|                 |            |                                                                                                                                                                                                                                                                                               |                      | submission of its DCO application, whilst recognising its obligation to deliver the project at the earliest opportunity to address the water supply deficit in Hampshire. The Applicant does not consider the proposals to have been rushed.                                                                                                                                                                                                        |
| Wider community | TPP09      | The respondent commented that the Project should proceed without any delay.                                                                                                                                                                                                                   | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                               |
| Wider community | TPP10      | Respondents made a number of suggestions, including doing the work in sections, getting on with it, and carrying out environmental assessments as soon as possible, and ensuring that the Project timescale has included time for delays so that the Project can still be seen to completion. | N                    | An EIA has been undertaken as reported in the ES. The construction programme would be phased and would be determined by the Contractor once appointed. ES Chapter 3 Description of Proposed Development, Volume I (Document reference 6.1, DCO Volume 6) sets out an outline construction programme which has informed the environmental assessments.                                                                                               |
| Wider community | TPP11      | Concerns were raised about the construction timeline, including the temporary construction compound, and the effect that the length of time of disruption.                                                                                                                                    | N                    | The Project would be constructed over approximately a five year period which is expected to commence in 2028, however a detailed construction programme would be developed by the Contractor once appointed and would set out the length of time the construction compounds would be required for. ES Chapter 3 (Document reference 6.1, DCO Volume 6) sets out an outline construction programme which has informed the environmental assessments. |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Marine Management Organisation (MMO)                            | DCOP0 1    | <p>The MMO highlighted its role in Nationally Significant Infrastructure Projects (NSIPs), emphasising responsibilities in licensing construction works, deposits, and removals in marine areas.</p> <p>The MMO stated it advises developers on aspects impacting the marine area and that it is responsible for post-consent monitoring and enforcement if the Development Consent Order (DCO) includes a deemed marine licence (DML). It emphasised the importance of ensuring that DML provisions allow it to carry out its regulatory obligations.</p> | Y                    | <p>The Applicant has and continues to engage with the MMO by virtue of its role on the Project. A summary of engagement and record of discussions undertaken with the MMO during the pre-application process is contained within the Statement of Engagement (Document reference 5.9, DCO Volume 5). The Applicant has prepared a Statement of Common Ground with the MMO, Draft Statement of Common Ground – Marine Management Organisation (Document reference 5.8, DCO Volume 5), setting out the current position on various matters.</p> <p>A deemed marine licence is sought within the DCO to cover construction of the Pipelines between Budds Farm Wastewater Treatment Works (WTW) and the Water Recycling Plant (WRP) site and the WRP site's drainage outfall. The drafting of the marine licence has been discussed and agreed with the MMO, as set out in the Other Consents and Licences Position Statement (Document reference 5.4, DCO Volume 5).</p> |
| Hampshire County                                                | DCOP0 2    | HCC highlighted its role in NSIPs and noted the importance of DCO drafting in                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | N                    | The Applicant has and continues to engage with HCC by virtue of its role on the Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Consultee     | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|---------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Council (HCC) |            | <p>pre-application consultation, particularly for traffic management, Public Rights of Way (PRoW), and flood risk management.</p> <p>The Council stressed that DCO requirements should be discussed during the pre-application stage, and it welcomes early engagement to ensure that the draft requirements, especially those relevant to its role as the Local Highway Authority are appropriately addressed.</p> |                      | <p>This has included engagement on traffic management, PRoW, and flood risk management. The Applicant has also engaged with HCC on the requirements set out in Schedule 2 of the Draft Development Consent Order (Document reference 3.1, DCO Volume 3).</p> <p>A summary of engagement and record of discussions undertaken with the HCC during the pre-application period is contained within the Statement of Engagement (Document reference 5.9, DCO Volume 5).</p> <p>The Applicant has also prepared a Statement of Common Ground with HCC, Draft Statement of Common Ground – Hampshire County Council (Document reference 5.8, DCO Volume 5), setting out the current position of each party against relevant matters.</p> |
| Royal Mail    | DCOP03     | Royal Mail noted that a Traffic Management Strategy, Rights of Way Management Plan and Framework Construction Traffic Management Plan are also to be prepared and submitted with the forthcoming DCO application.                                                                                                                                                                                                   | N                    | <p>The documents referenced in the bullet list below are contained within the DCO application as follows:</p> <ul style="list-style-type: none"> <li>Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) (including Framework Construction Worker Travel Plan)</li> <li>Traffic Management Strategy (Document reference 7.3, DCO Volume 7)</li> </ul>                                                                                                                                                                                                                                                                                                                                            |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                      | <ul style="list-style-type: none"> <li>Framework Rights of Way Management Plan (Appendix to Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7)).</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| HCC       | DCOP04     | <p>HCC discussed various requirements for the DCO drafting, including Section 106 agreements, the Hampshire County Permit Scheme, Lane Rental Scheme, and Section 278 agreements.</p> <p>HCC requested the Section 278 design check process and agreements to be included in the DCO for all permanent access arrangements. Temporary access proposals must be detailed and approved within the DCO, including mechanisms for works and reinstatement.</p> <p>The Section 278 process may also apply to temporary compound access points, depending on construction needs. Restrictions on Pipeline sections adjacent to highways were requested, and access for abnormal loads and highway amendments were highlighted as something needing to be considered within the DCO.</p> <p>HCC made the following suggestion regarding the DCO.</p> | N                    | <p>The Applicant has and continues to engage with HCC on how highway related matters would be addressed in the draft DCO. Protective provisions have been included in the draft DCO to safeguard the functions, assets and interests of the local highway authorities, including HCC. The protective provisions would control the process through which the detail of highway works is to be approved and would give functions to the local highway authority for the approval, inspection and certification of highway works carried out by the Applicant. HCC's permit scheme would be followed for street works, but with some modifications secured through the DCO.</p> <p>The Applicant has prepared a Statement of Common Ground with HCC, Draft Statement of Common Ground – Hampshire County Council (Document reference 5.8, DCO Volume 5), setting out the current position of each party against relevant matters.</p> |

|                       |            | Regarding construction, the Council highlighted the New Roads and Street Works Act 1991, which is the requirement to maintain powers to dictate night works through the Act where works are located on the highway or require traffic management on the highway, and the needs of the Act specify nightworks would be beneficial. Additionally, it was stated that all tunnelling and trenchless construction follow CD662, a Design Manual for Roads and Bridges (DMRB) standard. |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Portsmouth Water (PW) | DCOP05     | PW requested assurance that the DCO provisions do not replace the need for the Applicant to obtain key regulatory licenses and consents from the EA to support the delivery of the Project.                                                                                                                                                                                                                                                                                        | N                    | The Other Consents and Licences Position Statement (Document reference 5.4, DCO Volume 5) lists the other consents and licences that may be required to enable the construction and/or operation of the Project; it lists those that are included within the DCO, and those that would need to be secured outside of the DCO. For example, the Applicant needs to obtain a discharge licence for the storage of water in Havant Thicket Reservoir and amend the existing discharge licence for the release of reject water from the Eastney Long Sea Outfall (LSO). The Applicant has been engaging with the Environment Agency (EA) on these consents. |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                                | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                        |
|------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| National Grid Energy Transmission (NGET) | DCOP0 6    | NGET requested adequate Protective Provisions be included within the DCO and provided a plan which showed the locations of NGET's apparatus in the scoping area.                                                                                                                                                                                                                                                                                                       | N                    | The Applicant has and continues to engage with NGET and other utility providers. Protective Provisions relating to NGET are contained in Schedule 9 of the draft Development Consent Order (Document reference 3.1, Volume 3).                                                                                                                                  |
| Havant Borough Council (HBC)             | DCOP0 7    | HBC outlined that the defences at Broadmarsh protect a historic coastal landfill which has the potential to fail within 10 years without intervention. This failure could result in the historic coastal landfill potentially spilling onto the foreshore or needing removal to a licensed facility. This could severely impact environmentally designated sites in Langstone Harbour. HBC said that sea defence reinforcement should be addressed in the DCO process. | N                    | The Project does not impact the sea defences in Havant nor would it be affected by any failure of those defences, hence upgrades to sea defences do not form part of the Project. The Applicant is, however, engaging with HBC to explore opportunities to support local public realm and environmental enhancements as part of the wider sea defences project. |
| National Highways (NH)                   | DCOP0 8    | NH welcomed ongoing engagement on the Project. From 1 April 2024, NH can recover costs for responding to third-party DCOs, due to new powers under the Levelling up and Regeneration Act 2023. NH stated it would contact the Applicant to discuss services, cost estimates, and next steps.                                                                                                                                                                           | N                    | The Applicant has noted this comment and welcomes ongoing engagement with NH as part of the DCO process.                                                                                                                                                                                                                                                        |
| Winchester City Council (WCC),           | DCOP0 9    | It was noted that the draft Order Limits are flexible to allow for the final placement of the proposed Pipeline routes following additional environmental reports.                                                                                                                                                                                                                                                                                                     | N                    | Flexibility is provided by the Limits of Deviation for the Pipeline shown on the DCO Works Plans (Document reference 2.3, DCO Volume 2). This flexibility is provided to                                                                                                                                                                                        |

|----------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Upham Parish Council |            | Further information was requested on how consultees would be consulted or provided with further information at the detailed design stage.           |                      | <p>account for potential environmental constraints identified from ongoing surveys prior to the commencement of construction which would be undertaken at the detailed design stage post DCO consent. Further information regarding flexibility is provided in ES Chapter 3 Description of the Proposed Development (Document reference 6.1, DCO Volume 6) and ES Chapter 5 EIA Approach and methodology (Document reference 6.1, DCO Volume 6).</p> <p>Detailed design of the Above Ground Plant (AGP), including the WRP, would be subject to further approval by the relevant planning authorities in line with Schedule 2 of the Draft Development Consent Order (Document reference 3.1, DCO Volume 3). The Pipeline would not be subject to detailed design approval by local authorities however its design would need to align with the Design Principles Document (Document reference 5.11, DCO Volume 5). Community engagement would be undertaken during the construction stage to keep local communities informed of key activities in their area.</p> |
| WCC                  | DCOP10     | WCC mentioned that a worst case scenario is used for the Preliminary Environmental Information Report (PEI Report) as final design work which would | N                    | The Project proposals have been refined for the DCO application, which is assessed in the ES. The preliminary design principles presented at the Summer 2024 Consultation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | be undertaken post-DCO decision, although it was noted that further detail would be included at the ES stage. The Project elements within the WCC area were listed, including the underground pipeline, BPT-K, IPS-G, isolation, washout and air valves, utility connections, new access routes, landscaping, and temporary construction infrastructure. |                      | have been developed into General Design Principles (applying to the entire Project) and Site-Specific Design Principles (providing more detail on a site-specific level or where a design commitment only applies to a particular site) which are set out in the Design Principles Document (Document reference 5.11, DCO Volume 5). These would control the detailed design of the Project following approval of the DCO application, as required by the requirements set out in Schedule 2 of the Draft Development Consent Order (Document reference 3.1, DCO Volume 3). |
| WCC       | DCOP1<br>1 | WCC acknowledged that details of the AGP and the isolation, washout and air valves were described. However, the Council requested photographs of existing plants from other schemes in the ES to better understand their visual appearance.                                                                                                              | N                    | <p>Some images of the Applicant's plant at other existing locations have been shared with WCC during bilateral engagement meetings; these are not appropriate or required to be included in the ES.</p> <p>Local authorities, including WCC have also been engaged on the development of the design principles for the Project, which are contained within the Design Principles Document (Document reference 5.11, DCO Volume 5). The Design Principles will guide and control the design of the Project following DCO consent.</p>                                        |

| HCC, Environment Agency (EA)                     | DCOP1 2    | <p>HCC requested further explanation about how contractor flexibility would be assessed and controlled, together with an explanation, in the DCO.</p> <p>The EA generally agreed with the PEI Report's assessment breadth and conclusion that risks are manageable, but suggested a more precautionary approach is taken, especially in risk scoring and impact significance.</p> | N                    | <p>Flexibility is provided and controlled by the DCO Limits of Deviation for the Pipeline shown on Works plans (Document reference 2.3, DCO Volume 2) and the AGP parameters shown in the Works plans (Document reference 2.3, DCO Volume 2) and the Design Principles Document (Document reference 5.11, DCO Volume 5). The Project must be designed in accordance with these. This flexibility has been assessed as part of the EIA. A full description of the Project, as assessed, can be found in ES Chapter 3 Description of Proposed Development, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>In response to the EA's comment on the PEI Report, the methodology to the EIA has followed an accepted and well-established approach in determining impact significance. The methodology for the assessment is set out in ES Chapter 5 EIA approach and methodology, Volume I (Document reference 6.1, DCO Volume 6), which follows an accepted and well-established approach.</p> |

The examination process provides further opportunity for independent scrutiny of the Project and its supporting environmental assessments.</p> <p>The Applicant therefore considers that consultation has been undertaken in a transparent and proportionate manner consistent with established DCO practice.</p>                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Wider community | DCOP14     | Respondents considered the Project to be rushing through a ' <i>fast track DCO process</i> .' | N                    | <p>The Project is proceeding under the conventional timescales set out in the PA 2008. The DCO process is required due to the nature and scale of the Project and its designation as a Project of National Significance. The Applicant has undertaken detailed investigations, assessments and surveys to develop the DCO application, as is required by policy and legislation. The Applicant is expediting delivery timescales wherever possible in order to enable the regulatory delivery date of 2034 to be met, as set out in the Applicant's emerging WRMP24. The Applicant has developed and improved the proposals in readiness for the DCO application over a period of time that is typically considered longer than other projects following the DCO process owing to the number of consultations undertaken to</p> |

It lists those that are included within the DCO, and those that will need to be secured outside of the DCO.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Wider community | DCOP17     | Respondents stated there was a lack of local accountability and noted that local authorities were unable to reflect local concerns, and only the Secretary of State could decide on the consent of the Project. The Applicant was criticised for bypassing local councils and not having thoroughly explored other options. | N                    | <p>The Secretary of State gave a Section 35 direction to pursue the Project under the DCO regime to better manage the efficient consenting of a complex project which stretches across seven local authorities. The Secretary of State will decide whether to grant consent for the Project, following Examination and a recommendation by the Examining Authority (ExA) (appointed by the Inspectorate). The role of the ExA is to review the DCO application independently and recommend to the Secretary of State whether development consent should be granted. Local authorities, as statutory consultees, have played a key role in the process of developing the Project. The Applicant has engaged early, regularly and extensively with local authorities affected by the Project, and local priorities and policy are understood and reflected in the Project design as far as reasonably practicable.</p> <p>The Statement of Engagement (Document reference 5.9, DCO Volume 5) sets out the engagement undertaken with local authorities to date, and this Consultation Report sets out how the Project has had regard to feedback,</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                |                      | including from local authorities and communities.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Wider community | DCOP18     | Respondents hoped the government would examine the Project carefully and conduct a wider review of alternative ways to secure water. It was suggested that the application for the Project should be examined via a public inquiry rather than by a local authority, so that the relevant experts can examine the Project and provide full representation of affected persons. | N                    | <p>As the Project is proceeding through the DCO regime, the Secretary of State will decide whether to grant consent for the Project, rather than a local authority, following consideration and recommendation by an examining authority appointed by the Inspectorate.</p> <p>The National Policy Statement for Water Resources Infrastructure (NPSWRI) will be used as the primary basis for consideration by the Secretary of State of the DCO application. Under the NPSWRI, where a project is featured in a published final WRMP, the need for that project will have been established and alternative solutions will therefore not be open to further consideration. Where it does not feature in a published WRMP, the need for the project, including consideration of alternatives, will need to be made out as part of the application.</p> |
| Wider community | DCOP19     | The respondent mentioned that following a public consultation, the Applicant will submit a DCO application, and the Secretary of State for Department for Environment, Food and Rural Affairs (Defra) will decide whether the Project is                                                                                                                                       | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|                 |            | accepted to the examination stage where a decision on the Project would be made.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Wider community | DCOP20     | <p>Respondents noted that the consultation documents included illustrative designs for infrastructure elements to inform the EIA, but that there was no commitment to these designs. It was stated that the appointed contractor can develop solutions as long as the impact does not exceed the 'worst case' parameters used in the EIA.</p> <p>Concern was raised about the DCO application being based only on an initial design, with the final detailed design developed after DCO acceptance. It was noted that this approach, while claimed to be normal for large-scale infrastructure projects to maintain flexibility, means the Secretary of State would have to approve a scheme without all essential details finalised.</p> | N                    | The ES has assessed worst case parameters in accordance with the 'Rochdale Envelope' approach, which is the industry precedent for NSIP EIAs. This approach involves establishing a maximum design envelope and parameters within which the Project's final detailed design will need to be designed within. The design envelope and parameters are secured by the Works plans (Document reference 2.3, DCO Volume 2) and the Design Principles Document (Document reference 5.11, DCO Volume 5) through the DCO. Further information regarding the ES approach and methodology is contained in ES Chapter 3 Description of the Proposed Development (Document reference 6.1, DCO Volume 6) and ES Chapter 5 EIA Approach and methodology (Document reference 6.1, DCO Volume 6). |
| Wider community | DCOP21     | There was a request for information on how the public would be consulted at the detailed design stage and how they would be informed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | N                    | Detailed design of the WRP and AGP is subject to further approval by the relevant planning authority as set out in the requirements in Schedule 2 of the Draft Development Consent Order (Document reference 3.1, DCO Volume 3). Consultation on the detailed design by the local planning authority is likely to be undertaken in                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                                        |                      | accordance with its normal procedures for publicity. The public also have the ability to comment on the DCO application, including the Design Principles Document (Document reference 5.11, DCO Volume 5) which detailed design would need to be in accordance with.                                                                                                                                                                                                                                                                                                                        |
| Wider community | DCOP2 2    | It was stated that the public were disadvantaged by the unavailability of documents, such as the ES which is only published as part of the DCO application once submitted. It was stated that the PEI Report is a work-in-progress and not a substitute for the authoritative evidence base of the ES. | N                    | The PEI Report published at Summer 2024 Consultation provided the information reasonably required for consultees to understand the likely significant effects of the Project, as understood, at that stage in time, in accordance with guidance and legislation. It formed a key consultation tool for the statutory pre-application stage by providing an update on the ongoing EIA, consultation and design of the Project. The ES reports on the EIA undertaken for the Project and interested parties have the ability to comment on this as part of the next state of the DCO process. |
| Wider community | DCOP2 3    | It was mentioned that baseline data will influence the design of the Project, avoiding and reducing likely adverse effects, and that these details will be presented in the ES. A review of the full ES was looked forward to, to understand the                                                       | N                    | The ES reports on the EIA undertaken for the Project and members of the public have the ability to comment on this within the DCO process.                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Consultee | Issue code | Summary of issue raised                        | Project change (Y/N) | The Applicant's response |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                   |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Havant Borough Council (HBC)                                    | ISWI01     | HBC stated that there will be a need to clearly differentiate between impacts and mitigation, compensation or enhancement measures arising from this project. They also note that there would be a degree of integration between the Applicant's elements within the Borough and Havant Thicket Reservoir scheme. | N                    | Environmental Statement (ES) Chapter 5 EIA approach and methodology, Volume I (Document reference 6.1, DCO Volume 6) sets out the general methodology followed in the ES. The ES sets out an assessment of significance of effects as reported in subsection 8 and summarised in subsection 10 of ES Chapters 6 to 20, Volume I (Document reference 6.1, DCO Volume 6). As described in ES Chapter 5 EIA approach and methodology, Volume I (Document reference 6.1, DCO Volume 6) the mitigation hierarchy has been followed and definitions of mitigation, as defined by ISEP guidance, and enhancement opportunities are provided. Mitigation and enhancement relevant to topic chapters are set out in subsection 4 and 9 of ES Chapters 6 to 20, Volume I (Document reference 6.1, DCO Volume 6). |

|                                                  |            | <p>Sewer Overflow and Long Sea Outfall (LSO) during storm conditions.</p> <p>It was noted that there was an expectation for the Applicant to set up a meeting so this could be discussed further, as it stated the proposed works could impact designated sites in Langstone Harbour and the Solent.</p> |                      | Natural England on this matter through ongoing consultation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                          |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Wider community                                  | ISWI03     | <p>It was noted that in the past, Southmoor Nature Reserve was flooded with pollution from Budds Farm Wastewater Treatment Works (WTW).</p> <p>It was emphasised that such incidents cannot happen in the future and that the Applicant needs to address these issues and be accountable.</p>            | N                    | At Budds Farm WTW, surface water runoff from the Project would be managed in the same way as currently occurs on site; all site drainage is returned to the head of the WTW and incorporated into the overall wastewater treatment process. As such, the Project would not result in the generation of additional surface water runoff rates or volumes leaving the site; the required attenuation would be provided by returning all site drainage to the head of the works for inclusion within the overall effluent treatment process. Further detail and information is contained within ES Appendix 19.1 Flood Risk Assessment (Document Reference 6.2, DCO Volume 6). |
| Wider community                                  | ISWI04     | There was concern about Budds Farm WTW feeding into Langstone Harbour and it was mentioned that the map provided was unclear.                                                                                                                                                                            | N                    | The Project does not comprise any release of treated wastewater into Langstone Harbour. Reject water produced by the Water Recycling Plant (WRP) would be released into the Solent via the existing Eastney LSO.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | ISWI05     | The respondent stated that Annex 5 within the Applicant's Gate 2 report, which confirmed benefits for the water environment associated with B.5, as some flows would be diverted from the Peel Common Wastewater Treatment Works LSO to the Eastney (Budds Farm) LSO.                                                                                                | N                    | ES Chapter 4 Consideration of alternatives, Volume I (Document reference 6.1, DCO Volume 6) and the Scheme Development Report (Document reference 5.10, DCO Volume 5) reports on the selection of the Project and why Option B.5 was not progressed. Option B.5 was not progressed due to its lower flexibility and scalability compared to Option B.4 and therefore would not be as resilient as Option B.4 during a drought.                                                                                                                                                                                           |
| Wider community | ISWI06     | Concerns were raised that greater strain would be placed on Budds Farm WTW.<br><br>It was mentioned that the proposals do not add to the capacity of Budds Farm WTW but would increase the load on the WRP. It was questioned why Budds Farm WTW is not being updated or enlarged before considering adding 'partially treated' water into Havant Thicket Reservoir. | N                    | This Project would not add more strain on Budds Farm WTW. Instead, it would take a proportion of the highly treated wastewater from Budds Farm WTW (which is usually pumped out to sea) and process it into recycled water. The Project utilises the Budds Farm WTW in Havant as this is one of the Applicant's largest wastewater treatment works and therefore has the greatest capacity for supplying the fully treated wastewater required for a WRP producing up to 60 million litres per day of recycled water.<br><br>Upgrades to Budds Farm WTW are being progressed by the Applicant separately to the Project. |

| Wider community | ISWI07     | It was emphasised that the Applicant needs to invest in Budds Farm WTW, but that doing so in the context of the Havant Thicket Reservoir project was not appropriate.                                                                                                                                                                                                                                                                                                                          | N                    | There are planned improvement works for Budds Farm WTW however these do not form part of the Project.                                                                                                                                                                                                                                                                                                                                                |
| Wider community | ISWI08     | It was queried how the water at Otterbourne Water Supply Works (WSW) would be affected. In addition, it was also queried how the increased flow rate would affect the overall Pipeline route and the connection to Otterbourne WSW.                                                                                                                                                                                                                                                            | N                    | Water from the Project would be treated at Otterbourne Water Supply Works (WSW) and would continue to meet strict regulatory standards for drinking water quality.<br><br>The pipeline would be designed to transfer the required flows in the timescales necessary to maintain water quality in the pipeline. Flexibility has been provided in the size of pipeline required to achieve this, and this does not affect the routing of the pipeline. |
| Wider community | ISWI09     | The University of Portsmouth discussed the impact on Langstone Campus, noting that the Eastney Tunnel Transfer (TT) currently runs under the site. It was noted that no physical work is proposed to the Eastney TT at this time, therefore respondents stated that they had no concerns regarding the operation and future redevelopment of Langstone Campus.<br><br>However, it reserved the right to provide further comments if additional work to the Eastney TT is proposed. The need to |                      | Whilst the Project would use the Eastney LSO, Transfer Tunnel and Pumping Station as set out in ES Chapter 3 Description of the Proposed Development (Document reference 6.1, DCO Volume 6), the Project does not comprise any works to the existing Eastney LSO, Transfer Tunnel or Pumping Station.                                                                                                                                                |

| Consultee | Issue code | Summary of issue raised                                                                                                        | Project change (Y/N) | The Applicant's response |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------|
|           |            | understand if any additional maintenance or access would be required for the Eastney TT as a result of the Project was raised. |                      |                          |

**Table F29-26 Summary of issues raised on the theme of the EIA approach and methodology and the Applicant's response**

|                                      |            |                                                                                                                                                                                                                           |                      | ongoing engagement with technical stakeholders where appropriate.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Havant Borough Council (HBC)         | EIAA02     | The Council was concerned that the ' <i>engineering worst case</i> ' may differ between topics. Shaft, Pipeline depths and construction techniques were noted as examples that were uncertain.                            | N                    | Following the 'Rochdale Envelope', a well-established principle in EIA (set out in Planning Inspectorate (2018) Advice Note Nine: Rochdale Envelope (Version 3)) each topic establishes the worst case layout/basis for its assessment within the maximum design parameters. This ensures that each topic assesses maximum adverse effects and ensures the proposed mitigation is reflective of that. This is set out in Section 3 of ES Chapter 5 EIA approach and methodology, Volume I (Document reference 6.1, DCO Volume 6).              |
| Marine Management Organisation (MMO) | EIAA03     | The MMO highlighted the requirements for EIAs for projects requiring a marine license. It noted the need for compliance with both the Marine Works (EIA) Regulations and The Town and Country Planning (EIA) Regulations. | Y                    | The Applicant has taken into consideration the need for compliance with both the Marine Works (EIA) Regulations and the Town and Country Planning (EIA) Regulations. The Other Consents and Licences Position Statement (Document reference 5.4, DCO Volume 5) contain a deemed license/protective provision for marine works.<br><br>The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 provide the regulatory framework for the Environmental Impact Assessment (EIA) process for DCO applications. The EIA work |

|                                         |            |                                                                                                                                                                                                                                                                                                                                                                                             |                      | presented in the ES has been undertaken in accordance with The Infrastructure Planning (Environmental Impact Assessment) Regulations 2017, which are similar to the two regulations stated in the feedback.                                                                                                                                                                                                                                                                                                                                                               |
| Wiltshire Council, Natural England (NE) | EIAA04     | Respondents stated they were unsure about the operational effects on the environment, and that they have no comments to make on the proposed measures to minimise effects.                                                                                                                                                                                                                  | N                    | The Applicant has noted this comment. Where scoped into the EIA, topics assess the operational effects of the Project and consider the requirement for mitigation measures to avoid, prevent or reduce likely significant operational effects. These relevant measures are set out in Section 4 of ES Chapters 6-19, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                     |
| Hampshire County Council (HCC)          | EIAA05     | The Council asked why decommissioning was included in the Preliminary Environmental Information Report's (PEI Report) scope, given that the operational life of the Project was not specified. It was noted that the Project assumed a 100 year minimum life cycle, making it difficult for the Council to comment on the decommissioning phase's significant effects so far in the future. | N                    | The decommissioning of the Project was considered in Appendix E.12 (Preliminary Environmental Information Report), and is considered and assessed where relevant in ES Chapters 6-19, Volume I, and ES Chapter 20 Cumulative and in-combination effects, Volume I (Document reference 6.1, DCO Volume 6), on the basis it is a phase of the Project requested in the EIA Scoping Opinion. A full list of the EIA Scoping Opinion comments and responses is provided in ES Appendix 5.3 Response to EIA Scoping Opinion, Volume II (Document reference 6.2, DCO Volume 6). |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee                          | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                    |            |                                                                                                                                                                                                                                                                                                                                                                                  |                      | Therefore, whilst the DCO is not seeking consent for decommissioning, reasonably foreseeable effects from decommissioning activities are assessed. Decommissioning will be subject to the appropriate permits, consents and regulatory environment at the relevant time.                                                                                                                                                                                                                                                                                       |
| UK Health Security Agency          | EIAA06     | The respondent commented that the structure of Chapter 17 uses the EIA process instead of section-by-section analysis which makes it hard to understand the findings and combined effects for specific wards, especially since the chapter covers multiple topics.                                                                                                               | Y                    | The structure of the health assessment, which forms part of ES Chapter 17, Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) has been amended to report the residual effects within each relevant Ward.                                                                                                                                                                                                                                                                                                                     |
| HCC, Winchester City Council (WCC) | EIAA07     | <p>Respondents noted that the information provided in the PEI Report was preliminary and expected that all comments would be addressed within the ES.</p> <p>Neutral comments were made that accept that the areas scoped out of the scoping opinion have not been explored. Statements noted the value and significance of impacts as part of the approach and methodology.</p> | Y                    | <p>The EIA reported in the ES was undertaken in accordance with the EIA Scoping Opinion, adherence to the EIA Scoping Opinion is set out in ES Appendix 5.3 Response to EIA Scoping Opinion, Volume II (Document reference 6.2, DCO Volume 6). This provides a summary of every comment contained in the EIA Scoping Opinion and a response to that comment, setting out how, and where if relevant, it is addressed in the ES.</p> <p>ES Chapter 5 EIA approach and methodology, Volume I (Document reference 6.1, DCO Volume 6), provides an overarching</p> |

| Consultee      | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                      | <p>description of how significance of effect is determined when undertaking an EIA.</p> <p>Where individual assessments require a deviation from this approach, for example an agreed industry approach, this is set out in section 5 of the relevant ES topic chapter (Document reference 6.1, DCO Volume 6).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| HE,<br>HBC, NE | EIAA08     | <p>HE commented on the PEI Report and emphasised the need for an iterative approach to assessing impacts on heritage assets. Comments must be incorporated into future impact assessments, including the ES and Heritage Impact Assessment, to ensure robustness and appropriateness for decision-making. HE noted that the PEI Report identified potential impacts on the historic environment, such as permanent damage to buried archaeology, but since the Project's design is still evolving, ongoing consultation and technical surveys are necessary to fully understand these impacts. HE also highlighted that identifying the significance of heritage assets early on is crucial for developing a strong basis for design decisions.</p> <p>HBC noted that the preliminary assessment was progressing well, noting</p> | Y                    | <p>Further work has been undertaken following the production of the PEI Report for the Summer 2024 Consultation, as presented in the ES. Engagement with HE and other stakeholders has been ongoing which has informed the scheme design, technical surveys, assessment and development of mitigation, including sharing a draft of the Outline Written Scheme of Investigation for review and comment. Section 30 of the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7) provides further details on how technical matters raised by consultees have been addressed.</p> <p>The Applicant notes the feedback provided by HBC and NE and will continue to engage with them regarding the assessment and reducing</p> |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                                 |            | <p>that more detailed information is anticipated as the Project advances.</p> <p>NE added that it is working with the Project team to minimise environmental impacts. NE acknowledged the team's responsiveness to advice on river crossings and additional surveys.</p>                                                                                                                                                                                                                                                                                                                                    |                      | <p>environmental impacts as the Project advances.</p> <p>The impacts and effects on the historic environment are presented in ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) and a summarised version is presented in the ES Non-Technical Summary, Volume I (Document reference 6.1, DCO Volume 6).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Chichester District Council, NE | EIAA09     | <p>Respondents made comments outlining the importance that the potential for effects is fully explored as the Project develops and that harmful significant effects are avoided.</p> <p>Suggestions that surveys should inform best practice and mitigation, notably in the area between Budds Farm WTW to the WRP.</p> <p>It was acknowledged that advice from NE was being followed, and environmental impacts are being limited. NE said it was pleased with the extensive surveys, including those identifying additional ancient woodland that might not be mapped on the priority habitat layers.</p> | N                    | <p>For projects consented under the Planning Act 2008 (PA 2008), such as this Project, the environmental information and assessment becomes more detailed as the design evolves. The Preliminary Environmental Information Report, published as part of the Summer 2024 Consultation materials, provided the preliminary environmental information available, and also set out the potential likely significant effects based on the information at that point in time.</p> <p>Following the Summer 2024 Consultation, further work has been undertaken on collecting baseline and survey data, modelling, and refining the design of the Project. This work has been used to inform the assessment of likely significant effects and mitigation proposals, presented in the ES, in line with the requirements of the PA</p> |

| Consultee                                           | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| HE, South Downs National Park Authority (SDNPA), NE | EIAA10     | <p>Feedback pertained to consultation and engagement with relevant environmental bodies. Comments highlighted that it is crucial to consult all relevant stakeholders in the Landscape and Ecology Management Plan design because planting and habitat creation and/or restoration can impact heritage assets. Comments welcomed continued discussions about the impact on the National Park's setting, biodiversity, and access.</p> <p>NE outlined its role and reviewed relevant chapters and documents of the Preliminary Environmental Information Report, while emphasising the need for ongoing consultation.</p> | N                    | <p>Engagement and consultation has been integral to the development of the Project as described in the Statement of Engagement (Document reference 5.10, DCO Volume 5). Engagement has continued on environmental matters including the Design Principles (which secure planting and habitat creation) with HE, NE and SDNPA through various mechanisms such as the Technical Working Group, EIA Working Group forums, and also on a bilateral basis.</p> <p>Specifically, with the SDNPA, engagement has covered the following areas:</p> <ul style="list-style-type: none"> <li>▪ Assessment methodology for the LVIA (presented in the ES) and its applicability to the South Downs National Park (SDNP) Assessment</li> <li>▪ Explaining how the relevant legislation and policy, including the SDNPA 2019 South Downs Local Plan (reviewed 7 November 2025) has informed the value attached to the landscape</li> <li>▪ Explaining how the disruption caused to the landscape pattern and tranquillity is</li> </ul> |

| Portsmouth Water, SDNPA, HBC, NE | EIAA13     | Comments and recommendations were made that a detailed CEMP should cover the construction phase and for the lifetime of the Project is required which should be developed before the DCO application is made and approved before the start of works. | N                    | <p>An Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) has been prepared which is submitted with the DCO application, however, the detailed CEMP(s) will be developed by the appointed Contractor post-consent, as per standard practice for NSIPs. A detailed CEMP(s) will be produced and submitted for approval in accordance with the requirements contained in Schedule 2 to the draft DCO (Document reference 3.1, DCO Volume 3). This will be approved by the relevant planning authority before the commencement of construction works.</p> <p>The detailed CEMP(s) will only cover the construction phase of works. An Operational Environmental Management Plan (Document reference 7.7, DCO Volume 7) has been prepared to cover the operational lifetime of the Project and has been submitted as part of the DCO application.</p> |
| HCC, HBC, NE                     | EIAA14     | Suggestions were made relating to the water environment topic in the Register of Environmental Actions and Commitments (REAC) table in the Outline CEMP, including ensuring a sufficient level of                                                    | Y                    | Table 5.1 of the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) specifies measures to prevent sediment and debris contamination into watercourses (sediment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           |            | <p>detail is provided by including a construction methodology to maintain existing overland flow routes and prevent increased flood risk. It should reference key surface water flow routes from the updated Flood Map for surface water.</p> <p>It was requested that the Temporary Construction Drainage Strategy should include management of overland flow routes. The Temporary Construction Drainage Plan, and Waste Management Plan, should address the dewatering of shaft excavations advanced through the tidal leachate table. The commitment should include proactive management of the risk.</p> <p>It was expected that the Ordinary Watercourse Consenting regime will apply for crossings at ordinary watercourses, including small ordinary water courses (ditches) to address flood risk impacts during construction. Details will need to be submitted to the LLFA.</p> <p>More detail and clarity was requested regarding whether risk assessments when work occurs within a flood zone includes surface water and ground water risk.</p> |                      | <p>traps, barricade if extent of settlement is high) in measures MB3, WE6 and WE7. Measure LQGC6 in Table 5.1 of the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) also specifies the requirement for the Contractor to produce a plan for dealing with unforeseen contamination.</p> <p>Measure WE18 in Table 5.1 of the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) provides details on the measures the Contractor would follow when undertaking any dewatering processes. It sets out the requirement for compliance with relevant legislation, abstraction licenses and discharge permits and also monitoring and mitigation measures.</p> <p>Measure WE11 in Table 5.1 of the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) requires the Contractor to undertake a risk assessment for any works to occur in a flood zone.</p> <p>Measures WE5 and WE6 in Table 5.1 of the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) require the Contractor to prepare a Construction Drainage Plan to</p> |

|           |            | Details on methods for pollution control were requested to be included to ensure no debris from dust or surface runoff enters watercourses or nearby designated sites. Additionally, the Construction Environmental Management Plan should include how sediment, concrete, or other debris accidentally released during construction will be captured to prevent contamination of watercourses or nearby designated sites. |                      | <p>manage surface water and associated flood risk during construction. It will include measures to minimise water within the working area and ensure ongoing drainage of surrounding land.</p> <p>The measures contained in the Outline Construction Environmental Management Plan are secured by a requirement in Schedule 2 to the DCO (Document reference 3.1, DCO Volume 3). A detailed CEMP(s) will be produced and submitted for approval in accordance with the corresponding requirement in Schedule 2 to the draft DCO (Document reference 3.1, DCO Volume 3).</p> <p>The Other Consents and Licences Position Statement (Document reference 5.4, DCO Volume 5), submitted with the DCO, sets out the progress made on all relevant consents required for works that relate to water courses, including the Ordinary Watercourse Consent and abstraction licenses.</p> |
| HCC       | EIAA15     | It was suggested that the CEMP should have input from Geotechnical specialists to address construction risks of trenchless and tunnelling activities that may require road closures to ensure safety, critically for off-peak and nighttime work on the strategic road network.                                                                                                                                            | Y                    | Geotechnical specialists provided input and review of the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), ensuring the measures detailed in Table 5.1 provide consideration of safe excavations practices,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                  |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | At each trenchless construction and tunnelling beneath highways, ground investigations should be conducted, and local authority be consulted. The County Council expects similar reporting requirements for tunnelling as set out in CD 622.                          |                      | and to manage geotechnical hazards during construction.<br><br>A detailed CEMP(s) will be produced and submitted for approval, as secured by the requirements contained in Schedule 2 to the draft DCO (Document reference 3.1, DCO Volume 3).<br><br>A detailed CEMP(s) must be approved by the relevant planning authority before the commencement of construction works.               |
| HCC       | EIAA16     | The respondent suggested adding a commitment to grassland restoration (e.g. retention of lifted turf and soil) at Staunton Country Park to recognise that the grassland composition is crucial for the park's biodiversity.                                           | N                    | Following the approval in 2025 of Portsmouth Water's application for a Pipeline between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. As a result, the Project no longer goes through Staunton Country Park and commitments to restoration are not required. |
| HCC       | EIAA17     | The respondent requested for the REAC to be amended to include off-peak working in relation to noise and vibration as the implementation of evening and night-time working is dependent on the method of construction and the location of those construction methods. | Y                    | The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), secured by a requirement in Schedule 2 to the draft DCO (Document reference 3.1, DCO Volume 3), includes measure NV3 which requires the Contractor to adopt additional noise and vibration mitigation measures to avoid likely significant adverse effects where relevant and              |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                         |                      | <p>practicable, to be specified in the relevant approved Noise and Vibration Management Plan. Subject to detailed assessment presented in the Noise and Vibration Management Plan, these measures are anticipated to include consideration of additional working hours restrictions, such as restricting construction works, from taking place on Saturday afternoons for specific activities in certain locations. A detailed CEMP(s) will be produced and submitted for approval in accordance with the corresponding requirement in Schedule 2 to the draft DCO (Document reference 3.1, DCO Volume 3).</p> <p>A detailed CEMP(s) must be approved by the relevant planning authority before the commencement of construction works.</p> |
| HCC       | EIAA18     | The respondent requested adding the additional objective of minimising disturbance to Staunton Country Park users during specific events (linked to restricting hours/ dates of construction activity). | N                    | Following the approval in 2025 of Portsmouth Water's application for a Pipeline between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. As a result, the Project no longer goes through Staunton Country Park.                                                                                                                                                                                                                                                                                                                                                                                                   |
| HCC       | EIAA19     | It was requested that there be an addition to the REAC table for a method ensuring                                                                                                                      | Y                    | The Outline Construction Environmental Management Plan (Document reference 7.1,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | that materials that can be recovered are put to beneficial use and a method for recording the recovery of mineral, both on and off-site, is made to the Minerals Planning Authority. These methods should be included in the Outline Materials Management Plan and Outline Soils Resource Management Plan |                      | <p>DCO Volume 7) includes mitigation measure RWM12 which requires the appointed Contractor to produce a Minerals Management Strategy (MMS) prior to commencement of excavation activities. RWM12 states that the MMS will include:</p> <ul style="list-style-type: none"> <li>▪ Extraction and handling procedures: methodologies for the extraction, handling, temporary storage/stockpiling and beneficial use within the construction of the Project.</li> <li>▪ Documentation and records: method for documenting the quantities of minerals which have been excavated, stored/stockpiled and used in the construction of the Project.</li> </ul> <p>It also states that for any minerals encountered through the excavation which are not used in the construction of the Project, opportunities would be sought for re-use at other schemes in the area.</p> <p>The measures contained in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) are secured by a requirement in Schedule 2 to the draft DCO (Document reference 3.1, DCO Volume 3).</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| PILs                                                        | EIAA23     | Respondents expressed concerns about the environmental impact of the proposed Pipeline routes and the adequacy of surveys undertaken. The need for robust environmental protection measures during construction and operation was highlighted. | N                    | <p>From the Project outset, there has been extensive environmental design, refinement and assessment to understand, avoid, remove and reduce environmental effects across the Project.</p> <p>The ES (Document reference 6.1, DCO Volume 6) sets out mitigation measures that have been implemented in the design of the Project thus far to avoid environmental effects as well as measures to be implemented during construction and operation of the Project to avoid, remove and reduce environmental effects of the Project. The ES is supported by a number of management plans submitted with the DCO application to secure (through requirements in Schedule 2 to the draft DCO, Document reference 3.1, DCO Volume 3) the identified mitigation measures.</p> |
| PILs                                                        | EIAA24     | Respondents acknowledged the thoroughness of the surveys but noted the lack of detailed measures to protect the environment.                                                                                                                   | N                    | Following the conclusion of the Summer 2024 Consultation further work has been undertaken on refining the design of the Project in response to feedback, engagement and as informed by the EIA. This includes refining and adding to mitigation measures                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                  |                      | <p>that have been implemented in the design of the Project to avoid environmental effects as well as measures to be implemented during construction and operation of the Project to avoid, remove and reduce environmental effects of the Project.</p> <p>Measures to protect the environment are set out in Sections 4 and 9 of ES Chapters 6-19, Volume I (Document reference 6.1, DCO Volume 6) and summarised in ES Appendix 5.5 Commitments Register, Volume II (Document reference 5.5, DCO Volume 6).</p> |
| PILs      | EIAA25     | Respondents appreciated the effort put into assessing the overall environmental impact of the Project and trusted that the measures proposed would be effective. | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PILs      | EIAA26     | Comments were made that surveys have been disjointed, cancelled, not taken place at all, limited only to the summer months.                                      | N                    | <p>Whilst there is the intention of implementing surveys as per the planned programme of works, circumstances may arise that require changes to be made to the timings. For example, weather conditions could result in a required last-minute change.</p> <p>All surveys have been undertaken at the appropriate time of year, e.g. seasonal ecological surveys undertaken in the appropriate seasons.</p>                                                                                                      |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                         |                      | The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out the surveys that would be conducted post-consent. The measures contained in the Outline Construction Environmental Management Plan are secured by a requirement in Schedule 2 to the draft DCO (Document reference 3.1, DCO Volume 3).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| PILs      | EIAA27     | A respondent emphasised the need and the preference for construction working hours to be limited to Monday to Friday, with no disturbance at weekends. A further respondent raised that landowners have not been asked what they know about the land, despite living on the land for years, It was further noted that an amount of 'desktop' information had been used, and surveys had been sporadic and limited to the summer months. | Y                    | <p>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out that the construction working hours, required to deliver the Project in line with the proposed timeline, are:</p> <ul style="list-style-type: none"> <li>Monday to Friday (excluding bank holidays): 07:00 to 19:00 in summer and 07:00 to 17:30 in winter; and</li> <li>Saturday: 07:00 to 17:00.</li> </ul> <p>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), secured by a requirement in Schedule 2 to the draft DCO (Document reference 3.1, DCO Volume 3), includes measure NV3. This requires the Contractor to adopt additional noise and vibration mitigation measures to avoid likely significant adverse effects where relevant and practicable, to be specified in the relevant approved Noise and</p> |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                  |            |                                                                                                                                                                                                                                         |                      | <p>Vibration Management Plan. Subject to detailed assessment presented in the Noise and Vibration Management Plan, these measures are anticipated to include consideration of additional working hours restrictions, such as restricting construction works from taking place on Saturday afternoons for specific activities in certain locations.</p> <p>Landowners have already provided knowledge relating to their land and the Applicant would continue to engage with landowners to develop its understanding through the detailed design.</p> <p>All surveys have been undertaken at the appropriate time of year, e.g. seasonal ecological surveys undertaken in the appropriate seasons.</p> |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                         |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Wider community                                  | EIAA28     | Respondents claimed the EIA approach was not robust and raised concerns about the risks and potential environmental impacts of the Project. Impacts on habitats, local residents, and various water courses were cited as key concerns. | N                    | The ES (Document reference 6.1, DCO Volume 6) has been prepared in accordance with the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017, relevant topic-specific and general guidance, and the EIA Scoping Opinion.                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Wider community | EIAA32     | The respondent noted that the EIA process was at a general, high-level stage, despite having passed the scoping stage.                                                                                                                                                                                                                     | N                    | <p>For projects consented under the PA 2008, such as this Project, the environmental information and assessment becomes more detailed as the design evolves. The Preliminary Environmental Information Report, published as part of the 2024 Summer Consultation materials in May 2024, provided the preliminary environmental information available, and also set out the potential likely significant effects based on the information at that point in time.</p> <p>Following the conclusion of the 2024 Summer Consultation further work has been undertaken on collecting baseline and survey data, modelling, and refining the design of the Project. This work has been used to inform and add detail to the assessment of likely significant effects presented in the ES (Document reference 6.1, DCO Volume 6).</p> |
| Wider community | EIAA33     | Respondents criticised the PEI Report as many risks have not been clarified and the assessment is not robust or sufficient. Respondents requested that further detailed assessments and peer reviews are carried out. Respondents mentioned that the consultation took place without the full picture, as the EIA was pending at the time. | N                    | <p>The PEI Report, published as part of the 2024 Summer Consultation materials in May 2024, provided the preliminary environmental information that <i>“is reasonably required for the consultation bodies to develop an informed view of the likely significant environmental effects of the development (and of any associated development)”</i> (Regulation 12(2)(b) of the Infrastructure</p>                                                                                                                                                                                                                                                                                                                                                                                                                            |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                                               |                      | <p>Planning (Environmental Impact Assessment) Regulations 2017. The PEI Report set out the potential likely significant effects of the Project for all environmental topics scoped into the EIA (in accordance with the EIA Scoping Opinion).</p> <p>Following the conclusion of the 2024 Summer Consultation further work has been undertaken on collecting baseline and survey data, modelling, and refining the design of the Project. This work has been used to inform the assessment of likely significant effects, presented in the ES (Document reference 6.1, DCO Volume 6), in line with the requirements of the PA 2008 and the Infrastructure Planning (EIA) 2017 Regulations.</p> |
| Wider community | EIAA34     | The respondent expected full impact assessments, both under the EIA regime and Habitats Directive Regulations, to be prepared urgently. The respondent noted that the Project is supported conditionally on the basis that detailed assessments are undertaken to prevent pollution and environmental damage. | N                    | The EIA for projects consented under the PA 2008, such as this Project, follow a process whereby the environmental information and assessment develops as the design evolves. The PEI Report, published as part of the 2024 Summer Consultation materials in May 2024, provided the preliminary environmental information available, and also set out the potential likely significant effects based on the information at that point in time.                                                                                                                                                                                                                                                 |

| Consultee       | Issue code | Summary of issue raised                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|                 |            |                                                                                                                                                                                                                     |                      | is required to consult the consultation bodies as defined.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Wider community | EIAA36     | Neutral comments and suggestions were made about the role of respondents, suggestion for ongoing engagement, liaison with existing environmental organisations and participation in the application review process. | N                    | <p>Ongoing stakeholder engagement is an important part of the pre-application process as described in the Statement of Engagement (Document reference 5.10, DCO Volume 5). Statutory and non-statutory consultees who hold an interest in the environmental impact, mitigation and assessment of the Project have been regularly engaged with as the Project has progressed. Five EIA Working Groups were set up by the Applicant to facilitate engagement with statutory consultees and relevant non-statutory consultees through the progression of the EIA for the DCO application. This enabled feedback to be provided on an ongoing basis. Technical Working Groups were also set up to engage with the EA, NE and MMO on a regular basis, as well as Joint Officer Group meetings to engage with host authorities. Additionally, a Wildlife and Water Interest Group was set up as a forum to engage with non-statutory stakeholder groups that have a particular interest in the terrestrial, freshwater and marine environment.</p> <p>Statements of Common Ground (SoCG) with relevant stakeholders have been prepared and submitted with the DCO and will continue</p> |

| Winchester City Council (WCC)                                   | AQO01      | WCC noted that Chapter 6 of the Preliminary Environmental Information Report (PEI Report) contained limited information on areas within the Winchester District. | N                    | <p>The PEI Report included an assessment of relevant sensitive receptors within WCC's administrative area. The study area assessed within Environmental Statement (ES) Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6) includes a detailed assessment of potential impacts associated with construction road traffic emissions on sensitive receptors, including those within Winchester District's administrative area.</p> <p>In addition, ES Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6) includes an assessment of potential construction dust impacts on sensitive receptors within Winchester District's administrative area.</p> |

| Consultee            | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Natural England (NE) | AQO02      | <p>NE stated that a by-product of catalytic conversion (a process to reduce tailpipe emissions of nitrogen oxides) is ammonia. As traffic composition changes, catalytic convertors could cause an increase in ammonia emissions, resulting in large changes to nitrogen deposition close to roads.</p> <p>NE recognises that the current Best Available Tool to assess ammonia emissions is the CREAM tool created by Air Quality Consultants (AQC). NE suggested that an assessment using the best available approach (i.e. CREAM) is necessary and that model uncertainties should be considered when deciding mitigation. Mitigation should be recommended alongside evidence to provide information on the efficacy of measures.</p> <p>NE noted that ammonia, along with nitrogen oxides (NOx), can contribute to nitrogen deposition in the soil and potential eutrophication of habitats. While background levels of NOx have shown a steady decline over time due to reduced emissions from vehicles and other sources, levels of ammonia have remained relatively stable over the last 30 years.</p> | N                    | <p>The assessment within ES Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6) includes detailed consideration of potential impacts associated with ammonia (NH<sub>3</sub>) emissions on sensitive ecological habitats.</p> <p>CREAM V1A has been used to provide NH<sub>3</sub> emissions factors for the quantification of the potential impacts of NH<sub>3</sub> from road traffic emissions in accordance with NE's response and reflects an update to the assessment scope since the PEI Report was completed.</p> <p>Following completion of the assessment it was noted that an updated version of CREAM (V2A) was released. It is understood that CREAM V1A is generally more conservative than CREAM V2A. However, there are some cases where CREAM V2A NH<sub>3</sub> emissions can be higher than those derived from CREAM V1A – particularly at slower speeds. As such, sensitivity testing was undertaken to compare the results of potential construction road vehicle exhaust impacts upon ecological receptors.</p> <p>When assessing nitrogen and acid deposition, both the NOx and NH<sub>3</sub> components have been considered.</p> |

| Consultee                      | Issue code | Summary of issue raised                                                                                                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|                                |            |                                                                                                                                                                                                                                                                                   |                      | <p>When assessing NO<sub>x</sub>/NH<sub>3</sub>/N-Dep and acid, the most recent background NO<sub>x</sub> concentrations from Department for environment, food and rural affairs (Defra) for the relevant assessment years have been used. Background ammonia concentrations, background nitrogen deposition rates and background acid deposition rates were taken from the UK Centre for Ecology and Hydrology Air Pollution Information System for the 2020-2022 period (mid-year 2021).</p> <p>ES Chapter 8 Terrestrial and freshwater biodiversity Volume I (Document reference 6.1, DCO Volume 6) concludes no significant effects in relation to increased ammonia emissions as a result of road traffic, including for the CREAM V2A sensitivity test. Any increases in atmospheric ammonia are considered short term; therefore, no mitigation measures are required.</p> |
| Hampshire County Council (HCC) | AQO03      | HCC suggested that an agreement on likely highway impacts, and therefore public health impacts, between the Applicant and the Local Highway Authority is needed. This was due to uncertainty of potential health impacts because of changes to air quality. Eastleigh Air Quality | N                    | As documented within ES Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6) and ES Appendix 6.2 Air quality assessment traffic data, Volume II (Document reference 6.2, DCO Volume 6), road traffic flows generated by the Project have been screened against the indicative criteria outlined in the Institute of Air Quality Management and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                      | methods to monitor emissions of dust during the construction phase, commensurate to the level of risk detailed within ES Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                   |
| NE        | AQO06      | <p>Feedback was provided on the impacts of air pollution on designated ecological features.</p> <p>NE suggested that the assessment should address the impacts of air quality on the natural environment, particularly traffic impacts associated with the Project on European sites and Sites of Special Scientific Interests (SSSIs).</p> <p>The effects of road traffic associated with the Project (both alone and in-combination with other plans and projects, in-line with NE guidance) on designated nature conservation sites should be assessed using traffic projections and local air quality modelling.</p> <p>It was also highlighted that construction occurs within 120 meters of Portsdown SSSI. Air quality impacts should be considered, and opportunities for better connectivity through Biodiversity Net Gain (BNG) and Nature Recovery proposals should be explored.</p> | N                    | <p>As documented within ES Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6), ecological sites within 200m of the affected road network have been screened in and assessed in line with NE's approach to advising competent authorities on the assessment of road traffic emissions under the Habitats Regulations (NEA001).</p> <p>The assessment includes European sites, SSSIs, Ancient Woodlands and Sites of Importance for Nature Conservations. The assessment included Portsdown SSSI as a receptor specifically.</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                      | demonstrates that emissions from NRMM used during construction are unlikely to have a significant effect on local air quality with the implementation of best-practice mitigation measures detailed within Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Wider community | AQO09      | <p>Respondents raised concern over the potential risk of odours impacting upon residents when the historic landfill site is opened up during construction. A further respondent added that opening up the waste to the air can cause landfill odours to be carried by the prevailing wind towards residential areas to the north. In addition, it was stated that introducing oxygen into the landfill material could alter the decomposition process within the waste.</p> <p>Additionally, concerns about the risks during maintenance of proposed Pipeline routes and potential odours during operation were noted. A further respondent said that any process of damping down to reduce dust generation would add to the water draining into the landfill.</p> | N                    | <p>A qualitative assessment of potential odour impacts during construction is presented in ES Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6) and mitigation measures for the control of odour emissions are included within the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). Following the application of these measures, the residual effect is considered to be not significant. In addition, as per the response detailed within RWM08, extracted landfill material would be carefully managed by the appointed contractor. The proposed method for sinking shafts through the landfill into the underlying chalk would avoid air (and therefore oxygen) ingress into the waste mass.</p> <p>Consideration of potential odour impacts during operation is considered in ES Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6). |-----------------|------------|------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                              |                      | <p>assessment concluded that potential odours arising from the operation of the Project are considered to be not significant.</p> <p>Whilst a small number of historic landfill sites along the pipeline route were identified, consideration of the Water Recycling Plant (WRP) landfill site represents the largest and most significant source of odour during construction and therefore provides a worst case assessment relative to other landfill sites along the pipeline route that may be disturbed during any maintenance activities.</p> <p>The amount of water required for damping down is likely to be analogous to the natural rainfall events that have occurred throughout the 50-60 year lifespan of the landfill site so far. It is understood the landfill site is not lined nor does it have an engineered cap, allowing water to percolate through. Water for damping down would be managed in a way to minimise water usage and prevent the release of sediment-rich water into adjacent water bodies (e.g. through the site's Sustainable Drainage System (SuDS)).</p> |
| Wider community | AQO10      | Respondents queried whether partially treated sewage would smell and expressed concerns about odours near residential areas. | N                    | As documented within ES Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6), operations at Budds Farm Wastewater Treatment Works                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|------------|-------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>(WTW) would remain unchanged as part of the Project. The WRP would utilise and receive the wastewater from the existing treatment process at Budds Farm WTW. The wastewater entering the WRP site would comprise highly treated wastewater and would have already be extensively cleaned and treated at Budds Farm WTW. Treated wastewater entering the WRP site is not anticipated to be odorous and would resemble river water more than wastewater. The recycled water produced by the WRP site would meet strict water quality standards and would be odourless.</p> <p>As part of the baseline characterisation within ES Chapter 6 Air Quality and odour, Volume I (Document Reference 6.1, DCO Volume 6), it was confirmed by Havant Borough Council (HBC) that no recent actionable odour-related complaints have been received. It is understood that 38 complaints were received directly by Budds Farm WTW between 2018-2023 and none in 2024 up to the most recently obtained records in August 2025, highlighting the infrequency of odour complaints and associated issues.</p> <p>The Project would not involve modifications to the odorous components of Budds Farm WTW and utilises wastewater with minimal</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|-----------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                                           |                      | <p>standards for construction vehicles using the highway network to reduce potential air quality effects.</p> <p>The areas of the Order Limits in proximity to the schools referenced are sections of underground Pipeline with no construction activity due to take place at ground level. The findings of the assessment within ES Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6) concluded that, with appropriate mitigation in place, the overall significance of construction dust impacts or the impacts of other pollutants associated with non-road mobile machinery at these receptors would be not significant.</p> |
| Wider community | AQO12      | <p>Respondents outlined concerns regarding odours from Budds Farm and the potential for the Project to exacerbate odour issues in the area and how this could impact on human health and wellbeing.</p> <p>Feedback pertained to how odour from the WRP would impact nearby residents and businesses.</p> | N                    | <p>As documented within ES Chapter 6 Air Quality and odour, Volume I (Document reference 6.1, DCO Volume 6), operations at Budds Farm WTW would remain unchanged as part of the Project. The WRP would utilise and receive the wastewater from the existing treatment process at Budds Farm WTW. The wastewater entering the WRP site would comprise of highly treated wastewater and would have already be extensively cleaned and treated at Budds Farm WTW. Treated wastewater entering the WRP site is not anticipated to be odorous and would resemble river water more than wastewater.</p>                                                               |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Historic England (HE)                                           | ACH01      | HE made opening remarks that there are a number of designated assets that will be affected by the Project, specifically the designated heritage assets of the highest significance that may be affected, primarily the Scheduled Monuments and Leigh Park Registered Park and Garden. | Y                    | ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) presents the assessment of effects on heritage assets (both designated and non-designated) which has been carried out to a scope and method agreed with relevant stakeholders including HE. |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | HE noted that the Project description in the Preliminary Environmental Information Report (PEI Report) was preliminary, and stated it was good to see that potential impacts on both designated and non-designated heritage assets were being considered throughout all Project phases. HE recognised that the design and route was still preliminary and was pleased to learn that all known Associated Developments will be assessed in the Environmental Statement (ES). |                      | <p>A number of Scheduled Monuments have been identified as experiencing temporary effects arising through change to setting during construction. These are:</p> <ul style="list-style-type: none"> <li>▪ Fort Purbrook (NHLE 1001842)</li> <li>▪ Fort Widley (NHLE 1001862)</li> <li>▪ Fort Southwick (NHLE 1001808)</li> <li>▪ Fort Nelson (NHLE 1001860)</li> <li>▪ Park Pale at Marwell Park (NHLE 1012308)</li> <li>▪ Otterbourne Manor (NHLE 1013055)</li> </ul> <p>Following the approval in 2025 of Portsmouth Water's application for two new pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's backup option for pipelines between the Water Recycling Plant (WRP) site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project (thereby avoiding Leigh Park and its setting). The Applicant's Development Consent Order (DCO) application will seek to authorise the use of Portsmouth Water's Pipelines to transfer recycled water between Bedhampton Springs and Havant Thicket Reservoir.</p> |

| HE        | ACH05      | HE noted it was pleased that primary mitigation involved avoiding areas of high archaeological potential and that the characterisation of these areas was ongoing, relevant to further surveys or archaeological works. HE also noted it was important not to rely solely on geophysical results for assessing archaeological potential, as this methodology may not be uniformly reliable across the entire Project area. HE recommended including LiDAR, aerial photographs, and documentary searches (HER, etc.) to ensure a comprehensive assessment. | N                    | Desk-based assessment including interpretation of documentary, aerial photography (including the Hampshire National Mapping Programme) historic mapping and LiDAR data has been carried out and reported at ES Appendix 7.1 Historic environment baseline study, Volume II (Document reference 6.2, DCO Volume 6) and ES Appendix 7.10 World War II Crash Site Pigeon House Farm Technical Note and geophysical survey report, Volume II (Document reference 6.2, DCO Volume 6). Trial trenching has been undertaken at key points of the route determined by an understanding of archaeological potential and is reported at ES Appendix 7.9 Trial trenching report, Volume II (Document reference 6.2, DCO Volume 6). The results of an updated search of the relevant Historic Environment |

Historic environment gazetteer Part A and Part B, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>Detailed design would, where appropriate, be informed by the results of these surveys and surveys carried out post-consent.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| HE        | ACH06      | <p>HE provided feedback on the baseline study presented in Appendix 7.1 of the Preliminary Environmental Information Report. It was noted that Table 2 regarding heritage importance seemed to incorrectly suggest that some nationally designated heritage assets, such as Grade II listed buildings and certain conservation areas, for example Sir George Staunton, are only of regional interest. HE noted that it believed this was likely an error in the baseline study rather than a misunderstanding and suggested this should be corrected in the ES.</p> <p>It was also noted that Table 2 also left out Registered Parks and Gardens (RPGs) but acknowledged that these are covered elsewhere in the Preliminary Environmental Information Report.</p> <p>HE also noted that Table 7-6 in the Preliminary Environmental Information</p> | N                    | <p>Grade II listed buildings and Conservation Areas were assigned Medium importance (a category into which regionally significant archaeological remains were also classified) for the purpose of identifying likely significant effects in terms of the EIA Regulations. This approach was not an error and had been set out at scoping. It was subsequently agreed with HE in consultation following their comments on the PEI Report and has been carried forward to the ES.</p> <p>Understanding harm to a designated heritage asset as set out in the National Policy Statement for Water Resources Infrastructure (NPSWRI) is independent of this evaluation, and an assessment of whether harm would arise is provided in respect of all designated heritage assets assessed as part of the ES assessment.</p> |

|           |            | Report was more thorough, but it also omitted Grade II RPGs. From Table 1-3 in the Gazetteer (Appendix 7.2 of the Preliminary Environmental Information Report), HE interpreted this as if no Grade II RPGs were affected in the study area, but HE affirmed it would like confirmation of this in the final ES.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                      | The ES confirms that there are no Grade II RPGs within the extended study area or the Order Limits.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| HE        | ACH07      | HE recommend an extensive geoarchaeological assessment through boreholes and/or test-pits to inform on (as per section 6 of Geoarchaeological DBA: Preliminary Environmental Information Report Appendix 7.4): archaeological and paleoenvironmental potential; the depth and extent of significant deposits, and measures of mitigation which may include additional boreholes and/or test-pits at more intensive sampling intervals. This assessment, along with other archaeological assessments, should be used in micro-siting the route so that the intended primary mitigation measure of avoidance can be implemented. This strategy should be detailed in the Project's Outline Written Scheme of Investigation (section 7.9.3 of the Preliminary Environmental Information Report). | N                    | Information on geoarchaeology additional to that presented at PEI Report has been gathered through monitoring ground investigation (GI) interventions and using those records and logs of other GI works to develop an enhanced deposit model which has been used to inform assessment, scheme development and mitigation proposals set out in the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7). The exact location of the pipeline within the Order Limits and Limits of Deviation would be determined post-DCO consent at the detailed design stage, and the strategy for this regarding archaeology and cultural heritage is set out in the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7). |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HE        | ACH08      | A suggestion was made to include a figure with the putative projection of known raised beaches across the Project area in the Geoarchaeological desk-based assessment (Appendix 7.4 of the Preliminary Environmental Information Report) as deposits of high potential are not well mapped or dated. | Y                    | An enhanced deposit model has been produced and is presented at ES Appendix 7.5 Geoarchaeological monitoring reporting, Volume II (Document reference 6.2, DCO Volume 6); raised beach deposits are anticipated to be present in areas subject to disturbance only at the Water Recycling Plant (WRP) site and immediately to the east ((GCZ5c) Figure 2 ES Appendix 7.5 Geoarchaeological monitoring reporting, Volume II (Document reference 6.2, DCO Volume 6)), and were not observed in any GI interventions. Raised beach despoths observed in Geological Conservation Zone (GCZ) 5a and 5b are no longer within the Order Limits following the decision to use the Portsmouth Water connection to Bedhampton Springs which avoids the construction of a separate tunnel north of Bedhampton Springs. |
| HE        | ACH09      | HE commented that Department for Digital, Culture, Media and Support (DCMS) policy on Scheduled Monuments (2013) is not a guidance document, but a policy statement.                                                                                                                                 | Y                    | This document has been re-categorised as DCMS policy, reflecting HE's clarification of its status.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| HE        | ACH10      | HE added that it was pleased to see a reference to the GPA3 in Appendix 7.7 of the PEI Report. In line with this guidance, HE would expect to see further                                                                                                                                            | Y                    | All visualisations used in the production of the assessment, which have been updated for the ES, and an additional heritage-specific viewpoint VP134 (ES Figure 7.5 Heritage                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | visualisations to demonstrate the impact on the setting of the designated heritage assets, as appropriate.                                                                                                                                                                                                                                                                                                                                                                                                                                                |                      | Specific View Point from Fort Widley looking East, Volume III (Document reference 6.3, DCO Volume 6)) are cross-referenced in the text of the assessment presented in section 7.8 of ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6). GPA3 also sets out setting as a holistic perceptual concept, noting that visualisations are considered an aid to assessment and are not a precondition for, or a necessary part of that assessment. This use of visualisations as an aid to the narrative assessment of setting has been taken in the ES.        |
| HE        | ACH11      | HE noted that the PEI Report stated that intervisibility between Fort Widley and the proposed Break Pressure Tank (BPT)/Intermediate Pumping Station (IPS) E is blocked by woodland, hedgerow planting, and the Churchillian and Harbour Heights apartments. It was concluded that the construction of the Above Ground Plant (AGP) would not change the setting of the designated heritage asset. However, to firmly establish this, visualisations and viewpoints from the Fort to the proposed location of the BPT/IPS E were expected to be provided. | Y                    | The PEI Report noted that intervisibility would generally be blocked though there may be intermittent visibility from small areas of the ramparts. A visualisation from a viewpoint agreed with HE has been produced to illustrate views from the asset to the AGP (VP134: ES Figure 7.5 Heritage Specific View Point from Fort Widley looking East, Volume III (Document reference 6.3, DCO Volume 6)). Reference has also been made in the specific assessments presented in the ES to relevant Landscape and Visual Impact Assessment viewpoints referenced in the assessment of change to setting. |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HE        | ACH12      | Suggestion that designation status of designated heritage assets should be stated clearly or grouped by type.                                                                                                                                                                                                                                                                                                                                               | Y                    | Designation status of heritage assets and National Heritage List for England (NHLE) reference has been stated in ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| HE        | ACH13      | HE provided detailed feedback on Leigh Park and its significance as a park. HE is concerned for loss of the remaining legibility of the gardens following the loss of about 50% of its area to Havant Thicket Reservoir and are particularly concerned that the Pipeline works don't affect the water features of the park (The Lake and Upper Lake) and their water management systems. Avoiding further physical and visual barriers should be a key aim. | Y                    | Following the approval in 2025 of Portsmouth Water's application for two new pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's backup option for pipelines between the Water Recycling Plant (WRP) site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project (thereby avoiding Leigh Park and its setting). The Applicant's Development Consent Order (DCO) application will seek to authorise the use of Portsmouth Water's Pipelines to transfer recycled water between Bedhampton Springs and Havant Thicket Reservoir. Further information on the removal of the backup option is contained in section 5 of the Scheme Development Report (Document reference 5.10, DCO Volume 5). |
| HE        | ACH14      | HE queried the assumption that tunnelling would avoid direct disturbance of archaeological heritage assets.                                                                                                                                                                                                                                                                                                                                                 | Y                    | Tunnelling (in Section D: The Water Recycling Plant site to Portsdown Hill of the pipeline) would be through chalk bedrock and disturbance of archaeological and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                               |                      | geoarchaeological deposits would arise only at shaft locations. This has been assessed in ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| HE        | ACH15      | HE noted the biggest permanent adverse heritage impact that was reported in the PEI Report was to be on the aircraft crash site at Frith Farm but stated that HE was pleased ways to avoid this were ongoing. | N                    | There are significant constraints to Pipeline development that mean that the crash site cannot be avoided entirely. Research into the site and discussions with the Ministry of Defence (MoD) Joint Casualty and Compassionate Centre (JCCC) have identified that the pilot escaped from the aircraft before the crash, the crash was recovered by the RAF immediately after the crash and the site had been partially excavated as part of a University of Winchester research project. MoD have expressed a preference that the site be fully excavated under licence in advance of construction rather than partially disturbed. This is shown in the Statement of Common Ground with the MoD, Draft Statement of Common Ground - Ministry of Defence (Document reference 5.8, DCO Volume 5), which has been prepared and submitted with the DCO, and would continue to evolve as the DCO Examination progresses. |
| HE        | ACH16      | Statement from HE that impacts on heritage assets arising through changes to                                                                                                                                  | N                    | Archaeological investigation has not identified any waterlogged deposits that would be                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|           |            | the water environment are not detailed in the Archaeology and Cultural Heritage chapter of the PEI Report.                                                                                                                                |                      | sensitive to the changes caused by the Project in the absence of mitigation. Additionally, as a result of primary and tertiary mitigation aimed to prevent change to drainage during the construction and operation of the Project, no change to hydrology sufficient to give rise to an adverse effect would arise. ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) has been updated to reflect this assessment.                                                                                                                                                                                                                                                           |
| HE        | ACH17      | HE commented that some impacts on designated and undesignated heritage assets of national importance could be significant permanent and adverse. The potential to provide enhancement to assets has yet to be fully realised or outlined. | N                    | A full assessment of effects on heritage assets of national significance (designated heritage assets and non-designated archaeological remains of equivalent significance to a Scheduled Monument) is presented in Section 7.8 of ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6). While some designated heritage assets of national significance would be subject to temporary significant adverse effects during construction, no permanent residual likely significant adverse effects have been identified. The Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7) sets out a programme of outreach and engagement based on the process and |

| HE                              | ACH18      | HE states that it is essential to avoid or minimise any conflict between the heritage assets conservation and any aspect of the proposal, and to have clear and convincing justification for any harm.<br><br>HE requests that their consultation response is incorporated into future impact assessments.                   | Y                    | HE comments have been noted and actioned as set out above.                                                                                                                                                                                                                                                                                                                                            |
| Eastleigh Borough Council (EBC) | ACH19      | EBC stated that greater care should be taken where the Pipeline route goes near the Ancient Monument of Marwell Park Pales.                                                                                                                                                                                                  | N                    | The scheduled Park Pale at Marwell would be avoided by intrusive works carried out as part of the Project. While a small part of the monument extends into the proposed Environmental Management and Enhancement Area (EMEA) at Fisher's Pond, there would be no new planting, as this improvement relates entirely to the better management of the grassland, including removal of invasive species. |
| Hampshire County Council (HCC)  | ACH20      | HCC stated that further information is needed on how tree preservation, removal, and replacement would be managed to maintain the character of the designed landscape within Staunton Country Park and noted that trees are integral to the historic landscape of Staunton Country Park. The County Council affirmed that it | Y                    | Following the approval in 2025 of Portsmouth Water's application for two new pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's backup option for pipelines between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs                                                             |

| WCC       | ACH23      | WCC agreed with the Setting Assessment included within Table 4-1 of Preliminary Environmental Information Report Appendix 7.6.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N                    | The Applicant acknowledges this feedback.                                                                                                                                                                                                                                                                                                                                                                                                             |
| WCC       | ACH24      | <p>WCC stated that the secondary mitigation measures were deemed as appropriate. They noted that the strategy for secondary mitigation would be detailed in a project-specific Outline Written Scheme of Investigation (WSI). However, an Outline Mitigation Strategy for the ES, presented as a single Outline WSI, could not comprehensively address all survey, evaluation, and currently unknown mitigation requirements.</p> <p>WCC recommend that an agreed Outline Mitigation Strategy, which should include a public engagement and public value strategy, is included in the ES, following consultation.</p> | N                    | It was agreed with the Local Planning Authority Archaeologists that the overarching Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7) which includes provisions for archaeological research and outreach as well as cross-referencing proposals for non-investigative mitigation set out in other application documents as submitted with the ES, includes the information requested in the Outline Mitigation Strategy. |
| WCC       | ACH25      | It was noted that many measures within an Outline WSI would be undertaken at a post-consent stage, and there were discussions about intrusive evaluation work being planned for 2024. The Council stated that it was unclear whether intrusive evaluation was still planned as part of the EIA work. The need for sufficient time in                                                                                                                                                                                                                                                                                  | N                    | In addition to the non-intrusive and intrusive survey works carried out in advance of the application (reported at ES Appendix 7.3 Detailed gradiometer survey report - Phase 1, Volume II; (Document reference 6.2, DCO Volume 6), ES Appendix 7.5 Geoarchaeological monitoring reporting, Volume II (Document reference 6.2, DCO                                                                                                                    |

| Consultee | Issue code | Summary of issue raised                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | the post-DCO schedule for evaluation, reporting, and archaeological mitigation works, which may impact the construction schedule was outlined. |                      | Volume 6), ES Appendix 7.8 Detailed gradiometer survey report - Phase 2, Volume II (Document reference 6.2, DCO Volume 6), ES Appendix 7.9 Trial trenching report, Volume II (Document reference 6.2, DCO Volume 6) and ES Appendix 7.10 World War II Crash Site Pigeon House Farm Technical Note and geophysical survey report, Volume II (Document reference 6.2, DCO Volume 6)), the construction programme for the Project has regard to the need to carry out archaeological survey in advance of construction works. Archaeological investigations as set out in the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7) would be undertaken post-consent to allow for a detailed scope of archaeological investigation and mitigation to be agreed with the relevant Local Planning Authority Archaeologists and HE. This approach has been agreed with the Local Planning Authority Archaeologists and HE through subsequent consultation as recorded in the relevant Statements of Common Ground (Document reference 5.8, DCO Volume 5). |
| WCC       | ACH26      | WCC acknowledged that monitoring was proposed for landscape restoration areas, including archaeological earthworks at 11                       | N                    | Design has ensured that the best-preserved earthworks would be avoided by the proposed works. Mitigation proposals for the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           |            | Acre Pond, Fishers Pond, and Marwell, unless direct impacts to this medieval monument can be avoided.                                                                                                                                                                                                                     |                      | earthworks that would not be avoided are set out (or cross-referenced) in the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7), including pre-works survey of earthworks, archaeological investigation and sensitive reinstatement to pre-works condition with appropriate monitoring of works.                                                                                                                                                                               |
| WCC       | ACH27      | WCC agree that the tallest building at IPS G is closer to Titchfield Lane, furthest away from Grade II* listed building at Park Place.                                                                                                                                                                                    | N                    | The Applicant notes this feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WCC       | ACH28      | WCC note the effects on the built environment due to the change in setting but commend that impacts within the Winchester area would not be greater than reported in the PEI Report.                                                                                                                                      | N                    | The Applicant notes this feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| WCC       | ACH29      | WCC commented that there would be adverse effects on buried archaeological and geoarchaeological/paleoenvironmental deposits. In worst case scenarios, these remains could be entirely removed by construction work, resulting in a major permanent adverse impact, although the magnitude of the effects might be lower. | N                    | Following the application of an agreed scheme of mitigation there would be no residual lasting significant adverse effects on archaeological or geoarchaeological remains. Mitigation proposals for archaeological remains and geoarchaeological deposits are discussed in section 7.4 of ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) and set out in more detail in the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7). |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WCC       | ACH30      | WCC noted that there would be no lasting effect on historic landscapes of Wickham Park deer park and Bishops Waltham deer park, but effects on parts of the medieval fishpond known as 1 Acre Pond partly linked to Marwell Park would result in <i>“moderate adverse effects that would be significant and adverse in the absence of mitigation”</i> . | N                    | Mitigation proposals for the earthworks at Fisher's Pond which would preclude any lasting significant adverse effect, include the adoption of trenchless crossing of Winchester Road, which follows a medieval fishpond dam and through siting of launch/receive pits within the fishponds rather than across earthworks. Additional mitigation would comprise restoration of any disturbed earthworks and archaeological investigation. These measures are discussed in ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) and set out in more detail in the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7). |
| WCC       | ACH31      | WCC requested that further information is included in the ES on how conclusions regarding impacts to non-designated heritage assets outside of the Project area from inundation, dewatering or vibration/compaction have been reached.                                                                                                                  | N                    | Archaeological investigation has not identified any waterlogged deposits that would be sensitive to the changes caused by the Project in the absence of mitigation whether within or outside the Order Limits. Additionally, as a result of primary and tertiary mitigation aimed to prevent change to drainage during the construction and operation of the Project, no change to hydrology sufficient to give rise to an adverse effect would arise. Effects arising from compaction would not occur outside areas that would be directly disturbed, and vibration                                                                                                                       |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                     | Issue code | Summary of issue raised                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               |            |                                                                                                                                                                                                                                                          |                      | would be managed to acceptable levels for human health and disturbance that are significantly lower than those required to give rise to any physical changes to heritage assets. ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) has been updated to reflect this assessment.                                                                                                                                        |
| WCC                           | ACH32      | WCC stated that the summary of assessed residual effects, as presented in the PEI Report, was agreed.                                                                                                                                                    | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                |
| WCC                           | ACH33      | With reference to the next steps outlined in the PEI Report, WCC asked for more information on the statements 'complete geoarchaeological investigation (2024)' and 'complete intrusive archaeological surveys (2024-2025)'.                             | N                    | Following this consultation response, it was clarified with WCC that these comments reflected completion of the agreed surveys, i.e. the monitoring of GI work and the targeted trial trenching (Document reference 5.9, DCO Volume 5). These are reported at ES Appendix 7.5 Geoarchaeological monitoring reporting, Volume II (Document reference 6.2, DCO Volume 6) and ES Appendix 7.9 Trial trenching report, Volume II (Document reference 6.2, DCO Volume 6). |
| Fareham Borough Council (FBC) | ACH34      | FBC's Conservation Planner stated that the submitted PEI Report indicated that the overall Project would significantly impact both archaeology and built heritage assets along most of the route corridor. However, it was also noted that due to recent | N                    | Effects arising through change to setting of heritage assets, considering both temporary and permanent effects, have been assessed in section 7.8 of ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | changes to the proposed Pipeline routes, the section passing through Fareham is quite limited, resulting in a relatively small historic environment impact within the Fareham Borough boundary. It was also noted that there are two levels of identifiable visual impact which are temporary effects on the setting of buildings and monuments during the construction phase, and the permanent effects of constructing long-term surface facilities required for the continued operation of the proposed Pipeline routes. |                      | <p>Direct physical effects arising through disturbance of archaeological remains have either been avoided or can effectively be mitigated to non-significant through application of the works set out in the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7).</p> <p>Some temporary effects arising through change to setting during construction would be significant and adverse, but following restoration lasting effects on heritage assets within the vicinity of the Project have mostly been avoided or can be adequately mitigated to non-significant, and the comment on the limited nature of any effect in Fareham is acknowledged.</p> <p>The impacts and effects on people's views and the landscape have been assessed and considered in the design of the Project, as summarised in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6).</p> |
| FBC       | ACH35      | It was highlighted that the temporary visual impact of the construction phase would be noticeable across the wider landscape and could adversely affect the setting of nearby heritage assets. However, FBC stated that proper post-construction reinstatement                                                                                                                                                                                                                                                              | N                    | Proposals for reinstatement have been considered in the assessment presented in section 7.8 of ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) and are set out in detail in the Outline Landscape and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                              |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                      | range of measures have been embedded into the Project design to avoid or reduce environmental effects. Through the implementation of mitigation, no significant residual ecological effects are anticipated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Havant Borough Council (HBC) | ACH37      | HBC stated that the Project has the potential to impact on both designated and non-designated heritage assets. Specifically, there is potential for harm to the Old Bedhampton Conservation Area due to Construction Compound B2-1. The Council recommended that a heritage impact assessment is produced to confirm level of harm and mitigation. The Council cited the Old Bedhampton Conservation Area as an example where a more detailed heritage impact assessment could establish any potential impacts to the conservation area. | N                    | <p>An assessment of effects on the Old Bedhampton Conservation Area is set out in section 7.8 of ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>The Applicant assumes the consultee is referring to Construction Compound B1-2. One veteran tree canopy is located approximately 14m from this Construction Compound. ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity, including ancient and veteran trees. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Primary mitigation includes no loss or deterioration of ancient and veteran trees as set out in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). Through the implementation of mitigation, no residual</p> |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                                                             |            |                                                                                                                                                                                                                                                                                                       |                      | likely significant adverse effects on ecological features are anticipated.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Natural England (NE)                                        | ACH38      | NE encouraged ongoing engagement with stakeholders to ensure impacts on the historic environment are minimised. NE commented that they expect sites to be restored following the completion of works.                                                                                                 | Y                    | <p>Engagement is ongoing with NE, HE and other key stakeholders as the Project progresses to ensure that impacts on the historic environment are minimised.</p> <p>Archaeological remains and other heritage assets have been considered in route selection and project development. Proposals for reinstatement have been considered in the assessment presented in section 7.8 of ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) and are set out in detail in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7).</p> |
| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                                                                                                                                                                                                       |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| PIL                                                         | ACH39      | It was highlighted that the proposed Pipeline route will cross the Bishops Waltham Park Lug, a heritage feature, a mound 16½ feet broad and some 6 feet high, with trees planted on the top to form a barricade around the medieval Park of Bishops Waltham. It was suggested that should be avoided. | N                    | The crossing of the Park Lug has been selected as part of a multi-disciplinary design process as set out in ES Chapter 4 Consideration of alternatives, Volume I (Document 6.1, DCO Volume 6). This crossing is at a location where the lug is less well preserved and tree cover less dense, and the working width in this area has been reduced to minimise disturbance and visual change to the Park Lug. Any disturbance                                                                                                                                                                                   |

|                                                  |            |                                                                                                                                                         |                      | would be subject to archaeological investigation in line with the proposals set out in the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7), and any earthworks restored in line with the reinstatement strategy in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) on completion of works.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                         |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Wider community                                  | ACH40      | The respondent commented that the route under Highbridge Road, Colden Common, is close to gravel pits. Mesolithic stone hand axes have been found here. | N                    | The Historic Environment baseline report, ES Appendix 7.1, Volume II (Document reference 6.2, DCO Volume 6), and Geoarchaeological DBA, ES Appendix 7.4, Volume II (Document reference 6.2, DCO Volume 6), have considered the potential presence of early prehistoric material and deposits likely to contain such material within the Order Limits and including the area around Highbridge Road, and reference has been made to the results of Ground Investigation works to refine understanding of the potential presence of these deposits (ES Appendix 7.5 Geoarchaeological monitoring reporting, Volume II (Document reference 6.2, DCO Volume 6)). Archaeological investigations as set out in the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7) would be undertaken post-consent |

|                 |            |                                                                                                                                                                                                                                             |                      | to allow for a detailed scope of archaeological investigation and mitigation to be agreed with the relevant Local Planning Authority Archaeologists and HE.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Wider community | ACH41      | The respondent stated that a major concern was that the proposed Pipeline route intersects Roman roads at five points.                                                                                                                      | N                    | <p>Whilst the design of the Project has sought to minimise disturbance of these features, the Pipeline crosses the projected or inferred lines of Roman Roads at Wickham (IPS-G), Meadow View Farm, Treefield Farm, and Brookland Farm.</p> <p>These locations would be considered within the development of an agreed scheme of archaeological investigation so that any effects can be adequately mitigated. Archaeological investigations as set out in the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7) would be undertaken post-consent to allow for a detailed scope of archaeological investigation and mitigation to be agreed with the relevant consultees.</p> |
| Wider community | ACH42      | It was noted that construction would significantly impact historic conservation areas, including Old Bedhampton, due to traffic for new shafts, tunnels, and pipelines. Additionally, the second reservoir Pipeline option may involve open | N                    | Conservation areas were considered during scheme development and as a result there are no works proposed within any conservation areas other than Old Bedhampton. No works are proposed in Staunton Country Park (Leigh Park) or the Sir George Staunton Conservation Area which                                                                                                                                                                                                                                                                                                                                                                                                                           |

|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>cutting through Staunton Country Park's historic parkland.</p> <p>Additionally, the wider community noted that living in a Conservation Area means that any construction, whether temporary or permanent, would require careful consideration.</p> |                      | <p>contains it as a result of the removal of the second pipeline option between Havant Thicket Reservoir and the WRP. An assessment of effects on the Old Bedhampton Conservation Area is set out in section 7.8 of ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) and noted a significant adverse effect during the construction period as a result of the construction of a section of above-ground pipeline, reducing to non-significant on completion of construction.</p> <p>Change to traffic within Bedhampton is considered in ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6). With the measures detailed in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) and Traffic Management Strategy (Document reference 7.3, DCO Volume 7), no significant effects are predicted with regards to traffic and transport in the Bedhampton area.</p> |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b>                      |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Winchester City Council (WCC), Langstone Harbour Board, Havant Borough Council (HBC) | TFB01      | <p>WCC noted that Table 8-17 of the Preliminary Environmental Information Report (PEI Report) showed adverse potentially significant effects and moderate beneficial significant effects on statutory designated sites in the operational stage. The Council affirmed that mitigation measures must be implemented to avoid and/or mitigate adverse impacts on statutory designated sites and therefore maintain the integrity of those sites. WCC suggested that these are updated within the ES and the Habitats Regulations Assessment.</p> <p>Langstone Harbour Board noted that construction cannot avoid coinciding with sensitive times for overwintering waders and wildfowl. The board outlined this as a concern.</p> <p>HBC noted that it was clear from its review of the ecological documentation presented in the PEI Report and the Outline Construction Environmental Management Plan (CEMP), that there remained a lack of full detail in some areas due to ongoing</p> | N                    | <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity, including statutory and non-statutory designated sites. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Through the implementation of mitigation, no residual likely significant adverse effects on ecological features are anticipated.</p> <p>A Habitats Regulations Assessment - Stage 2 Appropriate Assessment and Marine Conservation Zone - Stage 1 Assessment (Document reference 5.2, DCO Volume 5) is submitted with the DCO application and provides detail on any potential impact pathways from the Project and any mitigation that would be implemented. This concluded that with the consideration of further design details and with the application of mitigation measures, there would be no impacts which undermine conservation objective or result in an adverse effect on the integrity of any Habitats sites or Marine Conservation Zone</p> |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>ecological assessments and design development. The Council requested to be kept informed as the Project progresses and advised it was happy to provide further comments if required.</p> <p>In addition, HBC advised that there would be direct and indirect impacts to sites of international, national and local importance. For example, Sites of Importance for Nature Conservation (SINC)s in the Havant Thicket area would be affected by trenching and habitats would need to be reinstated.</p> |                      | <p>(MCZ). As part of this assessment, engagement has been undertaken with NE to ensure appropriate mitigation for impacts on Solent Waders and Brent Goose Strategy (SWBGS) sites.</p> <p>Construction works would be timed to avoid the non-breeding bird season within candidate SWBGS site W03G and an adjacent buffer. If piling is required within 200m of candidate site H130 than construction works would be timed to avoid the non-breeding bird season. Further mitigation, as set out in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), includes (but is not limited to) the use of acoustic and visual screening, soft start approach for piling work and watching briefs two hours either side of high tide. If 1% or more of the qualifying species population is present during proposed enabling and construction works, works would cease.</p> <p>HBC is an attendee of the Biodiversity and Water EIA Working Group. This forum has been used to update stakeholders on the progress of the ecological assessment and design development. The Proposed Development does not include any trenching</p> |

| Eastleigh Borough Council (EBC), Fareham Borough Council (FBC), Portsmouth City Council (PCC), Natural England (NE), HBC | TFB02      | <p>EBC raised several ecological queries related to the construction and operation of the proposed Pipeline route, including potential ancient woodlands having been identified: Chestnut Gully Wood SINC EA0102 and the Mount, Fair Oak and Horton Heath SINC EA0098. The Council stated a minimum 15m buffer between the construction area and these woodlands will therefore be required. EBC also noted that a habitat reinstatement plan will be submitted in the DCO application.</p> <p>EBC acknowledged information provided on section 8.8.35 of the Preliminary Environmental Information Report that it had been stated that District Level Licensing (available in Eastleigh Borough) would be used. It also stated that Great Crested Newts are considered absent from the Zone of Influence (Zol). The Council</p> | N                    | <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity, including ancient woodlands, statutory and non-statutory designated sites and Great Crested Newts. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Through the implementation of mitigation, no residual likely significant adverse effects on ecological features from the Project are anticipated.</p> <p>Primary mitigation measures include a minimum of 15m horizontal and 4m vertical exclusion zone from any construction works to designated ancient woodland habitat and no loss or deterioration of ancient and veteran trees. As set out in the Outline Construction Environmental Management Plan (Document</p> |

|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>said it was unclear if this statement only applied to HBC and EHDC which do not have District Level Licensing. It also added that in Eastleigh Borough, Great Crested Newts are present within the ZoI (within 500m), and the draft Order Limits pass through red and amber zones.</p> <p>FBC advised that under the Council's Service Level Agreement with HCC, one of its Senior Ecologists has reviewed the submitted information where it relates to the proposed Pipeline route through Fareham Borough. It was reported that the ongoing ecology surveys seemed to be in order and the ecologist noted that it had no concerns at the time, until a mitigation strategy is submitted.</p> <p>PCC discussed the naval estate off Farlington Avenue, Portsmouth Water land south of Portsdown Hill Road and Gilman Lane. The Council added that although mostly outside the responsibility of PCC these areas hold relic fragments of chalk grassland and can be considered as part of the biodiversity network of the hill and added that Gilman Lane has a population of glowworms.</p> <p>HBC noted that the intention to update desk-based and field assessments as</p> |                      | <p>reference 7.1, DCO Volume 7), Chestnut Gully Wood SINC and the Mount, Fair Oak and Horton Heath SINC are avoided by the Project.</p> <p>Where the local planning authority is signed up to a Great Crested Newts District Licence scheme an assessment of effects on Great Crested Newts has not been carried out, since any potential adverse effects would be mitigated through the District Licence. Where the Local Planning Authority is not signed up to a Great Crested Newts District Licence scheme (PCC and HBC) an assessment has been carried out.</p> <p>NatureSpace has produced a District Licence Report which is included with the DCO application. This sets out how District Licence would be applied to the Project.</p> <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) includes survey reports for protected and notable species as technical appendices 8.1 to 8.8. Temporary loss of chalk grassland would occur at Field to West of Gillman Road SINC at Farlington. A bespoke habitat reinstatement plan would be produced for the SINC, as set out in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume</p> |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                             | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                       |            | <p>necessary was welcomed. The Council also acknowledged ecological field surveys were ongoing and the results of these would be provided in the future EIA submission.</p> <p>NE noted that their marine team had been reviewing documents where relevant and stated it would continue to do so as the Project progresses. NE added that PEI Report Appendix 8.5 Ornithology (Confidential) was still being reviewed by their marine team and stated it would send comments once finalised.</p> |                      | <p>7) and Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). This may include, but is not limited to, turf stripping and storage, followed by reinstatement. Given the small-scale nature of the works in this location, effects on glow-worm are considered to be short-term, temporary and non-significant.</p> <p>HBC, EBC, FBC and PCC are all members of the Biodiversity and Water EIA Working Group. This forum is used to update stakeholders on the progress of the ecological assessment and design development.</p> <p>Comments from NE have since been received for PEI Report Appendix 8.5 Ornithology (Confidential). These comments have been considered as part of the ES assessment and applied to ES Appendix 8.5 Ornithology (Confidential), Volume II (Document reference 6.2, DCO Volume 6).</p> |
| Environment Agency (EA), WCC, HBC, NE | TFB03      | The EA noted that it had no significant concerns in relation to terrestrial and freshwater ecology. In general, the EA was satisfied that the PEI Report appropriately covers this topic. However, the Agency raised specific comments which should be                                                                                                                                                                                                                                           | N                    | The Applicant's response to specific comments can be found in TFB04 and TFB10.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                      |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>addressed, these are covered in TFB04 and TFB10.</p> <p>WCC noted that in regard to Chapter 8 of the PEI Report, the approach, methodology and next steps were considered to be appropriate. It was noted that the assessments were based on current data and the worst case scenario, further assessments were being made which would inform the ES.</p> <p>HBC noted that it was considered that the proposed method of carrying out the ecological assessment for the EIA was acceptable. These had been discussed with key stakeholders via regular workshops, and there have been opportunities to comment and refine the scope of receptors considered.</p> <p>NE supported the proposed habitat enhancements at the high lift pumping station sites which include woodland, chalk grassland and parkland creation, discussed in the Consultation Brochure.</p> |                      |                                                                                                                                                                                                                               |
| EA, PCC   | TFB04      | The EA stated it was unclear why Atlantic Salmon were not highlighted for the River Itchen Special Area of Conservation (SAC). It was also noted that there was no explanation as to why Bullhead had been                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | N                    | Although they were not specifically listed in Preliminary Environmental Information Report paragraph 8.8.10 for the River Itchen SAC, Atlantic salmon and bullhead were assessed in the Preliminary Environmental Information |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>excluded. The EA stated that both Atlantic Salmon and Bullhead must be included within the ES.</p> <p>The EA emphasised the need to include Atlantic Salmon and Bullhead in the River Itchen SAC, raising concerns about the assessment of 'significance,' particularly regarding otter disturbance, and seeking clarification on suitable displacement habitats and the permitting process for fish rescue activities.</p> <p>Similarly, the Councils' emphasis on habitat mapping, impact mitigation, and survey clarity demonstrates a shared concern for ensuring impacts are thoroughly understood and effectively managed.</p> <p>PCC's focus on habitat restoration techniques, such as avoiding bought-in seed, conserving species-rich grasslands, and restoring habitats complements this by proposing specific ecological actions to enhance habitat connectivity and biodiversity, particularly around key sites like calcareous grasslands and ecological units like Portsdown.</p> |                      | <p>Report and are assessed, including in relation to the River Itchen SAC, in ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6). They are also assessed within the Habitats Regulations Assessment - Stage 2 Appropriate Assessment and Marine Conservation Zone - Stage 1 Assessment (Document reference 5.2, DCO Volume 5) that is submitted with the DCO application.</p> <p>The assessment of likely significant effects on terrestrial and freshwater biodiversity is undertaken in accordance with the Guidelines for Ecological Impact Assessment in the UK and Ireland. This guidance has been used when evaluating sites, habitats and species, including otter. Section 8.5 of ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) outlines the assessment methodology, including the assessment of significance. Should fish rescue be required this would be undertaken prior to the start of any construction work, including enabling, under a method statement that would be agreed with the EA and delivered by the Ecological Clerk of Works, as outlined in the Outline Construction Environmental</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                                                                   |                      | <p>Management Plan (Document reference 7.1, DCO Volume 7).</p> <p>The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) includes principles to guide the detailed design of proposed grassland planting. Principles listed include the consideration of soil reuse (including chalk from tunnelling activities) in areas of new chalk grassland planting and the use of grass seed harvested from local donor grassland sites. A habitat reinstatement strategy forms part of the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) and provides information on seeding and planting specifications, including plant mixes. Chalk grassland habitat would be provided to support the Portsdown SSSI to the south, as detailed within the Design Principles Document (Document reference 5.11, DCO Volume 5).</p> |
| EA        | TFB05      | The EA requested clarification on how 'significance' had been determined. The EA stated if disturbance and displacement resulted in a female otter abandoning a natal holt with cubs, which don't survive, and queried if this was minor adverse, not significant as reported. The EA deemed that there were inconsistencies with | N                    | ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) presents a more detailed assessment of the impacts on otters. It is considered that primary mitigation addresses the risk to natal holts by avoiding these features, and the magnitude is therefore reduced. The Applicant is in agreement that                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | assessment methodology, and requested clarity on suitable displacement habitats, as well as noting that fish rescue and/or relocation would be subject to permits and authorisations from the EA. |                      | <p>disturbance of a natal holt would not be an insignificant effect. If a natal site is confirmed or suspected to support otter cubs, an exclusion buffer would be extended to 200m of the natal site, with works within this buffer being suspended for approximately eight to ten weeks until it has been confirmed the cubs are mobile, or presence of cubs is ruled out.</p> <p>The assessment methodology for freshwater receptors is in line with published guidance and good practice as detailed in ES Appendix 8.9 Freshwater Ecology, Volume II (Document reference 6.2, DCO Volume 6). After the issue was raised, the assessment methodology was discussed and agreed with environmental regulators including the EA and NE. The requirement for fish rescue and/or relocation would be determined after pre-construction habitat suitability assessments at all trenched open-cut watercourse crossings have been undertaken. Should fish rescue be required this would be undertaken prior to the start of any construction work, including enabling, under a method statement that would be agreed with the EA and delivered by the Ecological Clerk of Works, as outlined in the Outline Construction Environmental</p> |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                      | Management Plan (Document reference 7.1, DCO Volume 7).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| WCC       | TFB06      | <p>WCC advised that at present a number of adverse impacts were anticipated without mitigation. Section 8.10 and table 8-17 of the PEI Report provided a summary of the residual impacts (after mitigation). The Council noted that while lots of mitigation measures were proposed, it was not clear how each potential significant effect detailed in section 8.8 of the PEI Report was being addressed. The Council requested that a table is produced showing matched up anticipated impacts with the mitigation measures and residual effects.</p> <p>WCC requested the below suggestions to be included in the ES submission:</p> <ul style="list-style-type: none"> <li>Engagement with the Solent Wader and Brent Goose Strategy (SWBGS) Steering Group is supported. This is essential to agree and secure appropriate mitigation.</li> </ul> | N                    | <p>Surveys and mitigation development was ongoing during the production of the PEI Report and the residual effects listed were only potential at that stage. ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed methodology and impact assessment on terrestrial and freshwater biodiversity. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Through the implementation of mitigation, no residual likely significant adverse effects on ecological features from the Project are anticipated.</p> <p>Table 8-18 in ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) clearly links potential effects to mitigation for construction and operation.</p> <p>Habitats Regulations Assessment - Stage 2 Appropriate Assessment and Marine Conservation Zone - Stage 1 Assessment (Document reference 5.2, DCO Volume 5) is submitted with the DCO application and provides detail on any potential impact</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                      |                      | <p>pathways from the Project and any mitigation that would be implemented. As part of this assessment, engagement has been undertaken with NE (who also have a role on the SWBGS Steering Group) to ensure appropriate mitigation for impacts on SWBGS sites. This concluded that with the consideration of further design details and with the application of mitigation measures, there would be no impacts which undermine conservation objective or result in an adverse effect on the integrity of the Habitats sites or Marine Conservation Zones (MCZ).</p> <p>EA, WCC, SDNPA, PCC, HBC and NE have been engaged as part of bilateral meetings and the Biodiversity and Water EIA Working Group. These forums are used to update stakeholders on the progress of the ecological assessment and design development as well as discuss any issues.</p> |
| WCC       | TFB07      | <p>Respondents made suggestions on which updates should be made to various figures within the ES.</p> <p>These suggestions are bulleted below:</p> <ul style="list-style-type: none"> <li>15m ancient woodland buffers should be shown within Figure 8.4.</li> </ul> | N                    | <p>The ancient woodland and ancient and veteran tree figure is no longer figure 8.4. A 15m ancient woodland buffer is shown on ES Figure 8.5 Ancient woodland and ancient and notable trees within the desk study area, Volume III (Document reference 6.3, DCO Volume 6).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|            |            | It was suggested that this should be included in Appendix 8.6 of the PEI Report, or within a separate figure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      | the largely temporary nature of the impacts from the Project, it is considered proportionate to assume level of presence and mitigate accordingly rather than carry out field surveys, therefore field surveys were not deemed as necessary. ES Appendix 8.8 Other notable fauna, Volume II (Document reference 6.2, DCO Volume 6) and ES Figure 8.48 Other notable fauna local record data within the desk study area, Volume III (Document reference 6.3, DCO Volume 6) detail the reptiles and invertebrate desk studies.                                                                                                                                                             |
| HBC, SDNPA | TFB11      | <p>SDNPA noted that some of the effects on these matters were considered to be 'significant' in Chapter 8 Terrestrial Biodiversity of the PEI Report, without appropriate mitigation having been implemented. SDNPA stated that it would continue to work with the Applicant in order to ensure a robust package of embedded and secondary mitigation is secured through the DCO.</p> <p>HBC noted that the site of the proposed WRP and high lift pumping station is known to support a large population of the County Notable Hairy Buttercup as well as other species such as Pyramidal Orchid and Corky-fruited Water-dropwort.</p> | N                    | <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Through the implementation of mitigation, no residual likely significant adverse effects on ecological features from the Project are anticipated.</p> <p>The WRP site has been subject to full NVC surveys which are used in conjunction with an HBIC data search in the assessment. All these species are known to be or have been present on the site and this information has</p> |

| Consultee    | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              |            | Therefore, it was suggested that these records should appear on an updated HBIC data search. Updating field surveys can be carried out as appropriate (given the limitations arising from drought conditions noted in 2022).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                      | been factored into the assessment. Further detail can be found in ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) and ES Appendix 8.2 Habitats, Volume II (Document reference 6.2, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| PCC, WCC, NE | TFB12      | <p>PCC suggested that reseedling with bought in material should be avoided, so an approach to revegetation through temporary translocation or storage of what is there and/or inoculation with locally gathered seed was recommended. It was also suggested that consideration should be given to conserving viable species-rich grassland, which might be lost during the works, through establishing it on other parts of the hill.</p> <p>PCC added that there was an opportunity to increase the diversity of disturbed areas that were not currently species-rich by applying suitable reinstatement techniques. If any secondary woodland is removed an assessment should be made as to whether this should be reinstated, or the cleared ground added to the area of grassland to better connect this habitat across the hill. Secondary woodland and self-established scrub blocks add visual and ecological</p> | N                    | <p>The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) includes information on protection of biodiversity features, habitat creation or enhancement (including aftercare) and the long-term management and monitoring to ensure the successful establishment of new habitats.</p> <p>A habitat reinstatement strategy forms part of the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) and provides information on seeding and planting specifications, including plant mixes. Principles to guide the detailed design include the consideration of soil reuse (including chalk arisings from tunnelling activities) in areas of new chalk grassland planting and the use of grass seed harvested from local donor grassland sites. Chalk grassland habitat would be provided to support the Portsdown SSSI to the south, as detailed within the Design Principles</p> |

|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>diversity. PCC also provided feedback on the following areas - Naval estate off Farlington Avenue, Portsmouth Water land south of Portsdown Hill Road and Gilman Lane. It was noted that these areas contain areas of calcareous grassland that should be conserved as those on open spaces. Portsdown was noted as an ecological unit that should be maintained in an intact state to facilitate ecological connectivity.</p> <p>PCC also noted, with regard to principles for restoration, that the phase 2 botanical survey is to establish the vegetation baseline in areas of planned disturbance. The Council requested that a strategy for conservation is confirmed, mitigation, or restoration of any valuable habitats to be damaged. The revegetation should accord with the Local Nature Recovery Strategy (LNRS) in terms of habitat connectivity and favouring key habitats.</p> <p>It was also noted by PCC that there should be coordination to ensure minimisation of disturbance. Consideration of HCC's LNRS and ecologically informed perspective should be given along the entire length of the Project. The Project has the potential to hinder or help landscape wide habitat connectivity.</p> |                      | <p>Document (Document reference 5.11, DCO Volume 5).</p> <p>No secondary woodland is due to be removed to facilitate construction of the Project. The Pipeline would be tunnelled under the Naval estate off Farlington Avenue and Portsmouth Water land south of Portsdown Hill. Temporary loss of a small area of chalk grassland may occur at Farlington. This would be mitigated through a sensitive clearance approach, which may include, but is not limited to, turf stripping and storage, followed by reinstatement.</p> <p>National Vegetation Classification (NVC) surveys have taken place, further details of which can be found in ES Appendix 8.2 Habitats, Volume II (Document reference 6.2, DCO Volume 6). The Hampshire LNRS was taken into consideration and informed the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) and the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7). The statutory BNG metric and condition assessments and are submitted with the DCO application.</p> <p>ES Chapter 6 Air quality and odour, Volume I (Document reference 6.1, DCO Volume 6) includes ammonia modelling and calculations.</p> |

| NE        | TFB14      | <p>NE advised that ammonia sourced from traffic emissions should be included for assessment within the Local Plan Habitats Regulations Assessment, as the impact from this source on designated sites was unclear.</p> <p>NE also noted that in a recent Technical Working Group meeting and EIA workshop meeting by NE, the Applicant was encouraged to explore further if additional chalk grassland could be created with any chalk arisings from the construction process.</p> | N                    | <p>ES Chapter 6 Air quality and odour, Volume I (Document reference 6.1, DCO Volume 6) includes ammonia modelling and calculations. This data has informed the assessment in ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) and the Habitats Regulations Assessment – Stage 2 Appropriate Assessment and Marine Conservation Zone – Stage 1 Assessment (Document reference 5.2, DCO Volume 5).</p> <p>The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) includes principles to guide the detailed design of proposed grassland planting. Principles listed include the consideration of soil reuse (including chalk arisings from tunnelling activities) in areas of new chalk grassland planting and the use of grass seed harvested from local donor grassland sites.</p> |
| NE        | TFB15      | NE noted that the method for assessing in combination effects had changed due to a number of high-profile appeal decisions, and as such ' <i>a detailed in-combination</i>                                                                                                                                                                                                                                                                                                         | N                    | Where the in-combination effects for terrestrial and freshwater biodiversity are inherently assessed, for example, where the noise and vibration of construction activity could result in impacts on protected species,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Consultee                       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                                 |            | <i>assessment with other plans/projects in the area and with Local Plans is required.'</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                      | these are reported within ES Chapter 8 Terrestrial and Freshwater biodiversity, Volume I (Document reference 7.5, DCO Volume 7). However, where a feature is affected by multiple topics and there is the potential for significant in-combination effects to occur, these aggregated effects are reported within ES Chapter 20 Cumulative and in-combination effects, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                             |
| Test Valley Borough Council, NE | TFB16      | <p>Test Valley Borough Council highlighted the importance of the River Test and its tributaries as highly valued chalk streams with significant portions designated as nationally important.</p> <p>NE acknowledged that the application (Project) site is in close proximity to and hydrologically connected to designated Habitats sites (previously referred to as European sites) and therefore has the potential to affect interest features. Habitats sites are afforded protection under the Conservation of Habitats and Species Regulations 2017, as amended (the 'Habitats Regulations'). It was noted that the Project documentation confirmed the need to undertake a Habitats Regulations Assessment.</p> | N                    | A Habitats Regulations Assessment – Stage 2 Appropriate Assessment and Marine Conservation Zone – Stage 1 Assessment (Document reference 5.2, DCO Volume 5) is submitted with the DCO application and provides detail on any potential impact pathways from the Project and any mitigation that would be implemented. As part of this assessment, engagement has been undertaken with NE to ensure appropriate mitigation for impacts on SWBGS sites. This concluded that with the consideration of further design details and with the application of mitigation measures, there would be no impacts which undermine conservation objective or result in an adverse effect on the integrity of the Habitats sites or MCZ, including those listed by NE as relevant to the Project. |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           |            | <p>NE also acknowledged that the following internationally designated sites, SAC and Special Protection Area (SPA) relevant to the Project:</p> <ul style="list-style-type: none"> <li>▪ River Itchen SAC</li> <li>▪ Chichester and Langstone Harbour SPA and Ramsar (SPA)</li> <li>▪ Solent Maritime SAC</li> <li>▪ South Wight Maritime SAC</li> <li>▪ Solent and Isle of Wight Lagoons SAC</li> <li>▪ Portsmouth Harbour SPA and Ramsar</li> <li>▪ Solent and Southampton Water SPA and Ramsar</li> <li>▪ Solent and Dorset Coast SPA</li> <li>▪ River Meon Compensatory SAC habitat</li> </ul> <p>NE considered that the designated sites at risk from local impacts were those within 200m of a road with increased traffic, which featured habitats that are vulnerable to nitrogen deposition/acidification. NE acknowledged that impacts to Chichester Harbour SSSI are likely to be minimal due to the site being located 1.0 km from construction works. It highlighted that best</p> |                      | <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed terrestrial and freshwater biodiversity impact assessment. This includes all the internationally, nationally and locally designated sites listed by NE aside from Moorgreen Meadows SSSI due to its distance from the Project and lack of impact pathways.</p> <p>This impact assessment includes an assessment of the effects of air quality of the affected road network and effects on SPA functionally linked land. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Through the implementation of mitigation, no residual likely significant adverse effects are anticipated on any designated sites, or the features for which these sites are designated.</p> <p>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) would manage effects on local wildlife during construction. This includes the implementation of good practice measures, including complying with relevant protected species legislation, implementation of appropriate buffer zones and timing of works for the relevant ecological features.</p> |

|           |            | as it is within 2km of the draft Order Limits. Clarification was requested on this point.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| NE, NH    | TFB17      | <p>NE highlighted that it does not hold locally specific information on local sites and recommended further information was obtained from appropriate bodies. It was suggested that emerging Local Nature Recovery Strategies may also provide further useful information.</p> <p>NE noted there are a number of Sites of Importance for Nature Conservation (SINC)s and Residential Visual Envelope of Influence (RVEI) within 250m of the draft Order Limits for the Project as outlined in Appendix 8.1 and Table 3-4 of the PEI Report, these sites should be avoided wherever possible and restored if any damage does occur. It was also recommended that that opportunities to enhance these sites are explored as part of BNG commitments.</p> <p>Feedback was provided by NE on the Ornithological chapter (confidential chapter) and noted there appeared to have been no mention of terns in either document, that the works are located within Chichester and Langstone Harbours SPA and near to some key nesting areas</p> | N                    | <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity. This includes considering Local Nature Recovery Strategies, SINC)s and RVEIs, details of which were obtained from the relevant local record centres. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Through the implementation of mitigation, no residual likely significant adverse effects on ecological features from the Project are anticipated.</p> <p>Although not yet a requirement for NSIPs, the Project has voluntarily committed to the delivery of at least 10% BNG. Engagement has been undertaken with NE to discuss opportunities for BNG and enhancements for the Project. These opportunities are detailed within ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) and the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7). They would be delivered through a combination of on-site</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>(including areas with active restoration work to increase shingle volume). NE said these should be considered further. If surveys had not been undertaken then British Trust for Ornithology (BTO) counts should be used, along with Royal Society of Protection of Birds (RSPB) held for this area.</p> <p>NH noted the proposed maintenance and aftercare of the site including measures to avoid impacts on the non-statutory designated sites and retained habitats.</p> |                      | <p>Environmental Mitigation and Enhancement Areas (EMEAs) and offsite through partnerships and off-site provision. BNG calculations based on the statutory metric for the Project have been undertaken and are reported within the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7).</p> <p>The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) includes information on protection of biodiversity features, habitat creation or enhancement (including aftercare) and the long-term management and monitoring to ensure the successful establishment of new habitats. A habitat reinstatement strategy forms part of the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) and provides information on seeding and planting specifications, including plant mixes.</p> <p>ES Appendix 8.5 Ornithology, Volume II (Document reference 6.2, DCO Volume 6) has been updated since the Summer 2024 Consultation. This reports the findings of desk study data and targeted bird field surveys undertaken to establish the baseline. Terns are included in the report.</p> <p>A Habitats Regulations Assessment – Stage 2 Appropriate Assessment and Marine</p> |

This concluded that with the consideration of further design details and with the application of mitigation measures, there would be no impacts which undermine conservation objective or result in an adverse effect on the integrity of the Habitats sites or MCZ.                                                                                                                                                                                                                        |
| EA, SDNPA | TFB18      | The EA stated that in 8.6.1 of the PEI Report, the text stated ' <i>it is assumed that the habitats that make up the current baseline reported in section 8. 7 would continue to be managed as they are currently, with the exception of those noted under the future baseline (in section 8.7)</i> '. On page 69, section 8.7 of the PEI Report, it stated, ' <i>no significant change to watercourses or ponds is anticipated in the foreseeable future</i> ' and noted that there is a significant package of compensation measures associated with the Havant Thicket Reservoir. This included extensive river restoration on the Hermitage Stream. This would shift the baseline which had not | N                    | ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity. As part of this assessment, the future baseline, including the Havant Thicket Reservoir project and its associated river restoration work are incorporated into the Applicant's assessment.<br><br>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) considers the Zone of Influence for ecological features. This is the area over which ecological features may receive impacts from a development. A range of measures have been embedded into the Project design to avoid or reduce |

| EBC, Portsmouth Water (PW), HBC, NE | TFB20      | <p>EBC noted that the Fielders Farm Meadows (Eastleigh) Site of Importance for Nature Conservation (SINC) is designated for its grassland, flushes, watercourse and the notable species tubular water-dropwort <i>Oenanthe fistulosa</i>, although other notable plant and bird species have also been recorded on site.</p> <p>The UK Hab Figure 8.6 had identified the SINC as comprising modified grassland only which does not reflect the site's designation. If the temporary loss of habitat in this SINC is unavoidable for use as a compound or for the Pipeline itself, then a more detailed survey would be required to inform the construction footprint. The retention and protection of certain habitats within the SINC are essential during construction, notably the wetland habitats and more valuable areas of grassland. The Council also noted that there is, however, also the potential to enhance other habitats post construction, for example, currently impoverished grassland.</p> <p>PW stated that the biodiversity value of parts of Farlington Water Treatment Works and its surroundings should be noted. PW commented that it was careful to ensure that its own development proposals do not</p> | N                    | <p>A detailed National Vegetation Classification (NVC) survey has taken place within the Fielders Farm Meadows (Eastleigh) SINC, and the route would be located within the areas of the SINC that are of poorer quality, lower distinctiveness habitat. Reinstatement detailed within the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) would restore the affected area of the SINC to a like for like or better condition and the wider habitat would be enhanced through measures including scrub and INNS removal.</p> <p>PW's Farlington Water Treatment Works UKHab vegetation survey (including NVC) results have been included within the assessment in ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6). The Pipeline would be tunnelled under Farlington Water Treatment Works. Temporary loss of chalk grassland would occur at Farlington for a small construction compound. This would be mitigated through a sensitive clearance approach, which may include, but is not limited to, turf stripping and storage, followed by reinstatement.</p> <p>The proposals for the WRP are aiming to retain existing vegetation where possible and</p> |

|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>significantly impact upon the lowland calcareous grassland, neutral grassland and ruderal vegetation that is present on the site and surroundings and, as the Applicant's proposals develop, it wished to ensure that these habitats are protected, and suitable mitigation measures employed. PW noted that a number of regulatory obligations with biodiversity and any development and impacts would need to be undertaken in such a manner that the impacts are kept to a minimum, and/or compensatory measures are developed.</p> <p>HBC noted that the presence of these species (County Notable Hairy Buttercup as well as other species such as Pyramidal Orchid and Corky-fruited Water-dropwort) indicated that this former landfill site still retained an interesting flora. Taking that into account, the Council expected the proposals for this site to include the retention of existing vegetation wherever possible, and for the existing vegetation and locally relevant habitat types to inform proposals for landscaping. The Council said this should be reflected clearly in the site-specific design considerations and the Environmental Masterplan. The Council highlighted that development of the WRP site would result in the loss of a designated</p> |                      | <p>include appropriate mitigation and reinstatement where retention is not possible. The WRP site has been subject to full NVC surveys which are used in conjunction with a Hampshire Biodiversity Information Centre (HBIC) data search in the assessment. County Notable Hairy Buttercup as well as other species such as Pyramidal Orchid and Corky-fruited Water-dropwort are known to be or have been present on the site and this information has been factored into the assessment. Further detail can be found in ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) and ES Appendix 8.2 Habitats, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>A Habitats Regulations Assessment – Stage 2 Appropriate Assessment and Marine Conservation Zone – Stage 1 Assessment (Document reference 5.2, DCO Volume 5) is submitted with the DCO application and provides detail on any potential impact pathways from the Project and mitigation that would be implemented. As part of this assessment, engagement has been undertaken with NE to ensure appropriate mitigation for impacts on SWBGS sites. This concluded that with the consideration of further design details and with the application</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>Low Use Solent Waders and Brent Geese site and suggested this habitat loss would need to be considered in the Habitats Regulations Assessment associated with the DCO.</p> <p>HBC considered that an avoidance and mitigation package would be needed in order for the Habitats Regulations Assessment to conclude that there is no likely significant effect as a result of the Project.</p> <p>NE recommended that created and enhanced habitats should seek, where practical and reasonable, to be local to any impact. They should also deliver strategically important outcomes for nature conservation. It was also recommended that opportunities should be sought to link delivery to relevant plans or strategies. This could include Green Infrastructure Strategies or Local Nature Recovery Strategies.</p> <p>NE asked if, as part of biodiversity enhancements, river restoration could be undertaken in sections of the River Hamble and Bow Lake catchment identified in this section as artificial and stated that reference is made to this on page 48 and 49, sections 19.7.81 and 19.7.83 of the</p> |                      | <p>of mitigation measures, there would be no impacts which undermine conservation objective or result in an adverse effect on the integrity of the habitats sites or MCZ.</p> <p>Although not yet a requirement for Nationally Significant Infrastructure Project (NSIP)s, the Applicant has voluntarily committed to the delivery of at least 10% Biodiversity Net Gain (BNG). Engagement has been undertaken with NE to discuss opportunities for BNG and enhancements for the Project. These opportunities are detailed within ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) and the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7). They would be delivered through a combination of on-site Environmental Mitigation and Enhancement Areas (EMEA)s and off-site provision. BNG calculations based on the statutory metric for the Project have been undertaken and are reported within the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7).</p> <p>Regular engagement has been undertaken with EBC, PW, HBC and NE as part of bilateral meetings, TWGs and the Biodiversity and Water EIA Working Group. These are used to update stakeholders on the progress</p> |

|           |            | <p>Water Environment chapter. It was noted that the Applicant could also explore if there is any additional restoration that could be done in the vicinity of the streams in the Havant Thicket not being undertaken by Portsmouth Water as part of its mitigation/compensation work for Havant Thicket Reservoir, including measures to improve water quality.</p> <p>NE expressed support for the proposal of seasonal pond and pond restoration, or enhancement as outlined in section 8.9.29 of the Preliminary Environmental Information Report - Enhancements of the Terrestrial chapter as well as enhancements of existing ditches and waterways through removal of undesirable species such as dense scrub and INNS.</p> |                      | <p>of the ecological assessment and design development as well as discuss any issues. Opportunities to incorporate environmental enhancements, including BNG, have been explored. This has included actively seeking opportunities for enhancement of Bow Lake watercourse river habitats through engagement with EBC. This and other opportunities are detailed within ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) and the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7). They would be delivered through a combination of on-site EMEAs and off-site through partnerships.</p> <p>Good practice principles and guidance, and the Defra consultation on BNG for NSIPs have been considered, including seeking to keep net gain local to the development where reasonable and practicable. The Project has taken into consideration the LNRS in the context of its strategy in relation to BNG through suitable habitat creation or enhancement in locations that have been identified within the LNRS as detailed in the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7).</p> |

|-----------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EA, Langstone Harbour Board | TFB21      | <p>The EA advised that the potential for notable and rare ephemeral invertebrates should be scoped in, but noted it was not reflected within the documentation. However, it was acknowledged that in section 8.5.47 of the PEI Report, the text stated that ephemeral streams will be appropriately assessed in the ES. The EA raised that this is slightly contradictory. The EA also stated that it was unclear whether Table 8-16 in the PEI Report was intended to be a full list of the anticipated impacts on ecological receptors. The EA stated that if this was the case, it needs be more comprehensive. Examples of absent impacts include vegetation clearance, increased sediment runoff to water courses and impacts on fish and eels (all life stages) from high intensity noise and vibration resulting in disturbance (delayed migration) and physical harm.</p> <p>Langstone Harbour Board noted that construction of the proposed WRP would be on land allocated under the SWBGS. The board outlined that protected species such as waders, brent geese, and gulls frequent the site and its adjacent lands.</p> | N                    | <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) has been updated accordingly. Additional surveys of potentially ephemeral watercourses and the invertebrates they support have now been carried out and the results are assessed within ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6). Through the implementation of mitigation, no residual likely significant adverse effects on ecological features from the Project are anticipated.</p> <p>Regular engagement has been undertaken with NE regarding impacts on SWBGS sites. An approach to the mitigation for these impacts has been agreed with NE and this is set out in the Stage 2: Habitats Regulation Assessment (Appropriate Assessment) and Marine Conservation Assessment Stage 1, including Habitats Regulations Assessment – Stage 2 Appropriate Assessment and Marine Conservation Zone – Stage 1 Assessment (Document reference 5.2, DCO Volume 5) which is submitted with the DCO application. This provides detail on any potential impact pathways from the Project and any mitigation that would be implemented as a result to ensure that there are not adverse effects on</p> |

|           |            | including links to the open mosaic habitats inventory. NE provided a link to the site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| EBC, NE   | TFB24      | <p>Opportunities for BNG were outlined. EBC noted that it had recently acquired several parcels of land within the borough for environmental mitigation which can also potentially provide BNG for this Project. One of these parcels of land is at Stoke Park Farm at the north of the borough which is adjacent to the Order Limits of 'Stretch L'. EBC provided a plan to support this suggestion. In addition, the Council said that there is high potential for BNG enhancements to the Bow Lake River which is currently overly incised. The Council also provided a plan to support this suggestion. This land is also within a biodiversity priority area in EBC's emerging Biodiversity Strategy which is likely to be incorporated into Hampshire's LNRS. EBC said it would be happy to discuss other Council owned land parcels in further detail.</p> <p>NE advised that it is best practice to submit a biodiversity gain plan and completed biodiversity metric with the application, with enhancements then being secured by requirements in the DCO.</p> | N                    | <p>Engagement has been undertaken with EBC and NE to discuss opportunities for BNG and enhancements for the Project. The Applicant has committed to the delivery of at least 10% BNG.</p> <p>BNG calculations using the statutory metric for the Project have been undertaken and are reported within the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7). Opportunities to incorporate environmental enhancements, considering LNRS including BNG have been explored. These opportunities are detailed within ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) and the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7). They would be delivered through a combination of on-site EMEAs and off-site provision.</p> <p>Opportunities include enhancement of Bow Lake watercourse river habitats through engagement with EBC which has fed into BNG enhancement opportunities within two EMEAs (EMEA-L-5 and EMEA-L-6) which are detailed within ES Chapter 8 Terrestrial and</p> |

|           |            | <p>NE said it was pleased to see biodiversity enhancement areas have been identified and were keen to work with the Applicant to develop these further. This should link to local nature recovery strategies where possible and provide better connection for wildlife across these landscapes (Draft illustrative Outline Environmental Masterplan document). Opportunities for BNG should be explored where restoration work is to occur. It was noted that NE's Multi-Agency Geographic Information for the Countryside (MAGIC) maps should also be used to determine if any of these historic environment assets are protected under countryside stewardship options.</p> <p>NE noted that it is working with the Applicant via the TWG and intended to continue to raise concerns in these meetings as required. But on initial review these seem to have been located in areas which limit biodiversity loss, in many cases the designs proposed provide a BNG and the Applicant has also considered the landscape and character impacts, which are the main areas covered by the NE remit.</p> <p>BNG opportunities to enhance the environment in these areas should be</p> |                      | <p>freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) and the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7). When assessing opportunities for BNG the live original data on the National Heritage List was reviewed rather than MAGIC as this is where MAGIC gets its data.</p> <p>The Applicant has assumed that the Council was referring to Section L: Lower Upham to Brambridge rather than Stretch L.</p> |

|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>from disturbed landfill materials on wildlife. It was raised that effluent recycling would 'fail' a robust Habitats Regulations Assessment and highlighted the insufficient environmental screening before the selection of effluent recycling, these doubts were enhanced by the view that current assessments had not considered the risks of algal blooms and reduced water quality.</p> <p>Respondents emphasised the potential environmental impact on flora and fauna and the disruption to wildlife and habitats during the construction phase, including habitats for birds such as Brent Geese, gulls and waders. One respondent considered that the impact of the Project would go against the intent of the Global Biodiversity Framework 2023, to which the UK was a signatory.</p> <p>It was noted that former benefits of Langstone Harbour as a refuge for waders and wildfowl would need to be reviewed and would depend on 'the regularity with which draw down events could occur and extend over long periods under the proposed new operating regimes.'</p> <p>A respondent stated that damage at Havant Thicket could have been considerably reduced. For example, few</p> |                      | <p>(Document reference 5.2, DCO Volume 5) is submitted with the DCO application and provides detail on any potential impact pathways from the Project and mitigation that would be implemented. This concluded that with the consideration of further design details and with the application of mitigation measures, there would be no impacts which undermine conservation objective or result in an adverse effect on the integrity of the Habitats sites or MCZ.</p> <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) and ES Chapter 9 Marine biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provide a detailed impact assessment on terrestrial, freshwater and marine biodiversity. ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed assessment of potential impacts on water quality. Within this chapter, water modelling has shown that nitrate and orthophosphate would decrease and remain at similar concentrations respectively in Hermitage Stream, whilst in Eastney Long Sea Outfall (LSO) the total nitrogen would decrease, therefore, risk of algal bloom is not expected from the Project.</p> |

|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | bat boxes were not enough to mitigate and added that veteran trees were felled to erect a barrier in relation to the Havant Thicket Reservoir . The respondent then suggested that a few cm either side of the tree trunks would have made sense and would have therefore resulted in less work which would have saved money and important habitat and that the learning from this could be transferred into this new Project. |                      | <p>A range of measures have been embedded into the Project design to avoid or reduce effects on aquatic biodiversity and water quality. These measures are secured within the Design Principles Document (Document reference 5.11, DCO Volume 5) and the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). Through the implementation of mitigation, no significant residual effects on ecological features or water quality from the Project are anticipated.</p> <p>The construction methods used to construct the WRP site and associated pipelines are designed to avoid mobilising contaminants at the historic landfill site. The design of the WRP within the site has also sought to reduce mobilising contaminants. An assessment of the potential for impacts as a result of construction of the WRP is set out in ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6). The results of this assessment were used to inform the assessment of potential impacts on surface and groundwater receptors in both ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) and ES Chapter 19 Water environment, Volume I (Document</p> |

|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                          |                      | Assessment and Marine Conservation Zone – Stage 1 Assessment (Document reference 5.2, DCO Volume 5) and is submitted with the DCO application. This provides detail on any potential impact pathways from the Project and mitigation that would be implemented. Mitigation includes timing construction works to avoid disturbance to qualifying species, including wild birds. This concluded that with the consideration of further design details and with the application of mitigation measures, there would be no impacts which undermine conservation objective or result in an adverse effect on the integrity of the Habitats sites or MCZ. |
| Wider community | TFB35      | The respondent noted the potential impact on trout, invertebrate life, and salmon migration and spawning due to low water levels and high-water temperatures reportedly rising above 19 degrees Celsius. | N                    | The fundamental reason behind the Project is to end the need for water abstraction from critical chalk stream habitats. This would help to maintain water and temperature levels within these internationally important habitats.                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Wider community | TFB36      | The respondent appreciated the thought and planning which had gone into the Project and the consultation process, noting the awareness of how to protect flora and fauna wherever possible.              | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Wider community | TFB37      | The respondent emphasised the importance of minimising the impact on                                                                                                                                     | N                    | ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Rowlands Parish Council, Langstone Harbour Board                | MBIO01     | <p>Rowlands Parish Council stated that there is risk to Langstone Harbour from developing the Water Recycling Plant (WRP) and associated deep tunnel shafts on the contaminated landfill site at Broadmarsh (Site 72).</p> <p>Langstone Harbour Board emphasised the effects of the inherent salinity and temperature of the effluent on the marine environment, noting that estuarine species are often euryhaline, whereas many marine species are stenohaline and have narrow physiological tolerance ranges.</p> | N                    | <p>Project specific and previous phases of ground investigations have been undertaken within the WRP site. The ground investigations involved the collection of geo-environmental samples, groundwater, surface water and ground gas monitoring. Soil, soil-leachate, groundwater and surface water samples were sent for laboratory analysis, the results of which are provided within Environmental Statement (ES) Appendix 11.2 Geotechnical and geo-environmental reports, Volume II (Document reference 6.2, DCO Volume 6) – Proposed WRP with an overview of the findings included within ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>Details of the proposed foundation works for the Project are provided within Foundation Works Risk Assessments which form an appendix to the Outline Construction</p> |

| Consultee                             | Issue code | Summary of issue raised                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                       |            |                                                                                                                                                                    |                      | <p>Environmental Management Plan (Document reference 7.1, DCO Volume 7). The Foundation Works Risk Assessments cover the WRP, Above Ground Plant (AGP) and Trenchless Crossings as well as Tunnels and Shafts. The Foundation Works Risk Assessments would serve to manage potential risks and ensure appropriate mitigation measures are implemented to reduce the potentials on marine biodiversity.</p> <p>Regarding Langstone Harbour Board's comment, this has been noted and considered in the ES. Water quality sampling, dispersion modelling and Sustainable Drainage Solutions (SuDS) outfall modelling have been carried out to address this concern. This is discussed in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6). The changes in concentrations of the water quality parameters are very small, resulting in no likely significant effects on the marine biodiversity receptors, as discussed in ES Chapter 9 Marine biodiversity, Volume I (Document reference 6.1, DCO Volume 6).</p> |
| Marine Management Organisation (MMO), | MBIO02     | The MMO noted mitigation measures to reduce marine biodiversity impacts, such as trenchless construction, and highlighted changes in the water content released at | N                    | The primary mitigation measures are included in ES Appendix 3.1 Primary mitigation, Volume II (Document reference 6.2, DCO Volume 6), ES Chapter 9 Marine biodiversity,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Consultee               | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Langstone Harbour Board |            | <p>the existing Eastney Long Sea Outfall (LSO).</p> <p>It was noted that the reject water through Eastney LSO would likely have a decreased volume and be slightly more saline, with potential implications for water quality parameters in the surrounding marine environment. The MMO noted that all crossings of main rivers will be trenchless to 2.5m below the bed of the river.</p> <p>Langstone Harbour Board emphasised its duty to protect and conserve the harbour environment.</p> |                      | <p>Volume I (Document reference 6.1, DCO Volume 6) and ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>Potential implications of the reject water through Eastney LSO for water quality parameters in the surrounding marine environment has been addressed in the ES, with results of water quality modelling at Eastney LSO presented in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6). Effects on the marine environment are assessed in ES Chapter 9 Marine biodiversity, Volume I (Document reference 6.1, DCO Volume 6) resulting in no likely significant effects.</p> |
| Natural England (NE)    | MBIO03     | <p>NE noted that any impact on Gilkicker Lagoon Site of Special Scientific Interest (SSSI) was unlikely due to its proximity to Eastney LSO.</p> <p>NE also noted that results of the dispersion and water quality modelling for Bembridge Marine Conservation Zone (MCZ) should be assessed in the context of this site. NE will make a full assessment of the impacts to this site at that time.</p>                                                                                         | N                    | <p>Gilkicker Lagoon SSSI has been reviewed in the ES Chapter 9 Marine biodiversity, Volume I (Document reference 6.1, DCO Volume 6) and ES Appendix 9.1 Designated sites identified within marine biodiversity study areas 1 and 2, Volume II (Document reference 6.2, DCO Volume 6) and there are no likely significant effects.</p> <p>The Bembridge MCZ has been assessed in ES Chapter 9 Marine Biodiversity, Volume I (Document reference 6.1, DCO Volume 6) drawing on results from dispersion and water</p>                                                                                                                                        |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|                                  |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      | quality modelling presented in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) resulting in no likely significant effects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Environment Agency (EA)          | MBIO04     | The EA expressed satisfaction with the Preliminary Environmental Information Report which considered transitional and coastal (TraC) waters and the potential impact of the reject water discharge via Eastney LSO on the Solent and Isle of Wight East water bodies.                                                                                                                                                                                                                                                                                                                                                                                                                                     | N                    | Agreement with consideration on transitional and coastal water aspects is noted. The dispersion modelling at the Eastney LSO and any potential impact of the reject water release on the water bodies have been assessed in the ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                        |
| MMO, Langstone Harbour Board, NE | MBIO05     | The MMO recommended careful interpretation of data collected using non-shellfish specific gear to identify the shellfish baseline. It also noted that in April 2022, grab samples were collected using a 0.1 m <sup>2</sup> mini-Hamon grab along with benthic samples to provide a high-level characterisation of the subtidal benthic community within Langstone Harbour and nearby coastal waters. These samples were analysed for Particle Size Analysis (PSA) by Kenneth Pye Associates Ltd, a laboratory validated by the MMO. The results were reported as part of the habitat mapping in Preliminary Environmental Information Report Appendix 9.5 Subtidal geophysical survey, Volume II, with a | N                    | <p>The shellfish baseline has been reviewed, and interpretation on data collection is provided in ES Chapter 9 Marine biodiversity (Document reference 6.1, DCO Volume 6).</p> <p>There are no works below MHWS within Langstone Harbour or around the LSO. There would be works for the WRP site SuDS outfall below MHWS at Hermitage Stream within the Order Limits. The Pipelines between Budds Farm Wastewater Treatment Works (WTW) and WRP are also below MHWS but they are trenchless construction and as such do not directly interact with the marine environment in the same way as the SuDS outfall. Therefore, due to the localised/underground nature of the abovementioned works below</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           |            | <p>summary in Annex 1. Although contaminant data for these samples had not been provided, it may not be required depending on the nature of the works below Mean High Water Springs (MHWS).</p> <p>It was also emphasised the need to consider the potential release of suspended sediments and associated contaminants during construction and to engage with the MMO for sampling requirements if dredging or bed levelling is required.</p> <p>The MMO also requested that if dredging/arising are to occur below MHWS the Applicant engages with the MMO for sampling requirements (including number, depth, analytes and appropriate contaminant analysis methods required). This is to ensure that the sampling and analysis to inform the EIA are robust and provide the evidence base for sound decisions.</p> <p>NE stated that approximately 31 ha. of saltmarsh was recorded in the intertidal surveys in Langstone Harbour and that the Preliminary Environmental Information Report Marine Biodiversity chapter does not reference this. It was therefore suggested that this should be considered</p> |                      | <p>MHWS, the high-level characterisation of the subtidal benthic community is considered sufficient and further interpretation of data collected is not needed.</p> <p>There is no dredging or bed levelling required for the Project.</p> <p>No dredging/arising would occur below MHWS, therefore, the sampling requirements mentioned in the comment are not relevant to the Project.</p> <p>The saltmarsh information recorded in the baseline intertidal survey undertaken by the Applicant has been taken into account in the assessment. This has been described in ES Chapter 9 Marine biodiversity, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>Ground truthing for the harder substrate or more detailed habitat mapping for the surveyed areas within Langstone Harbour and outside the harbour in the Solent was not required as the Project has no works in these areas. Underwater video transects or stills were not obtained from the surveyed areas within Langstone Harbour or outside the harbour in the Solent. Sediment particle size analysis was used to ground-truth the geophysical survey results to confirm the habitat type, as presented in ES Appendix 9.5</p> |

|           |            | <p>in any subsequent submissions such as the ES.</p> <p>NE noted that in Appendix 9.5 of the Preliminary Environmental Information Report, section 3.2 made references to potential areas of harder substrate having been present within the survey area (e.g. 3.2.4 – <i>"In the west of Area 2, some small patches of harder return were identified, likely consisting of large cobbles with evidence of algae growth"</i>). The primary method for ground-truthing the side scan sonar results was grab sampling which is suitable for sediment but not hard substrate. NE stated that it was not clear whether or not <i>'underwater video transects, or stills'</i> were obtained to confirm habitat type in these areas. Section 3.3.2 implied they were as it states <i>"The bedform features throughout the entire survey area were considered to be of significant importance when considering the range of habitats present and would likely require further investigation if more detailed habitat mapping was undertaken"</i>. NE requested clarity on this point.</p> <p>NE claimed that Appendix 9.5 did not contain any survey data from the Eastney LSO and noted that the results of some</p> |                      | <p>Subtidal geophysical survey, Volume II (Document reference 6.2, DCO Volume 6 and ES Appendix 9.6 Subtidal grab sampling report, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>Please note that ES Appendix 9.5 Subtidal geophysical survey, Volume II (Document reference 6.2, DCO Volume 6) is a report prepared by an independent survey contractor for a specific piece of work and would normally have been a standalone report. As such, ES Appendix 9.5 Subtidal geophysical survey, Volume II (Document reference 6.2, DCO Volume 6) has not been updated with new information, but an additional ES Appendix 9.10 Eastney Long Sea Outfall benthic ecology survey, Volume II (Document reference 6.2, DCO Volume 6) has been prepared with the results of the most recent benthic surveys at the Eastney LSO.</p> <p>Further information has been provided in ES Chapter 9 Marine biodiversity, Volume I (Document reference 6.1, DCO Volume 6) to support the assessment that these samples presented in ES Appendix 9.6 Subtidal grab sampling report, Volume II (Document reference 6.2, DCO Volume 6) were considered viable.</p> |

They are commonly used terms across all EIA projects and are supported by evidence and data as set out in the ES.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Wider community | MBIO22     | Respondents raised concerns about the impact of expanding or developing the WRP on Langstone Harbour and its marine life. It was stated that there is the need to consider the environmental effects of increased discharges into the Solent. | N                    | Potential impacts of the Project on marine biodiversity receptors in Langstone Harbour are discussed in the ES Chapter 9 Marine biodiversity, Volume I (Document reference 6.1, DCO Volume 6). Releases from the Eastney LSO would be reduced in volume as a result of the WRP, compared to the existing scenario. Environmental effects of decreased releases into the Solent arising from the Project are considered and predicted by undertaking dispersion modelling studies (as provided in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6)) indicating that the changes to concentrations of water quality parameters in the water release from Eastney LSO are very small, resulting in no likely significant effects on marine biodiversity receptors. |

**Table F29-31 Summary of issues raised on the theme of carbon and climate change and the Applicant's response**

| Consultee                                                       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Winchester City Council (WCC), Fareham Borough Council (FBC)    | CCC01      | <p>It was highlighted that WCC declared a climate emergency in June 2019, committing to becoming a carbon neutral council by 2024 and aiming for the wider district to be carbon neutral by 2030. The Council must ensure that no developments are permitted that restrict this net zero target. Climate impact is an interrelated issue and should be a key consideration throughout, as noted in policy CN1 of the Winchester District Local Plan Part 1 Joint Core Strategy (Adopted March 2013).</p> <p>It was acknowledged that the Applicant has undertaken a carbon assessment of the Project, and further work was recommended to identify additional mitigation measures. It was noted that climate adaptation and resilience have also been assessed.</p> | N                    | <p>Carbon emissions and measures to mitigate emissions have been considered as part of the Project design. The carbon assessment included in section 10.8 of Environmental Statement (ES) Chapter 10 Carbon and climate change, Volume I (Document reference 6.1, DCO Volume 6) provides a predicted emission total for each phase of the Project. The carbon assessment highlights that the highest source of emissions would be embodied carbon in materials during construction, and the use of chemicals during operation. In addition, further measures to avoid and reduce greenhouse gas emissions are secured through the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and Outline Carbon Management Plan (Document reference 7.8, DCO Volume 7), submitted as part of the DCO application.</p> <p>It is likely that the majority of carbon emissions associated with the Project would take place outside of the WCC and FBC regions. The carbon assessment has not disaggregated emissions per Local Planning Authority boundary due to uncertainties in the supply chain, which makes it unclear where</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                      | the carbon emissions associated with the Project would take place geographically. Furthermore, the carbon emissions associated with the Project are assessed against the UK's national carbon budgets. However, the Project would achieve the National Policy Statement requirement that carbon "emissions are as low as reasonably practicable".                                                                                                                                                                                                                                                                                                                                 |
| WCC       | CCC02      | <p>The proposed approach, methodology, and next steps outlined in Preliminary Environmental Information Report Chapter 10 Carbon and Climate Change were considered to be appropriate at this stage. The methodology used to calculate construction and operational carbon emissions was also deemed appropriate, and that the In-Combination Climate Assessment (ICCA) methodology is appropriate and aligned with best practice approaches.</p> <p>The inclusion of additional mitigation measures was supported as there is the potential to further reduce emissions.</p> | N                    | <p>The Applicant acknowledges that WCC agree with its methodology for undertaking the carbon and climate change assessment, which is presented in the ES Chapter 10 Carbon and climate change, Volume I (Document reference 6.1, DCO Volume 6), and ES Appendix 10.3 In-combination Climate Change Impact assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>Additional mitigation measures have been identified which are reported in the Outline Carbon Management Plan (Document reference 7.8, DCO Volume 7), submitted with the DCO application which would further reduce Greenhouse Gas (GHG) emissions from the levels predicted in the assessment.</p> |
| WCC       | CCC03      | It was suggested that the ES should explain how climate change impacts from the construction and operation of the                                                                                                                                                                                                                                                                                                                                                                                                                                                             | N                    | Section 10.8 of ES Chapter 10 Carbon and climate change, Volume I (Document reference 6.1, DCO Volume 6) considers the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|                                |            |                                                                                                                                                                                                                                                                                       |                      | <p>meaningful and efficient renewable energy contribution to the Project power demand.</p> <p>Following these findings, the Applicant set out a process to evaluate which energy procurement routes are more efficient to achieve optimal decarbonisation of power demand.</p> <p>The Applicant will provide an updated energy strategy for the Project in the second iteration of the Carbon Management Plan that will confirm the specific strategy to supply power to the site and the impact on operational phase carbon emissions. The second iteration of the Carbon Management Plan will be prepared in accordance with the DCO requirements and after the Direct Procurement for Customers (DPC) tender process, when the contract with the Contractor is signed. These proposals will provide evidence of how the Project would use renewable energy sources.</p> |
| Rowlands Castle Parish Council | CCC06      | It was highlighted that the Project has a relatively high environmental cost in terms of energy use 24/7 throughout the year to pump millions of litres of water continuously, even during prolonged periods of rainfall. There would be a high energy demand associated with pumping | N                    | Carbon emissions from energy consumption have been accounted for in the carbon assessment, presented in section 10.8 of ES Chapter 10 Carbon and climate change, Volume I (Document reference 6.1, DCO Volume 6). A range of different alternatives to the Project were considered as outlined in ES                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           |            | It was also highlighted that the construction process would result in significant carbon emissions and biodiversity harm. |                      | <p>expected to decarbonise over the period of the assessment in line with Government policy.</p> <p>Commitments made in the Design Principles for the Project have been adopted to ensure that the design reduces energy use. In addition, further measures to reduce emissions are included within the Outline Carbon Management Plan (Document reference 7.8, DCO Volume 7), submitted as part of the DCO application. The carbon emissions associated with the construction of the Project are not assessed to be likely to be significant, as outlined in section 10.8 of ES Chapter 10 Carbon and climate change, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>The potential for climate change to affect terrestrial and marine biodiversity has been considered in the In-combination Climate Change Impact (ICCI) assessment, including impacts on watercourses and biodiversity, which forms ES Appendix 10.3 In-combination climate change impact assessment, Volume II (Document reference 6.2, DCO Volume 6). The ICCI assessment concluded that the consequence of ICCI for all identified effects of the Project was</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Wider community | CCC09      | <p>Respondents suggested that pumping water over shorter distances could reduce operational energy and carbon costs.</p> <p>Questions were raised about how new pumping stations would be powered.</p> | N                    | <p>The Project was derived from an optioneering assessment, where a range of different options were considered as outlined in ES Chapter 4 Consideration of alternatives, Volume I (Document reference 6.1, DCO Volume 6). The level of lifecycle carbon emissions was one of the factors feeding into the optioneering study. The current design of the Project represents a lower carbon option compared to other options considered, such as desalination, with consideration for the capacity requirements needed to address the water supply challenges in Hampshire. In addition, the Applicant, as part of the Project design development, is committed to reducing operational carbon emissions to as low as reasonably practicable, as detailed in the Outline Carbon Management Plan (Document reference 7.8, DCO Volume 7).</p> <p>The majority of energy that would be consumed by the Project is anticipated to come from the National Grid, which is expected to decarbonise over the period of the assessment in line with Government policy.</p> |

|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                   |                      | <p>Additionally, the Applicant has assessed the feasibility of self-generating power for the Project, including for new pumping stations, through a detailed examination of potential renewable energy options, as detailed in the Outline Carbon Management Plan (Document reference 7.8, DCO Volume 7). The study found insufficient viable generation opportunities within the DCO limits to significantly meet the Project's power demand.</p> <p>In response, the Applicant is evaluating more efficient energy procurement routes for optimal decarbonisation. An updated energy strategy will be provided in the second iteration of the Carbon Management Plan, detailing the plan to supply power to the Project and its impact on operational phase carbon emissions. The second iteration of the Carbon Management Plan will be prepared in accordance with the DCO requirements and after the DPC tender process, when the contract with the Contractor is signed.</p> |
| Wider community | CCC10      | Respondents highlighted the need to develop more sustainable solutions that work with climate change, not against it, to address water shortages. | N                    | The Project has been identified through the Applicant's Water Resources Management Plan (WRMP) and options appraisal processes as a crucial and necessary part of its strategy to respond to current and future                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                 |            | Immediate action was suggested in order to address the scenario that the impact of climate change would worsen.                                                                                                                                                                           |                      | <p>water supply challenges in its Hampshire supply area.</p> <p>The Water Resources South East (WRSE) and WRMP processes considered a range of future forecasts for water demand and supply in the Hampshire area under a variety of different scenarios, which include higher environmental ambitions, higher growth forecasts and more challenging climate change impacts.</p> <p>However, other options are not available at the scale needed and in the timescales required. The different options considered are outlined in ES Chapter 4 Consideration of alternatives, Volume I (Document reference 6.1, DCO Volume 6). The level of lifecycle carbon emissions was one of the factors feeding into the optioneering study. The WRSE Regional Plan and the Applicant's emerging WRMP24 select the Project in all scenarios.</p> |
| Wider community | CCC11      | Respondents noted that the treatment plant will operate using reverse osmosis, which they anticipate will be energy intensive. The plant would need to run continuously at a minimum operational flow of 20 million litres a day, regardless of rainfall, resulting in high treatment and | N                    | The impact of the Project's energy consumption including the mitigation measures implemented are reflected in the carbon assessment presented in section 10.8 of ES Chapter 10 Carbon and climate change, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                     |                      | procurement routes to support decarbonisation. The plan also outlines how carbon emissions would be monitored and reported during construction and operations to ensure emissions are as low as reasonably practicable. These measures ensure that the Project support's the Applicant's Net Zero plan.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Wider community | CCC12      | Respondents noted the reported overarching issue of UK energy supply and suggested constructing a solar farm near, or on, the WRP to provide a source of renewable energy. It was also suggested that using solar panels could reduce energy costs and be environmentally friendly. | N                    | <p>As part of the design development to date, the Applicant has evaluated whether self-generation of energy would be feasible for the Project. The self-generation options were evaluated through a detailed examination of potential renewable energy options within the Order Limits as summarised in the Outline Carbon Management Plan (Document reference 7.8, DCO Volume 7). The study concluded that there are insufficient viable generation opportunities available within the DCO limits to provide meaningful and efficient renewable energy contribution to the Project power demand.</p> <p>Following these findings, the Applicant set out a process to evaluate what energy procurement routes are more efficient to achieve optimal decarbonisation of power demand.</p> |

|           |            | <p>"<i>Health Farm</i>" as a historical farm instead of landfill.</p> <p>The respondent also highlighted the need to consider nitrates affecting Langstone Harbour, and the absence of the Lambeth group in mapping regarding Pipeline Section M.</p> <p>Additionally, it requested more details on the location of abstractions.</p> |                      | <p>would be no residual likely significant effects on land quality and ground conditions receptors.</p> <p>Details of the proposed foundation works for the Project are provided within the Outline Foundation Works Risk Assessment (Document reference 7.4 DCO Volume 7) and covers the WRP, Above Ground Plant (AGP) and trenchless crossings as well as tunnels and shafts. Detailed Foundation Works Risk Assessments would be developed by the Contractor post-consent in line with CL:AIRE's Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination: Guidance on Pollution Prevention as secured within the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p> <p>Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for Pipelines between the WRP site and Havant Thicket Reservoir was not progressed any further. As a result, Health Farm now falls outside of the Order Limits and the land quality and ground conditions study area. Therefore, it is not discussed within ES</p> |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                      | monitoring, where identified within the WRP site, which is located within the HBC's jurisdiction and is not considered applicable to land within EBC's authority.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| EA, HBC   | LQGC1<br>1 | <p>The EA stated that while impacts lasting up to 6 years are considered 'short term' based on CIRIA 552 contaminated land guidance, it argued that this may be relevant for pre-existing contamination, but it is not appropriate for new impacts. It argued if there was 'derogation of a strategically important public water supply' for 6 years, this would not be a short-term impact and suggested this assessment should be revisited.</p> <p>HBC noted that the proposed Pipeline will pass through a portion of the Harts Farm Landfill owned by HBC. Concern was raised that the Council would retain liability for contamination if a new pathway was created between the landfill leachate and the protected marine habitat.</p> | Y                    | <p>Pre-consent project specific ground investigations (conducted as Phase 0, 1, 2, 3A, 3B and 3C) have now been completed. The findings of each phase of ground investigation, including an interpretation of soil, soil-leachate and groundwater laboratory analysis, are reported within ES Appendix 11.2 Geotechnical and geo-environmental reports, Volume II (Document reference 6.1, DCO Volume 6).</p> <p>The impact assessment within section 11.8 of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) has been updated to reflect the findings of the ground investigation. The updated assessment has identified, with the implementation of mitigation measures, there would be no residual likely significant effects on land quality and ground conditions receptors.</p> <p>With regards to potential impacts on groundwater resources as a result of contamination, the assessment has been reviewed and updated within ES Chapter 11</p> |

|-----------|------------|-------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) to reflect the potential duration of an impact. It has been determined that potential impacts to groundwater resources as a result of both the mobilisation of pre-existing and introduction of new sources of contamination as a result of the Project are medium-term (i.e. lasting between two and 15 years). Although the potential duration of impacts has been revised, with the implementation of mitigation measures, there would be no likely significant effects to groundwater resources.</p> <p>It has also been determined that, with the implementation of mitigation measures (for example, the production of detailed Foundation Works Risk Assessment by the appointed contractor, as secured within the Outline Construction Environmental Management Plan (Document reference 7.2, DCO Volume 7)), the potential for the creation of new preferential pathways that would allow for the migration of landfill leachate to the marine environment would be reduced and that there would be no likely significant effects.</p> |

| Rowlands Castle Parish Council | LQGC1 2    | The respondent raised concerns that deep piling through landfill sites could facilitate leachate entering Langstone Harbour and also cause gas emissions from the landfill contents. | N                    | <p>The impact assessment, included within section 11.8 of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6), discusses the potential impacts associated with the migration of contamination into Langstone Harbour as a result of the Project. Section 11.8 also discusses the potential for preferential pathways to be created or modified as a result of piling activities.</p> <p>Mitigation measures protective of land quality and ground conditions receptors, including Langstone Harbour, are discussed within section 11.4 of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6). These mitigation measures include, for example, the development of a detailed Foundation Works Risk Assessment by the appointed contractor which would be developed in line with CL:AIRE's Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination: Guidance on Pollution Prevention as secured within the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p> <p>With the implementation of the mitigation measures discussed within section 11.4 of ES</p> |

|           |            | need for deeper soil sampling and proper drainage provisions was emphasised. |                      | <p>(see ES Appendix 11.2 Geotechnical and geo-environmental reports, Volume II (Document reference 6.2, DCO Volume 6)). The ground investigations comprised a total of 123 boreholes (to depths between 30.00 and 110.00m below ground level (bgl)) and 31 trial pits (to a maximum depth of 4.00m bgl).</p> <p>Section 11.7 (baseline conditions) of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) incorporates the Project specific ground investigation data. The impact assessment within section 11.8 of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) has also been updated to reflect the findings of the ground investigation.</p> <p>Consideration of drainage is provided within ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6). Mitigation measures in relation to construction and operational drainage strategies are detailed in section 19.4 and section 19.9 of ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6). These include measures to reduce runoff from construction works and permanent</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                      | biodiversity receptors, by referring to the assessment results presented in the ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Wider community | LQGC20     | <p>Respondents stated that building a facility on a historical landfill site was unfavourable and not environmentally viable. Respondents also stated that landfills settle unevenly, so deep digging for stable foundations would further increase contamination risks, including landfill leachate and gas migration.</p> <p>It was also noted that existing infrastructure, such as old pipework and tunnels from the 1960s, adds to the potential danger of leaks.</p> <p>Respondents added that Langstone Harbour is already struggling with pollutants that encourage harmful algae and invasive species. Disturbing the landfill would worsen this, undermining efforts to reduce artificial fertiliser use and protect ecosystems. Additional challenges include the need to transfer water over 40 km if the plant is relocated.</p> | N                    | <p>Project specific and previous phases of ground investigations have been undertaken within the WRP site, also historically known as Broadmarsh landfill. The ground investigations involved the collection of geo-environmental samples, groundwater, surface water and ground gas monitoring. Soil, soil-leachate, groundwater and surface water samples were sent for laboratory analysis, the results of which are provided within ES Appendix 11.2 Geotechnical and geo-environmental reports, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>With regards to nitrates and other contaminants potentially affecting Langstone Harbour, Chichester Harbour and chalk aquifers geo-environmental sampling of groundwater and analysis has been undertaken as part of the Project specific ground investigations with the results discussed in ES Appendix 11.2 Geotechnical and geo-environmental reports, Volume II (Document reference 6.2, DCO Volume 6).</p> |

If any leak occurs to the water pipe it would be contained within the conduit.</p> <p>The conduit would remain in place after decommissioning potentially being filled with some form of void filler.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Wider community | LQGC2<br>1 | <p>Respondents expressed significant concerns about the proposed WRP at Broadmarsh, specifically the potential environmental, ecological, and health risks, including the release of toxic chemicals and landfill gas migration, from developing on the landfill site. The need for the Applicant to ensure the safety of the Broadmarsh landfill site was emphasised, with a lack of public trust in the proposal. It was also noted that excavation would disturb toxic waste buried during WW2 and later, releasing dangerous compounds into Langstone Harbour and possibly the aquifer.</p> <p>Respondents highlighted the risk to Langstone Harbour, Chichester Harbour and the underlying chalk aquifer from developing on the site.</p> | N                    | <p>Project specific and previous phases of ground investigations have been undertaken within the WRP site, also historically known as Broadmarsh landfill. The ground investigations involved the collection of geo-environmental samples, groundwater, surface water and ground gas monitoring. Soil, soil-leachate, groundwater and surface water samples were sent for laboratory analysis, the results of which are provided within ES Appendix 11.2 Geotechnical and geo-environmental reports, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>With regards to nitrates and other contaminants potentially affecting Langstone Harbour, Chichester Harbour and chalk aquifers geo-environmental sampling of groundwater and analysis has been undertaken as part of the Project specific ground investigations with the results</p> |

|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | It was argued that the Preliminary Environmental Information Report identified many contaminants of concern at the Broadmarsh landfill site and the risks of leachate and landfill gas being mobilised by piling and tunnelling through the waste was highlighted. Concerns were raised about the proposed Pipeline construction below Hermitage Stream, the potential for future leaks and the potential for pipes to act as pathways following decommissioning of the Project. |                      | <p>discussed in ES Appendix 11.2 Geotechnical and geo-environmental reports, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>Potential impacts as a result of nitrates, and other contaminants, impacting controlled waters, inclusive of Langstone Harbour, Chichester Harbour and chalk aquifers, are discussed within section 11.8 of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6). With the implementation of mitigation measures, there would be no residual likely significant effects on land quality and ground conditions receptors as result of the migration of landfill leachates into Langstone Harbour, Chichester Harbour and chalk aquifers.</p> <p>Mitigation measures in relation to ground gas are outlined in ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) and secured within the Design Principles Document (Document reference 5.11, DCO Volume 5). With the implementation of mitigation measures, there would be no residual likely significant effects on land quality and ground conditions receptors as result of the migration of ground gas.</p> |

|-----------|------------|-------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>Section 11.8 of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) assesses the potential impacts on land quality and ground conditions receptors during the decommissioning phase of the Project. The assessment is based upon the buried pipeline infrastructure remaining in situ following the end of the life cycle. The assessment has determined that, with the implementation of mitigation measures (which are assumed to be similar in nature to those of the construction phase), there would be no residual likely significant effects on land quality and ground conditions receptors during the decommissioning phase of the Project.</p> <p>Details of the proposed foundation works for the Project, which includes the WRP site and the trenchless crossing below Hermitage Stream, are provided within the Outline Foundation Works Risk Assessment (Document reference 7.4, DCO Volume 7). Detailed Foundation Works Risk Assessments would be developed by the appointed contractor post-consent in line with CL:AIRE's Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination: Guidance on Pollution Prevention as secured within the Outline</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                       |                      | contained within the conduit which prevents any subsidence due to the leak.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Wider community | LQGC23     | Respondents raised concerns about the environmental impact on Chichester and Langstone Harbour Special Protection Area (SPA) and Solent Maritime Special Area of Conservation (SAC). They emphasised the importance of protecting Havant Thicket Reservoir site's value as a support site for the nearby coastal SPA. | N                    | <p>A Habitats Regulations Assessment (HRA) - Stage 2 Appropriate Assessment (AA) and Marine Conservation Zone (MCZ) - Stage 1 Assessment (Document reference 5.2, DCO Volume 5) is submitted with the DCO application and provides detail on any potential impact pathways from the Project on the Habitats sites including Chichester and Langstone Harbours SPA and Solent Maritime SAC, and any mitigation that would be implemented. This concluded that with the consideration of further design details and with the application of mitigation measures, there would be no impacts which undermine conservation objective or result in an adverse effect on the integrity of the Habitats sites or MCZ, including those listed by the consultee. As part of this assessment, engagement has been undertaken with NE to ensure appropriate mitigation for impacts on Solent Waders and Brent Goose Strategy sites.</p> <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity, including an assessment on the future ecological potential</p> |

|           |            |                         |                      | of Havant Thicket Reservoir. A range of measures have been embedded into the Project design to avoid or reduce environmental effects, including measures to ensure that the water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the WFD Directions. This includes ecological status and biological quality elements. Through the implementation of mitigation, no residual likely significant adverse effects on ecological features from the Project are anticipated. |

**Table F29-33 Summary of issues raised on the theme of land use and agriculture and the Applicant's response**

| Consultee                                                            | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response              |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b>      |            |                                                                                                                                                                                                                                                                                                                                                                               |                      |                                       |
| The Health and Safety Executive (HSE), Winchester City Council (WCC) | LUA01      | It was noted that HSE Land Use Planning Advice is based on the location of areas where people may be present. Based on the information provided in the Preliminary Environmental Information Report, it was stated as unlikely that HSE would advise against the Project. However, it was highlighted that this advice may change if HSE's policy or the scope of the Project | N                    | The Applicant has noted this comment. |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                                           | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                     |            | <p>changes by the time the DCO application is submitted.</p> <p>WCC acknowledged that most works are expected to be temporary in nature, thus the proposals were deemed acceptable. It was noted that assessments are still ongoing, and therefore further comments will be reserved until all details are presented by the Applicant.</p> |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| East Hampshire District Council (EHDC)              | LUA02      | The respondent stated that the loss of agricultural land comes at a time of increasing concern about food production and supply. It welcomed the role of water recycling in providing a mitigation option to this.                                                                                                                         | N                    | The permanent loss of agricultural land to the Above Ground Plant (AGP) is very small (at 2.68 hectares in four locations) and would not have a noticeable impact on food production locally or in the wider food production industry. Although the loss of agricultural land to install the pipelines is substantial at 240 hectares, this land would be taken out of food production temporarily, for a short period and in sequence, such that there would also not be a noticeable impact on food production either locally or in the wider food production industry. |
| Portsmouth City Council (PCC), Natural England (NE) | LUA03      | Respondents highlighted the importance of soil management for ecosystems and providing services such as carbon storage and nutrient cycling. Potential disturbance to grassland, soil ecosystems, and soil profiles due to access shafts and ancillary                                                                                     | N                    | The effects on soils are considered in section 12.8 of ES Chapter 12 Land use and agriculture, Volume I (Document reference 6.1, DCO Volume 6) and the importance of soil management is reflected in the Outline Soil Resource Management Plan that is                                                                                                                                                                                                                                                                                                                    |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>works was stated. The importance of restoring the soil was emphasised, using the same genetic material and substrate and ensuring that the soil retains its functions and services. It was highlighted that disturbed soil should remain chalk based with varying topsoil thickness for diverse growing conditions, and the surface should be regularised for easy mowing, with no imported soil or use of fertilisers or herbicides.</p> <p>It was advised that a detailed Agricultural Land Classification (ALC) survey should be undertaken to inform micro-siting, impact assessment, and soil handling and restoration criteria. NE stated that the main impact on the Best and Most Versatile (BMV) land related to the proposed Pipeline route and that the supporting documentation was unclear whether the Project was developed to minimise this loss. It was further stated that loss can only be considered temporary if it is restored to its original quality. The importance of minimising losses and limiting permanent impacts to BMV agricultural land was emphasised.</p> <p>It was suggested that the Environmental Impact Assessment (EIA) should use the</p> |                      | <p>appended to the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). The detailed Soil Resource Management Plans produced by the appointed contractor post consent would need to adhere with the Outline Soil Resource Management Plan (Document reference 7.1, DCO Volume 7).</p> <p>The Outline Soil Resource Management Plan (Document reference 7.1, DCO Volume 7) submitted with the DCO application and the subsequent detailed Soil Resource Management Plans that would be prepared by the contractor set out the measures necessary to ensure that land used temporarily to install the pipelines and for construction compounds is restored to its original quality. These measures include the accurate recording of soil properties and depths, the appropriate timing of works in relation to weather and soil conditions, the use of appropriate plant and equipment, and the use of experienced soil specialists to supervise and advise on soil handling and restoration works.</p> <p>Detailed ALC surveys (reported in ES Appendix 12.1 Agricultural Land Quality, Volume II (Document reference 6.2, DCO Volume 6)) have been undertaken in areas of</p> |

| NE        | LUA05      | NE emphasised the importance of conducting an Agricultural Land Classification (ALC) survey for all land that may experience temporary or permanent disturbance. It was stated that as indicated by the documents provided by the Applicant, 8.1 hectares of agricultural land would be subject to permanent development, identified as Grade 3 from Provisional ALC mapping. It was stated that it was not clear from the documents the total area of the study area, and thus the area of land potentially subject to temporary disturbance. | N                    | <p>The approach taken to surveys of agricultural land used temporarily and permanently for the Project has been discussed and agreed with NE and presented in the Community EIA Working Group sessions. Detailed ALC surveys (reported in ES Appendix 12.1 Agricultural Land Quality, Volume II (Document reference 6.2, DCO Volume 6)) have been undertaken of areas required permanently for the Above Ground Plant (AGP) whilst the areas subject to temporary, short-term disturbance for installing the Pipelines have been classified using data and samples obtained from the Ground Investigations.</p> <p>The area and grade of agricultural land required permanently and temporarily is set out in ES Chapter 12 Land use and agriculture, Volume I (Document reference 6.1, DCO Volume 6). The area of permanent land required is 2.68ha, of which 1.58ha is BMV agricultural land. This is smaller than the area of permanent land required of 8.1ha reported in the Preliminary Environmental Information Report. The area of agricultural land required temporarily would be 240ha, of</p> |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|                                                             |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                      | which 114ha is BMV land. Following installation of the pipelines and completion of construction, the land would be restored to its pre-existing condition using the same soils in the same locations from which they would have been excavated, as set out in the Outline Soil Resource Management Plan appended to the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). Nevertheless, likely significant effects have been identified and reported for the temporary loss of Grade 1 and 2 agricultural land, and the permanent loss of Grade 2 agricultural land. |
| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| PILs                                                        | LUA06      | Respondents raised concerns about the impact of the proposed Pipeline on agricultural land, including the loss of forage for livestock and the potential reduction in crop yield. An example was given that the loss of working land during and after the works will cut crop yield by nearly 50% each season, affecting the dairy operation and resulting in reduced rent for the landowner in question. It was also argued that the sterilisation of land by the Pipeline easement could render the site unviable for future development. | N                    | <p>The Applicant refers to the ES Chapter 12 Land use and agriculture, Volume I (Document reference 6.1, DCO Volume 6) which outlines the analysis undertaken to assess the potential impacts on farming activities and businesses. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out further details regarding mitigation measures which would be implemented during construction.</p> <p>Those affected by compulsory acquisition or temporary possession under the DCO may be entitled to compensation in line with the</p>                           |

|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>A respondent noted their land has significant potential for future housing development, already considered in WCC's SHELAA process. It is favoured by both the City and Wickham Parish Councils, with interest from local developers for a housing allocation on the northern edge of Wickham, near the Bewley Homes development, a proposed recreation area, and the Community Centre on Mill Lane.</p> <p>It was also stated by a further respondent that the sterilisation of land by the proposed Pipeline easement could reduce the developable area and render land unviable. It was also noted that people with an interest in the land found impediments within the locations of the Pipeline route and construction compounds which would render the fields unsuitable for the Project.</p> |                      | <p>Compensation Code and relevant statutory provisions. The Applicant has confirmed sufficient resources to meet these obligations as set out in the Funding Statement (Document reference 4.2, DCO Volume 4). The Applicant has included the minimum amount of land necessary to deliver the authorised development within the Order Limits whilst ensuring suitable flexibility is retained until the detailed design has been confirmed. The Applicant would only exercise the compulsory acquisition and temporary use powers over land actually required to deliver the authorised development.</p> <p>The Applicant aims to work collaboratively with landowners to address concerns and agree practical solutions wherever practicable. Affected landowners are also entitled to seek independent professional advice and reimbursement of associated costs may be provided as part of the negotiation of voluntary agreements or in accordance with established law and practice if the DCO is granted.</p> <p>Where development land is identified and impacted by the Project, this would be discussed with affected parties on a case-by-case basis. The Applicant cannot mitigate impacts on developments where no proposals</p> |

| PILs      | LUA09      | <p>Respondents expressed concern that the proposed Pipeline route passes through private land that has a domestic agricultural holding, rather than a business. The need for responsible construction and operation was emphasised, to minimise the impact on agricultural land with long-term crops.</p> <p>The importance of storing excavated soil separately based on soil type was emphasised, as was conducting a full soil assessment by an independent expert with the results shared in order to provide a baseline for reinstatement, before any construction begins. There was an enquiry about a soil resource management plan, and what reinstatement plans are proposed.</p> | N                    | <p>The Outline Soil Resource Management Plan (Document reference 7.1, DCO Volume 7) sets out the measures that would be adopted in installing the Pipeline to minimise the long-term impact on agricultural land, particularly the use of measures to restore land used temporarily for the installation of the pipeline to its original quality. These measures include the accurate recording of soil properties and depths, the appropriate timing of works in relation to weather and soil conditions, the use of appropriate plant and equipment, and the use of experienced soil specialists to supervise and advise on soil handling and restoration works.</p> <p>Although specifically designed for the construction phase, the soil protection measures contained within the detailed Soil Resource Management Plan can also be applied to any monitoring, maintenance, repair or replacement works that need to occur during the operation of the Project and that affect soil resources. The measures may also be relevant to works during the decommissioning phase, subject to relevant statutory requirements and relevant good practice measures in place at that time.</p> <p>The Outline Soil Resource Management Plan (Document reference 7.1, DCO Volume 7) is</p> |

| PIL                                              | LUA10      | The respondent emphasised the importance of ensuring that the proposed Pipeline installation does not interfere with agricultural activities, such as ploughing. They requested a commitment from the Applicant to occupy their land for as short a period as possible and to reinstate the land in a timely manner. The respondent requested that the pipe installation be deep enough for agricultural activities and that topsoil be reinstated to its original depth. | N                    | <p>The Outline Soil Resource Management Plan (Document reference 7.1, DCO Volume 7) sets out the measures that would be adopted in installing the Pipeline to enable the topsoil to be reinstated to its original depth and for agricultural activities to be able to continue post-installation.</p> <p>ES Chapter 3 Description of the Proposed Development, Volume I (Document reference 6.1, DCO Volume 6) provides information regarding minimum proposed pipeline depths and the construction programme. The minimum depth of the pipeline crown on agricultural land is 0.9m which is sufficiently deep to allow agricultural activities to continue. The land would be reinstated using materials excavated from the trench as soon as practicable following the placing of the pipeline in the trench.</p> |

ES Appendix Figure 13.11 Landscape designations, Volume III (Document reference 6.3, DCO Volume 6) has been updated to reflect the correct ASLQ boundary using the data provided by FBC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| South Downs National Park Authority (SDNPA) | LVIA02     | SDNPA disagreed with the statement that there would be no operational effect on the setting of South Downs National Park (SDNP). It said that elements such as visibility splays, or highway engineered changes, the incongruity of new structures and their associated lighting, fencing, signage would likely contribute to the potential to change or erode the landscape character and Local Landscape Character Areas. | N                    | SDNPA raised concern that the potential for operational effects on the setting of the SDNP could be understated. The Applicant has considered these matters and acknowledges that some localised operational effects are likely, and has engaged with SDNPA to inform mitigation and the development of the Design Principles. These effects are addressed in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6), within section 13.8 Assessment of likely significant effects - Effects on landscape designations. Adverse impacts on the setting of the SDNP are indeed likely to extend into the operational phase, but these would be localised and would reduce over time with the establishment of mitigation planting. Break Pressure Tank K (BPT-K) in the operational phase would contribute to adverse impacts on the setting of the SDNP, reflected in the assessment of effects on LLCA 33: Durley and Durley Street and Viewpoint 082. |

| FBC       | LVIA05     | FBC's tree officer had considered the impact on trees and raised no objections to the proposed pipeline route and associated infrastructure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | N                    | FBC's Tree Officer raised no objections to the proposed pipeline route and associated infrastructure; the Applicant has noted this position, and no further action is required.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| SDNPA     | LVIA06     | <p>SDNPA noted that LLCA26 was assessed as having a moderate adverse and significant landscape impact but stated that such impact was identified for the role it plays in the setting of the SDNP. The National Park noted that if an LLCA is adversely affected, so too is the setting.</p> <p>SDNPA suggested that a definition of landscape character should be included.</p> <p>It also provided suggestions which pertained to the treatment of the National Park and special qualities. It said that the SDNP should not be treated as a single receptor nor should the special qualities. It was added that receptors should be the patterns of elements contributing to the National Park setting. In addition, it was suggested that the scale required adjustment, or the report should clarify how direct impacts affect the National Park's setting. The use of Local Landscape Character Areas (LLCA) as receptors was</p> | N                    | <p>SDNPA queried the treatment of LLCA 26 and the way the SDNP and its special qualities are addressed, recommending clearer definitions, receptor treatment based on patterns of elements within the National Park's setting, and closer alignment of mitigation to identified harm. The Applicant has reviewed these points and addressed within the ES. All the LLCAs that contribute to the qualities of the SDNP, including LLCA26, are clearly identified within the LVIA presented in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6), with full details in ES Appendix 13.3 Landscape baseline and effects, Volume II (Document reference 6.2, DCO Volume 6). This approach was discussed and agreed with the SDNPA, at an in-person meeting on 02 December 2024.</p> <p>A definition of landscape character is included within section 13.7 Baseline conditions, Current landscape character baseline, of the</p> |

|           |            | supported and it was suggested that mitigation should align more closely with the identified harm. |                      | <p>LVIA as set out within ES Chapter 13 Landscape and Visual, Volume I (Document reference 6.1, DCO Volume 6), and within ES Appendix 13.1 Landscape and visual legislation and planning policy, Volume III (Document reference 6.2, DCO Volume 6).</p> <p>The Landscape Institute's recent GLVIA3 clarifications stated landscape designations should be treated as a landscape receptor, and the assessor should report on how the special qualities (i.e. the components of natural beauty) and/or purposes of designation of a designated landscape would be affected. The LVIA addresses the statutory status of the SDNP and the likely impacts on its designation with reference to its special qualities. The LVIA applies best practice in describing how the patterns of elements contribute to landscape character of LLCAs and the setting of the SDNP and explains how changes within the setting could affect the designation.</p> <p>ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6) addresses the likely operational effects of the Project on the setting of the SDNP, taking account of how the likely impacts have informed the embedded mitigation.</p> |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                     | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Portsmouth City Council (PCC) | LVIA07     | <p>PCC stated it had reviewed the Preliminary Environmental Information Report Chapter 13 and its associated figures, plans and descriptions, alongside the developing Environmental masterplan, Outline Landscape and Ecology Management Plan and Construction Environmental Management Plan as well as the summary of likely significant residual effects in Preliminary Environmental Information Report Chapter 21.</p> <p>PCC acknowledged the ongoing process and stated it would therefore continue to comment on these and other detailed elements as the final documents develop and if needed, when the LVIA is produced for the ES through the DCO process. The Council added that historic, if not ancient, landforms are present, such a trackways.</p> | N                    | <p>PCC confirmed ongoing review of the PEI Report materials and noted the presence of historic landforms such as trackways. The Applicant notes this comment and confirms that a detailed description by LLCA is provided in ES Appendix 13.3 Landscape baseline and effects, Volume II (Document reference 6.2, DCO Volume 6). This includes indicators of value such as natural heritage, cultural heritage and landscape condition. The document incorporates specific inputs from PCC received by email on 21 December 2023.</p> |
| Havant Borough Council (HBC)  | LVIA08     | <p>HBC noted that the Applicant had considered the visual impact of the proposed Water Recycling Plant (WRP) and has proposed landscape buffers around the site to screen the proposals. The Council said it was satisfied in principle that this will mitigate the impact on the character of area.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                             | N                    | <p>HBC acknowledged the visual mitigation proposed for the WRP through landscape buffers and indicated satisfaction in principle that this would mitigate effects on local character. The Applicant notes this position.</p>                                                                                                                                                                                                                                                                                                         |

| Consultee                                          | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|----------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SDNPA, HBC, East Hampshire District Council (EHDC) | LVIA09     | <p>SDNPA welcomed the inclusion of the European Landscape Convention definition of landscape, and the connection to other disciplines as part of the evolving Outline Landscape and Ecology Management Plan.</p> <p>HBC noted that the majority of the proposed pipeline route running through the district is proposed to be below ground, therefore reducing visual impact.</p> <p>EHDC also noted that the Applicant had acknowledged the proximity of the Project to the SDNP and considered potential impacts. The Council added that it is important to note that landscape impacts are not only local but cover a wider area and subject to further changes to the Project, this may impact further on the landscape.</p> | N                    | <p>SDNPA welcomed inclusion of the European Landscape Convention definition of landscape and the interdisciplinary approach within the evolving Outline Landscape and Ecology Management Plan, while HBC recognised that the majority of the pipeline would be below ground and EHDC noted wider-area considerations linked to the SDNP. The Applicant notes these points and confirms that the definition and assessment of landscape and visual impact is presented within the LVIA as set out in ES Chapter 13 Landscape and visual, Volume I, (the LVIA) (Document reference 6.1, DCO Volume 6), and that the LVIA, the biodiversity assessment, and relevant guidance and input from stakeholders, informed the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) submitted with the DCO application.</p> <p>The biodiversity assessment is presented in ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6).</p> |
| EBC, Natural England (NE)                          | LVIA10     | <p>EBC noted that the proposed pipeline routes would cross mature tree lines and hedgerows in Eastleigh Borough. It also noted the working width was reduced to 20m from 40m, but incomplete survey data</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | N                    | <p>EBC expressed concern about potential loss of veteran, ancient and mature trees along the route and queried the completeness of ancient woodland identification, requesting detailed Arboricultural information. EBC listed</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|           |            | <p>indicates a potential loss of veteran or ancient trees. The Council stated that not all ancient woodland has been identified in the Preliminary Environmental Information Report (Chestnut Gully Wood and The Mount, Fair Oak and Horton Heath) and that no veteran trees were identified as being within 200 metres of the Draft Order Limits in the Preliminary Environmental Information Report.</p> <p>Further information was requested on the impact on trees within the Draft Order Limits. It was stated that there has been a lack of identification and acknowledgement of veteran trees and their importance, particularly in field boundaries. Strong opposition was noted to the loss of any veteran, ancient, or mature trees. It was added that it was preferable to align the proposed pipeline routes to avoid significant trees; but that if unavoidable, it was suggested trenchless methods should be considered.</p> <p>EBC also highlighted that the proposed pipeline routes would mainly traverse open fields and field boundaries with trees. The Council listed the following areas as sites of concern: South of Portsmouth Road, west of The Laurels, East of Winchester</p> |                      | <p>areas of concern and requested care around Root Protection Areas (RPA).</p> <p>Regarding impact on trees, the Applicant instructed an Arboricultural survey, to inform the ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6). The Arboricultural Impact Assessment categorises and assesses the condition of existing trees within and on the boundaries of the Order Limits. The named woodlands are outside the Order Limits and the Arboricultural survey area. The design has evolved in response to this and additional survey findings. The survey identified the locations of veteran and ancient trees. There would be no loss or deterioration of ancient and veteran trees.</p> <p>Regarding vegetation loss, ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document Reference 6.2, DCO Volume 6), provides a list of numbered trees to be removed in a worst case scenario, accompanied by Tree Impacts Plan within Appendix C. The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) sets out the reinstatement strategy.</p> <p>Regarding RPAs: Construction activities would comply with the Tree Impacts Plan</p> |

|           |            | <p>Road, west of The Mount ancient woodland, either side of Winchester Road (boring sites), adjacent to Bow Lake north of Crowdhill (boring sites).</p> <p>EBC noted that it had no Arboricultural issues with any proposed work in the open fields away from significant trees. However, it mentioned that care would be required to not impact the Root Protection Areas (RPA) of any tree, in particular at compound boundaries where they are most likely to come close to significant trees. The Council added, however, that was not possible to assess the impact, mitigation and protection measures without detailed Arboricultural information (Tree Survey, AIA, Arboricultural Method Statement and Tree Protection Plan).</p> <p>Feedback was also provided on ancient woodland and veteran trees. It was acknowledged that the Applicant assessed woodlands along the proposed pipeline route for ancient woodland status. NE welcomed discussions on survey outputs and potential route changes and highlighted that impacts on ancient woodland and veteran trees should follow paragraph 186 of the NPPF. NE said it maintains the Ancient Woodland Inventory</p> |                      | <p>(TIP) set out in the ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6) as secured through the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p> <p>The LVIA, as set out in ES Chapter 13 Landscape and Visual, Volume I (Document reference 6.1, DCO Volume 6), assesses the likely impacts and effects on the landscape at the local, county and national scale. The LVIA has informed the iterative design process from the outset to avoid adverse impacts where possible and to embed good design.</p> |

| Consultee                            | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| SDNPA, Winchester City Council (WCC) | LVIA11     | <p>It was noted that tranquillity was described as a state of calm and peace, influenced by visual and auditory elements therefore effects on tranquillity, linked to views and visual changes, require reconsideration in relation to setting.</p> <p>Clarity on landscape patterns was also requested. The phrase "West of the River Meon the landscape becomes more irregular in pattern" was described as unclear. It was suggested that consistency in describing landscape patterns and relationships is needed. In addition, descriptions should be rooted in specific elements, avoiding miscommunication. The section should describe unity or coherence concerning the visual element of tranquillity.</p> <p>WCC acknowledged that tranquillity and landscape character were evaluated for significant residual effects. It was also noted that mitigating tranquillity is considered challenging through physical means and added that time is needed to determine restoration. WCC stated that significant effects on receptors had largely</p> | N                    | <p>SDNPA and WCC requested clearer treatment of tranquillity in relation to setting and greater consistency in describing landscape patterns. The Applicant has addressed this by using recognised tranquillity datasets and reviewing descriptions of landscape patterns for consistency.</p> <p>The LVIA set out in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6) takes into account both the South Downs Tranquillity mapping, and CPREs Tranquillity Map, presented in ES Figure 13.9 Tranquillity baseline, Volume III. These data sources are listed in Table 13-9 of the LVIA, and the SDNPAs descriptions of tranquillity have been added to the LVIA.</p> <p>The LVIA set out in the ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6) has been reviewed to address the consistency of descriptions of landscape patterns and to draw upon the detailed Arboricultural and habitat surveys carried out in summer between 2023 and 2025.</p> |

|                                            |            | been assessed. However, it was also noted that further reports were in progress and further comments would be provided at DCO submission.                                                                                                                                                                                      |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| National Grid Electricity Transmission PLC | LVIA12     | National Grid Electricity Transmission suggested that if a landscaping scheme is proposed, it requested that only slow and low growing species of trees and shrubs are planted beneath and adjacent to the existing overhead line to reduce the risk of growth to a height which could compromise statutory safety clearances. | N                    | National Grid Electricity Transmission requested that any landscaping beneath or adjacent to existing overhead lines use slow and low-growing species to maintain statutory safety clearances; the Applicant notes this comment and confirms consideration has been given to planting beneath and adjacent to the existing overhead lines to reduce the risk of growth to a height which compromises statutory safety clearances. This is set out in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) which has been informed by the ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6) (Document reference 6.2, DCO Volume 6) and hedgerow surveys. |
| Historic England (HE), WCC                 | LVIA13     | HE suggested that the Landscape and Ecology Management Plan should consider heritage assets, both designated and undesignated, buried and upstanding.<br><br>WCC stated that it agreed with the next steps outlined by the Applicant in Chapter                                                                                | N                    | The Applicant confirms that heritage considerations are integrated into landscape management proposals and that the approach aligns with work undertaken for ES submission.<br><br>The Outline Landscape and Ecology Management Plan (Document reference 7.5,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>SDNPA also stated that if the Project is altering field patterns through hedgerow loss, pattern of woodland, or implicating Ancient Woodland and its buffer, then there is likely to be an adverse effect on the National Park setting.</p> <p>HBC provided guidance on seed mixes and plantings and suggested that they should be guided by local landscape and plant health considerations. It added that generic 'wildflower' seed mixes are not generally supported as mitigation measures. The Council stated that proposed habitat reinstatement measures and any actions relating to net gain should be guided by local conditions and landscape and ideally be coordinated with the upcoming Local Nature Recovery Strategy (LNRS) for Hampshire. It was added that any loss of trees or vegetation due to above ground pipeline must be mitigated locally, and replacement planting should ensure no loss of character, green infrastructure, and biodiversity.</p> |                      | <p>in the ES and the Outline Landscape and Ecology Management Plan.</p> <p>SDNPA sought clearer articulation of where embedded or secondary mitigation addresses effects and highlighted potential adverse effects on the National Park's setting from changes to landscape pattern.</p> <p>The LVIA recognises that embedded mitigation, such as alignment refinement, RWW, and retention of key landscape elements, can avoid or reduce effects. Where these measures are sufficient to lower the magnitude of change, this is stated clearly in the assessment with full details in ES Appendix 13.3 Landscape baseline and effects, Volume II (Document reference 6.2, DCO Volume 6). Secondary mitigation is not relied upon for landscape and visual matters, as explained in section 1.3 of ES Appendix 13.2 Landscape and visual assessment methodology, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>The assessment also acknowledges that changes to landscape pattern, including hedgerow loss, alteration of field structure, woodland removal, or any effect on Ancient Woodland and its buffer, have the potential to influence the setting of the SDNP. Where such changes occur within LLCA(s)</p> |

| Rowlands Castle Parish Council, Upham Parish Council | LVIA16     | <p>Rowlands Parish Council raised concerns about the new trees and hedges that are proposed to screen the visual impact of the water treatment plant. The parish said that once the roots reach down to the 'landfill contents' at the site, the roots would die off as they would lack the necessary nutrients from soil. The Council also noted that maintenance would be provided for 5 years and claimed that this would be when the plants would start to die off. The parish suggested that maintenance should last as long as the WRP lifetime.</p> <p>Upham Parish Council noted that the Project's red line boundary includes a long section of hedgerow at the entrance to the access track to BPT-K. It was outlined that Sciviers Lane has a strong rural character and the hedgerows with their mature oak trees are very important to this. Permanent removal and re-alignment of hedgerows or removal of oak trees for sight lines was viewed as disproportionate and unacceptable, especially considering the</p> | N                    | <p>Rowlands Parish Council raised concerns that screening planting at the WRP could fail if roots reach landfill material and that maintenance should extend to the WRP's lifetime, and Upham Parish Council expressed concern regarding hedgerow and tree loss associated with access to BPT-K along Sciviers Lane; the Applicant has addressed rooting depth and maintenance through soil management and long-term landscape management proposals, has revised access arrangements since Preliminary Environmental Information Report, and has assessed local landscape effects and necessary vegetation removal with reinstatement and protection secured through the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) and Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p> <p>The Outline Soil Resources Management Plan (Document reference 7.1, DCO Volume 7) provides details of subsoil and topsoil depths. Forest Research indicates that it is unusual for roots to penetrate to a depth</p> |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                      | <p>quality (Category A) Oak tree and a section of hedgerow along Sciviers Lane would need to be removed to facilitate construction of the Project.</p> <p>Reinstatement measures are set out in the outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7), while the ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6) specifies protection measures to existing trees, secured through the outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p>           |
| EBC       | LVIA17     | <p>EBC raised that the proposed pipeline route and methodology would result in the loss of significant, mature trees at identified points. The Council objected to this loss. It claimed that no detailed Arboricultural information had been provided and without this information, it had not been possible to assess the impact in detail.</p> <p>The Council also highlighted a concern about tree identification and noted that Chapter 8 of the Preliminary Environmental Information Report mentioned that it had identified 7 ancient trees within 200m of the Order Limits, therefore the Council</p> | N                    | <p>The Council objected to potential loss of significant mature trees and highlighted the need to identify veteran and ancient trees at individual level, noting that earlier consultation lacked detailed Arboricultural information; the Applicant notes that this issue was raised as part of the Summer 2024 Consultation, at which time the Project's Arboricultural Impact Assessment had not yet been published which has seen been completed.</p> <p>ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6), categorises and</p> |

| Consultee                          | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                    |            | <p>considered there to be a lack of identification or acknowledgment of 'veteran' trees and their importance. It was added that veteran trees, which may pre-date ancient woodland, are given equal importance to ancient trees in national policy and governmental advice. Mature trees, especially those forming important linear features like field boundaries, are also significant.</p> <p>The Council said that the Arboricultural information fails to identify whether any veteran trees are present within or close to the Order Limits. It was advised that it is critical to identify the presence and impacts on veteran, mature, and ancient trees at an individual tree level. It was noted that although Chapter 13 (Landscape and Visual) mentions trees and veteran trees, it is more from a landscape perspective rather than an ecological one. The Council added that it will need to assess the Arboricultural impact primarily from an ecological and ecosystem services perspective.</p> |                      | <p>assesses the condition of existing trees within and on the boundaries of the Order Limit. The document identifies the locations of veteran and ancient trees. There would be no loss or deterioration of ancient and veteran trees.</p> <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity, including trees and woodland habitat. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Through the implementation of mitigation, no residual likely significant adverse effects on ecological features, including trees and woodland habitat, would be anticipated.</p> |
| HCC, Environment Agency (EA), WCC, | LVIA18     | HCC stated that mitigation planting plans and details of any tree or hedgerow removal must be prepared in consultation with the LHA. All losses of highway trees or                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | N                    | HCC requested that details of mitigation planting and any tree or hedgerow removal be agreed with the LHA and that losses of                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Consultee            | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Upham Parish Council |            | <p>hedges must be identified, and any removal carried out under HCC's Technical Guidance Note 15 will require a Capital Asset Value for Amenity Trees (CAVAT) payment.</p> <p>HCC affirmed that mitigation planting should not be within the highway boundary and stated that replacement of lost highway planting should be undertaken by the County Council using the Capital Asset Value for Amenity Trees funding.</p> <p>WCC said that some impact will result from loss of vegetation and changes to topography but with suitable landscape schemes, this can be mitigated over time. The Council also said it would like to understand the temporary impact of 'scarring' of the landscape and added that details of replanting and measures to mitigate this impact need to be presented.</p> <p>Upham Parish Council said it wanted to see full re-instatement of the hedgerows impacted by the construction compound between Mortimers Lane and Stroudwood Lane.</p> <p>NE made suggestions pertaining to visual disturbance mitigation. It was noted that</p> |                      | <p>highway vegetation be identified, with reference to Technical Guidance.</p> <p>The Applicant identifies loss of trees and hedges, including within the highway, in ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6), and within ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>Detailed mitigation planting plans and exact extent of the vegetation removal would be defined at detailed design, post DCO consent and would be set out in the Landscape and Ecology Management Plans for approval by the Local Planning Authority.</p> <p>WCC sought clarity on temporary 'scarring' and reinstatement and Upham Parish Council requested full reinstatement of hedgerows affected by a construction compound.</p> <p>The LVIA, presented in ES Chapter 13 Landscape and Visual, Volume I (Document reference 6.1, DCO Volume 6), with further detail provided in ES Appendix 13.3 Landscape baseline and effects, Volume II (Document reference 6.2, DCO Volume 6), includes an assessment of likely landscape and visual impacts and effects at year 1 of</p> |

|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>qualifying features of bird species are sensitive to visual disturbance.</p> <p>It was suggested that visual screening should be used to mitigate potential disturbances and impacts should be assessed and addressed according to SWBGS Guidance on Mitigation and Offsetting Requirements.</p> |                      | <p>operation in winter. This describes the conditions that would exist after the ground has been restored and before planting proposed to reinstate vegetation removed to facilitate construction has established. This worst case assessment explains the temporary effects of scarring until such planting has established.</p> <p>In response to Upham's Parish Council's comment: A reinstatement strategy is included in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) submitted with the DCO application. This explains how vegetation loss would be minimised and existing trees protected, with reference to the ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6). The hedgerows affected by the construction compound between Mortimers Lane and Stroudwood Lane, along with other impacted vegetation, would be mitigated through replacement planting as close to the original locations as practicable, except where planting is restricted above the pipeline. In such cases, Graphic 3-1 of the Outline Landscape and Ecology Management Plan sets out the acceptable species. Vegetation would be reinstated according to its original UKHab type, detailed plant species</p> |

|-----------|------------|-------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>lists for each of the reinstated habitats and the exact extent of the vegetation removal and therefore reinstatement planting required would be defined at detailed design, post DCO consent and would be set out in the Landscape and Ecology Management Plans submitted for approval to the relevant Local Planning Authority for the affected location</p> <p>Regular engagement has been undertaken with NE regarding impacts on SWBGS sites. An approach to the mitigation for these impacts has been agreed with NE and this is set out in the Habitats Regulations Assessment (HRA) - Stage 2 Appropriate Assessment (AA) and Marine Conservation Zone (MCZ) - Stage 1 Assessment (Document reference 5.2, DCO Volume 5) submitted with the DCO application. This provides detail on any potential impact pathways from the Project and mitigation that would be implemented. Mitigation includes timing construction works to avoid disturbance to qualifying species, including wild birds. This concluded that with the consideration of further design details and with the application of mitigation measures, including visual screening, there would be no impacts which undermine conservation</p> |

|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                             |                      | <p>objective or result in an adverse effect on the integrity of the Habitats sites or MCZ.</p> <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity, including SWBGS sites. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Through the implementation of mitigation, no residual likely significant adverse effects on ecological features are anticipated.</p>                                                                                                                       |
| WCC       | LVIA19     | WCC said that the majority of adverse impact will be during the construction phase and around any permanent above ground structures such as intermediate pumping stations and break pressure tanks from a landscape and visual perspective. | N                    | <p>WCC observed that the majority of adverse effects would arise during construction and around permanent above-ground infrastructure; the Applicant confirms that this aligns with the LVIA findings, presented in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6). The LVIA identifies that the majority of adverse effects arise during the construction phase due to temporary vegetation loss, construction activity and the presence of plant and machinery. The assessment also recognises localised long-term adverse effects associated with permanent above-ground infrastructure, such as Intermediate Pumping Stations and Break</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

However, it is not considered reasonable for the proposed IPS-F to provide additional planting to mitigate effects arising from a separate, consented development. Any landscape mitigation proposed is therefore limited to that necessary to address the effects of the IPSF itself, having regard to the location and nature of cumulative schemes.                                                                                                                                                                                                                                    |
| PIL       | LVIA26     | The respondent raised concerns over the process undertaken to identify the proposed pipeline routes and stated it had taken too long and would destroy many invaluable mature trees. The respondent added that replacement is not achieved in the 21st century. Replacing a large oak for a stick in the ground was not considered replacement. | N                    | The respondent raised concern about the process taken to identify pipeline routes and potential loss of mature trees. The Applicant confirms that the design has sought to avoid impacts on mature trees through alignment refinement and RWW at sensitive locations, and that there would be no loss or deterioration of ancient and veteran trees. Where vegetation is removed to facilitate construction, it would be reinstated in line with the reinstatement strategy set out in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) which has been informed by the ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6) and hedgerow surveys. |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PILs      | LVIA27     | Respondents hoped that any turf reinstatement work would be carried out to an equivalent, or better, standard than it currently is, and that there would be a suitable period to redress any subsequent issues arising from settlement, or similar in a timely manner.                                                                                                                                                                                                                | N                    | Respondents requested assurance that turf reinstatement would match or exceed current conditions. The Applicant confirms that the vegetation removed to facilitate construction would be reinstated in line with the reinstatement strategy set out in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) which indicates that all new planting would be subject to a five year establishment maintenance period. The Outline Landscape and Ecology Management Plan has been informed by the ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO volume 6) and hedgerow surveys. |
| PILs      | LVIA28     | A respondent stated that any post-development landscape impact should be minimised. The respondent suggested replacing and enhancing hedgerows where they have been lost and creating connections between existing woodland using hedgerows to strengthen habitat connectivity. A respondent also suggested opportunities for on-site habitat enhancement, such as incorporating biodiversity features into drainage design, and exploring the potential to extend existing woodland. | N                    | Respondents highlighted opportunities to reduce post-development landscape impacts. The Applicant confirms that the design of the Project incorporates embedded mitigation, informed by an LVIA (Document reference 6.2, DCO Volume 6) from the outset, with a clear emphasis on the avoidance of vegetation removal through alignment refinement, RWW at sensitive locations, and design iteration. These measures represent embedded primary mitigation.<br><br>Vegetation removed to facilitate construction would be reinstated in line with the                                                                                                         |

| Consultee | Issue code | Summary of issue raised                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                                |                      | EMEAs. The exact locations are a matter for the detailed design and have not been identified at this stage and have not been relied upon in the ES for mitigation. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) includes a requirement to consider opportunities for early/advanced planting, as this relates to construction programming and does not influence the final design.                                                                                                                                                                                                                                                                                                                                                        |
| PIL       | LVIA30     | The respondent stated that their land is bordered by a linear group of mature common Oak located along the northwestern boundary. The trees are of notable size providing an element of natural screening between their property and neighbours, as well as enhancing the setting of the land. | N                    | <p>The respondent highlighted mature oaks along their north-western boundary that provide screening.</p> <p>The Applicant confirms that the Project has been designed to as far as possible avoid the loss of mature trees. Within this specific location the working width would be reduced from 40m to 20m to reduce loss of vegetation; however, and with reference to the Arboricultural Impact Assessment presented in ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6); three oak trees have been identified for removal, comprising two of high quality, and one of moderate-quality. Loss of vegetation would be reinstated in line with the reinstatement strategy set out in the Outline Landscape and Ecology Management</p> |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                      | Plan (Document reference 7.5, DCO Volume 7) which has been informed by the ES Appendix 13.5 AIA, Volume II (Document reference 6.2, DCO Volume 6) and hedgerow surveys.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PIL       | LVIA31     | The respondent highlighted a derelict hedgerow and three significantly sized protected oak trees on their farm which the proposed pipeline route would run very close to. The respondent provided a map to support their statement. The respondent highlighted that there are TPOs on three oaks and it was suggested that the Applicant needs to make sure that these are avoided which might prompt a realignment of the route. The respondent also provided photographs to support their statement. | N                    | <p>The Applicant has reviewed this information and confirms the mentioned trees would be protected. With reference to the Arboricultural Impact Assessment, presented in ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6). The referenced trees comprise T342, T546, T547 and T548, along with two ancient oak trees (T343 and T554). Tunnelling beneath the River Itchen extends through this area and, as a result, these trees have not been identified for removal.</p> <p>Construction activities would comply with the Tree Protection Plan (TPP) set out in the ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6) as secured through the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), and there would be no loss or deterioration of ancient and veteran trees.</p> <p>The Project has been designed to as far as possible avoid the loss of mature trees. Where vegetation is removed to facilitate</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                      | construction, it would be reinstated in line with the reinstatement strategy set out in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) which has been informed by the ES Appendix 13.5 AIA, Volume II (Document reference 6.2, DCO Volume 6) and hedgerow surveys.                                                                                                                                                                                                                                   |
| PIL       | LVIA32     | The respondent stated that BPT/IPS-E the Project would break the skyline in important views from Portsmouth City, Portsmouth Harbour and Langstone Harbour. They added that the Project would also be very visible when looking south across the sweeping landscape to the north of Portsdown Hill. The respondent said this would be very harmful to the landscape. They suggested that the infrastructure needs to be redesigned to minimise its impact upon a very sensitive and important skyline. | N                    | The impacts and effects on people's views and the landscape, including views from Portsmouth, across Portsmouth Harbour and Langstone Harbour and from Portsdown Hill have been assessed and considered in the design of the Project, as summarised in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6). The proposed BPT/IPS-E has been designed to be integrated into landform of Portsdown Hill and would not break the skyline in views from Portsmouth City, Portsmouth Harbour and Langstone Harbour. |
| PILs      | LVIA33     | Respondents mentioned that the Project would potentially be visible from a PRow 124 to the north and PRow 45 to the south. The respondent therefore raised concerns about visual impact.                                                                                                                                                                                                                                                                                                               | N                    | Visual impacts have been assessed within the LVIA set out in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6), including people using PRow, this addresses requirements for mitigation. The LVIA has informed the iterative design of the Project from the outset. Where vegetation is removed to facilitate                                                                                                                                                                                                |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Wider community                                  | LVIA34     | <p>Respondents highlighted the visual impact of the associated infrastructure and cited visual impacts on the countryside and Langstone Harbour.</p> <p>One respondent noted that the Applicant had indicated that it would screen the development with additional tree planting, but trees on the landfill regularly die due to exposure of their roots to leachate and landfill gas which displaces oxygen. The respondent highlighted that Site 72 now has trees not established around the full perimeter, therefore leaving gaps.</p> | N                    | <p>Assuming the 'associated infrastructure' relates to the WRP, the impacts and effects on people's views and the landscape, including views across Langstone Harbour (represented by VP004, VP011, VP017 and VP133) and across Chichester Harbour (VP002), have been assessed and considered in the design of the Project, as summarised in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6). The design of the WRP incorporates a suite of embedded mitigation measures secured through the Design Principles Document (DCO Document 5.12, Volume 5), which aim to reduce visual impact and assist with landscape integration on views from the harbour, such as limiting building heights to a maximum of 14.5m from existing ground level to reduce vertical prominence, reinforcement of existing</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                    |                      | <p>boundary vegetation and the use of materials and a colour palette appropriate to the local context, informed by a colour assessment.</p> <p>The Applicant notes that tree and shrub planting is proposed around the site boundaries where mature vegetation is already successfully established., indicating that planting is viable in these peripheral areas. Detailed planting specification would be developed at the detailed design stage, informed by site specific ground conditions.</p> <p>A combination of species selection and planting medium depths in accordance with industry recommendations would maximise the percentage of tree establishment over land fill.</p> |
| Wider community | LVIA35     | Respondents emphasised the need for tree screening to mitigate the visual impact on AONB and raised concerns about the environmental impact on AONB, one respondent added that this is already struggling with huge strain of overflows of sewage. | N                    | <p>Nationally important landscapes within the study area, including Chichester Harbour National Landscape (previously AONB), have been assessed within the LVIA set out in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6). Views from the National Landscape are represented by VP002. The assessment concludes that intervisibility between the Chichester Harbour National Landscape and the construction of the Project would be very limited, and none during operation. The</p>                                                                                                                                                                 |

| Wider community | LVIA38     | The respondent stressed the need to assess and explain the impact on nature and vegetation, including the loss of visual, recreational, and social amenities. | N                    | The respondent emphasised the need to explain impacts on vegetation, nature and visual/recreational amenities. The Applicant confirms that these impacts have been assessed in the ES; impacts on existing vegetation are assessed in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6), and ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6). The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) includes a reinstatement strategy. Effects on community facilities and land (including public recreational resources) are assessed in ES Chapter 17 Socioeconomics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6). Furthermore, the vegetation removed to facilitate construction would be replaced following construction, and trenchless construction techniques would be used for sensitive crossings, such as beneath rivers and woodland. |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | LVIA39     | Respondents raised concerns about the significant visual impact of the proposed WRP at Broadmarsh, particularly from Langstone Harbour which is an SSSI and part of a Ramsar site within a special protection area (SPA). They emphasised the need for effective long-term screening and the potential failure of tree planting due to reportedly poor soil quality. A respondent also noted that as well as the visual impact not having been fully considered, neither has the impact the site may have on migratory birds. and the overall visual and environmental impact. | N                    | <p>The WRP site is already well screened from Langstone Harbour by vegetation around Broadmarsh Coastal Park, which would not be affected by the Project. In addition, the vegetation already in place around the WRP site would also be maintained in place during construction as far as is practicable. Any locations where this is not achievable are expected to be small in the overall context and not considered likely to have an adverse effect on the qualifying feature of Chichester and Langstone Harbours SPA and Ramsar. Additional planting would be added to the boundary of the WRP and would be managed and maintained as set out in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7).</p> <p>The Applicant notes that tree and shrub planting is proposed around the site boundaries where mature vegetation is already successfully established, indicating that planting is viable in these peripheral areas. Detailed planting specification would be developed at the detailed design stage, informed by site specific ground conditions.</p> <p>The Applicant confirms that the impacts and effects on people's views and the landscape are assessed in ES Chapter 13: Landscape and Visual (Document reference 6.1, DCO</p> |

Protective Provisions manage the interface between the Project and third party undertakers' apparatus, which when in place, would mitigate the risk of damage to the asset.</p>                                                                                                                                                                                                                                                                                                                            |
| HSE       | MAD02      | <p>HSE also noted the pipeline operator, Southern Gas Networks, may have legal interest in the development in the vicinity of the pipeline which may restrict developments within a certain proximity. HSE further noted that the standards to which the pipeline would be designed and operated may restrict major traffic routes within proximity of the pipeline, consequently requiring the need for Southern Gas Network to modify the pipeline or its operation if development proceeds. HSE stated there was a requirement to establish the necessary measures required to alter or upgrade the pipeline to appropriate standards.</p> |                      | <p>The Applicant confirms they have contacted Southern Gas Networks. They have identified interfaces between the Project and Southern Gas Network's assets and are currently engaged in managing the interface with their apparatus.</p> <p>Protective Provisions have been included in the DCO for the benefit of undertakers, such as Southern Gas Networks. Protective Provisions manage the interface between the Project and third party undertakers' apparatus, which when in place, would mitigate the risk of damage to the asset. The Applicant is progressing ongoing engagement with relevant third party undertakers on protective provisions and managing the interface with their apparatus.</p> |

|                               |            | To address the above matters HSE recommended the Applicant to contact Southern Gas Network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Winchester City Council (WCC) | MAD03      | <p>It was highlighted that Chapter 14 Major accidents and disasters outlined the provisions in place to prevent major accidents and disasters during construction and operation, involving authorities like HSE, Environment Agency (EA), Southampton Airport, and Hampshire and Isle of Wight Fire and Rescue Service. Several risks, including Control of Major Accident Hazards (COMAH) sites, widespread electrical failure, system failure, and severe weather, had been scoped out of the assessment.</p> <p>It was also highlighted that there is a need to understand emergency planning measures and the reliance on local authorities for assistance in emergencies. WCC noted that it is an important issue to consider especially along the length of the Pipeline which may impact the availability of water for residents across the region.</p> <p>It was mentioned by WCC that a risk assessment had been undertaken and appeared acceptable, though it was noted</p> | N                    | <p>The Applicant notes the summary of the chapter contents and the confirmed scoped out risks.</p> <p>The details for emergency plans to be produced to manage risks during construction and operation of the Project are set out in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and the Operation Environmental Management Plan (Document reference 7.7, DCO Volume 7) respectively. This includes mitigation for the risk of an interruption to water supply. The detailed versions of the Construction Environmental Management Plan and Operation Environmental Management Plan would be produced and submitted for approval in accordance with corresponding requirements of Schedule 2 of the draft Development Consent Order (Document reference 3.1, DCO Volume 3).</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | that authorities would provide more detailed comments on specialist areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                      | The Applicant notes the mention of the risk assessment and that WCC believe this is acceptable.                                                                                                                                                                                                                                                                                                                                                                                         |
| HSE       | MAD04      | <p>HSE referred to Chapter 3 of the Preliminary Environmental Information Report (May 2024) and stated that depending on the specifics of the hydrogen peroxide to be used in the Water Recycling Plant (WRP), this may require hazardous substances consent.</p> <p>HSE advised that confirmation is sought as to whether or not any substance proposed falls into the categories in Schedule 1 (Planning (Hazardous Substances) Regulations 2015 as amended) and whether the quantities are sufficient to require consent.</p> | N                    | It has been confirmed that Hazardous Substances Consent would not be required for the operation of the Project as the hazardous substances used during construction do not meet the volume thresholds requiring such consent. This is set out in section 14.4 of Chapter 14 Major accidents and disasters, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                             |
| HSE       | MAD05      | HSE noted that Regulation 5(4) of the Infrastructure Planning (Environmental Impact Assessment) Regulations 2017 requires the assessment of significant effects to include, where relevant, the expected significant effects arising from the Project's vulnerability to major accidents. It was also highlighted that there is the need to consider risk assessments arising from the development's vulnerability to major                                                                                                      | N                    | The Applicant notes HSE's comment that there is a need to consider risk assessments arising from the development's vulnerability to major accidents in line with Advice note 15: Drafting Environmental Statements – Major Accidents and Disasters. ES Appendix 14.1 Stage 2 risk assessment, Volume II (Document reference 6.2, DCO Volume 6) of the Major accidents and disasters chapter contains a risk assessment of the Project's vulnerability to major accidents and disasters. |

|                                                  |            | accidents, in line with Advice note 11 on the Inspectorate website.                                                                                                                                                                                   |                      | <p>This is summarised in ES Chapter 14 Major accident and disasters, Volume I (Document reference 6.1, DCO Volume 6). The risk assessment concludes the Project would not lead to a major accident or disaster on the basis each risk is mitigated to 'as low as reasonably practicable' and therefore no likely significant effects arising from the Project's vulnerability to major accidents or disasters have been identified.</p> <p>The Project has developed this risk assessment, along with the whole ES, in line with the Inspectorate: Working with Public Bodies in the infrastructure planning process.</p> |
| HSE                                              | MAD06      | HSE noted that the Explosives Inspectorate had no comment to make. It was noted that there are HSE licenced explosives sites in the vicinity of the Project, however, HSE confirmed that the Project did not fall into any of the safeguarding zones. | N                    | The Applicant has noted this comment that there are HSE explosive licenced sites in the vicinity of the Project but that the site does not fall into any safeguarding zones. This did not require further consideration in the major accidents and disasters assessment as, as stated by the HSE, the Project does not fall into any safeguarding zones.                                                                                                                                                                                                                                                                  |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                       |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Wider community                                  | MAD07      | Objections were expressed to the Project as it was considered that there is too much potential for failures. Respondents expressed concerns pertaining to potential                                                                                   | N                    | A risk assessment has been undertaken for ES Chapter 14 Major accidents and disasters, Volume I (Document reference 6.1, DCO Volume 6) and is set out in ES Appendix 14.1 Stage 2 risk assessment, Volume II                                                                                                                                                                                                                                                                                                                                                                                                              |

|                                                                    |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                      | 7), would be further developed by the contractor to include these details.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Hampshire County Council (HCC), Winchester City Council (WCC), HBC | NAV02      | <p>HCC stated that it had considered objective of scheduling construction works to minimise noise and vibration emissions at highly sensitive times. It also stated that engagement would continue with district and borough Environmental Health teams on measures to control and reduce construction noise emissions. It was also recommended that the location and methodology of baseline noise measurements within the Havant Borough be agreed by the Environmental Health Team of HBC.</p> <p>WCC expressed support for the approach the Applicant proposed to take regarding noise and vibration. However, it was stated that more details regarding compound areas and impacts on sensitive receptors should be submitted with the formal application, which will be assessed by the Council's technical officers at that time.</p> <p>HBC highlighted that in the Preliminary Environmental Information Report, noise and vibration sensitive receptors were identified, including residential and non-residential receptors and suggested if the</p> | Y                    | <p>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) identifies the standard construction working hours and activities that may be undertaken outside of these times when required. The trenchless crossings at which extended periods of night-time working may be required have been identified and the associated noise and vibration impacts have been assessed, as described in section 15.8 of ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6). The assessment also considers the noise impacts of construction works on Saturday afternoons (the relatively noise-sensitive period in the core working hours) and identifies the locations and activities at which this could cause significant disturbance effects without mitigation. Details on potential mitigation measures are included in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) submitted with the DCO application and a final package of construction mitigation would be identified in the Noise and Vibration Management Plan (NVMP) to be prepared and submitted by the</p> |

|           |            | <p>receptors could be identified locationally more clearly, at least by District /Borough so that the noise and vibration impacts on local residents can be understood more readily. It was acknowledged that baseline noise measurements had been taken from publicly available information, and a baseline noise survey will be done to inform the ES. HBC also highlighted potential noise and visual disturbance for works at the proposed Water Recycling Plant (WRP) site including Chichester and Langstone Harbour's Special Protection Area (SPA)/Ramsar and several sites listed in the Solent Waders and Brent Goose Strategy.</p> <p>It was acknowledged that the Preliminary Environmental Information Report set out a range of mitigation measures, including portable screening, silenced generators, and noise enclosures, and that these will be developed further in the Construction Environmental Management Plan.</p> |                      | <p>Contractor post-DCO consent. The core working hours have not changed since the Preliminary Environmental Information Report was produced; however, subject to the information to be provided in the NVMP, it is currently anticipated that some restrictions on Saturday afternoon working would be required, as detailed in section 15.9 of ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6). This additional mitigation measure would avoid some of the significant construction noise effects predicted at the PEI Report stage. With the mitigation measures identified in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) in place, residual effects are predicted to be not significant. The receptors identified in the assessment are shown in Figure 15.1 Noise and vibration sensitive receptors, Volume III (Document reference 6.3, DCO Volume 6) which allows the receptors to be identified by District/Borough.</p> <p>The main forum for Local Planning Authority engagement on noise and vibration has been the Emission and Transport Environmental Impact Assessment (EIA) Working Group, which met nine times between Summer 2022 and Summer 2025. The local authority noise specialists involved in the Emission and</p> |

|           |            | more clearly, and that the location and methodology of baseline noise measurements should be agreed with HBC.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                      | submitted by the Contractor post-DCO consent.<br><br>Baseline noise surveys were undertaken in 2024, the location and methodology were agreed with all Local Planning Authorities. ES Figure 15.1 Noise and vibration direct effects study areas, sensitive receptors and monitoring locations, Volume III (Document reference 6.3, DCO Volume 6) shows the noise sensitive receptors identified in the assessment.                                                                                                                                                                                                                                                                                                                          |
| HCC, HBC  | NAV04      | <p>Respondents made suggestions about working hours during construction.</p> <p>HBC requested that works should only be permitted between 08:00-18:00hrs (Mon-Fri), 09:00-13:00hrs (Sat) and no works on Sundays and Public Holidays.</p> <p>It was also suggested that in exceptional cases when work must be carried out outside of regular working hours, the Local Authority should be informed.</p> <p>HCC noted that as stated by paragraph 3.5.4 of the Framework Traffic Management Plan, work outside of typical hours must be considered, and they argued that this had not been considered fully in the noise assessment.</p> | Y                    | <p>The standard working hours for construction of the Project have not changed since the Preliminary Environmental Information Report and are secured in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). These are as follows:</p> <ul style="list-style-type: none"> <li>Monday to Friday (excluding bank holidays): 07:00 to 19:00 in summer and 07:00 to 17:30 in winter; and</li> <li>Saturday: 07:00 to 17:00.</li> </ul> <p>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) requires that an NVMP would be submitted to the local authority for approval and section 61 applications made prior to commencement of construction works</p> |

|           |            |                         |                      | <p>as required. Hence, the Local Planning Authority would be kept informed of works outside of regular working hours.</p> <p>As discussed in relation to Issue Code NAV02, rather than amending the construction working hours to comply with the request of HBC, sufficient mitigation measures have been identified to avoid significant effects, with a particular focus on the periods of proposed Project construction works which are outside of the hours requested by HBC. This is in acknowledgement of the fact that there are large areas of the project which are not close to noise sensitive locations; and there are activities such as meetings and toolbox talks which occur at the start and end of the working day and do not emit high noise levels. Construction works in non-sensitive locations, and activities which do not emit high levels of noise, can be undertaken outside of the working hours requested by HBC without causing significant disturbance effects. Retaining the proposed working hours and identifying mitigation as required is considered a preferable approach to allow the construction works to be undertaken as efficiently as possible.</p> |

|           |            | significant noise impacts identified are likely to carry a health burden for residents, especially those who are more vulnerable. Mitigation measures suggested included contingency mitigations for affected dwellings, possibly including off-site accommodation for respite, on request.                                                                                               |                      | to construction noise, no significant population-level health effects have been identified.<br><br>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) identifies sufficient on-site mitigation to avoid significant effects on residents due to noise and vibration from construction works. This means that the potential requirements to offer noise insulation or temporary rehousing identified in the PEI Report are not required.                                                                                                                                                                                                                                         |
| NE        | NAV07      | It was emphasised that best practice guidance should be followed to minimise noise and vibration disturbance to designated Habitats sites. NE noted that during the months of October to March (inclusive) noise from development near to any part the SPA or SPA supporting habitat for overwintering birds shall not exceed 69 dB $L_{Amax}$ and that this should have been considered. | N                    | The ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity, including designated sites. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Secondary mitigation includes adopting soft start methodology, timing restrictions and watching briefs, to ensure to reduce disturbance to overwintering birds, and to ensure construction noise does not exceed noise best practice guidance thresholds. Best practice guidance includes use of the Waterbird Disturbance Mitigation Toolkit Informing Estuarine Planning & Construction |

| PIL       | NAV08      | <p>Concerns were expressed about the proposed Pipeline routes, particularly regarding noise.</p> <p>Concerns were raised that the proposed work hours would significantly impact the enjoyment and use of gardens and land. It was stated that the noise and vibration from construction machinery and traffic would affect family life. The respondent stated their concern in regard to only having one day per week uninterrupted by the construction of this Project.</p> | Y                    | <p>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) identifies the standard construction working hours and activities that may be undertaken outside of these times when required. The effects of noise from construction works depend on a variety of factors including the noise level, the duration of the activity and the sensitivity of the receptor at the time when the works are being done. The working hours try to strike a balance between these, in particular shortening the working hours (e.g. to provide an additional day of per week of respite, as suggested by the consultee) would extend their duration and therefore not necessarily reduce the overall effects on enjoyment and use of gardens and land. The concern raised regarding construction working hours is noted and additional mitigation has been proposed in order to mitigate these effects. It is currently anticipated that some restrictions on Saturday afternoon working (the relatively noise-sensitive period in the core working hours) would be required, as detailed in section 15.9 of ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6). This additional mitigation measure would avoid some of the significant construction noise effects predicted at the</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                            |                      | Summer 2024 Consultation due to Saturday afternoon working. With the mitigation measures identified in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) in place, residual effects are predicted to be not significant. The final package of mitigation would be identified in the NVMP to be prepared and submitted by the Contractor post-DCO consent.                                                                                                                                                                                                                                                                                                                                                                                                                        |
| PILs      | NAV09      | <p>Concerns about noise and disruption during construction affecting livestock units were raised. Measures to minimise construction and operational effects, namely site visits and vibration monitoring equipment were requested.</p> <p>Concerns were raised about the level of noise from heavy machinery and its effect on horses. It was stated that loud noise could scare the horses and pose a risk to riders.</p> | N                    | <p>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) identifies a range of mitigation measures that would be used to minimise construction noise effects. It also requires that an NVMP would be submitted to the Local Planning Authority for approval prior to commencement of construction works, this would detail any noise and vibration monitoring to be undertaken.</p> <p>Control measures to prevent unauthorised access to construction sites are identified in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). These measures would ensure that horses are kept a sufficient distance from the works to minimise the risk that they are scared by noise from the works. The Outline Soil Resource Management Plan</p> |

| Wider community                                  | NAV10      | <p>Respondents expressed concerns about the operational impacts of the WRP, which included noise and vibration but also smells and environmental impacts, especially during construction. Respondents also raised particular concerns about noise impacts during nighttime hours which could have impacts on nearby housing and wildlife.</p> <p>It was recommended that robust control measures for noise and light pollution from the Above Ground Plant (AGP) are needed to minimise impacts, especially near housing or sensitive habitats.</p> | N                    | <p>Noise effects associated with the construction and operation of the WRP are not expected to be significant, including activities that may need to be undertaken at night. An assessment of construction noise and vibration is provided in ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6). Details on potential mitigation measures are included in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) submitted with the DCO application. A final package of mitigation would be identified in the NVMP to be prepared and submitted by the Contractor post-DCO consent.</p> <p>An assessment of operational noise from the WRP and AGP (intermediate pumping stations and break pressure tanks) is provided in ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6). Control measures for these effects are identified in the Design Principles Document (Document reference 5.11, DCO Volume 5) and include measures such as selection of quiet / low vibration plant and upgrades to enclosures or buildings with high indoor noise levels. The Design Principles</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|                 |            |                                                                                                                                                                                                                                                                                                                                                      |                      | <p>Document (Document reference 5.11, DCO Volume 5) includes a commitment that sufficient measures would be included to avoid noise from causing adverse observed effects on health and quality of life, to accord with relevant planning policy.</p> <p>The potential for odour from the WRP is assessed in ES Chapter 6 Air quality and odour, Volume I (Document reference 6.1, DCO Volume 6). Please refer to the Applicant's responses to Issue codes AQO10 and AQO12.</p> <p>Light pollution from the AGP would be controlled through measures contained within the Design Principles Document, with assessment provided in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6).</p> |
| Wider community | NAV11      | Respondents expressed concern about how noise from construction activities and maintenance traffic would impact people. For example, residents, particularly young children, the elderly, and pets, wildlife, and impacts on heavily populated areas such as the Havant Borough. Dust was also mentioned as a concern alongside noise and vibration. | N                    | ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6) presents an updated assessment of construction noise and vibration effects (including noise from construction traffic) of the Project on residential dwellings and other receptor types such as nurseries, schools and nursing homes. These receptors are in all the local authorities affected by the Project, including Havant Borough. The impacts are                                                                                                                                                                                                                                                                               |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|------------|-------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>assessed at the worst affected receptor, not considering the number of receptors/total population affected. Noise and vibration control measures are included in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and a final package of mitigation would be identified in the NVMP to be prepared and submitted by the Contractor post-DCO consent. With these in place, residual effects are not expected to be significant.</p> <p>The following ES Chapters include consideration of noise and/or vibration in their assessments: Chapter 7 Archaeology and cultural heritage, Chapter 8 Terrestrial and freshwater biodiversity, Chapter 9 Marine biodiversity, Chapter 12 Land use and agriculture (effects on amenity), Chapter 13 Landscape and visual (disruption to tranquillity) and Chapter 17 Socioeconomics, tourism and health (health effects), Volume I (Document reference 6.1, DCO Volume 6). The Equality Impact Assessment (Document reference 7.14, DCO Volume 7) assesses the potential effects of the Project and whether or not there are likely to be disproportionate or differential effects for people who share protected characteristics, as defined in the Equality Act 2010, which includes specific consideration for young children and older</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                               |                      | <p>people. No disproportionate or differential effects are reported in the Equality Impact Assessment in relation to noise and vibration, or construction dust.</p> <p>The potential for dust risk arising from construction is assessed in ES Chapter 6 Air quality and odour, Volume I (Document reference 6.1, DCO Volume 6). Construction dust mitigation measures, commensurate with the level of dust risk, are included in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). A final package of mitigation would be incorporated within a Dust Management Plan, to be prepared and submitted by the Contractor post-DCO consent. With these measures in place, the overall effect of construction dust is considered to be not significant.</p> |
| Wider community | NAV12      | Concerns were raised about subsidence and vibration affecting properties. It was queried what remediation the Applicant would put in place in the event of structural damage. | N                    | No Project change was deemed required in relation to the issue raised. ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6) presents an assessment of potential structural damage due to vibration from construction of the Project. Measures to minimise vibration effects, such as using a vibratory compactor with a single drum and amplitude of less than 0.5mm, are identified in the Outline                                                                                                                                                                                                                                                                                                                                                                   |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                    |                      | <p>Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and, with these in place, significant structural damage effects are not expected to arise as a result of vibration.</p> <p>ES Appendix 11.2 Geotechnical and geo-environmental reports, Volume II (Document reference 6.2, DCO Volume 6) and Chapter 11 Land quality and ground conditions, Volume 2 (Document reference 6.1, DCO Volume 6) provide the geotechnical and geo-environmental data and interpretative reports. Within the Interpretative Reports there are 'geotechnical hazard assessments, which summarise the potential geotechnical hazards associated with the project post construction, including the risk of subsidence. The geotechnical hazard assessment also includes mitigation measures.</p> <p>Please see measure LQGC15 within the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) for subsidence mitigation.</p> |
| Wider community | NAV13      | Respondents raised concern that noise and vibration from construction of the WRP at Broadmarsh would impact Langstone Harbour feeding grounds for Brent Geese and other sea birds. | N                    | ES Chapter 8 Terrestrial and freshwater diversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity, including Langstone Harbour. A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      | Engagement (Document reference 5.10, DCO Volume 5).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| HCC       | RWM03      | HCC, acting as the Minerals and Waste Planning Authority, commented on Preliminary Environmental Information Report Chapter 16 Appendix 16.1 section 8. HCC explained that incidental extraction ensures that where material is being excavated and then not reused that this enters Hampshire's mineral markets and stated that the application of this approach should be the minimum level of mineral extraction expected as part of the Project construction. This is to reduce the risk of sterilisation to the satisfaction of HCC. | Y                    | <p>The methodology followed in the Mineral Safeguarding Assessment was informed by the framework set out in Policy 15 of the Hampshire Minerals and Waste Plan.</p> <p>The findings concluded that an incidental extraction approach would be the most suitable approach for the Project. Therefore, where practicable incidental mineral extraction would be undertaken and this is secured through the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) as tertiary mitigation. The tertiary mitigation is as follows:</p> <p>"The development will involve excavation through the trenchless and open-cut trench methods for the construction of the pipelines, foundations and levelling for Above Ground Plant (AGP). To ensure effective management of minerals encountered through these works, there is a requirement in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) for a Minerals Management Strategy (MMS) to be developed by the appointed Contractor as part of the detailed</p> |

|-----------|------------|-------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>This mitigation applies across the whole Project (including non-designated land). This proposed approach accords with the Minerals and Waste Supplementary Planning Document and has been informed by feedback provided by HCC through the consultation process and the EIA Working Groups.</p> <p>The material surrounding the Pipeline will need to meet particular specification requirements, for example, material surrounding a steel/ductile pipe will need to be self-compacting granular material and sand sized material will be required if surrounding a plastic pipe. If material excavated on site is suitable for the pipe surround, potentially with onsite processing (e.g. grading out cobbles and boulders), then the Applicant's preference is to use this material around the Pipeline to prevent the need to import material.</p> <p>The Minerals and Waste Partial Update, latest available, Local Aggregate Assessment and the latest Annual Monitoring Report has been used to inform the baseline for the ES assessment presented in section 16.7 of ES Chapter 16 Resources and waste management Volume I (Document reference 6.1, DCO Volume 6).</p> |

| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| PIL                                                         | RWM04      | The respondent requested a guarantee that any exposed waste would not impact horses or neighbouring residents. | N                    | Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) includes measures to ensure that waste generated by the Project would be managed to minimise the risk of adverse environmental impacts. Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out measures to ensure that waste would be securely stored and contained, which would minimise the risk of adverse environmental impacts on horses or neighbouring residents. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) requires the appointed Contractor to prepare a Site Waste Management Plan (SWMP) as part of the detailed Construction Environment Management Plan. The requirements for these measures to be documented in the SWMP and the detailed Construction Environmental Management Plan(s) are set out in RWM07 and RWM14 of the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). |
| PIL                                                         | RWM05      | The respondent highlighted that they have an interest in land that consists of building-                       | Y                    | There is currently no planning application for excavation of minerals at this location and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|           |            | quality sand and is identified in the Hampshire Mineral Plan. They raised concerns that the proposed Pipeline would prevent future sand quarry on land and requested compensation for this. |                      | <p>detailed proposals cannot therefore be assessed as part of the EIA process. It is also noted that the minerals assessment assesses safeguarded mineral resources as a whole (mineral receptors) rather than specific landowner sites.</p> <p>The Applicant has engaged with the landowner to better understand the landowner's future plans for the site. Following discussions the Order Limits have subsequently been amended. Discussions on the proposals for this specific site remain ongoing.</p> <p>Those affected by compulsory acquisition or temporary possession under the DCO may be entitled to compensation in line with the Compensation Code and relevant statutory provisions. The Applicant has confirmed sufficient resources to meet these obligations as set out in the Funding Statement (Document reference 4.2, DCO Volume 4).</p> <p>The Applicant has included the minimum amount of land necessary to deliver the authorised development within the Order Limits whilst ensuring suitable flexibility is retained until the detailed design has been confirmed. The Applicant will only exercise the compulsory acquisition and temporary</p> |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           |            | needed. The assessment should follow the latest IEMA guidance, as health effects can change over time. The full effects are unclear. |                      | <p>DCO Volume 6). Furthermore, the health assessment in section 17.8 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) includes differential impacts on both the general population and vulnerable groups.</p> <p>To assess the magnitude, each impact on a health determinant considers the duration (whether impacts would be short, medium or long term), as defined in section 17.5 of ES Chapter 17 Socioeconomics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6). This has been built into the criteria for magnitude of impacts in Table 17-11 in section 17.5 of ES Chapter 17 Socioeconomics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>The Applicant accepts that health effects can change over time and can outlast the duration of impacts on health determinants. Significant adverse effects on wellbeing and quality of life have been identified as a result impacts on neighbourhood amenity (construction noise and visual impacts) and perceived effects of construction traffic on pedestrians, equestrians and cyclists. While the overall construction phase would last approximately 5 years, construction impacts in any given location would be considerably shorter. The</p> |

| South Downs National Park Authority (SDNPA)                  | STH03      | The respondent welcomed the inclusion of the South Downs Local Plan policies and the South Downs National Park Partnership Management Plan 2020-2025 in the Preliminary Environmental Information Report.                                                                                                                                                                                                                            | N                    | The Applicant has noted this comment. The South Downs Local Plan is included in the policy assessment in table 17-3 of ES Chapter 17 Socioeconomics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                       |
| UK Health Security Agency, HCC, Havant Borough Council (HBC) | STH04      | <p>Respondents made suggestions as to how the Applicant could enhance the assessments on socioeconomics, tourism and health.</p> <p>It was noted that residential areas such as the 43 dwellings south of Lower Road, Havant, as well as Staunton Farm were not identified as health receptors in the Preliminary Environmental Information Report assessment, despite being 200m from the proposed Water Recycling Plant (WRP).</p> | Y                    | <p>The health baseline data has been provided at Local Planning Authority ward level in section 17.7 of ES Chapter 17 Socioeconomics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>This is based on the assessment of population health being provided at ward level as described in the ES Appendix 5.1 EIA Scoping Report, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>Deprivation data is given at LSOA level within the Order Limits in Table 17-15 (Document reference 6.1, DCO Volume 6).</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>It was suggested that a map be produced, detailing locations of identified human health receptors, and a report of any differential impacts on vulnerable populations. It was suggested that the human health chapter be revised to report disproportionate effects on vulnerable populations, when compared to general population. It was suggested the chapter be restructured so the reader can consider route wide and then individual schemes separately, and that health data should be presented at the smallest data level (Middle Layer Super Output Area (MSOA) or Lower Layer Super Output Area (LSOA)).</p> <p>The importance of considering physical activity and active travel was emphasised, and it was suggested that there should be more detailed analysis on mitigation options to reduce impact on local communities. The need for mitigation for temporary loss of the pitches and discussion with the relevant body (e.g. Sports England) was expected. Clarity was requested on how the mental wellbeing impacts of increased traffic, noise and construction would be mitigated as well as physical health.</p> |                      | <p>Where data is not available at ward or LSOA level, Local Planning Authority level data has been presented.</p> <p>Staunton Farm and the 43 dwellings south of Lower Road are not within the 500m buffer of the Order Limits as shown and outlined in ES Figure 17.1 Study area: Administrative boundaries, Volume III (Document reference 6.3, DCO Volume 6) and so have not been included in the assessment. Figure 17.3 Social infrastructure and Public Rights of Way Volume III (Document reference 6.3, DCO Volume 6) shows PRoW and social infrastructure within the study area. The location of health receptors potentially affected by the Project are described in the assessment text within section 17.8 of ES Chapter 17 Socioeconomics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>Table 17-30 in section 17.7 of ES Chapter 17 Socioeconomics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) considers effects on vulnerable groups, where these differ from the effects on the general population. The summary of residual effects relating to the construction, operation and decommissioning of the Project are given in Table 17-36, in section 17.7 of ES Chapter</p> |

|           |            |                         |                      | <p>PRoW closures and diversions are described further in the Framework Rights of Way Management Plan, Appendix to Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).</p> <p>With regard to the loss of pitches, the Project no longer intersects with Havant Rugby Club, therefore no potential effects are expected. Section 17.7 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) also presents baseline data on physical activity rates for adults in each of the Local Planning Authority within the study area. Additionally, effects of perceived changes in road safety on levels of active travel are assessed under community safety. Section 17.8 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) concludes that as a result of primary and tertiary mitigation there would be no residual effects, however perception of risk can still remain within the community which, if not appropriately mitigated can result in stress and anxiety for some people.</p> <p>ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) uses data from the</p> |

| HBC, University of Portsmouth | STH05      | <p>Concerns were raised regarding the potential for a temporary loss of sports pitches during the proposed Pipeline construction and argued this could displace user clubs without suitable alternative venues. Specifically, there were concerns that the proposed underground Pipeline route in Havant passes through public open spaces at Hooks Lane and Bidbury Mead Recreation Grounds, and it was highlighted that Hooks Lane hosts rugby pitches and Bidbury Mead hosts cricket and football pitches.</p> <p>The current challenges for football, rugby, and cricket facilities were highlighted and the need for significant mitigation for any temporary loss of pitches.</p> | N                    | <p>As the Project no longer intersects with Havant Rugby Club, no temporary loss of sports pitches is expected. Section 17.8 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) identifies that potential noise from construction would be noticeable to Bedhampton Mariners Cricket Club and adjacent playing fields (Bidbury Mead Recreation Ground), including a football pitch. The assessment, however, concludes the effects to be neutral (not significant), due to the visual screening provided by the railway lines and the nature and use of these resources.</p> |
| HCC                           | STH06      | <p>The respondent requested further information to be satisfied that construction compound B1-1 within Staunton Country Park would not deter people from accessing it. The respondent was not satisfied that the compound would have a neutral or minor impact on recreation. There was concern about the impact on visitor numbers to Staunton Country Park.</p>                                                                                                                                                                                                                                                                                                                       | N                    | <p>The Project no longer includes any construction work within Staunton Country Park. Therefore, it was removed as a receptor from ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) assessment as there are no potential effects on this resource.</p>                                                                                                                                                                                                                                                                                                                        |

|                                     |            | phases, to ensure the benefits of the planned employment use are not lost to the local area.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                      | <p>focuses commitments on construction roles and does not include any commitments related to the operational phase.</p> <p>The Applicant has set out in the Case for the Project (Document reference 5.6, DCO Volume 5), submitted with the DCO application, a comprehensive package of benefits that the Project would deliver, including local skills and employment initiatives.</p>                                                                                                                                                                                                                                                                                                                                                                       |
| UK Health Security Agency, HCC, HBC | STH10      | <p>Respondents raised concerns regarding the impacts of construction on community wellbeing and mental health. There was concern that the temporary loss of facilities could impact the Boroughs already poor levels of physical and mental health and place strain on local sports clubs.</p> <p>The impacts projected during the construction phase ranging from weeks to up to the four year construction period was argued as a source of high-level uncertainty for local residents and could affect the accuracy of the assessment of significance.</p> <p>It was stated that the potential neighbourhood amenity health effects are likely to be significant for the Broadmarsh Coastal Park.</p> | N                    | <p>The health assessment within ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) applies the World Health Organisation definition of health (which includes physical, mental and social wellbeing) and the IEMA guidance on assessing the significance of health effects (which gives parity to physical and mental health). As such, the impacts of construction on community wellbeing and mental health are considered throughout the assessment.</p> <p>The assessment is based on a main construction programme of four years. Using this construction period allows the worst case scenario to be considered and reflects the impacts more accurately across the main active construction period.</p> |

|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | It was argued that the Preliminary Environmental Information Report did not provide proposed mitigation or alternative options to reduce potential impacts, particularly in areas of higher sensitivity. It was noted that Staunton Country Park is not listed as a 'strategic tourism receptor' and concern was raised that the identified impacts could reduce visitor numbers, affecting countryside access and public health. |                      | <p>The assessment includes the pathways through which construction may impact access to green space, recreation and physical activity. This includes impacts on PRow, parks, sports pitches and other open green spaces. Refer to section 17.8 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>The Project no longer intersects with Havant Rugby Club, and therefore, no temporary loss of sports pitches is expected.</p> <p>A definition of short-term (and medium-term/long-term for the construction phase is provided in section 17.5 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>Section 17.8 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) assesses the impacts on Broadmarsh Coastal Park. A temporary, minor (not significant) adverse effect on well-being, resulting from a reduction in tranquillity at Broadmarsh Coastal Park, is identified.</p> <p>The Project no longer includes any construction work within Staunton Country Park. Therefore, it was removed as a receptor</p> |

|                           |            |                                                                                                                                                                                                                                                                                                                                             |                      | <p>from ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) as there are no potential effects on this resource.</p> <p>Where higher sensitivity areas or vulnerable groups may experience adverse effects mitigation is provided, as set out in section 17.8 and 17.9 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6).</p>                                                                                                                                                                                                                                                                                                                                                           |
| UK Health Security Agency | STH11      | The respondent noted the wider determinants of health and wellbeing that they expect the ES to address, including access, traffic and transport, socioeconomics, and land use. It was noted that some groups of individuals may be vulnerable to changes in biophysical and socio-economic factors and may experience differential effects. | N                    | <p>Vulnerable groups are defined in Table 17-30 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6). Impacts on the wider determinants of health in regard to access to social care and social infrastructure, access to green space, neighbourhood amenity and social cohesion on both the general population and vulnerable groups have been included in section 17.10 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6). ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6) and ES Chapter 12 Land use and agriculture, Volume I (Document reference 6.1, DCO Volume 6) also considered the likely effects of the Project on these topics.</p> |

| HCC       | STH12      | <p>The respondent requested further clarification to ensure the robustness of the assessment of population health and health impacts. The importance of considering the public health effects of the proposals, including wider determinants of health, was emphasised.</p> <p>It also mentioned that baseline evidence from the Hampshire Joint Strategic Needs Assessment should be added to the data sources. Additionally, it stated that the health impacts and their geographic and temporal distribution were not clearly presented for each section of the proposed pipeline.</p> <p>It was suggested that the Applicant assess the potential public health impact of electromagnetic fields arising from any electrical equipment associated with the facility.</p> | N                    | <p>ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) has considered the likely effects of the Project on the wider determinants of health. Where these have the potential to give rise to a significant effect on population health, they have been scoped into the assessment in section 17.8.</p> <p>ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) uses data from the Hampshire Joint Strategic Needs Assessment (JSNA) in section 17.7 in relation to the percentage of the population exposed to air pollution, life expectancy data, the percentage of people who experience anxiety and the percentage of people in Hampshire who are disabled under the Equality Act.</p> <p>ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) assesses likely health effects on a short term, medium term and long term basis and the health impacts are split geographically within the Chapter per stage of the Project.</p> <p>The ES Appendix 5.1 EIA Scoping Report, Volume II (Document reference 6.2, DCO Volume 6), table 20-3, identified topics to be scoped out from the EIA. This stated that "No</p> |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| PILs                                                        | STH13      | <p>There were concerns about the impact of construction on the health of elder residents, with the potential to cause any change in their surroundings and the adverse consequences this could have on their wellbeing.</p> <p>There were also concerns about the potential effect on Wickham Park Golf Club, as it was viewed that the categorisation of the impact as 'temporary' in the Preliminary Environmental Information Report oversimplifies the position and underestimates the consequences.</p> | N                    | <p>The assessment methodology within section 17.5 of the ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) outlines how the assessment considers the impact on vulnerable groups which includes older people. The chapter identifies the proportion of older people for England, Hampshire and the relevant wards. Where the proportion of older people for a ward is lower or higher than the county average, this has been outlined. The sensitivity of a receptor is considered very high if it includes populations that have a high concentration of older people. A moderate (significant) effect has been identified on the vulnerable groups of drivers,</p> |

Proactive engagement with the operators of the Golf Club is ongoing. This would continue post DCO consent to understand how the course is used, to further refine the design, and to develop measures that could mitigate, where reasonably practicable, any potential impacts on its operations and member experience.</p> |
| PIL       | STH15      | The respondent stated that all available space at Hooks Lane is used for games and training and emphasised the importance of the pitches for activities.                                                                      | N                    | The Project no longer intersects with Havant Rugby Club, Hooks Lane, therefore there are no potential effects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| PILs      | STH16      | Respondents expressed concerns regarding the impact of the proposals on local residents' retirement plans and general wellbeing. It was viewed that the proposed Pipeline routes showed no consideration for local residents. | N                    | As part of the design process, pipeline routes have been planned to maximise distance from residential properties wherever possible; however, this has not always been achievable due to physical and environmental constraints. Where proximity to homes cannot be avoided, mitigation measures would be implemented to reduce impacts as far as reasonably practicable.                                                                                                                                                                                                                     |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                  |            |                                                                                                                                                                                                                                                                                                                          |                      | The assessment methodology in section 17.5 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) sets out the methodology for assessing impacts on vulnerable groups. Table 17-31 identifies older people as a vulnerable group, noting their greater reliance on health and social care services and other social infrastructure, which makes them more susceptible to disruption affecting transport and access. The health assessment in section 17.8 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) considers whether a resource is used predominantly by older people, with such resources classified as having high sensitivity. This section also summarises the overall conclusion of the impacts on older people. |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                                          |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Wider community                                  | STH17      | Respondents raised concerns about the potential stress and health risks associated with construction for elderly parents and other sensitive receptors. They were concerned about the disruption to the local community, the impact on sports pitches, and the potential effects on property values and quality of life. | N                    | The assessment methodology in section 17.5 of ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) outlines how the assessment considers the impact on vulnerable groups which includes older people. The sensitivity of a receptor is considered very high if it includes populations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|-----------|------------|-------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>doctor's surgeries, hospitals, medical facilities, schools, places of worship, leisure facilities, formal recreation facilities (e.g. children's play areas and outdoor sports facilities) and other community facilities such as libraries and children's centres. There are no significant effects identified.</p> <p>Langstone Sports Centre is no longer included in the study area for ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) as it is associated with a section of the Pipeline that is included in the Project as there would be a change of use, but no physical works undertaken. Therefore, this section of the Pipeline is scoped out of the socioeconomics, tourism and health assessment.</p> <p>As part of the design process, pipeline routes have been planned to maximise distance from residential properties wherever possible; however, this has not always been achievable due to physical and environmental constraints. Where proximity to homes cannot be avoided, mitigation measures would be implemented to reduce impacts as far as reasonably practicable.</p> |

**Table F29-39 Summary of issues raised on the theme of traffic and transport and the Applicant's response**

| Consultee                                                       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Hampshire County Council (HCC), Royal Mail                      | TTR01      | <p>HCC noted that it had concerns about the process of identifying baseline conditions and applying mitigation for local traffic and transport impacts. The Council highlighted there existed uncertainty regarding mitigation requirements and cited unknowns such as associated development ancillary matters. The Council stated it would like the Environmental Statement (ES) to address these uncertainties.</p> <p>HCC also provided specific comments about some details outlined in the Preliminary Environmental Information Report which had not been agreed by the Council.</p> <p>It was advised that assumptions with respect to the Construction Hub should be supported by appropriate Trip Rate Information Computer System (TRICS) trip generation data and should be considered further in the Transport Assessment (Traffic Assessment).</p> <p>Royal Mail outlined its role as the Universal Service Provider and its statutory right to protect its assets and operational interests</p> | N                    | <p>The baseline conditions and mitigation requirements have been reviewed and updated following comments from stakeholders, as detailed in ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6) and in ES Appendix 18.1 Transport Assessment, Volume II (Document reference 6.2 DCO Volume 6).</p> <p>The assumptions that have informed the ES and Traffic Assessment are detailed within the relevant management plans submitted with the DCO application. For example, the length of a road closure is detailed in the Traffic Management Strategy (Document reference 7.3, DCO Volume 7).</p> <p>Due to uncertainty over timing and availability of potential temporary construction workers hub sites, the temporary construction workers hub would be identified by the Contractor, during the construction phase, and it is assumed that it would use an existing suitably consented site for the activities to be undertaken there. A TRICS assessment for the Temporary Construction Worker Hub has been undertaken and can be found in the</p> |

This concludes that an office development with a sufficiently sized car park would generate a similar number of vehicle trips to the temporary Construction Worker Hub.<br><br>Royal Mail's role and statutory rights have been noted.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| HCC, South Downs National Park Authority (SDNPA), Portsmouth City Council (PCC) | TTR02      | <p>HCC provided comments on the adequacy of the baseline assessment for traffic and transport including corrections, information updates, site-specific comments and points to be agreed with the authority. HCC set out specific commentary for PEI Report Chapter 18 – Traffic and Transport sections. They noted that relevant legislation, including the Road Traffic Act 1991 and other legislation, required referencing as appropriate.</p> <p>HCC identified missing sections of off-road provision for cyclists connecting the NCN Route 22 and linkages to existing transport infrastructure. It was also noted roads identified to have a medium impact and reserved the right to comment further on these as more details become available and offered assistance to share detailed</p> | N                    | <p>The baseline conditions have been reviewed and updated following comments from stakeholders, as detailed in ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6) and the Traffic Assessment, included in ES Appendix 18.1 Transport Assessment, Volume II (Document reference 6.2, DCO Volume 6). This includes specific reference to NCN Route 22. The legislation, policy and guidance section of ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6) has also been updated to include the New Roads and Street Works Act 1991 and the 1991 Road Traffic Regulation Act 1984.</p> <p>All traffic management strategies have been shared with HCC in draft and reviewed and updated following comments. The proposed strategies have informed the assessment in</p> |

| HCC, National Highways (NH) | TTR03      | <p>HCC highlighted the National Policy Statement requirement for traffic impacts to be minimised, and the Council expects this to be addressed through the Traffic Assessment. It was also suggested that in finalising the Traffic Management Strategy (TMS), the Council should be involved with the review and assessment process to determine the impact of construction works on the highway network.</p> <p>HCC noted that the Project needs to include a comprehensive study area to consider impacts on all roads subject to construction traffic and the construction hub. The Council also added that clarity is needed as to the construction period and opening year.</p> | N                    | <p>Construction traffic impacts have been minimised where practicable through the measures outlined in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) and the appended Framework Construction Worker Travel Plan (CWTP).</p> <p>Two draft versions of the Traffic Management Strategy (Document reference 7.3, DCO Volume 7) have been shared with HCC for comment. Written comments received from HCC have been adopted and reflected in the strategy submitted as part of the DCO application.</p> <p>The study area has been reviewed following the Preliminary Environmental Information assessment to reflect HCC comments and</p> |

|           |            | construction only represent initial thinking and are subject to change. The Council noted that the Rights of Way Management Plan addressed a number of recommendations made by the authority and confirmed that the County Council can prescribe an agreed scope and content for such plan. Recommendations included that the design of the measures should follow a hierarchy of measures from impact avoidance to management of Public Right of Way (PRoW) crossings. In addition, the Council requested management of PRoW for Staunton Country Park; and that plans should include deliverable restoration and aftercare schemes. It also noted that a sufficiently detailed, agreed and deliverable Rights of Way Management Plan must be in place before it is submitted as part of the DCO application documents. |                      | DCO Volume 7) has been shared with the relevant local highway authorities for comment and subsequently updated. <ul style="list-style-type: none"> <li>Following a design change, works are no longer proposed in Staunton County Park and therefore this has been removed from the study area of the assessment and the scope of the Framework Rights of Way Management Plan (Appendix to Framework CTMP (Document reference 7.2, DCO Volume 7)).</li> </ul> |
| HCC, NH   | TTR06      | HCC drew attention to the assumption of 18 compounds as worst case scenario and required robust justification and assessment. It noted that, as presented in the Preliminary Environmental Information Report, the use of 18 compound locations would represent worst case scenario. However, it was highlighted that some compound locations would have greater                                                                                                                                                                                                                                                                                                                                                                                                                                                         | N                    | The Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) details the access strategy for light and heavy vehicles for every construction compound, not just the 18 construction compounds identified and assessed in the PEI Report. This has informed the assessment of construction traffic impacts in ES Chapter 18 Traffic and                                                                                           |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           |            | <p>impact than others at the local level so this will need to be fully assessed through the Traffic Assessment. The Council also queried if 18 compounds was an appropriate assumption.</p> <p>Respondents suggested that the Applicant work with HCC and NH regarding matters relation to the consideration of options for managing construction traffic to minimise impacts during peak periods on both the local and strategic road networks.</p> <p>HCC suggested that for the purposes of clarity, the network should be described for all users and considered holistically within a single section of the report. They further clarified that secured highway amendments and committed development should be appropriately identified, such as at Welborne and east of Horndean, and appropriately considered as committed schemes within existing site condition assessments. The Council also stated that there are narrow sections of footway that should be reflected in the report.</p> |                      | <p>transport, Volume I (Document reference 6.1, DCO Volume 6) and ES Appendix 18.1 Transport Assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>A technical note was issued to the local highway authorities and NH in December 2024 and NH confirmed they are not concerned regarding the construction worker trip generation on the Strategic Road Network.</p> <p>There have also been several discussions with HCC regarding the impacts of construction traffic on the local highway network and management measures have been included in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) to minimise impacts.</p> <p>Cumulative developments, including Welborne and East of Horndean, have been agreed with the local planning and highway authorities. These developments along with the associated highway schemes are detailed in the Traffic Assessment, included in ES Appendix 18.1 Transport Assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> |

|           |            | informed about construction activities is acknowledged.                                                                                                                                                                                                                                                                                                                                                                   |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| HCC       | TTR09      | HCC noted the inclusion of its previous comments at section 18.3 in Preliminary Environmental Information Report Chapter 18 on the proposed construction compound locations and access points. They confirmed comments would be reviewed and noted that some compounds are not considered suitable based on current information and that this was also communicated at a prior workshop which took place on 11 July 2024. | Y                    | The access proposals for each construction compound have been developed and refined following subsequent engagement with HCC and the revised proposals are detailed in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).                                                                                                                                                                                                                                                                                                                   |
| HCC       | TTR10      | HCC emphasised the need for the FF Traffic Management Strategy to clearly address the requirements for large loads and any necessary highway alterations. They noted that each compound access location would need to be fully assessed and subject to subsequent highway approvals. They advised review of the full requirements is set out within published technical standards                                         | N                    | <p>Requirements for Abnormal Indivisible (Large) Loads (AIL) are detailed in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7), including where any temporary alterations to highways may be required.</p> <p>The construction compound access concept designs are included in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7). Detailed designs would be developed post-DCO consent in accordance with the requirements set out within the published technical standards, where practicable.</p> |

|           |            | <p>the Framework Construction Traffic Management Plan was also highlighted. HCC highlighted the provided construction worker number assumptions and noted that assumptions did not allow for shift handovers. Therefore, HCC pointed toward the need for further information on proposed operation Construction Worker assumptions and staffing numbers. The highways authority further emphasised the importance of quantifying LGV movements and staff trips associated with locations across the corridor.</p> <p>Respondents emphasised that further clarity is sought regarding some of the construction logistics assumptions as well as specific requirements and restrictions on contractor operations.</p> <p>Commentary also highlighted the need for highway condition surveys, including pre-condition surveys, and for standardised details on haul road crossings to be included within the Framework Construction Traffic Management Plan. It also noted that information on measures is required due to local factors, for example additional mitigation secured in the Draft Framework Construction Traffic Management Plan.</p> |                      | <p>Volume 6). These figures have been discussed with HCC and presented temporally in accordance with the construction programme.</p> <p>Construction logistics routes are detailed in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) and have been informed by significant engagement with both HCC and PCC as the local highway authorities. The routing and construction traffic impacts of construction workers has also been developed in detail and discussed with the LHA.</p> <p>The Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) sets out the proposed management measures at each construction compound access with specific consideration given to any relevant local factors. Highway condition surveys have also been secured through the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).</p> <p>NH confirmed they are not concerned regarding the construction traffic impacts forecast on the Strategic Road Network and therefore the assessment of construction traffic impacts focuses on the LHA, rather</p> |

| UK Health Security Agency, HCC, SDNPA, Upham Parish Council | TTR13      | <p>Respondents made comments relating to construction traffic access routes and movements of HGVs.</p> <p>Respondents noted that the draft transport management plan identified the intention to control vehicle movements to avoid school drop-off and pick-up times but emphasised the need for this to be consistently reflected within assessments and clarity to which schools this may apply. It was highlighted the importance of considering specific additional traffic impacts that could arise from remedial repairs to the existing road network.</p> <p>SDNPA referred to its EIA Scoping response and reiterated that vehicle movements may be more significant than previously anticipated by the Applicant. It added that careful consideration would need to be given to the site as well as a robust mitigation strategy applied to the site selection process.</p> <p>Responses included queries to consider alternative access at Upham. It was noted that Sciviers Lane is not suitable for the heavy construction traffic. It was suggested to adapt and use the farm track that runs</p> | Y                    | <p>The Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) details all locations where further restrictions to HGV arrivals and departure times beyond the peak hours have been applied to avoid school drop-off and collection times. Any remedial repairs to the highway would be in the same location of the proposed works and therefore has been assessed within section 18.8 of ES Chapter 18 Traffic and transport, Volume II (Document reference 6.1, DCO Volume 6).</p> <p>The combined impacts of all construction traffic associated with the Project have been assessed across the study area and this has informed the access strategy for each construction compound.</p> <p>The access from Sciviers Lane is no longer proposed. A temporary access from Winchester Road is proposed, as detailed in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).</p> |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee    | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              |            | up to the site from the B2177 as both a temporary and permanent access.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| EBC, HCC, NH | TTR14      | <p>HCC advised that it required further details around specific access points, and interactions with the existing junction. They further noted the need to appropriately consider vegetation restrictions, visibility requirements and junction spacing as set out within HCC's Technical Guidance Notes.</p> <p>NH raised the need for proposed construction traffic routes to be identified on a plan and that details are provided, including areas relating to parking, loading, storage, and hours of construction work and deliveries.</p> <p>Responses highlighted the need for HGV routing agreements to be in place to ensure site traffic uses the most appropriate routes and noted a concern to access off Bishopstoke Lane.</p> | Y                    | <p>The Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) includes concept designs for every construction compound access. These drawings present the visibility requirements and the access position in relation to other existing junctions on the network. Visibility splays have been calculated and presented in accordance with the HCC guidance.</p> <p>The Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) also includes details regarding construction access routes, and these are presented in figures within the report. Typical arrangements for the compounds, including parking, loading, storage, are also included, alongside working hours.</p> <p>Construction access routes for HGVs have been developed in discussion with the local highway authorities and would be secured through the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7). This includes no HGVs routing along Bishopstoke Lane.</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| HCC       | TTR15      | <p>HCC referred to proposed Pipeline Sections H, K, and J and emphasised the need to consider routing in the case of overlapping projects, such as the Botley Bypass construction, and highlighted the importance of managing construction traffic to minimise impacts on the highway network. It was noted that there is the need to consider the type of vehicles requiring road access and their management.</p> <p>HCC noted considerations to be included within the draft Framework Construction Traffic Management Plan, including that active traffic management measures to address PRow implications are not expected to be appropriate. In addition, the narrowness of the construction route was also noted as construction vehicles wouldn't be able to pass along its length.</p> <p>HCC further advised that the construction route within the draft framework should appropriately account for the A27 network and the traffic sensitive Harts Farm Way. They noted that the interaction between PRow users and construction traffic is to be set out within the framework and referenced New Down Lane and PRow Southwick and Widley 28.</p> | Y                    | <p>The construction access routes for HGVs have been discussed in detail with the local highway authorities. Access routes through Botley have been considered in the context of the construction programme for the Botley Bypass.</p> <p>The construction access strategy for Mill Lane has been developed with PRow users in mind, and includes measures so HGVs can safely access the construction compound, as detailed in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7). With these measures, the PRow between Bidbury Lane and Harts Farm Way via Mill Lane could be mostly kept open, aside from a short-term closure. PRow Southwick and Widley 28 would however need to be closed for up to 24 months to manage the potential conflict with the construction access route along New Down Lane, as detailed in the Framework Rights of Way Management Plan, appended to the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).</p> <p>The traffic impacts of construction workers have been assessed in detail and discussed with HCC. Appropriate measures have been identified in the Framework Construction</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>Further commentary highlighted the need to assess the impacts on the surrounding residential area considering it would also be used as the access point to the haul road. It was noted that there is the need for visibility assessments and vehicle tracking works for certain access points, their appropriate management set out within the draft framework to ensure free flow onto the road network and that is demonstrated to be compatible with consented highway changes such as from the Welborne development.</p> <p>HCC suggested further amendments to the F Traffic Management Strategy to take account of major events, including the Wickham Festival and Wickham Horse Fair. They also requested further evidence to support figures at Preliminary Environmental Information Report Appendix 18.1 paragraph 5.2.2.</p> <p>HCC also identified four proposed construction compounds which it deemed likely to be acceptable subject to addressing identified issues.</p> |                      | <p>Traffic Management Plan (Document reference 7.2, DCO Volume 7) to avoid potential significant effects, including on Harts Farm Way and the A27.</p> <p>Vehicle tracking has been undertaken at all construction compound accesses and included in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7). There are also visibility assessments for all accesses.</p> <p>The Traffic Management Strategy (Document reference 7.3, DCO Volume 7) includes reference to major events, including the Wickham Festival and Wickham Horse Fair.</p> |
| HCC       | TTR16      | HCC emphasised the need to consider whether impacts are most effectively managed through the FF Traffic                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | N                    | The Traffic Assessment assesses the local impacts of construction traffic and can be found in ES Appendix 18.1, Transport                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee                      | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| HCC, HBC  | TTR25      | <p>The respondents emphasised the need for further clarification on the assumption that 30% of construction worker trips will be undertaken by sustainable modes. Respondents noted the use of local travel to work data to support worker distribution assumptions and highlighted the importance of considering construction activities undertaken by specialist contractors. HCC noted an absence of evidence base to support the assumptions around the number of staff, delivery, HGV, and Abnormal Load movements.</p> <p>Respondents further requested that sustainable travel improvements secured for a shared use path along Harts Farm Way and a controlled crossing be included in local improvement measures whilst suggesting further consideration to improving north and west sustainable travel links.</p> | N                    | <p>A Framework Construction Worker Travel Plan can be found appended to the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) and has been submitted as part of the DCO application. The Framework Construction Worker Travel Plan includes a range of measures, including shuttle buses, to achieve a target mode share of 25% by sustainable modes.</p> <p>Detailed construction traffic calculations have been shared with HCC and included within the ES Appendix 18.1 Transport Assessment, Volume II (Document reference 6.2, DCO Volume 6). The assumptions that have informed the construction traffic calculations are detailed in the Framework CTMP (Document reference 7.2, DCO Volume 7).</p> <p>Following a detailed review of a potential shared footway/cycleway on Harts Farm Way, it was confirmed that the Project would not be feasible as the land take from the proposed WRP site would be too significant. A signal-controlled crossing is however proposed on Harts Fram Way to provide safe access into the WRP site for construction workers.</p> |
| EBC       | TTR26      | The respondent highlighted the importance of appropriate traffic management plans to                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | N                    | A Traffic Management Strategy (Document reference 7.3, DCO Volume 7) has been                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           |            | <p>be in place during construction to minimise disruption to public transport and motor traffic.</p> <p>It was also noted that advanced warning and signage to warn of construction traffic and site accesses should be installed before construction activities begin.</p> |                      | <p>prepared and submitted as part of the DCO application and includes measures to reduce the impacts of traffic management on the local highway network.</p> <p>The signage strategy for traffic management would be agreed with the relevant highway authority post-DCO as part of the detailed Construction Traffic Management Plan(s).</p>                                                                                                                                                                                                      |
| HCC       | TTR27      | HCC noted the need for more detail on necessary bus route diversions and the impact on the viability of routes. The importance of appropriate mitigation to minimise and manage the impact on public transport operations was also noted.                                   | N                    | <p>The potential impacts of construction traffic and temporary works on the public highway are assessed in the Traffic Assessment contained in ES Appendix 18.1 Transport Assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>Measures to reduce the impacts of construction traffic and traffic management on public transport are set out in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) and Traffic Management Strategy (Document reference 7.3, DCO Volume 7) respectively.</p> |
| HCC       | TTR28      | HCC noted the need to agree on the details of the FTMS, order limits, and Construction Traffic Management Plan before finalising the assumptions and limitations as set out in Chapter 18 of the                                                                            | N                    | Draft versions of Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) and Traffic Management Strategy (Document reference 7.3, DCO Volume 7) have been shared with HCC for comment. The assumptions set out in these management plans have informed                                                                                                                                                                                                                                                              |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           |            | Preliminary Environmental Information Report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                      | the assessment included in section 18.8 of ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| HCC, WCC  | TTR29      | <p>The LHA commented on Chapter 18 – Traffic and Transport, the Draft Framework Construction Traffic Management Plan, and the FTMS.</p> <p>HCC stated that the EIA is committed to a sequential approach to closures and that the F Traffic Management Strategy is expected to set out traffic management requirements more clearly. However, it was advised that primary mitigation measures are to include the avoidance of road closures across all levels of the highway infrastructure to minimise localised impacts.</p> <p>Commentary by HCC further requested the amendments to construction working hours to reflect receptors considered more sensitive to impacts and that construction periods should be managed around special events and peak seasons and noted as example that Staunton Country Park and Staunton Farms' visitor hours are entirely covered by proposed construction hours.</p> <p>HCC further suggested amendments to the Draft Framework Construction Traffic</p> | Y                    | <p>A Traffic Management Strategy (Document reference 7.3, DCO Volume 7) has been prepared and submitted as part of the DCO application detailing the traffic management requirements for all works in the highway associated with the construction of the Pipeline and the creation and removal of temporary/permanent accesses. Some road closures are required; however, these are broadly limited to quieter roads/lanes. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out the proposed construction working hours for construction of the Project within the programme timeline.</p> <ul style="list-style-type: none"> <li>Monday to Friday (excluding bank holidays): 07:00 to 19:00 in summer and 07:00 to 17:30 in winter; and</li> <li>Saturday: 07:00 to 17:00.</li> </ul> <p>Further to this, measure NV3 in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) commits to: Introduce additional working hours restrictions, such as restricting construction works from taking place after</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| HCC, Royal Mail, Upham Parish Council | TTR30      | <p>HCC considered that section 18.8.13 of the Preliminary Environmental Information Report indicated a number of road closures and lane closures but noted that these sections provided insufficient detail and did not include all roads impacted which would also likely be subject to closure.</p> <p>Ahead of a fully considered list within the F Traffic Management Strategy a number of roads, including Winchester Road (Fair Oak), Winchester Road (Lower Upham), Titchfield Lane, A32 Hoads Hill, Southwick Road, and Harts Farm Way are considered by the highway authority to have a high impact on the operation of the highway. Other respondents highlighted the importance of advanced knowledge of any traffic management to mitigate any disruptions and raised concern about the</p> | N                    | <p>A Traffic Management Strategy (Document reference 7.3, DCO Volume 7) has been prepared and submitted as part of the DCO application. This details all locations where either a lane or road closure may be required. Road closures are not proposed on Winchester Road (Fair Oak), Winchester Road (Lower Upham), Titchfield Lane, A32 Hoads Hill, Southwick Road, or Harts Farm Way.</p> <p>The Traffic Management Strategy (Document reference 7.3, DCO Volume 7) notes considerations to for the communication strategy which is secured in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and would be developed post-DCO consent. This communication strategy would detail how and when local communities would</p> |

|                 |            | proposed closure of Sciviers Lane and suggested trenchless construction methods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                      | be informed of works. Whilst it is not practicable to avoid a road closure on Sciviers Lane, this road would not be used for construction or operational traffic.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| WCC, Royal Mail | TTR31      | <p>Respondents stated that further clarification is required in respect of construction working hours, as set out in Chapter 18, including months/timing and which months are associated with proposed summer or winter periods.</p> <p>Respondents assumed instances of 24-hour/ Sundays/ bank holidays working to take place and highlighted the need for further clarification setting out the expectancy for such instances. It was emphasised that the importance of advanced knowledge of any traffic management, road closures, or other works affecting the public highway.</p> | N                    | <p>Details regarding construction working hours can be found in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), including confirmation of summer and winter periods. There may be times when works are required outside of the standard working hours or overnight (including Sundays and bank holidays) due to activities such as construction of trenchless crossings and tunnelling construction works within or near highways and railways, and abnormal load deliveries.</p> <p>The Traffic Management Strategy (Document reference 7.3, DCO Volume 7) notes considerations to for the communication strategy which is secured in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and would be developed post-DCO consent and detail how and when local communities would be informed of works.</p> |

|           |            | <p>Report Chapters 3 and 18 and required amendments and clarifications. It was clarified that Appendix 3.4 set out primary mitigation required amendments to include avoiding temporary road closures on the full network, not just roads used for regional/national journeys in order to accord with the Traffic Management Act 2004.</p> <p>It was stated that paragraph 18.6.7 must clarify how the shortest appropriate alternative route for pedestrians and cyclists is identified and emphasised the importance of avoiding temporary road closures. It was also affirmed that it must be made clear that PRow diversion needs to be of a suitable level of accessibility, condition and public safety and agreed with the Local Highway Authority.</p> <p>It was noted that that a walking and cycling assessments of diversions may be required, diversions are to be agreed with the highway authority prior to commencement, and that section 18.6.7 required amending as the highway authority stated that any closure of a PRow of any length (even 1 hour) requires notification and approval. Therefore, the highways authority confirmed that all</p> |                      | <p>roads where a temporary road closure is proposed. These road closures have been agreed with HCC in principle through the draft iterations of the Traffic Management Strategy and are limited to local roads and rural lanes where impacts can be managed.</p> <p>Draft iterations of the Framework Rights of Way Management Plan, Appendix to Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) have been shared with HCC. As such, all proposed temporary closures and diversions have been reviewed and updated accordingly. The Framework Rights of Way Management Plan, Appendix to Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) includes risk assessments for diversion routes where there is envisaged to be a potential risk to public safety and mitigation has been identified, where required.</p> <p>Section 18.4 of ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6) includes reference to the PRow network, with the detail set out in the Traffic Assessment, included in ES Appendix 18.1 Transport Assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                      | <p>residential areas and minor roads wherever practicable.</p> <p>No HGVs associated with the construction of the Project are permitted to route along Upham Street and this is detailed in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).</p> <p>Most traffic movements associated with the Above Ground Plant (AGP) during operation would be made by van. HGVs would only be required for plant replacement which would be a very infrequent managed movement.</p>                                                                                                  |
| PILs      | TTR35      | <p>Respondents requested confirmation of construction traffic access. They noted that Construction Traffic would only take access from the Botley Road to the southeast of the potentially affected property and would not also jointly use the Treefield Farm Access Road, adjoining the east of the proposed compound. The landowner requested confirmation that they have the right of way.</p> <p>The suitability of access via the unmade track that provides access to Park Place Farm Nursery was queried. Access arrangement for construction traffic, along an unmade track, with questionable</p> | Y                    | <p>Following the 2024 Summer Consultation, the temporary construction compound has been relocated from the west to the east of Treefield Farm, and it can be confirmed a separate temporary access is proposed for construction access. The proposed temporary construction access location can be found in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) included in the DCO application.</p> <p>As detailed in the Traffic Assessment, included in ES Appendix 18.1 Transport Assessment, Volume II (Document reference 6.2, DCO Volume 6), the existing private</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>intervisibility at its northern end, limited opportunities for passing and potential for conflict with other vehicles accessing the adjacent commercial enterprises.</p> <p>Landowners highlighted the existing access from Titchfield Lane or alternative locations along Titchfield Lane, stated to be within their control, and requested this alternative access to be utilised by construction traffic. Comments suggested that the unmade track could be used for future access to the pumping station and compound could be used after construction during operation.</p> |                      | <p>access track from Titchfield Lane and adjacent to Park Place Farm Nursery is proposed to be used for permanent access to the AGP. Most traffic movements associated with the AGP during operation would be made by van. HGVs would only be required for plant replacement which would be a very infrequent managed movement.</p> <p>For construction traffic access, a new temporary access is proposed from Titchfield Lane, located closer to the junction with the A334. As such, construction traffic would not use the private track located adjacent to Park Place Farm Nursery.</p> |
| PIL       | TTR36      | The respondent objected to the Project due to the lack of details in the draft construction management plan relating to construction traffic and the suitability of the proposed access.                                                                                                                                                                                                                                                                                                                                                                                            | N                    | A Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) has been prepared and submitted as part of the DCO application. This includes concept access designs for every temporary access to the construction compounds alongside the proposed management measures to facilitate safe access.                                                                                                                                                                                                                                                                   |
| PILs      | TTR37      | <p>Respondents highlighted the existing traffic congestion problems on Winchester Road.</p> <p>The potential impact of the proposed road closure on the equestrian business at Sandy Lane was also raised. There is a</p>                                                                                                                                                                                                                                                                                                                                                           | N                    | As detailed in the Traffic Management Strategy (Document reference 7.3, DCO Volume 7), a temporary road closure is required on Sandy Lane. This would likely last for up to seven days.                                                                                                                                                                                                                                                                                                                                                                                                       |

| PILs      | TTR39      | Respondents expressed concern citing fatalities over recent years, concerning the potential increase in fatalities on the road outside their property due to increased construction traffic. Attention was also drawn to Upham CofE school in the middle of Upham and raised safety concerns about the increase in vehicles and an assumed increase of vehicle users that would disregard speed limits thereby increasing risk to pedestrians. | N                    | <p>The impacts of construction traffic on road safety have been assessed in section 18.8 of ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6). This has been informed by a detailed review of road traffic collisions set out in the Traffic Assessment, included in ES Appendix 18.1 of the ES, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>The construction traffic access routes to temporary construction compounds have been developed in consultation with HCC and PCC as the local highway authorities and detailed in the Framework CTMP (Document reference 7.2, DCO Volume 7). The proposed access routes have been developed to avoid residential areas and minor roads wherever practicable.</p> <p>No HGVs associated with the construction of the Project are permitted to route past Upham CofE School in the middle of Upham and this is detailed in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).</p> |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                                                                                         |                      | compound L-10 (such as using a temporary acoustic enclosure over the trenchless crossing equipment). With this mitigation in place, residual effects are not significant.<br><br>Temporary fencing would be installed around construction working areas for security and safety.                                                                                                                                                                       |
| Wider community | TTR41      | One comment focused on a proposed route for HGV movement between school facilities and the public playground on the existing rugby field, which due to location and proximity was raised as a concern to impact the school during active hours of the day outside of peak times. Comments suggested an alternative adjoining field as more appropriate. | Y                    | Following the approval in 2025 of Portsmouth Water's application for a Pipeline between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, a construction compound (and associated access) is no longer proposed adjacent to Havant RFC and Bidbury Infant and Junior Schools as part of the Applicant's proposals. |
| Wider community | TTR42      | Respondents stated that any measures to avoid traffic delays and disruption should be undertaken and would be appreciated.                                                                                                                                                                                                                              | N                    | A Traffic Management Strategy (Document reference 7.3, DCO Volume 7) has been submitted as part of the DCO application. This Plan has been developed to reduce the impacts of works in the public highway on driver and bus passenger delay.<br><br>A Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) has also been submitted as part of the DCO application. This has been                                      |

|                 |            |                                                                                                                                                                                                                                                                                                                                             |                      | developed to reduce the impacts of construction traffic on the local highway network.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Wider community | TTR43      | Respondents criticised the Project for an anticipated disruption of busy commuter areas between Southampton, Portsmouth, and Winchester and that alternative design could avoid such disruption. It was also suggested that relocating the contingency access location and access route would reduce impacts on Havant Rugby Football Club. |                      | <p>A Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) has been submitted as part of the DCO application. This has been developed to reduce the impacts of construction traffic on the local highway network. This includes restrictions on HGV movements in the network peak hours and a Framework Construction Worker Travel Plan, Appendix to Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) to reduce the proportion of construction workers travelling by car.</p> <p>Following the approval in 2025 of Portsmouth Water's application for a Pipeline between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, there is no longer an impact on the Havant Rugby Football Club as part of the Applicant's proposals.</p> |
| Wider community | TTR44      | Respondents identified concerns regarding potential impacts on Tanfield Lane, Meon Run House and businesses, Sciviers Lane,                                                                                                                                                                                                                 | N                    | The construction traffic access routes to temporary construction compounds have been developed in consultation with HCC and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | and Kiln Lane from heavy vehicle movement with respect to noise, traffic and access.                                                                    |                      | <p>PCC as the local highway authorities and detailed in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7). The proposed access routes have been developed to avoid residential areas and minor roads wherever practicable.</p> <p>No HGVs associated with the construction of the Project are permitted to route on Sciviers Lane, Tanfield Lane or Meon Run.</p> <p>Whilst a small number of HGVs a day are required to access the construction compounds M-1 and M-2 via Kiln Lane, these would be scheduled to avoid two-way movements.</p> |
| Wider community | TTR45      | The respondent accepted that there would be disruption with traffic and digging during construction but believed it to be ultimately for a good reason. | N                    | <p>The Project forms a key element of the Applicant's strategy for addressing future water supply challenges in their Hampshire supply area.</p> <p>A Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) has been submitted as part of the DCO application. This Plan has been developed to reduce the impacts of construction impacts on driver and bus passenger delay.</p>                                                                                                                                                                       |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | TTR46      | The respondent suggested that the Access Road at Havant Football Rugby Club can be better positioned so as not to impact the floodlit training pitch.                                                                                       | Y                    | Following the approval in 2025 of Portsmouth Water's application for a Pipeline between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further was removed from the project and therefore a construction compound (and associated access) is no longer proposed adjacent to Havant RFC as part of the Applicant's proposals.                                                                                                                                                                                                       |
| Wider community | TTR47      | The respondent suggested that a better alternative could be to adapt and use the farm track that runs up to the site from the B2177 (formerly a main entrance to the estate, complete with lodge) as both a temporary and permanent access. | Y                    | <p>Following the 2024 Summer Consultation, the temporary and permanent access from Sciviers Lane has been removed from the Project.</p> <p>As detailed in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7), temporary access is proposed directly from the B2177 Winchester Road.</p> <p>As detailed in section 18.8 of ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6) and the Traffic Assessment in ES Appendix 18.1 Transport Assessment, Volume I (Document reference 6.2, DCO Volume 6), a permanent access is proposed via a private track from Winters Hill.</p> |

|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | TTR48      | <p>Feedback pertained to impacts of construction traffic on local communities, including delays and severance.</p> <p>Respondents stated that construction would cause a negative impact on the local community. Key negative impacts cited were that construction traffic would cause disproportionate disruption to communities' day to day.</p> <p>Feedback also pertained to the potential impact on Havant Thicket Reservoir. Heavy vehicles affecting unpaved or residential routes was cited as a concern and some stated that this would cause disruption and barriers to communities.</p> | N                    | <p>As detailed in section 18.8 of ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6) and the Traffic Assessment in ES Appendix 18.1 Transport Assessment, Volume II (Document reference 6.2, DCO Volume 6), there are no significant effects anticipated with regards to severance or driver and bus passenger delay. A Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) would be secured through the DCO and includes measures to minimise the impacts of construction traffic as far as practicable on local communities.</p> <p>Following the approval in 2025 of Portsmouth Water's application for a Pipeline between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further moved from the Project. The transfer of water between Bedhampton Springs and Havant Thicket Reservoir would utilise Portsmouth Water's pipelines. Therefore, there are no construction traffic impacts predicted near Havant Thicket Reservoir.</p> |

|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>anticipated on Portsmouth Harbour Site of Special Scientific Interest (SSSI).</p> <p>Regarding river crossings, NE noted their ongoing work with the Applicant to minimise the impacts of Pipeline crossings on watercourses, but some issues remain under discussion, such as whether certain crossings should be constructed using trenchless or open-cut methods. It was noted that these decisions will depend on surveys scheduled in summer 2025.</p> <p>NE noted some issues with information presented in the Water Environment Chapter. It was stated Appendix 19.3 only mentions non-public water abstractions on the River Meon, when both Portsmouth Water and Southeast Water have abstractions within the Meon catchment. However, it was acknowledged that these abstractions may fall outside the draft order limit of the Project, which could explain their exclusion from the section.</p> <p>It was also noted that Table 19-17 (sections G and M, pages 86/87 and 98/99) does not mention the ongoing surveys for waterbodies in the River Meon and River Itchen catchments, even though</p> |                      | <p>Management Plan (Document reference 7.1, DCO Volume 7), impacts on the SAC are not anticipated.</p> <p>No works would be undertaken in Portsmouth Harbour and no other pathway for effect has been identified. Impacts to Portsmouth Harbour SSSI are not therefore expected.</p> <p>A detailed crossing schedule of all watercourses crossed by the Project is provided in ES Appendix 19.4 Watercourse crossing schedule, Volume II (Document reference 6.2, DCO Volume 6). Impacts associated with watercourse crossings are assessed in section 19.8 of ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>The Applicant has obtained data on licenced abstractions (including public water supplies) and private water supplies within the study area, which are reported in section 19.7 of ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) and ES Appendix 19.3 Hydrogeological Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6). Any abstractions outside the study area are excluded.</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>they are referenced in the Terrestrial Chapter.</p> <p>Finally, it was stated that section 3 of Appendix 19.3 lists protected areas near the Project but does not include Marine Conservation Zones (MCZs). While MCZs are mentioned in other sections of the documentation, NE suggested they should also be explicitly included in this section for completeness.</p> |                      | <p>The Applicant confirms that surveys of waterbodies in the River Meon and River Itchen catchments have been undertaken, and these are reported in section 19.7 (baseline conditions) of ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>The closest MCZ to the Project is Bembridge MCZ (5 km away). As discussed in section 19.7 of ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) the project is not hydrologically connected to designated sites in the Solent. Model outputs (ES Appendix 19.5 Eastney Long Sea Outfall Solent Dispersion Modelling, Volume II) show negligible differences between existing Budds Farm Wastewater Treatment Works (WTW) release and future release with WRP reject water combined. For chemicals (Appendix 19.8 Eastney Long Sea Outfall CORMIX modelling, Volume II (Document reference 6.2, DCO Volume 6)), Environmental Quality Standard (EQS) compliance occurs within 1–2 m of the outfall, indicating rapid dilution.</p> |
| EA        | WEN03      | The EA recognised that impacts on the water environment had been scoped for further assessment as part of Stage 3 of                                                                                                                                                                                                                                                       | N                    | The Applicant has noted this comment. ES Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Eastleigh Borough Council (EBC), EA, Langstone Harbour Board | WEN07      | <p>Respondents expressed concerns surrounding water quality modelling and the extent of this modelling, including the impact of reject water release and ecological and geomorphological implications.</p> <p>Respondents also stated that water quality modelling needs to be completed and reviewed before conclusions can be drawn.</p> | N                    | <p>Updated modelling is presented in ES Appendix 19.11 Havant Thicket Reservoir water quality modelling, Volume II (Document reference 6.2, DCO Volume 6) that includes the use of a High Rejection Rate Membrane (HRRM) at the WRP. This modelling shows that water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the Water Framework Directive (WFD) Directions. Operation of the Project would not, therefore, result in a deterioration in water quality in Havant Thicket Reservoir.</p> <p>As the release rate of compensation flows would not increase compared to existing flows, geomorphological impacts would not occur. The results of water quality modelling here are presented in ES Appendix 19.6 Havant Thicket Reservoir Compensatory Flows water quality modelling, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>Updated modelling that includes the HRRM at the WRP has been reviewed and this shows that operation of the Project would not result in a deterioration in water quality or biological</p> |

|                                                                                                             |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                      | release and the future release from Budds Farm (once the Water Recycling Plant (WRP) is in place and reject water is combined) are compared.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Chichester District Council, Eastleigh Borough Council (EBC), Environment Agency (EA), Natural England (NE) | WEN08      | <p>Chichester District Council noted that the Preliminary Environmental Impact Assessment (EIA) identifies potential significant effects on Chichester and Langstone Harbour SPA/Ramsar due to changes in release contents and dispersion at the Eastney Long Sea Outfall (LSO). Chichester District Council added that the understanding of such effects is limited.</p> <p>EBC suggested that processes should be put in place to ensure high standards of water quality on completion and into the future including high standards of maintenance and regular monitoring of water quality.</p> <p>The EA noted that there was no mention of changes in water quality or potential impacts on downstream water bodies, especially since water quality modelling/assessment is not yet completed. The EA expected this to be appropriately reported on in the ES.</p> | N                    | <p>Results of water quality modelling for releases from the Eastney LSO and the potential for effects on SPAs/Ramsar sites and Special Areas of Conservation (SACs) are presented in the Habitats Regulations Assessment. Significant effects to Chichester and Langstone Harbour SPA/Ramsar due to changes in releases from Eastney LSO are not predicted.</p> <p>Water quality in Havant Thicket Reservoir and in downstream water bodies has been modelled in detail and a summary is provided below.</p> <p>Updated modelling that includes the use of a High Rejection Rate Membrane (HRRM) at the WRP shows that water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the WFD Directions. This includes ecological status and biological quality elements. There would be no detrimental effects on biodiversity potential. Operation of the Project would not, therefore, result in a</p> |

|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>NE welcomed the further dispersion modelling for the Eastney LSO releases near the Solent and Southampton Water Special Protection Area (SPA)/Ramsar and Portsmouth Harbour SPA. It also said that it would continue to engage on any concerns regarding at Eastney LSO as the water quality modelling becomes available. NE noted that it would provide additional comments and advice on next steps, including potential further mitigation, once the water quality modelling has been completed.</p> <p>NE noted there is interaction between the underground proposed Pipeline route which connects the Water Recycling Plant (WRP) and Budds Farm, the Eastney LSO, and the hydrological connections with the River Itchen, Hamble, Meon, and Hermitage Stream catchments. NE acknowledged impacts to this site via the River Itchen, Meon and Hamble catchments would be limited/unlikely to occur if best practice construction methods are undertaken as located upstream in these catchments. NE stated that the contractors appointed to undertake this work must follow appropriate construction methods to ensure this is the case.</p> |                      | <p>deterioration in water quality Havant Thicket Reservoir.</p> <p>The addition of the HRRM would avoid the accumulation of phosphorus within Havant Thicket Reservoir and prevent Havant Thicket Reservoir switching to a eutrophic state (and the risk of algal blooms) with the addition of recycled water.</p> <p>In addition, Havant Thicket Reservoir model includes a predicted water quality envelope for compensatory flows released downstream. This shows that operation of the Project would not result in a deterioration in water quality or biological status in receiving watercourses and water bodies downstream.</p> <p>Further details of the modelling undertaken can be found in:</p> <ul style="list-style-type: none"> <li>ES Appendix 19.6 Havant Thicket Reservoir Compensatory Flows water quality modelling, Volume II (Document reference 6.2, DCO Volume 6).</li> <li>ES Appendix 19.11 Havant Thicket Reservoir water quality modelling, Volume II (Document reference 6.2, DCO Volume 6).</li> </ul> <p>A Water Monitoring Plan would be developed by the appointed Contractor to verify</p> |

|           |            | <p>NE noted that direct interaction with the Solent and Dorset Coast SPA occurs via the Eastney Long Sea Outfall (LSO) release. Further dispersion modelling was welcomed and stated it would address any concerns as water quality data becomes available. NE also said it would also provide comments on potential impacts and necessary mitigation measures. Other risks to the site were considered low due to limited hydrological connectivity, with the nearest contact point being 1.6km south of the site. However, NE said this should be assessed and screened in environmental evaluations.</p> <p>NE acknowledged that the Eastney LSO releases near the Solent Maritime SAC. It appreciated the further dispersion modelling, and NE would address any concerns as water quality data becomes available. They would also provide comments on potential impacts and necessary mitigation measures.</p> <p>NE noted that water quality modelling for Havant Thicket Reservoir and headwaters was ongoing, and that NE was in discussions with the Project team. Mitigation may be needed to prevent impacts on downstream waterbodies due</p> |                      | <p>predicted impacts to the local surface water and groundwater regime from temporary and permanent construction effects both during construction and post-construction, at locations and durations to be agreed with stakeholders during development of the detailed Water Monitoring Plan. ES Appendix 19.9 Outline Water Monitoring Plan, Volume II (Document reference 6.2, DCO Volume 6) would form the basis of the Water Monitoring Plan and includes trigger levels and action plans (to enable mitigation to be implemented based on the monitored conditions).</p> <p>Water quality modelling of the changes in currently consented parameters from the Eastney LSO has been completed. The modelling results were used to support the assessments presented in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6), and Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>Model outputs for the currently consented parameters show that the differences (and salinity) are insignificant when the existing Budds Farm Wastewater Treatment Works (WTW) release and the future release from Budds Farm (once the Water Recycling Plant</p> |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                              | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|----------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                        |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                      | Environmental Management Plan (Document reference 7.1, DCO Volume 7) would be carried forward and developed into a detailed Construction Environmental Management Plan(s), which would be produced by the appointed Contractor prior to the commencement of construction of the Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| East Hampshire District Council (EHDC) | WEN09      | EHDC welcomed measures to continue work to understand and manage the operational effects on the water environment, the Solent and new Havant Thicket Reservoir. However, the Council also noted that there would be a need to clearly differentiate between impacts and mitigation/ compensation/ enhancement measures arising from this Project and the related Havant Thicket Reservoir project. The Council added that there would need to be a degree of integration between the Applicant's elements and the Havant Thicket Reservoir project. | N                    | <p>The assessment presented in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) considers impacts on the water environment arising from the Project over and above any impacts resulting from construction and operation.</p> <p>The assessment considers potential impacts of the Project on the completed reservoir and assumes that Havant Thicket Reservoir and any associated mitigation and enhancement measures would be in place as part of the future baseline. The assessment is supported by detailed modelling presented in ES Appendix 19.11 Havant Thicket Reservoir water quality modelling, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>The assessment also considers potential impacts on the water environment downstream of Havant Thicket Reservoir, including Riders Lane Stream, Hermitage Stream and Langstone Harbour. This is</p> |

| NE        | WEN12      | <p>NE noted high levels of nitrogen and phosphorus in the Solent, with evidence of eutrophication at some designated sites. Clarification was requested on the conclusions in Appendix 19.6 of the 'Eastney LSO Solent Dispersion Modelling 2024 update.'</p> <p>Regarding Preliminary Environmental Information Report Appendix 19.6 Eastney Long Sea Outfall (LSO) Solent Dispersion Modelling, NE noted it was unclear how the data in table 3.2 translates to table 3.3. Comments were also made regarding</p> |                      | <p>An assessment of the implications for the Project on nutrient loads in the Solent and River Itchen nutrient neutrality catchments is provided in ES Appendix 19.7 Nutrient assessment, Volume II (Document reference 6.2, DCO Volume 6). A draft methodology for the Nutrient Assessment was issued to the Technical Working Group (TWG) for comment in advance of the assessment. The findings of the Nutrient Assessment are presented to the TWG through to DCO submission. The nutrient assessment concludes that, on the basis of nutrient</p>                                                                    |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>paragraph 5.3.2 which stated that the Project should reduce nutrient release into the Solent after completion, but the documentation should explain nutrient movement at the Solent catchment level.</p> <p>The doubling of nutrient release in table 3.2 seemed inconsistent with the document's conclusions was also raised.</p> <p>NE noted that the Eastney LSO releases outside the mouth of Chichester and Langstone Harbours. The completed dispersion modelling was welcomed but had previously raised concerns about the impact of CSO releases containing waste from the WRP. The Project team assured that this could not happen and provided a technical report.</p> <p>NE understood that changes to Combined Sewage Overflow (CSO) and LSO releases during storms were proposed as part of the Clean Rivers and Seas project. Further discussions were needed to understand how these changes might affect current proposals. The Applicant took the action to set up a meeting to discuss this further. NE noted potential impacts to the site needed to be discussed considering potential changes to the CSO/LSO during storm events. Chapter 21</p> |                      | <p>management measures embedded within the project, no additional mitigation would be required to achieve nutrient neutrality during the construction and operational phases of the Project.</p> <p>With regards to the LSO and water quality in the Solent, modelling is presented in ES Appendix 19.5 Eastney Long Sea Outfall Solent dispersion modelling, Volume II (Document reference 6.2, DCO Volume 6). The pollutant loads presented in Table 3.3 were derived by multiplying the concentrations of each parameter shown in Table 3.2 by the modelled flows shown in Table 3.1.</p> <p>Model outputs for the currently consented parameters show that the differences (and salinity) are insignificant with regard to Budds Farm Wastewater Treatment Works (WTW) release between the existing scenario and the operational Project scenario. Although Total Nitrogen concentrations under the 60 megalitres per day (Ml/d) scenario are approximately double those predicted under the existing scenario (as shown in Table 3.2), the reduced volume of release means that the total load decreases slightly.</p> <p>With respect to chemicals, the distance to the Environmental Quality Standards (EQS) for</p> |

|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | summarised likely significant effects and did not list Langstone Harbour SSSI or Chichester Harbour SSSI for operational impacts related to the Eastney Long Sea Outfall (LSO) release. In response, NE affirmed that these sites should be listed and considered at this stage. |                      | <p>the parameters screened in has been calculated as being 1-2 m from the outfall thus indicating rapid dilution at the outfall location.</p> <p>Given the scale of the predicted changes for the currently consented parameters and distance to EQS for the chemical parameters screened in, the addition of the reject water to the existing release would not result in any changes to water quality and changes would not extend into connected water bodies such as Langstone Harbour or the tidally influenced Hermitage Stream.</p> <p>The proposed reconfiguration of storm water and final effluent during storm events at Budds Farm WTW has been removed from the list of potential options being considered by the Clean Rivers and Seas Project. As such there is no longer a requirement to consider the interaction with the Proposed Development.</p> <p>Regarding operational impacts to Langstone Harbour Site of Special Scientific Interest (SSSI) and Chichester Harbour SSSI from the LSO during operation modelling shows differences are insignificant with regard to Budds Farm Wastewater Treatment Works (WTW) release between the existing scenario and the operational Project scenario.</p> |

| Consultee                    | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                              |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      | Changes do not extend to any of the harbours and water quality EQS are met within 1-2 m of the outfall location. This further shows that impacts from the LSO would not affect the harbour SSSIs.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Havant Borough Council (HBC) | WEN13      | <p>HBC said that it was aware that none of the discussed shaft construction techniques could fully exclude groundwater or leachate, and therefore, none are likely to be gas tight.</p> <p>The presence of groundwater and contaminants in leachate would be important engineering considerations for construction quality and logistics. The Council also added that this would be material to contamination risks, where the shaft annulus might alter leachate transport pathways.</p> | N                    | <p>ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) includes mitigation measures to avoid, reduce or remove potential effects, which are set out in section 11.4. The Applicant discussed the issue regarding the risk of a gas leak with HBC, the EA and NE at a joint meeting in November 2025. The Applicant explained the shaft construction techniques and clarified that the tunnel would be constructed with segmental concrete rings or pipe jack, grouted to seal the annulus and prevent gas migration, with the above-ground section providing a natural break.</p> <p>HBC agrees, in principle, with the proposed approach pending review of the environmental measures secured in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), details of the Outline Foundation Works Risk Assessment (Document reference 7.4, DCO Volume 7) and mitigation measures secured in the ES</p> |

|-----------|------------|-------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>Chapter 11 Land quality and ground conditions (Document reference 6.1, DCO Volume 6).</p> <p>The impact assessment, included within section 11.8 of ES Chapter 11 Land Quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) discusses the potential for preferential pathways to be created or modified as a result of the Project. Project specific ground investigations (conducted as Phase 0, 1, 2, 3A, 3B and 3C) have been undertaken. The findings of each phase of ground investigation, including an interpretation of soil, soil-leachate and groundwater laboratory analysis, are reported within ES Appendix 11.2 Geotechnical and geo-environmental reports, Volume II (Document reference 6.2, DCO Volume 6). Appendix 11.2 includes discussions with regards to aggressive ground conditions that may impact upon buried infrastructure.</p> <p>Detailed Foundation Works Risk Assessments would be completed post consent by the Contractor once appointed, in line with CL:AIRE's Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination: Guidance on Pollution Prevention as secured within the Outline Construction Environmental</p> |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                      | Management Plan (Document reference 7.1, DCO Volume 7). This would include mitigation measures associated with leachate and gas migration. An Outline Foundation Works Risk Assessment (Document reference 7.4, DCO Volume 7) is submitted with the DCO application.                                                                                                                                                                                                     |
| EA        | WEN14      | The EA noted that it had no major issues with the Preliminary Environmental Information Report regarding the breadth of the assessment and the general conclusion that groundwater risks were manageable. However, some reservations were noted about the details of the risk scoring and the significance of the impacts.                                                                                                                               | N                    | The Applicant has provided further detail on the mitigation measures and monitoring to reduce groundwater risks, which has informed the risk scoring and significance of impacts. This is presented in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6). A detailed assessment of impacts on groundwater receptors is presented in ES Appendix 19.3 Hydrogeological Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6). |
| EA        | WEN15      | The EA noted that the Preliminary Environmental Information Report has identified a couple of flood risk issues which required further assessment in the ES. Impact on Groundwater Flow Routes was outlined as one of the issues. The permanent pipeline's effect on groundwater flow routes required further evaluation, especially concerning construction shafts and the Pipeline itself. This included areas where groundwater was near the surface, | N                    | The Applicant has addressed potential groundwater flow impacts (both obstruction and diversion) through the Project's design principles. These are set out in the Design Principles Document (Document reference 5.11, DCO Volume 5) submitted with the DCO application.<br><br>In Table 19.23 of the Design Principles Document (Document reference 5.11, DCO Volume 5), groundwater flows/flood risks                                                                  |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>such as floodplains, to ensure sub-surface water flows are not obstructed or diverted, which could increase flood risk.</p> <p>In Table 19.23 'Summary of Residual Effects', groundwater receptors have been scoped out under the impact category of changes to flows/flood risk. However, sections 19.8.40 - 42 indicated that groundwater receptors should be included for further assessment. Clarification was sought on this point.</p> <p>The EA also requested clarification on whether groundwater receptors were scoped in for further assessment and the interaction of groundwater with surface water, as well as clarification on the Groundwater Source Protection Zones (SPZs).</p> <p>It was also noted that groundwater abstraction (including private supplies) appeared to be listed twice, with 50m and 500m buffers. It was unclear which was correct, the EA sought clarification on this point.</p> <p>Table 11-6 listed Groundwater SPZs for public and private water supplies but did not differentiate between SPZs 1 to 3. It was unclear if this includes the 50m default</p> |                      | <p>were scoped out of operation on the basis that risks are assessed (including permanent/long term) as part of the construction assessment as this is when the impact would occur to flow pathways. Groundwater impacts have been assessed for construction in section 19.8 of ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6). This includes impacts on interactions with surface water and SPZs. Groundwater impacts during construction are also assessed in ES Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6) and ES Appendix 19.3 Hydrogeological Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>The interaction between the receptors has been considered where relevant in the supporting appendices. For example, ES Appendix 19.3 Hydrogeological Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6) considers the impacts that groundwater level reduction may have on surface water baseflow or dependent terrestrial ecosystems.</p> <p>Potential impacts on groundwater (including SPZs) and surface water receptors as a result</p> |

| HBC       | WEN18      | <p>HBC highlighted that the coastal defences at Broadmarsh Coastal Park in Bedhampton were in poor condition and had reached the end of their life. This therefore posed the risk of coastal flooding and erosion.</p> <p>It was also highlighted Budds Farm WTW, the proposed Pipeline route to the proposed WRP, and small parts of the proposed WRP site are situated within the EA's Flood Zone 3. Therefore, these areas are at high risk of flooding and would be increasingly impacted by climate change over the duration of the lifespan of the Project.</p> | N                    | <p>An FRA for the Project is presented in ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6). The FRA includes allowances for climate change.</p> <p>The Project would be designed to be resilient to flooding. Construction-stage drainage management measures are described in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). Outline drainage strategies for above-ground infrastructure are shown in Annex A of ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> |
| EA        | WEN19      | The EA stated it was satisfied that the Preliminary Environmental Information Report identified the relevant flood risk issues and demonstrated that they can be mitigated and managed effectively. There was emphasis on the need for specific FRAs at the detailed design stage for river crossings and Above Ground Plant (AGP).                                                                                                                                                                                                                                   | N                    | Site-specific SuDS Strategies/Drainage Reports for river crossings and all of the permanent AGPs and the WRP are described in ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                 |
| EA, HBC   | WEN20      | The EA noted that the Preliminary FRA and the Outline Construction                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | N                    | Site-specific SuDS Strategies/Drainage Reports for all the permanent Above Ground                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           |            | <p>Environmental Management Plan had identified flood risk issues for the construction, operation, and decommissioning stages of the Project. Feasible mitigation measures were proposed which needed further development in site-specific FRAs. These FRAs would detail surface water management at above ground sites during construction and for infrastructure in Flood Zones 2 and 3. The EA affirmed that they must consider impacts of both permanent infrastructure and temporary features like watercourse crossings for access. It was acknowledged that these site-specific FRAs would be developed during the detailed design stage.</p> <p>The EA noted that when the Pipeline crosses main river watercourses, a Flood Risk Activity Permit (FRAP) would be required. It also affirmed that detailed FRAs must be submitted with the FRAP application. The EA added that if the Applicant wants FRAPs included in the DCO, the Applicant must incorporate Protective Provisions within the DCO and consult the EA further. Additionally, it was suggested that further assessment was needed to determine the flood risk implications of Pipeline washout</p> |                      | <p>Plant (AGP)s are described in ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>The Applicant would formally seek the Environment Agency's consent to the DCO disapplying the FRAP requirement for the five main river crossings where the Environment Agency has indicated it is willing to give that consent.</p> <p>The Applicant intends to apply for FRAP exemption for the other seven main river crossings.</p> <p>Washout valves would be used during the commissioning process and are anticipated to be tested every six months during normal operation. Washouts would not have any impact on flood risk because all washout water would be collected directly in a tanker for disposal at an appropriately licenced facility, with no source water released to the environment.</p> |

|           |            | <p><i>for up to 6 years would have only a minor impact'</i> was disagreed with.</p> <p>It was requested that the impact on water quality, such as increased turbidity, rated as negligible on the risk rating, was considered more seriously.</p> <p>Additionally, the EA outlined that its main issue was the potential impact of the works near the highly sensitive Havant and Bedhampton Springs. It stated that it could not yet agree that the impacts would be negligible without further assessment in the ES. However, the agency also stated that the risks could be managed, but more information was needed in order to provide reassurance.</p> |                      | <p>remain from works in the vicinity to and overlying the springs, which has informed the mitigation measures and monitoring requirements to reduce the impacts to negligible. The mitigation and monitoring measures to reduce risks to water supplies has been documented within the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and ES Appendix 19.9 Outline Water Monitoring Plan, Volume II (Document reference 6.2, DCO Volume 6).</p>                                 |
| NE        | WEN23      | <p>NE provided feedback pertaining to construction impacts on the River Itchen SAC.</p> <p>Further advice was provided on River Itchen SAC in 3 Freshwater Environment. NE advised that it has been working closely with the Project team to avoid damage to the River Itchen SAC from river crossings and intended to continue doing so. It added that this Project would directly interact with this site via a trenchless river crossing.</p>                                                                                                                                                                                                             | N                    | <p>NE's engagement on this matter is welcomed by the Applicant and has continued throughout pre-application.</p> <p>Section M: Brambridge to Otterbourne Water Supply Works (WSW) would require two Main Rivers to be crossed; the River Itchen and the Otterbourne Stream. A trenchless technique would be employed and there would therefore be no direct disturbance of either watercourse. Section M would also require crossings of three Ordinary Watercourses, all of which are directly connected to the River</p> |

|           |            | <p>NE affirmed that it was working with the Applicant and stakeholders to address environmental concerns across the proposed Pipeline routes and the marine environment, with a particular focus on designated areas, river crossings and the release from Eastney Long Sea Outfall (LSO).</p> <p>NE also confirm that it continues to contribute to EIA stakeholder workshops and the regulators TWG.</p> |                      | <p>Itchen. These watercourses would be crossed using an open-cut trench technique. Temporary structures may also be required to provide access across the watercourse during construction.</p> <p>These activities could potentially result in direct impacts on the hydrology and geomorphology of the watercourses. However, the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out a series of measures to reduce the impacts of temporary watercourse crossings. This includes measures to maintain flows, reduce changes on downstream sediment transport, and ensure that the channels are reinstated appropriately.</p> <p>The works associated with the River Itchen trenchless crossing would be located outside of the Source Protection Zone or Principal aquifer. These works are unlikely to encounter chalk aquifer and would be undertaken in the lower permeability bedrock (non-aquifer) that confines the chalk below. Should dewatering be required, it could impact groundwater receptors within the zone of influence albeit it is anticipated to be limited due to the low permeability of the bedrock.</p> |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                      | Management Plan (Document reference 7.1, DCO Volume 7).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| NE        | WEN24      | <p>NE stated that the River Meon should be referred to as the River Meon Compensatory SAC due to the Applicant's compensatory drought habitat located in this catchment, as part of the 2019 drought plan for the River Itchen. NE acknowledged that this update could not be made in time for the relevant Preliminary Environmental Information Report chapters. Consistency in referring to the River Meon as a compensatory SAC should be ensured at DCO submission. NE also added that the River Meon compensatory habitat includes chalk stream habitat and Atlantic salmon as qualifying features.</p> <p>NE highlighted that the Water Environment chapter of the Preliminary Environmental Information Report referred to water quality in the Itchen catchment as having been good but noted that this did not meet the CSMG criteria for favourable condition of the SSSI currently. NE therefore suggested that reference is needed to the favourable condition/favourable conservation status of</p> | N                    | <p>In February 2023, the EA stated that the River Meon should be considered as a SAC, even though it is not formally designated. This was agreed and has been reflected in Table 19-52 and sections 19.7 and 19.8 of ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>The River Itchen baseline section (in section 19.7 of ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6)) has been updated to include water quality assessment data for the SAC, which is available from the River Itchen SAC Evidence Pack (NE, 2024). These data confirm that recent water quality measurements for the River Itchen within the SAC show phosphorus concentrations to be exceeding the targets in most units.</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | the designated site and not just the WFD status.                                                                                                                                                                                                                                                                                                                                                                                                            |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| NE        | WEN25      | NE noted that Brading Marshes to St Helen Ledges SSSI, Whitecliff Bay and Bembridge Ledges SSSI, and Ryde Sands and Wootton Creek SSSI were screened in the Marine Environment chapter of the Preliminary Environmental Information Report, with the only potential impact being from the Eastney Long Sea Outfall (LSO) release. NE emphasised the need to assess the results of the dispersion and water quality modelling in the context of these sites. | N                    | <p>Brading Marshes to St Helen Ledges SSSI, Whitecliff Bay and Bembridge Ledges SSSI, and Ryde Sands and Wootton Creek SSSI are located on the north to north-east coastline of the Isle of White.</p> <p>As shown in ES Appendix 19.5 Eastney Long Sea Outfall dispersion modelling, Volume II (Document reference 6.2, DCO Volume 6), model results for releases from the Eastney LSO predict that the changes in parameter concentrations are very small and spatially restricted to the immediate vicinity of the outfall. Impacts on designated sites on the Isle of Wight coast are not predicted. Modelling results are further discussed in ES Chapter 9 Marine biodiversity, Volume I (Document reference 6.1, DCO Volume 6).</p> |
| NE        | WEN26      | NE acknowledged that discussions were ongoing regarding washouts along the network and the potential impacts these could have on watercourses. It also suggested that, wherever possible, release of washouts direct to watercourses should be avoided. NE recommended that the use of SuDs should be explored.                                                                                                                                             | N                    | During normal operation the washout valves would be inspected and tested to check the valves are operational. All source water resulting from the testing of washout valves would be collected directly by a tanker, with no source water released to the environment (land or watercourse). This could require the installation of temporary pumping and flexible pipework to connect the tanker to the                                                                                                                                                                                                                                                                                                                                   |

|                                                             |            | <p>NE highlighted that if these were to release to land, there would also be a risk sediment could be mobilised from the receptor and reach the watercourse, some locations would need to be suitably chosen, and appropriate mitigation provided. The washouts could also cause water quality impacts to the receiving waterbody if the water chemistry were to differ, further discussion is needed on this matter. NE confirmed it would continue to engage via the monthly TWG.</p> <p>NE noted dispersion modelling of the Eastney LSO wastewater release was ongoing for EQS chemical screening, a concern NE had previously raised in relation to designated sites and protected species in the Solent. NE welcomed further discussions and engagement once work has been completed. NE noted its concerns around the saline nature of the release have been addressed in previous modelling and discussions and this does not significantly alter salinity in the vicinity of the release.</p> |                      | <p>washout valve. Testing of a washout valve would result in the release of up to approximately 4.5m<sup>3</sup> of source water from the Pipelines, requiring only one tanker. Testing of washouts would be required every six months.</p> <p>Water quality modelling of Eastney LSO has been updated for parameters screened in via the surface water risk assessment screening tests, as presented in ES Appendix 19.5 Eastney Long Sea Outfall Solent dispersion modelling, Volume II (Document reference 6.2, DCO Volume 6), and Appendix 19.8 Eastney Long Sea Outfall CORMIX modelling, Volume II (Document reference 6.2, DCO Volume 6). The results are assessed in the ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6), and ES Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> |

|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>from the chalk downs that hold water. A further respondent noted that they were concerned about increased water in an area which is low lying, heavy clay and has insufficiently maintained ditches and drainage systems in place.</p> <p>The respondent expressed concerns about the proximity of the Project to the Bow Lake watercourse and sought clarity on protection and mitigation measures in this area.</p> |                      | <p>and flooding from all sources is assessed in ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6). Impacts associated with surface and groundwater are assessed in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>Section L: Lower Upham to Brambridge of the Pipeline between the Water Recycling Plant (WRP) site and Otterbourne Water Supply Works (WSW) intersects with Winchester Road (B3354), Bow Lake and an upstream tributary of the River Itchen. The intersection with a watercourse and woodland at Store House Gully would be constructed using trenchless construction. The remaining parts of Section L: Lower Upham to Brambridge would be constructed using trenched open-cut construction. Construction activities would therefore require ground disturbance and the use of construction materials and plant above and below the ground surface. This could result in the accidental release of fine sediment and contaminants into the surface drainage network within these catchments. However, construction would be undertaken in accordance with the good practice principles set out in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). This includes</p> |

| PILs      | WEN29      | <p>The respondent shared a diagram which indicated the presence of a subterranean river at point B, running below the land. The respondent added that according to the previous owner, the underground river carries significant volumes of water and breaching it could lead to substantial flooding.</p> <p>A further respondent stated that their grass verge/hedge must be re-instated to at least 150mm above the surface of the track to stop flooding.</p> | N                    | <p>All sources of baseline data have been checked and there is nothing to suggest the existence of an underground river at this location. Any water that is encountered water would be managed in line with the measures outlined in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and relevant consents/permits, so as not to increase flood risk.</p> <p>In terms of wider flood risk, site-specific SuDS Strategy/Drainage Reports for all the permanent Above Ground Plant (AGP)s and the Water Recycling Plant (WRP) are described in ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6). The FRA assess flood risk to and from the Project from all sources.</p> <p>Procedures for the reinstatement of land post-construction (e.g. verge/hedge at Shirrell Heath) are set out in ES Chapter 3 Description of the Proposed Development, Volume I (Document reference 6.1, DCO Volume 6). This document explains that ground levels and existing grass swards would be reinstated to pre-construction levels.</p> |

| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Wider community                                  | WEN30      | <p>Feedback pertained to concerns from the wider community regarding the water quality impact on Langstone Harbour and Havant Thicket Reservoir receiving recycled water rather than being solely a spring water fed reservoir.</p> <p>It was highlighted that Langstone Harbour is an SSSI with international status and that Chichester Harbour is a RAMSAR wetland of international importance. It was also noted that the proposed treatment works site, the site of the WRP, is next to an RSPB Nature reserve. Respondents affirmed that Langstone Harbour must be protected.</p> <p>Please see WEN28 for feedback specifically pertaining to the release of concentrated reject water from the WRP and its proposed release into the Solent.</p> <p>It was stated that the proposed Pipeline construction beneath Hermitage Stream presents environmental risks due to potential future leaks and the need for maintenance in the ecologically sensitive Langstone Harbour area. It was stated that there is uncertainty regarding how the Pipeline would be sealed to prevent</p> | N                    | <p>Water quality modelling of Havant Thicket Reservoir and compensatory flows to downstream water bodies, including Langstone Harbour, is presented and assessed in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) and ES Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>Updated modelling (ES Appendix 19.11 Havant Thicket Reservoir water quality modelling, Volume II (Document reference 6.2, DCO Volume 6)) that includes the use of a High Rejection Rate Membrane (HRRM) at the WRP shows that water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the WFD Directions. Operation of the Project would not, therefore, result in a deterioration in water quality in Havant Thicket Reservoir.</p> <p>Modelling has also been undertaken for compensatory flows from Havant Thicket Reservoir that would reach Langstone Harbour (ES Appendix 19.6 Havant Thicket Reservoir Compensatory Flows water quality modelling, Volume II (Document reference</p> |

|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>leachate from the nearby landfill from migrating along the pipe or tunnel, which it was argued would pose a long-term contamination threat.</p> <p>Nitrogen pollution was another concern for respondents. It was stated that, historically, nitrogen has entered spring water through agricultural fertiliser use, but levels are now decreasing. It was viewed that if Havant Thicket Reservoir were to be fed solely by chalk spring water, this would have helped reduce nitrogen levels in Langstone Harbour, improving habitat conditions by mitigating algal blooms that harm seagrass. However, if Havant Thicket Reservoir is supplemented with recycled water, more spring water may need to be released back into the harbour, potentially reversing these environmental gains.</p> <p>The need for water quality modelling, a Habitats Regulations Assessment, and an EIA for Havant Thicket Reservoir, streams, and coastal waters was highlighted.</p> |                      | <p>6.2, DCO Volume 2)). This shows that the Project would not result in a deterioration in water quality or biological status in receiving watercourses and water bodies downstream (Riders Lane Stream, Hermitage Stream, Langstone Harbour).</p> <p>A Stage 2: Habitats Regulations Assessment (Appropriate Assessment) and Marine Conservation Zone Assessment Stage 1, including Habitats Regulations Assessment Stage 1 (Document reference 5.2, DCO Volume 5) is submitted with the DCO application and provides detail on any potential impact pathways from the Project and any mitigation that would be implemented. This concluded that with the consideration of further design details and with the application of mitigation measures, there would be no impacts which undermine conservation objective or result in an adverse effect on the integrity of the habitat sites or MCZ. This includes Chichester and Langstone Harbours SPA and Ramsar that overlaps Langstone Harbour SSSI and the RSPB site. As part of this assessment, engagement has been undertaken with NE to ensure appropriate mitigation for impacts on Solent Waders and Brent Goose Strategy sites.</p> |

| Wider community | WEN31      | <p>Respondents made suggestions regarding the water environment.</p> <p>Respondents suggested that there is a need for further processing of reject water before release to protect the Solent's Marine Protected Areas. Most notably: a maritime SAC; four SPAs, three Ramsar sites and three Marine Conservation Zones.</p> <p>Respondents expressed that an engineering solution involving the enlargement of the culvert and the clearing of the drainage system at as far as Alma Lane, and possibly as far as the golf course, would be necessary to avoid problems affecting properties along Sciviers Lane.</p> <p>Respondents also suggested that control measures for the Pipeline / temporary ponds would need to be put in place to minimise the risk of pollution to local water courses, including the four major river crossings and associated tributaries.</p> | N                    | <p>For assessment of the WRP reject water release, water quality modelling of the changes in currently consented parameters from the Eastney LSO has been completed, and the results are presented in Appendix 19.5 Eastney Long Sea Outfall Solent dispersion modelling, Volume II (Document reference 6.2 DCO Volume 6). The assessment of chemicals within the release has been undertaken in line with EA's guidance 'Surface water pollution risk assessment for your environmental permit - GOV.UK' and the output is presented in ES Appendix 19.8 Eastney Long Sea Outfall CORMIX modelling, Volume II (Document reference 6.2, DCO Volume 6). The modelling results were used to support the assessments on marine designated sites presented in ES Chapter 9 Marine biodiversity, Volume I (Document reference 6.1, DCO Volume 6). Model outputs for the currently consented parameters show that the differences (and salinity) are insignificant when the existing Budds Farm WTW release and the future release from Budds Farm (once the WRP is in place and reject water is combined) are compared. With respect to chemicals, the distance to the EQS for the parameters screened in has been calculated as being 1-2 m from the LSO thus indicating rapid dilution</p> |

|-----------|------------|-------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>at the LSO location. Given the scale of the predicted changes for the currently consented parameters and distance to EQS for the chemical parameters screened in, the addition of the reject water to the existing release would not result in any changes to water quality, therefore wide scale impacts on water quality are not predicted, and consequently no potential impacts on Habitats sites or MCZ are anticipated. This assessment has been presented in section 9.8 of the ES Chapter 9 Marine biodiversity (Document reference 6.1, DCO Volume 6) by referring to the detailed water quality assessment results presented in the ES Chapter 19 Water environment (Document reference 6.1, DCO Volume 6).</p> <p>A Stage 2: Habitats Regulations Assessment (Appropriate Assessment) and Marine Conservation Zone Assessment Stage 1, including Habitats Regulations Assessment Stage 1 (Document reference 5.2, DCO Volume 5) is submitted with the DCO application and provides detail on any potential impact pathways from the Project and any mitigation that would be implemented. This concluded that with the consideration of further design details and with the application of mitigation measures, there would be no impacts which undermine</p> |

|           |            |                         |                      | <p>status for the same parameters listed for Langstone Harbour. The water body is hydrologically connected to the adjacent Langstone Harbour water body. For both water bodies, 'Good' status for chemical parameters is predicted to be achieved by 2063 though natural chemical status recovery related to Polybrominated Diphenyl Ethers. The long (multi-decadal) recovery time for chemical status may limit the potential for a return to oyster farming.</p> <p>An assessment of potential impacts on water quality in Langstone Harbour is presented in ES Appendix 19.5 Eastney Long Sea Outfall Solent dispersion modelling, Volume II (Document reference 6.2, DCO Volume 6), ES Appendix 19.6 Havant Thicket Reservoir Compensatory Flows water quality modelling, Volume II (Document reference 6.2, DCO Volume 6), ES Appendix 19.7 Nutrient Assessment, Volume II (Document reference 6.2, DCO Volume 6), and ES Appendix 19.8 Eastney Long Sea Outfall CORMIX modelling, Volume II (Document reference 6.2, DCO Volume 6). These assessments demonstrate that the Project would not result in adverse impacts on water quality in Langstone Harbour. Further information is provided in ES Chapter 19 Water environment, Volume I (Document reference</p> |

| Wider community | WEN33      | <p>Respondents provided specific feedback regarding water quality modelling and investigations and the potential impact on Eastney LSO and the Solent.</p> <p>The respondents expressed concerns about the environmental impact of concentrated reject water being discharged into the Solent via the WRP and causing environmental damage due to high concentrations of saline via reverse Osmosis treatment. Respondents also expressed concerns that the “<i>brine by-product</i>” release has not been considered in water quality modelling.</p> <p>Respondents also raised concerns about the possible effect on the Solent Designated Sites and highlighted the high international designation for environmental protection of Langstone Harbour.</p> <p>Environmental impacts and change in water quality were identified as key areas of concern for the wider community.</p> | N                    | <p>Water quality modelling of Eastney LSO (which includes the WRP reject water) has been completed, and the results are presented in ES Appendix 19.5 Eastney Long Sea Outfall Solent dispersion modelling, Volume II (Document reference 6.2, DCO Volume 6), and ES Appendix 19.8 Eastney Long Sea Outfall CORMIX modelling, Volume II (Document reference 6.2, DCO Volume 6). The modelling results were used to support the assessments presented in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6), and ES Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6). Impacts on Protected Areas associated with offshore water bodies are assessed in ES Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>The Eastney LSO modelling demonstrates that the changes to the existing Budds Farm WTW release with the WRP in place, regardless as to WRP flow are very small and</p> |

|                 |            |                                                                                                                                                                                                                                                                                               |                      | 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Wider community | WEN38      | The respondent suggested that surface water in a warmer world would lead to increased loss due to evaporation. Subsurface aquifer storage was suggested as a more sustainable option.                                                                                                         | N                    | <p>ES Chapter 4 Consideration of alternatives, Volume I (Document reference 6.1, DCO Volume 6), sets out the alternatives considered for the Project and the rationale for the Project forming the basis of the DCO submission.</p> <p>Using local aquifers, through both managed aquifer recharge and aquifer storage and recovery, has been considered by the Applicant through its WRMP process but these require specific geological conditions, require extensive testing and carry a number of environmental and feasibility uncertainties. One such scheme is proposed after 2035 but is only forecast to provide just over 5Ml/d of water into supply and would thus not be able deliver at the scale required to negate the need for the Project.</p> |
| Wider community | WEN39      | Respondents highlighted the flood risk in the area based on current Intergovernmental Panel on Climate Change (IPCC) forecasts for tide rise. It was emphasised that there is the need to manage water levels and consider the long-term impacts of dewatering land and flooding other areas. | N                    | Site-specific SuDS Strategy/Drainage Reports for all the permanent Above Ground Plant (AGP)s, Water Recycling Plant (WRP) and pipelines are described in Environmental Statement Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6). FRAs include climate                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | <p>It was stated that Colden Common's Highbridge Road experienced significant disruptions, tankers were used to pump out storage tanks, temporary lights were installed, houses were flooded, and roads were often closed. It was highlighted that this caused considerable stress and disruption, especially since Highbridge Road is a crucial link to the south for Colden Common.</p> <p>It was deemed essential that the Project coordinates with the departments managing flooding to avoid exacerbating the issue. The respondent added they had raised the issue of flooding on Highbridge Road at a public information event and said that no one in attendance was aware. Therefore, highlighting the need for better communication and planning.</p> <p>It was requested that attention is paid to winter flooding around Boarhunt and the alternative road used when the M27 J10-J11 is closed due to accidents.</p> |                      | <p>change allowances and assess flood risk to and from the Project.</p> <p>The FRAs and associated SuDS drainage strategy ensure that the proposed development does not increase flood risk elsewhere. The majority of the pipeline would be subsurface, so would not impact flooding at the stated locations. The permanent above-ground infrastructure is utilising SuDS to ensure that surface water runoff rates and volumes are not increased as a result of the proposed development. There is also no permanent above-ground infrastructure at the location of Boarhunt or Colden Common's Highbridge Road.</p> |
| Wider community | WEN40      | The respondents noted the risk to 'ecologically sensitive sites in Langstone Harbour.' The Preliminary Environmental Information Report indicated that mitigating the issue would necessitate either the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | N                    | Section 11.4 of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) discusses the removal of landfill material within the WRP site. It is noted within section 11.4 that                                                                                                                                                                                                                                                                                                                                                                                                 |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | permanent or temporary removal of all landfill material. However, the respondent deemed this approach unsustainable and economically unviable. It was claimed that this would lead to a significant release of leachate, therefore resulting in considerable harm to the surrounding sensitive and protected water environments. |                      | <p>wholesale removal of the landfill material could potentially cause significant harm to the environment and so is not considered to be appropriate.</p> <p>The impact assessment, included within section 11.8 of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6), discusses the potential impacts associated with the migration of contamination into Langstone Harbour as a result of the Project. Section 11.8 also discusses the potential for preferential pathways to be created or modified as a result of piling activities. With the implementation of mitigation measures, including the development of a detailed Foundation Works Risk Assessments by the appointed contractor which would be developed in line with CL:AIRE's Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination: Guidance on Pollution Prevention as secured within the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), there would be no likely significant effects to Langstone Harbour associated with the potential migration of contamination as a result of the Project.</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Wider community | WEN41      | A respondent noted that the Preliminary Environmental Information Report highlighted several risks associated with construction in the Langstone Harbour area, including the disturbance of landfill, which could produce leachate, dust, and potentially migrate landfill gases, posing an explosion risk. These risks are categorised as high to very high for human health, high for property, and moderate to very high for ecologically sensitive sites in Langstone Harbour. The Harbour, designated as an SPA, SAC, and SSSI, supports diverse wildlife, including species at Farlington Marshes Nature Reserve. Additionally, toxic leachate could impact marine life within the Harbour and extend into the Solent. | N                    | <p>An assessment of potential impacts of the WRP site in terms of the historic landfill, including from leachate, are discussed in ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) and ES Chapter 9 Marine biodiversity, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>The impact assessment, included within section 11.8 of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6), discusses the potential impacts associated with the migration of contamination into Langstone Harbour as a result of construction activities within the WRP site. Section 11.8 also discusses the potential for preferential pathways for leachate and ground gases to be created or modified as a result of construction activities and how this may impact upon human health, controlled waters and environmental receptors. Sections 11.4 and 11.8 of ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) discuss primary and tertiary mitigation measures that are protective of human health, controlled waters and environmental receptors. The WRP SuDS system is designed to deal with</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                      | runoff (rainfall and surface water drainage from slopes) from the increased impermeable area of the WRP. The proposed WRP surface water SuDS would include a range of control measures such as filter strips, swales and a detention basin, to provide sufficient mitigation for reducing any pollutants entering the surface waters. Modelling of runoff from the SUDs outfall can be found in ES Appendix 19.12 Water Recycling Plant site Sustainable Drainage System dispersion modelling, Volume II (Document reference 6.2, DCO Volume 6).                                                                                                                                |
| Wider community | WEN42      | <p>Feedback was provided on river and stream health.</p> <p>Respondents outlined concerns that the Project would have a potential negative effect on rivers and chalk spring streams local to the Project, including the Lavant and Hermitage streams. These concerns were regarding contamination to watercourses, as well as the perceived construction impacts of the Pipeline at river crossings, and it was stated that appropriate assessment had not been undertaken.</p> <p>It was noted that, in the Preliminary Environmental Information Report, the</p> | N                    | <p>Potential impacts on rivers and chalk streams have been assessed in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6), ES Chapter 8, Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6), and Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6). These assessments conclude that, following the application of primary and tertiary mitigation, there would be no significant adverse effects on chalk streams crossed by the Project.</p> <p>There would be no releases into the Lavant catchment or water body, and therefore no</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>following river crossings were described as trenchless: Potwell Tributary, Wallington River, River Meon, River Hamble, Moors Stream, Horton Heath Stream, Bow Lake, Itchen Navigation, River Itchen SAC and Hermitage Stream. It was stated that any risks associated with trenchless methods would need to be described in the full ES/Habitats Regulations Assessment/AA assessments. Any assessment of impact would need to include the construction phase risks, given that large open sites would be required around the crossing points, to avoid sedimentation and pollution, both to the groundwater aquifer and the main rivers. It was also emphasised that the timing of the works is crucial and should be considered as urgent, given that some of these rivers hold migratory fish and the tight timetable for compliance with the section 20 Agreement.</p> <p>The importance of chalk water depth and water temperature was emphasised regarding maintaining the health of streams and rivers, and their inhabitants.</p> |                      | <p>potential for adverse effects as a result of the Project.</p> <p>Impacts from watercourse crossings are assessed in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6), and ES Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6). The assessments show that significant effects at watercourse crossings are not expected. Mitigation measures at crossing points are detailed in section 19.4 and section 19.9 of ES Chapter 19 Water Environment, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>Potential impacts on water body biological status, which includes fish, is assessed in ES Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6). Impacts on the movement of fish and normal fish behaviour are not expected. Impacts on fish are also assessed in ES Chapter 8 (Document reference 6.1, DCO Volume 6).</p> <p>A Construction Drainage Plan would be prepared by the Contractor, once appointed, to manage the quality and quantity of construction stage drainage. Measures required to be included in the Construction</p> |

| Wider community | WEN43      | Respondents expressed concerns over potential pollution from the release of effluent risks to various areas, including the Solent, Havant Thicket Reservoir, and Langstone Harbour. | N                    | <p>The storage and release of recycled water in Havant Thicket Reservoir, in downstream water bodies and in the Solent related to the LSO release, has been modelled in detail.</p> <p>Updated modelling that includes the use of a HRRM at the WRP shows that water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the WFD Directions. Operation of the Project would not, therefore, result in a deterioration in water quality Havant Thicket Reservoir.</p> <p>In addition, the Havant Thicket Reservoir model includes a predicted water quality envelope for compensatory flows released downstream. This shows that operation of the Project would not result in a deterioration in water quality or biological status in receiving watercourses and water bodies downstream.</p> <p>The assessment of chemicals within the release released from the LSO has been undertaken in line with EA's guidance Surface water pollution risk assessment for your environmental permit.</p> |

| Hampshire County Council (HCC), Winchester City Council (WCC), Havant Borough Council (HBC) | CEF01      | <p>Respondents raised concerns over the possible cumulative impacts of the Project, most notably these comments were made in relation to the cumulative effects of construction related traffic.</p> <p>This included resident access into Staunton Country Park and improvement plans, the works for Andover and Southampton Links, the Horndean development site, highway works as part of</p> | N                    | <p>Environmental Statement (ES) Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6) assesses the impacts of the Project in the construction stage on the transport network. This traffic impact assessment includes traffic associated with the cumulative developments and this approach (including a long and short list of cumulative developments) has been agreed with HCC.</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>the Welbourne Garden Village Development, and The Southsea Coastal Scheme.</p> <p>HCC suggested that consideration be made for the cumulative effects on traffic and transport when the in-combination effects of planned roadworks have been accounted for. This includes the impact on current highway and access arrangements in place for the construction of the Kingscroft development.</p>                                                                                                                                                                   |                      | <p>In addition to the assessment included ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6), ES Chapter 20 Cumulative and in-combination effects, Volume I (Document reference 6.1, DCO Volume 6) considers the cumulative impacts of construction works in the public highway, including the Welbourne Garden Village and Kingscroft development. This assessment concludes there would be no new significant effects with regards to traffic and transport as a result of the cumulative impacts of the above developments.</p>                         |
| HCC, WCC  | CEF02      | <p>HCC stated that understanding the cumulative and in-combination effects would not be possible without a Framework Travel Management Strategy (FTMS) and finalisation of compound locations and access points. The Council raised concerns regarding the Cumulative Effects Assessment (CEA), noting that these elements would need to be reviewed in order to inform the traffic assessment. These key points would then inform the study area (zone of influence) which would then enable the Local Highway Authority (LHA) to respond on the study area (zone</p> | N                    | <p>The Framework Traffic Management Strategy (Document reference 7.3, DCO Volume 7) has been finalised following multiple reviews from HCC. Construction compound locations have also been fixed and are detailed in ES Chapter 3 Description of Project, Volume I (Document reference 6.1, DCO Volume 6) and the Framework Construction Traffic Management Plan (CTMP) (Document reference 7.2, DCO Volume 7).</p> <p>The long and short list of cumulative developments were agreed with HCC after the construction compound locations were fixed and a draft iteration of the Traffic</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           |            | <p>of influence) for the traffic and transport topic used in the CEA.</p> <p>WCC acknowledged that a reasonable approach had been taken to identify wider impacts of the Project within 500m, 3km and 10km of the proposed draft order limits.</p>                                                                                                                             |                      | <p>Management Strategy (Document reference 7.3, DCO Volume 7) had been shared.</p> <p>The Applicant has noted WCC's acknowledgement.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| HBC       | CEF03      | <p>HBC raised several suggestions relating to cumulative effects of the Project in combination with Portsmouth Water's Havant Thicket Reservoir project.</p> <p>This included consideration of the construction and operation of both projects in combination, as well as consideration of the management of both schemes and how they can help minimise negative effects.</p> | N                    | <p>Havant Thicket Reservoir construction has commenced and would overlap with construction of the Project. Havant Thicket Reservoir is considered within the ES topic chapters and ES Chapter 20 Cumulative and in-combination effects, Volume I (Document reference 6.1, DCO Volume 6) as both baseline (existing when the Project commences construction) and future baseline. The overlap in construction periods is assessed within ES Chapter 20 Cumulative and in combination effects, Volume I (Document reference 6.1, DCO Volume 6) and any mitigation necessary is identified.</p> |
| HCC       | CEF04      | <p>HCC suggested that in-combination effects on public health should be included as part of the ES. The Council suggested that the Applicant should consider the in-combination effects on public health from different sources such as air quality, land</p>                                                                                                                  | N                    | <p>The health assessment included in section 17.8 of ES Chapter 17 Socio-economics tourism and health, Volume I (Document reference 6.1, DCO Volume 6) has assessed the health effects of impacts on neighborhood amenities, which includes the combined impacts of noise, air quality, traffic and visual</p>                                                                                                                                                                                                                                                                               |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|--------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                  |            | <p>quality, land use, visual impacts, noise and vibration and traffic.</p> <p>The Council also added the Public Health Authority needs to be satisfied that health impacts have been fully assessed which includes at a scale that accounts for the health impacts where smaller impacts combine to potentially create more significant health effects.</p> |                      | <p>impacts. Impacts resulting from changes in land use have been considered where relevant in the health assessment, for example in the assessment of access to green space. Land quality effects are not included in the health assessment since compliance with regulatory standards would ensure there is no risk to human health associated with harmful substances in soils and groundwater. Cumulative and in-combination effects relating to all ES topics including health are considered in ES Chapter 20 Cumulative and in-combination effects, Volume I (Document reference 6.1, DCO Volume 6). No likely significant cumulative or in-combination effects have been identified for health.</p> |

| UK Health Security Agency, Hampshire County Council (HCC), South Downs National Park Authority (SDNPA), Natural England (NE) | PRW01      | <p>Respondents made suggestions relating to PRoW.</p> <p>These included assessment of usage levels of directly affected routes, the incorporation of measures to enhance or create new footpaths, and thorough mitigation measures for affected areas.</p> | N                    | <p>The assessment of effects with regards to Pedestrian, Cycle and Horse-rider Delay is set out in section 18.8 of ES Chapter 18 Traffic and transport, Volume I (Document reference 6.1, DCO Volume 6). This follows the methodology set out in the Design Manual for Roads and Bridges LA112 guidance and does not require usage level data. Usage levels of the affected routes have not been collected, and the assessment is instead informed by the quality of the route and the length of the diversion which is in keeping with the methodology outlined in LA112.</p> <p>A Framework Rights of Way Management Plan (RoWMP) (appended to the Framework Construction Traffic Management Plan (CTMP) (Document Reference 7.2, DCO Volume 7)) has been submitted as part of the DCO application. This details all PRoW that would be affected by the Project and the associated mitigation, including temporary diversions.</p> <p>Whilst no new footpaths are proposed to be created, potential upgrades to existing PRoW have been discussed with HCC and may be identified in the Case for the Project</p> |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|                                                  |            | Respondents also expressed a lack of trust in the Applicant, referring to its environmental record. A respondent stated that they hoped the Project would not take place due to this lack of trust in the Applicant. |                      | <p>The Applicant recognises the importance of engaging with landowners from the earliest stages of project development and is committed to ensuring that all interactions are handled sensitively and professionally. To support this, dedicated land agents were appointed as landowners' primary point of contact, ensuring that engagement is timely, transparent, and responsive to individual circumstances. The landowners and respective rights to be acquired are set out in the Book of Reference (Document reference 4.3, DCO Volume 4). The status of negotiations is set out in the Pre-application Land and Rights Negotiations Tracker (Document reference 4.4, DCO Volume 4).</p> <p>The Applicant also acknowledges that a lack of trust in its environmental record has been raised. As outlined in the response to WSWO02, the Applicant is taking proactive steps to address these concerns, and there has been a 38% reduction in pollution incidents since 2020.</p> |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                      |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Wider community                                  | WSWO 05    | Respondents expressed concern over the Applicant's operations, including sewage release and leaks in existing Pipeline infrastructure.                                                                               | N                    | The Applicant recognises the need for significant investment in reducing leakage and addressing pollution incidents. The Applicant is committed to halving leakage by 2050 and has already made progress through                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                               |                      | its Turnaround Plan, with a 10% reduction in the overall leakage on the Applicant's network since 2023. There has also been a 38% reduction in pollution incidents since 2020. The Applicant would continue its investment programme to meet these challenging targets. These challenges are being tackled alongside the need to develop essential new sustainable water resources like the Project.                                                                                                      |
| Wider community | WSWO 06    | Respondents made a range of suggestions about the Applicant's operations, these included educating customers about water conservation, water storage, and fixing leaks.                                       | N                    | The Applicant recognises the importance of customer education, water efficiency, and leakage reduction in addressing water scarcity. These activities are already under way as part of a wider ongoing engagement programme. The Applicant has committed to halving leakage by 2050, supported by targeted mains replacement and advanced detection technologies. Public engagement materials and campaigns are being delivered to raise awareness of water scarcity and promote water-saving behaviours. |
| Wider community | WSWO 07    | Respondents expressed concerns over the relationship between the Project and Portsmouth Water's supply, with some respondents feeling that they have been misled over where recycled water would be supplied. | N                    | The Project is designed to address a critical water supply shortfall in Hampshire helping to protect sensitive chalk stream habitats. Under the already-approved reservoir scheme, spring water stored in Havant Thicket Reservoir would be used to supply Portsmouth Water customers in the Havant and Portsmouth area during a drought. This                                                                                                                                                            |

| Consultee       | Issue code | Summary of issue raised                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------|------------|---------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                         |                      | <p>enables Portsmouth Water to share water with the Applicant from its network further in the west.</p> <p>If the Project is implemented, recycled water would be pumped into Havant Thicket Reservoir, mixing with spring and rainwater, further strengthening water supply resilience. Water supplied to Portsmouth Water's customers from Havant Thicket Reservoir is only anticipated through a bulk supply agreement established between the Applicant and PW whereby water supplied to the Applicant via PW's potable water network during drought conditions could be replaced into PW's network through abstraction from Havant Thicket Reservoir. Portsmouth Water has confirmed that Havant Thicket Reservoir would not be used to supply its customers on a routine basis.</p> <p>This information was presented at the time of the planning application for Havant Thicket Reservoir and has been consistently communicated through consultation materials.</p> |
| Wider community | WSWO 08    | Respondents supplied by Portsmouth Water indicated that they did not want their source water to change. | N                    | Water supplied to PW customers from the already approved reservoir is only anticipated through a bulk supply agreement established between the Applicant and PW whereby                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Consultee       | Issue code | Summary of issue raised                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------|------------|--------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                              |                      | <p>water supplied to the Applicant via PW's potable water network during drought conditions could be replaced into PW's network through abstraction from Havant Thicket Reservoir. This agreement does not form part of the operation of the Project, and it was therefore not indicated on the figure.</p> <p>Like all UK water companies, Portsmouth Water is required to plan for a wide range of different future scenarios, which take into account changes to population levels, the potentially varying impacts of climate change and the need to leave more water in the environment, to benefit nature. Under the current proposals, Portsmouth Water customers would still only receive water from Havant Thicket Reservoir in drought conditions. Havant Thicket Reservoir would not be used to supply Portsmouth Water customers on a routine basis.</p> |
| Wider community | WSWO 09    | Respondents expressed lack of trust in the Applicant to deliver safe drinking water through water recycling. | N                    | <p>The Applicant recognises that public trust is a key issue, and rebuilding confidence is a priority.</p> <p>The Applicant has completed an ambitious plan to address its operational performance. Its Turnaround Plan rapidly improved performance between 2023 and 2025, with a renewed focus on ensuring a reliable water</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                             |            | the statutory purposes of a National Park, the Broads or an AONB in England in exercising their functions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                      | The Applicant recognises the duty imposed by section 245 of the LURA and has worked closely with SDNPA throughout the pre application process to demonstrate compliance with this duty. The Planning Policy Statement (Document reference 5.5, DCO Volume 5) and the Applicant's Statement of Common Ground with the SDNPA (Document reference 5.8, DCO Volume 5) sets out the position in relation to this duty.                                                                                                                                                                         |
| Environment Agency (EA), NE | LPP04      | <p>Respondents suggested that consideration is made more carefully towards references to the Section 20 agreement with the EA, to ensure that statements are not misleading.</p> <p>Reference was made to wording which appeared on page 65 of the consultation brochure where it was claimed the wording was 'misleading and incorrect'. NE noted that upon raising the wording with the Applicant, it was rectified quickly, and an apology was issued.</p> <p>It was suggested that further engagement should be carried out with the EA and NE on reference to the Section 20 agreement.</p> | N                    | <p>A clarification was issued during the Summer 2024 consultation which provided updated wording to page 65, section 7 of Appendix E.7 (Summer 2024 Consultation Brochure).</p> <p>Engagement with the EA and NE has been ongoing and the Applicant has prepared a Statement of Common Ground with the EA (Draft Statement of Common Ground – Environment Agency (Document reference 5.8, DCO Volume 5)) and NE (Draft Statement of Common Ground – Natural England (Document reference 5.8, DCO Volume 6)), setting out the current position of each party against relevant matters.</p> |
| EA                          | LPP05      | The respondent queried where The Water Environment (Water Framework Directive)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | N                    | This is addressed in ES Appendix 19.2 Water Environment Regulations compliance                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee | Issue code | Summary of issue raised                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | Regulations 2017 would be addressed in relation to terrestrial and freshwater ecology.                                                                     |                      | assessment, Volume II (Document reference 6.2, DCO Volume 6) which concludes that the Project is considered to be compliant with WER requirements.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| HCC       | LPP06      | The respondent stated that it was unable to comment on the likely residual effects and associated measures until finalised and confirmed in the ES.        | N                    | The Applicant has noted this comment. The ES is submitted as part of the DCO application. ES Chapter 21 Summary of likely significant residual effects, Volume I (Document reference 6.1, DCO Volume 6) is particularly relevant to this comment. HCC would be able to comment on this and proposed measures during the DCO process.                                                                                                                                                                                                                                                                                                                                   |
| NE        | LPP07      | The respondent expressed views on the need for a HRA, and consultation where development is likely to affect Sites of Special Scientific Interest (SSSIs). | N                    | <p>A HRA Stage 2 and Marine Conservation Assessment Stage 1, including HRA Stage 1 (Document reference 5.2, DCO Volume 5) has been undertaken and is submitted as part of the DCO application. NE, as well as the EA and Marine Management Organisation (MMO), have been consulted throughout the Habitat Regulation Assessment (HRA) and Marine Conservation Zone (MCZ) assessment processes.</p> <p>With the consideration of further design details and applied mitigation, there would be no impacts which undermine conservation objectives or that would result in an adverse effect on the integrity of the habitat sites taken through to the HRA Stage 2.</p> |

| Consultee    | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| MMO, HCC, NE | LPP08      | <p>The MMO provided guidance on activities and processes for marine licencing.</p> <p>HCC suggested that the National Planning Policy Framework (NPPF) requirements needed to be addressed in relation to PRow and requirements to 'enhance the network.'</p> <p>NE referred to paragraph 182 of the NPPF requiring weight to be given to conserving and enhancing landscape and scenic beauty within AONB.</p> | N                    | <p>A deemed marine licence is sought under the DCO to cover relevant works that fall within the UK marine area, comprising construction of the Pipelines between Budds Farm WTW and the WRP site and the WRP site's drainage outfall. The drafting of the marine licence has been discussed and agreed with the MMO, as set out in the Other Consents and Licences Position Statement (Document reference 5.4, DCO Volume 5). The Applicant has prepared a Statement of Common Ground with the MMO (Draft Statement of Common Ground – Marine Management Organisation (Document reference 5.8, DCO Volume 5)), setting out the current position of each party against relevant matters.</p> <p>The National Policy Statement for Water Resources Infrastructure (NPSWRI) will be used as the primary basis for consideration by the Secretary of State of the DCO application. The NPPF, revised in February 2025, and Planning Practice Guidance (PPG) (continuously updated since 2014) will be considered in the decision making. The NPPF confirms at paragraph 5 that it does not contain specific policies for NSIPs, however, policies in the NPPF and the PPG are, however, likely to be important and relevant considerations under Section 104(2)(d) of the</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                                                      |                      | Case for the Project (Document reference 5.6, DCO Volume 5) contains a statement explaining how the Project delivers value for money for customers. Advanced decision-making techniques have been utilised to embed 'best value' within the Water resources South East Regional Plan and emerging WRMP24, including the development of a set of best value planning objectives. More detail is provided in the Case for the Project (Document reference 5.6, DCO Volume 5).                                      |
| Wider community | LPP11      | Respondents highlighted the obligations faced by the Applicant under the Section 20 Agreement with the EA.                                                                                                                                                                                                                                           | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Wider community | LPP12      | <p>Respondents referred to the Water Resources South East (WRSE) Regional Plan and expressed concerns about delivery of the Project. This included some concerns over the cost viability of the Project.</p> <p>Respondents also expressed a desire for the Applicant, the water regulator, and WRSE to reassess the 'Water for Life' programme.</p> | N                    | The need for the Project is set out in the Case for the Project submitted with the DCO application (Document reference 5.6, DCO Volume 5). This document also contains a statement explaining how the Project delivers value for money for customers. Advanced decision-making techniques have been utilised to embed 'best value' within the Water resources South East Regional Plan and emerging WRMP24, including the development of a set of best value planning objectives. More detail is provided in the |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                  |                      | <p>Case for the Project (Document reference 5.6, DCO Volume 5).</p> <p>The Case for the Project concludes that there is a clear legislative, policy, environmental, economic and social need for the Project, and that the Project would deliver benefits at the national, regional and local levels. Additionally, the NPSWRI sets out that where a project is featured in a published final WRMP, the need for that project would have been established and alternative solutions would therefore not be open to further consideration.</p> |
| Wider community | LPP13      | The respondent claimed that the Project is not in line with national policy.                                                                                                     | N                    | The Planning Policy Statement (Document reference 5.5, DCO Volume 5) provides an analysis of the Project against the relevant planning policy framework. It concludes that in planning policy terms the benefits of the project outweigh the negatives.                                                                                                                                                                                                                                                                                       |
| Wider community | LPP14      | Respondents expressed concern that a full HRA had not taken place, with some respondents indicating that this information would enable them to make a better-informed judgement. | N                    | An HRA Stage 2 and Marine Conservation Assessment Stage 1, including HRA Stage 1 (Document reference 5.2, DCO Volume 5) has been undertaken and is submitted as part of the DCO application. With the consideration of further design details and applied mitigation, there would be no impacts which undermine conservation objectives or that would result in an adverse effect on the                                                                                                                                                      |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                      |                                                                                                                                                                                                                                                                                                             |
| Exolum Pipeline System Ltd                                      | LEN01      | <p>The respondent stated that the Project is constructed within close proximity to Exolum apparatus, which would restrict access for maintenance and emergencies. The respondent objected to the Project and emphasised the need for consultation with Exolum to ensure no impact on their apparatus and that consent would be required if apparatus is impacted by the Project.</p> <p>Exolum Pipelines Ltd also stated that landowners and third parties have a duty of care to avoid works that could damage Exolum Pipelines property, even where works are more than 3 metres from the apparatus.</p> | N                    | The Applicant is negotiating bespoke protective provisions for the benefit of Exolum Pipeline System Ltd with Exolum's solicitors. Further details regarding the status of negotiations is included within the Pre-application Land and Rights Negotiations Tracker (Document reference 4.4, DCO Volume 4). |
| Hampshire County Council (HCC),                                 | LEN02      | HCC stated although it is a major landowner with many potentially affected parcels, HCC cannot provide site-specific comments at this stage. HCC added that                                                                                                                                                                                                                                                                                                                                                                                                                                                | N                    | The Applicant has engaged with landowners and requested details to undertake diligent inquiry throughout the process of land referencing the Order Limits. The Applicant                                                                                                                                    |

| Consultee                     | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                        |
|-------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Portsmouth City Council (PCC) |            | <p>some sites may have special designations or operational constraints. The Council also confirmed that it is continuing to undertake due diligence following land interest questionnaires and will respond separately, particularly where permanent rights are sought. The Council also said it was keen to continue engagement.</p> <p>PCC has reviewed and responded to a large volume of land referencing requests, confirming its land interests and those of third-party leaseholders and licensees on land owned by PCC.</p> |                      | would like to thank landowners including the councils for their co-operation in completing the land referencing requests.                                                                                                                                                                       |
| PCC                           | LEN03      | PCC suggested that further engagement would be needed with the Applicant on a land agreement for potential acquisitions, works and access rights.                                                                                                                                                                                                                                                                                                                                                                                   | N                    | The Applicant has held a number of meetings with PCC regarding land agreements required and further details regarding the status of negotiations are included within the Pre-application Land and Rights Negotiations Tracker (Document reference 4.4, DCO Volume 4).                           |
| PCC                           | LEN04      | PCC raised a concern about the volume of work it undertook for the land referencing exercise requested by the Applicant. It was noted that the current Planning Performance Agreement (PPA) covers certain officer roles within the Council but does not include PCC Property. It requested confirmation that PCC Property                                                                                                                                                                                                          | N                    | The Applicant has engaged with PCC regarding the PPA, property costs and voluntary agreements required over PCC land. Further details regarding the status of negotiations are included within the Pre-application Land and Rights Negotiations Tracker (Document reference 4.4, DCO Volume 4). |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                         |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PILs                                                        | LEN05      | <p>Respondents expressed concerns about the impact of the proposed Pipeline on land of interest, including the loss of grazing land, disruption to farming businesses, and possible devaluation of properties.</p> <p>Respondents criticised the Applicant for inadequate compensation and a lack of consideration, being unorganised and creating a mess when undertaking surveys.</p> | N                    | <p>As set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5) and in line with Design Approach Document (Document reference 5.12, DCO Volume 5) the Applicant sought to reduce impacts on existing land uses as far as reasonably practicable by locating pipeline routes at the edge of agricultural fields. Following the Summer 2024 Consultation, further scheme development was undertaken to refine the Project and give regard to consultation feedback and stakeholder engagement.</p> <p>The Applicant continues to engage with affected parties to understand the impacts of the construction, operation and maintenance of the Project. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out how</p> |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|-------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>the Project would avoid, reduce and mitigate effects on the environment and surrounding area during construction.</p> <p>Those affected by compulsory acquisition or temporary possession under the DCO may be entitled to compensation in line with the Compensation Code and relevant statutory provisions. The Applicant has confirmed sufficient resources to meet these obligations as set out in the Funding Statement (Document reference 4.2, DCO Volume 4). The Applicant has included the minimum amount of land necessary to deliver the Project within the Order Limits whilst ensuring suitable flexibility is retained until the detailed design has been confirmed. The Applicant would only exercise the compulsory acquisition and temporary use powers over land actually required to deliver the Project.</p> <p>The Applicant aims to work collaboratively with landowners to address concerns and agree practical solutions wherever practicable. Affected parties are also entitled to seek independent professional advice and reimbursement of associated costs may be provided as part of the negotiation of voluntary agreements or in accordance with established law and practice if the DCO is granted.</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                               |                      | <p>Where possible, access for surveys was agreed with landowners via voluntary licences. In a small number of cases, where access was not agreed voluntarily, the Applicant used statutory notices under Section 172 of the Housing and Planning Act 2016. An upfront payment was made to reflect any potential losses suffered as a result of the works, but landowners were able to make a claim if losses exceeded that initial payment.</p> <p>The Applicant would continue to engage with affected parties to seek to agree access where required by voluntary agreement where possible and would aim to minimise disturbance wherever possible and reinstate the land on completion of works.</p> |
| PILs      | LEN06      | Respondents made a number of suggestions including requesting further dialogue with landowners, reducing the working corridor width, and that reinstatement works is of an adequate standard. | N                    | <p>The Consultation Report summarises the consultation activities undertaken by the Applicant with consultees including landowners. Further details regarding the status of negotiations are included within the Pre-application Land and Rights Negotiations Tracker (Document reference 4.4, DCO Volume 4). The Applicant continues to engage with landowners and discuss their individual circumstances further. As set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5) and in line</p>                                                                                                                                                                                 |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|           |            |                         |                      | <p>with Design Approach Document (Document reference 5.12, DCO Volume 5), the Applicant sought to reduce impacts on existing land uses as far as reasonably practicable. Following the Summer 2024 Consultation, further scheme development was undertaken to refine the Project and give regard to consultation feedback and stakeholder engagement.</p> <p>The maximum working width for the trenched open-cut construction of the Pipeline would be 40m; however, this would be reduced in certain areas to a narrower 20m corridor to avoid and/or reduce the impacts on constraints and sensitivities and to reduce vegetation loss. Where a Reduced Working Width (RWW) of 20m is used, there would be no space available to store excavated material, therefore the working width either side of the length that is reduced may need to be widened up to 50m. The working width has been calculated using the size of equipment and plant required, working areas, haul road and storage areas for excavated soil. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) set out further details regarding mitigation measures which</p> |

| PILs      | LEN08      | Respondents expressed concerns about the impact of the proposed Pipeline on their property, including damage and devaluation. | N                    | <p>The Applicant is continuing to engage with affected parties to understand the impacts of the construction, operation and maintenance of the Project and discuss their individual circumstances further. Following construction of the pipelines, the land would be restored to its existing condition as far as reasonably practicable in accordance with a detailed Soil Resource Management Plan (SRMP) that would be prepared by the Contractor once appointed as set out in the Outline SRMP appended to Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and submitted with the DCO application. The land would therefore be farmable following reinstatement. The Outline SRMP sets the criteria for the appropriate timing, weather conditions and</p> |

|                 |            |                                                                                                                                                                                                                                      |                      | <p>The Consultation Report details non-statutory and statutory consultation the Applicant has undertaken with landowners who would potentially be impacted by the Project. Through pre-application consultation, the Applicant has provided details regarding the rights required to deliver the Project including freehold interests, new rights and temporary use of land.</p> <p>The Applicant is engaging with and seeking to negotiate voluntary land agreements for the required rights with affected landowners. Please see the Pre-application Land and Rights Negotiations Tracker (Document reference 4.4, DCO Volume 4) for the current status of such negotiations. Compulsory acquisition powers are being sought to ensure the Project can be delivered where voluntary agreements cannot be concluded. The need for such powers is addressed further in the Statement of Reasons (Document reference 4.1, DCO Volume 4).</p> |
| Wider community | LEN19      | Respondents expressed concern over the potential impact to house prices for those with properties close to the Project. Additionally, it was suggested that fair and transparent compensation should be provided for those affected. | N                    | Those affected by compulsory acquisition or temporary possession under the DCO may be entitled to compensation in line with the Compensation Code and relevant statutory provisions. The Applicant has confirmed sufficient resources to meet these obligations as set out in the Funding Statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | WIC02      | <p>Respondents expressed their concern over the performance of water companies across the industry in recent years, with some referring to documentaries and media articles that detail the challenges faced within the water industry. Issues raised included:</p> <ul style="list-style-type: none"> <li>▪ Flooding</li> <li>▪ Perceived failure to upgrade critical infrastructure, including sewers</li> <li>▪ Funding of water companies</li> <li>▪ The role of Ofwat</li> </ul> | N                    | <p>The Applicant acknowledges the public's concern regarding the performance of water companies across the industry, including issues such as flooding and the resilience of critical infrastructure. The Applicant is actively addressing these challenges through its investment programme and long-term planning.</p> <p>The Applicant is working collaboratively with organisations responsible for drainage, flooding, and environmental protection as it develops its Drainage and Wastewater Management Plan (DWMP) for the Arun and Western Streams Catchment, covering Kent, Sussex, Hampshire, and the Isle of Wight. The Applicant is committed to halving leakage by 2050 and has achieved a 10% reduction since 2023. Since 2020, total wastewater releases have also been reduced by 38%, as outlined in the Applicant's Turnaround Plan.</p> <p>The Applicant recognises that concerns have been raised about the funding of water companies and the role of Ofwat. These matters relate to regulatory and financial frameworks that are determined at a national level and are, therefore, outside the scope of individual water companies, and outside of the scope of the Applicant's application for a Development Consent Order (DCO).</p> |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | WIC03      | Respondents raised that the overall responsibility and accountability sits with wider UK government. Therefore, it was suggested that water companies should be nationalised.                                       | N                    | While the Applicant understands public feeling on the issue of nationalisation – government and national policy determine decisions about ownership models and regulatory frameworks. As such, they fall outside the remit of individual water companies, and outside of the scope of the Applicant's application for a DCO.                                                                                                                                                                                                                                                                                                                    |
| Wider community | WIC04      | Respondents raised that addressing sewage release into waterways was considered a higher priority than delivering the Project.                                                                                      | N                    | <p>The Applicant understands and shares the public concern regarding the release of wastewater into the marine environment, which is why the Applicant has launched its Clean Rivers and Seas plan, underpinned by £1.5 billion investment between 2025-2035, to get to the root cause of storm overflows across the region.</p> <p>As outlined in the Turnaround Plan, since 2020, pollution incidents have been reduced by 38%. The Applicant would continue to deliver its investment programme to address these challenges alongside projects to create new sustainable sources of water to supply to customers, including the Project.</p> |
| Wider community | WIC05      | Respondents expressed concerns over the quality of the recycled water for drinking due to the pre-existing perception that the Applicant does not currently treat drinking water to the standard deemed acceptable. | N                    | The Applicant supplies clean, safe drinking water to more than 2.6 million people across Kent, Sussex, Hampshire and the Isle of Wight. Every day it undertakes thousands of water quality tests to ensure that all water                                                                                                                                                                                                                                                                                                                                                                                                                       |
