL10 3QP on Friday 2nd February 2024 at 2 p.m. thanksgiving@rawll.com
Online Ref: WO019001

WARING.—(née Fogg). Joy Millicent Charlotte Latham peacefully passed away on November 22nd 2023, aged 104. Beloved mother of Caroline and Grant and GranGran to her grandchildren and great grandchildren. Latterly resident in Peterborough, previously of Girton, Cambridgeshire and Horsford and Reepham in Norfolk. Vice President of The Military Heraldry Society and indexer for London and Belfast Gazette for over 25 years. A Service of Thanksgiving will take place on Monday January 15th 2024 at 11 a.m. at All Saints Church, Horsford, Norwich, NR10 3DB. There will be an informal reception after the service. Donations, if desired, may be made payable to 'Calibre Audio' and 'Cam Sight' sent c/o Jerry March Funeral Services, 28 Holt Road, Horsford, Norwich, NR10 3DD or online via the donations page at www.jerrymarchfuneralservices.co.uk
Online Ref: WO018977

Memorial services

ARNOLD.—Sir Thomas Arnold.
A Memorial Service will be held on January 31st at 11 a.m. at St Etheldreda's, Ely Place, London EC1N 6RY.

Public notices

THE H2TEESSIDE PROJECT
The Planning Act 2008 - Section 48
The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 - Regulation 4
The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 - Regulation 13
NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.
4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point - 454719 524286
   - North - 451309 526476
   - East - 458760 521587
   - South - 457001 520748
   - West - 446938 521613
6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
   c. an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2 ;
   g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.
11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.
12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.
15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.
16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	Opening Times (subject to opening hours over the Christmas holiday period)
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net
Post: Freepost H2TEESSIDE
Telephone: Freephone 0800 080 3028
Project Website: www.h2teesside.co.uk

19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.
21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

DEPARTMENT FOR ENERGY SECURITY AND NET ZERO
SLOUGH MULTIFUEL EXTENSION PROJECT
THE PLANNING ACT 2008 AND THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017
NOTICE OF A DECISION ON AN APPLICATION FOR AN ORDER GRANTING DEVELOPMENT CONSENT FOR EIA DEVELOPMENT

The Secretary of State for Energy Security and Net Zero ("the Secretary of State") gives notice under regulation 31(2) of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 that a determination has been made on an application made by SSE Slough Multifuel Limited ("the Applicant") for development consent under the Planning Act 2008 ("the 2008 Act") for development that constitutes "Environmental Impact Assessment development" as defined in the 2017 Regulations.

The application is to increase the efficiency and output of a previously consented energy from waste electricity generating station located in Slough, Berkshire from up to 50 megawatts to up to 60MW. The Secretary of State has decided, following consideration of the report of the Examining Authority who conducted an examination into the application, that development consent should be granted for the proposed Development.

The statement of reasons for deciding to make an Order granting development consent, which has been prepared by the Secretary of State under section 116 of the 2008 Act and regulation 31(2) of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017, containing the content of the decision, the requirements imposed in connection with the development, the main reasons and considerations on which the decision is based including relevant information about the participation of the public, a description of the main features to avoid, reduce and offset any major adverse effects of the development, is published on the Planning Inspectorate's website:
https://infrastructure.planninginspectorate.gov.uk/projects/south-east/slough-multifuel-project/.

The statement of reasons contains the information required by regulation 30(2) including information regarding the right to challenge the decision and the procedures for doing so.

Hard copies of the decision documentation will also be available to inspect at the Planning Inspectorate's offices (by appointment using the contact details below):

The Planning Inspectorate, National Infrastructure Directorate, Temple Quay House, Bristol BS1 6PN.

To make an appointment for inspection of the documents contact the Planning Inspectorate on 0303 444 5000 or email NIEnquiries@planninginspectorate.gov.uk.

Copies of the Secretary of State's decision letter and the text of the Order can be obtained by writing or sending an e-mail to the Planning Inspectorate. No charge will be made for this service. (4512027)

THE H2TEESSIDE PROJECT
THE PLANNING ACT 2008 – SECTION 48
THE INFRASTRUCTURE PLANNING (APPLICATIONS: PRESCRIBED FORMS AND PROCEDURE) REGULATIONS 2008 – REGULATION 4
THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017 – REGULATION 13
NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT
The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').

2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.

3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.

4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.

7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:

a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;

b. a natural gas supply connection for the supply of gas to the hydrogen production plant;

c. an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;

d. an electricity grid connection to provide power to the Project;

e. water supply and treatment and wastewater infrastructure;

f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;

g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;

h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located

within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.

11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation

12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.

14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.

15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.

16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	**Opening Times (subject to opening hours over the Christmas holiday period)**
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: Freepost H2TEESSIDE

Telephone: Freephone 0800 080 3028

Project Website: www.h2teesside.co.uk

19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.

21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

TOWN PLANNING

DEPARTMENT FOR TRANSPORT
TOWN AND COUNTRY PLANNING ACT 1990

The Secretary of State gives notice of an Order made under Section 247 of the above Act entitled "The Stopping up of Highways (West Midlands) (No.34) Order 2023" authorising the stopping up of two part-widths of Queen Victoria Road, at Coventry in the City of Coventry. This is to enable development as permitted by Coventry City Council, under reference OUT/2020/2876.

Copies of the Order may be obtained, free of charge, from the Secretary of State, National Transport Casework Team, Tyneside House, Skinnerburn Road, Newcastle Business Park, Newcastle upon Tyne NE4 7AR or nationalcasework@dft.gov.uk (quoting NATTRAN/WM/S247/5258). They may also be inspected during normal opening hours at Coventry City Council, The Council House, Coventry CV1 5RR.

Any person who wishes to challenge the validity of the decision to make the Order may apply to the High Court within 6 weeks from 14 December 2023.

N Crass, Casework Manager (4512025)

DEPARTMENT FOR TRANSPORT
TOWN AND COUNTRY PLANNING ACT 1990

The Secretary of State gives notice of an Order made under Section 247 of the above Act entitled "The Stopping up of Highways (West Midlands) (No.32) Order 2023" authorising the stopping up of a length of Rover Road and a part-width of Queen Victoria Road, at Coventry in the City of Coventry. This is to enable development as permitted by Coventry City Council, under reference OUT/2020/2876.

Copies of the Order may be obtained, free of charge, from the Secretary of State, National Transport Casework Team, Tyneside House, Skinnerburn Road, Newcastle Business Park, Newcastle upon Tyne NE4 7AR or nationalcasework@dft.gov.uk (quoting NATTRAN/WM/S247/5256). They may also be inspected during normal opening hours at Coventry City Council, The Council House, Coventry CV1 5RR.

Shipping will 'get there by 2050', industry heavyweights tell Lloyd's List Outlook Forum

SHIPPING WILL MANAGE to meet the International Maritime Organization's goal of net zero emissions sometime around mid-century, an industry audience was told in London this morning.

However, progress is likely to be uneven and developments in world politics will likely make progress more complicated than otherwise, a heavyweight panel argued.

BIMCO president and Reederei F Laeisz chief executive Nikolaus Schües, Shell decarbonisation manager Alexandra Ebbinghaus, Cargill Ocean Transportation global operations director Eman Abdalla and Citi's shipping and logistic chair Michael Parker, who also chairs the Poseidon Principles, were speaking at a Shipping Outlook Forum organised by Lloyd's List Intelligence.

The first question the panel was asked was what was keeping them awake at night. Abdalla highlighted a continually accelerating situation in world politics, with tension seen particularly in the Middle East and the Russia/Ukraine conflict.

This will have implications for global trade, decarbonisation and safety, and is undermining progress on various fronts.

Ebbinghaus agreed from an environmental point of view, highlighting the possibility that COP28 in Dubai will end without meaningful agreement. In addition to climate change, the planet has boundaries for things such as pollution and water supply.

THE H2TEESSIDE PROJECT

The Planning Act 2008 – Section 48

The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4

The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13

NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').

2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.

3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.

4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

    - Mid-point – 454719 524286
    - North – 451309 526476

- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.

7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:

   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.

11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.

12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.

14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.

15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.

16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	**Opening Times (subject to opening hours over the Christmas holiday period)**
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed

Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.

21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

NEW REVELATIONS ON ROCKALL ROW

SEE PAGE 2

Crew visa salary hike ‘absolutely devastating’

‘EVERYONE IS IN SHOCK’ following the home secretary’s announcement last week of a 50% rise in the skilled worker visa salary threshold, says Clyde Fishermen’s Association secretary Elaine Whyte.

Speaking ahead of a meeting with UK government officials to obtain more details on the terms and conditions of the new rules, she said it would be ‘really devastating’ for areas like the west of Scotland if there were no alternatives for the fishing industry.

Vessel owners had invested in sponsorship licences, and were now faced with the prospect of additional costs from next spring that they would be unable to meet. “People are heavily invested in something that’s effectively going to last only a few months,” she said.

“I appreciate the issues with immigration, but I don’t think measures should affect migrant workers who are coming in supporting food production and essential services.

Elaine Whyte.

“On top of the issues with the MCA, it almost feels like it’s getting quite impossible to operate inshore boats.”

She said she understood the rationale about training up local people, but many of the affected areas are suffering rural depopulation, and there are not the people there to train.

“We can’t magic people out of the sky. In Kintyre you’re not going to suddenly get a huge workforce regardless of what you pay.

“I’m the first person to advocate different wages for anybody who’s working a decent shift, that’s fair, but I also think if you are basing what’s a basic wage in London and extending that to somewhere like Kintyre or Skye or Orkney, it’s not almost £40,000 – that’s way beyond average for those areas.

“These changes are absolutely devastating.”

Sea trials for new Genesis

The new 14.99m vivier crabber Genesis H 37 heading out from Whitby at daybreak last Wednesday for sea trials. Built by Parkol Marine Engineering for Genesis Fishing Ltd, the new vessel will be skippered by George Robson. With her crew and gear now aboard, final touches were being made to the fit-out last week. A full feature on the new Genesis will appear in *Fishing News* soon. *(Photo: Paul Armstrong/The Artistic Lens)*

THE H2TEESSIDE PROJECT | THE PLANNING ACT 2008 – SECTION 48
THE INFRASTRUCTURE PLANNING (APPLICATIONS: PRESCRIBED FORMS AND PROCEDURE) REGULATIONS 2008 – REGULATION 4
THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017 – REGULATION 13

NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.
4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point – 454719 524286
   - North – 451309 526476
   - East – 458760 521587
   - South – 457001 520748
   - West – 446938 521613
6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
   c. an air separation unit or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.
11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.
12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.
15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.
16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

How to respond to this notice

Inspection Location	**Opening Times** (subject to opening hours over the Christmas holiday period)

WHICH IS THE BEST PANTO?

Jobs secured in SeAH contract

'Largest ever deal' at Teesworks firm

SEAH Wind has signed its largest ever contract - securing well over 700 jobs at its Teesworks site.

The contract with Vattenfall to supply all the wind turbine monopiles for its Norfolk Vanguard Project, positions SeAH Wind as the UK's leading Foundation Manufacturer and ensures that the UK is at the forefront of developing offshore wind globally.

By Mike Hughes

SeAH says it can now plan and grow the business with order security from 2025 until the end of 2027. Production is due to start in 2026, and continue until the end of 2027, utilising the Teesworks heavy duty quay for both incoming raw materials, and outbound monopiles, which will range from 10-11 meters in diameter, weighing between 1,600 and 2,250 tons each, and varying in length from 70 95 meters.

Minister for Investment Lord Johnson said: "I'm delighted that SeAH Wind has increased its investment to £650 million to build a state-of-the-art manufacturing facility in Teesside.

The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point – 454719 524286
   - North – 451309 526476
   - East – 458760 521587
   - South – 457001 520748
   - West – 446938 521613
6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
   c. an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.
11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.
12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.
15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.
16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	Opening Times (subject to opening hours over the Christmas holiday period)
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: **info@h2teesside.net**
Post: **Freepost H2TEESSIDE**
Telephone: **Freephone 0800 080 3028**
Project Website: **www.h2teesside.co.uk**

19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.
21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

TRAFFIC & Roads

national highways

ROAD TRAFFIC REGULATION ACT 1984 - SECTION 14(1)(a)
THE A19 TRUNK ROAD (HOWDON INTERCHANGE TO FISHER LANE) (TEMPORARY PROHIBITION OF TRAFFIC) ORDER 2023

NOTICE IS HEREBY GIVEN that National Highways Limited (Company No. 09346363) has made an Order on the A19 Trunk Road, in the Counties of Northumberland, North Tyneside and Tyne and Wear, to enable maintenance and improvement works, to be carried out in safety.

The works are expected to take place overnight between 8pm and 6am during a period starting on 1 January 2024 and ending on 23 December 2024.

The effect of the Order will be to impose prohibitions on the following lengths of carriageway:

(i) the A19 Trunk Road, in both directions, between Howdon Interchange and Fisher Lane;
(ii) all slip roads leading to and from the lengths of carriageway described above; and
(iii) all lay-bys, adjacent to the lengths of carriageway as described in (i).

During any road closures traffic will be diverted via alternative junctions of the A19 Trunk Road and local roads. These diversions will be clearly indicated by traffic signs throughout the area.

To obtain a copy of the A19 Programme of Works please contact the National Highways Customer Contact Centre on 0300 123 5000 or info@nationalhighways.co.uk.

The duration of each prohibition will vary depending upon the nature of the work being undertaken on each occasion and access will be maintained at all times to premises and properties which are accessible from, and only from, the A19.

The prohibitions will not apply to emergency services, works, or winter maintenance vehicles. The prohibitions will only apply during such times and to such extent as shall be indicated by traffic signs.

The Order comes into force on 31 December 2023 and will expire on 21 December 2024.

Richard Foxton, an official of National Highways Limited, 2 City Walk, Leeds LS11 9AR.

National Highways Limited, Bridge House, 1 Walnut Tree Close, Guildford, GU1 4LZ. Registered in England & Wales number 09346363.

national highways

ROAD TRAFFIC REGULATION ACT 1984 - SECTION 14
THE A1(M) MOTORWAY AND A168 TRUNK ROAD (DISHFORTH) (TEMPORARY PROHIBITION OF TRAFFIC)

NOTICE IS HEREBY GIVEN that National Highways Limited intends to make an Order on the A1(M) Motorway and A168 Trunk Road, in the County of North Yorkshire, to enable resurfacing and road marking works to be carried out in safety.

The works are expected to start on Monday 8 January 2024 for 2 nights, or until completed, and will take place between 8pm and 6am.

The effect of the Order will be to close, at times during the works, the:

(i) A168 carriageway from its commencement at the northbound entry slip road at the A1M Junction 49 (Dishforth) to its junction with the Dishforth Interchange western dumbell roundabout, a distance, a distance of 670 metres;
(ii) A1(M) northbound entry slip road at Junction 49; and
(iii) A1(M) southbound exit slip road at Junction 49.

During the closures suitably signed alternative routes will be available at all times.

Traffic signs will indicate the extent of the prohibitions (which will not apply to emergency service vehicles or vehicles being used in connection with the said works or for winter maintenance or traffic officer purposes). The Order comes into force on 7 January 2024 and has a maximum duration of eighteen months.

The contact for this scheme is Michael McCormack. For enquiries please contact the National Highways Customer Contact Centre on 03001235000 or info@nationahighways.co.uk

RICHARD FOXTON, National Highways, 2 City Walk, LEEDS, LS11 9AR.

ROAD TRAFFIC REGULATION ACT 1984 - SECTION 14(1)(a) & 14(7)
THE A168, A19, A174, A1053, A66 TRUNK ROADS (TEMPORARY PROHIBITION OF TRAFFIC) ORDER 2023

NOTICE IS HEREBY GIVEN that National Highways Limited (Company No. 09346363) has made an Order on the A168, A19, A174, A1053, A66 Trunk Roads, in the Counties of North Yorkshire, Cleveland, County Durham and Tyne and Wear, to enable maintenance and improvement works, to be carried out in safety.

The works are expected to take place overnight between 8pm and 6am during a period starting on 2 January 2024 and ending on 21 December 2024.

The effect of the Order will be to impose prohibitions on the following lengths of carriageway:

(i) the A168, A19, A174, A1053, A66 Trunk Roads, in both directions, between Dishforth and Tyne Tunnel; and
(ii) all slip and link roads leading to and from the lengths of carriageway as described above in (i).

During any road closures traffic will be diverted via alternative junctions of the A168, A19, A174, A1053, A66 Trunk Roads and local roads. These diversions will be clearly indicated by traffic signs throughout the area.

To obtain a copy of the A168, A19, A174, A1053, A66 Programme of Works please contact the National Highways Customer Contact Centre on 0300 123 5000.

The duration of each prohibition will vary depending upon the nature of the work being undertaken on each occasion.

The prohibitions will not apply to emergency services, works, or winter maintenance vehicles. The prohibitions will only apply during such times and to such extent as shall be indicated by traffic signs.

The Order comes into force on 1 January 2024 and will expire on 21 December 2024.

Richard Foxton, an official of National Highways Limited, 2 City Walk, Leeds, LS11 9AR.

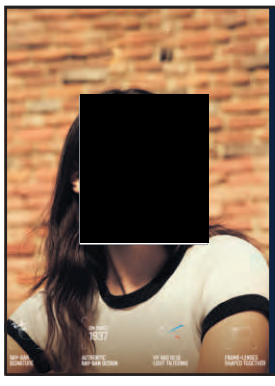
Bumper success for coats appeal

Thousands of donations from Echo readers help out struggling families

By Tom Burgess



IT has been a bumper year for donations of clothes to Darlington Cares school uniform scheme as residents have responded in their masses to a campaign backed by The Northern Echo.

We launched our 'Coats for Christmas' campaign, which backs Darlington Cares' winter clothes appeal, at the start of December and since then a surge of donations have flooded in.

The shop, run by Darlington Cares and located in Queen Street Shopping Centre has seen an unprecedented demand for winter clothing as the cost of living crisis continues and families are struggling more than ever. 13,000 items have been donated and 12,337 pieces of clothing have been given out to 4,393 customers over the last 12 months.

PLANNING

TOWN & COUNTRY PLANNING ACT 1990
PLANNING (LISTED BUILDINGS & CONSERVATION AREAS) ACT 1990

The following applications are required to be advertised under the above Acts:

1. Single storey rear extension. Internal alterations to attic, new flat roof dormer, 2 rooflights & increasing size of existing dormer. Demolition of existing garage & construction of 2 storey garage & garden room. 28 Albert Street Durham 23/02439
2. Change of use of storage shed to dwelling. Sparks Farm Wearhead 23/03651
3. Variation of Conditions 1 (approved plans), 2 (floorspace) & 8 (minimum retail floorspace) pursuant to planning permission 23/02838 (mixed use scheme). Land Rear Of Tindale Crossing Public House Stadium Way St Helen Auckland 23/03718
4. Reserved Matters for Cell C (22/03572). Land South Of A182 Cold Hesledon 23/03605
5. Single storey rear extension. 4 Back Mount Joy Durham 23/03526
6. 53 dwellings. Land North Of Redworth Business Park Redworth Road Shildon 23/03270
7. Change of use to dwelling & external alterations. 1 Lumsden Terrace Catchgate 23/03693
8. 2 dwellings. Land East Of Railway Villa Granville Avenue Annfield Plain 23/03715
9. Conversion to dwelling & parking. Hunstanworth Farm Hunstanworth 23/03725
10. Replace ground & 1st floor windows to front. 68 Hallgarth Street Durham 23/03641
11. 100 dwellings. Land West Of 20 Pont Road Leadgate 23/03633
12. 41 dwellings. Land South Of Broadway Avenue Salters Lane Trimdon 23/03533
13. Removal of 1 rack & the installation of cabinet within internal room. Vane Tempest Hall Maynards Row Gilesgate 23/03482 & 23/03483
14. Erection of detached dwelling & stable. Stables Tudhoe Village 23/02227
15. Concrete plant (retrospective) & construction & demolition washing plant. Aycliffe Quarry Aycliffe Village 23/03701
16. Change of use to hot food takeaway (across all 3 levels) & erection of flue to rear. Revised application to allow opening to midnight 7 days a week. 17 Seaside Lane Easington Colliery 23/03627
17. Renewal of below ground drainage system to the North Terrace of Durham Castle Palace Green Durham 23/03666 & 23/03667

View applications at www.durham.gov.uk/planning. Representations should be made by **11 January 2024** & will be recorded online. Signatures, phone numbers & e-mail addresses will be removed.

TRAFFIC & Roads

NOTICE OF MAKING OF AN ORDER
HIGHWAYS ACT 1980
WILDLIFE AND COUNTRYSIDE ACT 1981
THE COUNTY COUNCIL OF DURHAM
(PUBLIC FOOTPATH NO.44 WOLSINGHAM PARISH)
PUBLIC PATH DIVERSION AND DEFINITIVE MAP AND STATEMENT MODIFICATION ORDER 2023

The above order, made on 13 December 2023, under section 119 of the Highways Act 1980, will **Divert Public Footpath No. 44 Wolsingham Parish** from a point south-south-east of the disused Thistlewood Quarry, proceeding in a generally north-north-westerly direction on the west side of a wall past the quarry to the junction with Public Footpath and Bridleway No. 43 **to a line running** north-east then north-north-westerly on the east side of the wall to the same point at the junction with the existing Public Footpath and Bridleway No.43 as shown on the order map. The above order will also modify the Definitive Map and Statement of the Public Rights of Way for County Durham by deleting and adding the footpath described.

A copy of the order and the order map have been placed and may be seen free of charge at Wolsingham library during normal opening hours and via the Council website.

Any representations about or objections to the order may be sent in writing addressed to Sharon Renwick, Legal Assistant, County Hall, Durham DH1 5UL or by email to Highways.orders@durham.gov.uk (ref: 4309432) not later than 18 January 2024. Please state the grounds on which they are made.

If no such representations or objections are duly made, or if any so made are withdrawn, the County Council of Durham may confirm the order as an unopposed order. If the order is sent to the Secretary of State for the Environment for confirmation any representations or objections which have not been withdrawn will be sent with the order.

Dated: 21 December 2023

HELEN LYNCH
Head of Legal and Democratic Services
County Hall, Durham DH1 5UL

THE H2TEESSIDE PROJECT
The Planning Act 2008 – Section 48
The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4
The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13
NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.
4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   • Mid-point – 454719 524286 • North – 451309 526476
   • East – 458760 521587 • South – 457001 520748 • West – 446938 521613
6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
   c. an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.
11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.
12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.
15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.
16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	Opening Times (subject to opening hours over the Christmas holiday period)
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:
Email: info@h2teesside.net Post: Freepost H2TEESSIDE Telephone: Freephone 0800 080 3028
Project Website: www.h2teesside.co.uk
19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.
21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

Statutory

THE H2TEESSIDE PROJECT
The Planning Act 2008 - Section 48
The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 - Regulation 4
The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 - Regulation 13
NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.
4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point - 454719 524286
   - North - 451309 526476
   - East - 458760 521587
   - South - 457001 520748
   - West - 446938 521613
6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
   c. an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2 ;
   g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.
11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.
12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.
15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.
16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	Opening Times (subject to opening hours over the Christmas holiday period)
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net
Post: Freepost H2TEESSIDE
Telephone: Freephone 0800 080 3028
Project Website: www.h2teesside.co.uk

19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.
21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

Planning

STOCKTON ON TEES BOROUGH COUNCIL

I give notice that the following application(s) have been made to Stockton on Tees Borough Council:-

Planning (Listed Building and Conservation Areas) Regulations 1990
Applications for development within a Conservation Area

Erection of dormer to rear, installation of 2no roof lights and internal alterations to the first and ground floor to include installation of 2no doors to the ground floor and the installation of a corridor, utility room, staircase and walls to first floor. at 122 High Street, Norton, Stockton-on-Tees by Pyramid Architectural Designs 23/1985/LBC

TOWN AND COUNTRY PLANNING (DEVELOPMENT MANAGEMENT PROCEDURE) (ENGLAND) ORDER 2015
Notice Under Article 15
Affecting a Public Right of Way to which Part III of the Wildlife and Countryside Act 1981 applies

Erection of 87no. dwelling to include the creation of associated accesses, landscaping, external works, and the erection of a substation. at Land East Of Mandale Park, Urlay Nook Road, Eaglescliffe by ELG Planning 23/2223/FUL

TOWN AND COUNTRY PLANNING (DEVELOPMENT MANAGEMENT PROCEDURE) (ENGLAND) ORDER 2015 Notice Under Article 15

Change of use of site to vehicle repair and maintenance depot within use class B2 to include the erection of extensions to the building, erection of a vehicle wash bay, alterations to external yard layout and the erection of a 4 metre high fence. at Virgin Media, The Annexe Building , De Havilland Avenue, Preston Farm Business Park by ID Planning 23/2169/FUL

Erection of two storey factory building to include the creation of 58 car parking spaces, 8 EV parking spaces and demolition of 4no existing buildings. at Thorpe Leazes Farm, Thorpe Leazes Lane, Thorpe Thewles by Origin Planning Services 23/2099/FUL

Planning (Listed Building and Conservation Areas) Regulations 1990 Applications Affecting the setting of a Listed Building Consent

Erection of a detached summer house building within rear garden area at 464A Thornaby Road, Thornaby, Stockton-on Tees by miss Jessica Riley 23/1492/FUL

Members of the public may inspect copies of the application, plans and other documents submitted with the application(s) via our web site at www.stockton.gov.uk or alternatively, if you do not have access to the internet please contact Planning Development Services on 01642 526022. Anyone who wishes to make a representation about any of the above applications should write to Planning Services, Municipal Buildings, Church Road, Stockton on Tees. TS18 1LD or online at https://www.stockton.gov.uk/planningapplication or email: planningdevelopmentservices@stockton.gov.uk by **4 January 2024**

Please Note: Any comments received, applications forms, plans and/or any other documentation submitted will be made available for inspection on-line by visiting our web site at www.stockton.gov.uk.
For a large print version of this advert please contact 01642 526067

MIDDLESBROUGH BOROUGH COUNCIL

TOWN AND COUNTRY PLANNING ACT 1990
PLANNING (LISTED BUILDINGS & CONSERVATION AREAS) ACT 1990
PUBLICITY FOR PLANNING APPLICATIONS (CIRCULAR 15/92)

Notice is hereby given that the following applications have been submitted to Middlesbrough Council. Public rights of way may be affected.
Ref No: 23/0660/FUL
Address: 5, Hustlers Way, MIDDLESBROUGH, TS5 7DT
Proposal: Installation of 3no. new conservation style rooflights to the main roof of the property (North facing side)
Ref No: 23/0661/FUL
Address: 4, Hall Drive, Middlesbrough, TS5 7EN
Proposal: Retrospective extensions and alterations to garage to side to create residential annex
The applications are available for viewing, and comments can be made, on the Council's website using the following link or typing it into your web browser:
https://planning.agileapplications.co.uk/middlesbrough/search-applications/
Anyone wanting to make representations about the applications should do so in writing by 10-Jan-2024

Traffic & Roads

national highways

ROAD TRAFFIC REGULATION ACT 1984 – SECTION 14 THE A19 TRUNK ROAD (STOCKTON ROAD INTERCHANGE TO PORTRACK INTERCHANGE) (TEMPORARY PROHIBITION OF TRAFFIC)

NOTICE IS HEREBY GIVEN that National Highways Limited intends to make an Order on the A19 Trunk Road and the A66 Trunk Road, in the Districts of Middlesbrough and Stockton-On-Tees, to enable routine maintenance works to be carried out in safety.

The works are expected to start at 8pm on Monday 15 January 2024 and will take place periodically over a period of 12 months and will end on 23 December 2024.

The effect of the Order will be to close, between 8pm and 6am, on Monday to Friday nights, at times during the works, the:

(i) A19 northbound carriageway from the exit slip road at Stockton Road Interchange to the entry slip road at Portrack Interchange, a distance of 2470 metres;
(ii) A19 southbound carriageway from the exit slip road at Portrack Interchange to the entry slip road at Stockton Road Interchange, a distance of 2500 metres;
(iii) link roads connecting the A66 eastbound carriageway with the A19 southbound and northbound carriageways at Stockton Road Interchange;
(iv) link road connecting the A66 westbound carriageway with the A19 northbound carriageway at Stockton Road Interchange;
(v) A19 northbound exit and southbound entry slip roads at Portrack Interchange;
(vi) link roads connecting the A19 southbound carriageway with the A66 eastbound and westbound carriageways at Stockton Road Interchange; and
(vii) layby adjacent to the A19 southbound carriageway approximately 500 metres north of the exit slip road at Portrack Interchange.

When required, traffic signs will indicate the extent of the prohibitions (which will not apply to emergency service vehicles or vehicles being used in connection with the said works or for winter maintenance or traffic officer purposes). The Order comes into force on 14 January 2024 and will expire on 23 December 2024.

The project manager for this scheme is Michael Morgan. For enquiries please contact the National Highways Customer Contact Centre on 03001235000 or info@nationalhighways.co.uk

Statutory

THE H2TEESSIDE PROJECT
The Planning Act 2008 - Section 48
The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 - Regulation 4
The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 - Regulation 13
NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.
4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point - 454719 524286
   - North - 451309 526476
   - East - 458760 521587
   - South - 457001 520748
   - West - 446938 521613
6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
   c. an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2 ;
   g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.
11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.
12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.
15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.
16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	Opening Times (subject to opening hours over the Christmas holiday period)
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net
Post: Freepost H2TEESSIDE
Telephone: Freephone 0800 080 3028
Project Website: www.h2teesside.co.uk

19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.
21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

Villagers step up campaign to save pub

By Janet Gleeson
Staff Reporter

HOUSEHOLDERS are driving forward a campaign to save their village's historic pub.

The Horseshoe Inn at West Rounton, near Northallerton, has been a pub since the 1860s but struggled to carry on after Covid.

Since January, it has been up for sale with the price reduced to about £300,000. The owners said there has been no interest and applied to turn the Grade II-listed building into a house.

Concerned residents set up the Rountons Community Interest Group to try and save the venue. The planning application was due to be decided by November 27, but following protests, campaigners have been told it has been deferred until after the New Year.

A spokesperson for the Rountons Community Interest Group said: "A key next step for the community is to start collating ideas of how the community hub could work and we will be looking to gauge interest and give further updates at a public meeting in mid-January at East Rounton Village Hall.

"Other steps taken by the Rountons Community Interest Group involve carrying out more research, obtaining knowledge and speaking with others who have already succeeded in running a community pub and hub.

"We are also looking at how to apply to the Government Ownership Community Fund for financial support as well as how to form a co-operative to manage the Horseshoe Inn."

Visits have already been made to the George and Dragon at Hudswell, near Richmond, one of the oldest community pubs in the UK, where a new landlord was recently appointed after villagers took over running the pub when previous tenants left. Members of the Rounton group have also visited the Travellers Rest at Skeeby, near Richmond, where residents battled for 14 years to buy back their beloved pub. In 2022 the dream became a reality and in June 2023 the pub reopened and has since gone from strength to strength.

The parish council is also applying to make the Horseshoe Inn an asset of community value to try and ensure it is offered to local people.

THE H2TEESSIDE PROJECT
The Planning Act 2008 – Section 48
The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008 – Regulation 4
The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 – Regulation 13
NOTICE PUBLICISING A PROPOSED APPLICATION FOR A DEVELOPMENT CONSENT ORDER FOR THE H2TEESSIDE PROJECT

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.
4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   • Mid-point – 454719 524286 • North – 451309 526476 • East – 458760 521587
   • South – 457001 520748 • West – 446938 521613
6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
   c. an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.
11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.
12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.
15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.
16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	Opening Times (subject to opening hours over the Christmas holiday period)
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net • Post: Freepost H2TEESSIDE
Telephone: Freephone 0800 080 3028 • Project Website: www.h2teesside.co.uk

19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.
21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

Progress as leisure site fences come down at last

By Janet Gleeson
Staff Report

THERE have been developments on the long-awaited opening of Northallerton Sports Village, with people now allowed to use the land and the running track, but organised events cannot yet take place.

The £1.3m first phase of the scheme was due to be opened in July but became bogged down in the transfer of the land from Hambleton District Council to North Yorkshire Council.

This week North Yorkshire's assistant director for leisure and culture, Jo Ireland said: "Although the transfer of the land is still not complete, we are now able to allow public access on to the site which includes the one-kilometre circuit, amenity grass and car park.

"However, organised activity, that would require a licence, will not be permitted until the land has been transferred to the council.

"The capital works on the first phase of Northallerton Sports Village were completed in July, but the site remained closed to the public to allow the recreational grassed areas to establish.

"Opening of the site was then further held up due to a delay in the transfer of the land from the developers to the council."

Excitement started to mount at the beginning of the week when lorries were seen taking down much of the fencing which was supposed to block off the site, but had been pushed down in places. Vandals had also caused damage along with graffiti on a bridge and underpasses.

The sports village was always designed to enhance the former Stonecross playing fields and was a major part of the North Northallerton development of more than 900 houses, in conjunction with contractors Taylor Wimpey. The council said it is hoping to complete the transactions in the next few weeks so the site can be totally opened.

Organisers of Northallerton Parkrun welcomed the news but said they cannot have runs there until organised events can be licensed. A spokesperson said: "The good news is once open the core team can start looking at potential new routes, something we've been unable to whilst the space has been closed.

Joe Cornish says his farewells to gallery

IT is the end of an era in Northallerton today as the Joe Cornish Gallery closes after almost 20 years as a focal point for landscape photographers across Britain and beyond.

Joe is 65 and is keen to move on while he can still walk miles and climb mountains.

He says: "I am not getting any younger, next year I will be retirement age. We have found it very difficult over the last two years as a small team with five full time staff and a few part timers. It has become a showcase for other photographers, and it's been great to be part of that community."

The Application

1. Notice is hereby given that H2 Teesside Limited (the 'Applicant'), who registered office is Chertsey Road, Sunbury on Thames, Middlesex, TW16 7BP, intends to submit an application to the Secretary of State (the 'SoS') for Energy Security and Net Zero for development consent under Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008'), to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project').
2. H2 Teesside Limited is owned by bp Plc ('bp'). bp will be the lead developer and operator of the Project.
3. The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Proposed Application Site boundary following further design development and technical assessments and responses to the first consultation.
4. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', the Applicant has a duty to publicise the Proposed Application. In accordance with those provisions, this notice also summarises the Project and explains where the consultation documents (the 'Consultation Documents') can be viewed.

The Project

5. The Site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The Project Site extends to approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:
   - Mid-point – 454719 524286
   - North – 451309 526476
   - East – 458760 521587
   - South – 457001 520748
   - West – 446938 521613
6. Plans are available within the 'Consultation Documents' on the Project Website: www.h2teesside.co.uk (see further below) showing the current Project Site boundary.
7. H2Teesside will be one of the UK's largest blue hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal, representing more than 10% of the Government's hydrogen production target of 10 gigawatts by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year. The Proposed Application will, amongst other matters, seek development consent (granted in the form of a Development Consent Order 'DCO') for the construction, operation and maintenance of:
   a. a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
   b. a natural gas supply connection for the supply of gas to the hydrogen production plant;
   c. an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
   d. an electricity grid connection to provide power to the Project;
   e. water supply and treatment and wastewater infrastructure;
   f. CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
   g. hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
   h. other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.
8. The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial off-takers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.
9. The DCO to be sought would also authorise, if required, the permanent and/or temporary compulsory acquisition of land and/or rights in land for the Project; the extinguishment and/or overriding of easements and other rights over or affecting land required for the Project; and/or the temporary occupation of land required for the Project; the application and/or disapplication of legislation relevant to the Project as may be required; permanent and temporary changes to the highway and public rights of way network as may be required; tree and hedgerow removal; a deemed marine licence for those parts of the Project within or affecting the tidal section of the River Tees or other sections of the UK Marine Area; and such ancillary, incidental and consequential works, provisions, permits, consents, waivers or releases as are necessary and/or convenient for the successful construction, operation and maintenance of the Project.

Environmental Impact Assessment

10. The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the Proposed Application.
11. Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS'). The PEIR reflects the Project Site boundary (and the proposals within that wider boundary) as it stood at the first consultation.
12. A H2Teesside Project Update Brochure forms part of the Consultation Documents includes information on whether or not the conclusions of the PEIR are affected by the changes to the Project that are the subject of this second consultation.

Consultation Documents

13. In accordance with Section 48 of the PA 2008, Regulation 4 of 'The Infrastructure Planning (Applications: Prescribed Forms and Procedure) Regulations 2008' and Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017', this notice publicises the Proposed Application, summarising the Project and explaining where the Consultation Documents can be viewed.
14. The second consultation on the Proposed Application will take place between the **13 December 2023 and 23 January 2024**.
15. The Consultation Documents to this second consultation comprise the H2Teesside Project Update Brochure and plans and maps showing the proposed changes to the Project Site boundary. The PEIR, a Non-Technical Summary of the PEIR, the Consultation Brochure and Consultation Leaflet for the first consultation are also available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.
16. If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy
17. Digital copies of the Consultation Documents will also be available to view free of charge at the following inspection locations until 23 January 2024:

Inspection Location	Opening Times (subject to opening hours over the Christmas holiday period)
Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT	Monday to Wednesday 9am to 6pm; Thursday 9am to 5pm; Friday 9am to 6pm; Saturday 9.30am to 12.30pm; Sunday closed
Stockton Central Library, Church Road, Stockton, TS18 1TU	Monday & Wednesday 8.30am to 6pm; Tuesday & Thursday 8.30am to 8pm; Friday 8.30am to 6pm; Saturday 09.30am to 4pm; Sunday closed
Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY	Mondays to Thursdays 9am to 5pm; Fridays 9am to 4.30pm; Saturday and Sunday closed

How to respond to this notice

18. If you wish to respond to this notice or make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net • Post: Freepost H2TEESSIDE
Telephone: Freephone 0800 080 3028 • Project Website: www.h2teesside.co.uk

19. Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, the Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its DCO application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent DCO application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy
20. Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**. Responses received after this date may not be considered.
21. If you would like any further information in respect of this notice or the Project, please contact the Applicant using one of the contact methods set out above.

PLANNING

NOTICE IS HEREBY GIVEN THAT Darlington Borough Council has received the following Planning Applications:

MAJOR DEVELOPMENT
Skipbridge Farm, Neasham Road, Hurworth Moor, Darlington, DL2 1QL (23/01211/FUL)
Application submitted under Section 73 of the Town and Country Planning Act 1990 for the variation of Condition 2 (approved drawings) and Condition 3 (landscaping scheme) attached to planning permission 20/00967/FUL dated 21 January 2022 (Removal of redundant agricultural sheds and conversion of barns into 8 no. dwellings with associated parking, landscaping and access works) to permit the reduction from 4 No. dwellings to 3 No. dwellings at Skipbridge farm and revised vehicular access to each plot

MAJOR DEVELOPMENT LIKELY TO AFFECT THE SETTING OF A LISTED BUILDING AND RIGHT OF WAY
Manor Farm Poultry Unit, Manor Farm, Low Dinsdale, Neasham, Darlington, DL2 1PN (23/01158/FUL)
Erection of poultry house to allow farm to convert to higher welfare, low stock density, incorporating concrete apron, surface water soakaway and underground dirty water tank

LISTED BUILDING CONSENT
1 And 3 Neasham Hill, Neasham, Darlington, DL2 1QY (23/01128/LBC)
Amalgamation of 2 no. dwellings to form 1 no. single dwelling with associated internal works to re-configure internal spaces including removal of staircase (property no.1) and partition/internal walls, formation of doorways, installation of fixtures & fittings and external works consisting of infill and render of rear door area, insertion of sun-tunnel to rear roof slope, refurbishment works to brickwork on south elevation and windows, including replacement of first floor rear windows with timber sash windows, together with the partial demolition of the garden wall on the west boundary to provide new access and off-street parking with EV charging point

PLANNING PERMISSION LIKELY TO AFFECT A LISTED BUILDING
1 And 3 Neasham Hill, Neasham, Darlington, DL2 1QY (23/01129/FUL)
Amalgamation of 2 no. dwellings to form 1 no. single dwelling with associated internal and external works including infill and render of rear door area, insertion of sun-tunnel to rear roof slope, refurbishment works to brickwork on south elevation and windows, including replacement of first floor rear windows with timber sash windows, together with the partial demolition of the garden wall on the west boundary to provide new access and off-street parking with EV charging point

PLANNING PERMISSION IN A CONSERVATION AREA
Reservoir (Disused), Darlington Road, Sadberge, Darlington (23/01157/FUL)
Demolition of existing tower structure and installation of seating area, public interpretation board and feature wall panel

A copy of the applications and plans are available online at www.darlington.gov.uk/PA
Any representations should quote the planning reference number and reach us no later than 12 January 2024
Friday 22 December 2023

PROBATE & Trustee

FRANCIS HENRY WALTON (Deceased)

Pursuant to the Trustee Act 1925 any persons having a claim against or an interest in the Estate of the above named, late of Maple Lodge Care Home, Scotton, Catterick Garrison, North Yorkshire DL9 4LJ (Formerly of 15 Spenceley Place, Aldbrough St John, Richmond, DL11 7TQ), who died on 26/08/2023, are required to send written particulars thereof to the undersigned on or before 23/02/2024, after which date the Estate will be distributed having regard only to the claims and interests of which they have had notice.

CLOSE THORNTON,

Exchange and Mart

TRAFFIC & Roads

North Yorkshire Council, Prohibition of Waiting & Loading & Provision of Parking, Amendment No 33, Order 2023 Notice is hereby given that on 15/12/23 The North Yorkshire Council made an Order under Sections 1(1), 2(1) to (3), 4(2), 32(1) & 35(1) of the Road Traffic Regulation Act 1984 & Part IV of Schedule 9 to the 1984 Act & under the Traffic Management Act 2004, the effect of which will be to amend "North Yorkshire County Council (Prohibition of Waiting & Loading & Provision of Parking) (District of Richmondshire) Consolidation Order 2013" by introducing the restrictions specified in the Schedules:- **Schedule 1 - Prohibition of Waiting & Loading & Provision of Parking** Leyburn, A684 Market Place, South side, from a point 2 metres west of its junction with the westernmost side of the vehicular access between properties 12A and 13 to a point 22 metres west of its junction with the westernmost side of the vehicular access between properties 12A and 13 - Loading Bay (Operational 5:00am - 9:30am daily) Outside of these times the bay will be available for general parking with waiting restricted to a maximum period of 30 minutes with no return within 1 hour. Leyburn, A684 Market Place, South side, from a point 22 metres west of its junction with the westernmost side of the vehicular access between properties 12A and 13 to a point 29 metres west of its junction with the westernmost side of the vehicular access between properties 12A and 13 - Disabled Parking Bay. Leyburn, A684 Market Place, South side, from a point 89 metres north-west of its junction with the west side of Hetton Garth to a point 97 metres north-west of its junction with the west side of Hetton Garth - No waiting at any time. Leyburn, A684 Market Place, South side from a point 97 metres north-west of its junction with the west side of Hetton Garth to a point 136 metres north-west of its junction with the west side of Hetton Garth - No waiting at any time (Carriageway Only). Leyburn, A684 Market Place, South side from a point 154 metres north-west of its junction with the west side of Hetton Garth to its junction with the A684 Wensley Road - No waiting at any time (Carriageway Only). **Schedule 2 – Revocations** Leyburn, A684 (South side of Market Place), South side from a point 45 metres west of its junction with the centre line of the access road across the Market Place, for a distance of 12.5 metres in a westerly direction - No waiting at any time. Leyburn, A684 (South side of Market Place), South side from a point 57.5 metres west of its junction with the centre line of the access road across the Market Place, for a distance of 40 metres in a westerly direction - No waiting at any time. Leyburn, A684 (South side of Market Place), South side from a point 6 metres east of its junction with the centre line of the access road across the Market Place, for a Distance of 43.5 metres in a westerly direction - No waiting at any time. Leyburn, A684 (South side of Market Place), South side from a point 97.5 metres west of its junction with the centre line of the access road across the Market Place for a distance of 13 metres in a westerly direction - No waiting at any time. A copy of the Order, which comes into operation on 29/12/23 together with a map showing the roads affected may be examined at County Hall, Northallerton & at Leyburn Library, Thornborough Hall, Leyburn, DL8 5AB during normal office hours from 22/12/23 until 26/01/24 & also viewed online at www.northyorks.gov.uk/roadworks-map or www.northyorks.gov.uk/traffic-regulation-orders. If you wish to question the validity of the above Order or of any provision contained in it, on the grounds that it is not within the powers conferred by the Road Traffic Regulation Act 1984, as amended, or on the grounds that any requirement of that Act, or of any Instrument made under it, has not been complied with in relation to the Order, you may, within 6 weeks of 22/12/23 make application to the High Court for the purpose. Barry Khan, Assistant Chief Executive, Legal & Democratic Services Dated 22/12/23

TRAFFIC & Roads

DARLINGTON BOROUGH COUNCIL
ROAD TRAFFIC REGULATION ACT 1984
(TEMPORARY ROAD CLOSURE) 2023
YARM ROAD, MIDDLETON ST GEORGE

Darlington Borough Council has made an Order under the provisions of Section 14(1) of the Road Traffic Regulation Act, 1984, as amended, the effect of which will be to close:

YARM ROAD
From its southern junction of the roundabout at Woolsington Drive southwards to the north side of its junction with Middleton Back Road

An alternative route will be signed via Mill Lane, A67 and vice versa.

The Order is necessary to allow repairs to the rail bridge on behalf of Network Rail.

The maximum duration of the temporary closure under this Order is 18 months commencing from 29th January 2024, it is anticipated that the closure will be effective between 1930hours and 0730hours from 29th January to 2nd February and between 2300hours on 3rd February to 0700hours on 4th February.

Dated: 22nd December 2023

DARLINGTON BOROUGH COUNCIL
ROAD TRAFFIC REGULATION ACT 1984
(TEMPORARY ROAD CLOSURE) 2023
COACH HOUSE LANE, DARLINGTON

Darlington Borough Council intend, not less than seven days from the date of this notice, to make an Order under the provisions of Section 14(1) of the Road Traffic Regulation Act, 1984, as amended, the effect of which will be to close:

COACH HOUSE LANE
From its northern junction with Elton Parade westwards to the rear boundary of 35 Elton Parade

The Order is necessary to allow works to install a new gas supply by Northern Gas Networks

The maximum duration of the temporary closure under this Order is 18 months commencing from 30th January 2024, it is anticipated that the closure will be effective for 2 weeks.

Dated: 22nd December 2023

13 December 2023

Further consultation on our proposals for H2Teesside

Dear Sir/Madam,

As you may be aware, we're proposing to build a new blue hydrogen production facility on Teesside, known as H2Teesside. It aims to be one of the biggest blue hydrogen production facilities in the UK, delivering economic growth for Teesside and the domestically-produced low carbon hydrogen that the UK needs.

We held a consultation on our proposals for H2Teesside between 14th September and 26th October 2023. The feedback we received has been used, alongside further assessment and technical work, to review our project design. As a result, we have now identified several changes to our proposals and have launched a consultation on these changes. This consultation will run from 13th December 2023 until 23rd January 2024.

You can find out more about our H2Teesside proposals and our changes to them by:

- Viewing our Project Update Brochure and updated plans on our project website: www.h2teesside.co.uk
- Visiting one of the venues below during their opening hours to view all of our consultation documents to date on a publicly accessible computer:
    - Redcar and Cleveland House, Kirkleatham Street, Redcar, TS10 1RT
    - Stockton Central Library, Church Road, Stockton, TS18 1TU
    - Hartlepool Civic Centre, Victoria Road, Hartlepool, TS24 8AY
- Contacting us on our Freephone number (0800 0803028) or info@h2teesside.net to request printed documents

You can respond to our consultation in the following ways:

- Online: fill in our response form at www.h2teesside.co.uk
- Email: Send your response to info@h2teesside.net
- Post: Send your response to **FREEPOST H2Teesside**.

Please submit your feedback by **11.59pm on 23 January 2024**.

If you have any questions or need any further information, please contact the H2Teesside team on 0800 0803028 or info@h2teesside.net

Yours faithfully,

[redacted] **– on behalf of H2Teesside Limited**

APPENDIX 14.1: ADDITIONAL SECTION 42 LETTERS 18 JANUARY 2024

Date: 18 January 2024

The Company Secretary
Asda Stores Limited
Asda House
Great Wilson Street
Leeds
LS11 5AD

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

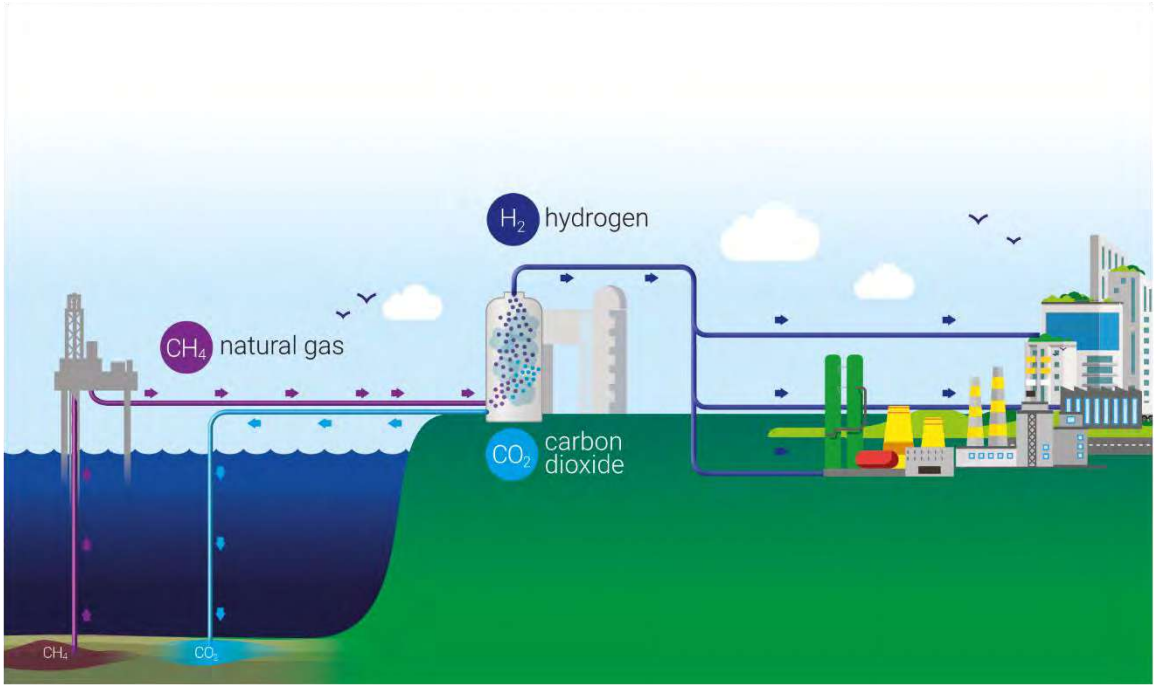
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences

for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **19 February 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project.

Following that first consultation and pursuant to that Section 42 duty, the Applicant wishes to now seek your views through the second consultation on the Project as it is considered that the changes to the proposed Order Limits for the Project, which are described in this second consultation affect land in which you hold an interest.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587

- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below and a plan showing how the changes to the proposed Order Limits affect land in which you hold an interest is provided with this letter.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a plan showing the extent of your landholding.
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 19 February 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 19 February 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Enc. Section 48 Notice
Landholding Plan

Date: 18 January 2024

The Company Secretary
Kemira Chemicals (UK) LimitedAsda House
Bowling Park Drive
Bradford
BD4 7TT

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

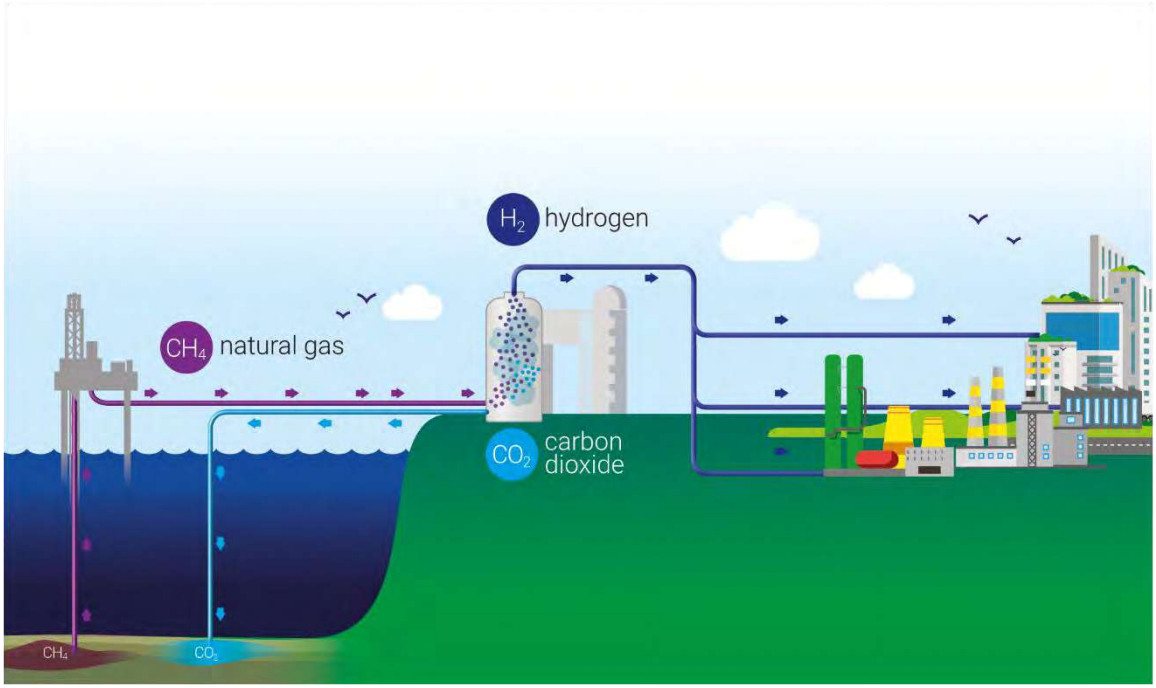
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences

for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **19 February 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project.

Following that first consultation and pursuant to that Section 42 duty, the Applicant wishes to now seek your views through the second consultation on the Project as it is considered that the changes to the proposed Order Limits for the Project, which are described in this second consultation affect land in which you hold an interest.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587

- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below and a plan showing how the changes to the proposed Order Limits affect land in which you hold an interest is provided with this letter.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a plan showing the extent of your landholding.
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 19 February 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 19 February 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Enc. Section 48 Notice
Landholding Plan

Date: 18 January 2024

The Company Secretary
Legal & General Assurance (Pensions Management) LimitedBowling Park Drive
1 Coleman Street
London
EC2R 5AA

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

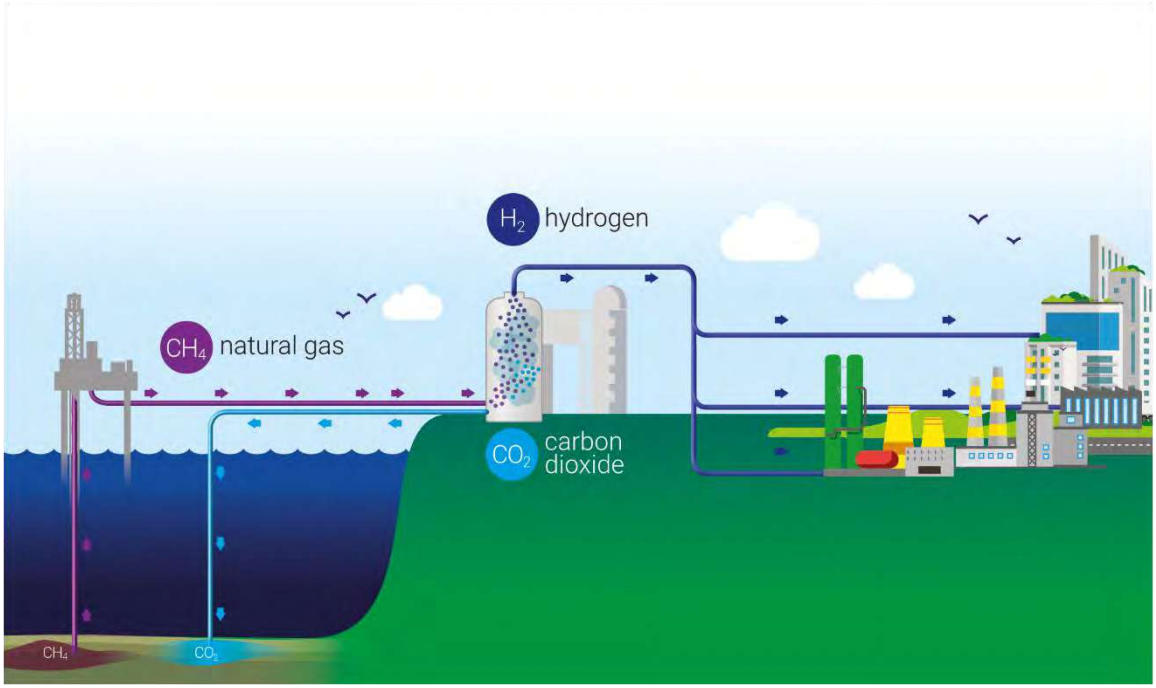
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences

for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **19 February 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project.

Following that first consultation and pursuant to that Section 42 duty, the Applicant wishes to now seek your views through the second consultation on the Project as it is considered that the changes to the proposed Order Limits for the Project, which are described in this second consultation affect land in which you hold an interest.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587

- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below and a plan showing how the changes to the proposed Order Limits affect land in which you hold an interest is provided with this letter.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a plan showing the extent of your landholding.
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 19 February 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 19 February 2024**.

Yours faithfully

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

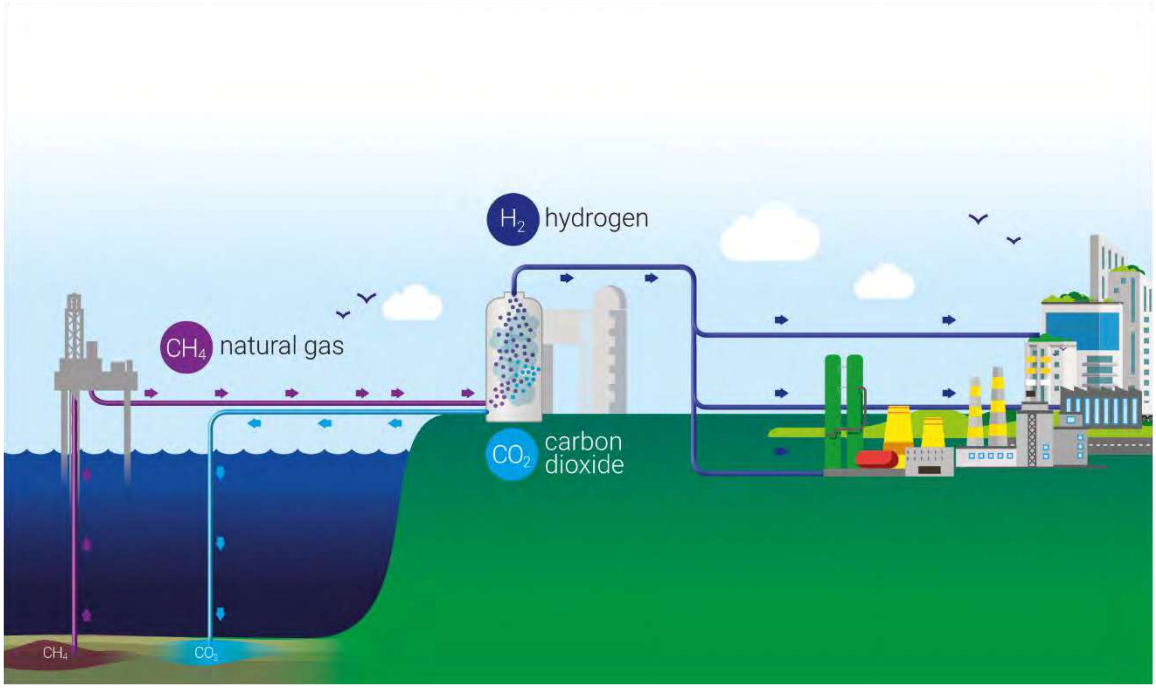
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences

for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **19 February 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project.

Following that first consultation and pursuant to that Section 42 duty, the Applicant wishes to now seek your views through the second consultation on the Project as it is considered that the changes to the proposed Order Limits for the Project, which are described in this second consultation affect land in which you hold an interest.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587

- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below and a plan showing how the changes to the proposed Order Limits affect land in which you hold an interest is provided with this letter.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a plan showing the extent of your landholding.
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 19 February 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 19 February 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

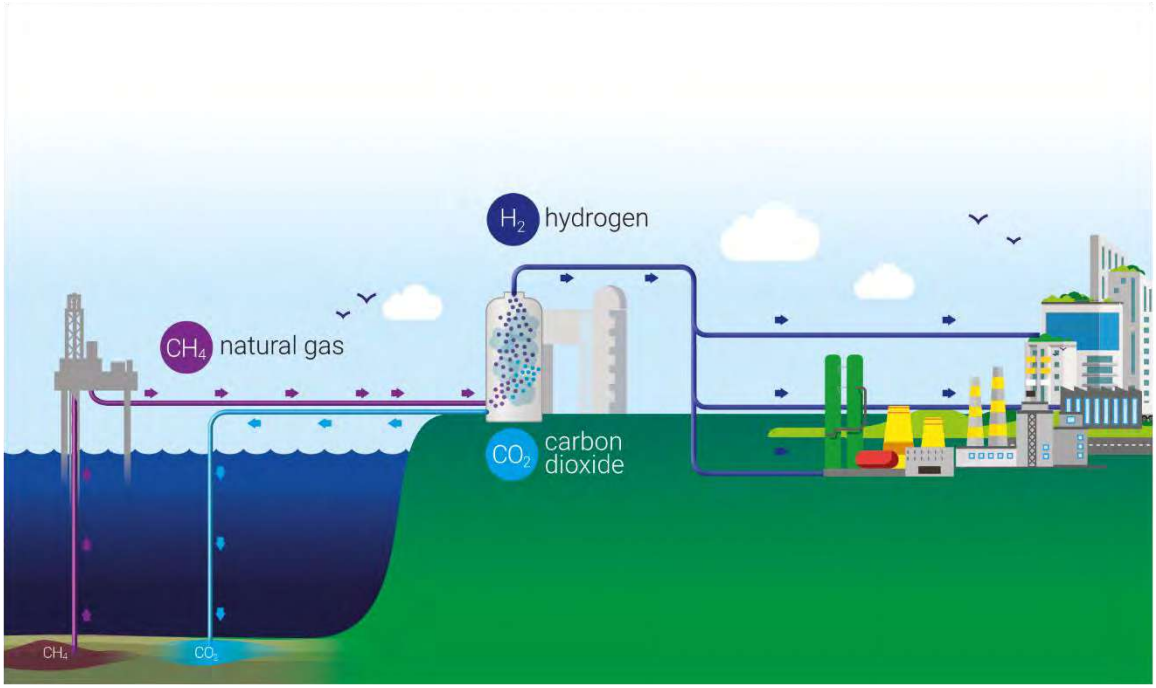
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences

for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **19 February 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project.

Following that first consultation and pursuant to that Section 42 duty, the Applicant wishes to now seek your views through the second consultation on the Project as it is considered that the changes to the proposed Order Limits for the Project, which are described in this second consultation affect land in which you hold an interest.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587

- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below and a plan showing how the changes to the proposed Order Limits affect land in which you hold an interest is provided with this letter.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a plan showing the extent of your landholding.
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 19 February 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 19 February 2024**.

Yours faithfully

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

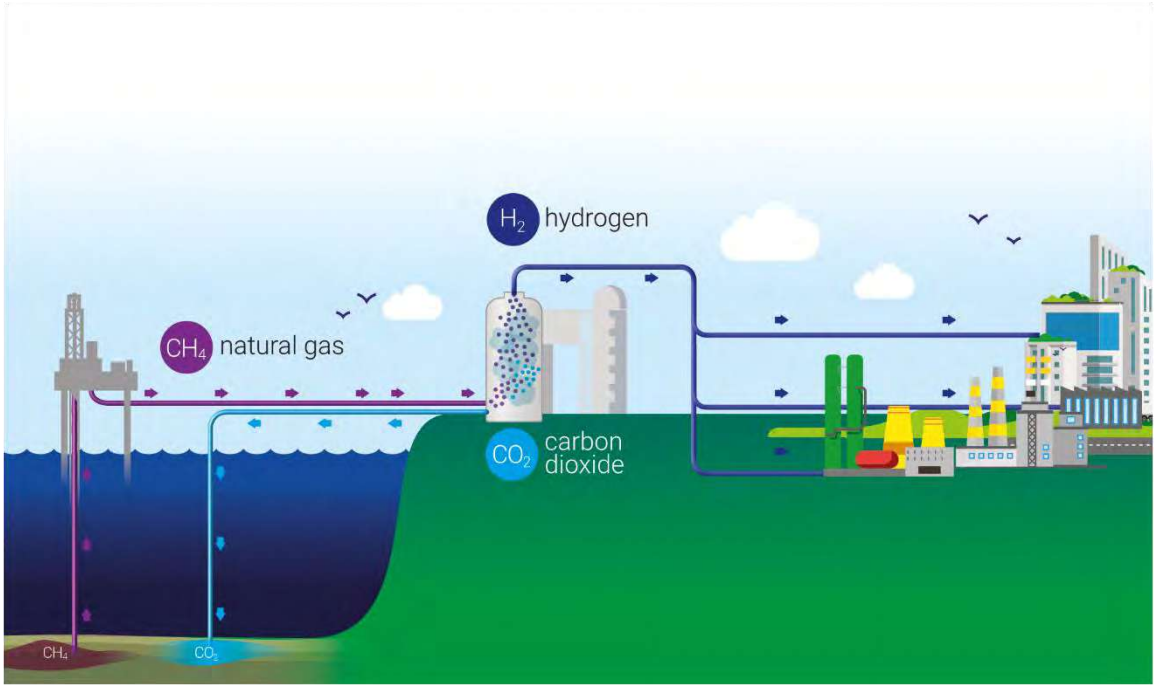
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences

for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **19 February 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project.

Following that first consultation and pursuant to that Section 42 duty, the Applicant wishes to now seek your views through the second consultation on the Project as it is considered that the changes to the proposed Order Limits for the Project, which are described in this second consultation affect land in which you hold an interest.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587

- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below and a plan showing how the changes to the proposed Order Limits affect land in which you hold an interest is provided with this letter.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a plan showing the extent of your landholding.
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 19 February 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 19 February 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Enc. Section 48 Notice
Landholding Plan

Date: 18 January 2024

The Company Secretary

Shire Park
Kestrel Way
Welwyn Garden City
AL7 1GA

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

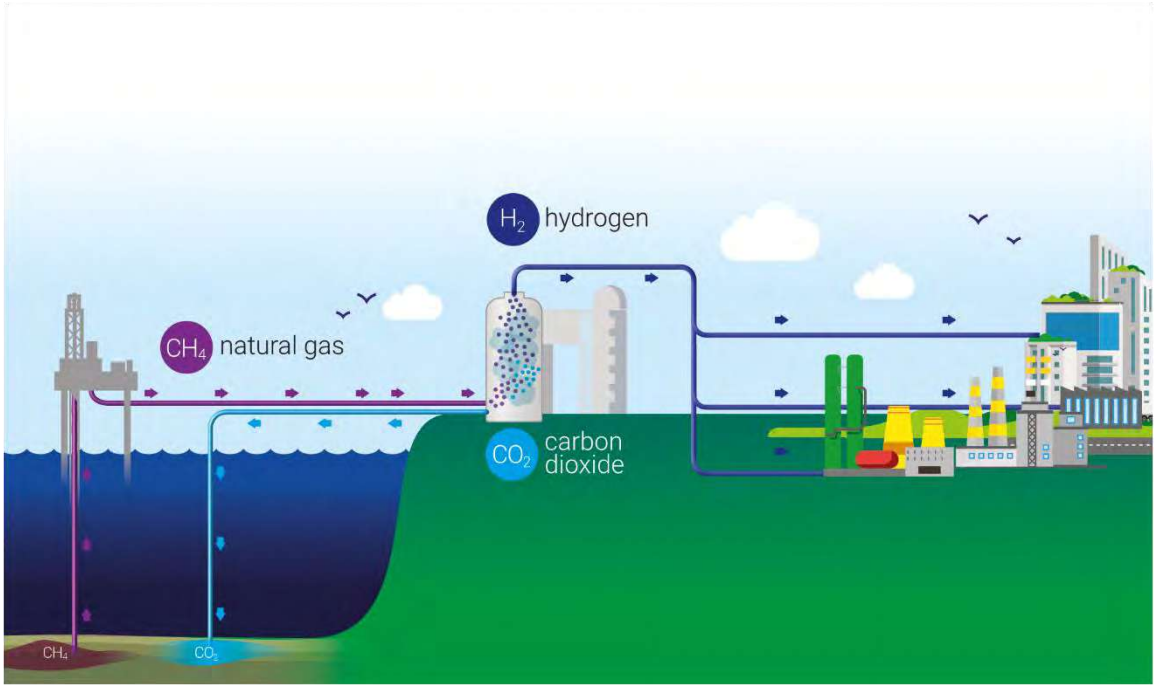
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences

for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **19 February 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project.

Following that first consultation and pursuant to that Section 42 duty, the Applicant wishes to now seek your views through the second consultation on the Project as it is considered that the changes to the proposed Order Limits for the Project, which are described in this second consultation affect land in which you hold an interest.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587

- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below and a plan showing how the changes to the proposed Order Limits affect land in which you hold an interest is provided with this letter.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a plan showing the extent of your landholding.
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 19 February 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 19 February 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Enc. Section 48 Notice
Landholding Plan

APPENDIX 14.2: ADDITIONAL SECTION 42 LETTER 31 JANUARY 2024

Date: 31 January 2024

Chief Executive
Office for Health Improvement and Disparities
Department of Health and Social Care
39 Victoria Street
London

Email: [redacted]

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

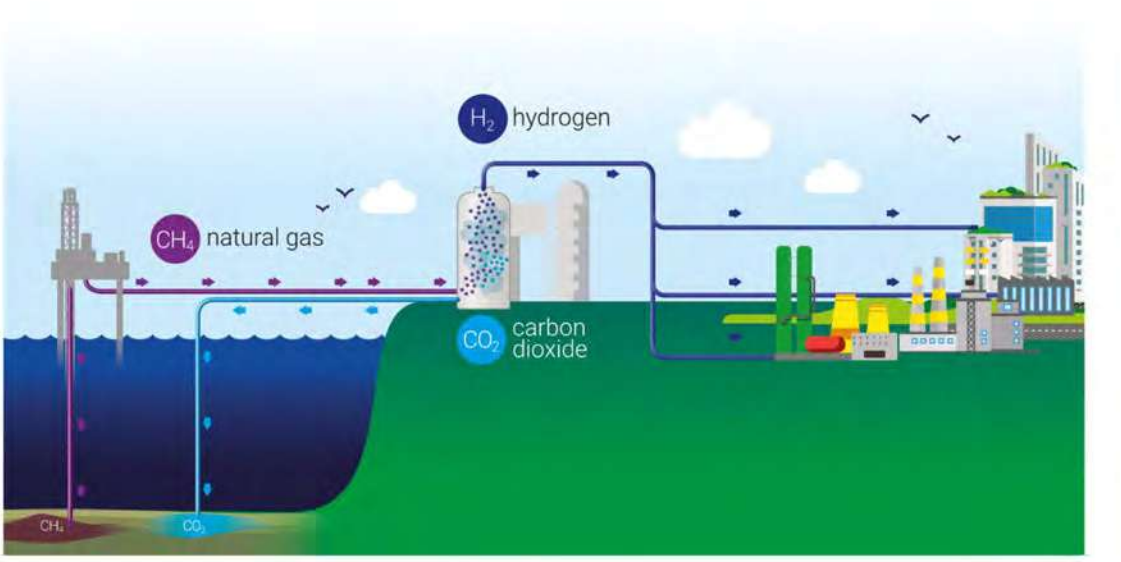
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance store and other nearby CO_2 stores that NEP holds CO_2 storage licences for.

These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by the Project will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **1 March 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & EIA Regulation 13 'Pre-application publicity under Section 48 (duty to publicise)'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

The Applicant has identified a number of persons and organisations, which it is required to consult for the purposes of Section 42 of the PA 2008. It has been determined that you or your organisation is, or may be, a 'prescribed person' for the purposes of Section 42. The Applicant therefore wishes to seek your views on its latest proposals for H2Teesside.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project was published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

Regulation 13 of 'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017' (the 'EIA Regulations') requires applicants, at the same time as publishing the Section 48 Notice, to send a copy of that notice to the 'consultation bodies' and to any person notified to the applicant by the SoS under EIA Regulation 11(1)(c).

A copy of the Section 48 Notice that has been published is appended to this letter in accordance with EIA Regulation 13.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and

responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that has been published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 1 March 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Enc. Section 48 Notice

APPENDIX 14.3: ADDITIONAL SECTION 42 LETTERS 5 FEBRUARY 2024

[redacted]

From: [redacted]

To: [redacted]
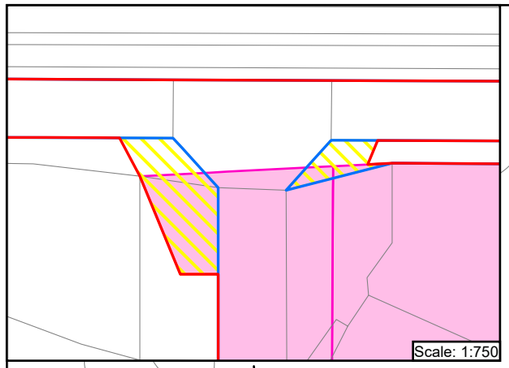
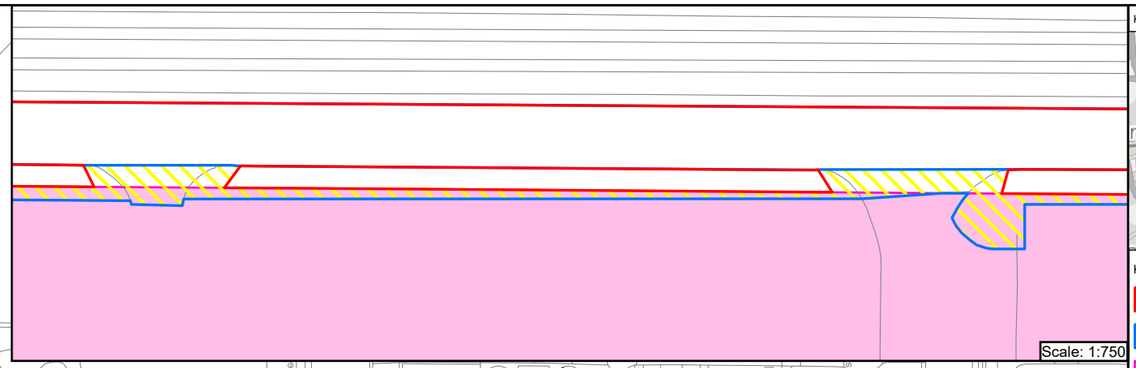
Cc: [redacted]
Subject: H2Teesside - Targeted s.42 Consultation

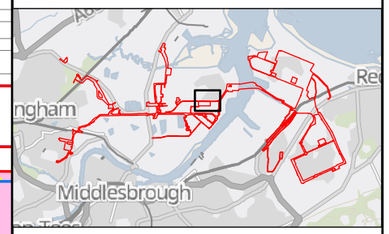


Hi [redacted]



I hope you are well.

As you will be aware H2Teesside undertook an additional round of statutory consultation which closed last month. Following this, we have launched an additional round of targeted consultation following the addition of a sliver of land to the north of your landholding as shown in the attached plans. These documents have also been issued via post to INEOS. The deadline for any comments on this is the 7th March 2024 and as previously, this can be provided through the dedicated project channels outlined within the letter.



If you have any queries, please do not hesitate to contact me.

Kind regards
[redacted]

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

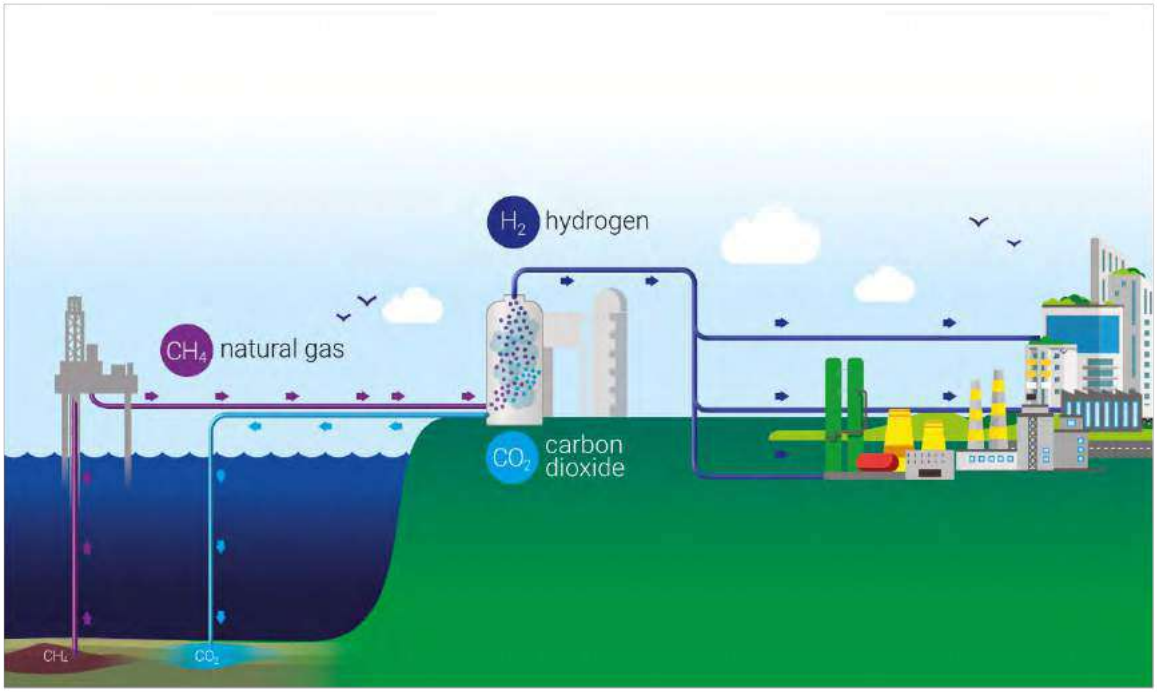
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the

Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **23 January 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project.

Following that first consultation and pursuant to that Section 42 duty, the Applicant wishes to now seek your views through the second consultation on the Project as it is considered that the changes to the proposed Order Limits for the Project, which are described in this second consultation affect land in which you hold an interest.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476

- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below and a plan showing how the changes to the proposed Order Limits affect land in which you hold an interest is provided with this letter.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a plan showing the extent of your landholding.
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**.

Yours faithfully

[redacted] **– on behalf of H2Teesside Limited**

Enc. Section 48 Notice
Landholding Plan

Date: 13 December 2023

The Chief Executive
PD Teesport Limited
17-27 Queen's Square
17-27 Queen's Square
Middlesbrough
TS2 1AH

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

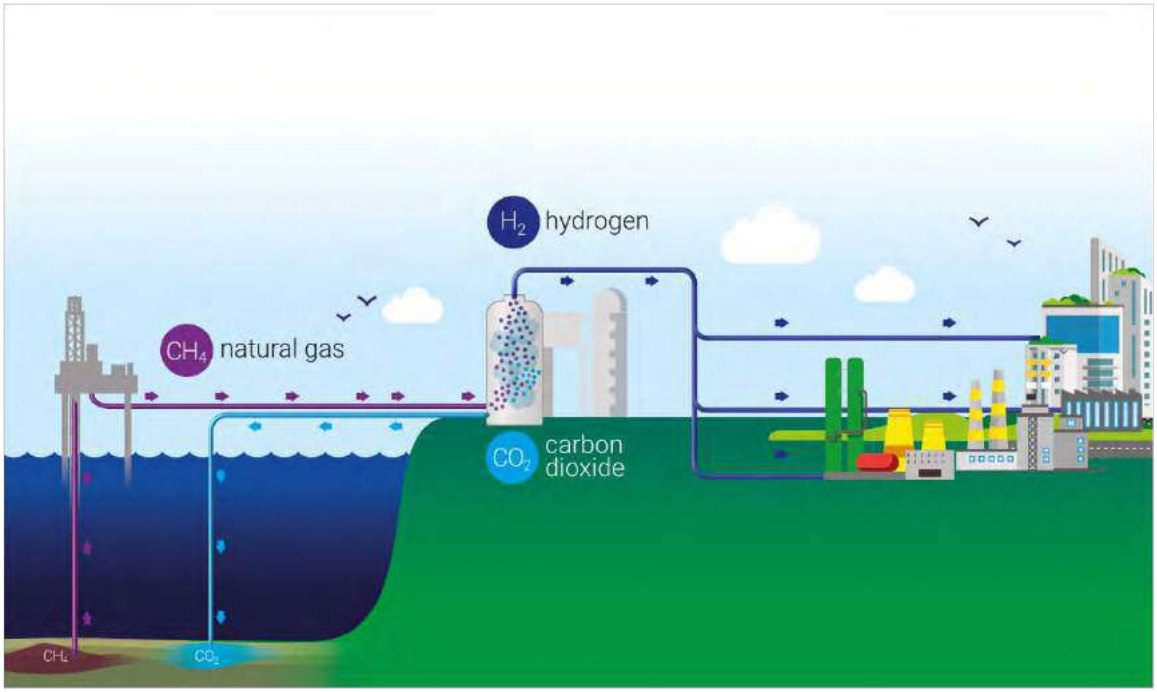
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and is now carrying out further consultation ('the second consultation') on the Project in respect of a number of changes that have resulted to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the

Endurance storage site and other nearby CO_2 stores that NEP holds CO_2 storage licences for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by H2Teesside will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the Consultation Documents that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **23 January 2024**. Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & Section 48 'Duty to publicise'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

As part of the first consultation on the Project, the Applicant identified you/your organisation as a 'prescribed person' (or potentially being a prescribed person) for the purposes of Section 42 of the PA 2008. This related to you/your organisation being a landowner identified as being affected/potentially affected by the Project or having an interest in land affected by the Project.

Following that first consultation and pursuant to that Section 42 duty, the Applicant wishes to now seek your views through the second consultation on the Project as it is considered that the changes to the proposed Order Limits for the Project, which are described in this second consultation affect land in which you hold an interest.

Section 48 of the PA 2008 'Duty to publicise' also requires applicants for development consent to publicise their proposed application by publishing a notice (a 'Section 48 Notice') once in a national newspaper, once in the London Gazette, and in the case of a project like H2Teesside that involves tidal waters in the UK marine area, in the Lloyds List and an appropriate fishing journal, and for at least two successive weeks in a local newspaper circulating in the vicinity of the land to which the project relates. The Section 48 Notice for the Project is being published as follows:

- Telegraph – 14 December 2023
- London Gazette – 14 December 2023
- Lloyds List – 14 December 2023
- Fishing News – 14 December 2023
- Northern Echo – 14 and 21 December 2023
- Teesside Gazette – 14 and 21 December 2023
- Darlington and Stockton Times – 15 and 22 December 2023

A copy of the Section 48 Notice that is being published is appended to this letter.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476

- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

Plans are available within the 'Consultation Documents' (see further below) showing the current Project Site boundary.

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Changes to the Project Site Boundary

A number of changes have resulted to the proposed Order Limits for the Project following further design development and technical assessments and responses to the first consultation.

The further design and technical work has allowed for some of the flexibility and optionality that was included at the time of the first consultation to be removed. This has resulted in a significant overall reduction in the proposed Order Limits from 1,350 hectares to 508 hectares.

A small number of additions have been made to the proposed Order Limits to accommodate works required for the Project.

The changes made to the proposed Order Limits are shown and described within the Consultation Documents listed below and a plan showing how the changes to the proposed Order Limits affect land in which you hold an interest is provided with this letter.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') and were made available for the first consultation. A H2Teesside Project Update Brochure that includes information on whether the conclusions of the PEIR are affected by the changes to the Project is included with the Consultation Documents.

Consultation Documents

The Consultation Documents relating to the Project, including plans and maps showing the nature and location of the Project can be downloaded via the below link to a secure fileshare site:

https://dwd.ctit.co/url/fhjwzeicng2spvya

The Consultation Documents include:

- a plan showing the extent of the current Project Site boundary edged in red and the areas that have been removed and those that have been added since the first consultation;
- a plan showing the extent of your landholding.
- a H2Teesside Project Update Brochure that includes information on whether the conclusions of the Preliminary Environmental Information Report ('PEIR') produced for the first consultation are affected by the changes to the Project that are the subject of this second consultation, which is also being sent to people living within the vicinity of the Project Site;
- the Preliminary Environmental Information Report and its Non-Technical Summary produced for the first consultation and accompanying plans and maps;
- the Consultation Brochure produced for the first consultation;
- the Consultation Leaflet produced for the first consultation, which was sent to people living within the vicinity of the Project Site; and
- the Section 48 Notice that is being published for the second consultation.

The Consultation Documents are available to download and view free of charge from the Project Website: www.h2teesside.co.uk until 23 January 2024.

If you are unable to access the fileshare site or the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the Consultation Documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: info@h2teesside.net

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm on 23 January 2024**.

Yours faithfully

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

TARGETED CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008

We recently consulted you by letter dated 13 December 2023 (our second consultation) on a number of changes that we had made to the Site boundary of the H2Teesside Project (the 'Project') following our first consultation on the Project in September and October 2023.

These changes, which followed further design development and technical assessments and responses to our first consultation on the Project, resulted in a significant overall reduction in the proposed Order Limits for the Project from 1,350 hectares to 508 hectares. A small number of additions were also made to the proposed Order Limits to accommodate works required for the Project.

The letter of 13 December 2023, which is attached to this letter, provided details of how to access the consultation documents showing the changes to the proposed Order Limits. Those documents, including plans and maps showing the nature and location of the Project are available to download and view free of charge from the Project Website: www.h2teesside.co.uk

If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the consultation documents free of charge (with the exception of the Preliminary Environmental Information Report, which will be charged at a maximum of £250) or a USB device containing the documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Since undertaking our second consultation, we have identified further land that is required for the Project, and which needs to be included within the Order Limits. This is a small slither of land in between two plots that has been mistakenly excluded from the draft Order Limits at the previous consultation, which the Project is now seeking to remedy. Our enquiries indicate that you have an interest in this land. The land in question is identified on the plan that also accompanies this letter.

We wish to seek your comments on the inclusion of this land within the Order Limits and this letter represents our targeted consultation of Ineos Nitriles (UK) Limited on this matter pursuant to Section 42 of the Planning Act 2008.

Any comments and representations you may have should be submitted to us no later than **11.59pm on 7 March 2024**. Comments and representations may be submitted in the following ways:

Email: **info@h2teesside.net**

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by use and our appointed agents, and copies may be made available in due course to the Secretary of State, Planning Inspectorate and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, we are under a statutory duty to publish names and addresses as part of our development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Yours faithfully

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

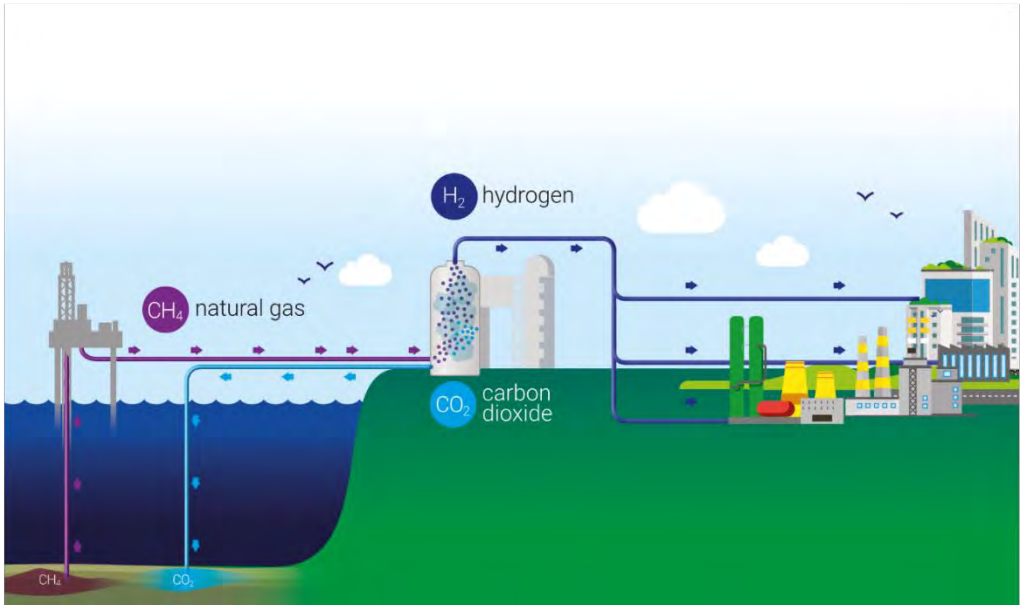
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and then carried out a further consultation ('the second consultation') on the Project between 13th December 2023 and 23rd January 2024 in respect of a number of changes to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Since undertaking our second consultation, we have continued our land referencing and scheme development, and have now identified that you have an interest in land within the Order Limits. This is because the adopted highway adjacent to your land falls within the limits of our Order (New Road, Haverton Hill, Stockton-on-Tees). While this project does not directly impact your land ownership, it does involve seeking powers over your assumed subsoil interests in the adopted highway. These assumed interests arise on the basis of the legal principle that, where a road is unregistered, such as New Road, adjacent land owners are assumed to own the 'subsoil' of that road. New Road is inclined in our Order limits as we anticipate the need to utilise it for temporary access during the construction phase. Additionally, we plan to acquire new rights, specifically in the form of an easement over the road, to facilitate the installation and on-going maintenance of a pipeline in the existing road (and therefore affecting the subsoil). The affected land is shown on the plan accompanying this letter.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance store and other nearby CO_2 stores that NEP holds CO_2 storage licences for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by the Project will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the documents from the previous consultation that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **11 March 2024.** Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & EIA Regulation 13 'Pre-application publicity under Section 48 (duty to publicise)'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

The Applicant has identified a number of persons and organisations, which it is required to consult for the purposes of Section 42 of the PA 2008. It has been determined that you or your organisation is, or may be, a 'prescribed person' for the purposes of Section 42, due to the land interest noted above. The Applicant therefore wishes to seek your views on its proposals for H2Teesside.

To ensure that you are receiving the same information that was produced at the first consultation also enclosed with this letter is a copy of the section 48 notice that was published in the local and national newspapers at the time of the first consultation.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

Plans are available on the Project Website described below. .

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') that was made available for the first consultation. A H2Teesside Project Update Brochure that included information on whether the conclusions of the PEIR are affected by the changes to the Project was produced for the second consultation.

Consultation Documents

Those documents, as well all other consultation documents that were produced for the first and second consultation are available to download and view free of charge from the Project Website: www.h2teesside.co.uk

If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: **info@h2teesside.net**

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm 11 March 2024**

Yours faithfully

- Section 48 Notice
- Land Interest Plan

Date: 8th February 2024

Industrialised Limited
C/O Private A J Boyle
4 Bowcliffe Grange
Bramham
Wetherby
LS23 6UL

Dear Sir/Madam,

THE H2TEESSIDE PROJECT – LAND EITHER SIDE OF THE RIVER TEES WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES ON TEESSIDE AND THE BOROUGH OF HARTLEPOOL IN COUNTY DURHAM

FURTHER CONSULTATION IN ACCORDANCE WITH SECTION 42 'DUTY TO CONSULT' OF THE PLANNING ACT 2008 & REGULATION 13 'PRE-APPLICATION PUBLICITY UNDER SECTION 48 (DUTY TO PUBLICISE)' OF THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017

H2 Teesside Limited (the 'Applicant') is proposing to apply for development consent pursuant to Section 37 'Applications for orders granting development consent' of the Planning Act 2008 (the 'PA 2008') from the Secretary of State ('SoS') for the Department of Energy Security and Net Zero ('DESNZ') to authorise the construction, operation and maintenance of the H2Teesside hydrogen project (the 'Project') on land either side of the River Tees within the boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and Hartlepool within County Durham.

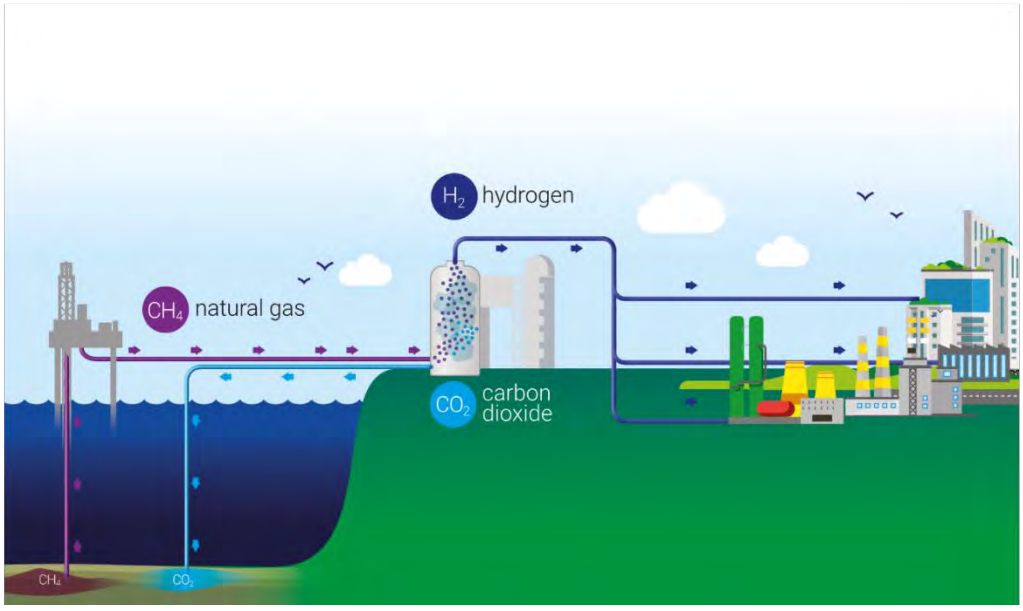
The Applicant consulted on the Project between 14th September and 26th October 2023 ('the first consultation') and then carried out a further consultation ('the second consultation') on the Project between 13th December 2023 and 23rd January 2024 in respect of a number of changes to the Project Site boundary following further design development and technical assessments and responses to the first consultation.

Since undertaking our second consultation, we have continued our land referencing and scheme development, and have now identified that you have an interest in land within the Order Limits. This is because the adopted highway adjacent to your land falls within the limits of our Order (New Road, Haverton Hill, Stockton-on-Tees). While this project does not directly impact your land ownership, it does involve seeking powers over your assumed subsoil interests in the adopted highway. These assumed interests arise on the basis of the legal principle that, where a road is unregistered, such as New Road, adjacent land owners are assumed to own the 'subsoil' of that road. New Road is inclined in our Order limits as we anticipate the need to utilise it for temporary access during the construction phase. Additionally, we plan to acquire new rights, specifically in the form of an easement over the road, to facilitate the installation and on-going maintenance of a pipeline in the existing road (and therefore affecting the subsoil). The affected land is shown on the plan accompanying this letter.

Background to the Project

H2Teesside will be one of the UK's largest hydrogen production facilities with a capacity of up to 1.2 gigawatts ('GW') thermal by 2030, representing more than 10% of the Government's hydrogen production target of 10 GW by 2030. This equates to the production of approximately 160,000 tonnes of low carbon hydrogen per annum, with approximately two million tonnes of CO_2 being captured and stored each year.

The Project will use natural gas to produce hydrogen (known as 'blue' hydrogen) with the carbon dioxide (CO_2) created during the hydrogen production process being captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'). NEP will store the CO_2 securely below ground within the Endurance store and other nearby CO_2 stores that NEP holds CO_2 storage licences for. These are located approximately 145 kilometres ('km') offshore from Teesside under the North Sea.



The onshore elements of the NEP infrastructure on Teesside are also known as the Net Zero Teesside ('NZT') Project and have been the subject of an application for development consent, in respect of which the SoS for DESNZ is expected to make a decision in the near future.

H2Teesside and NEP form part of the East Coast Cluster ('ECC'). The ECC has been selected as one of the first two carbon capture, usage and storage ('CCUS') clusters to be taken forward by the UK Government. The ECC has the potential to remove almost 50% of the UK's total industrial clusters carbon dioxide emissions, protect thousands of jobs and establish the region as a globally competitive climate friendly hub for industry and innovation. The ECC will include a diverse mix of low-carbon projects, including industrial carbon capture, low-carbon hydrogen production, negative emissions power, and power with carbon capture.

The low carbon hydrogen produced by the Project will be supplied via a new hydrogen pipeline network to existing businesses, helping heavy industry on Teesside reduce its carbon dioxide emissions and supporting the UK Government's commitment to reach to reach net zero by 2050.

It is anticipated that the proposed application for development consent will be submitted to the Planning Inspectorate ('PINS'), acting on behalf of the SoS for DESNZ in Q1 2024.

The infographic below provides an overview of the 'blue' hydrogen processes.

Further information relating to the Project is provided in this letter and the documents from the previous consultation that are being made available (see further details below).

Any comments and representations you may have on the Project should be submitted to the Applicant no later than **11 March 2024.** Details of how to make comments/representations are provided later in this letter.

Section 42 'Duty to consult' & EIA Regulation 13 'Pre-application publicity under Section 48 (duty to publicise)'

Section 42 of the PA 2008 'Duty to consult' requires prospective applicants for development consent (granted in the form of a 'Development Consent Order' or 'DCO') to consult on their proposed application with those persons specified in the PA 2008 and in regulations made pursuant to the PA 2008. These persons ('prescribed persons') include local authorities, prescribed consultation bodies and affected/potentially affected landowners and persons with other interests in the relevant land. The consultation must be carried out prior to submitting the application for development consent to PINS.

The Applicant has identified a number of persons and organisations, which it is required to consult for the purposes of Section 42 of the PA 2008. It has been determined that you or your organisation is, or may be, a 'prescribed person' for the purposes of Section 42, due to the land interest noted above. The Applicant therefore wishes to seek your views on its proposals for H2Teesside.

To ensure that you are receiving the same information that was produced at the first consultation also enclosed with this letter is a copy of the section 48 notice that was published in the local and national newspapers at the time of the first consultation.

The Applicant

H2 Teesside Limited is indirectly owned by bp Plc ('bp'). bp or an affiliate thereof will be the lead developer and operator of the Project.

bp is an active global hydrogen participant and believes hydrogen could play a key role in its energy portfolio. It is a vital industrial decarbonisation solution and together with carbon capture and storage, which can play a critical role in securely and safely storing the vast majority of CO_2 emissions produced by heavy industry, will be critical to delivering net zero.

The Project Site

The site for the Project (the 'Project Site') comprises land either side of the River Tees within boroughs of Redcar and Cleveland and Stockton-on-Tees on Teesside and the borough of Hartlepool in County Durham. The current extent of the Project Site, taking account of the changes made following further design development and technical assessments and responses to the first consultation, is approximately 508 hectares in total. National Grid References (NGRs) for the Project Site are provided below:

- Mid-point – 454719 524286
- North – 451309 526476
- East – 458760 521587
- South – 457001 520748
- West – 446938 521613

Plans are available on the Project Website described below. .

Project Description

The proposed application will, amongst other matters, seek development consent for the construction, operation and maintenance of:

- a hydrogen production plant of up to 1.2 GW thermal to be developed in two phases;
- a natural gas supply connection for the supply of natural gas to the hydrogen production plant;
- an air separation unit and or oxygen and nitrogen supply pipelines to supply these industrial gases for the hydrogen production process;
- an electricity grid connection to provide power to the Project;
- water supply and treatment and wastewater infrastructure;
- CO_2 capture and compression facilities and a connection to the NEP infrastructure for the transport and storage of the CO_2;
- hydrogen distribution pipelines to supply the low carbon hydrogen to industrial offtakers across Teesside;
- other associated development, including hydrogen storage; external lighting; fencing and boundary treatment; security measures; surface water and foul water drainage systems; water, electricity, gas and other utilities connections; hard and soft landscaping; biodiversity mitigation and enhancement measures; temporary contractor facilities and construction laydown areas; vehicle access roads, crossing, parking and pedestrian and cycle facilities.

The hydrogen production plant and its associated development (e.g. natural gas supply connection, air separation unit/oxygen and nitrogen supply pipelines, electricity grid connection, water infrastructure, hydrogen storage and CO_2 capture and compression facilities and connection) and ancillary development will be located within the administrative area of the borough of Redcar and Cleveland. The hydrogen distribution pipelines corridors will extend either side of the River Tees to several potential industrial offtakers and encompass land within the administrative areas of the boroughs of Redcar and Cleveland, Stockton-on-Tees and Hartlepool.

All of the above elements will be included in the proposed application for development consent.

Environmental Impact Assessment

The Applicant has notified the SoS in writing under Regulation 8(1)(b) of The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (the 'EIA Regulations') that it intends to provide an Environmental Statement ('ES') in respect of the Project. An ES will form part of the proposed application for development consent.

Information so far compiled about the Project's environmental impacts is contained in a Preliminary Environmental Information Report ('PEIR') and summarised in a Non-Technical Summary ('NTS') that was made available for the first consultation. A H2Teesside Project Update Brochure that included information on whether the conclusions of the PEIR are affected by the changes to the Project was produced for the second consultation.

Consultation Documents

Those documents, as well all other consultation documents that were produced for the first and second consultation are available to download and view free of charge from the Project Website: www.h2teesside.co.uk

If you are unable to access the Project Website, please email: info@h2teesside.net or telephone: 0800 080 3028 and you will be offered a paper copy of the documents free of charge (with the exception of the PEIR which will be charged at a maximum of £250) or a USB device containing the Consultation Documents free of charge. Any details you provide to us via email or telephone will be subject to our Privacy Notice: http://h2teesside.co.uk/privacy

Responding to the Consultation

If you wish to make comments or representations in respect of the Project, these should be sent to the Applicant. Please include your name and an address where any correspondence relating to the Project can be sent. Comments and representations may be submitted in the following ways:

Email: **info@h2teesside.net**

Post: **Freepost H2TEESSIDE**

Telephone: **Freephone 0800 080 3028**

Project Website: www.h2teesside.co.uk

Any comments received will be analysed by the Applicant and any appointed agent of the Applicant, and copies may be made available in due course to the SoS, PINS and other relevant statutory authorities so that your comments can be noted. For certain parties, those who own an interest in land or are affected by the Project, the Applicant is under a statutory duty to publish names and addresses as part of its development consent application. In respect of other people, we will request that your personal details are not placed on public record and these will be held securely by the Applicant in accordance with the Data Protection Act 1998 and the General Data Protection Regulation and used solely in connection with the consultation process and subsequent development consent application and, except as noted above, will not be passed to third parties. Please refer to our Privacy Notice: http://h2teesside.co.uk/privacy

Please note that all comments and representations must be received by the Applicant no later than **11.59pm 11 March 2024**

Yours faithfully

APPENDIX 14.5: TARGETED COWPEN BEWLEY CONSULTATION – EMAILS DATED 20 DECEMBER 2023 AND 16 JANUARY 2024 (INCLUDING OPEN SPACE REPLACEMENT LAND ASSESSMENT) TO STBC

[redacted]

From: [redacted]
Sent: 20 December 2023 13:02
To: [redacted]
Cc:
Subject: H2Teesside - replacement open space land

Importance: High

Hello [redacted] I hope you are keeping well and that the lead-up to Christmas has not been too busy.

I appreciate that officers will be on leave for the Christmas period, but I have been asked by bp to set up a meeting with Stockton early in the New Year to discuss the H2Teesside Project in terms of the potential requirement for replacement open space land.

To provide some context, part of the Project involves land to the north-west of Cowpen Bewley that is identified as open space/a woodland park. The potentially affected areas are marked in pink (permanent land take) and light blue below in **Figure 1** below. The land in question – the dark blue edged land between the railway and the pink land – would have above ground pipes within it after they have passed under the railway. The pink land will accommodate an AGI, but this will only occupy a small area as shown indicatively in **Figure 2** below. An extract of the Local Plan Proposals Map showing the area as open space is provided as **Figure 3** (also below).

I would be grateful if you could provide some dates and times for a meeting from 8th January in order to discuss this matter. We will provide more information on what is proposed within this area and also initial work and thoughts on possible replacement land.

Kind regards

[redacted]

From: [redacted]
Sent: 16 January 2024 10:13
To: [redacted]
Cc: [redacted]

Subject: H2Teesside - Cowpen Bewley (Open Space Replacement Land)

Importance: High

Dear [redacted] ahead of the meeting on Friday 19th, the following documents and plans are provided:

1. Open Space Replacement Land Assessment.
2. Plans and photographs of the Cowpen Bewley site (Refs. 22004379_PLN_ROC_307.1 to 307.57).
3. Plans and photographs of land on the north side of Cowpen Bewley (Field 1) (Refs. 22004379_PLN_ROC_307.58 to 307.76 – Field 1).
4. Plans and photographs of land lying to the south-east of Newton Bewley (Field 2) (Refs. 22004379_PLN_ROC_307.77 to 307.78 – Field 2).

The Open Space Replacement Land Assessment provides an assessment of potential replacement open space land within the vicinity of the Cowpen Bewley Woodland Park, including size, tenure, description, access routes to the land and local plan designation/status.

The documents and plans can be accessed and downloaded using the link below to our secure file share site.

https://dwd.ctit.co/url/qgwj3nevsigxsmhr

If you have any issues accessing the documents, please do let us know.

Kind regards

1.0 Summary 2

Open Space Land 3

Replacement Land Schedule 4

Local Plans 5

Stockton on Tees Borough Council 5

Appendix 1 – Access Routes 6

Appendix 2 – ALC 8

Appendix 3 – Record of Condition 9

1.0 Summary

Following the identification of designated open space land being required by the H2 Teesside Project. An assessment has been undertaken by Dalcour Maclaren to review potential replacement open space land within the vicinity of the Cowpen Bewley Woodland Park. The land selected must not already be deemed as 'open space' and should be as close as possible to Cowpen Bewley Woodland Park to ensure it is 'equally advantageous'.

Summary of the existing space in table below:

Summary of Existing Open Space Assessment	Date assessment carried out: 04/01/2024
Maximum acres required (If whole area needs to be replaced)	4.85 acres
Minimum acres required (If only AGI location needs to be replaced)	0.15 acres
Number of pedestrians	2
Activity	Dog walkers
Ground Conditions	Pedestrian paths saturated and boggy.
Time Spent assessing the area	2 hours

The area bp will be required to replace under statutory tests remain under assessment.

Open Space Land

The land shown in the plan below is wholly within the Open Space designated land known as Cowpen Bewley Woodland Park. The land take for the development is summarised below;

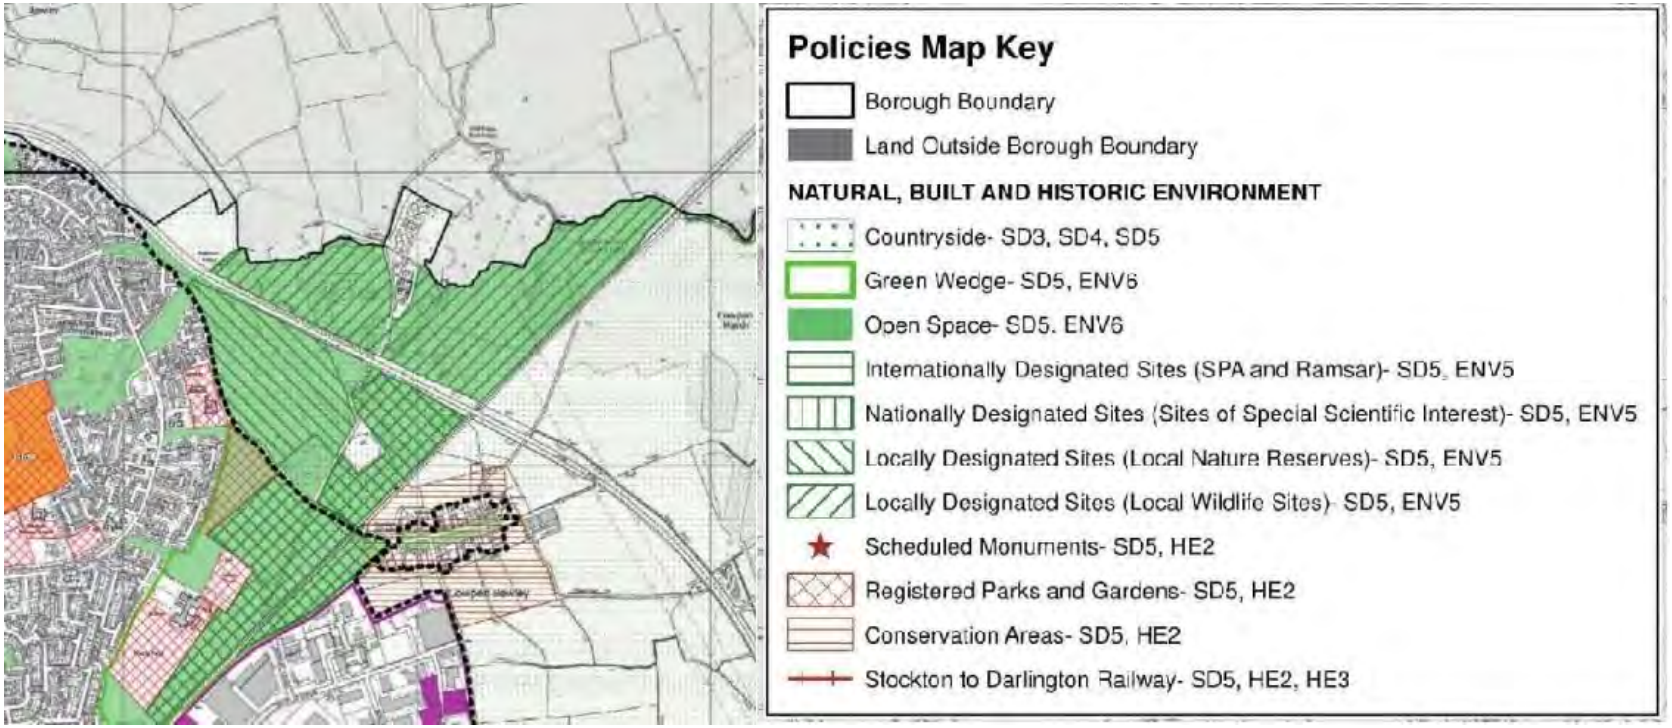
The area outlined in White on the adjacent plan shows the land which is assumed to be required for construction of the AGI, Pipeline and associated maintenance and access ways.

The area bp will be required to replace under statutory tests remains under assessment.

Replacement Land Schedule

REF	Title Number	Owner	Size (Ac)	Local Authority	Tenure	Description	Access (Routes shown in Appendix 1)	Image of Area (Links to detailed Photographs of land on site located in Appendix 1)
Open Space Land	CE118976 CE1133628 & CE133734	Northern Gas Networks Limited Stockton on Tees Borough Council	4.85 acres in total	Stockton-on-Tees Borough Council	Freehold Freehold	• Topography – Flat • Land Use – Pasture/Woodland • Fencing – Hedges/Woodland. Other points of note: • Access to land parcel 1 from woodland via brick tunnel on foot.	Access off Wolviston Back Lane. The woodland itself is accessed via styles leading to the public footpath.	
1	CE125722 LAND ON THE NORTH SIDE OF, COWPEN BEWLEY, BILLINGHAM	Shirley Peel	14.8	Stockton-on-Tees Borough Council	Owner Occupied	• Topography – Flat. • Land Use – Pasture. • Fencing - Post and rail / wire fenced. • Adjacent to existing open space. Other points of note: • Part of this land is within a conservation area. • Assumed Grade 4 (Poor) land.	Land can be accessed from existing open space via footpath under railway. Accessed via brick tunnel from existing open space.	
2	CE210987 LAND LYING TO THE SOUTH EAST OF, NEWTON BEWLEY, BILLINGHAM	Church Commissioners for England.	10.3	Stockton-on-Tees Borough Council	Freehold – Unknown Occupier (Farmer). No registered Lease	• Topography - Slight incline. • Land Use – Arable. • Fencing – Hedges. Other points of note: • Standing water. • Adjacent to existing open space • Assumed Grade 3 (Good to moderate) land	Vehicular access from the A1185 via gateway. Can be accessed off existing footpath as part of the Cowpen Bewley Woodland Park open space.	

Local Plans



Stockton on Tees Borough Council

The figure below shows the Local Plan Policies Map for Stockton on Tees Borough Council. The

1. Shirley Peel - Land identified as within a 'Conservation Area'.
2. Church Commissioners – Land identified as 'Countryside'

Development

No land is currently allocated for development. We are unaware as to whether there are any Promotion or Option Agreements in place for the lands development.

Appendix 1 – Access Routes

Access to the two land parcels has been determined as follows;

Open Space Land

Existing Open Space

1 - Access can be taken from Wolviston Back Lane and then access into the Open Space is via public footpath.

2 - Access can be taken from Wolviston Back Lane and then access into the Open Space is via public footpath.

3/4 - There is vehicular access from location 3 but as the red line turns south, access is via a public footpath. As the blue line heads out of the white outlined parcel, this leads under the tunnel (railway) into Shirley Peels land (Replacement option Field 1) which is a public footpath down to 4 which ends in Cowpen Bewley village.

Shirley Peel

Access to Shirley Peels land can be taken as follows;

1&2 - From the public highway at several points and linearly from the Red Line Boundary.

3 – From the public highway but via a private 3rd party landowner.

4 – Access into land from existing open space via tunnel beneath the railway.

Field 1 - 65 meters from existing site.

Church Commissioners for England

Access to Church Commissioners land can be taken from one principle location from the public Highway.

1 - Access from The A1185

There is a public footpath in the woodland to the south but this below the neighbouring field to the East.

Figure of Field 2 showing existing footpath

The image to the left shows the existing footpath locations adjacent to Field 2 by a red dotted line.

Appendix 2 – ALC

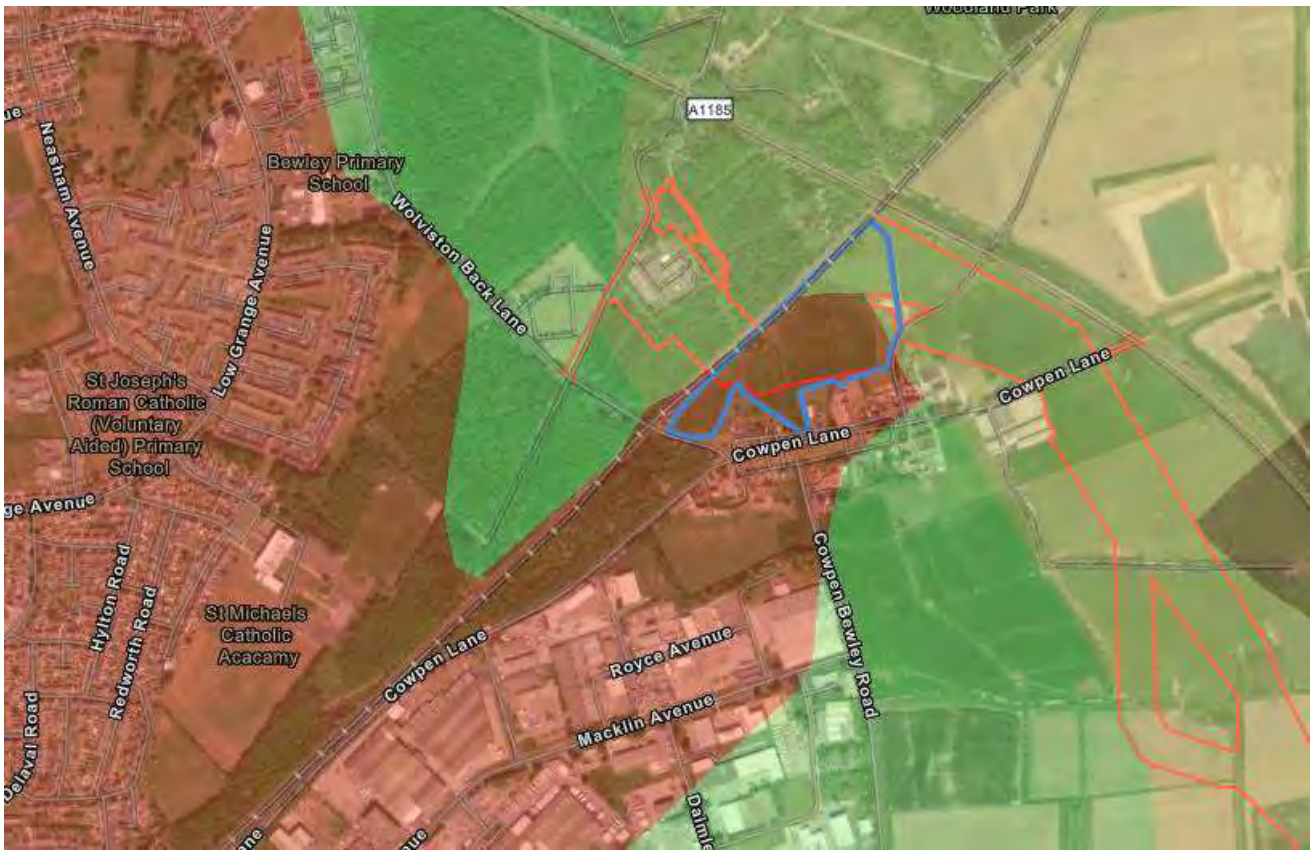


Figure showing Field 1 – Assumed to be Grade 4.

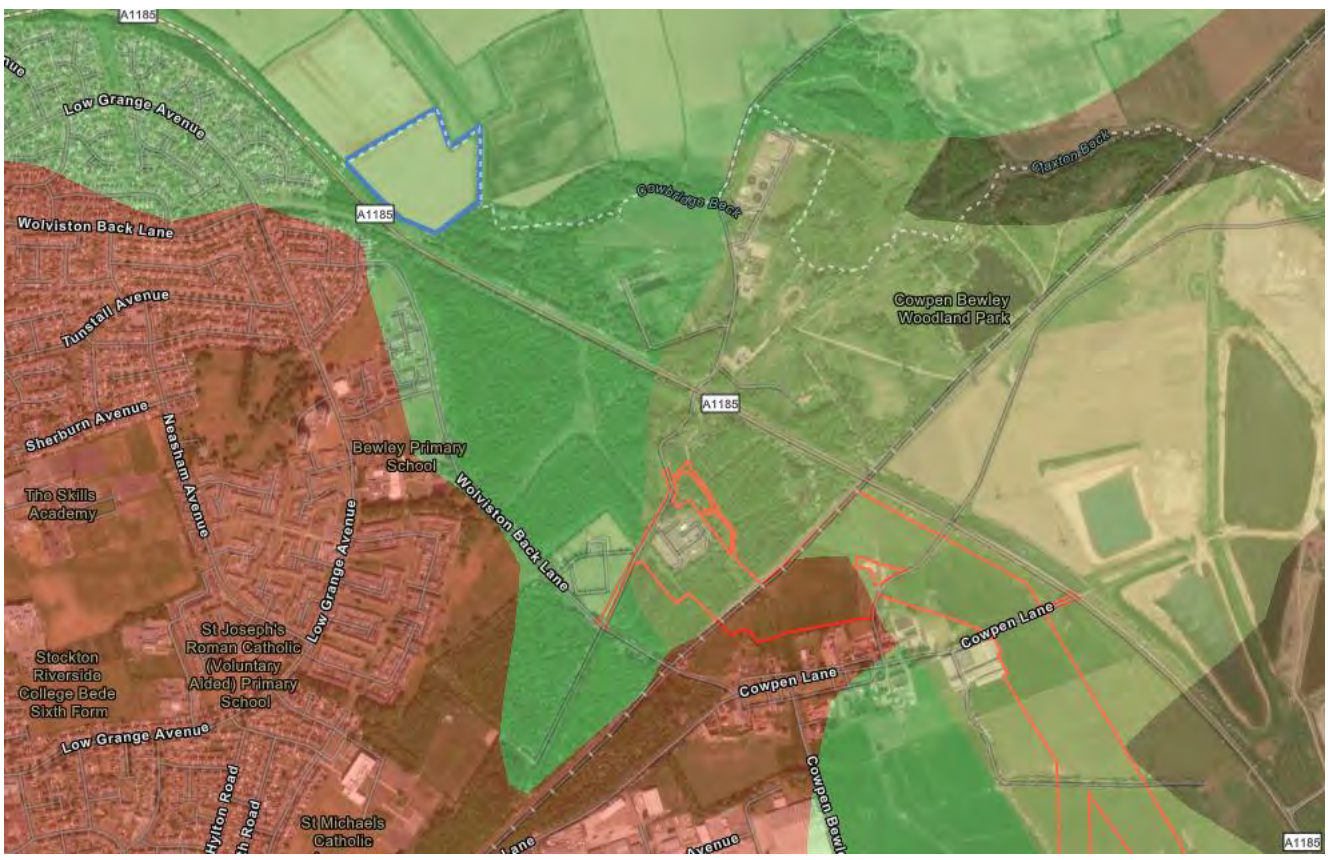

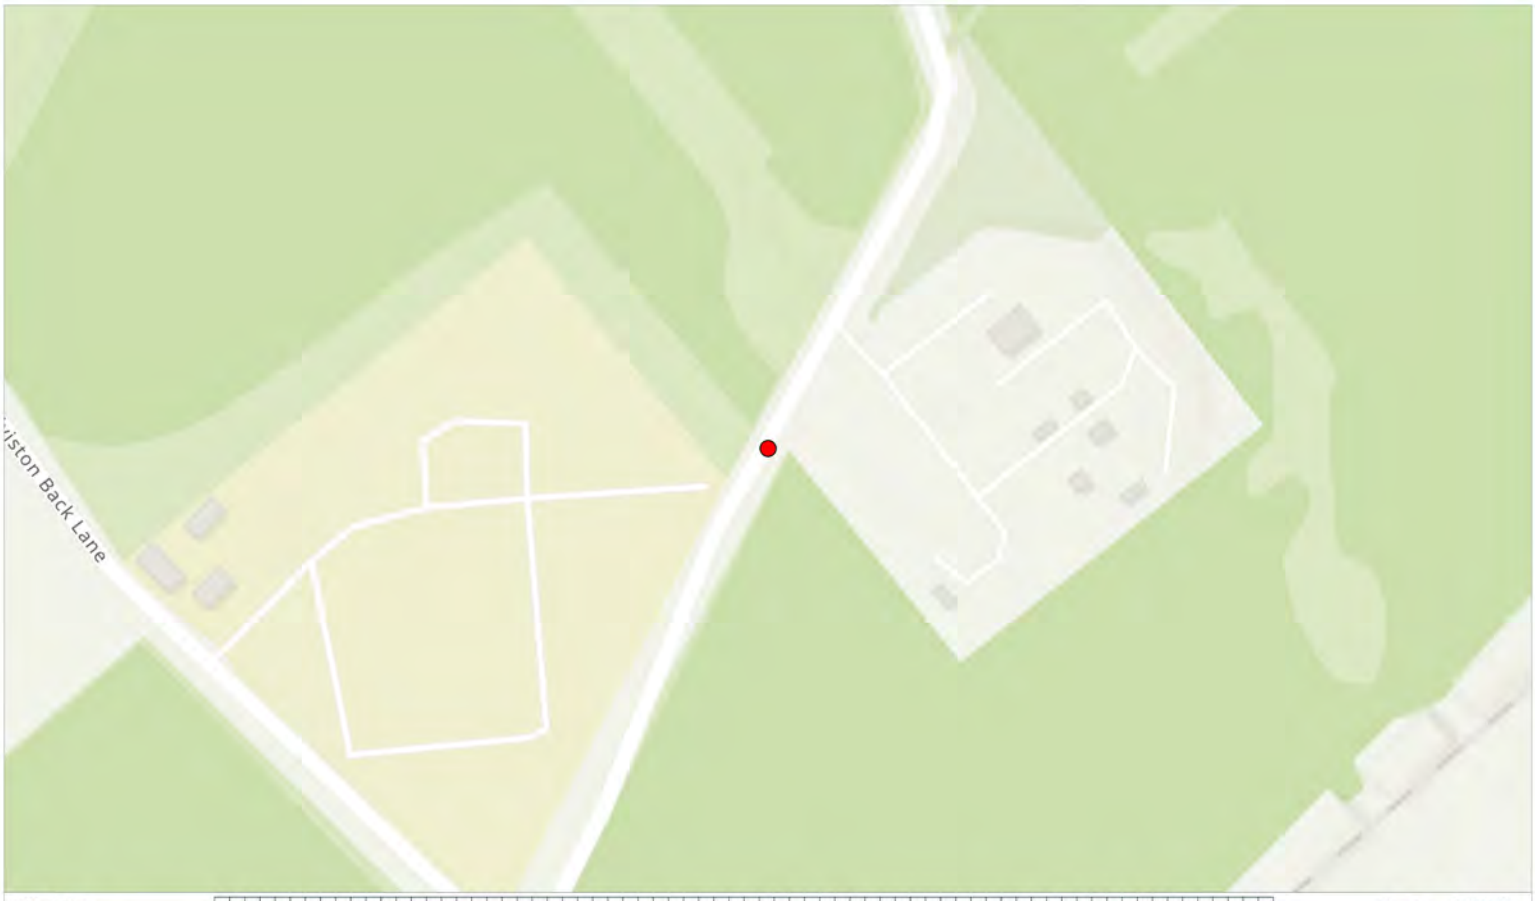

Figure showing Field 2 – Grade 3. Sub category (a/b) unknown.

Appendix 3 – Record of Condition

Existing site – Doc name 20240108_22004379_PLN_ROC_307.1-307.57_Existing_Sites (sent separately).

Field 1 – Doc name 20240108_22004379_PLN_ROC_307.58-307.76_Field_1 (sent separately).

Field 2 – Doc name 20240108_22004379_PLN_ROC_307.77-307.78_Field_2 (sent separately).

APPENDIX 14.6: TARGETED COWPEN BEWLEY CONSULTATION – EMAIL DATED 2 FEBRUARY 2024 TO STBC

[redacted]

From: [redacted]
Sent: 02 February 2024 15:52
To: [redacted]
Cc:
Subject: H2Teesside - Replacement Open Space Land

Dear [redacted]
Thank you for your time to discuss the H2 Teesside Project and the need for an open space replacement site near Cowpen Bewley Woodland Park on Friday's Teams call. After reflecting on our conversation, the project team have evaluated the benefits and drawbacks of both sites.

We have concluded that site two, owned by the Church Commissioners, is the preferred option for open space replacement land given its direct access from the Highway and the Woodland Park and we will be taking this site forward into our DCO application.

Site one has been discounted due to:

- the likely different commercial standing of the owner;
- being adjacent to Cowpen Bewley village, where we know the Residents Association is keen to protect the nature and historic setting of the village;
- being located within a conservation area and contains ridge and furrow; and
- presenting practical challenges in relation to the rights and crossing of the railway via the footpath, calling into question its suitability as an addition to the Woodland Park.

In light of this, we would like to seek Stockton on Tees Borough Council's support for this site going forward.
I can confirm that prior to the submission of the DCO application, the Project will:

- be writing to you, in your status as a land interest, with a formal consultation letter in respect of the inclusion of additional land within the Order limits in relation to the replacement open space land. This is necessary because, to access the land owned by the Church Commissioners, the Project will need to utilise an existing access point from the A1185, which is on land which is in the Council's ownership; and
- be writing to the residents of Cowpen Bewley, the parts of Billingham east of Marsh House Avenue, and Billingham Town Council, explaining this addition to the project's Order limits, but also explaining that, in light of comments at previous consultations, the Project has been able to reduce the extent of the Order limits adjacent to the village, and inviting any comments that they may have on these matters. We will also send the Council this letter in its role as LPA for comment.

In relation to the replacement open space, the project can also confirm that the DCO will provide the formal mechanism for the open space status of the affected land to be transferred to the replacement land, and that the scheme for the laying out of the replacement land for the Woodland Park purposes will be subject to the Council's approval.

I can also confirm that the management responsibilities of the eventually acquired land would be passed onto STBC, however the project will put in place a mechanism for the Council to be compensated for the additional costs of managing that replacement land compared to the affected land. This will likely be through a section 106 type mechanism, but this will be confirmed in due course in the DCO application.

Please let me know if you have any further questions or require additional clarification on this matter.

We look forward to hearing from you soon.
Kind regards,

[redacted]

APPENDIX 14.7: TARGETED COWPEN BEWLEY CONSULTATION – EMAIL DATED 7 FEBRUARY 2024 TO STBC

H2 Teesside Project: potential land acquisition

Note: the plans and aerial photos in this document are not to scale

SBC has identified two alternative sites which we believe offer greater potential benefits compared to the two options put forward to date. While these are not in the immediate vicinity of Cowpen Bewley the acquisition of either of these sites could be justified on the basis that the Borough's 2017 Open Space Assessment (extract below) shows that Billingham is already relatively well provided for in terms of natural and semi-natural open space provision. So we might argue that there is not necessarily a need for local mitigation for the loss of natural / semi-natural green space. Instead, by providing that mitigation in another area of the Borough we would deliver greater public and environmental benefits.

Table 3.12: Current provision against recommended Stockton-on-Tees quantity standard

Stockton-on-Tees Standard	Urban Parks		Natural & semi-natural		Amenity greenspace		Allotments	
	0.66		2.24		1.29		0.20	
	Current provision	+ / -	Current provision	+ / -	Current provision	+ / -	Current provision	+ / -
Billingham	0.24	- 0.42	2.93	+ 0.69	2.21	+ 0.92	0.22	+ 0.02
Eaglescliffe	4.95	+ 4.29	2.89	+ 0.65	1.24	- 0.05	0.96	+ 0.76
Ingleby Barwick	0.13	- 0.53	2.49	+ 0.25	0.50	- 0.79	-	- 0.20
Rural	-	- 0.66	35.36	+33.12	0.79	- 0.50	0.29	+ 0.09
Stockton	0.67	+ 0.01	3.11	+ 0.87	1.05	- 0.24	0.09	- 0.11
Thornaby	0.76	+ 0.10	1.91	- 0.33	1.53	+ 0.24	0.32	+ 0.12
Wynyard	-	- 0.66	-	- 2.24	1.21	- 0.08	-	- 0.20
Yarm	-	- 0.66	0.78	- 1.46	1.66	+ 0.39	0.47	+ 0.27

Alternative 1: Wynyard Woodland Park (4.68Ha)

This land would connect two sections of an existing country park, providing significant amenity benefits in aswell as opportunities for habitat creation.

Alternative 2: Blakeston Lane (7.6 Ha)

Whilst the Council have a desire for 7.6ha in this location a minimum of 4ha would be accepted, with priority for land towards Blakeston Lane (south east of site) so access can be achieved. This could be utilised to meet various openspace purposes

We understand much of the site is currently unregistered but we understand the landowners agent is Jonathan Wallis jonathan@jonathanwalliscs.co.uk / Jonathan Wallis Chartered Surveyor (jonathanwalliscs.co.uk)

Good Afternoon [redacted]

We have reviewed the information and out of your two options agree that Option 2 would be the best choice.

However, we have two areas of land that may be appropriate with the preferred option for SBC being Option 2 – I wonder if these can be given some consideration.

Many Thanks

In light of this, we would like to seek Stockton on Tees Borough Council's support for this site going forward.
I can confirm that prior to the submission of the DCO application, the Project will:

- be writing to you, in your status as a land interest, with a formal consultation letter in respect of the inclusion of additional land within the Order limits in relation to the replacement open space land. This is necessary because, to access the land owned by the Church Commissioners, the Project will need to utilise an existing access point from the A1185, which is on land which is in the Council's ownership; and
- be writing to the residents of Cowpen Bewley, the parts of Billingham east of Marsh House Avenue, and Billingham Town Council, explaining this addition to the project's Order limits, but also explaining that, in light of comments at previous consultations, the Project has been able to reduce the extent of the Order limits adjacent to the village, and inviting any comments that they may have on these matters. We will also send the Council this letter in its role as LPA for comment.

In relation to the replacement open space, the project can also confirm that the DCO will provide the formal mechanism for the open space status of the affected land to be transferred to the replacement land, and that the scheme for the laying out of the replacement land for the Woodland Park purposes will be subject to the Council's approval.

I can also confirm that the management responsibilities of the eventually acquired land would be passed onto STBC, however the project will put in place a mechanism for the Council to be compensated for the additional costs of managing that replacement land compared to the affected land. This will likely be through a section 106 type mechanism, but this will be confirmed in due course in the DCO application.

Please let me know if you have any further questions or require additional clarification on this matter.

We look forward to hearing from you soon.
Kind regards,

APPENDIX 14.8: TARGETED COWPEN BEWLEY CONSULTATION – EMAIL DATED 8 FEBRUARY 2024 TO STBC

[redacted]

From: [redacted]
Sent: 08 February 2024 18:27
To: [redacted]
Cc: [redacted]

Subject: H2Teesside - Community Consultation in respect land within the vicinity of Cowpen Bewley
Attachments: H2Teesside - Community Letter - Clean - Updated date.pdf; Consultation Zone.JPG; H2T_Cowpen_Bewley_Replacement_OS_S42_44_STBC_Letter.pdf; 073 _ARDG_H2Teesside_LIP_Stockton_on_Tees_Borough_Council.pdf

Importance: High

Dear [redacted]

Further to recent discussions, I am writing to confirm that the Applicant, H2 Teesside Limited, will be launching a consultation this Friday (8th February 20243) in relation to two changes that are being made to the H2Teesside Project in advance of the submission of the application for development consent. These changes both relate to land within the vicinity of Cowpen Bewley Village.

The first change follows feedback from residents in Cowpen Bewley in relation to the proximity of the proposed hydrogen pipeline connection corridor to residential properties. The Applicant has reviewed the pipeline routing options in this area and has been able to reduce the area required to the east of the Village, with the Project Order Limits (the proposed Application Site Boundary) now being further from the eastern edge of the Village.

The second change relates to the addition of an area of land that the Applicant intends to integrate with Cowpen Bewley Woodland Park, in order to replace an area of the Woodland Park that is required for the Project. The Applicant is keen to work with Stockton-on-Tees Borough Council to agree how the replacement open space will be planted and laid out, in order to ensure that the replacement space is of at least the same standard as the land required for the Project.

The Applicant would like to thank the Council for the information provided (your email of 7th February) in relation to possible alternatives to the replacement land at Cowpen Bewley. However, having considered these alternatives, the Applicant is of the view that the land that they have suggested is preferable. The Applicant will set out the reasons for this in full within the application for development consent.

I have attached a copy of the letter that the Applicant is sending to residents in Cowpen Bewley and the east of Billingham on Friday, inviting their comments on the two changes, which is also accompanied by plans showing the two changes, which will also be available on the project website: www.h2teesside.co.uk. The attached JPG image shows the area within which residents will receive the letter and plans.

The Applicant has written separately to the Council (letter dated 8th February) with regard to the proposed replacement open space and to formerly seek the Council's views pursuant to s42 of the Planning Act 2008 by 10th March 2024. A copy of that letter and the accompanying plan is attached for ease of reference.

Please let me know if you have any questions.

Kind regards

Dear Sir/Madam,

Sections 42 and 44 of the Planning Act 2008
H2Teesside Project – Consultation on Replacement Open Space Land

You will be aware from prior correspondence that H2Teesside Limited, a bp company, is developing its H2Teesside Project ('the Project') and have instructed Dalcour Maclaren ('DM') to act on their behalf as land agents for the Project. DM will be the main point of contact for land-related matters on the Project.

H2Teesside is the subject of a Direction under section 35 of the Planning Act 2008 and, as such, will be applying for a Development Consent Order (DCO) under that Act. The Project involves the construction, operation and maintenance of a new Hydrogen Production Facility on the Teesworks site, with an associated hydrogen pipeline distribution network within Teesworks and to offtaker locations in the surrounding area, including at Cowpen Bewley; and other connections. Carbon dioxide (CO_2) captured by the Proposed Development will be transported by pipeline to the separately consented Northern Endurance Partnership infrastructure on the adjacent Net Zero Teesside site for high-pressure compression, offshore transport and underground storage.

You will have received correspondence in relation to two previous stages of statutory consultation for the Project, the second round of which concluded on Tuesday 23rd of January 2024.

We are writing to you, as we understand you hold the freehold interest in land off the A1185 at Billingham, for which the Project has now, post those previous rounds of consultation, identified that it requires for use as replacement open space land to replace existing open space land at Cowpen Bewley Woodland which is affected by the Project. The inclusion of this additional land within the Order Limits of is crucial in ensuring the successful delivery of the Project while also addressing environmental and community needs. The land affected is shown on the plan enclosed with this letter.

As a result, this letter is a formal consultation with you on this proposed addition to the Order limits, pursuant to sections 42 and 44 of the Planning Act 2008. We would welcome your response to this consultation letter so that we can have regard to your feedback in finalising the DCO application. Please respond to this letter using the details given below, by **11:59 on 10th March 2024.**

Dear [redacted],

Sections 42 and 44 of the Planning Act 2008
H2Teesside Project – Consultation on Replacement Open Space Land

You will be aware from prior correspondence that H2Teesside Limited, a bp company, is developing its H2Teesside Project ('the Project') and have instructed Dalcour Maclaren ('DM') to act on their behalf as land agents for the Project. DM will be the main point of contact for land-related matters on the Project.

H2Teesside is the subject of a Direction under section 35 of the Planning Act 2008 and, as such, will be applying for a Development Consent Order (DCO) under that Act. The Project involves the construction, operation and maintenance of a new Hydrogen Production Facility on the Teesworks site, with an associated hydrogen pipeline distribution network within Teesworks and to offtaker locations in the surrounding area, including at Cowpen Bewley; and other connections. Carbon dioxide (CO_2) captured by the Proposed Development will be transported by pipeline to the separately consented Northern Endurance Partnership infrastructure on the adjacent Net Zero Teesside site for high-pressure compression, offshore transport and underground storage.

You will have received correspondence in relation to two previous stages of statutory consultation for the Project, the second round of which concluded on Tuesday 23rd of January 2024, and the Project had a recent meeting with you to discuss its impacts to open space and its proposals for providing replacement land.

Further to that meeting, we are writing to you, as we understand you hold the freehold interest in land off the A1185 at Billingham, for which the Project has now, post those previous rounds of consultation, identified that it requires for use of the existing access point from the highway to adjacent land proposed to be used as replacement open space land to replace existing open space land at Cowpen Bewley Woodland which is affected by the Project. The inclusion of this additional land within the Order Limits is crucial in ensuring the successful delivery of the Project while also addressing environmental and community needs. The land affected is shown on the plan enclosed with this letter.

As a result, this letter is a formal consultation with you on this proposed addition to the Order limits, pursuant to sections 42 and 44 of the Planning Act 2008. We would welcome your response to this consultation letter so that we can have regard to your feedback in finalising the DCO application. Please respond to this letter using the details given below, by **11:59 on 10th March 2024.**

APPENDIX 14.10: TARGETED COWPEN BEWLEY CONSULTATION – LETTER AND PLANS DATED 9 FEBRUARY 2024 TO LOCAL COMMUNITY

9 February 2024

H2Teesside – consultation on proposed amends to our proposals in the Cowpen Bewley and Billingham areas

Dear Sir/Madam,

As you may be aware, we're proposing to build a new blue hydrogen production facility on Teesside, known as H2Teesside. It aims to be one of the biggest blue hydrogen production facilities in the UK, delivering economic growth for Teesside and the domestically produced low carbon hydrogen that the UK needs.

We have held two rounds of consultation on our proposals. We have used the feedback, alongside further assessment and technical work, to develop and refine our proposals.

Following our previous rounds of consultation, we are now consulting on (i) a reduction to the Order Limits (i.e. the area within which the proposed project can be carried out) in Cowpen Bewley; and (ii) an addition to the Order Limits to the east of the A1185 Seal Sands Road. The addition to the Order Limits will enable the replacement of an area of Cowpen Bewley Woodland Park (which is also designated as open space) that is required for the construction and operation of the project, and so will no longer form part of the Woodland Park. These amends are described in more detail below and plans related are available on our project website: www.h2teesside.co.uk.

Proposed changes

Reduction to the Order Limits in Cowpen Bewley

Feedback to our previous consultations included comments in relation to the proximity of the Order Limits to residential properties in Cowpen Bewley. As a result, we have reviewed pipeline routing options in this area, taking account of the environmental and technical constraints that exist. Following that work, we have been able to reduce the extent of the Order Limits adjacent to the village, as shown by the hatched area on the enclosed plan titled 'Cowpen Bewley Order Limits Reduction Plan'.

As part of this consultation, we would welcome any comments you have on this reduction to the Order Limits.

Addition to the Order Limits for replacement open space land

As identified in the Preliminary Environmental Information Report shared as part of our previous consultations, H2Teesside requires an area of land at Cowpen Bewley Woodland Park. This area is located in and around the existing Gas Distribution Station site and the nearby railway line.

We have now identified a replacement area of land, as shown on the enclosed plan titled 'Cowpen Bewley Woodland Park – Land Lost and Proposed Replacement Land Proposal Plan'. We intend to integrate this land with Cowpen Bewley Woodland Park and make it publicly accessible, to replace the area required by the project. We will be working with Stockton on Tees Borough Council to agree the layout and planting of this land and ensure that it is of at least the same standard as the land required by the project. As part of this consultation, we would welcome any comments you have on the land identified.

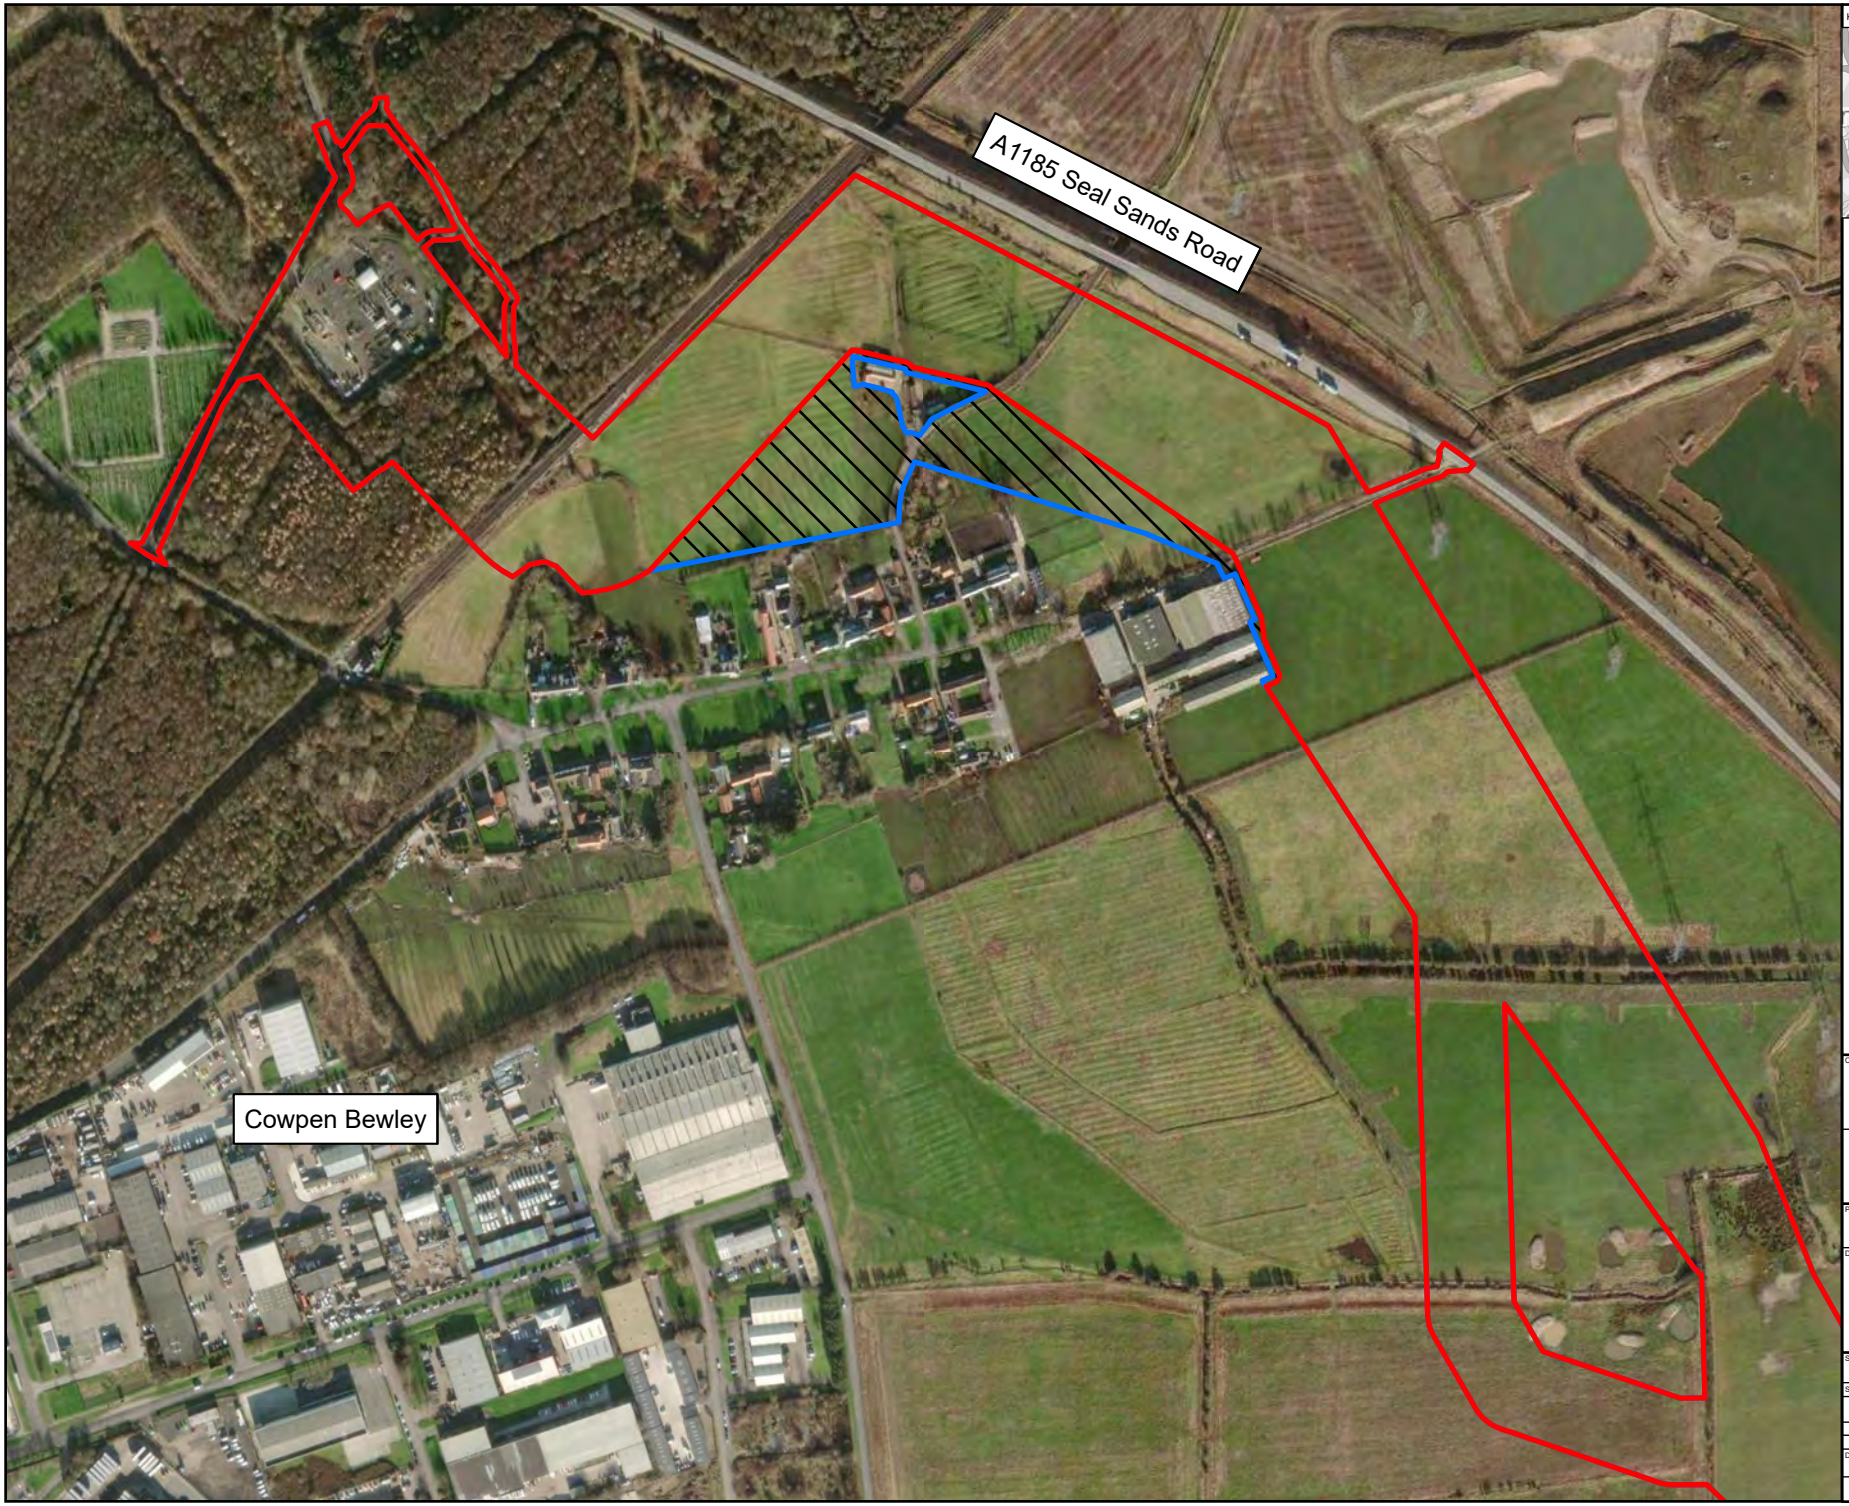
Find out more and have your say

This consultation will run from 9 February 2024 until 10 March 2024.

You can find out more by:

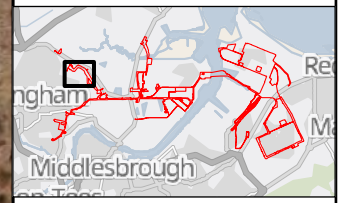
- Viewing plans of the proposed amendments and previous consultation documents on our project website: www.h2teesside.co.uk
- Contacting us on our Freephone number 0800 0803028 or info@h2teesside.net to request printed versions of the plans.

You can respond to our consultation in the following ways:



- Email: Send your response to info@h2teesside.net
- Post: Send your response to **FREEPOST H2Teesside**.

Please submit your feedback by **11.59pm on 10th March 2024**.



If you have any questions or need any further information, please contact the H2Teesside team on 0800 0803028 or info@h2teesside.net

Yours faithfully,

Matthew Williamson – on behalf of H2 Teesside Limited

Dear [redacted]

H2TEESSIDE PROJECT, LAND WITHIN THE BOROUGHS OF REDCAR AND CLEVELAND AND STOCKTON-ON-TEES, TEESSIDE AND WITHIN THE BOROUGH OF HARTLEPOOL, COUNTY DURHAM

THE INFRASTRUCTURE PLANNING (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2017 (AS AMENDED) – REGULATION 8(1)(B) 'NOTIFICATION OF INTENTION TO PROVIDE AN ENVIRONMENTAL STATEMENT' AND REGULATION 10(1) 'APPLICATION FOR A SCOPING OPINION'

I write on behalf of H2 Teesside Limited (the 'Applicant') in relation to the proposed construction and operation of the H2Teesside Project (the 'Project') on land within the boroughs of Redcar and Cleveland and Stockton-on-Tees, Teesside and within the borough of Hartlepool, County Durham.

The Project will be the UK's largest commercial-scale blue hydrogen production facility with a capacity of up to 1,200 megawatts ('MW') thermal. The Project will comprise a hydrogen production plant, which will use natural gas to produce hydrogen for use in a number of energy-related and industrial applications, a hydrogen distribution pipeline network (to supply the hydrogen to offtakers) and associated and ancillary development. The CO_2 generated by the Project during the hydrogen production process will be captured and compressed for onward transportation and storage, under agreement with the Northern Endurance Partnership (the 'NEP'), within the Endurance storage site, which is located approximately 145 kilometres offshore from Teesside under the North Sea.

The Secretary of State (the 'SoS') for Business, Energy and Industrial Strategy (now Energy Security and Net Zero) issued a direction under Section 35 of the Planning Act 2008 (the 'PA 2008') dated 22nd December 2022, confirming that the Project (as set out in the Applicant's direction request dated 5th December 2022), should be treated as development for which development consent under the PA 2008 is required.

The Applicant is proposing to submit an application to the SoS for Energy Security and Net Zero pursuant to Section 37 of the PA 2008, which will seek 'development consent' for the Project. It is currently anticipated that the application for development consent will be submitted in Quarter 4 2023.

This letter and the Environmental Impact Assessment ('EIA') Scoping Report, which is provided in electronic format, comprise the Applicant's formal notification of the SoS under Regulation 8(1)(b) of

DWD is the trading name of Dalton Warner Davis LLP, a Limited Liability Partnership. Registered in England No. OC304838.
Registered Office: 6 New Bridge Street, London EC4V 6AB.fdsa

'The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 (as amended)' (the 'EIA Regulations') that it proposes to undertake an EIA in respect of the Project and will provide an Environmental Statement ('ES') to report the findings of the EIA.

The letter and the Scoping Report also represent the Applicant's formal application to the SoS under Regulation 10(1) of the EIA Regulations for a 'Scoping Opinion' as to the information to be provided within the ES that will form part of the application for development consent. The Scoping Report includes a plan sufficient to identify the site; a description of the nature and purpose of the Project; an explanation of the potential likely significant effects of the Project on the environment; and other information considered relevant by the Applicant.

The EIA Scoping Report can be downloaded via the following secure fileshare link: https://dwd.ctit.co/url/s78v2js5z84dyvd2

We look forward to receiving the SoS's EIA Scoping Opinion within the 42-day period prescribed by Regulation 10(6) of the EIA Regulations.

Please do not hesitate to contact me using the details set out below if you have any queries.

Yours sincerely,
