You don't often get email from [REDACTED]

Hi,

I am writing to you to voice my concerns about the proposal to change the terms of the planning granted for the WMI Interchange project. As a resident of Calf Heath, I have first hand seen the devastation to wildlife, the huge impact its has had on the local road network and the noise pollution that has been caused so far, and they have only built one warehouse!

I have lived here for 14 years and for the first 12 years, I never saw a wild deer in or around the village or on the local roads. Since construction has started, I have had multiple sightings, deer helplessly wandering the roads trying to find somewhere to relocate now their natural habitat is being destroyed and are being terrified by the noise.

The road network congestion around the village is now a joke. The only tiny sliver of silver lining the original planning grant provided was that if we were to believe the developers, this would provide an opportunity to take freight off the roads by diverting it to rail, I welcome you to take a drive around the village and local vicinity at any point in the day to see why this would be welcomed.

The parks that were supposed to be built haven't been started and I believe that oi there is agreement granted to delay the freight hub, it will simply never be built, meaning vast swathes of warehouses and the associated extra unmanageable freight traffic further destroying the green belt, wildlife and quality of life for the surrounding villages.

By agreeing to allow more warehouses to be built before the terminal is in place and active would be devastating to the local roads, the villagers, the wildlife and the environment. I implore you to ensure that the developers stick to the original terms of the planning, we have been hopelessly let down before, please don't let us down again.

The local road network is now unusable,

Thanks and best regards,

Dan Martin
