

Wansford Parish Council wants to understand how, within the framework of the DCO, the applicant will conduct the detailed design and construction to minimise the environmental impact of the works. There is a great deal of discussion in the DCO about mitigation but the preferable approach is to engineer out the impacts so that mitigation is not needed. The contracting approach that NH has taken makes control of such features much more difficult. This has particular relevance to Schedules 1 and 2 of the DCO.
