**Table F28-1 Coding table**

| Tier 1 code                                            | Description                                                                                                                                                                                                                                                                                                      | Issue code reference |
|--------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| Principle of development                               | The respondent's overall view of the Project. This could be when a respondent supported the Project overall or if they objected to the principle of it.                                                                                                                                                          | POD                  |
| Need case                                              | The need for the Project and addressing the water supply challenge in Hampshire.                                                                                                                                                                                                                                 | NCA                  |
| Alternatives                                           | Other solutions suggested instead of water recycling and water transfer to meet the need. Alternative technologies and solutions included rainwater capture, demand reduction, reservoirs, desalination and other suggestions.                                                                                   | ALT                  |
| Attitudes to water recycling                           | Where respondents had expressed an opinion or attitude towards the advance treatment techniques to turn treated wastewater, that is usually pumped away into rivers and the sea, into purified recycled water. This included the overall acceptability of purified recycled water as a source of drinking water. | WRA                  |
| The water recycling process                            | How the water recycling process would work within the water recycling plant.                                                                                                                                                                                                                                     | WRPR                 |
| Location of the Water Recycling Plant (WRP)            | The location of the WRP at site 72, land 300m northwest of the Budds Farm Wastewater Treatment Work, north of Harts Farm Way, south of the A27 and west of the Hermitage Stream.                                                                                                                                 | LWRP                 |
| Design of the WRP                                      | Feedback on how the WRP was being designed, including the access and visual design.                                                                                                                                                                                                                              | DWRP                 |
| Location of Above Ground Plant (AGP)                   | The siting of all AGP, which collectively refers to the proposed Intermediate Pumping Stations, Break Pressure Tanks and High Lift Pumping Station.                                                                                                                                                              | LAGP                 |
| Design of AGP                                          | The design of the AGP including access and visual design.                                                                                                                                                                                                                                                        | DAGP                 |
| The process of developing the Project                  | The overall process undertaken to develop the design of the Project considering a range of technical, planning, social and environmental criteria.                                                                                                                                                               | SDGP                 |
| Preliminary design principles                          | Suggestions and comments on the preliminary design principles.                                                                                                                                                                                                                                                   | PDP                  |
| Location of the proposed pipeline routes               | Where a respondent had provided feedback on one or more sections of the proposed pipeline routes.                                                                                                                                                                                                                | PPRS                 |
| The process of developing the proposed pipeline routes | The process undertaken to determine the proposed pipeline routes. This included comments on the progression of the design from the Summer 2022 Consultation to determine the proposed pipeline                                                                                                                   | PPRP                 |

| Tier 1 code                                                       | Description                                                                                                                                                                                                                                                                                                     | Issue code reference |
|-------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
|                                                                   | routes consulted on as part of the Summer 2024 Consultation.                                                                                                                                                                                                                                                    |                      |
| Use of Havant Thicket Reservoir for the storage of recycled water | The principle of using Havant Thicket Reservoir for the storage of recycled water and mixing this with spring water. In addition, any commentary on Havant Thicket Reservoir's proposed other uses.                                                                                                             | UHTR                 |
| Water quality at Havant Thicket Reservoir                         | The ongoing assessments and water quality modelling, which were being undertaken at the time of the Summer 2024 Consultation.                                                                                                                                                                                   | WQHTR                |
| Portsmouth Water proposal                                         | The separate planning application for Havant Thicket Reservoir, Portsmouth Water's combined tunnel option and the working relationship between the Applicant and Portsmouth Water.                                                                                                                              | PWP                  |
| Construction impacts and effects                                  | Feedback on construction methods including trenched open cut, trenchless method, and tunnelling method. Comments on engagement, site access, required working widths, and mitigation proposed during construction.                                                                                              | CIE                  |
| Construction compound location                                    | Comments on the siting of proposed construction compounds.                                                                                                                                                                                                                                                      | CCL                  |
| Project legacy and benefits                                       | Views on the national, regional and local benefits the Project would deliver, including economic growth and enhancements to the community.                                                                                                                                                                      | PLB                  |
| Consultation                                                      | Comments on the quality of the consultation materials, promotion, effectiveness of the in-person consultation events.                                                                                                                                                                                           | CON                  |
| Equality Impact Assessment                                        | Feedback pertaining to the Equality Impact Assessment.                                                                                                                                                                                                                                                          | EQIA                 |
| Project finance and cost                                          | How the Project would be financed and how the cost could impact customers. Themes also included the perceived benefit to shareholders and the value for money the Project would bring.                                                                                                                          | PFC                  |
| Project timescales and programme                                  | Comments included the construction timeline and the consenting timetable.                                                                                                                                                                                                                                       | TPP                  |
| The Development Consent Order (DCO) process                       | Comments about the DCO process, the production of the Environmental Statement (ES), the Examination stage, the Secretary of State decision, and final detailed design. This excludes any comments on the content of the Preliminary Environmental Information (PEI) Report which are covered in separate codes. | DCOP                 |

| Tier 1 code                                                       | Description                                                                                                                                                                                                                    | Issue code reference |
|-------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| Interface with the Applicant's existing infrastructure and assets | How the Project would interface with the Applicant's existing infrastructure and assets, including Eastney Long Sea and Eastney Transfer Tunnel, Otterbourne Water Supply Works, and Budds Farm Wastewater Treatment Works.    | ISWI                 |
| EIA approach and methodology                                      | The ongoing EIA process, and the production of the PEI Report as part of the Summer 2024 Consultation, surveys, the Scoping Opinion, and engagement with prescribed environmental bodies.                                      | EIAA                 |
| Air quality and odour                                             | Air quality and odour impacts on the community, habitats and the environment, as reported in the PEI Report.                                                                                                                   | AQO                  |
| Archaeology and cultural heritage                                 | Archaeology and cultural heritage comments including designated and non-designated heritage assets, scheduled monuments, listed buildings, conservation areas and registered parks and gardens, as reported in the PEI Report. | ACH                  |
| Terrestrial and freshwater biodiversity                           | The potential impact on terrestrial and freshwater biodiversity, including designated sites, habitats, protected and notable species, and Invasive Non-Native Species (INNS), as reported in the PEI Report.                   | TFB                  |
| Marine biodiversity                                               | Marine biodiversity, including impacts on marine mammals, fish, marine habitats and benthic marine species, as reported in the PEI Report.                                                                                     | MBIO                 |
| Carbon and climate change                                         | Comments on the power needed to operate the WRP. In addition, potential impacts from carbon emissions during construction and operation, as reported in the PEI Report.                                                        | CCC                  |
| Land quality and ground conditions                                | Hydrology and environmentally sensitive areas including geology, soils, and contaminated land, as reported in the PEI Report.                                                                                                  | LQGC                 |
| Land use and agriculture                                          | Comments on the assessment of commercial and residential property, agricultural land, and development land, as reported in the PEI Report.                                                                                     | LUA                  |
| Landscape and visual                                              | Vegetation removal (includes trees), lighting from construction activities, viewpoints and ancient woodland, as reported in the PEI Report.                                                                                    | LVIA                 |
| Major accidents and disasters                                     | Comments on the risks assessments undertaken and how the Project could be affected by or contribute to major accidents or natural disasters, as reported in the PEI Report.                                                    | MAD                  |
| Noise and vibration                                               | Noise and vibration impacts including impacts on human health and the environment, wellbeing and                                                                                                                               | NAV                  |

| Tier 1 code                                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                     | Issue code reference |
|---------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
|                                                         | structural damage due to vibration emissions, as reported in the PEI Report.                                                                                                                                                                                                                                                                                                                                                    |                      |
| Resources and waste management                          | Comments on the effects on the safeguarding of mineral resources including Mineral Consultation Areas, landfill capacity, resources and waste management licenses and responsible waste management, as reported in the PEI Report.                                                                                                                                                                                              | RWM                  |
| Socio-economic, tourism and health                      | Access to recreational grounds during construction, job creation, impacts on employment and the local supply chain, Havant Thicket Reservoir as a recreational space, and impact on community wellbeing and mental health, as reported in the PEI Report.                                                                                                                                                                       | STH                  |
| Traffic and transport                                   | Construction traffic access routes, movements of heavy Goods Vehicles (HGVs), effects of construction traffic on local communities, including delays and severance, accident and safety measures, as reported in the PEI Report. Comments on sustainable travel and Construction Worker Travel Plan Road closures, diversions, and working hours.                                                                               | TTR                  |
| Water environment                                       | Ongoing water quality modelling and investigations, and potential impacts on the water environment including Riders Lane Stream, Hermitage Stream and Langstone Harbour, as reported in the PEI Report. Other topic that respondents commented on included groundwater, surface water, flood risk, river and stream health, discharges into chalk water streams, pollution prevention and water release through washout values. | WEN                  |
| Cumulative effects                                      | Impacts on other schemes, cumulative environmental impacts, cumulative health impacts, level of emissions and impacts and combined impacts on the wider road network, as reported in the PEI Report.                                                                                                                                                                                                                            | CEF                  |
| Public Rights of Way (PRoW)                             | PRoW (includes footpaths and bridleways) effects, and diversions for walkers and cyclists, as reported in the PEI Report.                                                                                                                                                                                                                                                                                                       | PRW                  |
| The Applicant's wider operations and Project interfaces | Comments on the trust and reputation of the Applicant, existing wastewater operations and the Applicant's wider Net Zero Plan.                                                                                                                                                                                                                                                                                                  | WSWO                 |
| Legislation, policy and permits                         | Comments on planning and environmental policy and legislation, including the Section 20 Agreement with the Environment Agency (EA), the Environmental Permitting (England and Wales) Regulations 2016, the Water Environment (Water Framework Directive)                                                                                                                                                                        | LPP                  |

| Tier 1 code                     | Description                                                                                                                                                                                   | Issue code reference |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
|                                 | (England and Wales Regulations 2017), the Water Resources Southeast Regional Plan, the National Policy Statement, and the Conservation of Habitats and Species Regulations 2017 (as amended). |                      |
| Landowner engagement            | This included comments on compulsory acquisition, property valuation, compensation, landowner soil handling, landowner drainage, and engagement with landowners.                              | LEN                  |
| Wider water industry challenges | This included comments regarding the relationship between the water industry and government, public discontent with the water industry and the handling of wastewater.                        | WWIC                 |

## F.29 The Applicant's response to feedback

## Tables

|              |                                                                                                                                                        |     |

| Rowlands Castle Parish Council                                  | POD01      | Rowlands Castle Parish Council objected to the Project in principle and stated investment in 'sewage processing' and moving river abstraction points would be more effective than water transfer and water recycling. | N                    | The Applicant's current Water Resources Management Plan (WRMP19) established the need for a new strategic water resource solution, in the form of a desalination plant, to address the significant water supply shortfall in Hampshire. As part of the RAPID regulatory process, an extensive options appraisal was undertaken by the Applicant which selected the Project as the preferred solution over the original desalination proposal. Informed by WRMP19, the options appraisal considered a range of alternative technologies and solutions, and assessed these against planning, environmental, socio-economic and cost criteria. The Applicant's WRMP19 was updated through an annual review to change the solution from a desalination plant to the Project. The Applicant's emerging WRMP24 and Water Resources South East (WRSE) Regional Plan both select the Project as a key component of future water supply in the Hampshire area and wider South East. Other options, including moving river abstractions were considered either through the WRMP or options appraisal processes however these solutions do not provide the scale of new |

| (FBC),<br>Havant<br>Borough<br>Council<br>(HBC) |            | control for Havant Thicket Reservoir. While technical issues remain, there was a general acceptance of the Project's objectives, its potential to enhance drought resilience and its wider role within the WRMP.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Portsmouth Water                                | POD03      | Portsmouth Water acknowledged its collaboration with the Applicant on the delivery of Havant Thicket Reservoir and expressed its support for the overall principle of the Project                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Rowlands Castle Parish Council                  | POD04      | <p>Rowlands Castle Parish Council expressed concern that the Project could become too expensive. Feedback highlighted the expensive nature of the advanced recycling process described in the documents provided by the Applicant, and the risk of '<i>ever-increasing costs of materials</i>' once the Project is operational.</p> <p>Rowlands Castle Parish Council queried whether water recycling and water transfer was the most effective solution to address the water shortfall. The respondent suggested that, since the Project is intended to be a drought resilience scheme, creating this proposed system for water pumping when '<i>it is not</i></p> | N                    | The Applicant's WRMP19 established the need for a new strategic water resource solution, in the form of a desalination plant, to address the significant water supply shortfall in Hampshire. As part of the RAPID regulatory process, an extensive options appraisal was undertaken by the Applicant which selected the Project as the preferred solution over the original desalination proposal. Informed by WRMP19, the options appraisal considered a range of alternative technologies and solutions, and assessed these against planning, environmental, socio-economic and cost criteria. The Applicant's WRMP19 was updated through an annual review to change the solution from a desalination plant to the Project. The Applicant's emerging WRMP24 and WRSE |

| Consultee            | Issue code | Summary of issue raised                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|----------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      |            | <i>needed for most, if not all, of the year'</i> seems inefficient.                                                                                                            |                      | <p>Regional Plan both select the Project as a key component of future water supply in the Hampshire area and wider South East. The water supply deficit facing Hampshire is such that the Project is required not only for drought resilience but also for providing essential daily water supplies in normal weather. Other options considered through both the WRMP and options appraisal processes do not provide the scale of new water resource needed and in the timescales required.</p> <p>The need for the Project and an explanation of the alternatives considered (including alternative technologies) is presented in the DCO submission in the Case for the Project (Document reference 5.6, DCO Volume 5), Scheme Development Report (Document reference 5.10, DCO Volume 5) and ES Chapter 4 Consideration of alternatives (Document reference 6.1, DCO Volume 6).</p> |
| Upham Parish Council | POD05      | Upham Parish Council felt neutral towards the Project as a response to the water supply shortfall in Hampshire and reducing abstractions from the River Test and River Itchen. | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| East Hampshire       | POD06      | The respondents expressed support for water recycling as a more sustainable                                                                                                    | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| PILs                                                                                  | POD07      | Respondents expressed opposition to the Project. Concerns were raised about the construction impacts of the proposed pipeline route on their land and questioned the adequacy of consideration and thought given to the development of the Project. | N                    | <p>The Applicant's site selection process has carefully evaluated site and route options against a range of planning and environmental criteria, including potential impacts on land use. The design process has also had regard to feedback from consultations and ongoing engagement with landowners and stakeholders.</p> <p>Good construction practices would manage the effects of construction on land use and agriculture, as well as any disruption to agricultural activities. These comprise of measures to reduce the duration and footprint of construction activity, reduce construction traffic impacts and control construction noise, vibration and dust. These measures would be secured through the DCO in a series of management plans which taken together,</p> |

Other options were considered through both the WRMP and options appraisal processes however these solutions do not provide the scale of new water resource needed and in the timescales required.</p> <p>An explanation of the alternatives considered (including alternative technologies) is presented in the DCO submission (in the Scheme Development Report (Document reference 5.10, DCO Volume 5) and ES Chapter 4 Consideration of alternatives, Volume I (Document reference 6.1, DCO Volume 6).</p> |
| PIL       | POD011     | The respondent expressed objection to the proposed locations for the AGP, viewing it as an unnecessary use of | N                    | The AGP are required at intervals along the Pipeline between the Water Recycling Plant (WRP) site and Otterbourne Water Supply Works (WSW) to overcome changes in topography along the route. The water could                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>energy to move water over 40km using a pumped system.</p> <p>It was suggested the proposed AGP could be installed in or around the Southampton area, removing the need for the proposed pipeline.</p> |                      | <p>not be pumped along this pipeline without the AGP. Therefore, AGP could not be installed around the Southampton area, as they need to be located along the pipeline route.</p> <p>The Project utilises the Budds Farm WTW in Havant as this is one of the Applicant's largest wastewater treatment works and therefore has the greatest capacity for supplying the fully treated wastewater required for a WRP producing up to 60 million litres per day of recycled water. Its proximity to Havant Thicket Reservoir also makes it a preferred choice. The Southampton area does not benefit from a wastewater treatment works as large as Budds Farm WTW, and instead comprises a number of smaller wastewater treatment works. Therefore, significant works would be required to connect and consolidate flows. As well as this, a new environmental buffer would be required as Havant Thicket Reservoir could not be used for this purpose.</p> <p>An explanation of the alternatives considered, including the site selection process for the AGP, is presented in the DCO submission in the Scheme Development Report (Document reference 5.10, DCO Volume 5) and ES Chapter 4 Consideration of alternatives (Document reference 6.1, DCO Volume 6).</p> |

| Wider community                                  | POD012     | <p>Respondents were opposed to the principle of the Project. A summary of concerns raised are bulleted below:</p> <ul style="list-style-type: none"> <li>environmental impacts of construction and operation</li> <li>water safety</li> <li>financial cost</li> <li>energy use associated with the whole Project.</li> <li>the sustainability of water recycling as a technology</li> <li>the needs case – some respondents suggested that the Project is financially driven and is unnecessary in principle</li> <li>the use of Havant Thicket Reservoir for the storage of recycled water</li> <li>Portsmouth Water's planning application for Havant Thicket Reservoir <ul style="list-style-type: none"> <li>the combination of alternative lower-cost solutions with less energy demands as a better solution to the Project.</li> </ul> </li> </ul> | N                    | <p>The Applicant's WRMP19 established the need for a new strategic water resource solution, in the form of a desalination plant, to address the significant water supply shortfall in Hampshire. As part of the RAPID regulatory process, an extensive options appraisal was undertaken by the Applicant which selected the Project as the preferred solution over the original desalination proposal. Informed by WRMP19, the options appraisal considered a range of alternative technologies and solutions, and assessed these against planning, environmental, socio-economic and cost criteria, comprising consideration of all the points raised by this consultee. The Applicant's WRMP19 was updated through an annual review to change the solution from a desalination plant to the Project. The Applicant's emerging WRMP24 and WRSE Regional Plan both select the Project as a key component of future water supply in the Hampshire area and wider South East. Other options were considered through both the WRMP and options appraisal processes however these solutions do not provide the scale of new water resource needed and in the timescales required.</p> |

| Wider community | POD013     | <p>Respondents expressed an openness to the Project if certain suggestions are considered and the proposal is revised. The principle of the Project was not objected to, but there were concerns about its practicality, particularly regarding cost, energy use, and proposed infrastructure required for the Project. It was noted that the success of the Project would depend on how well it is executed.</p> <p>Some respondents expressed a lack of interest in the Project, as they were not directly impacted and therefore raised no objections or concerns.</p> <p>The high cost of water, especially on the Isle of Wight, was mentioned, and there were questions about whether the money being paid by customers is being used effectively to address water supply issues. Despite this, support for the Project was expressed '<i>within reason</i>.'</p> | N                    | <p>The Applicant has noted this comment.</p> <p>The Applicant's WRMP19 established the need for a new strategic water resource solution, in the form of a desalination plant, to address the significant water supply shortfall in Hampshire. As part of the RAPID regulatory process, an extensive options appraisal was undertaken by the Applicant which selected the Project as the preferred solution over the original desalination proposal. Informed by WRMP19, the options appraisal considered a range of alternative technologies and solutions, and assessed these against planning, environmental, socio-economic and cost criteria. The Applicant's WRMP19 was updated through an annual review to change the solution from a desalination plant to the Project. The Applicant's emerging WRMP24 and WRSE Regional Plan both select the Project as a key component of future water supply in the Hampshire area and wider South East. Other options were considered through both the</p> |

|           |            | <p>Open and honest presentations of the safety and costs of the Project was regarded as important to ensure people can fully understand the Project and its effects, as was transparency regarding how the system will be used in the future.</p> <p>The question was raised regarding whether Southampton could recycle its own water to avoid the need for the Project, suggesting this could be a simpler and more efficient solution.</p> |                      | <p>WRMP and options appraisal processes however these solutions do not provide the scale of new water resource needed and in the timescales required.</p> <p>Project costs, energy usage and delivering best value for customers have been key factors in the Applicant's assessment and consideration of alternative solutions and the Project continues to be identified as the best overall solution in delivering a new water resource for Hampshire.</p> <p>The need for the Project and an explanation of the alternatives considered (including alternative technologies) is presented in the DCO submission in the Case for the Project (Document reference 5.6, DCO Volume 5), Scheme Development Report (Document reference 5.10, DCO Volume 5) and ES Chapter 4 Consideration of alternatives (Document reference 6.1, DCO Volume 6). The Design Principles Document (Document reference 5.11, DCO Volume 5) includes a general design principle ensuring that the detailed design of the Project complies with all relevant safety and security standards.</p> <p>The use of other wastewater treatment works for supplying recycled water has been considered, however, the Project utilises the</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                   |                      | Budds Farm WTW in Havant as this is one of the Applicant's largest wastewater treatment works and therefore has the greatest capacity for supplying the fully treated wastewater required for a WRP producing up to 60 million litres per day of recycled water. Its proximity to Havant Thicket Reservoir also makes it a preferred choice. The Southampton area does not benefit from a wastewater treatment works as large as Budds Farm WTW, and instead comprises a number of smaller wastewater treatment works. Therefore, significant works would be required to connect and consolidate flows. As well as this, a new environmental buffer would be required as Havant Thicket Reservoir could not be used for this purpose. |
| Wider community | POD014     | Respondents expressed support for the Project and hoped it proceeds as planned. It was referred to as a logical and necessary solution to the water supply issues in Hampshire. The importance of finding alternative sources of water, particularly to reduce abstraction from the River Test and River Itchen was emphasised, and the Project was viewed as vital for the protection of valuable chalk streams. | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|                 |            | The Project was praised as a ' <i>forward-thinking</i> ' approach, and there were calls for similar solutions to be pursued in future.                                                                                                                                                                                                                                                                   |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Wider community | POD015     | It was suggested that an independent review should be conducted by ' <i>experts</i> ' to assess the Project, as there was a self-perceived lack of knowledge to make a judgement. There were suggestions to discontinue with the Project.                                                                                                                                                                | N                    | <p>The Applicant's DCO application will be independently examined under the Planning Act 2008 (PA 2008) by an Examining Authority (ExA) appointed by the Planning Inspectorate (the Inspectorate) on behalf of the Secretary of State.</p> <p>The examination is a six-month process during which the ExA will assess the application, ask questions and hold hearings if there are issues that need to be discussed in detail. Interested parties are able to have their say during examination including official bodies, local planning authorities and members of the public.</p> |
| Wider community | POD016     | <p>Respondents opposed water recycling and water transfer as a proposed solution to the shortfall of water, citing reasons such as cost, environmental impacts, sustainability, and energy use.</p> <p>A respondent also noted that the Project directly conflicts with national and international sustainable energy and climate commitments and newly elected government policy. Respondents added</p> | N                    | The Applicant's WRMP19 established the need for a new strategic water resource solution, in the form of a desalination plant, to address the significant water supply shortfall in Hampshire. As part of the RAPID regulatory process, an extensive options appraisal was undertaken by the Applicant which selected the Project as the preferred solution over the original desalination proposal. Informed by WRMP19, the options                                                                                                                                                   |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | that the options appraisal process was criticised for not being robust, and there was concern about the environmental impacts and costs of the Project. It was argued that the Project would have been rejected at Gate 2, if 'proper' environmental assessments had been done. |                      | <p>appraisal considered a range of alternative technologies and solutions, and assessed these against planning, environmental, socio-economic and cost criteria. The Applicant's WRMP19 was updated through an annual review to change the solution from a desalination plant to the Project. The Applicant's emerging WRMP24 and WRSE Regional Plan both select the Project as a key component of future water supply in the Hampshire area and wider South East. Other options were considered through both the WRMP and options appraisal processes however these solutions do not provide the scale of new water resource needed and in the timescales required.</p> <p>Project costs, carbon emissions, environmental impacts and delivering best value for customers have been key factors in the Applicant's assessment and consideration of alternative solutions. The environmental assessments undertaken at this stage were robust, albeit necessarily high-level as multiple options were under consideration; it would not be practicable, efficient or meaningful to undertake an Environmental Impact Assessment to inform project selection.</p> |

|                 |            | proposed solution to the water shortfall, regarding it as <i>'practical'</i> and <i>'necessary.'</i>                                                                        |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Wider community | POD019     | One respondent suggested water recycling and water transfer as a proposed solution to the shortfall should only be considered after alternative options prove insufficient. |                      | The Applicant's WRMP19 established the need for a new strategic water resource solution, in the form of a desalination plant, to address the significant water supply shortfall in Hampshire. As part of the RAPID regulatory process, an extensive options appraisal was undertaken by the Applicant which selected the Project as the preferred solution over the original desalination proposal. Informed by WRMP19, the options appraisal considered a range of alternative technologies and solutions, and assessed these against planning, environmental, socio-economic and cost criteria. The Applicant's WRMP19 was updated through an annual review to change the solution from a desalination plant to the Project. The Applicant's emerging WRMP24 and WRSE Regional Plan both select the Project as a key component of future water supply in the Hampshire area and wider South East. Other options were considered through both the WRMP and options appraisal processes however these solutions do not provide the scale of new water resource needed and in the timescales required. |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                     |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Rowlands Castle Parish Council                                  | NCA01      | Rowlands Castle Parish Council acknowledged the threat of water scarcity but suggested that it may not be an issue if climate change leads to increased temperatures and rainfall. It supported <i>'the original Portsmouth Water Havant Thicket Reservoir project to capture surplus spring water in the winter months for distribution in times of drought.'</i> However, the respondent believed preventing sewage spills is a higher priority than addressing water shortages, and suggested | N                    | Reducing storm overflows and protecting Hampshire's chalk streams through reduced abstractions is not a binary choice. The Applicant is making significant investments in reducing storm overflows whilst delivering new sources of water to maintain customer supplies.<br><br>The Applicant's WRMP19 established the need for a new strategic water resource solution, in the form of a desalination plant, to address the significant water supply shortfall in Hampshire. As part of the RAPID regulatory process, an extensive options |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>investment should be focused on the former.</p> <p>The Council also stated that the Project should be stopped, and called for an assessment to be undertaken to consider alternative options to account for irregular and rare potential water shortages.</p> <p>Concerns were raised about the cost, energy use and environmental impacts of the Project. It was noted that the Project is aimed at addressing a 1-in-500-year drought, and by the time it occurs, the water treatment plant may already be outdated, with a 60-year lifespan. It suggested that for the same price, two to three winter storage reservoirs could be built, providing long-term benefits for up to 200 years. The respondent believed that addressing water shortages with the Project, instead of exploring more affordable and sustainable solutions, is economically unreasonable.</p> <p>The Council also added that although other parts of the world experience drought, the UK would not experience prolonged drought due to its climate but also acknowledged that climate change would result in wetter winters and drier summers.</p> |                      | <p>appraisal was undertaken by the Applicant which selected the Project as the preferred solution over the original desalination proposal. Informed by WRMP19, the options appraisal considered a range of alternative technologies and solutions, and assessed these against planning, environmental, socio-economic and cost criteria. The Applicant's WRMP19 was updated through an annual review to change the solution from a desalination plant to the Project.</p> <p>The Applicant's emerging WRMP24 and Water Resources South East (WRSE) Regional Plan both select the Project as a key component of future water supply in the Hampshire area and wider South East. The water supply deficit facing Hampshire is such that the Project is required not only for drought resilience but also for providing essential daily water supplies in normal weather. Other options considered through both the WRMP and options appraisal processes do not provide the scale of new water resource needed and in the timescales required.</p> <p>New reservoirs have been considered through the Applicant's WRMP process, but these take a significant amount of time to develop, carry their own environmental</p> |

|                                                                                |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                      | <p>Consideration of alternatives (Document reference 6.1, DCO Volume 6).</p> <p>Climate change projection data for the region were obtained from the UK Climate Projections (UKCP18) dataset, which is the official set of UK climate projection data published by the Met Office. The UKCP18 dataset indicates a future reduction in summer rainfall that could lead to drought events. Furthermore, the emerging WRMP24 indicates future forecasts of water resource deficits in the region which also has the potential to result in drought.</p> |
| EHDC,<br>WCC,<br>Portsmouth Water, South Downs National Park Authority (SDNPA) | NCA02      | <p>Respondents acknowledged and understood the need for the Project, recognising the aim to secure water supply by providing an additional 90 million litres of water per day to Hampshire, and optimising Havant Thicket Reservoir as a sustainable water source which will ensure the protection of '<i>world-renowned chalk streams</i>'.</p> <p>WCC said it would continue to assess technical aspects of the Project and said this is under continual review.</p> | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|                                 |            | <i>infrastructure project</i> and does not wish to prevent the construction from proceeding.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Rowlands Castle Parish Council  | NCA04      | <p>Rowlands Castle Parish Council supported the need to reduce river abstraction but proposed alternative solutions, such as developing rainwater capture and storage systems, which the respondent believed could be more cost-effective than the Project.</p> <p>While the respondent acknowledged that the Applicant's aim to protect the valuable chalk streams is valid, it was emphasised that reducing storm overflow spills into rivers is a more significant issue for river health and would have a greater impact than reducing river abstraction.</p> | N                    | Please see response to NCA01.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| EHDC, WCC, Upham Parish Council | NCA05      | <p>Respondents acknowledged the need to reduce reliance on the River Test and River Itchen due to a projected water supply deficit by 2027.</p> <p>The goal to create an alternative water supply and reduce abstractions from these rivers was supported, as it was acknowledged it would benefit the environment by preserving the rivers' ecological stability. However, concern was raised about the potential environmental impacts of the proposed infrastructure</p>                                                                                       | N                    | <p>The Applicant has noted this comment.</p> <p>The Applicant has made considerable effort, through the iterative design of the Project, and informed by engagement and consultation, to avoid and reduce impacts on the environment and local communities (see the ES (Document reference 6.1, DCO Volume 6)). An Environmental Impact Assessment (EIA) has been undertaken, which sets out the impact the Project is expected to have on various sensitive receptors, including local communities,</p> |

|-----------------------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                         |            | needed for the Project. The importance of balancing these benefits with efforts to mitigate any local environmental harm caused by the Project was emphasised.                                                                                                                                                                                                 |                      | ecology, the water environment and the highway network. The EIA process and methodology is set out in ES Chapter 5 EIA approach and methodology, Volume I (Document reference 6.1, DCO Volume 6). The ES sets out mitigation measures that would be implemented during the construction and operation phase of the Project. The Outline Construction Environment Management Plan (Document reference 7.1, DCO Volume 7) sets out mitigation measures that would be implemented during the construction phase to further reduce potential residual impacts.<br><br>The environmental effects of the Project during the construction phase are assessed in detail in the ES (Document reference 6.1, DCO Volume 6) |
| Test Valley Borough Council, Chichester District Council, Langstone Harbour Board, EHDC | NCA06      | Respondents expressed support for the proposed measures to reduce water abstraction from the River Test and River Itchen to protect these sensitive chalk streams. The need to promptly implement these measures was acknowledged, in order to reduce reliance on drought measure arrangements under the Section 20 Agreement of the Water Resources Act 1991. | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee                                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|--------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Council (HCC)                                                |            | <p>growing water demand was emphasised. It was iterated that access to clean water is critical to public health.</p> <p>In combination with fixing pipeline leakages, water recycling was seen as the best alternative to desalination, which was considered unviable due to high energy requirements.</p> <p>There was strong support for increased water capture, with a call for more backing from developers and central government to make it a requirement for new developments.</p> |                      | <p>targeted mains replacement and advanced detection technologies. Public engagement materials and campaigns are being delivered to raise awareness of water scarcity and promote water-saving behaviours. The Applicant's WRMP19 and emerging WRMP24 selects a range of measures including leakage reductions alongside the need for a new large scale infrastructure solution in their western supply area.</p> <p>The Applicant also offers water efficiency and wastewater management incentives to developers to promote more sustainable practices in new development. These include encouraging the installation of 'water capture' technologies such as greywater recycling and rainwater harvesting and attenuation.</p> |
| EHDC, Langstone Harbour Board, Portsmouth City Council (PCC) | NCA09      | <p>Respondents acknowledged the Southeast of England is facing '<i>serious water stress</i>', with the Applicant having a projected shortfall in the Hampshire water supply area. The need for prudent water resource management was emphasised for the wider Portsmouth area in particular.</p> <p>It was acknowledged that water recycling is being considered as a solution to address the gap between future water demand and availability. There was support for the</p>              | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

|                                                         |            | Applicant to improve water quality and resilience through the Water for Life Programme.                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WCC, Natural England (NE)                               | NCA10      | <p>Respondents understood the need for the Project, acknowledging the pressures on water security and the predicted deficit of up to 596 million litres of water per day by 2070, should the Project not be implemented.</p> <p>The importance of the Project, along with others in the Applicant's WRMP, to address water deficits and reduce river abstraction was emphasised.</p> <p>It was acknowledged that collaborative work is underway with the Applicant to ensure the Project's environmental impacts are limited.</p> | N                    | <p>The Applicant has noted this comment. The Applicant has worked closely with consultees throughout the pre application period to understand local issues and measures to reduce environmental effects as far as practicable.</p> <p>This engagement is reflected in the Statements of Common Ground (Document reference 5.8, DCO Volume 5) and the Statement of Engagement (Document reference 5.9, DCO Volume 5) contained within the DCO application.</p> |
| Rowlands Castle Parish Council, Environment Agency (EA) | NCA11      | <p>Customer education on reducing water usage combined with increased efforts to address leaks was raised as playing a significant role in addressing water shortages.</p> <p>The need to reduce water abstraction, which was identified in the Applicant's plan after reviews in 2008/9 and licence changes in 2019, was acknowledged. It was noted that the Applicant is facing a</p>                                                                                                                                           | N                    | <p>The Applicant recognises the importance of customer education, water efficiency, and leakage reduction in addressing water scarcity. These activities are already under way as part of a wider programme of measures as part of WRMP19 and are also proposed in the emerging WRMP24. The Applicant has committed to halving leakage by 2050, supported by targeted mains replacement and advanced detection technologies. Public engagement materials</p>  |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>drought deficit because it accepted these changes for a 1 in 200 year drought event and now needs to plan for a 1 in 500 year drought. Therefore, finding extra water resources is vital for supply resilience in the Western Zone, addressing both short-term droughts (1 in 200 year drought) and long-term droughts (1 in 500 year).</p> <p>Clarification was requested on why the strategy categorises the 1 in 200 year drought event as severe given that this option is presented as a major component of achieving immediate drought resilience for a 1 in 200 year event and improving resilience for a 1 in 500 year event.</p> |                      | <p>and campaigns are being delivered to raise awareness of water scarcity and promote water-saving behaviours. The Applicant also offers water efficiency and wastewater management incentives to developers to promote more sustainable practices in new development. These include encouraging the installation of 'water capture' technologies such as greywater recycling and rainwater harvesting and attenuation.</p> <p>Water companies in the UK are required to model water demand and supply in drought scenarios so they can plan for maintaining customer supplies in such events. '1 in 200 years' and '1 in 500 years' refer to the probability of a drought event occurring. A drought event that occurs every 1 in 200 years (a 0.5% chance of occurring in any given year) is termed a 'severe' drought. A drought event that occurs every 1 in 500 years (a 0.2% chance of occurring in any given year) is termed an 'extreme' drought. The Applicant is required to plan for a 1 in 500 year (extreme) drought as set out in the Government's Water Resources Planning Guideline.</p> |
| HBC       | NCA12      | HBC acknowledged that the National Policy Statement for Water Resources Infrastructure (NPSWRI) clearly states that                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | N                    | The Applicant has noted this comment, the Applicant's WRMP19 (as updated through annual review) and emerging WRMP24                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                    |                      |                                                                                                                                                                                                                      |
| PILs                                                        | NCA13      | <p>Respondents expressed a neutral sentiment towards the Project. The necessity of a secure water supply was acknowledged, and concern for the health of the River Test and River Itchen was raised as the number of new housing developments with a need for fresh water supplies increase.</p> <p>It was also noted that better water and sewage management has been needed since the 1980s.</p> | N                    | <p>The Applicant has noted this comment.</p> <p>The Applicant is making significant investment in both wastewater treatment and management whilst delivering new sources of water to maintain customer supplies.</p> |
| PILs                                                        | NCA14      | Respondents expressed support for the Project and acknowledged the need to reduce human impact on the natural environment in Hampshire. Support was given provided that the Project does not hinder essential work to address existing water leakage and reduce sewage discharges into the sea and watercourses.                                                                                   | N                    | The Applicant confirms that the Project would not hinder other programmes that are being progressed by the Applicant to reduce leakage and reduce storm overflows.                                                   |
| PILs                                                        | NCA15      | Respondents expressed support for the Project, deeming it the most appropriate solution to reduce river abstraction.                                                                                                                                                                                                                                                                               | N                    | The Applicant has noted this comment.                                                                                                                                                                                |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PIL       | NCA16      | The respondent expressed opposition to the Project, raising concerns about overcrowding in the area that is becoming <i>'uglier by the day.'</i> It was stated that the <i>'provision of extra water'</i> is only necessary to <i>'supply houses that should not have been built, with more development expected in the future.'</i>                                                                                                                                                                                 | N                    | The Applicant has a duty to ensure every home in its region has access to a clean and wholesome water supply. The Project would help maintain supplies for existing customers and build capacity for future planned housing growth which is managed by the relevant local planning authority.                                                                                                                                                                                                                                                                                                                                         |
| PIL       | NCA17      | The respondent expressed a neutral sentiment towards the proposed Pipeline routes, stating they should not be needed, but acknowledging the population is <i>'too large for infrastructure.'</i><br><br>Respondents suggested that investment should be directed towards improving existing infrastructure rather than creating new systems. It was also suggested that moving treatment facilities closer to areas of need, such as Havant, would reduce the length and complexity of the proposed Pipeline system. | N                    | The pipeline route is a key component of the Project, which has been identified by the Applicant as a key part of its strategy to respond to current and future water supply challenges in its Hampshire supply area.<br><br>Delivering operational efficiency and environmental performance has been a key factor in site and route selection, with the WRP being located in the Havant area given its proximity to Budds Farm Water Treatment Works (WTW) and the new Havant Thicket Reservoir. Locating the Water Recycling Plant (WRP) in this location reduces the complexity of the Project and the length of pipelines needed. |
| PILs      | NCA18      | Respondents acknowledged that the need to secure water is <i>'obvious,'</i> and the water shortfall cannot be ignored, citing reasons                                                                                                                                                                                                                                                                                                                                                                                | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Wider community                                  | NCA19      | <p>Respondents expressed opposition to the Project, deeming it unnecessary, costly and environmentally damaging.</p> <p>The Applicant's motivations for the Project were criticised, suggesting they are profit-driven as opposed to genuine environmental concerns.</p> <p>The need for the Project was questioned by respondents expressing scepticism about the predicted water shortfall and likelihood of drought, especially with the country's rate of rainfall. A 1 in 500 year drought event was not deemed a real risk, and it was questioned whether such an extreme event is necessary to plan for, given the country's overall water resources.</p> <p>It was stated that there are no justifiable reasons for this infrastructure investment, and alternative solutions were presented that remove the need for extensive infrastructure, deemed more efficient to address the water supply issues and resolve the issue without the need for the Project. These solutions were improved</p> | N                    | <p>The Applicant's emerging WRMP24 and WRSE Regional Plan both select the Project as a key component of future water supply in the Hampshire area and wider South East. The water supply deficit facing Hampshire is such that the Project is required not only for drought resilience but also for providing essential daily water supplies in normal weather. Other options considered through both the WRMP and options appraisal processes do not provide the scale of new water resource needed and in the timescales required.</p> <p>The Applicant is required by the Government's Water Resources Planning Guideline to plan for a 1 in 500 year drought event, and the emerging WRMP24 has been prepared on this basis.</p> <p>Project costs, carbon emissions, energy usage, environmental impacts and delivering best value for customers have been key factors in the Applicant's assessment and consideration of alternative solutions. The Project continues to be identified as the best overall solution in delivering a new water</p> |

|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>conservation practices, better infrastructure maintenance (including fixing leakages), and more water storage capacity.</p> <p>Respondents criticised the proposal, citing high costs, carbon use and environmental impacts of pumping water over 40 kilometres from Havant Thicket Reservoir to Otterbourne.</p> <p>It was stated that there was a lack of transparency with the failure to present a joint plan with Portsmouth Water. The adequacy of risk assessments was questioned, and it was argued that alternatives were not properly considered.</p> |                      | <p>resource for Hampshire alongside leakage and demand reduction measures. New reservoirs have been considered through the Applicant's WRMP process, but these take a significant amount of time to develop, carry their own environmental impacts, and cannot rely on rainfall alone to provide the necessary volumes in Hampshire, hence would need to rely on river abstractions that the Applicant is required to reduce. The Applicant is already investing significantly in Havant Thicket Reservoir and the White Horse Reservoir. Havant Thicket Reservoir plays a critical role in the Project by augmenting the volume of water that can be delivered to the Applicant's Otterbourne WSW. The Applicant has worked with Portsmouth Water to ensure that the Project and Havant Thicket Reservoir deliver the required water resources to address future water supply challenges.</p> <p>The need for the Project and an explanation of the alternatives considered (including alternative technologies) is presented in the DCO submission in the Case for the Project (Document reference 5.6, DCO Volume 5), Scheme Development Report (Document reference 5.10, DCO Volume 5) and ES Chapter 4 Consideration of alternatives (Document reference 6.1, DCO Volume 6).</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                                           |                      | The design of the Project has sought to reduce impacts on the environment and the local community. The Outline Construction Environment Management Plan (Document reference 7.1, DCO Volume 7) sets out mitigation measures that would be implemented during the construction phase. The environmental effects of the Project during the construction phase are assessed in detail in the ES (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                        |
| Wider community | NCA20      | Respondents generally viewed the Project as inevitable but controversial. The need to secure water to minimise the impacts of climate change and population growth while preserving the River Test and River Itchen was understood. However, there were concerns about whether a project of this scale and technical level was necessary. | N                    | <p>The Project has been identified through the Applicant's WRMP and options appraisal processes as a crucial and necessary part of its strategy to respond to current and future water supply challenges in its Hampshire supply area. Other solutions have been extensively considered but are not available at the scale needed and in the timescales required, as identified in emerging WRMP24.</p> <p>The need for the Project and a narrative of the alternatives considered (including alternative technologies) is presented in the DCO submission in the Case for the Project (Document reference 5.6, DCO Volume 5), Scheme Development Report (Document reference 5.10, DCO Volume 5) and ES</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                      | Chapter 4 Consideration of alternatives (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Wider community | NCA21      | <p>Respondents acknowledged the growing demand for water due to population growth and climate change and expressed support for the Project and its focus on water recycling and reducing abstraction from the River Test and River Itchen. The idea of water recycling to protect these rivers and reduce environmental damage was seen as a sensible, sustainable and necessary step.</p> <p>While there were concerns about impacts and potential disruption on local communities and the environment during construction, and the importance of ensuring the water is properly treated before being added to Havant Thicket Reservoir was emphasised, it was viewed as essential for long-term water security.</p> | N                    | <p>The Applicant has noted this comment. The Applicant has made considerable effort, through the iterative design of the Project, and informed by engagement and consultation, to avoid and reduce potential impacts on the environment and the local communities.</p> <p>The Outline Construction Environment Management Plan (Document reference 7.1, DCO Volume 7) sets out mitigation measures that would be implemented during the construction phase to further reduce potential residual impacts.</p> <p>The environmental effects of the Project during the construction phase are assessed in detail in the ES (Document reference 6.1, DCO Volume 6).</p> <p>The release of recycled water into Havant Thicket Reservoir would be subject to an Environmental Permit which would set water quality requirements for the composition of the recycled water.</p> |
| Wider community | NCA22      | Respondents questioned the need for water recycling as a solution to the water shortfall and suggested ' <i>cheaper</i> '                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | N                    | The Project has been identified through the Applicant's WRMP and options appraisal processes as a crucial part of its strategy to                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Wider community | NCA23      | <p>Respondents were sceptical about whether the Project would deliver meaningful benefits on reducing abstraction from the River Test and River Itchen. It was viewed that water companies '<i>utilise the cheapest water sources first</i>,' therefore recycled water will be used as a last resort, and river abstraction will be prioritised. The length of time for completion of the Project was a concern, as it was viewed that there would be no impact on abstraction rates until the work has been completed.</p> <p>Additionally, there were concerns that the focus on '<i>large technological infrastructure</i>,' which '<i>lacks independent expert validation</i>,' could introduce environmental and health risks. Concern was raised about the impacts of the Project on Langstone Harbour and the Solent, and it was viewed that any environmental damage to these water bodies would outweigh the benefits to the River Test and River Itchen.</p> | N                    | <p>The Applicant is making every effort to deliver the Project at the earliest opportunity in order to support the ecological and environmental objectives that reduced abstractions are required to achieve. Prior to construction starting, timescales are largely dictated by the requirements of the planning process and the need to undertake environmental and technical surveys and investigations, consultation and engagement and development of the Project.</p> <p>Abstraction reductions have already been implemented since 2018 and further reductions are planned for. Whilst this would deliver benefits for the environment, it places the Applicant's area under further water stress until the Project is implemented.</p> <p>Water quality modelling has been undertaken to consider the potential impacts of storing recycled water in Havant Thicket Reservoir and releasing reject water into the Solent via the existing Eastney Long Sea Outfall (LSO). Initial water quality modelling was presented at the Spring 2025 Consultation. The water quality modelling has informed ES Chapter 9 Marine biodiversity (Document reference 6.1,</p> |

Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | supported the Havant Thicket Reservoir plan, there was scepticism about the Applicant's projection of needing 2.5 billion extra litres of water per day by 2050, suggesting it was based on unrealistic worst case scenarios. Respondents emphasised the need to protect water quality, ensure sustainable solutions for increasing demand, and balance housing growth with environmental concerns. They called for a more ' <i>pragmatic approach</i> ' to water management, including reconsidering housing development if supply issues are not properly addressed, and promoting local water-saving measures. |                      | planned housing growth which is managed by local planning authorities.<br><br>The Applicant is also required to prepare a WRMP which sets out the supply and demand measures the Applicant would take to ensure future water supplies for customers. The Applicant is required to plan for a 1 in 500 year drought, and the Project has been identified in the Applicant's WRMP19 and emerging WRMP24 as a key component of future water supply in the Applicant's western supply area in both drought and normal conditions. |
| Wider community | NCA27      | Respondents expressed support for the Project as a necessary solution to the challenges posed by the growth in the population and subsequent housing developments. They also stressed the importance of the Project as a critical part of national infrastructure to ensure sufficient water for both current and future communities, warning that without action, issues like water scarcity and environmental degradation will worsen.                                                                                                                                                                          | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | NCA28      | The appropriateness of water recycling in southern England was questioned by respondents, with scepticism regarding whether the area is at real risk of a water shortfall. The need for cheaper, more sustainable, and eco-friendly alternatives is suggested by respondents. | N                    | <p>There is clear recognition through national policy and strategies, including from the EA and the then National Infrastructure Commission, that the water industry must plan for more resilient water supplies and additional capacity in the face of climate change, population growth and increased environmental protection. The Applicant is required to prepare a WRMP to set out the supply and demand measures it would take to ensure future water supplies. The Applicant is required to plan for a 1 in 500 year drought, and the Project has been identified in its emerging WRMP24 as a key component of future water supply in its western supply area. Other solutions have been extensively considered but are not available at the scale needed and in the timescales required.</p> <p>The need for the Project and an explanation of the alternatives considered (including alternative technologies) is presented in the DCO submission in the Case for the Project (Document reference 5.6, DCO Volume 5), Scheme Development Report (Document reference 5.10, DCO Volume 5) and ES Chapter 4 Consideration of alternatives (Document reference 6.1, DCO Volume 6).</p> |

| Wider community | NCA29      | Respondents acknowledged the need for planning future water supply and the impact of climate change and population growth on water demand.                                                                                                                                                                                                                                                                                                                              | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Wider community | NCA30      | Respondents expressed support for the Project as a solution to the water stress in the South East. The need for additional water supply due to population growth and the importance of reducing water supply problems during periods of drought were stressed by respondents.                                                                                                                                                                                           | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Wider community | NCA31      | Respondents acknowledged that the Applicant is working to meet the new 1 in 500 year drought guidelines in order to meet the WRMP29, but they questioned whether the emphasis on effluent recycling is driven more by the potential for future profits rather than environmental or cost-effective alternatives. They stated that cheaper and greener solutions may have been overlooked. Additionally, respondents asked when the draft WRMP consultation would begin. |                      | <p>The Applicant assumes the respondents' reference to WRMP29 should be WRMP24.</p> <p>The Project has been identified through the Applicant's WRMP and options appraisal processes as a crucial part of its strategy to respond to current and future water supply challenges in its Hampshire supply area both in drought and normal conditions. Project costs, carbon emissions, environmental impacts and delivering best value for customers have been key factors in the Applicant's assessment and consideration of alternative solutions. Other solutions have been extensively considered but are not available at the scale needed and in the timescales required. The Applicant's emerging WRMP24 plans for water supply</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Rowlands Castle Parish Council, WCC                             | ALT01      | <p>Respondents suggested a number of alternatives as a solution to the water shortfall, as opposed to the Project.</p> <p>One suggestion included building two to three new reservoirs to store winter rainfall, which was viewed as a more cost-effective and environmentally friendly solution compared to the Project. The benefits of using natural solutions like aquifers, reducing leakage, and investing in infrastructure that enhances biodiversity</p> | N                    | <p>The Project has been identified through the Applicant's WRMP and options appraisal processes as a crucial part of its strategy to respond to current and future water supply challenges in its Hampshire supply area both in drought and normal conditions. Project costs, carbon emissions, environmental impacts and delivering best value for customers have been key factors in the Applicant's assessment and consideration of alternative solutions.</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>and water storage capacity were emphasised.</p> <p>It was suggested that further resilience measures be explored, including the possibility of reversing water flows along the Andover Link to Otterbourne, when necessary.</p> |                      | <p>Other solutions have been extensively considered but are not available at the scale needed and, in the timescales, required.</p> <p>Using local aquifers for winter storage has previously been considered by the Applicant but carries a number of environmental and feasibility uncertainties and cannot solely deliver on the scale required in the Hampshire supply area.</p> <p>New reservoirs have been considered through the Applicant's WRMP process, but these take a significant amount of time to develop and carry their own environmental impacts. Capturing and storing rainfall in reservoirs alone would not provide the necessary volumes of water needed in Hampshire to address the water resources challenge and would need to rely on river abstractions that the Applicant is required to reduce. The Applicant is already investing significantly in Havant Thicket Reservoir and the White Horse Reservoir. Havant Thicket Reservoir plays a critical role in the Project by augmenting the volume of water that can be delivered to the Applicant's Otterbourne Water Supply Works.</p> <p>The Applicant's strategy for the Hampshire supply area in emerging WRMP24 includes building new pipelines to move water around</p> |

| Harbour Board                                                |            | <p>trap and store more rainwater, given the UK's maritime climate and increasing rainfall due to climate change was highlighted.</p> <p>Respondents viewed these alternatives as more favourable, stating they require less energy and fewer chemicals compared to producing recycled water.</p>                                                                                                                                                                                                                                                                                                                    |                      | <p>for the Hampshire supply area includes developing new groundwater sources, however these measures would not solely fulfil the future water supply challenges, and therefore additional infrastructure solutions are required such as the Project.</p> <p>The Applicant is required to plan for 1 in 500 year drought events, which are events where rainfall is much lower. This has informed the selection of the strategy for the Hampshire supply area which includes the Project.</p> |
| Rowlands Castle Parish Council, WCC, Langstone Harbour Board | ALT03      | <p>Respondents stated that investing in natural solutions to capture and store winter rain, such as additional winter storage reservoirs and rainwater capture systems, would provide valuable ecosystem services, reduce flood risk, and create vital wetland habitats. It was stated that these solutions would <i>'address the aquifer recharge problem faced by water companies.'</i> One respondent commented that <i>'If as much effort were put into capturing and storing rainwater in the catchment as had gone into this proposal, the recycling facility may well have been rendered redundant.'</i></p> | N                    | Please see response to ALT01 and ALT02.                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Consultee                      | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Rowlands Castle Parish Council | ALT04      | Rowlands Castle Parish Council called for increased efforts to repair leaks and reduce water wastage, as <i>'there is no point in treating water at a cost only to see it run into the ground from the many leaks in the distribution system.'</i>                                            | N                    | <p>The Applicant continues to invest in leakage and demand reduction measures. The Applicant is committed to halving leakage by 2050 and has already made progress through its Turnaround Plan, with a 10% reduction in the overall leakage on the Applicant's network since 2023. However, as set out in the Applicant's emerging WRMP24, these measures alone would not solve the scale of the water supply deficit in Hampshire and therefore can only be part of the overall solution, which also requires a large new water resource to maintain supplies into the future.</p> <p>The Applicant also offers water efficiency and wastewater management incentives to developers to promote more sustainable practices in new development. These include encouraging the installation of 'water capture' technologies such as greywater recycling and rainwater harvesting and attenuation.</p> |
| Rowlands Castle Parish Council | ALT05      | Rowlands Castle Parish Council suggested moving river abstractions downstream, closer to the tidal limit, would reduce the impact of water loss in the upper and middle reaches of rivers. The respondent also commented that damage to chalk streams could be reduced <i>'by not putting</i> | N                    | Moving abstractions closer to the tidal limit on the River Itchen has been looked at previously but not considered viable because of a number of environmental and feasibility constraints. There could be potentially significant implications on other water company abstractions and infrastructure, lower reaches of the river would still be                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Consultee                                               | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                         |            | <i>large volumes of raw sewage into the rivers on a persistent basis.'</i>                                                                                                                                                                                                                  |                      | <p>subject to abstraction reductions, there would be a likely impact on migratory fish and complications could arise from tidal effects on the duration of abstraction and on water quality. The construction of the necessary abstraction intake, pumping stations and connecting pipelines would also carry their own environmental impacts and this suggested option does not overcome the sustainability objective of reducing how much water the Applicant takes from the environment. Further information on consideration of other options, such as new reservoirs and moving abstractions, can be found in the Applicant's Statement of Responses to its emerging WRMP24.</p> <p>The Applicant's Clean Rivers and Seas Task Force is working to reduce storm overflows by keeping rainwater and groundwater out of sewers in the first place – keeping them free to deal with wastewater only wherever possible.</p> |
| Rowlands Castle Parish Council, Langstone Harbour Board | ALT06      | Respondents perceive a <i>'failure to properly consider a variety of solutions'</i> to address potential water shortages in the South East by reducing demand and waste, not just by developing more storage. It was commented that improvements to demand management, capacity at existing | N                    | The Project has been identified through the Applicant's WRMP19 and emerging WRMP24 and options appraisal processes as a crucial part of its strategy to respond to current and future water supply challenges in its Hampshire supply area both in drought and normal conditions. Other solutions have been                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|-----------|------------|-----------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | using natural aquifers and building new reservoirs. |                      | <p>targeted mains replacement and advanced detection technologies. Public engagement materials and campaigns are being delivered to raise awareness of water scarcity and promote water-saving behaviours.</p> <p>Leakage and demand reduction measures remain a key part of the strategy to address Hampshire's water supply deficit, but these can only be part of the overall solution, which also requires a large new water resource to maintain supplies into the future. Using local aquifers and developing new reservoirs for winter storage has previously been considered by the Applicant but carries a number of environmental and feasibility uncertainties and cannot deliver on the scale required. New reservoirs have been considered through the Applicant's WRMP24 process, but these take a significant amount of time to develop, carry their own environmental impacts, and cannot rely on rainfall alone to provide the necessary volumes in Hampshire, hence would need to rely on river abstractions that the Applicant is required to reduce.</p> <p>The Applicant is already investing significantly in Havant Thicket Reservoir and the White Horse Reservoir. Havant Thicket Reservoir plays a critical role in the Project by</p> |

|                         |            |                                                                                                                                                                                             |                      | subject to extensive consultation through the WRMP and DCO pre-application processes.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Langstone Harbour Board | ALT09      | Langstone Harbour Board emphasised the need to explore alternative strategic solutions in detail to address the impacts of climate change and population growth.                            | N                    | <p>The Project has been identified through the Applicant's WRMP and options appraisal processes as a crucial part of its strategy to respond to current and future water supply challenges in its Hampshire supply area. Other solutions have been extensively considered but are not available at the scale needed and in the timescales required. The Applicant's emerging WRMP24 sets out the range of measures that have been identified to address the future water supply challenges in the Hampshire Supply Area.</p> <p>The Applicant has progressed the Project through the RAPID gated process in order to consider alternative infrastructure solutions. This process is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5) and ES Chapter 4 Consideration of alternatives (Document reference 6.1, DCO Volume 6).</p> |
| WCC                     | ALT10      | WCC stated that various solutions had been explored, such as desalination plants and water abstraction from other rivers, but these were discounted due to environmental and cost concerns. | N                    | <p>The Applicant notes this comment.</p> <p>As a backup to the Project, the Applicant considered a water transfer and recycling solution utilising a new lake/reservoir closer to its Otterbourne Water Supply Works (WSW). This option was preferred less as it offered</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | WCC expressed support for the Project as a solution but wanted to know if alternative reservoir locations had been explored, closer to Otterbourne to avoid the need for pumping stations.                                                                     |                      | <p>less flexibility and scalability than the Project. Additionally, a new lake/reservoir would carry its own planning, delivery and environmental challenges and would not make best use of the significant investment already being made by the Applicant in Havant Thicket Reservoir as a new reservoir to serve its Hampshire supply area.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) explains the options appraisal process that was undertaken to select the Project.</p>                                                                                                                                           |
| EA, HBC   | ALT11      | <p>The EA requested clarity within the ES as to why the B.5 option was ruled out.</p> <p>HBC emphasised the need to consider alternative options and the importance of ongoing community and local authority engagement in the development of the Project.</p> | N                    | <p>ES Chapter 4 Consideration of alternatives (Document reference 6.1, DCO Volume 6) sets out that Option B.5 (referred to as the Backup option) was not progressed due to its lower flexibility and scalability compared to Option B.4 (the Project) and therefore would not be as resilient as Option B.4 during a drought. Additionally, the new lake/reservoir required as part of Option B.5 would carry its own planning, delivery and environmental challenges and would not make best use of the significant investment already being made by the Applicant in Havant Thicket Reservoir as a new reservoir to serve its Hampshire supply area.</p> |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                             |            |                                                                                                                                                                                                                    |                      | The Applicant has extensively considered alternative options through its WRMP and options appraisal processes to select the Project, as well as considering alternative options for components of the Project itself. This process is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5) and ES Chapter 4 Consideration of alternatives (Document reference 6.1, DCO Volume 6). The Applicant recognises the importance of consultation and engagement and has held consultations on the Project in 2021, 2022, 2024, 2025 and 2026 and undertaken extensive engagement with local planning authorities and other stakeholders throughout the pre-application period. |
| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                                                                                                                    |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| PIL                                                         | ALT12      | The respondent expressed concerns that receiving feedback on the process of identifying proposed Pipeline routes appears to be a cosmetic exercise, and suggested alternatives have not been genuinely considered. | N                    | <p>The process used to identify and refine the proposed Pipeline routes is described within the Scheme Development Report (Document reference 5.10, DCO Volume 5).</p> <p>During the Summer 2022 Consultation the Applicant presented alternative pipeline corridors and invited feedback from consultees. Responses received informed the identification of a preferred corridor which was subsequently refined through further</p>                                                                                                                                                                                                                                                                |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                                                        |                      | <p>environmental surveys, technical assessment and stakeholder engagement.</p> <p>At the Summer 2024 Consultation the Applicant presented updated pipeline route alignments and explained how these had evolved in response to consultation feedback and ongoing design development.</p> <p>The proposed pipeline routes therefore reflect an iterative design process informed by consultation responses, environmental constraints, engineering feasibility and landowner engagement. The Applicant considers that consultees were provided with appropriate opportunities to comment on route options as they were developed during the pre-application stage.</p> |
| PIL       | ALT13      | The respondent questioned why no reservoirs have been built since privatisation to store water for drier seasons. It was commented that regional storage reservoirs were a better solution to the water shortfall and stated they would avoid damage to agricultural land and provide a more sustainable water supply. | N                    | <p>New reservoirs have been considered through the Applicant's WRMP process, but these take a significant amount of time to develop, carry their own environmental impacts, and cannot rely on rainfall alone to provide the necessary volumes in Hampshire, hence would need to rely on river abstractions that the Applicant is required to reduce.</p> <p>The Applicant is already investing significantly in regional scale reservoir developments,</p>                                                                                                                                                                                                           |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                                                  |                      | <p>such as Thames Water's White Horse Reservoir being delivered by Thames Water, and Havant Thicket Reservoir being delivered by Portsmouth Water and which plays a critical role in the Project by augmenting the volume of water that can be delivered to the Applicant's Otterbourne WSW. These reservoirs are needed in addition to the Project not as an alternative to it.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project including the land needed to deliver it.</p> <p>The Project has been designed to reduce impacts on agricultural land, wherever practicable. Once the Pipeline has been constructed, agricultural land would be reinstated.</p> |
| PIL       | ALT14      | The respondent stated that the proposed scheme is costly and ' <i>disproportionate and invasive</i> ,' and suggested that local reservoirs and local recycling should be the solution to reduce river abstraction. ' <i>Green electricity</i> ' and ' <i>green desalination</i> ' were proposed as alternatives. |                      | <p>The Project has been identified through the Applicant's WRMP and options appraisal processes as a crucial part of its strategy to respond to current and future water supply challenges in its Hampshire supply area. Desalination was considered but was deemed unconscionable due to various environmental challenges. Other solutions have been extensively considered but are not available at the scale needed and in the timescales</p>                                                                                                                                                                                                                                                                                                                |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                    |                      | <p>required. The Applicant is already investing heavily in reservoirs, such as Thames Water's White Horse Reservoir, and Havant Thicket Reservoir being delivered by Portsmouth Water and which plays a critical role in the Project by augmenting the volume of water that can be delivered to the Applicant's Otterbourne WSW. These reservoirs are needed in addition to the Project not as an alternative to it.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project and explains how the Project is the only option available to deliver the scale of water resource required in the timescales needed.</p> |
| PIL       | ALT15      | The respondent suggested that increased investment in maintaining the existing supply, repairing and replacing leaking pipes, and implementing water recycling systems in new developments would be more effective as a solution than the Project. |                      | <p>The Applicant is committed to halving leakage by 2050 and has already made progress through its Turnaround Plan, with a 10% reduction in the overall leakage on the Applicant's network since 2023. Leakage and demand reduction measures remain a key part of the strategy to address Hampshire's water supply deficit, but these can only be part of the overall solution, which also requires a large new water resource to maintain supplies into the future. The Applicant also offers water efficiency and</p>                                                                                                                                                                                      |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                                                                |                      | wastewater management incentives to developers to promote more sustainable practices in new development. These include encouraging the installation of 'water capture' technologies such as greywater recycling and rainwater harvesting and attenuation.                                                                                                                                                                                                                                                                                                                                                                                                              |
| PILs      | ALT16      | Respondents suggested that the Applicant should have undertaken a full maintenance program to repair all leaks and installed water meters in all customers' homes before investing in a significant infrastructure project. They suggest that reducing sewage discharges and fixing leaking water pipes should be prioritised. |                      | The Applicant recognises the need for significant investment in reducing leakage and addressing pollution incidents. The Applicant is committed to halving leakage by 2050 and has already made progress through its Turnaround Plan, with a 10% reduction in the overall leakage since 2023. There has also been a 38% reduction in total pollution since 2020. Leakage and demand reduction measures remain a key part of the strategy to address Hampshire's water supply deficit, but these can only be part of the overall solution, which also requires a large new water resource to maintain supplies into the future, due to the scale of the future deficit. |
| PIL       | ALT17      | The respondent suggested that regional storage reservoirs are a far better solutions that would not damage agricultural land.                                                                                                                                                                                                  | N                    | The Project has been identified through the Applicant's WRMP and options appraisal processes as a crucial part of its strategy to respond to current and future water supply challenges in its Hampshire supply area. Other solutions have been extensively considered but are not available at the scale needed and in the timescales required. The                                                                                                                                                                                                                                                                                                                   |

| PIL       | ALT19      | The respondent suggested other options such as the storage of runoff water and reservoirs nearer to the demand supply areas. | N                    | The Project has been identified through the Applicant's WRMP and options appraisal processes as a crucial part of its strategy to respond to current and future water supply challenges in its Hampshire supply area. Other solutions have been extensively considered but are not available at the scale needed and in the timescales required. New reservoirs have been considered through the Applicant's WRMP process, but these take a significant amount of time to develop, carry their own environmental impacts, and cannot rely on rainfall alone to provide the necessary volumes in Hampshire, hence would need to rely on river abstractions that the Applicant is required to reduce. The Applicant is already investing significantly in regional scale reservoir developments, such as the White Horse Reservoir being delivered by Thames Water, and Havant Thicket Reservoir being delivered by Portsmouth Water and which plays a critical role in the Project by augmenting the volume of water that can be delivered to the Applicant's Otterbourne WSW. Reservoirs can play a key role as part |

| Wider community                                  | ALT21      | <p>Respondents opposed the proposed method of water recycling. It was proposed that building more reservoirs is a simpler and more sustainable solution to secure water supply. It was noted that reservoirs would have lower running costs, and a longer lifespan compared to the Project.</p> <p>As well as new reservoirs, respondents proposed other alternative solutions to the water supply shortfall and the reduction of river abstraction, such as using confined aquifers and transferring water from areas with surplus supply. Respondents claimed these options to be more sustainable, cost-effective, and environmentally friendly than the Project.</p> <p>It was suggested that the Applicant was prioritising its economic interests, viewing the solution as costly and unsuitable. It was questioned why customers should pay for this solution, arguing it is resulting from the Applicant's failure to explore more cost-effective and sustainable options over the past decade.</p> | N                    | <p>The Applicant's WRMP and options appraisal processes have played crucial roles in ensuring the most sustainable and best value solution was selected to address the forecast water supply deficit in Hampshire. Other solutions have been extensively considered but are not available at the scale needed and in the timescales required. The Applicant is already investing significantly in new reservoir developments and related transfers, such as the White Horse Reservoir being delivered by Thames Water, and Havant Thicket Reservoir being delivered by Portsmouth Water and which plays a critical role in the Project by augmenting the volume of water that can be delivered to the Applicant's Otterbourne WSW. Reservoirs can play a key role as part of a wider system including water abstraction, treatment and transfers, but can only perform a limited role on their own, and in any event are needed in addition to the Project. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project and explains how the Project is the only option available to deliver the scale of</p> |

The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Wider community | ALT23      | There were concerns that time has been ' <i>wasted</i> ' on exploring both desalination and water recycling as a solution, arguing they are costly, inefficient, and unsustainable. It was commented that these methods require significant energy, chemicals, and produce carbon emissions, making them environmentally unfriendly. It was viewed that desalination and water recycling should be seen as last-resort options. | N                    | <p>The Applicant's WRMP and options appraisal processes have ensured the most sustainable and best value solution was selected to address the forecast water supply deficit in Hampshire. The Applicant's emerging WRMP24 and the WRSE Regional Plan (which considers water resource planning at a regional level) both include the Project as a crucial part of the strategy to respond to current and future water supply demands. Other solutions have been extensively considered but are not available at the scale needed and in the timescales required.</p> <p>The National Policy Statement for Water Resources Infrastructure notes that infrastructure solutions such as water recycling have the advantage of 'being a constant, reliable source of water and may reduce the amount of water abstracted from the environment'. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project.</p> |

| Wider community | ALT24      | Respondents criticised the rejection of desalination as a solution and suggested that it should be reconsidered as a viable alternative to water recycling. Respondents commented that the advancements in desalination technology, the potential benefits compared to water recycling, and the fact that it is a proven method used in other countries are why desalination should be reconsidered. | N                    | Desalination options have not been progressed at this time as a result of the potential impacts on designated environmental sites in the Solent compared to other options such as water recycling and transfer which have fewer impacts.<br><br>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project.                                               |
| Wider community | ALT25      | It was acknowledged that the Project responds to the rejection of the desalination plan proposed in the Solent in 2021, with around 60% of correspondents preferring water recycling as an alternative.                                                                                                                                                                                              | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                   |
| Wider community | ALT26      | Respondents expressed opposition to the Project and suggested that the Applicant should address water leakage and invest in repairing existing infrastructure. It was noted that reducing leaks would provide a more sustainable solution compared to the Project and should be prioritised over new projects.                                                                                       | N                    | The Applicant has committed to halving leakage by 2050 and has already made progress through its Turnaround Plan, with a 10% reduction in the overall leakage since 2023. Leakage and demand reduction measures remain a key part of the strategy to address Hampshire's water supply deficit, but these can only be part of the overall solution, which also requires a large new water resource to maintain supplies into the future. |
| Wider community | ALT27      | Respondents emphasised the need for urgent action to reduce water wastage and manage demand, suggesting that existing                                                                                                                                                                                                                                                                                | N                    | The Applicant recognises the importance of customer education, water efficiency, and leakage reduction in addressing water                                                                                                                                                                                                                                                                                                              |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | <p>rainfall and water resources are adequate if properly managed. They called for measures such as investing in existing infrastructure maintenance, preventing leaks, and installing water-saving devices in homes and businesses. Additionally, promoting rainwater and greywater harvesting, installing water meters, and educating customers on responsible water usage were highlighted as key.</p> <p>Respondents also advocated for policies such as variable tariffs, water neutrality for new developments, and stricter building regulations. Many suggested that focusing on reducing demand through these measures, rather than costly infrastructure projects, would be a more effective solution to water shortages than the Project.</p> |                      | <p>scarcity. These activities are already under way as part of a wider programme of works. The Applicant has committed to halving leakage by 2050, supported by targeted mains replacement and advanced detection technologies. Leakage and demand reduction measures remain a key part of the strategy to address Hampshire's water supply deficit, but these can only be part of the overall solution, which also requires a large new water resource to maintain supplies into the future.</p> <p>The Applicant also offers water efficiency and wastewater management incentives to developers to promote more sustainable practices in new development. These include encouraging the installation of 'water capture' technologies such as greywater recycling and rainwater harvesting and attenuation.</p> |
| Wider community | ALT28      | <p>Respondents commented that moving water abstraction points closer to tidal limits would be a more sustainable and environmentally friendly solution. This approach was viewed as a way to allow freshwater to remain in rivers for longer and reduce the impact on chalk streams. It was raised that this was a solution wrongly overlooked.</p>                                                                                                                                                                                                                                                                                                                                                                                                     | N                    | <p>Moving abstractions closer to the tidal limit on the River Itchen has been looked at previously but not considered viable because of a number of environmental and feasibility constraints. There could be potentially significant implications on other water company abstractions and infrastructure, lower reaches of the river would still be subject to abstraction reductions, there was a likely impact on migratory fish and complications could arise from tidal effects on</p>                                                                                                                                                                                                                                                                                                                       |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Wider community | ALT30      | Respondents stated that there had been a perceived lack of public consultation on the consideration of alternative solutions. Respondents said that more sustainable and cost-effective solutions had not been adequately investigated. It was suggested that multiple options should be presented and not a singular solution. | N                    | <p>Alternative solutions to address forecast water supply deficits have been extensively considered through the Applicant's WRMP and options appraisal processes, as well as through the wider WRSE Regional Plan. The WRMP and WRSE processes have been subject to statutory consultation and stakeholder engagement over a number of years.</p> <p>These processes assessed a range of potential water resource options at both local and regional scales before identifying the Project as part of the preferred strategy.</p> <p>During a number of Project's pre-application consultation stages, the Applicant has provided information on the consideration of alternatives, both to the Project itself and in relation to component parts of the project, enabling consultees to comment on the approach taken.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the structured process through which alternative options were considered and the reasons for selection of the Project as the preferred solution.</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                      | The Applicant therefore considers that alternative solutions have been appropriately considered and consulted upon through both strategic water resources planning and Project-specific consultation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Wider community | ALT31      | <p>Respondents questioned the environmental impact of releasing reject water into Langstone Harbour and suggested alternative sites to avoid environmental risks. They also questioned the need for long-distance water pumping and proposed recycling water closer to its storage.</p> <p>It was suggested that if water recycling is necessary, Peel Common would be a better location for development. This was argued as a lower-cost and environmentally sound alternative, closer to where the water is needed thus reducing the proposed Pipeline distance to Otterbourne.</p> <p>It was also stated that the Applicant suggested it is not possible to transfer treated wastewater directly to reverse osmosis equipment for drinking water production. Instead, there needs to be a storage facility in between the two sources. The reason given for this was that the</p> | N                    | <p>The Project does not comprise the release of reject water into Langstone Harbour. Reject water produced by the WRP would be released into the Solent using the existing Eastney Long Sea Outfall (LSO) which is over 5km from the shore. No significant environmental effects have been identified in the ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) as a result of the release of reject water from the Eastney LSO.</p> <p>The WRP has been located in proximity to both Budds Farm Water Treatment Works (WTW), where it would draw treated wastewater from, and the new Havant Thicket Reservoir, which would be used to store recycled water, in order to minimise interconnecting pipelines and transfers.</p> <p>Solely utilising Peel Common WTW as a source of treated wastewater for water recycling would not produce the volume of recycled water required and would not offer</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

|                 |            | reverse osmosis systems must continuously run in order for them to function correctly.                                                                                                                                                                                                                                                                                                                                                                                                            |                      | <p>the benefits of being located close to the Eastney LSO and Havant Thicket Reservoir.</p> <p>Direct water recycling, which involves purified recycled water being put directly into the drinking water supply, is not currently used in the UK. Indirect water recycling, which is what this Project proposes, involves the use of an environmental buffer, in this case Havant Thicket Reservoir, to store the water prior to further treatment before being sent into supply.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project.</p> |
| Wider community | ALT32      | <p>Respondents suggested more investigation into other sustainable solutions, such as reservoirs and aquifers.</p> <p>It was stated that the scale of the solution was inappropriate, as it was argued that the assumptions used to forecast future water demand were unrealistic, relying on worst case scenarios for population growth, abstraction reform, and climate change. Additionally, the environmental assessment was criticised for being too high-level to understand the risks.</p> | N                    | <p>The Applicant's WRMP and options appraisal processes have ensured the most sustainable and best value solution was selected to address the forecast water supply deficit in Hampshire. The Applicant's emerging WRMP24 and the WRSE Regional Plan (which considers water resource planning at a regional level) both include the Project as a crucial part of the strategy to respond to current and future water supply demands. Other solutions have been extensively considered but are not available at the scale needed and in the timescales required.</p>                                                                    |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|------------|-------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>The Applicant is already investing significantly in new reservoir developments, such as the White Horse Reservoir being delivered by Thames Water, and Havant Thicket Reservoir being delivered by Portsmouth Water and which plays a critical role in the Project by augmenting the volume of water that can be delivered to the Applicant's Otterbourne WSW. Reservoirs can play a key role as part of a wider system including water abstraction, treatment and transfers, but can only perform a limited role on their own. Using local aquifers for winter storage has previously been considered by the Applicant but carries a number of environmental and feasibility uncertainties and cannot deliver on the scale required.</p> <p>The future water demand is informed by future population growth figures as determined by local authorities' local plans, climate change, and the need to plan for a 1 in 500 year drought event as required by the Water Resources Planning Guidance.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project.</p> |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | ALT33      | The respondent enquired about the incentives for the approach of pumping water across the proposed route and who would bear the cost.                                                                                          | N                    | As with all of the Applicant's costs, funding for new infrastructure would be averaged across water supply customers' bills and would be subject to approval by the water industry regulator, Ofwat.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Wider community | ALT34      | The respondent criticised the Applicant as relying on a single large solution and suggested a phased twin-track approach to water resource development, focusing on sustainable solutions closer to where the water is needed. | N                    | <p>The Applicant's WRMP and options appraisal processes have ensured the most sustainable and best value solution was selected to address the forecast water supply deficit in Hampshire. The Applicant's emerging WRMP24 and the WRSE Regional Plan (which considers water resource planning at a regional level) both include the Project as a crucial part of the strategy to respond to current and future water supply demands. Other solutions have been extensively considered but are not available at the scale needed and in the timescales required.</p> <p>The Applicant's emerging WRMP24 identifies various options alongside the Project to address the future water supply challenges in the Hampshire area, including reducing leaks, helping customers use less water, water transfers and developing groundwater sources. The Project is not the only solution identified by the Applicant to address the future water supply challenges.</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | ALT35      | <p>Respondents stated that the proposed location for the WRP would pierce the fragile membrane and cause potentially catastrophic pollution to both Langstone and Chichester Harbours.</p> <p>Peel Common WTW was suggested as an alternative location for the WRP. Reasons given for this suggestion included that its location was away from the harbour, lower risk from sea level rise, and proximity to where the water is needed. It was also stated that this alternative was a lower-cost and environmentally sound alternative, closer to where the water is needed thus reducing the proposed Pipeline distance to Otterbourne.</p> <p>It was noted that Peel Common WTW could provide at least 15 million litres per day of recycled water therefore reducing energy and carbon costs for construction. In addition, it was stated that if water recycling is to be selected, Ofwat must continue to fund the assessment of the alternative Option B.5 of Peel Common Sewage Treatment Works to Otterbourne. They argued that this option would provide better value and more environmental benefits.</p> |                      | <p>The Applicant has undertaken an extensive site selection process for the WRP site, which was presented at the Summer 2022 Consultation, and a further review of the site selection process was presented at the Summer 2024 Consultation. This site selection process considered a range of technical, environmental and planning criteria, which evaluated a range of sites within a 1.5km search area from Budds Farm WTW. The selected site for the WRP was considered to perform best against these criteria.</p> <p>The review of the site selection process presented at the Summer 2024 Consultation identified a potential site option at the previous IBM site at Langstone Technology Park, however this option did not perform as well as the preferred WRP site as existing buildings would need to be demolished and existing employment development would be lost. The preferred site at Broadmarsh did not have these constraints.</p> <p>The Applicant's Peel Common WTW is not a suitable location for the WRP since Peel Common WTW does not have the necessary quantity of treated wastewater required for a 60 million litres per day WRP, hence why it is required to be in close proximity to Budds</p> |

|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | Concerns were also raised about the proposed location of site 72 and the risk of gas emission from the landfill contents. The 'old IBM' site was suggested as an alternative site. |                      | <p>Farm WTW. Locating the WRP at Peel Common WTW would also place it a considerable distance from Havant Thicket Reservoir, increasing the length and costs of interconnecting pipelines. The Applicant considered an option that utilises treated wastewater from Peel Common WTW and Budds Farm WTW (Option B.5), however this option was not progressed as the Project offered greater resilience by using Havant Thicket Reservoir and remains better value with less impacts.</p> <p>The construction methods used to construct the WRP site and associated pipelines would seek to avoid mobilising potential contaminants at the historic landfill site. The design of the WRP within the site has also sought to reduce disturbance to the landfill. An assessment of the potential for impacts as a result of construction of the WRP site are set out in ES Chapter 11 Land quality and ground conditions (Document reference 6.1, DCO Volume 6). This also sets out the mitigation measures that would be implemented during the construction phase, which are secured in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p> |

**Table F29-4 Summary of issues raised on the theme of attitudes to water recycling and the Applicant's response**

| Consultee                                                       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                     |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Rowlands Castle Parish Council                                  | WRA01      | Rowlands Castle Parish Council stated that while the water produced through the recycling process would be fit to drink, the Project risks turning people away from tap water due to a reported lack of trust in water companies. The respondent stated that there would be an increase in the use of bottled water therefore resulting in increased plastic waste. | N                    | <p>Water recycling is a well-established and internationally proven technology, successfully implemented in countries such as the United States, Australia and Singapore. In the UK, water recycling can be delivered safely, with robust regulatory requirements that need to be demonstrated by water companies before recycled water can be put into supply, as confirmed by the Drinking Water Inspectorate (DWI).</p> <p>Water supplied to the public would meet these high safety and quality standards; notably being subject to rigorous regulatory oversight, including comprehensive risk assessment, advanced multi-barrier treatment processes, and continuous monitoring to ensure compliance with the Water Supply (Water Quality) Regulations 2016.</p> <p>The Applicant recognises that public perception and trust are essential and is committed to ongoing engagement to communicate how effective water recycling technology is in producing wholesome drinking water.</p> <p>With these measures, the public can have confidence in the safety and reliability of the</p> |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|--------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                  |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                      | Alongside the introduction of water recycling, significant investment continues in resource management and leakage reduction, with ambitious targets to halve leakage by 2050. The Applicant's network is big and complex (almost 14,000km of water mains), which makes finding and fixing leaks challenging. It is not technically feasible, nor cost-beneficial to the Applicant's customers, to fix all leaks as some leaks are small and very difficult to detect. If the Applicant could fix all leaks and maintain a zero-leakage level across Hampshire, this would contribute about a quarter of the 90 million litres of water a day that the Project could supply. |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Wider community                                  | WRA03      | <p>Respondents objected to the idea of recycled water as drinking water with some respondents stating that they '<i>object totally to using recycled water for human consumption.</i>'</p> <p>Concerns were raised about perceived health risks, the impact on animals and pets, whether there is potential for contamination – especially in the event of equipment failure, and the sustainability of water recycling. There was a strong preference for non-recycled water, and there was a belief that recipients of the</p> | N                    | Using recycled water as a sustainable and resilient solution to diversify source water supply is a well-established method currently deployed in several geographies such as Australia, the USA and Singapore. Reverse osmosis membranes are well documented to be a robust barrier against pathogens and chemical constituents. Reverse osmosis is used in desalination processes around various parts of the world where water is scarce. Any recycled water supplied to increase source water supply for drinking would meet the highest safety and quality                                                                                                               |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>new water would be '<i>drinking recycled sewage</i>.'</p> <p>Respondents emphasised distrust in water companies and expressed concerns about the perceived unproven nature of the proposed water recycling technology, particularly reverse osmosis, which they stated has not been used at scale in the UK. It was raised that 48% of respondents rejected water recycling in 2022.</p> <p>Respondents asked the Applicant to address public health concerns transparently before moving forward with the Project.</p> <p>Respondents claimed that the illustration on pages 9 and 17 of the Applicant's Consultation brochure was misleading because it did not state that recycled water would be supplied to Portsmouth Water's customers during droughts and emergencies, with more routine supply expected after 2040. More detail was requested regarding Portsmouth Water's pipelines.</p> <p>It was suggested that, if the Project is to be implemented, Portsmouth Water should be funded by Ofwat to engage with customers</p> |                      | <p>standards, with comprehensive risk assessment, advanced treatment, and continuous monitoring in place. The Applicant recognises the importance of public confidence and is committed to transparent engagement to address any perception of health concerns (to all water consumers, including pets) and explain the safeguards in place to ensure standards are maintained.</p> <p>The figure referred to on pages 9 and 17 of the Summer 2024 Consultation brochure (Appendix F.2) demonstrated how the Project would operate by recycling treated wastewater, storing this in Havant Thicket Reservoir and transferring it to Otterbourne WSW for treatment and onward supply to the Applicant's customers.</p> <p>Further detail on Portsmouth Water's pipeline proposals was provided in the Summer 2024 Consultation brochure (see page 38). At the time of consultation, the preferred option was to install two pipelines between the water recycling plant and Bedhampton Springs, connecting into the pipelines proposed by Portsmouth Water between Bedhampton Springs and Havant Thicket Reservoir. Portsmouth Water's two pipelines between Bedhampton Springs and the Havant Thicket Reservoir were proposed to be located in two</p> |

|-----------|------------|------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | and address concerns regarding water recycling and Havant Thicket Reservoir. |                      | <p>separate microtunnels, and Portsmouth Water was in the process of applying for planning permission for these pipelines. Approval was granted for Portsmouth Water's application in 2025. As such, the Applicant's "backup option" (also outlined on page 38 of the Summer 2024 Consultation brochure) was not progressed any further.</p> <p>Water supplied to Portsmouth Water customers from Havant Thicket Reservoir is only anticipated through a bulk supply agreement established between the Applicant and Portsmouth Water whereby water supplied to the Applicant via PW's potable water network during drought conditions could be replaced into Portsmouth Water's network through abstraction from Havant Thicket Reservoir. This agreement does not form part of the operation of the Project and it was therefore not indicated on the figure.</p> <p>With regards to engagement with customers, Portsmouth Water already communicates regularly with local communities about the progress of the Havant Thicket Reservoir Project and will continue to do so, including in relation to any future change of source for its customers.</p> |

| Wider community | WRA04      | There was some support for water recycling, on the condition that safety and sustainability formed part of the process. It was suggested that the Applicant should focus recycling efforts on non-potable uses, such as washing, rather than drinking water. A further respondent questioned whether Portsmouth Water's customers need to be supplied with recycled water as it was suggested that there is enough supply of aquifer water. | N                    | <p>The Applicant acknowledges that some respondents support water recycling, provided safety and sustainability are prioritised. Safety is central to the Project, with robust regulatory oversight, advanced multi-barrier treatment, and continuous monitoring to ensure all water supplied meets the highest standards.</p> <p>Sustainability is also a key consideration. Water recycling is less energy-intensive than alternatives that provide a comparable scale of water supply, such as desalination, and was determined as the best value solution as part of the Applicant's Water Resources Management Plan (WRMP) and options appraisal processes.</p> <p>Non-potable uses of water recycling would not address the projected water supply shortfall in Hampshire. As such, the Project represents a strategic solution to secure resilient water supplies for the long term, taking into account abstraction licence reductions, climate change and a rising population.</p> <p>If the Project is approved, Portsmouth Water's customers would only receive water from Havant Thicket Reservoir following a prolonged dry weather event, or in an emergency situation – when other sources of</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                      | <p>supply are not available. It's important to note that the company is facing abstraction licence reductions on its own river and groundwater sources.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project and explains how the Project is the only option available to deliver the scale of water resource required in the timescales needed.</p>                                                                                 |
| Wider community | WRA05      | <p>Respondents expressed support for water recycling.</p> <p>Its importance in reducing waste and spills by purifying and returning surplus water was highlighted. As was the importance of reusing water, comparing it to other recycling initiatives for materials like cardboard and cans.</p> <p>The proven track record of water recycling technology, used by the Royal Navy for decades, was referenced. The significant environmental benefits the Project would bring to the River Test and River Itchen was emphasised.</p> | N                    | <p>The Applicant welcomes the support for water recycling and the recognition of its role in making the best use of available resources. Drinking water is a valuable resource, and the projected shortfall in Hampshire means that a strategic approach is required to secure resilient supplies for the future. Reducing abstractions from the River Test and River Itchen, two of the world's rare and sensitive chalk streams, is a key objective of the Project, and water recycling is central to achieving this aim.</p> |
| Wider community | WRA06      | It was suggested that the Applicant should not treat wastewater for drinking water but                                                                                                                                                                                                                                                                                                                                                                                                                                                | N                    | While the Applicant recognises the interest in using treated wastewater for industrial,                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | <p>treat wastewater and release the solids as fertiliser. Treated wastewater was viewed as useful for industrial, agricultural, and commercial purposes but not suitable for drinking.</p> <p>It was also suggested that the Applicant should allow people to choose whether to pay more for non-recycled drinkable water.</p> |                      | <p>agricultural, or commercial purposes, and in the potential for resource recovery, such as fertiliser, this approach is already adopted at the Budds Farm Wastewater Treatment Plant (WTW), where Budds Farm WTW not only treats its sludge for land application but also processes sludge from other sites. The Project recycles the high-quality treated effluent that is currently released into the sea to help address Hampshire's significant shortfall in water supply. The scale of the challenge requires a strategic solution that can provide safe, reliable drinking water for the region.</p> <p>The proposed approach of allowing customers to opt out of recycled water and pay more for non-recycled water is not practical. The Otterbourne Water Supply Works (WSW), which serves as the source of drinking water for a very large area, supplies water to all customers in the network, making it impossible to differentiate between sources at the point of use. The Project is designed to ensure that all water supplied meets strict regulatory standards for drinking water quality, regardless of its source.</p> |
| Wider community | WRA07      | Respondents raised concerns about the taste of recycled water, arguing it would differ from the taste of the natural spring                                                                                                                                                                                                    | N                    | The Applicant acknowledges concerns regarding the potential for changes in the taste of drinking water following the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

|           |            | <p>water currently supplied. It was suggested that the spring water source should be protected and felt that the consultation did not adequately address these concerns. It was noted that the treated water, perceived to contain more chemicals and added chlorine, could negatively affect the taste.</p> <p>There was concern that the Applicant does not plan to remineralise the recycled water to match the calcareous composition of the spring water, which respondents viewed could affect both the taste and acceptability of the water.</p> <p>It was questioned how the Applicant would comply with drinking water quality standards, particularly those related to taste and odour.</p> |                      | <p>introduction of recycled water. Any change of source can result in slight variations in taste, which is common across the UK whenever water sources are blended or changed. Spring water stored in an open reservoir can taste and smell different from water taken directly from underground. This is because rainwater and natural elements like wildlife mix with the spring water over time. Rainwater has very few minerals, so when it blends with spring water, it makes the water less “chalky,” which changes its taste.</p> <p>Under the proposed scheme, recycled water would be remineralised but not chlorinated prior to blending with spring water in the transfer pipe feeding Havant Thicket Reservoir. The blended water would then be treated at the Otterbourne WSW to ensure it meets all drinking water standards.</p> <p>The DWI sets strict regulatory requirements for taste and odour, and these would be fully adhered to when the Project is in operation. As outlined by the DWI, water companies must ensure that water supplied to consumers is “wholesome and palatable,” and any changes in source must not result in water that is unacceptable in taste or odour. A communication campaign would be developed to proactively notify customers of a</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      | change in source water and information about the safety of their water supply would also be included to ensure customers are engaged in the process of switching sources nearer the time. The plan that the Applicant would put in place would include a gradual change in water sources to mitigate any risk with perceived water taste and feel.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Wider community | WRA08      | Respondents opposed the Project because they claimed it could turn people away from tap water. It was commented that this would be due to the lack of trust in water companies and therefore a lack of confidence in the safety of the water, as well as change in taste, leading to increased use of bottled water and plastic waste. It was claimed that the use of water recycling in California and Singapore led to increased bottled water consumption. Environmental and economic impacts of this perceived shift were emphasised. | N                    | It is not anticipated that water recycling would significantly reduce customers' use of tap water and subsequently increase their purchase of bottled water. Water recycling is a well-established and internationally proven technology. In the UK, it would only be introduced under strict regulatory requirements set by both the Environment Agency (EA), for release into the environment (Havant Thicket Reservoir and from the DWI (from Otterbourne Water Supply Works). The Applicant recognises that public trust is essential and is committed to ongoing engagement to explain how water recycling produces safe and wholesome drinking water (see WRA01 for further details). Claims that water recycling in Singapore or California caused higher bottled water consumption are unsupported by current data. Where high bottled water use exists (e.g., Singapore), leading analyses such as the United Nations |

|                 |            |                                                                                                                                                                                                                                                                                                                                                           |                      | University/Straits Times coverage on bottled water consumption and drivers and the California Association of Sanitation Agencies overview of potable reuse, point to market and lifestyle factors, not to the safety or presence of recycled water supplies.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Wider community | WRA09      | It was referenced that the International Bottled Water Association (IBWA) states bottled water often comes from public sources and undergoes additional treatment to meet 'FDA' standards. Concerns were raised about whether treated tap water, particularly recycled water, would need similar further treatment to be deemed as safe as bottled water. |                      | All water supplied to the public must meet strict drinking water quality standards set by the Drinking Water Inspectorate (DWI), regardless of its source or treatment process. This means that, like bottled water, tap water - including recycled water - undergoes rigorous treatment and monitoring to ensure its safety and quality. In the case of the Project, recycled water would be treated to drinking water standards at Otterbourne WSW, having already undergone advanced treatment at Budds Farm Wastewater Treatment Works (WTW) and the new Water Recycling Plant (WRP). The regulatory framework ensures that all water entering the public supply is safe, wholesome, and suitable for drinking, in line with DWI requirements. |
| Wider community | WRA10      | The question was raised about the measures the Applicant would take to address people refusing to drink the tap                                                                                                                                                                                                                                           | N                    | It is not anticipated that water recycling would significantly reduce customers' use of tap water and subsequently increase their purchase of bottled water. Water recycling is a well-established and internationally proven                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|                               |            |                                                                                                                                            |                      | Environmental Impact Assessment (EIA) – no likely significant effects have been identified in relation to carbon emissions from the operation of the water recycling plant, which would include the use of treatment chemicals and membranes. Further information on the carbon assessment can be found in ES Chapter 10 Carbon and climate change, Volume I (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Winchester City Council (WCC) | WRPR02     | Winchester City Council (WCC) wanted to understand the processes in place to prevent harmful water from entering Havant Thicket Reservoir. | N                    | The water recycling process would be subject to appropriate measures and controls, including continuous monitoring, to ensure compliance with regulations and standards set out and enforced by the Environment Agency (EA). The Water Recycling Plant (WRP) would feature numerous safeguards so that significant deviations in water quality are quickly spotted and rectified through partial or full system shutdowns, and in the unlikely event it does not meet the required standards, water would be automatically diverted to the Long Sea (LSO) Outfall. It would not be possible for treated wastewater to bypass this process and enter Havant Thicket Reservoir. These safeguards would be implemented by the Contractor once appointed to construct and operate the WRP and would be a key specification for the plant |

| Rowlands Castle Parish Council | WRPR03     | Rowlands Castle Parish Council expressed concerns about outbreaks of illness among the human population resulting in pathogens entering the system, and whether the membranes used to filter the water would fail to remove such pathogens and let them enter Havant Thicket Reservoir, leading to <i>'unpredictable adverse consequences.'</i> | N                    | <p>The advanced treatment process uses several layers of protection, these include advanced filtration, reverse osmosis, and disinfection steps such as ultraviolet light and oxidation. Each stage is designed to remove or inactivate pathogens.</p> <p>The multi-stage water recycling process would feature numerous safeguards, including continuous monitoring of water quality and system performance using real-time sensors and automated controls, to ensure that in the unlikely event of a significant deviation in expected water quality occurs, these can be quickly spotted and rectified through partial or full system shutdowns. It would not be possible for treated wastewater to bypass this process and enter Havant Thicket Reservoir. These safeguards would be implemented by the Contractor once appointed to construct and operate the WRP and would be a key specification for the plant to ensure water quality requirements would be met</p> <p>Water recycling is a well-established and internationally proven technology, successfully implemented in countries such</p> |

|-------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                             |            | It was also stated that there was little information about the extent of new works to be undertaken below the Mean High-Water Springs (MHWS). |                      | <p>With regards to new works to be undertaken below the MHWS, It would be necessary to construct a new outfall on the West bank of the tidal Hermitage Stream to release treated surface water from the WRP drainage system. The Sustainable Drainage System (SuDS) outfall would consist of a concrete lined channel running from an attenuation basin within the WRP site to a concrete headwall structure that would release into the Hermitage Stream.</p> <p>The assessment presented in ES Chapter 19 Water environment Volume I (Document reference 6.1, DCO Volume 6) demonstrates that the construction and operation of the new outfall would not adversely affect water quality or the geomorphology of the tidal Hermitage Stream. Furthermore, water quality modelling presented in ES Appendix 19.12 Water Recycling Plant Sustainable Drainage System dispersion modelling, Volume II (Document Reference 6.2, DCO Volume 6) demonstrates that any changes to salinity and water quality resulting from a new release of fresh water would not result in significant adverse impacts on Hermitage Stream.</p> |

| PILs      | WRPR05     | The respondent raised the perceived inability to remove certain hormones through filtration and osmosis and ultraviolet processes, and the general cost-effectiveness. | N                    | <p>The water recycling process is not an absolute barrier to hormones, pharmaceuticals and “forever chemicals”, so some trace amounts may be found in the recycled water produced as they would in other drinking water sources, such as rivers.</p> <p>The WRP treatment, which utilises reverse osmosis, ultraviolet advanced oxidation and granular activated carbon, is more effective at removing these contaminants than conventional water or sewage treatment processes.</p> <p>Additionally, the Applicant has conducted extensive testing through its water recycling pilot plant with experts from the University of Brighton. Testing has included analysis of pharmaceuticals and personal care products, pesticides, trace organic contaminants (including forever chemicals), and volatile organic compounds. Data from the Applicant's pilot plant trials has shown that the purified recycled water produced would provide a safe and sustainable source of supply that, following further treatment to drinking water standards, would continue to meet the strict water quality standards required by the DWI.</p> |

|           |            | <p>questioned. As was the reliability of the system, with fears that the Applicant would fail to maintain it properly.</p> <p>Concerns were raised about whether there would be higher concentrations of '<i>recycled sewage</i>' during dry seasons due to a '<i>lack of spring water to mix it with.</i>'</p> <p>Concerns were raised about the risk of pollution from the recycling plant and the disposal of toxic waste. The need for monitoring and maintenance was raised as a concern, and how this would impact customers financially. It was also argued that water recycling would not address the issue of effluent releases into the environment.</p> <p>It was stated that the technology was '<i>untested</i>' in the UK and multiple respondents queried what contingency plans would be in place to ensure non mechanical failure of processing the water.</p> <p>Respondents also suggested exploring other alternatives perceived to be safer and less controversial.</p> |                      | <p>The WRP treatment, which utilises reverse osmosis, ultraviolet advanced oxidation and granular activated carbon, is more effective at removing these contaminants than conventional water or sewage treatment processes.</p> <p>Additionally, the Applicant has conducted extensive testing through its water recycling pilot plant with experts from the University of Brighton. Testing has included analysis of pharmaceuticals and personal care products, pesticides, trace organic contaminants (including forever chemicals), and volatile organic compounds. Data from the Applicant's pilot plant trials has shown that the purified recycled water produced would provide a safe and sustainable source of supply that, following further treatment to drinking water standards, would continue to meet the strict water quality standards required by the DWI.</p> <p>Havant Thicket Reservoir is proposed to be filled with excess spring water during the winter months. Outside of the winter period, recycled water would become the predominate source of water used to fill the reservoir and therefore the proportion of recycled water in the reservoir would increase. The water quality modelling and</p> |

|           |            |                         |                      | <p>assessments undertaken do not show any adverse impacts arising as a result of this given that the recycled water would achieve the necessary water quality standards. The release of recycled water into the reservoir would be monitored in accordance with regulations and standards set out and enforced by the EA. Further information can be found in ES Chapter 19 Water environment Volume I (Document reference 6.1, DCO Volume 6).</p> <p>The multi-stage water recycling process would feature numerous safeguards, including continuous monitoring of water quality and system performance using real-time sensors and automated controls, to ensure that in the unlikely event of a significant deviation in expected water quality occurs, these can be quickly spotted and rectified through partial or full system shutdowns. It would not be possible for treated wastewater to bypass this process and enter Havant Thicket Reservoir. These safeguards would be implemented by the Contractor once appointed to construct and operate the WRP and would be a key specification for the plant to ensure water quality requirements would be met. Toxic waste would not be generated by the water recycling process, noting that it uses the</p> |

|           |            |                         |                      | <p>has included input from specialists who have worked on or collaborated with others on these well-established international schemes, ensuring that best practice has been embedded throughout the design and development of the Project. In the UK, the DWI has confirmed that water recycling can be delivered safely, outlining the robust regulatory requirements that water companies must demonstrate before recycled water can be put into supply.</p> <p>Water supplied to the public would continue to meet these high safety and quality standards; notably being subject to rigorous regulatory oversight, including comprehensive risk assessment, advanced multi-barrier treatment processes, and continuous monitoring to ensure compliance with The Water Supply (Water Quality) Regulations 2016.</p> <p>Alternative solutions to addressing the water supply challenge facing the Applicant have been extensively considered through the Applicant's WRMP and options appraisal processes, however, there are no options available capable of providing the scale of water resource needed and in the timescales required.</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | WRPR07     | <p>Respondents suggested exploring alternative water purification technologies, such as membrane filtration or UV disinfection, which they stated could have a smaller environmental impact.</p> <p>It was also suggested that the Applicant invest in decentralised, smaller-scale treatment plants closer to usage points, as to reduce energy use and environmental footprint.</p> <p>It was recommended that the final product of the water recycling process is stored locally for testing, particularly for hormones and contaminants such as PFAS, to give reassurance on the method's validity.</p> <p>Regular monitoring and publication of results was requested, including faecal bacteria and nano plastics, and it was suggested that the Applicant consult experts on nano plastic research before proceeding.</p> | N                    | <p>The Project was selected as the preferred solution from an extensive options appraisal process which considered a number of alternative options against a range of criteria, including environmental impact and cost. Water recycling is less energy-intensive than alternatives that provide a comparable scale of water supply, such as desalination, and was determined as the best value solution through both the WRSE and the Applicant's emerging WRMP24.</p> <p>The treatment proposed at the WRP is not an absolute barrier to hormones, pharmaceuticals and "forever chemicals", so some trace amounts may be found in the recycled water produced as they would in other drinking water sources, such as rivers.</p> <p>The WRP treatment, which utilises reverse osmosis, ultraviolet advanced oxidation and granular activated carbon, is in more effective at removing these contaminants than conventional water or sewage treatment processes.</p> <p>Additionally, the Applicant has conducted extensive testing through its water recycling pilot plant with experts from the University of Brighton. Testing has included analysis of pharmaceuticals and personal care products, pesticides, trace organic contaminants</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                    |                      | <p>(including forever chemicals), and volatile organic compounds. Data from the Applicant's pilot plant trials has shown that the purified recycled water produced would provide a safe and sustainable source of supply that, following further treatment to drinking water standards, would continue to meet the strict water quality standards required by the DWI.</p> <p>Compounds with an Environmental Quality Standard (EQS) - which include PFAS and other emerging compounds proposed by the EA - would be tested and reported on as part of the Applicant's discharge permit. These tests would be conducted at the WRP prior to discharging into Havant Thicket Reservoir.</p> <p>Nanoplastics are generally the same size as bacterial and some viruses, and these are known to be removed by RO membranes which form part of the multi-barrier treatment technology proposed for the WRP.</p> |
| Wider community | WRPR08     | <p>It was highlighted that in drought-stricken areas using water recycling, there are stringent controls in place over what is released into the sewer, especially by local industries.</p> <p>It was also noted that water treatment relies on a series of advanced processes</p> | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | to treat various types of water, and while highly contaminated water like landfill leachate can be purified into drinking water, the typical practice is to treat secondary or tertiary effluent water, which is already safe for environmental release. It was further noted that treated water from rivers, such as the Thames, is often used downstream for drinking water after passing through multiple treatment works.                                               |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Wider community | WRPR09     | <p>A respondent requested that if water recycling is impossible to avoid then could it be released into underground aquifers. The respondent also requested that if the water does go through the reverse osmosis process, if it could be pumped out to sea.</p> <p>It was suggested that the recycled water could be better used by releasing it after treatment into the sea, where reductions in bacteria, viruses, and chemicals could have environmental benefits.</p> | N                    | <p>The Applicant has considered aquifer storage and recovery through its emerging WRMP24, but this can only provide limited benefit for the Hampshire area, recognising that this requires specific geological conditions, requires extensive testing and carries a number of environmental and feasibility uncertainties. Pumping the recycled water into the sea would not provide the new sustainable water source needed to address the water supply deficit facing Hampshire.</p> <p>Reject water from the WRP would be combined with the existing Budds Farm WTW treated effluent and released via the existing Eastney LSO, which means that it would not therefore increase the burden on Budds Farm WTW. The release of reject water from the WRP would require a new Environmental Permit as per the ES Chapter 19 Water</p> |

|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                                   |                      | <p>All water supplied to customers, regardless of its source, would continue to meet the highest standards for safety, taste, and quality, as required by the DWI. The Applicant remains committed to transparency, rigorous monitoring, and full compliance with all relevant regulations throughout the development and operation of the Project.</p> <p>The Applicant has considered aquifer storage and recovery through its emerging WRMP24, but this can only provide limited benefit for the Hampshire area, recognising that this requires specific geological conditions, requires extensive testing and carries a number of environmental and feasibility uncertainties</p> |
| Wider community | WRPR12     | <p>Concerns were raised over reject water being released into the Solent, citing potential environmental harm.</p> <p>There was concern that the Project could increase the burden on Budds Farm WTW, potentially leading to '<i>untreated sewage</i>' being released into Langstone Harbour.</p> | N                    | <p>Water quality modelling of the potential changes in discharges of currently consented parameters and salinity (i.e. calculated change between the existing release and the release combined with the WRP reject water) at the Eastney SO has been completed, and the results are presented in ES Appendix 19.5 Eastney Long Sea Outfall Solent dispersion modelling, Volume II (Document reference 6.2, DCO Volume 6). The model output demonstrates that the changes are insignificant and therefore there would be no change to the existing effect the Eastney LSO</p>                                                                                                          |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                              |                      | <p>has on the Solent and adjoining water bodies such as Langstone Harbour.</p> <p>Reject water from the WRP would be combined with the existing Budds Farm WTW highly treated waste water and released via the existing Eastney LSO, downstream of Budds Farm WTW treatment processes, which means that it would not therefore increase the burden on Budds Farm WTW. The release of reject water from the WRP would require a new Environmental Permit as per the ES Chapter 19 Water environment Volume I (Document reference 6.1, DCO Volume 6).</p>                                                                                                             |
| Wider community | WRPR13     | Concerns were raised over whether 'combining Pipelines and storage' would risk polluting the clean water supply, and what safety systems would be in place to address this and other issues. | N                    | <p>The feedback is not clear whether 'clean water supply' means drinking water or Spring water. However, combining the source water pipeline from the Springs and the recycled water pipeline has been designed with the necessary backflow prevention equipment, in concert with Portsmouth Water, to protect the Spring sources. There are also control systems that include water quality instrumentation and automatic control valves in place to ensure the water quality parameters from both the water recycling plant and the Spring sources are available by Portsmouth Water and the Applicant to help protect the water quality being transferred to</p> |

|           |            |                         |                      | <p>risk assessment, advanced multi-barrier treatment processes, and continuous monitoring to ensure compliance with The Water Supply (Water Quality) Regulations 2016.</p> <p>The Applicant has adopted a globally acceptable process to produce high quality recycled water. The full-advanced treatment process, comprising an integrated membrane component and advanced oxidation with ultraviolet disinfection complete with granular activated carbon and remineralisation, is comparable to the part of the desalination treatment process used to remove salts and other chemical and biological contaminants from source water. This means that the selected process is reliable and has been in operation for over 40 years in the USA and several years in the Middle East and Australia. To protect the water quality transferred to Havant Thicket Reservoir, several critical control points would be applied at the water recycling plant and daily membrane integrity testing regime would be adopted.</p> <p>The multi-stage water recycling process would feature numerous safeguards, including continuous monitoring, to ensure that in the unlikely event of a significant</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      | deviation in expected water quality can be rectified through partial or full system shutdowns. It would not be possible for treated wastewater to bypass this process and enter Havant Thicket Reservoir. These safeguards would be implemented by the Contractor once appointed to construct and operate the WRP and would be a key specification for the plant to ensure water quality requirements would be met. The Applicant would select experienced process contractors and leverage independent expert advice to ensure the testing protocols are rigorous. The release of recycled water into HTR would be monitored in accordance with regulations and standards set out and enforced by the EA. |
| Wider community | WRPR15     | <p>It was asked whether, in line with the work on the Eastney LSO, the plan to install a double-lined pipe to switch outfall usage during storms would be completed. It was viewed that this would prevent combined sewer overflows (CSOs) from discharging into the sensitive area at the top of the harbour.</p> <p>It was also questioned why reject water is to be pumped via the Eastney LSO and not directly into the Havant Thicket Reservoir.</p> | N                    | <p>The Project only proposes the use of the Eastney LSO to release reject water from the water recycling process, alongside the highly treated effluent from Budds Farm WTW. Unrelated to the Project, the Applicant is separately progressing other projects to address CSO spills from Budds Farm WTW.</p> <p>The Eastney LSO is proposed for release of the reject stream from the WRP as it provides suitable dispersion of reject water.</p>                                                                                                                                                                                                                                                          |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                       |
|-----------|------------|-------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | Havant Thicket Reservoir is not suitable for release of reject water to, as it would supply source water that would be transferred to Otterbourne WSW to be treated for drinking water supply. |

**Table F29-6 Summary of issues raised on the theme of the location of the Water Recycling Plant (WRP) and the Applicant's response**

| Langstone Harbour Board | LWRP04     | Langstone Harbour Board acknowledged that site 72 is a former council landfill located adjacent to Langstone Harbour. | N                    | <p>The construction methods used to construct the WRP site and associated pipelines would seek to avoid mobilising potential contaminants at the historic landfill site. The design of the WRP within the site has also sought to reduce disturbance to the landfill. An assessment of the potential for impacts as a result of construction of the WRP site is set out in ES Chapter 11 Land quality and ground conditions (Document reference 6.1, DCO Volume 6). This also sets out the mitigation measures that would be implemented during the construction phase, which are secured in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p> <p>This approach has, in principle, been agreed with the EA and NE. HBC agrees, in principle, with the proposed approach pending review of the environmental measures secured in the Outline Construction Environmental Management Plan (Document reference 7.1,</p> |

|--------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HBC                                              | LWRP06     | HBC noted the consultation documents had advanced the Council's understanding of the underlying considerations for selecting Site 72 for the WRP, but noted that several material details were either not stated, unclear, or deferred.                                                                                                                                                                                                                | N                    | The Applicant has engaged with HBC to explain the site selection process for the WRP. This site selection process considered a range of technical, environmental and planning criteria, which evaluated a range of sites within a 1.5km search area from Budds Farm WTW. The selected site for the WRP was considered to perform best against these criteria. This process is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5) and was reported on in the Scheme Development Summary documents that formed part of the Summer 2022 Consultation and the Summer 2024 Consultation, as well as in the reporting for RAPID Gate 2. |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Wider community                                  | LWRP07     | <p>Respondents noted that the proposed location for the WRP would be 40km from Otterbourne Water Supply Works (WSW) and therefore suggested that other sites for the WRP which were closer to the supply works should be considered.</p> <p>Respondents added that they did not wish to live near a WRP and that other locations should be considered.</p> <p>It was questioned why the WRP is sited far from the area that requires the water. It</p> | N                    | The Project utilises the Budds Farm WTW in Havant as this is one of the Applicant's largest wastewater treatment works and therefore has the greatest capacity for supplying the fully treated wastewater required for a WRP producing up to 60 million litres per day of recycled water. Locating the WRP as close as possible to Budds Farm WTW minimises the length of interconnecting pipelines between the two facilities and associated costs, energy and carbon emissions from pumping water over greater                                                                                                                                                |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | was also questioned whether the proposed WRP was regarded as a standalone project, similar to Havant Thicket Reservoir, which 'does not require a Pipeline transfer to Otterbourne.'                                                                                             |                      | <p>distances. The WRP site's proximity to Havant Thicket Reservoir, which is required as an environmental buffer for storing the recycled water, also makes it a preferred choice, again by minimising pipeline lengths.</p> <p>Havant Thicket Reservoir would always require a pipeline to Otterbourne WSW, regardless of whether the WRP is part of the Project. The WRP is essential to augmenting the benefit of Havant Thicket Reservoir and delivering the scale of water resource required.</p>                                                                                                                                                      |
| Wider community | LWRP08     | A respondent suggested that independent experts would need to determine the 'optimum solution.' The Broadmarsh site was also suggested as an alternative and a further respondent stated that there had been a perceived lack of public consultation on the location of the WRP. | N                    | <p>The Applicant has undertaken an extensive site selection process for the WRP site, which was presented at the Summer 2022 Consultation, and a further review of the site selection process was presented at the Summer 2024 Consultation. This site selection process considered a range of technical, environmental and planning criteria, which evaluated a range of sites within a 1.5km search area from Budds Farm WTW. The selected site for the WRP was considered to perform best against these criteria.</p> <p>The site selection process was undertaken by qualified subject matter experts and has received support from the Applicant's</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                      | <p>regulators as part of progressing the Project through the RAPID regulatory process.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate the WRP site.</p>                                                                                                               |
| Wider community | LWRP09     | <p>Respondents noted the suitability of the proposed location for the WRP at Harts Farm Way and noted that the ground is not suitable for housing or playing fields, making it a well-placed site.</p> <p>It was also noted that the location of the WRP is ideal for pipework and residents, being next to a motorway and unlikely to be used for other purposes. In addition, a respondent stated that positioning the location of the proposed WRP was sensible as it aligns with Havant Thicket Reservoir at Havant Thicket and the pipe to Otterbourne.</p> | N                    | The Applicant has noted this comment. The site selection process for the WRP site considered a range of technical, environmental and planning criteria to identify the best performing site.                                                                                                                                                                |
| Wider community | LWRP10     | Respondents raised concerns about Site 72's potential impact on Langstone Harbour, the Solent, Site of Special Scientific Interest (SSSI), SPA, and the Ramsar site. It was outlined that construction and tunnelling on the site could expose toxic waste and cause pollution. Some respondents also raised                                                                                                                                                                                                                                                     | N                    | The construction methods used to construct the WRP site and associated pipelines would seek to reduce impacts on the environmental sites within Langstone Harbour and avoid mobilising potential contaminants. The design and location of the WRP within the site has also sought to reduce disturbance to the landfill. An assessment of the potential for |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>concerns about the potential visual impact of the WRP.</p> <p>A respondent noted that the WRP and multiple tanks would be up to 13m high (42ft). The site for the WRP would be on a landfill mound which already rises a significant height above sea level. It was also added that the northern aspect of Langstone Harbour is dominated by Farlington Marshes and the Broadmarsh Coastal Park giving a fairly rural aspect to views.</p> <p>Concerns were also raised regarding the High Lift Pumping Station which would be a significant structure given the energy needed to lift at least 30 megalitres per day (Ml/d) per of fluid from sea level to an 85m head at Portsdown Hill. In times of drought, that volume would triple to 90 million litres day. With the additional pumping infrastructure needed, there would be a significant site-wide requirement for piling through the landfill to the underlying chalk bed.</p> |                      | <p>impacts as a result of construction of the WRP site is set out in ES Chapter 11 Land quality and ground conditions (Document reference 6.1, DCO Volume 6) and ES Chapter 8 Terrestrial biodiversity (Document reference 6.1, DCO Volume 6). These chapters of the ES also set out the mitigation measures that would be implemented during the construction phase, which are secured in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p> <p>ES Chapter 13 Landscape and visual (Document reference 6.1, DCO Volume 6) considers the impact that the WRP site would have on views and landscape character. The Design Principles Document (Document reference 5.11, DCO Volume 5) sets out the measures that would control the detailed design of the WRP site to ensure visual impacts are reduced. This includes committing to a green or brown roof and ensuring the building and material finishes respect the local character of the area. The site previously had planning permission for warehousing which would have been at a larger scale than the proposed WRP.</p> |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | LWRP1 1    | The respondent said that they ' <i>welcomed</i> ' the proposed siting of the WRP at Site 72 and the proposed High Lift Pumping Station close to Budds Farm WTW. They added that the proposed locations are situated in a semi-urban area of relatively ' <i>low environmental value</i> '. | N                    | The Applicant has noted this comment. The site selection process for the WRP site considered a range of technical, environmental and planning criteria to identify the best performing site.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Wider community | LWRP1 2    | Respondents stated that building on contaminated land posed multiple risks including that the land is reportedly still ' <i>settling</i> ' and that using deep tunnel shafts on the contaminated landfill site also posed a risk.                                                          | N                    | <p>The methods used to construct the WRP site and associated pipelines would seek to avoid mobilising potential contaminants at the historic landfill site. The design of the WRP within the site has also sought to reduce disturbance to the landfill. An assessment of the potential for impacts as a result of construction of the WRP site is set out in ES Chapter 11 Land quality and ground conditions (Document reference 6.1, DCO Volume 6). This also sets out the potential mitigation measures that could be implemented during the construction phase.</p> <p>There is no restriction in the legislative and policy framework on the use of former landfill sites, and the National Policy Statement for Water Resources Infrastructure (NPSWRI) and the National Planning Policy Framework (NPPF) starting principle is to make use of previously developed brownfield land.</p> |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | LWRP13     | <p>A respondent noted that the provision of sustainable drainage at Site 72 also raised significant concerns and added that the drainage arrangement shown on Page 42 of the Book of Plans would not work, but did not offer further detail. The respondent also recommended that the Applicant must find an alternative site for the WRP and High Lift Pumping Station.</p> <p>A further respondent also outlined that following the Summer 2022 Consultation, 41% of respondents did not support the proposed location of the WRP at Broadmarsh (Site 72). The respondent reiterated that the perceived lack of support is documented.</p> | N                    | <p>The Applicant recognises concern about the location of the WRP and High Lift Pumping Station, however an extensive site selection process for the WRP site, which was presented at the Summer 2022 Consultation, and a further review of the site selection process was presented at the Summer 2024 Consultation. This site selection process considered a range of technical, environmental and planning criteria, which evaluated a range of sites within a 1.5km search area from Budds Farm WTW. The selected site for the WRP was considered to perform best against these criteria.</p> <p>The WRP site includes a sustainable drainage system which would capture, attenuate and release surface water into the Hermitage Stream. The design of the system has been designed by suitably qualified engineers and drainage and flooding experts. The approach to drainage at the WRP site has been agreed with stakeholders including HCC and the EA, as set out in Draft Statement of Common Ground (Document reference 5.8, DCO Volume 5).</p> |

**Table F29-7 Summary of issues raised on the theme of the design of the WRP and the Applicant's response**

| Consultee                                                       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Hampshire County Council (HCC)                                  | DWRP01     | <p>Hampshire County Council (HCC) noted that the site access as proposed would be a permanent arrangement and the site layout was shown indicatively on drawing 710166-SWS-XX-XX-DR-Z-01003 Rev P03. The access layout for this site was not agreed at the time.</p> <p>It also highlighted that access to this parcel of land should accord with the consent granted through application APP/21/00189 as the revised points of access accord with the design requirements of the Local Highway Authority. The Council highlighted that the access proposals could influence the design of the site and suggested, therefore, that this must be agreed and detailed to support the Development Consent Order (DCO).</p> <p>HCC stated that the proposed access point appeared to be indicatively where an existing gated access exists. This location is subject to reduced visibility due to the alignment of Harts Farm Way and in the absence of supporting information would not be considered appropriate.</p> | N                    | <p>The illustrative layout referred to is included within Appendix F.5 (Book of Plans) to provide indication of the Parameter Zones and elevation locations. Development of the permanent access has been subject to further liaison with HCC.</p> <p>An illustrative junction layout presenting a potential design for access by pedestrians, cyclists and vehicles in the permanent state has been prepared and discussed with HCC, as evidenced in the Draft Statement of Common Ground submitted alongside the DCO application (Document reference 5.8, DCO Volume 5).</p> <p>This demonstrates in principle that safe and suitable access to the site can be achieved, as was the case for the previous consented proposal for the WRP site. However, this remains indicative as detailed layout and designs would be submitted post-consent by the appointed contractor, which may include revised details for site access. These would be subject to further approval from the relevant planning and highway authorities. This would include a permanent controlled</p> |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                               |
|--------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                  |            | HCC affirmed that sustainable transport improvements to Harts Farm Way secured under application APP/21/00189 should not be compromised. This includes the provision of a shared use path and controlled crossing on Harts Farm Way. It is considered that such mitigation would be appropriate to apply to this Project to mitigate both the construction impacts and operation of the site.                                                                           |                      | crossing point for pedestrians to access the site from the south of Harts Farm Way.                                                                                                                                    |
| Havant Borough Council (HBC)                     | DWRP0 2    | HBC noted that the Project team had offered to continue working with the Council on the design parameters for the Water Recycling Plant (WRP) which was welcomed. It also noted that indicative diameters and depths were given for the launch and reception shafts required at the WRP site, with excavation expected to a depth of 40m below existing ground level at the Harts Farm Landfill. It was also added that the scale of shafts exceeds prior expectations. | N                    | The Applicant has acknowledged this comment.                                                                                                                                                                           |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                      |                                                                                                                                                                                                                        |
| Wider community                                  | DWRP0 3    | Respondents expressed concerns about the potential for pollution and leaks from the WRP, as well as the longevity of the plant. There was also concern regarding                                                                                                                                                                                                                                                                                                        | N                    | The components of the Project are expected to have a design life of up to 100 years, however the operational life of the Project could be longer than this. WRP components would be maintained and replaced throughout |

|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | <p>flood risk, and the safeguarding processes were inquired about.</p> <p>It was highlighted that the WRP would be outdated in 60 years, would need replacing or updating.</p> |                      | <p>the project life to ensure regulatory compliance and efficiency.</p> <p>Control measures would be in place to prevent leakages occurring. The WRP would feature numerous safeguards so that significant deviations in water quality are quickly spotted and rectified through partial or full system shutdowns, and in the unlikely event it does not meet the required standards, water would be automatically diverted to the Long Sea Outfall. It would not be possible for treated wastewater to bypass this process and enter Havant Thicket Reservoir.</p> <p>As ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6); there is no significant risk of flooding at the WRP as it is situated at an elevation that is entirely out of any projected flood zones, factoring in a H++ climate change scenario.</p> |
| Wider community | DWRP04     | <p>Respondents suggested that the WRP should be designed to blend in with the nearby styles of houses, as well as having <i>'decent screening and a big fence'</i>.</p>        | N                    | <p>The design of the proposed WRP has been informed by the Landscape and Visual Impact Assessment (LVIA), which is summarised in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                                                                                                                         |                      | As per the Design Principles Document (Document reference 5.11, DCO Volume 5) reference has been made to the assessment of local landscape character and views, including from Broadmarsh Coastal Park and Langstone Harbour to the south. Tree and shrub planting is proposed to reinforce the visual screening provided by existing vegetation around the boundaries of the site. A green/brown roof is also proposed to provide habitat and to assist in integrating the building into the landscape and views. This is consistent with the criteria for good design set out in section 3.6 of the National Policy Statement for Water Resources Infrastructure (NPSWRI). |
| Wider community | DWRP05     | Respondents queried why the recycled water would be sent to Otterbourne and expressed concern over the visual impact of the WRP and associated pipelines. There were concerns that tree screening would not be effective as it was argued that trees would struggle to grow to a significant height on the site due to toxic ground conditions and oxygen displacement by landfill gas. | N                    | Recycled water would be transferred to Havant Thicket Reservoir prior to transfer to Otterbourne WTW for further treatment, where it would then be distributed into the Applicant's supply network. Pipelines would be located underground apart from a small section close to Portsmouth's Water Bedhampton Springs Site, where the pipeline would have a maximum height of 2m above ground level. As per the Design Principles Document (Document reference 5.11, DCO Volume 5) consideration of screening planting for the WRP would be undertaken during the                                                                                                             |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------|------------|-------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>detailed design phase to ensure successful tree and shrub establishment. This would include measures such as selecting appropriate depths of growing medium and amelioration to support tree growth and without compromising the landfill containment system. Trees and shrubs with aggressive or deep roots would be omitted from planting schedules.</p> <p>The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) provides a list of indicative species; the final species including seed mixes would be agreed at the detailed design stage, post-consent, with the relevant Local Planning Authority as part of the detailed LEMPs.</p> <p>The visual impact of the WRP has been assessed within the LVIA presented in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6). While significant visual effects are identified during construction, these are expected to lessen as mitigation planting establishes. A number of Design Principles have been developed to minimise visual impact of the WRP, including limiting the building heights, landscape responsive building integration, use of contextual materials and colour</p> |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                 |

| Wiltshire Council, Eastleigh Borough Council (EBC), Hampshire County Council (HCC) | LAGP01     | The importance of protecting pumping stations and assets from groundwater inundation was emphasised, considering future climate change models. Also highlighted was the need for site-specific Flood Risk Assessments (FRA) and sustainable drainage strategies for the Above Ground Plant (AGP). | N                    | <p>The site selection for the AGP sites considered the potential for flooding to occur, this process is set out in the Scheme Development Report (Document Reference 5.10, DCO Volume 5). All the AGP sites are located outside high-risk flood zones.</p> <p>An FRA (Environmental Statement (ES) Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6)) has been undertaken for the Project which sets out the measures that</p> |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee                     | Issue code | Summary of issue raised                                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               |            |                                                                                                                                                                                                                                                                                     |                      | would be undertaken to prevent flooding and the approach to drainage. The FRA considers the future potential for flooding as a result of climate change. A drainage strategy would be submitted and approved by the local authority in consultation with the Lead Local Flood Authority, as secured by the relevant requirement in Schedule 2 of the draft Development Consent Order (Document reference 3.1, DCO Volume 3).                                                                                                                                                                                                                                                                                                                                                        |
| Winchester City Council (WCC) | LAGP02     | WCC expressed the view that Intermediate Pumping Station G is likely to have an adverse effect on the significance/setting of the Grade II* listed Park Place and the Hampshire Registered Historic Deer Park. The respondent requested further information on mitigation measures. | N                    | <p>IPS-G has been located considering the impact on the historic environment and the landscape character. The process for site selection for IPS-G is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).</p> <p>ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) includes an assessment of effects on Park Place and the historic deer park and any mitigation measures that would be implemented to reduce these.</p> <p>The Design Principles Document (Document reference 5.11, DCO Volume 5) sets out the approach to the design of IPS-G including site layout, finishes and materials. This includes landscaping around the site which would integrate the site into the existing landscape</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                              |                      | and provide screening. After mitigation through archaeological investigation, landscaping and planting, the effect on archaeological remains in this area, Park Place and Little Park Mansions, would be permanent and minor adverse (not significant).                                                                                                                                                                                                                                                                                                                                                                    |
| WCC       | LAGP03     | WCC mentioned that the proposed sites for the AGP along the proposed Pipeline route include land near to listed buildings, Park Place and Little Park Mansions. It was also noted that the two locations of the AGP in Winchester would not likely result in adverse impacts to air quality. | N                    | <p>The AGP sites have been located considering a range of technical, environmental and planning criteria, and the site selection process has aimed to reduce adverse effects.</p> <p>ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) sets out an assessment of effects of the AGP on heritage assets including listed buildings.</p> <p>After mitigation through archaeological investigation, landscaping and planting the effect on archaeological remains in this area, Park Place and Little Park Mansions would be permanent and minor adverse (not significant).</p> |
| WCC, HCC  | LAGP04     | Respondents highlighted the need for a detailed FRA for Intermediate Pumping Station G in the Meon Valley. They noted that the site has high groundwater levels, and impacts need to be assessed.                                                                                            | N                    | The site selection for the Above Ground Plant (AGP) sites considered the potential for flooding to occur, this process is set out in the Scheme Development Report (Document Reference 5.10, DCO Volume 5). All the AGP                                                                                                                                                                                                                                                                                                                                                                                                    |

| Consultee                     | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

|                               |            |                                                                                                                                                                                                                                                                                                               |                      | <p>sites are located outside high-risk flood zones.</p> <p>An FRA (ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6)) has been undertaken for the Project which sets out the measures that would be undertaken to prevent flooding and the approach to drainage. The FRA considers the future potential for flooding as a result of climate change and groundwater flows. A drainage strategy would be submitted and approved by the local authority in consultation with the Lead Local Flood Authority, as secured by the relevant requirement in Schedule 2 of the draft Development Consent Order (Document reference 3.1, DCO Volume 3).</p> |
| Fareham Borough Council (FBC) | LAGP05     | <p>FBC made several neutral comments regarding Intermediate Pumping Station F and its proximity to the Welbourne Garden Village development.</p> <p>It was noted that there has been ongoing engagement with the developers, and that detailed consideration of access arrangements will need to be made.</p> | Y                    | <p>IPS-F has been sited considering the development of Welborne Garden Village and the landscape character of its surrounding area. The developers of Welborne Garden Village have been engaged as the Project has progressed. Further details regarding the status of negotiations are included within the Pre-application Land and Rights Negotiations Tracker (Document reference 4.4, DCO Volume 4). The Applicant would continue to</p>                                                                                                                                                                                                                                             |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                                                                                                                                                                                                           |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| PIL                                                         | LAGP08     | The respondents raised concerns about the siting of the proposed Pipeline and Intermediate Pumping Station G, which in the respondent's view would prejudice the ability to deliver residential development at the site. Other respondents did provide comments as the AGP locations did not affect them. | N                    | The site selection process for the AGP considered approved or consented residential developments and residential allocations in a local authority's adopted and emerging local plans. In some locations, landowners have highlighted to the Applicant that land is being promoted for residential development, however in the absence of an allocation in a local plan or a planning application, the Applicant does not have certainty that the residential development would materialise and has not therefore necessarily avoided these locations on this basis. The process that has been undertaken to locate the AGP is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5). |
| PILs                                                        | LAGP09     | Respondents made neutral comments noting that the AGP is not proposed to be located close to land of their interest.                                                                                                                                                                                      | N                    | The Applicant has noted this feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| PIL                                                         | LAGP10     | The respondent noted that the site of Intermediate Pumping Station G is in proximity to Wickham Park Golf Club but beyond the ownership boundary, so it will                                                                                                                                              | N                    | The Above Ground Plant (AGP) sites have been chosen to avoid impact on existing business operations as far as practicable. The process that has been undertaken to locate the AGP is set out in the Scheme                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | not directly impact the Golf Club's operations.                                                                                                                                                                                                                                                                                                              |                      | Development Report (Document reference 5.10, DCO Volume 5). IPS-G is not located within Wickham Park Golf Club and therefore would not pose a direct impact. The pipeline south of IPS-G does pass through the golf club, however. Flexibility in the design of the Project in this location has been retained at Wickham Park Golf Club so that impacts can be reduced on the golf club's operations at the detailed design and construction stage.                                                                                                                                                                                                                                                                                          |
| PILs      | LAGP11     | <p>Respondents expressed opposition to the location of Intermediate Pumping Station G.</p> <p>It was stated that the site would impact both the current use and potential future uses of Little Park Farm.</p> <p>It was requested that alternative routes and locations for the proposed water main and pumping station be given further consideration.</p> | N                    | <p>Various sites have been considered for IPS-G as set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5). Key considerations for siting this AGP included avoiding impacts on the South Downs National Park and ensuring the site could be accessed during the construction and operation phases.</p> <p>The site selection process for the AGP considered approved or consented residential developments and residential allocations in a local authority's adopted and emerging local plans. In some locations, landowners have highlighted to the Applicant that land is being promoted for residential development, however in the absence of an allocation in a local plan or a planning application, the</p> |

|           |            |                                                                                                                                                                                                                                                |                      | would be provided to reduce them. This includes siting equipment that generates noise to reduce noise emissions as far as practicable and following the mitigation hierarchy, as set out in the Design Principles Document (Document reference 5.11, DCO Volume 5).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PIL       | LAGP14     | The respondent argued that the visual impact of IPS-F cannot be mitigated, and that the location would sever part of a field, rendering it unsuitable for agricultural production. It was encouraged that the pumping station should be moved. | N                    | <p>The site selection process for IPS-F has considered various technical, environmental and planning criteria as set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5). IPS-F has been sited adjacent to an existing block of woodland so that the site can be integrated into the existing landscape by providing additional planting and screening. Locating IPS-F next to Welborne Garden Village also avoids IPS-F being visually isolated in the landscape.</p> <p>The Design Principles Document (Document reference 5.11, DCO Volume 5) sets out the design measures and environmental mitigation that would be implemented to reduce visual impacts. This includes ensuring the building finishes respect and reinforce the local rural character and delivering woodland, scrub and hedgerow planting around the site.</p> |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                             |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Wider community                                  | LAGP15     | Respondents expressed opposition to the location of the AGP, for reasons including visual impacts, effect on agricultural land, and proximity to residents. | N                    | <p>The site selection process for the AGP has considered various technical, environmental and planning criteria as set out the Scheme Development Report (Document reference 5.10, DCO Volume 5). This includes siting the AGP so that it can be integrated into the existing environment and landscape through additional planting, avoiding locations that would be visually prominent within the surrounding landscape where practicable, considering the quality of the agricultural land, and considering the proximity to residential properties.</p> <p>The potential environmental impacts of the AGP are considered in the following ES Chapters:</p> <ul style="list-style-type: none"> <li>▪ ES Chapter 6 Air quality and odour, Volume I (Document reference 6.1, DCO Volume 6)</li> <li>▪ ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6)</li> <li>▪ ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6)</li> </ul> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                       |                      | <ul style="list-style-type: none"> <li>ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6)</li> </ul> <p>The Design Principles Document (Document reference 5.11, DCO Volume 5) sets out the approach to the design of each AGP site and the environmental mitigation that would be delivered to integrate the sites into the environment and provide screening.</p> |
| Wider community | LAGP16     | Respondents were unsure about the impact of the proposed locations for the AGP, with many not familiar with the areas. It was also stated that experts are better placed to make technical decisions. | N                    | The Applicant notes this comment and can provide assurance that feedback from relevant technical officers from local authorities and statutory environmental bodies has been considered in determining the locations for the AGP and the approach to their design. This process is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).                                |
| Wider community | LAGP17     | Respondents found the proposed locations for the AGP reasonable and noted that the infrastructure is required, and the sites selected had the least point of conflict with residential areas.         | N                    | The Applicant has noted this feedback.                                                                                                                                                                                                                                                                                                                                                              |
| Wider community | LAGP18     | Respondents suggested that Welbourne would be a better location for Intermediate Pumping Station F as the site is already being developed on.                                                         | N                    | Siting IPS-F within the Welborne Garden Village site would have a significant impact on the design and delivery of this development which has already received planning permission. IPS-F has been located                                                                                                                                                                                          |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|                 |            |                                                                                                                                                                                                                                                                                                                                                           |                      | considering the development of Welborne Garden Village, and engagement has been undertaken with the developer. The process to identify sites for the AGP is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Wider community | LAGP19     | Respondents expressed concerns about the impact of Intermediate Pumping Station G. Respondents stated the need for alternative access routes and expressed the view that Titchfield Lane is already narrow, thus not suitable for construction traffic. Concerns were raised about the impact on nearby residents and businesses, and on quality of life. | Y                    | <p>The site selection process for the AGP has considered various technical, environmental and planning criteria as set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).</p> <p>Following the Summer 2024 Consultation the construction access to IPS-G was moved further to the north as it was identified that the existing access track from Titchfield Lane would not be suitable for construction vehicles. This would reduce potential impacts on nearby residents and businesses.</p> <p>The air quality assessment presented in ES Chapter 6 Air quality and odour, Volume I (Document reference 6.1, DCO Volume 6) concluded that there would be no significant effects in relation to human health as a result of construction traffic.</p> <p>The health assessment presented in ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) identified a temporary minor</p> |

|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                        |                      | (not significant) adverse effect on wellbeing due to the impact of construction traffic on minor local roads on perceptions of safety for pedestrians, equestrians and cyclists. For more vulnerable groups such as older people, young children and those with disabilities, this was concluded to be a temporary moderate (significant) adverse effect.                                                                         |
| Wider community | LAGP20     | The respondent questioned how electricity would be supplied to Intermediate Pumping Station G.                                                                                                                                                         | N                    | It is expected that energy connections to the AGP sites would be delivered by the relevant energy undertakers. The Applicant has confirmed that all utility connections for the AGP are feasible, but the details would be determined by the relevant undertakers.                                                                                                                                                                |
| Wider community | LAGP21     | The respondent stated that Intermediate Pumping Station G is proposed in an area away from residential housing that would have the ' <i>least amount of impact.</i> '                                                                                  | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                             |
| Wider community | LAGP22     | Respondents raised concerns about Break Pressure Tank/Intermediate Pumping Station E. Concerns were about surface water run-off, noise, especially at night, and the impact on nearby Site of Special Scientific Interest (SSSI) and public amenities. | N                    | An FRA (ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6)) has been undertaken for the Project which sets out the measures that would be undertaken to prevent flooding and the approach to drainage. The FRA considers the future potential for flooding as a result of climate change. The draft DCO (Document reference 3.1, DCO Volume 3) requires the Applicant to produce a Drainage |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------|------------|-------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>Strategy which would be submitted and approved by the local authority in consultation with the Lead Local Flood Authority. This would ensure that BPT/IPS-E does not increase flood risk elsewhere.</p> <p>An assessment of noise impacts is set out in ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6). Where impacts have been identified, mitigation would be implemented to reduce these.</p> <p>The Design Principles Document (Document reference 5.11, DCO Volume 5) sets out the design and environmental enhancement measures that would be implemented in the design of BPT/IPS-E. This includes measures to reduce noise by ensuring this does not exceed impact thresholds, and by implementing the mitigation hierarchy to avoid the generation of noise, control noise at source or mitigate the pathway by introducing screening for example.</p> <p>BPT/IPS-E is not located in a SSSI or publicly accessible land. Portsdown SSSI (designated for its chalk grassland) is located approximately 160m to the south-west of BPT/IPS-E. The potential for impacts on this site has been fully assessed within the ES, Chapter 8 Terrestrial and freshwater</p> |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                   |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Winchester City Council (WCC)                                   | DAGP01     | WCC commented on Break Pressure Tank (BPT) K and noted the proposed location away from Sciviers Lane to the rear of Wintershill Hall, a locally listed Historic Park and Garden. WCC noted that the site would require a new access road from Sciviers Lane and would be approximately 4,347sqm with a maximum building height of approximately 3.5m. WCC suggested that external lighting details were required. | N                    | The maximum footprint of BPT-K would not exceed 4,650m <sup>2</sup> and the maximum building height would not exceed 5.6m from existing ground level. To reduce impact on residential views to the northwest, BPT-K would be embedded into the existing hillside to help it blend into the field as far as reasonably practicable. A green roof would be considered to help further integrate BPT-K into the landscape and enhance biodiversity. |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee               | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| WCC                     | DAGP03     | WCC questioned inconsistencies in the consultation material about the maximum of Above Ground Plant (AGP) being either 6.7m or 8m.                                                                                                                                                                                                                                                                                                                                                          | N                    | As per the Design Principles Document (Document reference 5.11, DCO Volume 5), the maximum building height of BPT-E, IPS-E, IPS-F and IPS-G would not exceed 8m.<br><br>The maximum building height of BPT-K would not exceed 5.6m (this height is lower because a pumping station building is not proposed at this site).                                                                                                                                                                                                                     |
| Natural England (NE)    | DAGP04     | NE stated it was pleased to see the Biodiversity Net Gain (BNG) proposed at AGP sites, and that the designs considered the landscape impacts. NE confirmed it would continue to review these plans as they adapt and advised it would provide further feedback as required.                                                                                                                                                                                                                 | N                    | The Applicant has noted this feedback.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Rowlands Parish Council | DAGP05     | Rowlands Parish Council noted that the consultation materials included various illustrative designs for infrastructure elements to inform the Environmental Impact Assessment (EIA). However, the parish acknowledged that these designs were not final and noted that the contractor when appointed would decide on the final design solutions if the Development Consent Order (DCO) is granted, as long as the impact does not exceed the 'worst case' parameters in the EIA. The parish | N                    | Detailed designs for Above Ground Plant (AGP) would be developed by the Contractor when appointed post-consent but would be required to adhere to the Project's Design Principles, which have been developed in collaboration with the relevant local authorities to achieve good design as established in Design Principles Document (Document reference 5.11, DCO Volume 5). Detailed designs for AGP would also be subject to local authority approval and so there are numerous safeguards in place to ensure good design can be achieved. |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                     | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               |            | stated therefore, that any reassurances about the design were meaningless.                                                                                                                                                                                                                                                                                                                                                     |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Fareham Borough Council (FBC) | DAGP06     | FBC Urban Designer has assessed supporting information and stated that their primary area of concern related to the development of IPS-F which was the only retained AGP which would be present within the Fareham Borough.                                                                                                                                                                                                    | N                    | The Applicant has noted this feedback, see the Design Principles Document (Document reference 5.11, DCO Volume 5) which have been developed in collaboration with FBC during the pre-application period for IPS-F.                                                                                                                                                                                                                 |
| FBC                           | DAGP07     | FBC's Urban Designer highlighted that a section of IPS-G showed the building cut into the land and supported this but raised concern about cladding and materials to prominent elevations only. The Council will be looking for a cohesive and unified architectural language. At 8m high with a flat roof, the Council noted the impact of IPS-G could be significant, and they would expect more on the building principles. | N                    | As per the Design Principles Document (Document reference 5.11, DCO Volume 5), buildings and finishes would respect and reinforce the local character by using materials and a colour palette appropriate to the local context, while also exploring opportunities for innovation and creativity which would be informed by a colour assessment.                                                                                   |
| FBC                           | DAGP08     | With regards to IPS-F, FBC stated that due to the large scale of the facility, care should be taken to ensure that proposed pumping station is designed to keep its visual impact on the surrounding landscape to a minimum and that it is adequately screened from longer distance views from outside the immediate area.                                                                                                     | N                    | As per the Design Principles Document (Document reference 5.11, DCO Volume 5), a number of screening measures are to be provided to help integrate the site into the existing landscape, provide habitat connectivity and to minimise visual impact. These include maximising separation from Welborne Garden Village, limiting building heights, embedding the building into the existing landform to reduce visibility, applying |

| Consultee                     | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                      | <p>contextual building finishes, and delivering woodland, scrub and hedgerow planting to provide effective visual screening.</p> <p>Visual impacts are addressed within ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6). Representative viewpoints VP123, VP124 and VP130, agreed with FBC, relate specifically to IPS-F and represent longer distance views. Two of these have been produced as photomontages to illustrate the anticipated views, and are presented in ES Figure 13.23 Viewpoint photography, Volume III (Document reference 6.3, DCO Volume 6)</p> |
| Portsmouth City Council (PCC) | DAGP09     | (PCC provided some suggestions relating to the visual design of the AGP. It stated that proposed tree and scrub planting to obscure IPS-E, should comprise native locally sourced species that complement the existing scrub and hedges in the local area. PCC also suggested that the Project team should aim for a naturalistic establishment of scrub and trees and to also consider translocated material and sowing tree seeds of local species. Finally, the Council suggested the Project team avoids plastic tree guards/ties and tanalised stakes. | N                    | <p>Proposed planting relating to BPT/IPS-E would be of the same or similar mix of native tree and shrub species found in the local area and be designed to complement the landscape character. This is secured within the Design Principles Document (Document reference 5.11, DCO Volume 5) and illustrated in the ES Appendix 3.2 Indicative Environmental Masterplan, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) provides a list of indicative species; the final species including seed</p>    |

|--------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                  |            | utilising the topography of the site to reduce height and visibility. Additionally, the respondent suggested that the colours and materials used should reflect those found in the local area.                                   |                      | new landform (not exceeding the maximum height of BPT/IPS-E) would be created to the north to screen the lower levels of the facility and reduce impacts on views from promoted routes and residential properties to the north. The landform should span the width of BPT/IPS-E when viewed from the north. The northern slope would blend naturally into the landscape with as gradual a slope as possible.<br><br>In addition, buildings and finishes would respect and reinforce the local character by using materials and a colour palette appropriate to local context, while also exploring opportunities for innovation and creativity – this would be informed by a colour assessment. |
| PIL                                              | DAGP1<br>2 | A respondent considered that the proposed temporary and permanent access routes to the plant to be unacceptable if taken from minor lanes. It was suggested that all access should be taken directly from A and B roads instead. | N                    | The Applicant has undertaken significant liaison with the local highways authorities to minimise impacts on the local traffic network, please see ES Appendix 18.1 Transport Assessment, Volume II (Document reference 6.2, DCO Volume 6) for further details.                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                  |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Wider community                                  | DAGP1<br>3 | Respondents queried whether there would be any visible pipes, and what materials the AGP would be constructed from. A further respondent stated that there would                                                                 | N                    | The vast majority of the Pipeline would be installed below ground. The only section of the Pipeline that is above ground is mainly through Portsmouth Water's Bedhampton                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | be increased risk of sewage spills and nitrate build up.                                                                                                                                                     |                      | <p>Springs operational site, over approximately 200m. The AGP sites would not contribute to nitrate build up or sewage spills as these sites would be handling water that is being transferred between the Water Recycling Plant (WRP) site and Otterbourne.</p> <p>As per the Design Principles Document (Document reference 5.11, DCO Volume 5), the detailed design of buildings (including finishes) would have regard to the surrounding context and seek to respect and reinforce the local rural character by using building forms, materials and a colour palette appropriate to that context.</p> |
| Wider community | DAGP14     | Respondents voiced opposition to the proposed AGP, citing concerns about its visual impact. It was described as an 'eyesore', with concerns it would disrupt the aesthetic character of the local landscape. | N                    | <p>A range of measures have been embedded into the Project design to avoid or reduce visual effects. including using building forms, materials and a colour palette appropriate to the context, as per the Design Principles Document (Document reference 5.11, DCO Volume 5).</p> <p>These measures have been informed by a Landscape and Visual Impact Assessment (LVIA), which assess impact on views from the surrounding area and concludes that through mitigation, no long-term significant adverse effects on views are anticipated. The LVIA is provided in ES Chapter 13 Landscape</p>           |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b>                                                   |            |                                                                                                                                                                                                                                                                                                          |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Hampshire County Council (HCC), Winchester City Council (WCC), Havant Borough Council (HBC), Natural England (NE) | SDGP0 1    | WCC requested that the Applicant take its consultation feedback into account throughout the Project's development, and that it must be demonstrable how the development is consistent with the Council's objectives.                                                                                     | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the criteria that have been used to develop the design of the Project, which includes various technical, environmental and planning criteria which have been informed by national and local policy. As part of this process, the Applicant has had regard to feedback received through consultation and ongoing engagement with local authorities and other stakeholders. |
| Wiltshire Council                                                                                                 | SDGP0 2    | Wiltshire Council expressed support for the process undertaken to identify the proposed Pipeline routes.                                                                                                                                                                                                 | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                    |
| South Downs National Park Authority (SDNPA)                                                                       | SDGP0 3    | SDNPA welcomed that the Project was now outside their authority area. It was acknowledged that Chapter 4 of the Preliminary Environmental Information Report demonstrated how options have been considered reaching the conclusion that a Pipeline corridor within the Authority's area must be avoided. | N                    | The development of the Project has sought to avoid the South Downs National Park given the protection this is afforded in the National Policy Statement for Water Resources Infrastructure (NPSWRI), and as a result the Order Limits do not overlap with the national park boundary.                                                                                                                                                                    |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| HCC       | SDGP04     | HCC stated there was insufficient information available to respond on the adequacies of the technical design and locations. It was stated that a number of points will need addressing as the DCO application is progressed and welcomed continued collaboration with the Applicant to address these. | N                    | The Applicant has engaged with HCC throughout the process to develop the design of the Project having regard to the Council's feedback received through consultation and ongoing engagement. The Applicant's approach to engagement is set out in the Statement of Engagement (Document reference 5.9, DCO Volume 5). The Applicant has prepared a Statement of Common Ground with HCC (Draft Statement of Common Ground – Hampshire County Council (Document reference 5.8, DCO Volume 5)), setting out the current position of each party against relevant matters. |
| HCC, WCC, | SDGP05     | HCC noted it has been actively involved in the pre-application stage and outlined a timeline of the Council's input since 2022.<br><br>WCC stated most of the Pipeline is located within its district and is therefore committed to working with the Applicant proactively.                           | N                    | The Applicant has noted these comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| WCC       | SDGP06     | WCC stated it was satisfied with the approach taken by the Applicant to engage with authorities in relation to the scheme development and noted regular meetings with all Local Authorities and individual officers.                                                                                  | N                    | The Applicant has noted these comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| HCC                                                         | SDGP07     | HCC noted its influential role in the preferred Pipeline corridor, particularly in avoiding coincidental construction programmes at Welborne Garden Village and transport impact at Fisher's Pond.                                                                                                                                                                                                                                                                                                                                                                                                                                      | N                    | The Applicant has noted these comments.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| PILs                                                        | SDGP08     | <p>There was concern that the land where the Pipeline route is proposed (Pipeline Section K would be sterilised as a result, thus reduce the developable area and overall potential unit numbers at the site, potentially rendering the site on the eastern edge of Upham unviable.</p> <p>It was suggested that the Applicant has not been open about its true intentions for the Project and that the general process to identify the proposed Pipeline routes was incomplete and not well thought out. It was questioned whether the proposed solution is the most beneficial from environmental, health, and cost perspectives.</p> | N                    | <p>The process to develop the design of the Project has considered various technical, environmental and planning criteria which are set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5). The Applicant's Summer 2022 and Summer 2024 consultations included a Scheme Development Summary document which set out how the pipeline routes and Above Ground Plant (AGP) sites had been developed. Feedback on this process was considered in determining the design for the Project.</p> <p>The site selection process for the AGP considered approved or consented residential developments and residential allocations in a local authority's adopted and emerging local plans. In some locations, landowners have highlighted to the Applicant that land is being promoted or considered as a potential residential development site, however in the absence of an allocation in a local plan or a</p> |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                           |

|                                                  |            |                                                                                                                                                                                                                                                                                                                                                                                                               |                      | planning application, the Applicant does not have certainty that the residential development would materialise.                                                                                                                                                                                                                                                                    |
| PILs                                             | SDGP09     | Key concerns included the planning, design and cost of previous projects such as Eastern Road, as well as the reported past failures to maintain this infrastructure gave the consultee cause for concern.<br><br>There were views that a lack of knowledge about the process to identify Pipeline routes and a lack of qualifications impeded the ability to pass judgement on the soundness of the process. | N                    | The process to develop the design of the Project has considered various technical, environmental and planning criteria which are set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).<br><br>The Applicant is hopeful that the evidence provided gives assurance around the robustness of the scheme development process.                             |
| PIL                                              | SDGP10     | The respondent found the process undertaken to identify the proposed Pipeline routes sensible.                                                                                                                                                                                                                                                                                                                | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                              |
| PIL                                              | SDGP11     | The respondent suggested that building a second water treatment plant closer to Havant Thicket Reservoir would be less disruptive than installing a pipeline to Otterbourne.                                                                                                                                                                                                                                  | N                    | Water from Havant Thicket reservoir needs to be transferred to the Otterbourne Water Supply Works (WSW) because this is the water supply hub for the Applicant's Hampshire supply area. Adding a water treatment works closer to Havant Thicket Reservoir would not negate the requirement to still transfer the water to Otterbourne so it can be pumped into the supply network. |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                               |                      |                                                                                                                                                                                                                                                                                                                                                                                    |

| Wider community | SDGP1 2    | At least one respondent objected to any use of land adjacent, next to, or on the area currently occupied by St Thomas More primary school.                                                                                                                                                                                                                                                                                          | N                    | Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the Water Recycling Plant (WRP) site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project as it is now proposed to use Portsmouth Water's Pipelines instead. This removes the elements of the Project that were in the proximity of St Thomas More's Catholic Primary School. Further information on the removal of the backup option is contained in section 5 of the Scheme Development Report (Document reference 5.10, DCO Volume 5). |
| Wider community | SDGP1 3    | It was stated that the proposed Pipeline route strikes an appropriate balance between avoiding sensitive land areas and cost. The scheme development process was praised for being robust and comprehensive. It was acknowledged and commended that changes have been made after feedback from residents.<br><br>The selection process was deemed logical and professional, and the respondent stated that keeping the WRP close to | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                 |            | Budds Farm Water Treatment Works (WTW) makes sense.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Wider community | SDGP14     | <p>At least one respondent concluded, following review of the Gate 2 process, Option D.2 should not be pursued and funded as a scheme in isolation.</p> <p>It was suggested that the Applicant should involve independent experts in the development of the scheme, as residents claimed they do not have the knowledge to comment.</p> <p>It was acknowledged that the Applicant engaged with a number of ecology specialists, and it was suggested that there be consistency with other schemes by the Applicant, ensuring effective Sustainable Drainage Systems (SuDS) at new sites.</p> <p>The discounting of desalination as a solution was praised, but it was suggested that the Applicant could explore incorporating Peel Common into the scheme, citing its existing UV treatment system, and its potential to help alleviate flooding and address odour issues.</p> | N                    | <p>Option D.2 is not being progressed. Option B.4 is being progressed which supplements Option D.2 with recycled water, therefore making it more resilient to the water resource planning requirements.</p> <p>The scheme development process has been undertaken by qualified subject matter experts. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has undertaken to develop the Project.</p> <p>A Flood Risk Assessment (ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6)) has been undertaken for the Project, which sets out the measures that would be implemented to prevent flooding. A comprehensive surface water management strategy that utilises SuDS for the WRP and AGPs has been developed, see ES Appendix 19.1 Flood Risk Assessment, Volume II (Document reference 6.2, DCO Volume 6). Solely utilising Peel Common WTW as a source of treated wastewater for water recycling would not produce the volume of recycled water required as determined by the</p> |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                      | emerging WRMP24. An option that utilises treated wastewater from Peel Common WTW and Budds Farm WTW was considered (Option B.5), however the Project was selected in favour of this option due to the greater resilience associated with the use of Havant Thicket Reservoir.                                                                                                                                                                                                                                                                                                                                                                                                      |
| Wider community | SDGP1 5    | Respondents stated that feedback appeared to have been taken into consideration in a reasonable way.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Wider Community | SDGP1 6    | <p>The respondent expressed several concerns about the options appraisal process, noting that local residents had fewer opportunities to provide feedback compared to other affected communities. They highlighted that Option B.4 was only introduced at the end of Gate 2, with development continuing into Gate 3.</p> <p>They further criticised the process, arguing that the Applicant is repeating previous mistakes by choosing effluent recycling, which relies on the same reverse osmosis technology as desalination. According to the respondent, this approach is equally harmful to the environment in terms of energy use and carbon emissions, requires even more chemicals for treatment, and still results in a concentrated waste stream</p> | N                    | The options appraisal process was undertaken to inform the RAPID regulatory process and to ensure that the Applicant was taking forward the best overall solution to addressing the water supply challenge in Hampshire. Project costs, carbon emissions, energy usage, environmental impacts and delivering best value for customers have been key factors in the Applicant's assessment and consideration of alternative solutions, and the Project was shown to perform considerably better than the desalination alternatives. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has undertaken to develop the Project. |

| Consultee | Issue code | Summary of issue raised                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>followed. Issues such as safety, security, and environmental impact were highlighted. Some respondents claimed the design was unnecessary and illogical, and that it would have a harmful impact on nature, wildlife, and the environment.</p> |                      | <p>the preliminary design principles have been applied through the design decision making process. The preliminary design principles presented at the Summer 2024 Consultation have been developed into General Design Principles (applying to the entire Project) and Site-Specific Design Principles (providing more detail on a site-specific level or where a design commitment only applies to a particular site) which are set out in the Design Principles Document (Document reference 5.11, DCO Volume 5). These would be secured through the DCO and would provide the framework against which the detailed design of the Project would be developed and approved following consent.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out how the design of the Project has considered impacts on the environment and the measures that have been taken to avoid and reduce these.</p> <p>The ES provides an assessment of the environmental effects of the Project, including the design principles, and the mitigation measures that have been implemented to reduce any resulting significant effects.</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | PDP06      | Respondents noted concerns, including the ability of the new plant to sustain earth tremors, the need for more information on specific sites, and the suitability of the design principles. Some respondents said they were unqualified to comment, while others emphasised the need for more environmentally friendly options.         | N                    | The preliminary design principles presented at the Summer 2024 Consultation have been developed into General Design Principles (applying to the entire Project) and Site-Specific Design Principles (providing more detail on a site-specific level or where a design commitment only applies to a particular site) which are set out in the Design Principles Document (Document reference 5.11, DCO Volume 5). These would control the detailed design of the Project following approval of the DCO application and cover the themes of sustainability. |
| Wider community | PDP07      | Respondents gave positive feedback, expressing trust in the experts and confidence in the design principles. Safeguarding the local site environments and the underlying important chalk aquifer by appropriate engineering mitigation designs was also highlighted.                                                                    | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Wider community | PDP08      | Respondents raised concern about the use of plastic materials, stating that plastic cannot be used as it has a limited lifecycle. Suggestions were made to integrate the infrastructure as fully as possible into the landscape, including the use of tree planting to help above-ground sites blend in and support nature. It was also | Y                    | The Design Principles set out in the Design Principles Document (Document reference 5.11, DCO Volume 5) include the Applicant's commitments regarding sustainability, visual impacts, and landscape reinstatement.<br><br>The operational maintenance approach for the Project is set out in the Operational Environmental Management Plan (Document                                                                                                                                                                                                      |

| Consultee | Issue code | Summary of issue raised                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | suggested that turf reinstatement should be carried out to an equivalent or better standard than existing conditions. |                      | <p>reference 7.7, DCO Volume 7) The components of the Project are expected to have a design life of up to 100 years, (however the operational life of the Project could be longer than this) after which the components would be checked to inform any maintenance requirements beyond this period.</p> <p>As per Design Principle GDP_11, the detailed design is committed to adopt an approach that maximises integration into the existing landscape. Where vegetation removal cannot be avoided, reinstatement planting would be undertaken in accordance with Design Principle GDP_17. The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) provides further information on landscape reinstatement.</p> <p>The Design Principles Document (Document reference 5.11, DCO Volume 5) sets out the list of environmental mitigation and enhancement works that would be delivered by the Project. This has been informed by the findings of the ES.</p> |

**Table F29-12 Summary of issues raised on the theme of the location of the proposed pipeline routes and the Applicant's response**

| Consultee                                                                                    | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                           |            | transmission, as the Pipeline would be closer to the surface. However, it was suggested that this risk could be mitigated through passive management measures close to the source. |                      | <p>(including disturbance of gases), and any mitigation measures that are required. The construction methods used to construct the WRP site and associated pipelines, in proximity to the historic landfill at the WRP site, would seek to avoid mobilising potential contaminants, including gases. Mitigation measures to address this during the construction phase are set out in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p> <p>This approach has been agreed, in principle, with the Environment Agency (EA) and Natural England (NE). HBC agrees, in principle, with the proposed approach pending review of the environmental measures secured in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), details of the Outline Foundation Works Risk Assessment (Document reference 7.4, DCO Volume 7) and mitigation measures set out in ES Chapter 11 Land quality and ground conditions (Document reference 6.1, DCO Volume 6).</p> |
| South Downs National Park | PPRS04     | The respondent stated that the South Downs National Park is an important landscape, given the highest level of                                                                     | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Consultee                  | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Authority (SDNPA)          |            | protection, and it was welcomed that the proposed Pipeline route has moved outside of the National Park.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Historic England (HE), HBC | PPRS05     | <p>It was suggested that, while the underground Pipeline parameters provided were useful, the Applicant should provide full construction details for all associated developments, including size, depth, materials, and techniques, to adequately assess potential impacts on both designated and undesignated heritage assets.</p> <p>Regarding the pipeline's design, a 200m above-ground section between Mill Lane and Bedhampton Springs in the preferred option was acknowledged. It was suggested that this section, if drilled accurately, could act as a natural 'fail-safe' to mitigate gas migration risks on Pipeline B before it passes under sensitive properties.</p> <p>Concerns were raised related to tunnelling in the Upper Chalk unit, which is part of the principal aquifer, particularly regarding structural voids forming due to tunnelling, potentially leading to erosion and new voids over time. Mitigation strategies</p> | Y                    | <p>The design of the Pipeline has been informed by ground investigations to identify risks relating to ground conditions, geology, and groundwater.</p> <p>Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project, as it is now proposed to use Portsmouth Water's Pipelines instead.</p> <p>The DCO application sets out the parameters for the Pipeline and Above Ground Plant (AGP) and the construction methodology for these. These are set out in ES Chapter 3 Description of Proposed Development, Volume I (Document reference 6.1, DCO Volume 6), which forms the basis of the assessment in the subsequent technical chapters of the ES.</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>suggested monitoring during tunnelling for groundwater management.</p> <p>It was noted that while the tunnelling route in Havant is unlikely to conflict with development sites, it does pass under several known and proposed sites, including mixed-use allocations and land safeguarded for environmental mitigation. It was suggested that the Applicant should consider how development proposals might impact the tunnelling process.</p> <p>Finally, it was noted that additional land underlain by the Pipeline has been proposed to the Council for consideration for development in the next Havant Borough local plan.</p> |                      | <p>The Applicant has continued to undertake engagement with HE and HBC on the Project and has prepared separate Statements of Common Ground (Draft Statement of Common Ground - Historic England (Document reference 5.8, DCO Volume 5) and Draft Statement of Common Ground - Havant Borough Council (Document reference 5.8, DCO Volume 5)) with both parties, which set out the current position of each party and the Applicant against relevant matters.</p>                      |
| HCC, HBC  | PPRS06     | <p>It was acknowledged that the Applicant is considering opportunities to integrate with new Pipeline infrastructure being proposed for the Havant Thicket Reservoir scheme. It was acknowledged that the preferred option for the Pipeline in Sections A and B is to use the pipes currently being proposed by Portsmouth Water, as this would have less impact on the Grade II* listed Sir George Staunton Country Park.</p>                                                                                                                                                                                                           | Y                    | <p>Following the approval in 2025 of Portsmouth Water's application for a Pipeline between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project and works around the Grade II* listed Sir George Staunton Country Park are avoided, as it is</p> |

| Consultee             | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|                       |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                      | now proposed to use Portsmouth Water's Pipelines instead.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Portsmouth Water (PW) | PPRS07     | <p>The respondent expressed concern that the proposed Pipeline route that would pass through the site at Farlington Water Treatment Works, across the top of strategic underground reservoirs. A localised adjustment to the proposed Pipeline route was suggested to avoid interface with Havant Thicket Reservoir and suitable protection of assets during construction and operation was requested.</p> <p>The respondent noted that the consultation material did not reflect the latest proposals, which had been updated to minimise impacts on the rugby pitches and emphasised that the proposed Order Limits need to be revised to reflect the updated alignment. It was stated that the updated drawings relating to the Portsmouth Water planning application had been shared with the Applicant.</p> | N                    | <p>The tunnel between the WRP site and Portsdown Hill would pass under Farlington Water Treatment Works. The tunnel would be at a substantial depth at this location and therefore is not expected to have an interface with Portsmouth Water's assets at this site.</p> <p>The Order Limits between Bedhampton Springs and Havant Thicket Reservoir reflect the approved design of Portsmouth Water's pipeline which is set out in the planning permission for this pipeline. The Order Limits are shown in sheets 1 to 3 of Works plans (Document reference 2.3, DCO Volume 2).</p> |
| HBC                   | PPRS08     | Regarding proposed Pipeline section C, the respondent stated that the proposed underground Pipelines between the Eastney Long Sea Outfall (LSO), Budds Farm Wastewater Treatment Works (WTW), and Water Recycling Plant (WRP)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | N                    | The Project does not interface with the North Portsea Island Coastal Scheme, and the tunnelled pipelines between Budds Farm WTW and the WRP would be sufficiently deep underground to ensure no interface with                                                                                                                                                                                                                                                                                                                                                                        |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                 |
|---------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                 |            | follow the alignment of the North Portsea Island Coastal Scheme. It was highlighted that ongoing engagement between Coastal Partners and the Applicant's Project team is crucial to ensure no adverse impacts on the integrity or functionality of these defences.                                                        |                      | the coastal defences in the vicinity of the Project.                                                                                                                                                                                                                                     |
| Fareham Borough Council (FBC)   | PPRS09     | General comments were made regarding proposed Pipeline section F, the respondent stated that the route of the Pipeline passes through a relatively undeveloped part of Fareham Borough, passing east to west from Portsdown Hill before passing under the River Wallington towards the IPS-F, to the east of Albany Farm. | Y                    | The Applicant has noted this comment. This Pipeline route in this location has been designed to consider the landscape character of the area and heritage assets.                                                                                                                        |
| Upham Parish Council            | PPRS10     | The respondent stated that they had a particular interest in proposed Pipeline section K, and that they had no problems in principle with the proposed Pipeline routes.                                                                                                                                                   | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                    |
| Eastleigh Borough Council (EBC) | PPRS11     | Regarding proposed Pipeline section L, the respondent stated that the proposed route passes under fields going north of a Site of Interest for Nature Conservation (SINC) and south of Marwell Park Pale, an Ancient Monument.                                                                                            | Y                    | The Applicant has undertaken engagement with EBC to explain the design to the south of Fisher's Pond considering the historic environment, the Bow Lake watercourse and the Fielder's Farm SINC. This design development is set out in the Scheme Development Report (Document reference |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                             |            | It was also stated that there would be two locations where the proposed route would be tunnelled, both of which were said to hold mature trees: under Winchester Road and under Bow Lake north of Crowdhill. It was noted that because of the methods used in these locations, the respondent's only concerns related to the compounds. |                      | <p>5.10, DCO Volume 5). As highlighted by the respondent, trenchless construction would be used under Winchester Road (B3354) and Bow Lake, therefore avoiding the removal of trees and vegetation adjacent to these features. Sheet 23 of the Works plans (Document reference 2.3, DCO Volume 2) shows the construction compounds in this location, these have been sited to avoid the removal of trees and reduce impacts on habitats.</p> <p>Construction of the Project would be managed by an Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), which sets out the measures that would be implemented to avoid and reduce environmental impacts, including those related to construction compounds.</p> |
| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                                                                                                                                                                                                                                         |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PILs                                                        | PPRS1<br>2 | Respondents expressed opposition to the proposed Pipeline routes in general, with one respondent stating the Pipelines were a 'waste of time'. Concerns were raised that the proposed Pipeline is too long, that there would be impacts to the community, and that sections of the Pipeline would                                       | N                    | The Applicant has endeavoured for the Pipeline routes to be as short as is practicable and has considered this alongside other technical and environmental factors, as well as reducing impacts on landowners' existing operations. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process                                                                                                                                                                                                                                                                                                                                                                                                                        |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | pass through land owned by respondents, therefore disturbing livestock.                                                                                                                                                                                          |                      | that has been undertaken to develop the pipelines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| PILs      | PPRS1<br>3 | It was stated that the proposed Pipeline routes are a reasonable compromise ' <i>to avoid massive disruption and damage.</i> ' More detail was requested regarding the exact route of the Pipeline.                                                              | N                    | The Works plans (Document reference 2.3, DCO Volume 2) set out the Order Limits and areas for each component of the Project including the pipelines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| PIL       | PPRS1<br>4 | Clarification was requested regarding whether the respondent's land, located on the south west side of Winchester Road, Upham, would have inspection chambers on it. It was stated that they would not be agreeable to their land being accessible indefinitely. | N                    | <p>The Applicant may require access to the Pipeline to undertake maintenance or repair in the event of an emergency. Dependent on the final design of the Pipeline, permanent valve chambers may be required.</p> <p>The Applicant is engaging with landowners and seeking to negotiate voluntary land agreements for the required rights, including access, with affected landowners. Please see the Pre-application Land and Rights Negotiations Tracker (Document reference 4.4, DCO Volume 4) for the current status of such negotiations. Compulsory acquisition powers are being sought to ensure the Project can be delivered where voluntary agreements cannot be concluded. The need for such powers is addressed further in the Statement of Reasons (Document reference 4.1, DCO Volume 4).</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PILs      | PPRS1 5    | <p>Regarding Pipeline section B, respondents stated that the Pipeline route, to be tunnelled beneath Hooks Lane playing fields, would not affect Havant Rugby Club's activities, as it does not interfere with the playing fields themselves.</p> <p>It was suggested that there was a lack of consultation with local residents regarding the proposed route. A question was raised about a route along Hermitage Stream, rather than the proposed one.</p> | N                    | Following the approval in 2025 of Portsmouth Water's application for a Pipeline between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project as it is now proposed to use Portsmouth Water's Pipelines instead.                                                                                                                                          |
| PIL       | PPRS1 6    | Regarding Pipeline Section E, it was suggested that the Pipeline continues on PCC's land rather than entering Southwick Estate's land. It was viewed that land owned by public bodies should be utilised for public good before privately owned land. It was suggested that the tunnel entrance labelled "E/D" is moved to Portsmouth Water's land (south of the current route) or PCC's land.                                                               | N                    | If the Pipeline was located in this area the construction works would be closer to Fort Widley which is a scheduled monument, and the Pipeline would be located at a higher topographic point and the works would be more visible from the South Downs National Park, both of which have a very high level of protection under relevant national planning policy. The Pipeline route was selected to reduce impacts on Fort Widley and the South Downs National Park. The process to locate the pipelines is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5). |
| PIL       | PPRS1 7    | Regarding proposed Pipeline section F, it was suggested that part of the route adjacent to Forest Lane and Crockerhill                                                                                                                                                                                                                                                                                                                                       | N                    | Where practicable the Applicant has located the Pipeline to align with field boundaries, however this is not possible in all locations                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                      | reference 7.1, DCO Volume 7). The Order Limits in this location are shown on sheet 16 of the Works plans (Document reference 2.3, DCO Volume 2).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| PILs      | PPRS2<br>1 | <p>Regarding Pipeline section H, it was suggested that the Pipeline route would minimise disturbance if it followed field boundaries due to long term development potential of the land.</p> <p>Amendments to the route were requested to minimise the impacts on properties, specifically residential properties along Blind Lane. There was a request for the Pipeline route to be amended through Shedfield/Shirrell Heath and stay on the same side of the track as Shirrell Farm and go behind Long Copse View and Kestral Rise.</p> <p>It was suggested that the Pipeline section H could have been better designed with straighter lines.</p> | N                    | <p>Where practicable the Applicant has located the Pipeline to align with field boundaries, however this is not possible in all locations due to other technical or environmental considerations. The site selection process for the Pipeline considered residential developments that are allocated in a local authority's adopted or emerging local plan, or are subject to a planning application or permission. In some locations, landowners have highlighted to the Applicant that land is being promoted for residential development, however in the absence of an allocation in a local plan or a planning application, the Applicant does not have certainty that the residential development would materialise.</p> <p>Locating the Pipeline route to the east of Long Copse View and Kestral Rise would result in significantly more vegetation being lost during the construction phase, therefore the proposed design was selected to reduce vegetation loss.</p> |

| PILs      | PPRS2<br>2 | Respondents expressed opposition to Pipeline section J. It was outlined that it would impact respondents' properties and render arable farmland and a small equestrian unit redundant during and after Pipeline installation. | N                    | <p>Where practicable the Applicant has located the Pipeline to align with field boundaries, however this is not possible in all locations due to other technical or environmental considerations. In this location, the Applicant considered various options to cross Winchester Road (B2177). This design was selected as it has the least environmental impact by reducing vegetation loss and being a greater distance from protected species. This design also avoids introducing multiple changes in direction which adversely impact the hydraulics of the Pipeline.</p> <p>ES Chapter 12 Land Use and Agriculture (Document reference 6.12, DCO Volume 6) outlines the analysis undertaken to understand the likely significant effects on land use and agriculture during the construction, operation and maintenance of the Project. The Applicant notes that the majority of the effects would be temporary and arise from the installation of the pipelines, as well as construction compounds. Once construction has been completed, the land would be returned to its pre-existing</p> |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|-------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>agricultural land use as far as reasonably practicable.</p> <p>The Applicant continues to engage with affected parties to understand the potential impacts of the construction and operation of the Project on them and discuss their individual circumstances further. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out how the Project would avoid, reduce and mitigate effects on the environment and surrounding area during construction.</p> <p>Those affected by compulsory acquisition or temporary possession under the DCO may be entitled to compensation in line with the Compensation Code and relevant statutory provisions. The Applicant has included the minimum amount of land necessary to deliver the Project within the Order Limits whilst ensuring suitable flexibility is retained until the detailed design has been confirmed. The Applicant would only exercise the compulsory acquisition and temporary use powers over land actually required to deliver the authorised development.</p> <p>The Applicant aims to work collaboratively with landowners to address concerns and agree practical solutions wherever</p> |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                      | practicable. Affected landowners are also entitled to seek independent professional advice and reimbursement of associated costs may be provided as part of the negotiation of voluntary agreements or in accordance with established law and practice if the DCO is granted.                                                                                                                                                                                                                                                            |
| PIL       | PPRS2<br>3 | Regarding Pipeline Section J, the Applicant's information indicates that the working corridor extends 20 m either side of the pipeline. The pipeline route appears to bend around the edge of a golf course and crosses through the centre of Five Oaks Farm.                                                                                                                                                                                                                                                                                                                      | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| PILs      | PPRS2<br>4 | <p>One respondent requested that, if their property is affected by the proposed Pipeline, the alignment should be moved as far south as possible. It was requested that the Pipeline run alongside, and as close as practicable to their southern boundary. The respondent provided a plan to support their feedback.</p> <p>A further respondent also requested that the Pipeline be moved as far south as possible to follow their southern boundary. It was also noted that the affected 8-acre paddock provides half of their summer grazing for up to 50 pedigree cattle,</p> | N                    | <p>Where practicable, the Applicant has located the Pipeline to align with field boundaries, however this is not possible in all locations due to other technical or environmental considerations. The process to locate the pipelines is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5). Following the Summer 2024 Consultation, the Order Limits were amended to avoid land identified by Hillcrest Farm.</p> <p>In this area of the pipeline route, the design has also been guided by reducing</p> |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                        |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>making it vital to farm operations. It was also queried whether the Pipeline could avoid Hillcrest Farm and suggested an alternative alignment through Ash Farm.</p> <p>Another respondent requested that the Pipeline be amended to run as close as possible to the northern and eastern boundaries of their unit. The respondent provided a plan to support their feedback.</p>                                                                                                                                                     |                      | environmental impacts, particularly on protected species.                                                                                                                                                                                                                                                                                                                       |
| PILs      | PPRS2 5    | <p>There was concern regarding Pipeline sections J and K, and it was stated that the proposed Pipeline route would render almost 50% of a farm's best grazing/pastureland unusable.</p> <p>Amendments to the route were requested by respondents to minimise the impact on their property. Two alternative options were proposed; either west and southern side of the sewage works, to the north side of Treefield Farm, or a minor diversion following the Park Lug from the tunnel shaft on the southern side of the Botley Road.</p> | Y                    | Having regard to consultee feedback, the Pipeline route was amended in this location to pass to the north of Treefield Farm. This was due to the presence of veteran trees and the approved expansion of polytunnels to the north of the River Hamble. The process to locate the pipelines is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5). |
| PILs      | PPRS2 6    | There was opposition to proposed Pipeline section K. Respondents stated that no consideration had been given to the routing of the pipeline, and that the proposed route would sever land, cause issues with                                                                                                                                                                                                                                                                                                                             | Y                    | Where practicable the Applicant has located the Pipeline to align with field boundaries, however this is not possible in all locations due to other technical or environmental considerations. The process to locate the                                                                                                                                                        |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>drainage and mature boundary hedges, and reduce future possibilities of farm building development.</p> <p>Amendments to the route were requested by respondents to minimise the impact on their land and businesses.</p>                                                                                                                                                                                                                                                                                                               |                      | <p>pipelines is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).</p> <p>In Section K the Pipeline was amended to have regard to feedback by avoiding the expansion of a soft fruit farm and reduce impacts on land used for cattle grazing.</p>                                                                                                                                                                        |
| PILs      | PPRS2 7    | While it was acknowledged that the Pipeline route is necessary, alternative routes for the Pipeline were proposed in order to avoid mature oak trees, electricity poles, bat activity, dormice, an old well adjacent to Alma Lane, and other obstacles on their land in Pipeline section K. Requests to move Pipeline section K to boundaries of land, including Park Lug. It was viewed that the alternative routes would ensure the continuation of their farming operation and save the Applicant considerable cost and inconvenience. | Y                    | <p>Having regard to consultee feedback, south of Winters Hill, the Pipeline route was amended to run parallel with the Park Lug and reduce impacts on fields.</p> <p>At Alma Lane, the location of the Pipeline was selected to avoid residential properties, reduce vegetation loss, and avoid existing utilities.</p> <p>The process to locate the pipelines is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).</p> |
| PILs      | PPRS2 8    | There was opposition to Pipeline section L. Respondents stated that the proposed Pipeline route would run through residential gardens, private land and farms, namely Thistleridge Farm and Highbridge Farm, with concerns that it would render land unusable for grazing.                                                                                                                                                                                                                                                                | Y                    | Having regard to consultee feedback, the Pipeline route was amended to align with field boundaries at Thistleridge Farm and Highbridge Farm where practicable considering other technical and environmental factors.                                                                                                                                                                                                                                    |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|                                                  |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      | The process to locate the pipelines is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| PILs                                             | PPRS29     | Regarding Pipeline section L, it was suggested that amendments to the route be made to minimise the impact on properties and businesses. These amendments included pushing the route as far south as possible to align with filed boundaries, minimising the easement width and working width, following the line of existing infrastructure.                                                                                                                                                                                                             | N                    | <p>Where practicable the Applicant has located the Pipeline to align with field boundaries, however this is not possible in all locations due to other technical or environmental considerations.</p> <p>The process to locate the pipelines is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).</p>                                                                                                                                                                                                                                                                                                   |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Wider community                                  | PPRS30     | <p>Respondents expressed opposition to the proposed Pipeline route in general. Concerns were raised about the environmental impacts on sensitive areas such as agricultural land.</p> <p>There was criticism that the proposed Pipeline route was not part of the original plan for Havant Thicket Reservoir, and it was viewed that it would negatively affect Havant Thicket Reservoir's benefits.</p> <p>It was viewed that more sustainable and cost-effective solutions could be considered. The proposed Pipeline route was deemed unnecessary.</p> | N                    | <p>Where practicable the Applicant has located the Pipeline to align with field boundaries, however this is not possible in all locations due to other technical or environmental considerations.</p> <p>The process to select the Project and develop the Pipeline routes is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5). The process has sought to reduce impacts on the environment and landowners' operations.</p> <p>The Project is a separate project to Havant Thicket Reservoir, which has already received planning permission. The Project is subject to a separate approval. The ES</p> |

|                 |            |                                                                                                                                                                                                                                                                                                     |                      | considers the impacts of storing recycled water within Havant Thicket Reservoir.                                                                                                                                                                                                                                                                                                                                                                                                 |
| Wider community | PPRS3 1    | Respondents expressed neutral sentiment towards the proposed Pipeline route. Respondents had no opinion, were indifferent to the route, nor did not feel knowledgeable enough to provide feedback.                                                                                                  | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Wider community | PPRS3 2    | Respondents supported the proposed Pipeline routes. It was viewed as well-considered and acceptable. The use of underground Pipelines in sensitive areas was appreciated, and it was acknowledged that the routes had been chosen to minimise the impact on natural habitats and residential areas. | N                    | The Applicant has noted this comment. The design of the pipelines has sought to reduce impacts on the environment, and trenchless construction techniques would be used to avoid surface level works in sensitive areas.                                                                                                                                                                                                                                                         |
| Wider community | PPRS3 3    | Comments suggested alternative Pipelines from Peel Common Water Treatment Works to lessen impact on the South Downs National Park. Respondents suggested that the proposed Pipeline routes should take advantage of existing routes to limit disruption to local communities and sports clubs.      | N                    | The Applicant considered Option B.5 as part of the Options Appraisal Process prior to Gate 2 of the RAPID gated process. This option comprised water recycling using treated wastewater from Peel Common Water Treatment Works and Budds Farm WTW, however this option was not progressed due to its lower flexibility and scalability and additional development impacts compared to Option B.4. Therefore, a pipeline from Peel Common WTW does not form part of this Project. |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                                                                                                               |                      | <p>The Pipeline has been located to reduce impacting community facilities such as open space and sports clubs. The respondent suggests 'taking advantage of existing routes', which would not be practicable due to the size of the working width required to lay the Pipeline, and this would have a greater impact on local communities.</p> <p>The process to select the Project and locate the pipelines is set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).</p>                                                                                                                                                                               |
| Wider community | PPRS34     | There was concern that the proposed Pipeline from Budd's Farm to the WRP posed a risk of releasing landfill gases. It was viewed that there was a lack of detail regarding washouts and potential odour issues. It was viewed that they could have a significant adverse impact on local water courses and Langstone Harbour, in the event of Pipeline bursts or maintenance. | N                    | <p>The construction methods used to construct the WRP site and associated pipelines would seek to reduce impacts on the environmental sites within Langstone Harbour and avoid mobilising potential contaminants, including gases and leachate. An assessment of the potential for impacts as a result of construction of the WRP site is set out in ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6). This also sets out the mitigation measures that would be implemented during the construction phase, which are secured in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Wider community | PPRS4 1    | <p>It was viewed that Pipeline Sections B and C are wrongly located for infrastructure disturbance, and it was suggested that section A should link across to follow the route in from section D. Suggestions were made to avoid Portsdown Hill SSSI and residential properties.</p> <p>It was also viewed that the consultation documents did not include details regarding the likely method(s) or depths of tunnelling along Pipeline Section D.</p> | N                    | <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process undertaken to locate the sections of the pipeline. The proposal for a direct Pipeline connecting the Water Recycling Plant (WRP) site and Havant Thicket Reservoir was removed from the Project following the approval of Portsmouth Water's Pipelines between Bedhampton Springs and Havant Thicket Reservoir. Therefore, Section A and Section B as presented at the Summer 2024 Consultation no longer form part of the Project. Section B now comprises Pipelines between the WRP site and Bedhampton Springs, and there is no Section A within the Project.</p> <p>Section C comprises the Pipelines between Budds Farm WTW and the WRP site. Trenchless construction under the Hermitage Stream is proposed for these pipelines, to limit impacts. An option to locate the pipelines within the road network was considered, but this was not progressed due to the potential for major disturbance to the highway network.</p> <p>All pipelines in this area avoid residential properties and the Portsdown Hill SSSI.</p> |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | PPRS4 5    | Respondents expressed neutral sentiment towards proposed Pipeline Section G due to a perceived lack of engineering expertise, and that the route must be logically devised by experts.                                                                            | N                    | The Applicant has noted this comment. Subject matter experts have informed the process to locate the Pipeline.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Wider community | PPRS4 6    | Regarding proposed Pipeline Section G, the importance of recording archaeological evidence of Roman roads and any associated structures was emphasised, and the Pipeline excavation was seen as an ideal opportunity to confirm the location of the intersection. | N                    | ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) considers the historic environment effects of the Project, including any impacts on buried archaeology and measures to mitigate these. The draft DCO (Document reference 3.1, DCO Volume 3) includes a pre-commencement requirement that requires a detailed written scheme of investigation(s) (WSI) to be produced in accordance with the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7) to be approved by the relevant local planning authority. |
| Wider community | PPRS4 7    | A respondent living between proposed Pipeline Sections H and J questioned the decision to change the routes and an explanation was requested.                                                                                                                     | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate Section H: Wickham to Shedfield and J of the Pipeline between the WRP site and Havant Thicket Reservoir. Section 5.7 of the Scheme Development Report (Document reference 5.10, DCO Volume 5) is relevant to the area in question, the Winchester Road (B2177) Crossing. It is explained that following                                                                                                                                               |

| Consultee       | Issue code | Summary of issue raised                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                       |                      | Summer 2022 Consultation feedback, the Applicant looked at alternative routes to avoid disruption to an existing business. The scheme development process identified that the alternative route to the south of the route presented at the Summer 2022 Consultation was preferred and was therefore progressed.                                                                                                                                                         |
| Wider community | PPRS4 8    | Regarding the proposed Pipeline section J, there was concern about the use of the land, and the 'twisty' nature of the route.         | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate Section J: Shedfield to the River Hamble of the Pipeline between the WRP site and Havant Thicket Reservoir. The pipeline has been designed considering environmental impact, technical and hydraulic constraints and reducing impact on landowners, which is why the Pipeline is not a direct straight line.                              |
| Wider community | PPRS4 9    | Regarding the proposed Pipeline section J, it was stated that it is likely to cut across the route of Roman roads at three locations. | N                    | ES Chapter 7 Archaeology and cultural heritage, Volume I (Document reference 6.1, DCO Volume 6) considers the historic environment effects of the Project, including any impacts on buried archaeology and measures to mitigate these. The draft DCO (Document reference 3.1, DCO Volume 3) includes a pre-commencement requirement that requires a detailed WSI to be produced in accordance with the Outline Written Scheme of Investigation (Document reference 7.6, |

|                 |            |                                                                                                                                                                                                                            |                      | undertaken to locate Section L: Lower Upham to Brambridge of the Pipeline between the WRP site and Havant Thicket Reservoir. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate the pipelines.                                                                                                                         |
| Wider community | PPRS5 3    | Regarding the proposed Pipeline section L, it was viewed that the route seemed reasonable. No further concerns were raised.                                                                                                | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                             |
| Wider community | PPRS5 4    | Regarding the proposed Pipeline section L, there was confidence that experts had selected the best route, and it was viewed as carefully planned.                                                                          | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                             |
| Wider community | PPRS5 5    | Regarding the proposed Pipeline sections L and M, the routes were viewed positively overall, but it was highlighted that the details are crucial. There was hope that there is scope for adjustments to refine the routes. | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate Section L and M of the Pipeline between the WRP site and Havant Thicket Reservoir.<br><br>The Applicant consulted on refinements to the pipeline routes at the Spring 2025 Consultation, following the consideration of feedback from the Summer 2024 Consultation. |
| Wider community | PPRS5 6    | Regarding the proposed Pipeline section M, it was viewed that the final part of the                                                                                                                                        | N                    | The Pipeline has been located to reduce environmental effects as far as practicable.                                                                                                                                                                                                                                                                                                              |

| Consultee       | Issue code | Summary of issue raised                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | Pipeline under the Itchen at Brambridge would have significant environmental effects.                                                                 |                      | <p>The ES sets out an assessment of the effects arising from the construction of the Project in this location.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out that trenchless construction would be used for the crossing of the River Itchen. The location of the crossing has been informed by ground investigation, and the design would seek to avoid the chalk geology which supports the river. The construction compounds to support the trenchless crossing have been located away from the river corridor and associated habitats. No significant environmental effects are reported, as set out in ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6).</p> |
| Wider community | PPRS5 7    | Regarding the proposed Pipeline Section M: Brambridge to Otterbourne Water Supply Works (WSW), respondents expressed a positive sentiment towards it. | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

**Table F29-13 Summary of issues raised on the theme of the process of developing the proposed Pipeline routes and the Applicant's response**

| Consultee                                                       | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                                                      | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Hampshire County Council (HCC), Natural England (NE)           | PPRP01     | HCC acknowledged that the Applicant had asked consultees about the Project design, including the proposed Pipeline routes and the process undertaken to identify the routes.<br><br>In addition, NE queried if borehole surveys would be required to inform the Pipeline routes.                                                                                           | Y                    | The design of the Project has been informed by ground investigations to identify the ground conditions. This has informed the location of the Pipelines, particularly sections that would be constructed using trenchless and tunnelling construction.<br><br>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate the pipelines.                                                                      |
| Winchester City Council (WCC)                                  | PPRP02     | WCC considered the overall proposed Pipeline route acceptable but reserved full comments until the final reports have been completed and assessed.                                                                                                                                                                                                                         | N                    | A full assessment of the Project is set out in the Environmental Statement (ES). A Scheme Development Report (Document reference 5.10, DCO Volume 5) has been prepared by the Applicant which details the process undertaken to develop the design of the Project.                                                                                                                                                                                                              |
| Eastleigh Borough Council (EBC), Portsmouth City Council (PCC) | PPRP03     | Respondents expressed a neutral sentiment regarding how heritage has been considered regarding the proposed Pipeline route. EBC considered, in general, that the proposed Pipeline route managed to avoid anything of heritage value in Eastleigh Borough, but suggested the short run and turn under the Winchester Road by Bow Lake would be better avoided if possible. | Y                    | The Applicant has undertaken further engagement with EBC to explain the design at the crossing of Winchester Road (B3354) south of Fisher's Pond. This considered both the technical engineering constraints, such as the crossing of the highway and existing utilities, as well as the historic environment.<br><br>The Pipeline is approximately 400m from Fort Widley. At the closest point, the Order Limits for construction compound E-2 are over 250m from Fort Widley. |

|           |            | independent verification confirms that it would pass through the clay bedrock.                                                                                                                                                                                                                         |                      | associated Source Protection Zone 1, and the SDNP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| PIL       | PPRP08     | The respondent expressed a positive sentiment towards the process undertaken to identify the proposed Pipeline routes stating that the process looked satisfactory.                                                                                                                                    | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| PIL       | PPRP09     | The respondent described the process as substandard and commented that as the landowner's representative, they had not received any communication regarding the sequential testing of alternative routes, nor any justification for the chosen alignment or why it could not be shifted further south. | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the criteria that have been used to develop the design of the Project, which includes various technical, environmental and planning criteria which has been informed by national and local policy. This has included considering areas of flood risk. The Project has sought to avoid intersecting with high-risk flood zones, however where this is not possible mitigation measures set out in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) would be implemented. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the justification for why sections of the Pipeline route are located in high-risk flood zones. |
| PIL       | PPRP10     | The respondent commented that there had been a change to the original proposed Pipeline route at Section H and requested details on the rationale for this change, as                                                                                                                                  | N                    | The site selection process for the Pipeline considered residential developments that are allocated in a local authority's adopted or emerging plan or are subject to a planning                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | this land has considerable development potential, whereas the area north of Blind Lane is less likely to be used for housing to meet Wickham's future housing needs.                                             |                      | <p>application or permission. In some locations, landowners have highlighted to the Applicant that land is being promoted for residential development, however in the absence of an allocation in a local plan or a planning application, the Applicant does not have certainty that the residential development would materialise.</p> <p>The Pipeline route was amended in this location as the options that were on the north western side of Titchfield Lane and Blind Lane would have greater ecological impact due to proximity to protected species and ancient woodland, and would have a greater historic environmental impact because there are two Roman Roads in this area, as opposed to one on the southeastern side.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate the pipelines.</p> |
| PIL       | PPRP1<br>1 | The respondent stated that the preferred proposed Pipeline route in June 2022, which involved a small part of the Welborne development, had been dropped because of its potential impact on the new development. | N                    | The Applicant has noted this comment. The design of the Pipeline was amended to minimise the interface with the Welborne Garden Village development following the Summer 2022 Consultation. The Order Limits provide flexibility for construction areas, environmental mitigation and access to be                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Wider community                                  | PPRP1 2    | <p>Respondents expressed a negative sentiment towards the process undertaken to select the proposed Pipeline route. It was viewed that the approach lacked transparency and consideration, as there were concerns about the impacts on residents, communities and wildlife.</p> <p>It was stated that the redaction of information on Gate 2 provided by the Applicant casted doubt and mistrust regarding the proposed Pipeline route. It was suggested that the proposed Pipeline route should be published before the route is finalised to enable genuine public consultation. The need for the entirety of the proposed Pipeline was questioned, and it was argued that there was a more sustainable and cost-effective water transfer solution.</p> | N                    | <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the criteria that have been used to develop the design of the Project, which includes various technical, environmental and planning criteria which have been informed by national and local policy.</p> <p>The Applicant presented the proposed draft Order Limits at the Summer 2024 Consultation, which included proposed pipeline routes and sites for the Above Ground Plant (AGP). This represented all the land that would be required to construct and operate the Project. The Summer 2024 Consultation was supported by a Preliminary Environmental Information Report which set out an initial and thorough assessment of likely environmental impacts of the Project. No information in the pre-application stage consultations held in 2022, 2024, 2025 and 2026 was redacted.</p> <p>Following the Summer 2024 Consultation, the Applicant has held further consultations setting out the minor refinements that have been made to the Project. The Applicant has</p> |

| (EHDC),<br>Rowlands<br>Castle Parish<br>Council |            | It was stated that there would be a loss of a unique biodiversity opportunity to create the UK's first chalk spring-fed reservoir. |                      | <p>to understand the impact of storing recycled water on Havant Thicket Reservoir and the relevant downstream watercourses.</p> <p>Environmental Statement (ES) Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) provides an assessment of the likely significant effects on the water environment from the Project, including releases from the Water Recycling Plant (WRP) into Havant Thicket Reservoir.</p> <p>Updated modelling, undertaken since the Environmental Water Quality Report for the Spring 2025 Consultation, includes the use of a High Rejection Rate Membrane (HRRM) at the WRP. This demonstrates that the addition of the HRRM would avoid the accumulation of phosphorus within Havant Thicket Reservoir and prevent Havant Thicket Reservoir switching to a eutrophic state (and the risk of algal blooms) with the addition of recycled water. Water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the WFD Directions. Operation of the Project would not, therefore, result in significant adverse effects or a deterioration in water quality Havant Thicket Reservoir.</p> <p>The Havant Thicket Reservoir model includes a predicted water quality envelope for</p> |

|                         |            | ensure that Portsmouth Water retain sufficient control of the Havant Thicket Reservoir.                                                                                                                                                                                                                                                                                    |                      | the Applicant and Portsmouth Water regarding use of Havant Thicket Reservoir.                                                                                                                                                                                                                                                                                                                                                                                                            |
| Langstone Harbour Board | UHTR04     | The Langstone Harbour Board noted that communities were supportive of the initial proposal for the Havant Thicket Reservoir and recognised the need to supplement existing water supplies and the promised biodiversity improvements. However, the respondent stated that <i>'the addition of a WRP has altered the perception of the initial proposal.'</i>               | N                    | The Applicant has noted this comment. The Applicant is aware that communities have mixed views on the Project. The Applicant has sought to alleviate concerns wherever possible through its engagement and consultation, supported by assessment work which considers the potential impacts of storing recycled water in Havant Thicket Reservoir. The Consultation Report sets out how the Applicant has had regard to feedback from the Langstone Harbour Board and local communities. |
| Portsmouth Water        | UHTR05     | Portsmouth Water noted that the Havant Thicket Reservoir is being developed in collaboration with the Applicant. It was noted that significant progress has been made in preparation for construction in Summer 2025.<br><br>It was highlighted that Havant Thicket Reservoir will protect rare river habitats and provide a green leisure facility for local communities. | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Havant Borough          | UHTR06     | HBC emphasised that consideration should be given to the potential changes that the Project could have on the anticipated                                                                                                                                                                                                                                                  | N                    | The Applicant consulted on an Environmental Water Quality Report at the Spring 2025 Consultation which set out that, with the                                                                                                                                                                                                                                                                                                                                                            |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee     | Issue code | Summary of issue raised                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Council (HBC) |            | benefits of the Havant Thicket Reservoir, such as the opportunity for habitat creation, reduced nitrogen load downstream and visitor access. |                      | <p>implementation of mitigation measures, the predicted changes in water quality parameters are not expected to impact the opportunity for habitat creation at Havant Thicket Reservoir. Updated modelling, undertaken since the Environmental Water Quality Report for the Spring 2025 Consultation, includes the use of a High Rejection Rate Membrane (HRRM) at the WRP. This demonstrates that the addition of the HRRM would avoid the accumulation of phosphorus within Havant Thicket Reservoir and prevent Havant Thicket Reservoir switching to a eutrophic state (and the risk of algal blooms) with the addition of recycled water. Water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the WFD Directions. Operation of the Project would not, therefore, result in significant adverse effects or a deterioration in water quality Havant Thicket Reservoir.</p> <p>The Havant Thicket Reservoir model includes a predicted water quality envelope for compensatory flows released downstream. These results demonstrate that the release of water from the WRP into Havant Thicket Reservoir would not result in significant adverse effects or deterioration in chemical or biological status in the water bodies</p> |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

|           |            | <p>recycled water was not a good way to protect the environment.</p> <p>One of the respondents stated that whilst the Project should not be needed it was acknowledged that it is needed considering circumstances. It was also stated that the use of recycled water in the Havant Thicket Reservoir was not agreed during the initial planning stage and viewed this as a poor development move.</p> |                      | <p>Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project and explains how the Project is the only option available to deliver the scale of water resource required in the timescales needed. Use of Havant Thicket for the storage or recycled water forms part of the Project for which the Applicant is making a DCO application for.</p> <p>The Applicant is aware of the concern that has been raised on the potential for impacts to water quality in Havant Thicket Reservoir. Updated modelling, undertaken since the Environmental Water Quality Report for the Spring 2025 Consultation, includes the use of a High Rejection Rate Membrane (HRRM) at the WRP. This demonstrates that the addition of the HRRM would avoid the accumulation of phosphorus within Havant Thicket Reservoir and prevent Havant Thicket Reservoir switching to a eutrophic state (and the risk of algal blooms) with the addition of recycled water. Water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the WFD Directions. Operation of the Project would not, therefore, result in</p> |

| Wider community                                  | UHTR09     | <p>Respondents expressed opposition to the use of the Havant Thicket Reservoir for the storage of recycled water. Concerns were raised about whether there would be negative impacts on Havant Thicket Reservoir, including changes to temperature, salinity and the loss of a unique opportunity to create a chalk spring-fed reservoir.</p> <p>It was emphasised that while there was support for the Havant Thicket Reservoir project during the planning stage, this has ceased after the introduction of recycled water storage. It was suggested that the original plans for the Havant Thicket Reservoir should be preserved (i.e. the</p> | N                    | <p>The Applicant is aware of the concern that has been raised on the potential for impacts to water quality in Havant Thicket Reservoir. Updated modelling, undertaken since the Environmental Water Quality Report for the Spring 2025 Consultation, includes the use of a High Rejection Rate Membrane (HRRM) at the WRP. This demonstrates that the addition of the HRRM would avoid the accumulation of phosphorus within Havant Thicket Reservoir and prevent Havant Thicket Reservoir switching to a eutrophic state (and the risk of algal blooms) with the addition of recycled water. Water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the WFD Directions. Operation of the</p> |

|                 |            | to store recycled water is to lower the Applicant's costs.                                                                                                                                                                                                                                                                 |                      | <p>an options appraisal process to identify a water resources infrastructure solution capable of meeting the demand identified in the Applicant's WRMP. The Project was identified as the only option available which can deliver the scale of water resource required in the timescales needed. Augmenting the supply of water available from Havant Thicket Reservoir with the addition of recycled water provides considerably better value for money for customers than delivering a separate new water resource. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project.</p> <p>The Applicant held consultations on the Project in 2022, 2024, 2025 and 2026, setting out the intention to use Havant Thicket Reservoir to store recycled water.</p> |
| Wider community | UHTR13     | The respondent expressed support for the storage of recycled water in the Havant Thicket Reservoir. They emphasised that the water quality in Havant Thicket Reservoir will not deteriorate when mixed with recycled water. They added that the recycled water will be further treated to attain drinking water standards. | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | UHTR14     | <p>It was argued that the local community had been misled over the proposals for the Havant Thicket Reservoir which had received planning approval previously. The change in the role of Havant Thicket Reservoir from a chalk spring-fed reservoir to one that stores recycled water was criticised.</p> <p>Concerns were raised about the impact on recreational uses (i.e. water sports, fishing and swimming) and the local community.</p> | N                    | <p>The initial Havant Thicket Reservoir proposal, which was approved by HBC and EHDC, was for a spring-fed reservoir to enable the supply of water to the Applicant in times of drought. The Project seeks to make the best use of Havant Thicket Reservoir by using recycled water to supplement to quantity of water resources available. The Applicant initially proposed to utilise Havant Thicket Reservoir to store recycled water through the RAPID gated process. Within this process the Applicant undertook an options appraisal process to identify a water resources infrastructure solution capable of meeting the demand identified in the Applicant's WRMP. The Project was identified as the only option available which can deliver the scale of water resource required in the timescales needed. Augmenting the supply of water available from Havant Thicket Reservoir with the addition of recycled water provides considerably better value for money than delivering a separate new water resource. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project.</p> <p>The Applicant has undertaken assessments to understand the impact of storing recycled</p> |

|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                |                      | <p>water on Havant Thicket Reservoir and the relevant downstream watercourses. Overall, with the implementation of mitigation measures, the predicted changes in water quality parameters are not expected to result in any adverse changes to trophic status or changes in water body status within Havant Thicket Reservoir and therefore would not impact biodiversity. Therefore, the ecological and water environment benefits previously proposed by Havant Thicket Reservoir are not affected by the Project.</p> <p>Portsmouth Water is delivering and will be operating Havant Thicket Reservoir and will determine the extent and nature of public access – the Applicant's proposal to utilise Havant Thicket Reservoir for the storage of recycled water is not anticipated to change this position.</p> |
| Wider community | UHTR15     | The respondent welcomed the opportunity to create a significant public facility for active and passive recreation at the Havant Thicket Reservoir. They requested more information on the design and extent of the water body. | N                    | Havant Thicket Reservoir is a separate project which is being delivered by Portsmouth Water under a separate planning permission. Portsmouth Water are continuing to update local communities on the progress of Havant Thicket Reservoir's construction.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

**Table F29-15 Summary of issues raised on the theme of water quality at Havant Thicket Reservoir for the storage of recycled water and the Applicant's response**

| Consultee                                                       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                               |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Langstone Harbour Board, Rowlands Castle Parish Council         | WQHTR 01   | <p>Respondents raised concerns about the unknown impacts on water quality and biodiversity from adding recycled water to the Havant Thicket Reservoir.</p> <p>It was noted that nitrates in spring water would naturally break down in Havant Thicket Reservoir before flowing to the Harbour, but this benefit would be reduced under the new proposal as less spring water would be needed to be pumped up to Havant Thicket Reservoir.</p> | N                    | <p>Modelling shows that water quality in Havant Thicket Reservoir would be consistent with the definitions of 'high' or 'good' status for a lake water body in the Water Framework Directive (WFD) Directions. With the implementation of additional phosphorus removal measures at the Water Recycling Plant (WRP), operation of the Project would not change the predicted ecological status of the reservoir under the Water Environment Regulations.</p> <p>Water quality modelling of Havant Thicket Reservoir and compensation flows is presented and assessed in the Environmental Statement (ES) Chapter 19 Water Environment, Volume I (Document reference 6.1, DCO Volume 6) and ES Appendix 19.2 Water Environment Regulations Compliance Assessment, Volume II (Document Reference 6.2, DCO Volume 6). These assessments demonstrate that, with the implementation of additional phosphorus removal measures at the WRP, operation of the Project would not change the ecological status of the water</p> |

| Eastleigh Borough Council (EBC) | WQHTR 03   | EBC inquired about the water filtration process at the abstraction point to ensure all biota is retained in Havant Thicket Reservoir.                                                                           | N                    | It is currently assumed that coarse trash screens (150mm spacing) are to be provided at the Havant Thicket Reservoir extraction point. However, filtration of the biota is not proposed. Portsmouth Water are currently undertaking a risk review of debris and organic matter passing through the system.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|                                                       |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                      | <p>Portsmouth Water's impounding license is conditioned with measures to prevent entry of fish into Havant Thicket Reservoir.</p> <p>An Invasive Non-Native Species (INNS) Biosecurity Plan (Document reference 7.10, DCO Volume 7) is submitted with the DCO application which identifies an outline approach to INNS management for the Project, including the initial biosecurity standard for the Project.</p>                                                                                                                                                                                                                                                                                                                               |
| Environment Agency (EA), Havant Borough Council (HBC) | WQHTR 04   | <p>It was suggested that the water discharged from Havant Thicket Reservoir will alter the water chemistry downstream, and while it was viewed that this would not adversely impact ecology, it should be acknowledged as a significant change to existing conditions.</p> <p>The extent of improvement that could be achieved through infiltration reduction at the WRP was queried, in comparison to the improvements expected under the previously consented project.</p> | N                    | <p>Havant Thicket Reservoir modelling includes a predicted water quality envelope for compensatory flows released downstream. The results of this process are presented in ES Appendix 19.6 Havant Thicket Reservoir Compensatory Flows water quality modelling, Volume II (Document reference 6.2, DCO Volume 6).</p> <p>Modelling shows that with primary phosphorus reduction control measures in place at the WRP, operation of the Project would not result in a deterioration in water quality or biological status in receiving watercourses and water bodies downstream. Water quality modelling of Havant Thicket Reservoir and compensation flows is presented and assessed in ES Chapter 19 Water Environment, Volume I (Document</p> |

| Wider community                                  | WQHTR 05   | <p>Respondents expressed concerns over the environmental impacts to the Havant Thicket Reservoir as a result of adding recycled water that would lead to the perceived '<i>Loss of a unique biodiversity opportunity to create a chalk spring fed reservoir.</i>'</p> <p>This included concerns over the impacts on reservoir water quality, with respondents commenting that the water quality would be reduced, or that the impacts on water quality were uncertain.</p> <p>Environmental concerns included uncertainty over the impacts on biodiversity, as well as the effects of 'forever chemicals' were also raised.</p> | N                    | <p>Water quality modelling of Havant Thicket Reservoir and compensation flows is presented and assessed in ES Chapter 19 Water Environment, Volume I (Document reference 6.1, DCO Volume 6) and ES Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document Reference 6.2, DCO Volume 6). This shows that water quality in Havant Thicket Reservoir would be consistent with the definitions of 'high' or 'good' status for a lake water body under the Water Framework Directive (WFD) Directions. Operation of the Project would not, therefore, result in a deterioration in water quality in Havant Thicket Reservoir.</p> |

|           |            |                         |                      | <p>Wales) 2015, which are strict levels that seek to prevent environmental impacts and includes a comprehensive suite of chemicals.</p> <p>The Applicant has undertaken an extensive programme of monitoring of a wide range of Contaminants of Emerging Concern (CECs) in the final treated effluent from Budds Farm Wastewater Treatment Works (WTW) (i.e., a representation of influent water quality to the WRP) and water treated in its pilot treatment plant at Budds Farm WTW. The pilot plant included a Full Advanced Treatment (FAT) process, comprising integrated membranes followed by an ultraviolet and advanced oxidation process, but did not include the granular activated carbon (GAC) and remineralisation processes that would be present within the WRP. Because some contaminants would also be removed by the GAC process, the results from the pilot plant therefore represent an underestimate of the performance of the full WRP and are therefore considered to be the worst case. Further information can be found in an independent review of the recycling pilot plant performance produced by the University of Brighton (Mayor-Smith, 2024).</p> <p>The results of the investigation into pilot plant performance indicate that the FAT process</p> |

|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                             |                      | <p>resulted in a considerable increase in water quality, with the concentration of CECs decreasing after passing through the pilot plant. Over 60% of the CECs measured in the WRP influent decreased to below the limits of detection in the recycled water that had passed through the WRP, with the largest reductions identified for a range of pharmaceuticals, personal care products and pesticides. This suggests that releases from the WRP into Havant Thicket Reservoir and downstream water bodies (Riders Lane Stream, Hermitage Stream and Langstone Harbour) are unlikely to contain the full suite of CECs measured by the Applicant or independently recorded in Langstone Harbour (Ford and Ginley, 2024; Uhlhorn et al., 2025) and that any CECs remaining in the WRP output would be present in extremely low concentrations. Significant adverse effects on water quality and biota from CECs are considered unlikely, particularly given that the full treatment process that would be in place at the WRP.</p> |
| Wider community | WQHTR 06   | Respondents asked for more information about the impact on water quality at Havant Thicket Reservoir, and how this would be tested and monitored, including | N                    | <p>Water quality modelling of Havant Thicket Reservoir and compensation flows is presented and assessed in ES Chapter 19 Water Environment, Volume I (Document reference 6.1, DCO Volume 6) and ES</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|           |            | risk assessments and contingency plans for safety. |                      | <p>Appendix 19.2 Water Environment Regulations Compliance Assessment, Volume II (Document Reference 6.2, DCO Volume 6).</p> <p>Water quality modelling undertaken by the Applicant adheres to the Environment Agency's (EA) Surface Water Pollution Risk Assessment process which involves screening a defined suite of parameters to determine if any have the potential to fail its Environmental Quality Standards (EQS) and therefore require further assessment (modelling). If the EQS screening shows predicted concentrations in the reject water to be below the EQS for a parameter, it is screened out and modelling is not required. The EQSs are set out in the Water Framework Directive (Standards and Classification) Directions (England and Wales) 2015, which are strict levels that seek to prevent environmental impacts and includes a comprehensive suite of chemicals. The Applicant has undertaken an extensive programme of monitoring of a wide range of Contaminants of Emerging Concern (CECs) in the final treated effluent from Budds Farm WTW (i.e., a representation of influent water quality to the WRP) and water treated in its pilot treatment plant at Budds Farm WTW. The pilot plant included a Full Advanced</p> |

|           |            |                         |                      | <p>Treatment (FAT) process, comprising integrated membranes followed by an ultraviolet and advanced oxidation process, but did not include the granular activated carbon (GAC) and remineralisation processes that would be present within the WRP. Because some contaminants would also be removed by the GAC process, the results from the pilot plant therefore represent an underestimate of the performance of the full WRP and are therefore considered to be the worst case. Further information can be found in an independent review of the recycling pilot plant performance produced by the University of Brighton (Mayor-Smith, 2024).</p> <p>The results of the investigation into pilot plant performance indicate that the FAT process resulted in a considerable increase in water quality, with the concentration of CECs decreasing after passing through the pilot plant. Over 60% of the CECs measured in the WRP influent decreased to below the limits of detection in the recycled water that had passed through the WRP, with the largest reductions identified for a range of pharmaceuticals, personal care products and pesticides. This suggests that releases from the WRP into Havant Thicket Reservoir and downstream water bodies (Riders Lane Stream, Hermitage Stream and Langstone</p> |

|                 |            |                                                                                                                                                           |                      | <p>Harbour) are unlikely to contain the full suite of CECs measured by the Applicant or independently recorded in Langstone Harbour (Ford and Ginley, 2024; Uhlhorn et al., 2025) and that any CECs remaining in the WRP output would be present in extremely low concentrations. Significant adverse effects on water quality and biota from CECs are considered unlikely, particularly given that the full treatment process that would be in place at the WRP.</p> <p>The blended raw water in Havant Thicket Reservoir has been assessed as part of a wider water safety plan which is regulated by the Drinking Water Inspectorate (DWI). A drinking water safety plan is required to encompass the complete supply system, starting at the catchment for the water source and ending at customer taps. Risks are assessed at each stage of the supply system – i.e. catchment area, abstraction, treatment, distribution, and at customer taps.</p> |
| Wider community | WQHTR 07   | The respondent stated that adding advanced treated recycled water to Havant Thicket Reservoir will improve the quality of Havant Thicket Reservoir water. | N                    | Updated modelling that includes the use of a High Rejection Rate Membrane (HRRM) at the WRP shows that water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the WFD Directions.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Wider community | WQHTR 08   | <p>Respondents expressed concerns about the Preliminary Environmental Information Report (PEI Report) assessments and water quality modelling of the Havant Thicket Reservoir.</p> <p>This included concerns that water quality modelling had not been undertaken and needed to consider different operating regimes, as well as assess the risks of eutrophication and algal blooms.</p> <p>Some respondents described the environmental assessments as <i>'inadequate'</i>.</p> | N                    | <p>Water quality modelling has been updated since the PEI Report was issued. Havant Thicket Reservoir modelling considered multiple scenarios to reflect different operational conditions, including "normal" operation, different drawdown scenarios and severe drought conditions.</p> <p>Modelling shows that water quality in Havant Thicket Reservoir would be consistent with the definition of 'high' status for a lake water body under the WFD Directions. Operation of the Project would not result in a deterioration in the status of Havant Thicket Reservoir.</p> <p>Modelling also shows that phosphorus removal measures embedded in the Project design would be sufficient to avoid the accumulation of phosphorus within Havant Thicket Reservoir and prevent Havant Thicket Reservoir switching to a eutrophic state (and the risk of algal blooms) with the addition of recycled water.</p> <p>The PEI Report, consulted on as part of the Applicant's Summer 2024 Consultation, contained initial assessments of the likely impacts of the project, including on environmental water quality. Updated environmental information specifically relating to water quality modelling and assessments was later consulted on as part of the</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Wider community | WQHTR 09   | <p>Respondents expressed concerns that the Havant Thicket Reservoir would be at risk of being contaminated if used for storing recycled water and expressed opposition to the mixing of recycled water with spring water in the Havant Thicket Reservoir, with concerns that this would have a detrimental impact to the water quality of Havant Thicket Reservoir and surrounding streams, wildlife, local communities and recreation. It was questioned whether the benefit of a reduction in nitrate levels entering Langstone Harbour due to spring water being fed into Havant Thicket Reservoir would be lost if recycled water were to enter Havant Thicket Reservoir.</p> | N                    | <p>The Applicant acknowledges respondents' concerns regarding potential impacts on water quality in Havant Thicket Reservoir and has undertaken a detailed assessment to characterise impacts and develop appropriate measures to prevent significant adverse effects.</p> <p>ES Chapter 19 Water environment Volume I (Document reference 6.1, DCO Volume 6) and ES Appendix 19.2 Water Environment Regulations compliance assessment, Volume II (Document reference 6.2, DCO Volume 6) provide an assessment of the likely significant effects on the water environment from the Project, including releases from the WRP into Havant Thicket Reservoir, and on</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>Some respondents noted that if the WRP is not maintained properly then this could contribute to contamination of Havant Thicket Reservoir.</p> <p>Respondents also commented that if the technology used in the water recycling process were to fail then this could contribute to contamination of Havant Thicket Reservoir.</p> <p>A lack of trust in the Applicant's ability to not pump sewage into Havant Thicket Reservoir was also noted.</p> |                      | <p>compensatory flows in downstream watercourses.</p> <p>Overall, with the implementation of mitigation measures, the predicted changes in water quality parameters are not expected to result in any changes to trophic status or in water body status within Havant Thicket Reservoir. Modelling shows that water quality in Havant Thicket Reservoir would be consistent with the definitions of 'high' status for a lake water body under the WFD Directions. Operation of the Project would not, therefore, result in a deterioration in water quality in Havant Thicket Reservoir.</p> <p>Water quality modelling of compensation flows also shows that operation of the Project would not result in a deterioration in water quality in receiving watercourses and water bodies downstream (Riders Lane Stream, Hermitage Stream, Langstone Harbour). Water quality modelling shows that, over time, the nitrate concentration in Havant Thicket Reservoir would reduce given the significantly lower nitrate concentration in recycled water, compared to the spring water, and this is expected to reduce the overall concentration of nitrate going into Langstone Harbour via the local streams.</p> |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                          |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Havant Borough Council (HBC)                                    | PWP01      | HBC stated it understood that the bored tunnel option is a contingency if the Portsmouth Water Pipeline does not gain consent or infrastructure sharing is not feasible. | N                    | Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the Water Recycling Plant (WRP) site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project as it is now proposed to use Portsmouth Water's Pipelines instead. The Applicant's Development Consent Order (DCO) application will seek to authorise the use of Portsmouth Water's Pipelines to transfer recycled water between Bedhampton Springs and Havant Thicket Reservoir. Further information on the removal of the backup option is contained in section 5 of the |

| Consultee               | Issue code | Summary of issue raised                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|                         |            |                                                                                                                                                                                                                                     |                      | Scheme Development Report (Document reference 5.10, DCO Volume 5).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Langstone Harbour Board | PWP02      | Langstone Harbour Board stated that Portsmouth Water was granted planning permission for the Havant Thicket Reservoir based on it being a spring water fed reservoir, promising a reduction in nitrate inputs to Langstone Harbour. | N                    | <p>The DCO application submitted by the Applicant seeks to use Havant Thicket Reservoir for the storage of recycled water, in addition to spring water. The Applicant has undertaken assessments to understand the impact of storing recycled water in Havant Thicket Reservoir and the relevant downstream watercourses. Overall, with the implementation of mitigation measures, the predicted changes in water quality parameters are not expected to result in any changes to trophic status or in water body status within Havant Thicket Reservoir. Additionally the Project would not affect the reduction in nitrate levels in the downstream watercourses and Langstone Harbour.</p> <p>ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) provides an assessment of the likely significant effects on the water environment from the Project, including releases from the WRP into Havant Thicket Reservoir. It also reports on the water quality modelling exercise undertaken to assess the sensitivity of reservoir water quality to the introduction of recycled water.</p> |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                      | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|--------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Portsmouth Water (PW)          | PWP03      | <p>PW stated it has recently submitted a new planning application for a Pipeline project between the Havant Thicket Reservoir and Bedhampton Springs and Pumping Station to improve resilience for their network.</p> <p>Portsmouth Water stated that the Pipelines could potentially be used by the Applicant in the future, reducing disruption, environmental impact, and costs.</p> <p>However, it was noted that Portsmouth Water's proposals did not make provision for the Applicant's use of the pipelines, and it would depend on the Applicant obtaining the necessary consents in the future.</p> | Y                    | The Applicant has noted this comment and is working closely with Portsmouth Water to consider the interface between the two projects. The DCO application seeks to authorise the use of Portsmouth Water's pipelines to transfer recycled water and store it in Havant Thicket Reservoir.                                                                                                                                                                                                                                                                                          |
| Hampshire County Council (HCC) | PWP04      | <p>HCC stated that the scenario whereby the Portsmouth Water Pipeline (preferred option) and the Applicant's Pipelines cannot be shared (back up option), was not presented.</p> <p>HCC stated that Chapter 20.2 of the Preliminary Environmental Information Report briefly addressed this separate Pipeline scenario which indicated no significant cumulative road traffic effects and low construction traffic increase. It was requested that more information should be given on the engineering solution to be used where compound B1-1 accessed off</p>                                              | N                    | At the Summer 2024 Consultation the Applicant set out the potential options for the transfer of recycled water between the WRP and Havant Thicket Reservoir, and these were assessed in the Preliminary Environmental Information Report. Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|-------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                             |            | Middle Park Way needs to be shared to allow the Council to approve the method.                                                                                                                    |                      | Thicket Reservoir as part of the Project as it is now proposed to use Portsmouth Water's Pipelines instead. This means that a construction compound north of Middle Park Way would not be required. Further information on the removal of the backup option is contained in section 5 of the Scheme Development Report (Document reference 5.10, DCO Volume 5).                                                                                                                                                                                                                                                                                                                                            |

| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Wider community                                  | PWP06      | <p>It was viewed that Portsmouth Water and its appointed consultants have a better understanding of the issues and potential impacts of the Project than the Applicant, having completed water quality modelling and assessments for the original spring-fed reservoir scheme.</p> <p>It was stated that Portsmouth Water would be able to assess the impacts of the Applicant's proposals robustly and cost-effectively, given its existing knowledge from previous assessments.</p> <p>It was suggested that stakeholders and the local community would have more confidence if Portsmouth Water led future assessments, and that Ofwat should fund Portsmouth Water to undertake those assessments.</p> | N                    | <p>The modelling and assessments of water quality impacts have been undertaken in conjunction and agreement with Portsmouth Water drawing on the combined expertise and experience of both companies and its technical advisors, including those that had undertaken the original assessments for the spring-fed reservoir proposal. This has informed ES Chapter 19 Water environment Volume I (Document reference 6.1, DCO Volume 6) and ES Chapter 8 Terrestrial and freshwater biodiversity Volume I (Document reference 6.1, DCO Volume 6).</p> <p>ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) provides an assessment of the likely significant effects on the water environment from the Project, including releases from the WRP into Havant Thicket Reservoir. It also reports on the water quality modelling exercise undertaken to assess the sensitivity of reservoir water quality to the introduction of recycled water.</p> |
| Wider community                                  | PWP07      | It was stated that the purpose of the Havant Thicket Reservoir was proposed by Portsmouth Water to store surplus spring                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | N                    | The initial Havant Thicket Reservoir proposal, which was approved by HBC and EHDC, was for a spring-fed reservoir to supply water to the Applicant in times of drought. The Project                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|           |            | <p>water from Bedhampton springs for use during drought conditions.</p> <p>It was stated that Portsmouth Water's reservoir scheme does not need the Applicant's proposed Pipeline and described it as unnecessary. It was also stated that it is premature to consider routes dependent on a reservoir not yet fully constructed.</p> |                      | <p>seeks to make the best use of Havant Thicket Reservoir by using recycled water to supplement the quantity of water resources available in order to meet the need identified through the Applicant's WRMP and options appraisal processes. The Project was identified as the only option available which can deliver the scale of water resource required in the timescales needed. Augmenting the supply of water available from Havant Thicket Reservoir with the addition of recycled water provides considerably better value for money than delivering a separate new water resource. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project.</p> <p>It is crucial that the Project is planned now given the urgency in addressing the water supply challenge in the Hampshire area. Havant Thicket Reservoir has received planning permission and is under construction, therefore there is a high degree of confidence and certainty in its delivery to enable the development and consenting of this Project in parallel.</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | PWP08      | <p>Respondents expressed concerns about the Applicant's changes to the original Havant Thicket Reservoir scheme, claiming there was not sufficient public consultation.</p> <p>Respondents claimed they had been misled and believe the proposed change, topping up Havant Thicket Reservoir with recycled water, would have adverse impacts on water quality and biodiversity in Havant Thicket Reservoir.</p> <p>It was stated that planning permission was given based on a spring water fed reservoir, without the inclusion of recycled water which would reduce reliance on river abstraction in face of population growth</p> <p>It was also noted that the original design of Havant Thicket Reservoir was to store excess groundwater from the South Downs aquifers, which would otherwise flow into the sea, and be used during peak demand periods.</p> <p>A respondent also stated that the Applicant's increased water demand projections changed the Project's scope.</p> | N                    | <p>The Applicant initially proposed to utilise Havant Thicket Reservoir to store recycled water as part of its consideration of alternatives through the RAPID gated process. As part of this process, the Applicant undertook an options appraisal process to identify a water resources infrastructure solution capable of addressing the need identified in the Applicant's WRMP. The Project was identified as the only option available which can deliver the scale of water resource required in the timescales needed. The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project. The Applicant held consultations on the Project in 2022, 2024, 2025, and 2026 setting out the intention to use Havant Thicket Reservoir to store recycled water.</p> <p>The Applicant has undertaken assessments to understand the impact of storing recycled water in Havant Thicket Reservoir and of compensation flows on relevant downstream watercourses. Overall, with the implementation of mitigation measures, the predicted changes in water quality parameters are not expected to result in any adverse water quality impacts or affect the ability to deliver ecological enhancements</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                          |                      | <p>and benefits within Havant Thicket Reservoir or downstream watercourses. ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) provides an assessment of the likely significant effects on the water environment from the Project, including releases from the WRP into Havant Thicket Reservoir. It also reports on the water quality modelling exercise undertaken to assess the sensitivity of reservoir water quality to the introduction of recycled water.</p> <p>The DCO application submitted by the Applicant seeks to authorise the use of Havant Thicket Reservoir to allow the storage of recycled water in the reservoir. This has been assessed in the ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6) as set out above.</p> <p>The scope of the Project has been informed by the water supply requirements set out in the Applicant's existing and emerging WRMPs, to ensure that it can continue to meet its water supply obligations.</p> |
| Wider community | PWP09      | The respondent suggested that the Applicant puts forward a sustainable and environmental proposal which is separate from the Havant Thicket Reservoir scheme. It was also suggested that | N                    | Making the best use of Havant Thicket Reservoir is a key element of the Project, which has been identified through the Applicant's WRMP and options appraisal processes as a key part of the strategy to                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | OFWAT should review the reasoning behind the proposal and ensure that the Applicant is meeting regulations.                                                                                                                    |                      | <p>address the water supply challenge in its Hampshire supply area. The Project is the only option available which can deliver the scale of water resource required in the timescales needed. Augmenting the supply of water available from Havant Thicket Reservoir with the addition of recycled water provides considerably better value for money rather than delivering a separate new water resource. The Project has been developed through the RAPID gated process, which provides regulatory oversight of the Project, including from Ofwat, to ensure it is developed efficiently and provides value for money.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process the Applicant has taken to select the Project.</p> |
| Wider community | PWP10      | The respondent stated that the use of a combined tunnel in collaboration with Portsmouth Water made sense from a cost, disruption, and environmental point of view. The respondent also expressed well wishes for the Project. | Y                    | The Applicant acknowledges this comment and agrees that utilising pipelines that are being delivered by Portsmouth Water to transfer water between the WRP site and Havant Thicket Reservoir is the preferred approach.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Wider community | PWP11      | It was suggested that the Applicant work with Portsmouth Water to provide the same information about Havant Thicket                                                                                                            | Y                    | The Applicant and Portsmouth Water are working closely to deliver their respective projects, and both companies continue to                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Havant Borough Council (HBC)                                    | CIE01      | <p>HBC noted that a number of local impacts on the Borough are therefore expected both from construction and operation. The Council additionally highlighted its role within the decision-making process.</p> <p>The Council also stated that it was content that a range of potential impacts (during construction, operation and decommissioning) have been considered appropriately. The Council was happy to provide more detailed comments once full details of the scheme are available, either informally in line with scheme development progression, or as part of the Local Impact Report.</p> | N                    | <p>The Applicant has maintained ongoing engagement with HBC to address any concerns and would continue to do so throughout the examination and detailed design process as required.</p> <p>Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the Water Recycling Plant (WRP) site and Havant Thicket Reservoir was not progressed any further. With this change, the construction impacts in Havant have been reduced significantly.</p> |
| Marine Management Organisation (MMO),                           | CIE02      | Respondents made neutral comments that acknowledged information provided about construction impacts. These referred to the temporary landscape and visual impacts,                                                                                                                                                                                                                                                                                                                                                                                                                                       | N                    | Habitat surveys and landowner consultations have taken place, and the findings and feedback would be incorporated by the                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Wiltshire Council, Eastleigh Borough Council (EBC), Fareham Borough Council (FBC), Natural England (NE) |            | plans for underground proposed Pipelines and information provided on the Eastney Long Sea Outfall (LSO). Clarification was requested regarding the extent of temporary fencing.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                      | <p>Contractor, once appointed, into the design of the temporary fencing.</p> <p>The fencing would vary depending on the work activity but would include a mixture of stock proof fencing for general demarcation, Heras fencing for securing work areas and possibly hoarding around some compound areas to offer screening and noise mitigation.</p> <p>The temporary fencing would likely remain in place until the permanent works and reinstatement is complete.</p>                                                                                                                                                                                                                      |
| MMO, Wiltshire Council, EBC, Hampshire County Council (HCC), Winchester County Council (WCC), HBC, NE   | CIE03      | <p>Respondents made several suggestions relating to the mitigation of construction impacts and effects.</p> <p>Respondents emphasised the need for early consideration of tunnelling arisings and environmental protection measures, including safeguarding watercourses and managing sediment mobilisation.</p> <p>It was requested that geotechnical information and assessments be provided for areas where the proposed Pipeline crosses highways and public footpaths.</p> <p>Suggestions were made to mitigate potential negative impacts of the Project. It was viewed that there was not enough information available regarding how the</p> | N                    | <p>Estimates of tunnelling arisings and type have been assessed to assist with the production of the Waste Management Plan (WMP), which would detail the management of the tunnel arisings to be developed by the Contractor, once appointed. This would cover all environmental protection measures including safeguarding watercourses and managing sediment mobilisation.</p> <p>Stakeholder engagement has been ongoing around geo-environmental impacts.</p> <p>Each highway crossing detail would be developed during the detailed design process which would be carried out by the contractor, once appointed, post consent. Engagement has been undertaken with the Local Highway</p> |

| Consultee            | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                      |            | Applicant has addressed potential risks. It was suggested that, in order to demonstrate suitability of the land for the development, the DCO application should include a construction Conceptual Site Model (CSM) for critical sections, such as Budds Farm Wastewater Treatment Works (WTW), the Water Recycling Plant (WRP) site, and Pipeline sections A, B C, and D. |                      | <p>Authorities and National Highways (NH) regarding the locations of trenchless crossings of highway assets and provides summary of the process of following NH standards regarding addressing geotechnical risks and technical approval of highway structures. Additional surveys including geotechnical would be required to develop the detail design.</p> <p>Further engagement has been undertaken with HBC to provide further detail to address each potential risk with detailed feedback on each.</p> <p>Preliminary and refined CSMs have been summarised for each section of the route and the WRP in the relevant sections within the Environmental Statement (ES) (see ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6)) and further detail is contained within ES Appendix 11.2 Geotechnical and geo-environmental reports, Volume II (Document reference 6.2, DCO Volume 6).</p> |
| Upham Parish Council | CIE04      | Upham Parish Council expressed general dissatisfaction with the measures proposed to mitigate construction impacts.                                                                                                                                                                                                                                                       | N                    | The type of pipe and associated trench and backfill arrangements would be defined at the detailed design by the Contractor, once appointed, post-consent. The design would                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Consultee                                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|---------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                             |            | Upham Parish Council also raised concerns about the construction methods at Wintershill, in particular the use of an aggregate surround for the proposed Pipeline that would ' <i>act as a French drain</i> ' and run down to the culvert at the lowest point of Sciviers lane that is ' <i>already overloaded at times.</i> ' |                      | be guided by the Design Principles Document (Document reference 5.11, DCO Volume 5). The detailed design would incorporate measures to avoid reinstated backfill around underground pipelines becoming a preferential route for subsurface flows. Where the pipeline is installed below groundwater level, the pipe bedding material would be permeable, to promote movement of groundwater around the pipeline (i.e. the pipeline would not form a substantial barrier to groundwater flow). To minimise the potential for groundwater flow along the line of the pipe (i.e. to prevent the pipeline acting as a preferential flow path), clay stanks would be used at regular intervals |
| MMO, WCC, Portsmouth City Council (PCC), NE | CIE05      | It was acknowledged that a combination of trenched, trenchless and tunnelled construction is proposed. Questions were raised over whether any pre-installation works would be required such as dredging and if jack-up barges or coffer dams would be used.                                                                    | N                    | All main river crossings would be carried out using trenchless techniques. These techniques do not require any pre-installation works such as dredging.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| MMO                                         | CIE06      | The MMO provided suggestions pertaining to mitigation of construction impacts and effects. It was suggested that anticipated dates and duration for tunnelling works under the Hermitage Stream should be provided. It was also suggested that works                                                                           | N                    | The final construction programme would be developed after the detailed design has been completed by the Contractor, once appointed. The design would define the length of the                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|           |            | <p>tunnelling and therefore it was suggested that this is updated accordingly.</p> <p>HCC provided feedback on Chapter 3 of the PEI Report and stated that clarification was required for the 7-12m strip of land on either side of the Pipeline for maintenance purposes. The description indicates that this strip of land is required only where trenchless, or tunnelling construction methods are used. The County Council said it needs to understand if this land requirement applies to any highway land.</p> <p>Construction Methodology: Further information is needed on how the Applicant would identify impacts on adopted County Council structures (bridges) and how these would be managed during construction. The County Council stated that no consideration had been given to the impact on highway structures, including underground drainage assets and culverts. It also added that potential impacts on existing utility services had not been considered. It noted that there are 19 bridges identified within the proposed Pipeline route, with no information on whether they would be affected by construction. HCC as the local highway authority confirmed that it has reviewed the</p> |                      | <p>(Document reference 7.3, DCO Volume 7), which has been developed with HCC.</p> <p>The strip of land required for operation and maintenance is the defined Easement requirement. Easements for tunnelled, trenchless, open-cut or above ground Pipeline sections to be defined within easement requirements technical memorandum. This describes the different requirements for different situations for example agricultural land and highways crossings which would have different requirements. The Applicant is continuing engagement with landowners, as appropriate, as the Project progresses.</p> |

| Havant Borough Council (HBC) | CIE08      | <p>HBC provided feedback on the Pipeline construction and stated that both the land south of Budds Farm WTW and the proposed WRP site comprise former landfill, and how the Project might alter the current risk profile of these respective features is intrinsically linked to the engineering details of the Pipeline installation. The Council also made the following suggestions below:</p> <ul style="list-style-type: none"> <li>measures to mitigate floatation effects on the shaft, and related stresses on design-critical elements</li> <li>construction detailing at the external annulus, base &amp; penetrations of the shaft structure, and the annulus of the tunnels where laid within Chalk</li> <li>a section illustration of each Pipeline path/orientation/depth relative to</li> </ul> | N                    | <p>A meeting was held with HBC, the Environment Agency (EA) and NE in November 2025. The Applicant prepared detailed responses which were discussed during the meeting. Detail design would be carried out by the Contractor, once appointed, which would take place post consent.</p> <p>This detail design would cover all elements highlighted in the response.</p> <p>It is anticipated that the Contractor, once appointed would excavate waste and remove this from site as waste. No environmental permit is anticipated to be required at either the WRP or Budds Farm WTW sites. Initial assessment suggests that 60% of the landfilled waste would be classified as hazardous waste, mainly due to hydrocarbon concentrations exceeding the threshold of 1000mg/kg. It is possible this material could</p> |

|           |            | <p>protected area (SPA) and Ramsar features, and appropriate installation methods chosen for the environment which minimise noise and vibrations.</p> <p>NE also outlined that trenchless construction methods are proposed for this crossing, suitable mitigation should be deployed to not disturb the bird interest feature of the site.</p> <p>NE provided feedback pertaining to many sites of special scientific interest (SSSIs) and noted that due to the proposed Pipeline route not directly crossing these sites during construction works, impacts are likely to be minimal, but best practice construction methods should be followed to ensure this is the case. It added that the Project team should also ensure that there would not be any hydrological impacts to these sites from the Pipeline construction. Hydrological assessments should be undertaken where appropriate to ensure this is the case. NE also requested that a full Horizontal Direct Drilling (HDD) feasibility study be undertaken to ensure that the Pipeline remains buried and therefore would not require remedial action in the future.</p> |                      | <p>Plan and Foundation Works Risk Assessments to be developed as per the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). The Water Monitoring Plan would verify predicted impacts to the local surface water and groundwater regime from construction activities and include trigger levels and action plans to enable mitigation to be implemented based on monitored conditions. The Drilling Fluid Management Plan would be agreed with the EA and NE prior to commencement, and document how risks of any fluid breakout would be reduced and how any breakout would be managed and mitigated if it did occur. The Foundation Works Risk Assessments would be undertaken for deeper structured in line with relevant published guidance to mitigate pollution water quality risks to receptors.</p> |

|                        |            | NE posed the following question: <i>'If the entry and exit pits are in the marine environment for the crossing between Budds Farm WTW and the proposed water recycling site then will there be a requirement for dredging / excavation of material to allow cable pull, as if so, will have an impact which will need further assessment.'</i>                                                                                                                                                                                                                                                                                                                          |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| National Highways (NH) | CIE10      | <p>NH stated that strategic road network (SRN) assets, consideration of potential impacts on SRN assets such as landscaping and drainage is needed. It also stated that it anticipated the development of construction methodology statements for proposals at this site adjacent to the A27.</p> <p>NH also strongly advised that geotechnical risk assessments in accordance with CD622 are carried out to inform routing options/locations for the pipeline/tunnelling under any part of the SRN. It was considered likely that there is a requirement for geotechnical certification from NH, which recommended early engagement with geotechnical specialists.</p> | N                    | Information received on highways structures including bridges and culverts has been incorporated in revised Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) and Framework Traffic Management Strategy (Document reference 7.3, DCO Volume 7), which has been developed with HCC. The Applicant is continuing engagement with National Highways, as appropriate, as the Project progresses. |
| HCC, HBC               | CIE11      | Specific feedback was provided on the trenchless construction methods.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | N                    | Motorways and major A roads would be crossed using trenchless techniques. All other                                                                                                                                                                                                                                                                                                                                              |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>HCC requested clarification on whether trenchless construction would only be used on crossings on motorways and A roads to accord with the requirements to minimise the disruption of road works as set out in the Traffic Management Act 2004.</p> <p>HBC stated that in order to adequately demonstrate suitability of the land for the development, the Council would expect the Development Consent Order (DCO) application to include the trenchless technique to be used for each section of Pipeline construction.</p>                                                |                      | <p>roads would be crossed in compliance with the Traffic Management Act 2004 requirement to minimise disruption.</p> <p>For plans showing the location of crossings with accompanying schedule, see appendix A of the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).</p> <p>Whilst worst case environmental impacts of the trenchless techniques have been assessed at this stage, the final trenchless techniques would be defined at the detailed design stage by the Contractor, once appointed.</p>                              |
| EBC, NE   | CIE12      | <p>Respondents provided feedback regarding the open-cut construction method.</p> <p>EBC listed out 9 instances (in 7 locations) where open-cut would traverse a field boundary and outlined that this potential impact was a concern.</p> <p>NE noted that the River Meon would be crossed using both trenchless and open-cut construction methods for the proposed Pipeline route. NE said that it is working closely with the Project team to avoid damage to the River Meon Compensatory Special Areas of Conservation (SAC) habitat from river crossings and added that</p> | N                    | <p>The Applicant has noted this comment. The design process has sought to reduce impacts on existing vegetation where possible, however some vegetation would be lost at field boundaries. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out the locations that Reduced Working Width (RWW) construction would be implemented at field boundaries to reduce impacts to vegetation.</p> <p>Trenchless construction under the River Meon would be used to reduce impacts on the watercourse and associated habitats, this</p> |

|                  |            | it has engaged with the Project team regarding open cut construction methods and appropriate mitigation measures.                                                                                                                                                                                                                                                                                                                   |                      | is secured through the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| NE               | CIE13      | NE suggested that open-cut construction should be kept to a minimum when crossing rivers, and that restoration should occur after works are completed. It added that during construction, soils must be appropriately separated and stored to ensure the site can be restored to the current condition. It advised that the Applicant should ensure any contractors appointed to undertake this work follow this standard practice. | N                    | All open-cut watercourse crossings would be undertaken using best practices as per the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and Design Principles Document (Document reference 5.11, DCO Volume 5)                                                                                                                                                                                                                                                                                                                                                       |
| Portsmouth Water | CIE14      | Portsmouth Water acknowledged that the preferred option for an overground Pipeline around the Bedhampton Water Treatment Works had been agreed due to the risks of an underground pipeline. It was noted that if an alternative underground option was pursued in this location, then Portsmouth Water would object to this aspect of the proposal.                                                                                 | N                    | Following the approval of Portsmouth Water's planning application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Project would use these pipelines instead of constructing a pipeline direct from the WRP site to Havant Thicket Reservoir. This means the Applicant needs to construct pipelines to connect the WRP site to Bedhampton Springs. The design of these pipelines within Bedhampton Springs has been discussed with Portsmouth Water which has proposed a number of routes through its site which the Applicant would review and agree delivery upon based on option |

|           |            | roads, ensuring that the width of roads is sufficient, visibility splays achieved, and that PRow's are protected. |                      | <p>Traffic Management Plan (Document reference 7.2, DCO Volume 7).</p> <p>Indicative construction accesses have been designed with visibility splays and vehicle tracking reviewed with HCC as part of the ongoing engagement on the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).</p> <p>Impacts on PRow have been reviewed with HCC and the proposed management strategies can be found in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).</p> <p>A range of measures have been embedded into Project design to avoid or reduce environmental effects, including on trees, during the construction phase. Primary mitigation includes designing the Project to utilise, where possible, existing gaps in vegetation, to reduce vegetation loss and reduce the creation of new (albeit temporary) gaps in linear vegetation features, as detailed within the Design Principles Document (Document reference 5.11, DCO Volume 5). Tertiary mitigation includes the implementation of a Reduced Working Width (RWW) of 20m, when crossing sensitive ecological features, including vegetation of importance for protected species or priority</p> |

|           |            |                                                                                                                                                                                                                                                                                                                     |                      | The Pipeline route has been developed to avoid private gardens.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| PILs      | CIE24      | Respondents expressed general concerns associated with construction impacts. These included safety concerns about children's safety around heavy machinery as well as security concerns associated with open access to land. This included concern about the impact to Wickham Park Gold Club, and private gardens. | N                    | <p>Security and safety of all work areas would be managed and maintained by the Contractor, once appointed, in accordance with its health and safety plans; this would include prevention of access to hazardous areas or equipment. Any access points used or created during the works would be managed in accordance with the health and safety plans with measures that could include gatemans, locked security gates, and CCTV.</p> <p>The draft Order Limits have been designed at Wickham Park Golf Club to provide flexibility for further refinement of the pipeline route at the detailed design stage, informed by further engagement with the golf club. The aim of this refinement would be to limit impacts on the operations of the golf club.</p> <p>The Pipeline route has been developed to avoid private gardens.</p> |
| PILs      | CIE26      | Respondents made several suggestions relating to construction impacts. This included suggestions to lessen the 40m working corridor width to reduce the impact on landowners, as well as ensuring that sites are restored and construction materials removed after works are                                        | N                    | The 40m working width has been calculated using the size of equipment / plant required, working areas, haul road and storage areas for excavated soil. This has been assessed and justified in ES Chapter 3 Description of                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>completed. Respondents expressed their concern at the working width and stated that '<i>40m wide working corridor is obscene</i>'.</p> <p>Multiple respondents suggested the easement width to be minimised as much as possible in order to limit sterilised area and protect future development potential of land. One respondent suggested a 15m working width.</p> <p>In addition, one respondent stated that no access for any purpose is permitted along Tangier Lane, into their farmyard or buildings, this includes during construction and after completion.</p> |                      | <p>Proposed Development, Volume I (Document reference 6.1, DCO Volume 6).</p> <p>As per the ES, the working width of 40m would be reduced wherever practicable to reduce environmental impact. A minimum width of 20m is possible over short distances but this does not allow enough room for the normal pipe laying operation so additional areas would be required to allow the storage of excavated material.</p> <p>The comment regarding Tangier Lane is noted. It has never been envisaged that Tangier Lane would be used for access.</p> |
| PILs      | CIE27      | <p>Respondents posed a number of queries about the construction process, including questions about river crossings and how they would be accounted for, access to Pipelines and the constraints this would create with regard to development on top of pipelines.</p> <p>Respondents also sought clarity on an optional access shaft to allow maintenance activities to the tunnelling machine to be carried out as it passes that point along its route.</p>                                                                                                                | N                    | <p>All main river crossings would be constructed using trenchless construction, which is secured in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). Some ordinary watercourses would be crossed using trenchless construction, and others would use trenchless construction, in line with mitigation measures in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). The construction methodology at river crossings has been informed by</p>           |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                          |                      | <p>environmental surveys and technical investigations.</p> <p>The construction process would be developed during the detailed design stage and would be communicated to Person(s) with an Interest in the Land (PILs).</p> <p>There would be a protective strip over pipelines to protect them from potential damage in the future and enable maintenance and repair. PILs would be advised of the extent of the protective strip on their land in due course.</p> <p>Details of intermediate shafts along the tunnel route would be developed and communicated to PILs where applicable.</p> <p>The proposed temporary construction accesses are presented in the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) and have been informed by significant engagement with HCC.</p> |
| PILs      | CIE28      | Respondents suggested that all available steps should be taken to minimise disruption to existing hedges and trees, as well as noting that land may be difficult to access during winter due to wet ground not being suitable for construction plant and | N                    | <p>A range of measures have been embedded into Project design to avoid or reduce environmental effects during the construction phase. Primary mitigation includes designing the Project to utilise, where possible, existing gaps in vegetation, to reduce vegetation loss and reduce the creation of new (albeit</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                            |                      | Thicket Reservoir. This means the Applicant would only need to construct pipelines to connect the WRP site to Bedhampton Springs. Therefore, the construction shaft at Havant Football Rugby Club is no longer part of the Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PILs      | CIE29      | Respondents expressed concerns over the tunnelling method being employed as well as having the proposed Pipeline route traverse under the homes and gardens of landowners. | N                    | Where tunnels are proposed that are located in proximity to residential properties, these would be at least 20m deep, so it is very unlikely there would be any disturbance during construction or operation. Potential noise and vibration effects on residential properties from tunnelling works have been assessed and found to be not significant, as reported in ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6). Please see measure LQCC15 within the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) for subsidence mitigation. The document confirms that the pipeline would be operated in accordance with industry good practice, this would ensure a sufficiently smooth water flow such that the pipeline is not anticipated to emit audible sound during operation. |
| PILs      | CIE30      | A respondent indicated that they were not concerned with the back-up option through                                                                                        | N                    | The Applicant has noted this comment. The backup tunnel option is no longer being pursued following Portsmouth Water securing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>Havant as it would not have a significant effect on the land.</p> <p>A further respondent stated it would not be possible to run a pipe from Construction Compound L-9 on the other side of Highbridge Road to the Construction Compound M-1 on the other side of the railway without coming up to ground level at least during the construction period. In addition, perhaps also later for the purpose of maintaining access for possible repairs.</p> |                      | <p>consent for its pipelines between Bedhampton Springs and Havant Thicket Reservoir.</p> <p>The Applicant is proposing to tunnel between the construction compound on the other side of Highbridge Road to the construction compound on the other side of the railway. As per the Design Principles Document (Document reference 5.11, DCO Volume 5), this tunnel would be deep enough to give clearance to the lowest point of the crossing so would be able to be constructed in a single run. The tunnel forms a conduit into which the pipe for carrying the water would be inserted. This means that any maintenance can be carried out from either end with no requirement for access between.</p> |
| PIL       | CIE31      | The respondent suggested more use of trenchless construction methods to avoid damage to mature trees and wildlife.                                                                                                                                                                                                                                                                                                                                          | N                    | As per the Design Principles Document (Document reference 5.11, DCO Volume 5), trenchless technology has already been identified along the pipeline route to avoid damage to mature trees, wildlife and sensitive areas.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| PIL       | CIE32      | The respondent suggested that if any open cut construction is done on the former landfill site (at site 72), the original soil should be moved off-site completely, and it should be restored with clean topsoil.                                                                                                                                                                                                                                           | N                    | Any contaminated arisings that cannot be treated on site would be removed and safely disposed of. This would be in accordance with the Outline Construction Environmental Management Plan (Document reference 7.1,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                              |
|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                                                                                                               |                      | DCO Volume 7) and the Waste Management Plan (to be produced by the Contractor, once appointed).                                                                                                                                                                                                                                                                                                       |
| PILs      | CIE33      | Respondents expressed concern that a construction shaft and access road would have a significant impact on the Havant Rugby Club playing fields.                                                                                                                                                                                                                              | N                    | Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant would use these pipelines instead of developing their own direct pipelines between the WRP site and Havant Thicket Reservoir. As a result, no works are proposed at Havant Rugby Club.                                                          |
| PIL       | CIE34      | The respondent made several suggestions about where the construction shaft currently proposed on the rugby club fields could be moved to, this included suggestion for it to be moved to the far side of the site to not impact the rugby pitches so much.                                                                                                                    | N                    | Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant would use these pipelines instead of developing their own direct pipelines between the WRP site and Havant Thicket Reservoir. As a result, no works are proposed at Havant Rugby Club.                                                          |
| PILs      | CIE35      | Concern was expressed over security of land from the removal of hedgerows. It was questioned what measures would be put in place to deal with surface water from streams affected by open cut trenches.<br><br>A further respondent noted that there were no proposals within the consultation material to provide landscaped or landform-based mitigation for the industrial | N                    | Security and safety of all work areas would be managed and maintained by the contractor in accordance with their health and safety plans; this would include prevention of access to hazardous areas or equipment. Any access points used or created during the works would be managed in accordance with the health and safety plans with measures that could include gatemen, locked security gates |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | nature of construction compound F-3 for the duration of the construction period. It was noted that this would exacerbate the impact on the neighbouring users of the business park during the construction period. |                      | <p>and CCTV. Any hedges removed would be reinstated following construction works.</p> <p>Where pipelines cross streams they would be constructed in compliance to the Design Principles Document (Document reference 5.11, DCO Volume 5), which define minimum depths below watercourses.</p> <p>At trenched watercourse crossings, temporary dams would be used to create a dry area of channel in which to excavate a trench and install the pipeline, and river flows would be maintained through the use of pumps, pipes or flumes. These temporary measures would be designed in accordance with the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7)</p> <p>Consideration would be given to mitigating the impact of construction compounds on users of surrounding properties/land. No landform screening would be provided at construction compound F-3, as this would require additional development to mitigate a temporary impact. Following completion of the works, the construction compound would be reinstated. All construction compounds have been assessed and any required mitigation addressed in the ES Chapter 15</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                      | Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| PIL       | CIE36      | The respondent stated that it was proposed to remove a vast swathe of a roadside hedge and noted that 58m had been included within the order limits, potentially on Sciviers Lane. The removal of this hedge would drastically change the character of the land. It was suggested that the Applicant should commit to removing as little hedgerow as possible. It was suggested that this should be less than 6m (3m for access and 3 m for pipe). The respondent also sought commitment that an ancient oak tree on the roadside would be protected. | N                    | <p>The Pipeline would cross Sciviers Lane, between Mindy's cottage and Swallows Roost, and while the Project seeks to minimise vegetation loss, it is anticipated that one high-quality (Category A) Oak tree and a section of hedgerow along Sciviers Lane would need to be removed to facilitate construction of the Project.</p> <p>Reinstatement measures are set out in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7), while the ES Appendix 13.5 Arboricultural Impact Assessment, Volume II (Document reference 6.2, DCO Volume 6) specifies protection measures to existing trees, secured through the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7)</p> <p>Primary mitigation measures include avoiding ancient woodland and ancient and veteran trees. No construction would be undertaken within a 15m horizontal buffer and 4m vertical buffer of ancient woodland. The Project would not result in the loss of deterioration of ancient and veteran trees.</p> |

| Wider community                                  | CIE40      | <p>Respondents expressed concerns about disruptions that would be caused by the construction of infrastructure required for the Project.</p> <p>Concerns were also raised about the shafts proposed to be dug into the former landfill site (at site 72) as some respondents noted the risk of 'mobilising leachate'. As well as concerns about impact to the Havant Football Rugby Club playing fields from construction shafts.</p> | N                    | <p>The Applicant has worked closely with the EA and HBC to ensure that concerns regarding potential contamination pathways for leachate are adequately addressed as part of the DCO application and its associated controls and management plans.</p> <p>An Outline Foundation Works Risk Assessment (Document reference 7.4, DCO Volume 7) has been completed which covers the WRP site, trenchless crossings, tunnels and shafts. A Detailed Foundation Works Risk Assessments, which would be based on the Outline Foundation Works Risk Assessment (Document reference 7.4, DCO Volume 7) would be completed as the design evolves by the Contractor, once appointed. The Foundation Works Risk Assessment serves to manage potential risks and ensure appropriate mitigation measures are implemented to reduce potential impacts on environmental receptors because of, for example, the creation or modification of preferential pathways for soil leachates and ground gas from the historical landfill site. The Foundation Works Risk Assessments</p> |

|           |            |                         |                      | <p>would be completed in line with CL:AIRE's Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination: Guidance on Pollution Prevention as secured within the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7). Additional mitigation measures associated with soil leachate from the historical landfill are secured within the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and are discussed in ES Chapter 11 Land quality and ground conditions, Volume I (Document reference 6.1, DCO Volume 6) and ES Chapter 19 Water environment, Volume I (Document reference 6.1, DCO Volume 6)</p> <p>Following the approval of Portsmouth Water's planning application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Project would use these pipelines instead of constructing a pipeline direct from the WRP site to Havant Thicket Reservoir. This means the Applicant would need to construct pipelines to connect the WRP site to Bedhampton Springs, and works are no longer proposed at Havant Rugby Football Club.</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                      | reference 6.1, DCO Volume 6) sets out an assessment of the likely significant effects of the Project on the environment and the local community and identifies mitigation to reduce or avoid these.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Wider community | CIE45      | The respondent appreciated the use of less disruptive construction methods as a means of mitigating construction impacts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Wider community | CIE46      | <p>Respondents questioned whether more environmentally friendly tunnelling techniques would be available in future to reduce environmental impacts which could arise from construction methods.</p> <p>A further respondent commented on the positioning of the shaft at Havant Rugby Football Club and suggested that it would be better if this could be avoided. However, the respondent added that if it is needed, it should be moved as far to the South/West of the site as possible, and that access be gained from the north west corner of the site (from Hooks Lane) 'hugging' the Western boundary of the site.</p> | N                    | <p>In assessing the effects of the Project, from an environmental perspective the approach involves establishing a maximum design envelope within which the final detailed design of the Project would sit.</p> <p>These parameters are defined in ES Chapter 3 Description of the Proposed Development, Volume I (Document reference 6.1, DCO Volume 6) and are secured in the DCO through the Works plans (Document reference 2.3, DCO Volume 2) and Design Principles Document (Document reference 5.11, DCO Volume 5). These provide clear parameters for environmental assessment, whilst allowing for flexibility of detailed design post-DCO. Each topic assessment therefore establishes those parameters likely to result in the maximum adverse effect (the worst case scenario) and an assessment is undertaken on this basis.</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                 |                      | Following the approval of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant would use these pipelines instead of development direct pipelines between the WRP site and Havant Thicket Reservoir. As a result, no works are proposed at Havant Rugby Club.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Wider community | CIE47      | Respondents expressed concerns about the tunnelling construction method under residential properties as well as the overall scale of the Pipeline construction. | N                    | Where tunnels are proposed that are located in proximity to residential properties, these would be at least 20m deep, so it is very unlikely there would be any disturbance during construction or operation. Potential noise and vibration effects on residential properties from tunnelling works have been assessed and found to be not significant, as reported in ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6). Please see measure LQCC15 within the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) for subsidence mitigation. The document commits that the pipeline would be operated in accordance with industry good practice, this would ensure a sufficiently smooth water flow such that the pipeline is not anticipated to emit audible sound during operation. |

|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | CIE48      | <p>A respondent said they hoped the construction would take as little time as possible.</p> <p>It was stated that the trenchless construction method would be more appropriate as Alma Lane has much less traffic and so closure would not be such a problem.</p> <p>A further respondent queried if there would be the likelihood of full reinstatement should buildings be potentially negatively impacted in the future.</p> | N                    | <p>The final construction programme would be developed after the detailed design has been completed by the Contractor, once appointed. This would develop the most efficient sequence of construction to minimise the construction period.</p> <p>Open cut construction would be used to install the pipeline at Alma Lane. As highlighted by the respondent, this road has lower volumes of traffic compared to other routes, and therefore trenchless construction methods are not considered appropriate. The detailed design would be in accordance with the Design Principles Document (Document reference 5.11, DCO Volume 5).</p> <p>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) defines how any potential settlement would be dealt with, although it is not anticipated that any reinstatement of buildings would be necessary.</p> |
| Wider community | CIE49      | <p>Respondents expressed concern that open-cut trenches would be used across agricultural land, therefore affecting food production.</p>                                                                                                                                                                                                                                                                                        | N                    | <p>Impacts on agricultural land would be temporary and full reinstatement to original condition would take place following pipe installation in accordance with a detailed Soil Resource Management Plan (SRMP) that would be developed by the contractor and would be substantially in accordance with the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|                 |            |                                                                                                                                         |                      | to avoid or reduce environmental effects. Through the implementation of mitigation, no residual likely significant adverse effects on ecological features are anticipated                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Wider community | CIE52      | The respondent asked what measures would be put in place to mitigate construction effects on local residents.                           | N                    | <p>The current indicative design has been developed to avoid and reduce impacts on local residents as far as reasonably practicable, with further mitigation proposed through construction best practice. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) has been developed to cover mitigation measures based on the assessment of this design.</p> <p>This would be developed by the Contractor, once appointed, into a detailed Construction Environmental Management Plan during the detailed design phase to further reduce any impacts.</p> |
| Wider community | CIE53      | Respondents queried whether engagement had been undertaken with Network Rail (NR) regarding the Pipeline crossing the mainline railway. | N                    | Engagement has been undertaken with NR to understand the interactions of the Project with its assets and ensure appropriate provisions are in place to protect these during the construction phase.                                                                                                                                                                                                                                                                                                                                                                                              |
| Wider community | CIE54      | The respondent requested that residents within the impacted areas remain informed during the lifetime of the Project.                   | N                    | Ongoing stakeholder engagement would continue throughout the development and construction of the Project.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                                                                                    |                      | As set out in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), the Applicant would develop and implement a stakeholder communications plan before work commences on site. This would include arranging meetings with relevant statutory bodies as necessary, maintaining site environmental notice boards with key contact information and guidance, publicising site office contact details in advance of works, and establishing clear procedures for reporting and responding to issues. The Applicant would also monitor and record complaints to help manage and minimise disturbance and would adhere to the Considerate Constructors Scheme. These measures are designed to ensure transparency, responsiveness, and continuity of dialogue, helping to maintain trust and address emerging concerns throughout the construction phase |
| Wider community | CIE55      | The respondent expressed the view that the proposed Pipeline route should avoid any environmental damage and heritage assets, such as ancient woodland and archaeological features. They added that where this would not be possible, it was suggested that appropriate trenchless | N                    | Design of the Project has purposely avoided direct disturbance of designated heritage assets where possible and has aimed to minimise any change to setting arising from perceptibility of the proposed development. Primary mitigation for the historic environment is set out in the Design Principles Document                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| Consultee | Issue code | Summary of issue raised                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

|           |            | excavation methods should be used instead. |                      | <p>(Document reference 5.11, DCO Volume 5) which includes reducing impacts to the most significant known heritage assets with an agreed scheme of investigation, as per the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7) to allow archaeological remains identified in advance of construction to be avoided by detail design or appropriately recorded before loss. Trenchless techniques have been considered and are used at some points on the route, although the adoption of these techniques has been determined on a case by case basis having regard to environmental and engineering constraints including potential disturbance of archaeological remains at entry and exit points, or through disturbance during the trenchless works. Consequently, these have not been widely adopted as mitigation measures only in specific cases.</p> <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity, including ancient woodland. A range of measures have been embedded into the Project design to avoid or reduce environmental effects. Through the implementation of mitigation, no residual</p> |

|                                      |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                      | movements between the construction workers hub and construction working areas.                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Winchester City Council (WCC), SDNPA | CCL02      | The respondents acknowledged that the construction hub would be a temporary use area for the duration of the construction. It was noted that this could require a separate planning application and that this might be located inside the South Downs National Park to retain flexibility and given that a site with existing planning permission is preferred. Detailed comments will be deferred until the application for the construction hub is submitted. | N                    | ES Chapter 3 Description of Proposed Development, Volume I (Document reference 6.1, DCO Volume 6) sets out that the construction workers hub would be an existing consented site, and therefore the Applicant would not need to apply for planning permission. Therefore, any landscape and visual or ecology effects would have been assessed as part of the approval process for that site. The Chapter considers the effects of vehicle movements between the construction workers hub and construction working areas. |
| Hampshire County Council (HCC)       | CCL03      | The respondent noted that some of the proposed construction compound locations are likely to be acceptable, with no immediate concerns identified and are likely to be dealt with via a standard detail arrangement within the DCO.                                                                                                                                                                                                                             | N                    | The Applicant has noted this comment. The Applicant has undertaken extensive engagement with HCC on construction compound accesses. The Applicant has prepared a Statement of Common Ground with HCC (Draft Statement of Common Ground – Hampshire County Council (Document reference 5.8, DCO Volume 5)), setting out the current position of each party against relevant matters.                                                                                                                                       |
| HCC, Portsmouth City Council         | CCL04      | Comments suggested that the proposed compound locations require additional information and engineering considerations                                                                                                                                                                                                                                                                                                                                           | N                    | Engagement on accesses and traffic management has been undertaken with PCC and HCC which has informed the Framework                                                                                                                                                                                                                                                                                                                                                                                                       |

| Consultee                         | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| (PCC),<br>Natural<br>England (NE) |            | to demonstrate their achievability with some more at risk of acceptability than others. In addition, it was suggested that they should be located away from watercourses and designated sites, all chemicals and fuels should be appropriately stored and considered in the Construction Environmental Management Plan, and the size kept to a minimum. The need for detailed traffic management measures to avoid potential impacts on safety and functionality was also noted. |                      | <p>Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).</p> <p>Compound locations have been chosen to avoid sites designated for nature conservation where possible. Only one site would be directly impacted (Fielders Farm Site of Importance for Nature Conservation (SINC)). The footprint would be minimised and located in the area of the site with the least botanical interest. The site would be enhanced to better than before on completion of construction as per Design Principle PL_27.</p> <p>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out measures for the avoidance of pollution within the construction compounds.</p> |
| HCC                               | CCL05      | The respondent acknowledged that the construction compound at the Water Recycling Plant (WRP) is likely to be acceptable subject to addressing the issue that it would be used for constructing the proposed Pipeline route to Budds Farm Wastewater Treatment Works (WTW).                                                                                                                                                                                                      | N                    | ES Chapter 3 Description of Proposed Development, Volume I (Document reference 6.1, DCO Volume 6) sets out that the construction compound at the WRP site would enable both the construction of the WRP site and tunnel shafts associated with the various pipelines (which include those between the WRP site and Budds Farm WTW).                                                                                                                                                                                                                                                                                                                                                                                         |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| HCC       | CCL06      | The respondent raised concerns over temporary construction compound access locations and the implications for walkers, wheelers and cyclists. The respondent requested further information about how the construction of the temporary access for the proposed construction compound B1-1 within Staunton Country Park would be managed to the satisfaction of the operators of the Country Park and Farm in order to minimise impacts on the park and its visitors. | N                    | <p>Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project as it is now proposed to use Portsmouth Water's Pipelines instead. As such, construction compound B1-1 is no longer included in the Project.</p> <p>Further information on the removal of the backup option is contained in section 5 of the Scheme Development Report (Document reference 5.10, DCO Volume 5).</p> |
| HCC       | CCL07      | The respondent acknowledged that construction compound B1-1 would be accessed from Middle Park Way and would likely be acceptable subject to addressing identified issues.                                                                                                                                                                                                                                                                                           | N                    | <p>Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. | HCC       | CCL08      | The respondent noted that construction compound B1-2 would have access from Hooks Lane and is not considered suitable by the Local Highway Authority. | N                    | Following the approval in 2025 of Portsmouth Water's application for pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project as it is now proposed to use Portsmouth Water's Pipelines instead. As such, construction compound B1-2 is no longer included in the Project. Further information on the removal of the backup option is contained in section 5 of the Scheme Development Report (Document reference 5.10, DCO Volume 5). |
| HCC       | CCL09      | The respondent noted that construction compound B2-1 access would be from Mill Lane and would likely be acceptable, subject to addressing issues.     | N                    | The Applicant has undertaken further engagement with HCC on access proposals which has informed the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Consultee                  | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|----------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                            |            |                                                                                                                                                                                                                                                                                                                      |                      | which sets out the access proposals to this construction compound via Mill Lane.                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| HCC                        | CCL10      | The respondent acknowledged that construction compound B2-2 would be accessed from Meyrick Road and would likely be acceptable subject to addressing identified issues. An Environment Agency (EA) culvert was highlighted and suggested it should be considered whether it is impacted by the Project.              | N                    | The Applicant has undertaken further engagement with HCC on access proposals which has informed the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7). Construction vehicles would access construction compounds B1-3 and B1-2 (previously construction compound B2-2) from Meyrick Road and the existing access to Bedhampton Springs, which cross the culvert highlighted by the respondent. No works are anticipated to be required to Meyrick Road or the access to Bedhampton Springs. |
| PCC                        | CCL11      | The respondent listed the roads within the Portsmouth Highway Network along the route and noted the construction compounds that would directly impact their network would be the ones located adjacent Gillman Road and New Down Lane as well as any potential delay arising from the construction of the pipelines. | N                    | The Applicant has undertaken further engagement with PCC on access proposals at Gilman Road and New Down Lane, which has informed the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).                                                                                                                                                                                                                                                                                                    |
| HCC, Portsmouth Water, PCC | CCL12      | Respondents made suggestions relating to construction compound D-1 and requested further discussions regarding this site due to its impact on other development plans for Portsmouth Water and housing                                                                                                               | N                    | The Applicant has undertaken engagement with HCC and PCC on access proposals for this compound which has informed the Framework Construction Traffic Management                                                                                                                                                                                                                                                                                                                                                                 |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>delivery. Specifically, an active planning application (Campdown) was raised with suggestions that regard for these works should be considered. It was stated that Gillman Road has a restrictive Traffic Regulation Order and would require amendment to facilitate the Project moving forward. It was also highlighted as a public footpath and as such consideration would be needed to ensure access is maintained or mitigations are put in place.</p> <p>Portsmouth Water stated that compound D-1 is proposed on land owned by Portsmouth Water, and further discussions are required regarding this site as it has development plans for this site that must not be compromised by the Project.</p> |                      | <p>Plan (Document reference 7.2, DCO Volume 7).</p> <p>The use of land for construction compound D-1 has been discussed with Portsmouth Water. The compound and shaft, if required, would be temporary in nature with the shaft being backfilled once tunnel construction is complete. Depending on the nature of the development, this would be unlikely to preclude long-term development of the land.</p>                                                |
| PCC       | CCL13      | <p>The respondent made several comments relating to construction compound E-1, noting the former arable land that is being managed for access and conservation, established and recently planted hedges and trees that have been planted in the area, and questioned whether they would be affected. Opportunity was highlighted to create chalk grassland on open areas of this compound and suggested that the</p>                                                                                                                                                                                                                                                                                           | Y                    | <p>The Project would require the removal of hedgerows to the north and west of construction compound E-1. These would be reinstated in line with the approach set out in the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7). All other hedgerows and trees would not be impacted.</p> <p>Environmental mitigation and enhancement would take place within land used for construction compounds E-1 and E-2. These</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                           |

|           |            |                                                                                                                                                                                                                                                                                       |                      | accessed from Boarhunt Road via the haul road.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| HCC       | CCL17      | For construction compound G-1, the respondent highlighted the need to consider and accommodate cycle improvements proposed as part of the Welborne Development works along the A32 corridor.                                                                                          | N                    | The Applicant has undertaken further engagement with HCC on access proposals, including cycle improvements, which has informed the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| HCC       | CCL18      | The respondent suggested combining construction compounds G-1 and G-2 to reduce the need for new access points onto the A32 and minimise the impact of the development. They also note a live application with WCC for a new access onto the A32 and provided reference 24/01126/FUL. | N                    | The construction compounds are required on either side of the A32 to implement trenchless construction under the A32. The Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7) sets out that given the limited information available as to when the works on the A32 would come forward, the detailed Construction Traffic Management Plan would need to give suitable consideration to these works and minimise disruption as much as reasonably practicable. This approach has been discussed with HCC as the Local Highway Authority and it has been agreed that the detailed Construction Traffic Management Plan(s) would include measures to reduce potential cumulative impacts where practicable. |
| HCC       | CCL19      | The respondent noted that construction compound G-3 would be accessed via                                                                                                                                                                                                             | Y                    | Construction compound G-3 is no longer accessed from Mayles Lane and would be                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| Consultee | Issue code | Summary of issue raised                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                |
|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | Mayles Lane and was not considered suitable by the Local Highway Authority.                                                                                       |                      | accessed from Hoads Hill (A32) via the haul road. The Applicant has undertaken further engagement with HCC on access proposals which has informed the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).                                            |
| HCC       | CCL20      | The respondent noted that construction compounds G-4 and G-5 would be accessed via Tanfield Lane and were not considered suitable by the Local Highway Authority. | Y                    | Construction compounds G-4 and G-5 would be accessed from Titchfield Lane via the haul road. The Applicant has undertaken further engagement with HCC on access proposals which has informed the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7). |
| HCC       | CCL21      | The respondent noted that construction compound H-1 would be accessed via an unadopted access road east of the A334.                                              | Y                    | Construction compound H-1 would be accessed from Blind Lane via the haul road. The Applicant has undertaken further engagement with HCC on access proposals which has informed the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7).               |
| HCC       | CCL22      | The respondent noted that construction compound H-2 would be accessed via Blind Lane and was not considered suitable by the Local Highway Authority               | N                    | Construction compound H-2 would be accessed via existing access from Blind Lane. The Applicant has undertaken further engagement with HCC on access proposals, including the access from Blind Lane, which has informed the Framework Construction                                      |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                            | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                            |

| HCC                                  | CCL24      | The respondent noted that compound K-5 and compound K-6 would be accessed via Sciviers Lane and were not considered suitable by the Local Highway Authority.                                                                                                                                                                                                             | Y                    | Construction compounds K-5 and K-6 would be accessed from Winchester Road (B2177) via the haul road.<br><br>Further engagement with HCC has been sought. The Applicant has undertaken further engagement with HCC on access proposals which has informed the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7). |
| Eastleigh Borough Council (EBC), HCC | CCL25      | EBC noted the proximity of Stroudwood Farmhouse (Grade II listed) to construction compound L-1 and mentioned that the Project was not expected to have an adverse impact on the property.<br><br>HCC stated that there are existing large drainage grips in this area. The Council added that although not clear, it was stated that there appeared to be a 'depression' | Y                    | Design refinements to construction compound L-1 were discussed with HCC and EBC and they were consulted on further design refinements to construction compound L-1 at the Spring 2025 Consultation. The design refinements to the construction compound were in response to comments from HCC, EBC and the landowner.                               |

|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | which ran adjacent to the hedge which could be a shallow ditch conveying surface water.                                                                                                                                                                                                                                       |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| EBC       | CCL26      | The respondent suggested that there was potential for noise concerns at construction compound L-3 due to the park homes at Hillview Manor Park. They suggested the need to consider an alternative location if significant activity is expected at night as this is a sensitive location.                                     | N                    | The potential noise effects from construction works, including compound L-3, have been assessed, asset out in ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6). The assessment considers potential effects of any proposed night-time works, in accordance with relevant guidance (BS5228-1:2009+A1:2014 Code of practice for noise and vibration control on construction and open sites – Part 1: Noise). With mitigation measures implemented, as identified in the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), the effects are considered not significant. |
| EBC       | CCL27      | The respondent expressed concerns about the ecological impact of construction compound L-4, which is proposed to be within a Site of Importance for Nature Conservation (SINC). The respondent suggested relocating part of this compound to construction compound L-5 which could reduce the temporary loss of SINC habitat. | Y                    | Construction compound L-4 that was presented at the Summer 2024 Consultation is now construction compound L-5. This construction compound has been reduced as far as reasonably practicable. As per Design Principle PL_27, pre-construction ecology survey data would be used to inform the layout/location of this construction compound and mitigation and enhancement of the SINC                                                                                                                                                                                                                                                          |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| HCC                                                         | CCL28      | The respondent noted that construction compound L-9 would be accessed via Bishopstoke Lane and was not considered suitable by the Local Highway Authority.                         | Y                    | The Applicant has undertaken further engagement with HCC on access proposals which has informed the Framework Construction Traffic Management Plan (Document reference 7.2, DCO Volume 7). Construction compound L-9 would be accessed from Church Lane via the haul road instead of from Bishopstoke Lane.                                                                                                                                                                                                                                                                                                                                                                                                  |
| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                                                                                    |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| PILs                                                        | CCL29      | General concerns were raised about siting construction compounds in the curtilage of a residential property and the unnecessary disruption to residents and agricultural activity. | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate construction compounds. This has considered the proximity to residential properties and existing commercial and agricultural uses of the land. Construction compounds have not been located in the curtilage of any residential properties throughout the development of the Project. Construction of the Project would be managed by an Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7), which sets out the measures that would be implemented to avoid and reduce environmental impacts including noise and vibration for example. |

| PILs      | CCL30      | General feedback was given that the area would be impacted wherever the construction compounds would be located, and comments that the temporary compounds would not affect some landowners. | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate construction compounds. This has considered the proximity to residential properties and existing commercial and agricultural uses of the land. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) includes measures to control the impact of construction compounds.                                                                                                                                                                                                                                      |
| PIL       | CCL31      | A respondent suggested that the Applicant could rent land off-site and therefore wouldn't need large construction compounds on site.                                                         | N                    | <p>Using land off-site as construction compounds would require a significantly greater number of construction vehicle movements between the Pipeline routes and the off-site location. This would have a larger impact on the transport network, and increase carbon, noise and air quality emissions. It would also extend the construction programme.</p> <p>Construction compounds have been identified due to their proximity to the Pipeline routes and the existing highway network, and have been located and refined considering a range of environmental and technical criteria, as set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PIL       | CCL32      | Comments strongly opposed the location construction compound B1-2 because of the impact on the neighbourhood, local school and green space.                                            | Y                    | Following the approval in 2025 of Portsmouth Water's application for two new pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's backup option for pipelines between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project as it is now proposed to use Portsmouth Water's Pipelines instead. As such, construction compound B1-2 is no longer included in the Project. Further information on the removal of the backup option is contained in section 5 of the Scheme Development Report (Document reference 5.10, DCO Volume 5). |
| PIL       | CCL33      | The respondent noted that mitigation proposals were reasonable for construction compound E-1 but expressed concern that the compound may have an effect on the view from Boundary Way. | N                    | ES Chapter 13 Landscape and visual, Volume I (Document reference 3.1, DCO Volume 6) considers the visual effects associated with the Project on residents on the western edge of Widley which includes Boundary Way. The assessment uses representative viewpoints along the western edge of Widley to support the assessment. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out measures that would be implemented to reduce effects during the                                                                                                                                                                                                  |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                    |                      | construction phase. Reinstatement planting would be undertaken in accordance with Design Principle GDP_17. The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) provides further information on landscape reinstatement. Whilst impacts from the construction compound itself would be temporary, it should be noted that BPT/IPS-E would be sited at this location.                                                                 |
| PIL       | CCL34      | The respondent raised concerns about the impact of construction compounds E-4a and E-4b on a hedge line beside the bypass noting that it should not be disturbed.                                                                                  | N                    | To reduce impacts on the hedgerow, a Reduced Working Width (RWW) would be implemented in this location, and therefore 20m of hedgerow would be removed and reinstated in accordance with Design Principle GDP_17 and the Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7).                                                                                                                                                           |
| PIL       | CCL35      | The respondent raised concerns about the proximity and size of construction compound E-5 to Offwell Farm. The route also includes an area which is currently by the shoot on the Estate. An alternative Pipeline route to the south was suggested. | N                    | As per preliminary Design Principle PDP_1 (see the Design Principles Document (Document reference 5.11, DCO Volume 5)), the Applicant has taken the approach to minimise land take, whilst ensuring sufficient space and access for efficient construction and operation, through route and site selection and optimising site layouts. Consideration was given to locating the Pipeline and construction compounds further to the south in Section E: Portsdown Hill to |

| Consultee | Issue code | Summary of issue raised                                                                   | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------|------------|-------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                           |                      | <p>Boarhunt, however this would result in the construction works being at a higher topographical point on the ridge of Portsdown Hill and therefore more visible from sensitive landscapes and other visual receptors. This would also result in the construction works being closer to the Palmerston Forts that are located along the ridge of Portsdown Hill, which are all scheduled monuments and Grade I or II* listed buildings, and therefore afforded a high level of protection by planning policy. Finally, a route further south would adversely impact the hydraulics of the Pipeline, which could require additional pumping to transfer water.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate the Pipeline between the WRP site and Otterbourne Water Supply Works (WSW). An assessment of the effects of construction works in this location is set out in the ES (Document reference 6.1, DCO Volume 6).</p> |
| PIL       | CCL36      | The respondent objected to the size and location of construction compounds E-6b and E-6a. | N                    | <p>As per preliminary design principle PDP_1 (see the Design Principles Document (Document reference 5.11, DCO Volume 5)), the Applicant has taken the approach to minimise land take, whilst ensuring sufficient space and access for efficient construction</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                  | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                                                                          |                      | and operation, through route and site selection and optimising site layouts. Only one construction compound out of E-6a and E-6b would be required. An assessment of the effects of construction works in this location is set out in the ES (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                |
| PIL       | CCL37      | The respondent raised concerns about the proximity of construction compounds F-1 and F-2 to the River Wallington.                                                                                                                                                                                                                        | N                    | Construction compounds F-1 and F-2 have been sited considering the proximity of these to the River Wallington, its flood plain and associated habitats. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) includes measures for mitigating the risk of flooding and protecting habitats during the construction phase. An assessment of the effects of construction works in this location is set out in the ES (Document reference 6.1, DCO Volume 6). |
| PILs      | CCL38      | Concerns were highlighted about the location of construction compound F-3 due to the potential disturbance of occupiers at the Albany Business Centre, it would cut off access to Whitesell Farm, and the land has topographic constraints possibly requiring significant earthworks which should be taken into account. In addition, it | Y                    | The Applicant assumes the respondent was referencing Whitedell Farm.<br>As per ES Chapter 3 Description of the Proposed Development (Document reference 6.1, DCO Volume 6), the access proposals for construction compound F-3 comprise construction vehicles accessing from Chalk Lane and not passing through Albany Farm. The Outline Construction Environmental Management Plan (Document reference 7.1,                                                                                        |

| Consultee | Issue code | Summary of issue raised                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------|------------|----------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | was noted that construction compound F-3 would affect the buildout for Welborne.                                                             |                      | DCO Volume 7) includes measures for mitigating environmental effects which may cause disruption.<br><br>The Applicant has engaged with Welborne Garden Village and flexibility has been included in the Project at this location to allow for the interface with the development. Further, as per Design Principle IPS-F_1, opportunities for a holistic approach on environmental enhancement and connectivity would be sought in collaboration with the Welborne Garden Village development. |
| PIL       | CCL39      | The respondent raised concerns about the impact of construction compound G-4 on the golf course, noting that it would compromise play.       | Y                    | The Project provides flexibility for design refinement within Wickham Park Golf Club at the detailed design stage, to allow for continued engagement with the golf club to ensure that impacts on its operations are reduced.                                                                                                                                                                                                                                                                  |
| PILs      | CCL40      | Respondents noted the potential impact of construction compounds H-3 and H-4 on their home, access to their ground and noise from machinery. | N                    | As per preliminary design principle PDP_1 (see the Design Principles Document (Document reference 5.11, DCO Volume 5)), the Applicant has taken the approach to minimise land take, whilst ensuring sufficient space and access for efficient construction and operation, through route and site selection and optimising site layouts. An assessment of the effects of construction works in this location, including noise during                                                            |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee | Issue code | Summary of issue raised                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                      |                      | the construction phase, is set out in the ES (Document reference 6.1, DCO Volume 6). The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) includes measures for mitigating environmental effects which may cause disruption.                                                                                                                                                                                                    |
| PIL       | CCL41      | The respondent suggested that construction compound H-4 be amended to avoid the Lutman field, but the construction of the Project would restrict the use of any part of their field. | N                    | As per preliminary design principle PDP_1 (see the Design Principles Document (Document reference 5.11, DCO Volume 5)), the Applicant has taken the approach to minimise land take, whilst ensuring sufficient space and access for efficient construction and operation, through route and site selection and optimising site layouts. An assessment of the effects of construction works in this location is set out in the ES (Document reference 6.1, DCO Volume 6). |
| PIL       | CCL42      | The respondent requested that the construction compound J-2 on Curdridge Lane be moved to the area northeast of the Pipeline to minimise the impact on their field.                  | N                    | As per preliminary design principle PDP_1 (see the Design Principles Document (Document reference 5.11, DCO Volume 5)), the Applicant has taken the approach to minimise land take, whilst ensuring sufficient space and access for efficient construction and operation, through route and site selection and optimising site layouts. An assessment of the effects of construction                                                                                     |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                              |                      | works in this location is set out in the ES (Document reference 6.1, DCO Volume 6).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| PIL       | CCL43      | The respondent raised concerns about the large size and location of construction compound J-3 and noted that it takes up the entire 10-acre field and part of the house title. The respondent suggested reducing the size of the compound and relocating it to minimise the impact and blight on the house and field as well as considering removing the portion of house title from the compound and Pipeline requirements. | Y                    | Construction compound J-3 was amended alongside Design Refinement 18 the River Hamble and Ford Farm and presented at the Spring 2025 Consultation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| PIL       | CCL44      | The respondent highlighted concerns about the suitability of the land proposed for the construction compound K-2, noting that it is very wet, formerly filled land, and not suitable for construction. The respondent suggested a physical site inspection to confirm this.                                                                                                                                                  | N                    | <p>The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) includes measures for mitigating the risk of flooding and pollution during the construction phase.</p> <p>During the detailed design phase the contractor would carry out further ground investigation to confirm measures required to accommodate a temporary compound. This could include potential ground water monitoring. As the pipeline would also be constructed through this area, depending on the outcome of the surveys, there may have to be temporary measures to allow the construction of the pipeline and placement of</p> |

| PILs      | CCL45      | <p>A respondent highlighted concerns about the size and length of the haul road from proposed construction compound L-1 to Writers Hill. It was also suggested that compound L-1 should be moved to the north of the Pipeline closer to Winchester Road.</p> <p>A respondent noted that their land (between Winchester Road and Stroudwood Lane) is proposed to be impacted. The respondent raised concerns that they thought the Applicant had proposed a huge compound in the centre of the respondent's land, with access from Winchester Road. The respondent suggested that it would make more sense if the compound was sited to the northeast as this would allow the rest of their land to be farmed, and it doesn't leave any awkward shapes. The respondent also stated that they didn't understand why this large compound had been put in this location.</p> | Y                    | <p>It is assumed that the respondent should have stated Winters Hill instead of 'Writers Hill'.</p> <p>As per preliminary design principle PDP_1 (see the Design Principles Document (Document reference 5.11, DCO Volume 5)), the Applicant has taken the approach to minimise land take, whilst ensuring sufficient space and access for efficient construction and operation, through route and site selection and optimising site layouts. As set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5), construction compound L-1 has been refined to consider environmental considerations, and its proposed location is adjacent to Winchester Road (B2177). Construction compound L-1 was also amended to ensure that land within the fields can continue to be farmed, without leaving awkward shaped areas of land. Following the completion of construction, the land would be reinstated to its existing condition.</p> <p>Construction vehicles would access construction compounds north of Winters Hill (construction compounds K-5 and K-6) via a</p> |

| PILs      | CCL46      | Feedback raised concerns about construction compounds L-5, L-6, L-7, L-8 which are near to the respondent. The concerns related to the quantity of compounds in two fields and how this is an unacceptable impact to the landowner and business. There was a suggestion that directional drilling should be used to remove the need for the number of compounds. | N                    | As set out in ES Chapter 3 Description of the Proposed Development, Volume I (Document reference 6.1, DCO Volume 6), construction compounds L-5 and L-6 are required to support the trenchless crossing of Winchester Road (B3354) and construction compounds L-7 and L-8 are required to support the trenchless crossing of the Bow Lake watercourse. Where trenchless construction methods are used, construction compounds are required. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) includes measures for mitigating environmental effects which may cause disruption. |
| PIL       | CCL47      | The respondent highlighted concerns about the suitability of the location for construction compound L-9 because it is populated by mature willow trees and is on the site of a mire. They also make a suggestion to avoid a kink in the route.                                                                                                                   | Y                    | As set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5), construction compound L-9 was refined to reduce impacts on trees. The Pipeline route in this location was also amended considering feedback from landowners as set out in the Scheme Development Report (Document reference 5.10, DCO Volume 5).                                                                                                                                                                                                                                                                                        |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Wider community                                  | CCL48      | The respondent highlighted general concerns about the construction compound locations. These concerns included disruption to people, landowners, the local area, environmental impacts and visual impacts.                     | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate construction compounds. This has considered the proximity to residential properties and existing commercial and agricultural uses of the land. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) includes measures for mitigating environmental effects which may cause disruption. |
| Wider community                                  | CCL49      | Respondents had no specific comments or objections about the temporary construction compound locations, though some noted were unsure on the detail, while others commented that they would not be directly affected.          | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Wider community                                  | CCL50      | The respondents noted that the proposed solutions for temporary construction compounds were reasonable and necessary.                                                                                                          | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Wider community                                  | CCL51      | The respondents suggested that the construction compounds are kept clean and secure, to keep their size to a minimum, and use signage to help keep traffic on the correct roads. Respondents also emphasised the importance of | N                    | The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out measures that would be implemented to reduce effects to residents and the environment during the construction phase. Reinstatement planting would be                                                                                                                                                                                                   |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | reinstatement works after removal of construction compounds.                                                                                                                                                                                                                                                      |                      | undertaken in accordance with Design Principle GDP_17. The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) provides further information on landscape reinstatement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Wider community | CCL52      | Respondents expressed concern about construction compound B1-2 and the impact on St Thomas More School's playground and the pitches and recreational space at Rugby Club. Pollution and noise levels from this compound were questioned and the in-combination effect with the Portsmouth Water Pipeline project. | Y                    | Following the approval in 2025 of Portsmouth Water's application for two new pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's proposal for a Pipeline between the WRP site and Havant Thicket Reservoir was not progressed any further. Therefore, no works are proposed between Bedhampton Springs and Havant Thicket Reservoir as part of the Project as it is now proposed to use Portsmouth Water's Pipelines instead. As such, construction compound B1-2 is no longer included in the Project. Further information on the removal of the backup option is contained in section 5 of the Scheme Development Report (Document reference 5.10, DCO Volume 5). |
| Wider community | CCL53      | The respondent highlighted concerns about the impact of construction compound B2-1 at Mill Lane in Bedhampton and noted that large lorries would have to move through the village area for up to two years. Further concerns were raised                                                                          | N                    | Measures to mitigate impacts associated with the access route to construction compound B1-1 (formally construction compound B2-1 at the Summer 2024 Consultation) are set out in the Framework Construction Traffic Management Plan (Document reference 7.2,                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                 | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | pertaining to the impact of this compound and were not considered in the Preliminary Environmental Information Report.                                                  |                      | DCO Volume 7). This includes restrictions on the hours of the day that Heavy Goods Vehicles could access the construction compound and use of a traffic marshal to manage conflicts between construction vehicles and other users of the access route.<br><br>The impacts of construction vehicle access routes are set out in the ES (DCO Volume 6).                                          |
| Wider community | CCL54      | The respondent raised concerns about the location of construction compound G-6 and suggested moving the boundary is moved 10m to avoid damaging archaeological remains. | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate the construction compounds. ES Chapter 7 Archaeology and cultural heritage (Document reference 6.1, DCO Volume 6) sets out an assessment of the effects on the historic environment and details the mitigation required.                                         |
| Wider community | CCL55      | The respondent raised concerns about the impact of construction compound G-8, noting that the farm track off Titchfield Lane is already busy.                           | N                    | Construction compounds G-7 and G-8 as presented at the Summer 2024 Consultation have been combined into one compound, G-7. Further information is contained in the Scheme Development Report (Document reference 5.10, DCO Volume 5). Construction compound G-7 would be accessed from a new temporary access from Titchfield Lane which would be reinstated following the construction phase. |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | CCL56      | The respondent raised concerns about the impact of the temporary construction compound H-3 in Shirrell Heath, and emphasised the negative impact of noise, vibrations and proposed working hours.                                              | N                    | An assessment of noise and vibration associated with the construction of Project (including works in compound H-3) is set out in ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6). The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) includes measures for mitigating environmental effects which may cause disruption, including a potential requirement for a temporary acoustic enclosure over the equipment in the launch shaft at the trenchless crossing between compounds H-3 and H-4. With these measures in place, residual effects are not significant. |
| Wider community | CCL57      | The respondent highlighted concerns about the impact of construction compounds H-5 and J-1 on either side of their home, noting the significant impact on their life due to noise, machinery, proposed working hours and access interruptions. | N                    | An assessment of the effects of this construction compound on residents and the environment is set out in the ES, with ES Chapter 15 Noise and vibration, Volume I (Document reference 6.1, DCO Volume 6) including an assessment of noise and vibration associated with the construction of Project. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) includes measures for mitigating environmental effects which may cause disruption.                                                                                                                                                          |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | CCL58      | Concerned comment about proximity of construction compound K-2 to the Winchester to Wickham Roman Road. It was suggested that the boundary is moved to avoid damaging archaeological remains. | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate the construction compounds. ES Chapter 7 Archaeology and cultural heritage (Document reference 6.1, DCO Volume 6) sets out an assessment of the effects on the historic environment and the Roman Road. The draft DCO (Document reference 3.1, DCO Volume 3) includes a pre-commencement requirement that requires a detailed Written Scheme of Investigation to be produced in accordance with the Outline Written Scheme of Investigation (Document reference 7.6, DCO Volume 7) to be approved by the relevant local planning authority. |
| Wider community | CCL59      | Concerned comment about construction compound K-3 as it faces a beautiful landscape and footpath and queried whether this outlook will be retained.                                           | N                    | The Scheme Development Report (Document reference 5.10, DCO Volume 5) sets out the process that has been undertaken to locate the construction compounds. An assessment of the landscape and visual effects is set out in ES Chapter 13 Landscape and visual, Volume I (Document reference 6.1, DCO Volume 6). Where vegetation removal cannot be avoided, reinstatement planting would be undertaken in accordance with Design Principle GDP_17. The Outline Landscape and Ecology Management Plan (Document reference 7.5, DCO Volume 7) provides                                                                                                                       |

| Consultee       | Issue code | Summary of issue raised                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                              |                      |                                                                                                                                                                                                                             |
| Hampshire County Council (HCC), Upham                           | PLB01      | HCC highlighted that at Summer 2022 Consultation stakeholders had already asked about opportunities to create pedestrian and cycle access along the Pipeline route and to join up the Public | N                    | Opportunities to improve cycling and walking networks along the vicinity of the Project have been considered in response to feedback. However, given that the nature of the Project does not require footpath or cycle path |

| Consultee                                  | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Parish Council                             |            | <p>Right of Way (PRoW) network. The Council acknowledged that the Applicant's response to feedback focused on communication with the public about footpath closures and alternatives. Whilst positive, this did not acknowledge the role the County Council can play in stakeholder engagement and management.</p> <p>Upham Parish Council noted it was not sure about the benefits the Project would deliver.</p> |                      | <p>provision along the pipeline routes, it would not be possible to secure the necessary land rights (without voluntary agreement) needed to deliver these opportunities, noting that potential routes would impact private land under multiple ownership. Implementing footpath and cycle path improvements would in many places significantly limit the use of such land (e.g. for agriculture) noting that for much of the pipeline, land would be reinstated to its former use as the pipeline would be underground. If, however, a third party or local communities themselves were able to coordinate and secure voluntary agreements with land owners affected by any potential paths, and undertake any necessary consenting of those paths, then the Applicant would consider supporting the implementation of those consented paths upon reinstatement of the Pipeline construction works.</p> <p>The Applicant would expect to work closely with HCC throughout the construction phase of the Project to ensure that communications regarding Public Rights of Way (PRoW) were coordinated and delivered.</p> |
| Wiltshire Council, Portsmouth City Council | PLB02      | Wiltshire Council noted that it strongly supported the benefits the Project would deliver.                                                                                                                                                                                                                                                                                                                         | N                    | <p>The Applicant has noted this comment.</p> <p>The Design Principles Document (Document reference 5.11, DCO Volume 5) sets out the</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Consultee                          | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| (PCC), Natural England (NE)        |            | <p>PCC said it appreciated the strategic opportunities identified in the draft environmental masterplan to identify any potential environmental and social enhancements within focus area 4: Portsdown Hill and Focus Area 5: Broadmarsh Coastal Park. The Council said it would look to see further details of this developing.</p> <p>NE acknowledged that the Project would deliver a number of benefits at a national, regional and local level, leaving a lasting legacy for both the environment and local communities.</p> |                      | <p>approach to environmental mitigation and enhancement on site within the Order Limits.</p> <p>The Case for the Project (Document reference 5.6, DCO Volume 5) sets out details on the Project's benefits and legacy at section 5.</p>                                                                                                                                                                                                                                                                                  |
| Winchester City Council (WCC), PCC | PLB03      | <p>Respondents made several suggestions about the benefits the Project would deliver.</p> <p>WCC highlighted that public value through community engagement and enhancement should form a key mitigation element throughout this lifespan of this Project which should be detailed in the OMS.</p> <p>PCC emphasized the importance of implementing tertiary mitigation measures for both the Pipeline and Above Ground Plant (AGP) located adjacent to Fort Widley</p>                                                           | Y                    | <p>The Design Principles Document (Document reference 5.11, DCO Volume 5) sets out the approach to environmental mitigation and enhancement on site within the Order Limits. This includes opportunities in relation to chalk grassland creation and landscape screening at Break Pressure Tank/Intermediate Pumping Station E, in response to feedback from PCC.</p> <p>The Case for the Project (Document reference 5.6, DCO Volume 5) further sets out details on the Project's benefits and legacy at section 5.</p> |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-----------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | PCC confirmed it had received input from its countryside management team and suggested it should work to balance screening planting with the promotion and expansion where possible of the SSSI chalk grasslands surrounding the sites. The Council suggested that this work could be included in identifying environmental enhancement opportunities.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| WCC, NE   | PLB04      | <p>WCC mentioned that its proposed BNG projects were in early development stages and unlikely to be ready by the time the DCO application is submitted.</p> <p>The consultee was under the impression, limited to TCPA applications, that NE highlighted that it is required by law to deliver a BNG of at least 10% from 12 February 2024 and this requirement was expected to be extended to smaller scale development in spring 2024. For Nationally Significant Infrastructure Projects (NSIP), it was anticipated that the requirement for BNG would be implemented from 2025.</p> <p>It was also suggested that the statutory Biodiversity Metric should be used to calculate biodiversity losses and gains for terrestrial and intertidal habitats and can be used to inform any development project.</p> | N                    | <p>Although not yet a statutory requirement for projects consented under the Town and Country Planning Act 1990 and the Planning Act 2008 (PA 2008), the Applicant would be delivering at least 10% biodiversity net gain (BNG).</p> <p>Engagement with local authorities and other relevant bodies has been undertaken to explore BNG provision opportunities. A Biodiversity Gain Plan (DCO Document reference 7.11, DCO Volume 7) is included with the DCO application detailing the gains required (based on the latest design) and including high level information on how the necessary units would be delivered. BNG would be delivered and secured in line with the relevant requirement in Schedule 2 of the Draft Development Consent Order (Document reference 3.1, DCO Volume 3).</p> |

Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee                                                                                     | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                               |            | For small development sites, the Small Sites Metric may be used. This is a simplified version of the Biodiversity Metric and is designed for use where certain criteria are met. The mitigation hierarchy as set out in paragraph 186 of the National Planning Policy Framework (NPPF) should be followed to firstly consider what existing habitats within the site can be retained or enhanced. Where on-site measures are not possible, provision off-site would need to be considered. |                      | <p>The Applicant has used the statutory biodiversity metric, however, due to the nature of the Project and the significant difference in the nature and scale between projects consented under the Town and Country Planning Act 1990 and the PA 2008, it is not considered in all cases to follow the statutory biodiversity metric user guide. The Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7) sets out the Project's approach to BNG.</p> <p>The process to design the Project, consider mitigation and BNG has followed the mitigation hierarchy.</p> |
| East Hampshire District Council (EHDC), Langstone Harbour Board, Havant Borough Council (HBC) | PLB05      | Respondents welcomed the commitment from the Applicant to achieve meaningful BNG as part of the Project.                                                                                                                                                                                                                                                                                                                                                                                   | N                    | <p>Although not yet a statutory requirement for projects consented under the PA 2008, the Applicant would be delivering at least 10% BNG</p> <p>The Applicant has noted this comment. A Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7) is included with the DCO application detailing the voluntary gains proposed (based on the latest design) and including high level information on how the necessary units would be delivered.</p>                                                                                                                      |
| EHDC                                                                                          | PLB06      | EHDC acknowledged that alongside the DCO application a detailed Ecology and Management Plan would be produced                                                                                                                                                                                                                                                                                                                                                                              | Y                    | The Applicant has committed to delivering at least 10% BNG – this is a firm commitment and not an aspiration. The Applicant                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

|                                                  |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                      | <p>off-site BNG opportunities, and the approach to delivery of this is set out in the Biodiversity Gain Plan.</p> <p>Engagement with NE has been undertaken on the approach to BNG and this has informed the Biodiversity Gain Plan.</p>                                                                                                                                                                                                                                                           |
| Eastleigh Borough Council (EBC)                  | PLB07      | <p>EBC suggested that there is high potential for BNG within a parcel of land at Stoke Park Farm. The Council noted that given the site's proximity to the proposed Pipeline route, location within a biodiversity priority area and high BNG potential for habitats and watercourses, this would be an ideal site for the Applicant to consider. The Council said it would be keen to discuss this further with the Applicant.</p>                                                        |                      | <p>The Applicant has engaged with EBC and all other local authorities that the Project is located within, regarding potential off-site BNG opportunities, and the approach to delivery of this is set out in the Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7). The parcel of land at Stoke Park Farm has been discussed and is being considered as part of BNG and enhancement delivery.</p>                                                                                     |
| Environment Agency (EA), Langstone Harbour Board | PLB08      | <p>The EA supported the inclusion of a BNG strategy. It noted that this took the form of an aspiration as opposed to a solid commitment. The EA said it expected firmer commitments to be made.</p> <p>Langstone Harbour Board stated it was notable that the published reports made no reference to what and/or where the BNG would be focused. It added that for a project of this size and scale, it would be preferable to see a more ambitious target of 20% being worked toward.</p> | N                    | <p>The Applicant has committed to delivering at least 10% BNG – this is a firm commitment and not an aspiration. The Applicant considers this an appropriate and proportionate commitment given the wider environmental benefits that the project would deliver and the fact that BNG is not a mandatory requirement at the time of DCO application submission. The BNG commitment would be delivered through a combination of on-site and off-site enhancements. The DCO application includes</p> |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                      | a Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7) setting out how the Project would achieve BNG.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| HBC       | PLB09      | <p>HBC noted that there are many potential opportunities for ecological enhancements within the Borough of Havant, which the Project may help realise. The Council said would welcome further discussions, which have already been offered by the Applicant, about how these and others might be realised and what might be included in the final Environmental Masterplan.</p> <p>HBC acknowledged the inclusion of this suggestion in the WRP design considerations and is open to collaborative discussions. The proposed improvements include:</p> <ul style="list-style-type: none"> <li>a) Biodiversity Enhancement: Opportunities for ecological gains by managing grassland and scrub habitats in areas owned by the Council south of Harts Farm Way and creating a seasonal refuge for wintering bird species.</li> <li>b) Leisure Access: Enhancing leisure access for residents while balancing the site's ecological value.</li> </ul> |                      | <p>The Applicant has committed to delivering at least 10% BNG – this is a firm commitment and not an aspiration. The Applicant considers this an appropriate and proportionate commitment given the wider environmental benefits that the project would deliver and the fact that BNG is not a mandatory requirement at the time of DCO application submission. The BNG commitment would be delivered through a combination of on-site and off-site enhancements. The DCO application includes a Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7) setting out how the Project would achieve BNG.</p> |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

|           |            | c) Coastal Protection: Implementing a rock armour defence to protect against coastal erosion and flood risk, as identified by a feasibility study funded by HBC and the Southern Regional Flood and Coastal Committee Local Levy.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| NE        | PLB10      | <p>NE welcomed the commitment to deliver a minimum of 10% on-site BNG. It noted that it is best practice for BNG proposals to be considered early on within project option and design phases. Early identification of areas of habitat creation and enhancement was recommended. Provision of as much BNG information as possible at an early stage will help ensure gains are maximised. These included suggesting that firm commitments are put in place, further discussions with Councils about areas for enhancement, and setting a target threshold of BNG.</p> <p>NE added that opportunities for enhancement might include incorporating features to support specific species within the design of new buildings such as swift or bat boxes or designing lighting to encourage wildlife.</p> | N                    | The Applicant has committed to delivering at least 10% BNG – this is a firm commitment and not an aspiration. The Applicant considers this an appropriate and proportionate commitment given the wider environmental benefits that the Project would deliver and the fact that BNG is not a mandatory requirement at the time of DCO application submission. The BNG commitment would be delivered through a combination of on-site and off-site enhancements. The DCO application includes a Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7) setting out how the Project would achieve BNG. |

| Consultee         | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                          |

|                   |            | It outlined that NE's Environmental Benefits from Nature tool may be used to identify opportunities to enhance wider benefits from nature and to avoid and minimise any negative impacts. It is designed to work alongside the Biodiversity Metric and is available as a beta test version.                                                                                                                                                 |                      |                                                                                                                                                                                                                                                                                                                                                                   |
| Wiltshire Council | PLB11      | Wiltshire Council supported the benefits the Project would deliver and noted that maintaining or increasing water supply improves our climate resilience and reduces the overbearing strain on aquifers and chalk streams which are already overly 'abused.' With reduced abstraction, the Council hoped the rivers would have more of a chance to regain some of their more natural flow states.                                           | N                    | The Applicant has noted this comment. The Project is a key part of the Applicant's strategy to address the water supply challenges faced in Hampshire by reducing reliance on abstractions from Hampshire's rivers.                                                                                                                                               |
| HBC               | PLB12      | HBC stated that the freshwater ecology study had highlighted the poor ecological condition of the borough's main watercourses such as the Hermitage and Riders Lane Streams. The Council stated it would very much welcome further attention being paid to watercourse enhancements (co-ordinated with the planned enhancement works related to Havant Thicket Reservoir site) within the borough (where all watercourses are in less-than- | N                    | The Applicant has noted this comment. Portsmouth Water will be undertaking enhancement measures within these two watercourses as part of Havant Thicket Reservoir. As the Project would not have any impacts within the freshwater reaches of these two watercourses, it is not considered necessary or proportionate for additional enhancements to be provided. |

|                                                  |            | joint approach on environmental enhancements and connectivity.                                                                                                                                                                                                                                                                                                |                      | enhancement and connectivity would be sought at the detailed design stage in collaboration with the Welborne Garden Village development.                                                                                                                                                                                                                                                                                                                                                     |
| PILs                                             | PLB19      | A respondent acknowledged that the Project would enhance water supply whilst reducing river extractions, which was seen as a benefit.<br><br>A further respondent noted that most of the world's chalk streams / rivers are in the UK, they estimated about 85%, and stated that this Project would help safeguard an environment of world-wide significance. | N                    | The Applicant has noted this comment. The Project is a key part of the Applicant's strategy to address the water supply challenges faced in Hampshire by reducing reliance on abstractions from Hampshire's rivers.                                                                                                                                                                                                                                                                          |
| PILs                                             | PLB20      | Respondents expressed concern that the Project would facilitate further housing developments in the area which respondents opposed.                                                                                                                                                                                                                           | N                    | As a water company, it is the Applicant's legal responsibility to provide customers with a reliable and safe supply of water. The Project is a key part of the Applicant's strategy to address the water supply challenge already faced in Hampshire. Any proposals for housing developments would be considered by the local planning authorities under the relevant planning policies. The Case for the Project (Document reference 5.6, DCO Volume 5) sets out why the Project is needed. |
| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                                                                               |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Wider community                                  | PLB21      | Respondents expressed general concerns that overall, they did not believe the Project                                                                                                                                                                                                                                                                         | N                    | The Project is a key part of the Applicant's strategy to address the water supply                                                                                                                                                                                                                                                                                                                                                                                                            |

|                 |            | acknowledged its contribution towards protecting chalk streams.                                                                                 |                      | reliance on abstractions from Hampshire's rivers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Wider community | PLB24      | Respondents suggested that the Project should include plans to improve the cycling and walking network along throughout the Project's vicinity. | N                    | Opportunities to improve cycling and walking networks along the vicinity of the Project have been considered. However, given that the nature of the Project does not raise issues of sustainable travel and accessibility that require interventions, it would not be possible to secure the necessary land rights (without agreement) needed to deliver these opportunities, noting that potential routes would impact private land under multiple ownership and implementing cycling/walking improvements would in many places significantly limit the use of such land (e.g. for agriculture) noting that for much of the pipeline, land would be reinstated to its former use as that pipeline would be underground. If, however, a third party or local communities themselves were able to coordinate and secure voluntary agreements with landowners affected by any potential routes, and undertake any necessary consenting of those routes, then the Applicant would consider laying those routes upon reinstatement of the Pipeline construction works. |

| Wider community | PLB25      | <p>Respondents expressed concerns that the addition of recycled water into the Havant Thicket Reservoir would have a negative impact on the BNG provided by Havant Thicket Reservoir.</p> <p>It was also noted the BNG Havant Thicket Reservoir would have provided would be significantly reduced. For example, the seasonal variations in water level at Havant Thicket Reservoir, which was essential to maximising the BNG to compensate for other losses such as loss of ancient woodland and priority grassland habitat, would be lost as the proposal is for recycled effluent to be pumped in daily to keep Havant Thicket Reservoir topped up.</p> | N                    | <p>Extensive water quality modelling has been undertaken to inform the assessments set out in the ES (DCO Volume 6). These have demonstrated that the addition of recycled water to Havant Thicket Reservoir would not adversely affect the biodiversity of Havant Thicket Reservoir. Portsmouth water will manage and operate Havant Thicket Reservoir and will determine how seasonal variations in water levels would be achieved.</p> <p>ES Chapter 8 Terrestrial and freshwater biodiversity (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity as well as including appropriate mitigation for habitats and species, as required.</p> |
| Wider community | PLB26      | The respondent welcomed the commitment for the Project to achieve a 'meaningful net gain' in biodiversity and encouraged the Applicant to set an ambitious target.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | N                    | The Applicant has noted this comment. A Biodiversity Gain Plan (Document reference 7.11, DCO Volume 7) is included with the DCO application detailing the committed gains (based on the latest design) and including high level information on how the necessary units would be delivered. The Applicant is committing to delivering at least 10% BNG.                                                                                                                                                                                                                                                                                                                                                           |
| Wider community | PLB27      | The respondent recognised the need to reduce river abstraction but expressed that                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | N                    | The Project is a key part of the Applicant's strategy to address the water supply                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Consultee       | Issue code | Summary of issue raised                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | more could be done with the Project to deliver more positive changes.                                                               |                      | challenge in Hampshire by reducing reliance on abstractions from Hampshire's rivers. In addition to the intrinsic benefit of protecting Hampshire's precious chalk stream habitats, the project would deliver a number of more localised benefits including skills and employment commitments, environmental enhancements and BNG. The Case for the Project (Document reference 5.6, DCO Volume 5) sets out the compelling need for the Project and details the Project's benefits and legacy. Many of the benefits proposed have been informed by consultation feedback, engagement with key stakeholders and through assessment outcomes. These benefits would be delivered in a variety of ways, such as through specific obligations, design principles or detailed designs. |
| Wider community | PLB28      | Respondents expressed concern that the Project would facilitate further housing developments in the area, that respondents opposed. | N                    | As a water company, it is the Applicant's legal responsibility to provide customers with a reliable and safe supply of water. The Project is a key part of the Applicant's strategy to address the water supply challenges already faced in Hampshire. Any proposals for housing developments would be considered by the local planning authorities under the relevant planning policies. The Case for the Project (Document reference 5.6, DCO Volume 5) sets out why the Project is needed.                                                                                                                                                                                                                                                                                    |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                              | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-----------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | PLB29      | Respondents expressed concerns that the Project would not be beneficial to future generations, this was because of perceived environmental impacts, in particular impacts on wildlife, a lack of longevity of the Project, and the carbon footprint. | N                    | <p>The Project would provide a new source of water which would address the future water supply challenges in the Hampshire area. The Project therefore continues to ensure customers' supplies whilst protecting the County's rare and precious chalk streams which are designated as a SAC and SSSI. Considerable efforts have been made to avoid and reduce impacts on the environment through the design and proposed mitigations of the Project.</p> <p>ES Chapter 8 Terrestrial and freshwater biodiversity, Volume I (Document reference 6.1, DCO Volume 6) provides a detailed impact assessment on terrestrial and freshwater biodiversity which includes the mitigation to be provided where required. The Case for the Project (Document reference 5.6, DCO Volume 5) sets out the compelling need for the Project and details the Project's benefits and legacy. The outline Carbon Management Plan sets out the measures to drive down carbon during construction and operation of the Project. The Planning Policy Statement (Document reference 5.5, DCO Volume 5) summarises the benefits and impacts of the Project in the planning balance section.</p> |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | PLB30      | The respondents expressed the view that the Project would benefit future generations and water resilience will be critical.                                                 | N                    | The Applicant has noted this comment. The Project is a key part of the Applicant's strategy to address the water supply challenges faced in Hampshire by reducing reliance on abstractions from Hampshire's rivers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Wider community | PLB31      | The respondent suggested that reservoirs and underground holding tanks would provide more benefits to future generations than the benefits proposed as part of the Project. | N                    | <p>New reservoirs have been considered as part of the Applicant's WRMP process, but these take a significant amount of time to develop and carry their own environmental impacts. Additionally, a WRMP that relies on capturing and storing rainfall alone to provide the necessary volumes in Hampshire would not fulfil the future water resources challenges and therefore the Applicant would have to continue to rely on river abstractions that the Applicant is required to reduce. The Applicant is already investing significantly in Havant Thicket Reservoir and the White Horse Reservoir. Havant Thicket Reservoir plays a critical role in the Project by augmenting the volume of water that can be delivered to the Applicant's Otterbourne Water Supply Works.</p> <p>Alternative solutions considered to address the water supply shortfall are detailed in ES Chapter 4 Consideration of alternatives, Volume I (Document reference 6.1, DCO Volume 6).</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Wider community | PLB32      | The respondent suggested that job creation could be provided already if used to fix current infrastructure. | N                    | <p>Since 2020, the Applicant has significantly increased its find-and-fix teams and it now has around 200 dedicated technicians working around the clock, fixing around 500 leaks a week, which is close to 25,500 leaks a year</p> <p>The Applicant has an ambitious target to reduce leakage by up to 50% by 2050, but fixing leaks alone will not solve the water resource challenge in Hampshire, which is why a major new source of water is required (i.e. the Project) to help address the significant water supply shortfall. The Case for the Project (Document reference 5.6, DCO Volume 5) sets out the compelling need for the Project.</p> |

**Table F29-20 Summary of issues raised on the theme of consultation and the Applicant's response**

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee                         | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                   |            |                                                                                                                                                                                                                                                                                                                                                                                                                |                      | 2008). All local authorities assessed the Applicant as having complied with the duties to consult and publicise (Sections 42, 47, and 48 of the PA 2008).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| UK Health Security Agency (UKHSA) | CON04      | The UKHSA stated that having considered the submitted consultation material, Office for Health Improvement and Disparities (OHID) wish to make the specific comments and recommendations. OHID acknowledged the intention to engage further and given comments and level of concern, the OHID welcomed the opportunity to discuss specific elements of the Project alongside local Directors of Public Health. | N                    | <p>As outlined in the Statement of Engagement (Document reference 5.9, DCO Volume 5), the Applicant recognises the importance of engaging with public health bodies to ensure that potential effects on human health are properly assessed and addressed. Engagement with UKHSA and OHID has been undertaken in line with relevant planning and environmental assessment guidance. Prior to the Summer 2024 Consultation, the UKHSA was invited by the Applicant to multiple EIA Working Groups, but it declined to attend, so was removed from the attendee list in 2023. Likewise, OHID was contacted by the Applicant in 2022 about attending the EIA working groups but declined.</p> <p>The UKHSA was invited by the Applicant to attend a meeting on 21 April 2026 to discuss the Project. The Applicant followed up twice with the UKHSA for whether this was an acceptable date but had no reply. The UKHSA was also invited to attend the final Community EIA Working Group meeting on</p> |

|                      |            |                                                                                                                                                                                 |                      | <p>30 April 2026, which it confirmed that OHID would attend.</p> <p>ES Chapter 17 Socio-economics, tourism and health, Volume I (Document reference 6.1, DCO Volume 6) evaluates the Project's impact on access to healthcare, community access, wellbeing, and social infrastructure.</p>                                                                                                                                                                         |
| Upham Parish Council | CON05      | Upham Parish Council outlined the quality of consultation materials and public information events was mixed, rating them from average to effective.                             | N                    | <p>In October 2025, the Applicant submitted an Adequacy of Consultation Milestone (AoCM) submission, please see Appendix A.3 (Adequacy of Consultation Milestone).</p> <p>As part of this submission, the Applicant asked local authorities for their views on the Applicant's compliance with the PA 2008. All local authorities assessed the Applicant as having complied with the duties to consult and publicise (Sections 42, 47, and 48 of the PA 2008).</p> |
| HBC                  | CON06      | HBC noted inconsistencies between various consultation documents, including pipeline route maps, and the Portsmouth Water application. HBC emphasised the need for consistency. | N                    | <p>The Summer 2024 Consultation materials outlined two options to transfer purified recycled water from the Water Recycling Plant (WRP) to Havant Thicket Reservoir. Following the approval in 2025 of Portsmouth Water's application for two new pipelines between Bedhampton Springs and Havant Thicket Reservoir, the Applicant's backup option for pipelines between the WRP site and Havant Thicket Reservoir was not</p>                                     |

|                   |            |                                                                                                                                                        |                      | progressed any further. The Applicant has worked with Portsmouth Water to ensure consistency between projects.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Wiltshire Council | CON07      | Wiltshire Council completed a feedback form and said it heard about the consultation via information provided by a local authority.                    | N                    | Wiltshire Council was notified of Summer 2024 Consultation by letter issued ahead of the start of the consultation period, in accordance with Section 42 of the PA 2008, as well as via email. The Applicant notes that Wiltshire Council became aware of the consultation through information shared by another local authority but confirms it has evidence that direct notification was provided on 24 May 2024 prior to the commencement of the Summer 2024 Consultation.                                                                                                                              |
| EHDC              | CON08      | EHDC noted that its area falls within the draft Order Limits but there were no public information events nor any deposit locations within the borough. | N                    | <p>Consultation materials were available online and through statutory notifications in newspapers, and via leaflets, letters and emails, providing accessible opportunities for stakeholders in the East Hampshire borough to view information and submit feedback in line with the PA 2008 requirements. Two in-person events were held in Havant, as well as three deposit locations. This was deemed sufficient for interested parties who wished to attend and event or find out more about the Project.</p> <p>The Applicant consulted EHDC on the draft 2024 Statement of Community Consultation</p> |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>was a lack of communication between Summer 2022 Consultation and Summer 2024 Consultation.</p> <p>Respondents who filled out a feedback form said they were unqualified to answer technical questions while others said they had not received sufficient information.</p> <p>A further respondent questioned the validity of the consultation process and expressed interest in whether anything has changed since the last consultation in Summer 2022.</p> |                      | <p>Consultation were widely publicised through a range of channels, including direct notifications to prescribed consultees, local authorities, parish councils, landowners, and the wider public. Information was made available online, at deposit locations, and through in-person events to provide accessible opportunities for feedback.</p> <p>Please see Appendix F.6 (2024 Scheme Development Summary) which details how the Project developed between the Summer 2022 Consultation and the Summer 2024 Consultation, resulting in the need to consult new and different landowners. Between the consultations, the Applicant published Appendix C.15 (Summer 2022 Consultation Summary of Feedback Report) in January 2023 to inform stakeholders about the issues raised and how their feedback was being considered.</p> <p>In line with good practice and appropriate guidance, the consultation materials were designed to be accessible to a broad audience, with non-technical summaries provided alongside detailed technical reports to support understanding.</p> |
| PILs      | CON14      | Respondents appreciated the quality of public relations and information days. They                                                                                                                                                                                                                                                                                                                                                                              | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

**Hampshire Water Transfer and Water Recycling Project**  
**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                       | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|-----------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | said that staff were able to answer most questions.                                                                                                                                                                                                                                                                           |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| PILs      | CON15      | Respondents requested the ability to download and save a copy of feedback submitted via the online feedback form while further respondents noted that attachments could not be uploaded alongside the online feedback form. Another respondent requested a location specific meeting so specific questions could be answered. | N                    | <p>At the subsequent Spring 2025 Consultation, the Applicant added a feature to the dedicated consultation website to enable consultees to download a copy of their completed feedback form.</p> <p>The Applicant assumes that the respondent was referring to the location of in-person events, held as part of the Summer 2024 Consultation. In consultation with local authorities on the 2024 SoCC, the locations were selected to ensure coverage across the consultation zone to allow interested parties to attend. Please refer to Chapter 8 of this Consultation Report for information about how the Applicant developed the 2024 SoCC and consulted local authorities on the in-person event locations.</p> <p>The Consultation Report summarises the consultation activities undertaken by the Applicant with consultees including landowners. Following Summer 2024 Consultation, the Applicant invited landowners who raised feedback to meet and discuss their comments further, to better understand possible impacts. Please see the Pre-application Land and Rights Negotiations</p> |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|           |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |                      | Tracker (Document reference 4.4, DCO Volume 4) for the current status of negotiations of voluntary land agreements with affected landowners.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| PILs      | CON16      | <p>There were concerns raised about the appropriateness of the consultation materials. In particular, concerns were raised about the accessibility of consultation materials for people who are dyslexic or non-computer literate, as well as the perceived 'transparent' level of detail regarding the proposed Pipeline routes.</p> <p>A respondent noticed an error on the Book of Plans, Section J, drawing 71066-SWS-XX-XX-DR-Z-08017. It was noted that there was a box included with the word Wickham in the north east corner, however this was noted as incorrect. It is the village of Waltham Chase, Wickham which is situated to the South East of this plan. It was requested that this plan is corrected.</p> | N                    | <p>Consultation materials were designed to ensure they were accessible through multiple formats, including an online dedicated consultation website, printed copies at deposit locations, and hard-copy materials available on request.</p> <p>The Applicant made a commitment in the 2024 SoCC that, '<i>on request, documents can also be translated, made available in large print, audio versions, braille and in a digital data format.</i>' The brochure, Appendix F.2 (Brochure) also explained that the consultation documents would be made available in an alternative format, and listed ways in which stakeholders could contact the Applicant to request this. The Applicant received no requests for consultation documents to be provided in an alternative format.</p> <p>The proposed Pipeline routes were shown as figures in the brochure, and at a larger scale in the Book of Plans, Appendix F.5 (Book of Plans) to provide varying levels of detail to stakeholders.</p> |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                         | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-----------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                                                                                                                                                                 |                      | The Applicant acknowledges the mapping error identified in the Book of Plans, Appendix F.5 (Book of Plans). This was not rectified during the consultation period because this feedback was received after the consultation closed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| PILs      | CON17      | Respondents reviewed the extensive information on the Project website and appreciated the understanding of the scheme and its consequences.                     | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| PIL       | CON18      | The respondent noted that they had received a formal letter and a leaflet about the Summer 2024 Consultation but noted they had not seen information elsewhere. | N                    | The Applicant confirms that all known landowners, Section 42(1)(d) consultees, notifications were verified to be delivered by Royal Mail Tracked Delivery service ahead of the start of the consultation. In consultation with the local authorities, and in accordance with Section 47 of the PA 2008, the Applicant developed a 2024 SoCC. As part of the 2024 SoCC, the Applicant created consultation zones for the Summer 2024 Consultation and clearly outlined which methods of communication would be used for each of the consultation zones. This included a leaflet which was sent to all landowners in Consultation Zones A and B. The 2024 SoCC also committed the Applicant to the distribution of posters, and placing adverts |

|           |            |                                                                                                                                                                                                                                                                                                                                        |                      | and notices in newspapers. These methods were chosen to raise awareness of the consultation. Please see Chapter 8 of the Consultation Report.                                                                                                                                                                                                                                                                                                                                                                                                            |
| PIL       | CON19      | The respondent noted that they had had a positive experience at the in-person event in Wickham. It was noted that the event was comprehensive, and staff were open to discussion. However, the respondent stated that they were unsure what would have happened if they did not make contact with the Applicant in the first instance. | N                    | The Applicant wrote directly to landowners, tenants and businesses within the draft Order Limits to notify them about the Summer 2024 Consultation, as required under Section 42 of the PA 2008. The letters included the locations of the in-person events which landowners were invited to attend.                                                                                                                                                                                                                                                     |
| PIL       | CON20      | The respondent noted that the public information events were well located and well-staffed but suggested spreading them over a longer period of time to accommodate more people. Especially considering the consultation was held over Summer.                                                                                         | N                    | The Applicant has noted this comment. In consultation with the local authorities, and in accordance with Section 47 of the PA 2008, the Applicant developed a 2024 SoCC. The Applicant consulted local authorities about the timing of the in-person events and received limited comments on this topic. The final 2024 SoCC committed the Applicant to undertake six in-person events at a range of times to maximise stakeholder attendance. Please see Chapter 8 of the Consultation Report for more information on the development of the 2024 SoCC. |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PIL       | CON21      | The respondent noted they had attended a public consultation event but were disappointed by the lack of specific information as the respondent said they sought assurances about the impact on their farm. It was noted that it was not worth their time attending. | N                    | <p>The Summer 2024 Consultation was held when the Project was at a formative stage to allow consultees to influence the proposals. A PEI Report was published as part of the consultation, which provided an overview of the preliminary environmental impacts to allow for stakeholders to make an informed view of the likely significant effects of the project at that interim stage. The ES reports the completed EIA, providing the findings of the more detailed environmental assessments undertaken and the proposed mitigation measures.</p> <p>The Applicant continued to engage with landowners on the impacts to their interests following the Summer 2024 Consultation.</p> |
| PIL       | CON22      | Having attended an in-person consultation event at Wickham Community Centre, a respondent stated that they were disappointed with the lack of clarity and stated it was a PR exercise.                                                                              | N                    | <p>The Applicant acknowledges the comment about the information provided at the Summer 2024 Consultation. Consultation materials were prepared to ensure information was clear, accurate, and proportionate to the stage of the Project.</p> <p>Appendix A.3 (Adequacy of Consultation Milestone) confirms that the Applicant undertook a compliant and adequate Summer 2024 Consultation. The Applicant remains committed to continuing open dialogue as the Project progresses.</p>                                                                                                                                                                                                     |

| Consultee                                        | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

| <b>Wider community Section 47 and Section 48</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| Wider community                                  | CON23      | <p>Respondents stated that there was inadequate public consultation, a lack of transparency, and insufficient communication about the Project's impact. It was viewed that more stakeholders, including customers, should have been engaged regarding the Project. A further respondent noted that as they live on a caravan park they are often overlooked so requested that all concerns raised by residents are considered.</p> <p>It was also stated that alternative options have not been presented.</p> | N                    | <p>The Summer 2024 Consultation was undertaken in accordance with the requirements of the PA 2008 and associated guidance, ensuring that statutory consultees, local authorities, landowners, and the wider public had the opportunity to review and comment on the proposals. As part of the 2024 SoCC, the Applicant created consultation zones for the Summer 2024 Consultation. The 2024 SoCC clearly outlined which methods of communication would be used for each of the consultation zones. The Summer 2024 Consultation asked for comments on the preliminary environmental and other impacts of the Project from those likely to be impacted by the construction and operation of the Project. Please see Chapter 8 of the Consultation Report for more information. The Applicant's emerging WRMP24, in which the Project has been selected, has been through an extensive consultation process with customers.</p> <p>The Applicant acknowledges concerns about transparency and communication and notes that multiple pre-application consultations on the Project have been undertaken.</p> <p>In October 2025, the Applicant submitted an AoCM submission, please see Appendix A.3</p> |

| Consultee | Issue code | Summary of issue raised | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------|------------|-------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            |                         |                      | <p>(Adequacy of Consultation Milestone). As part of this submission, the Applicant asked local authorities for their views on the Applicant's compliance with the PA 2008. All local authorities assessed the Applicant as having complied with the duties to consult and publicise (Sections 42, 47, and 48 of the PA 2008). Appendix A.3 (Adequacy of Consultation Milestone) confirms that the Applicant undertook a compliant and adequate Summer 2024 Consultation. The Applicant remains committed to continuing open dialogue as the Project progresses.</p> <p>Specific efforts were made to engage with a diverse range of stakeholders, including seldom-heard groups. The Applicant notes the importance of considering feedback from all residents, including those living in caravan parks, and confirms that all consultation responses have been recorded and reviewed.</p> <p>Regarding alternatives, the Applicant confirms that information on the evolution of the Project and the consideration of alternative options was presented within the consultation materials and is set out in greater detail in the Scheme Development Report (Document reference 5.10, DCO Volume 5).</p> |

| Wider community | CON24      | Positive feedback was provided to the consultation. Respondents appreciated the informative and well-presented consultation information and supported the Project citing its benefits.                                                                                                                                                                                                                                                                                                                                                                                                                                            | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Wider community | CON25      | <p>Respondents urged the Applicant to consult customers and residents within potentially impacted areas. The need for meaningful public consultation was emphasised.</p> <p>There was also a request to consult cycle and active travel groups.</p> <p>A representative from the Walk Wheel Cycle Trust (formally Sustrans) expressed interest in discussing the Project further and requested to be considered an ongoing stakeholder to be included in future conversations about the Project.</p> <p>It was viewed that there could have been more consultation with cycle groups to ensure a good route for a cycle path.</p> | N                    | <p>The Applicant has noted these comments. Meaningful public consultation has been undertaken with residents, landowners, and community groups in accordance with the 2024 SoCC, and relevant legislation and guidance.</p> <p>The Applicant confirms that the Walk Wheel Cycle Trust was notified about the subsequent Spring 2025 Consultation as an ongoing stakeholder.</p> <p>The Applicant has engaged with various stakeholders to seek views on the process that was undertaken to develop the design of the Project. For information about how the Applicant have considered suggestions to create a cycle route along the Pipeline route please refer to issue code PLB01.</p> |
| Wider community | CON26      | It was highlighted that although the material was well presented the respondent claimed that information was 'manipulated' due to a lack of detail.                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | N                    | Consultation materials were prepared in accordance with the requirements of the PA 2008 and associated guidance, ensuring information was accurate, accessible, and proportionate to the stage of the Project. While the Applicant acknowledges that some                                                                                                                                                                                                                                                                                                                                                                                                                                |

|                 |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                      | respondents sought greater detail, the level of information provided was in line with good practice and was considered sufficient to enable meaningful feedback. Please see section 3.6 of the Consultation Report for information about how the Applicant had regard to the Gunning Principles.                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Wider community | CON27      | The respondent said the consultation brochure was well presented.                                                                                                                                                                                                                                                                                                                                                                                            | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Wider community | CON28      | <p>It was acknowledged that deposit locations were useful for obtaining hard copies of the consultation material, but it was noted that there was no deposit locations situated within the East Hampshire district.</p> <p>Feedback indicated that some deposit locations were not always open and the material was not available on open display. It was also noted that some library staff said they had no knowledge about the consultation material.</p> | N                    | The 2024 SoCC explained how the Applicant would consult with people living within the vicinity of the Project. In accordance with Section 47 of the PA 2008, the Applicant consulted local authorities about what was to be included within the 2024 SoCC. This included the libraries chosen as deposit locations. Please refer to Chapter 8 of the Consultation Report for an explanation about how the Applicant consulted local authorities on the 2024 SoCC. Appendix A.3 (Adequacy of Consultation Milestone) confirms that the Applicant undertook a compliant and adequate Summer 2024 Consultation. All local authorities assessed the Applicant as having complied with the duties to consult and publicise (Sections 42, 47, and 48 of the PA 2008). |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                      | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-----------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                              |                      | The Applicant engaged with the appropriate persons at each of the libraries chosen for deposit locations prior to the consultation launch and provided instructions in a document to each library. The Applicant understands some library staff are volunteers and are not at the library full time, however, the Applicant engaged with libraries to help ensure consultation materials were presented at the libraries in the best way possible.                                                                                                                          |
| Wider community | CON29      | Feedback on the website's ease of navigation and the clarity of consultation materials was mixed, with some finding it average and others difficult to read. | N                    | The Applicant has noted this comment though the dedicated consultation website was designed to be accessible and informative, including providing an interactive map to assist interested parties to understand how the Project could affect them.                                                                                                                                                                                                                                                                                                                          |
| Wider community | CON30      | Respondents questioned whether all residents and businesses along the proposed pipeline route had been fully informed.                                       | N                    | Residents, landowners, and businesses identified within or near the draft Order Limits were consulted in accordance with the 2024 SoCC and relevant legislation and guidance. This includes Section 42 consultees. Notifications were issued by letter ahead of the start of the consultation to all landowners, supplemented by public notices, online materials, and a leaflet was sent to businesses and people living within 1km of the draft Order Limits. The Applicant is confident that all those potentially affected were given appropriate opportunity to review |

|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            |                                                                                                                                                                                                                           |                      | the proposals and provide feedback. Local authorities were asked for their views on Adequacy of Consultation which included the Applicant's duty to consult under Section 42 of the PA 2008. All local authorities confirmed that the Application had complied with Section 42 of the PA 2008. This is documented in Appendix A.3 (Adequacy of Consultation Milestone).                                                                                                                                 |
| Wider community | CON31      | A respondent presented the Project to students as a case study which resulted in a vote to reject it. The respondent called for persons of school age/college age to be consulted.                                        | N                    | The Applicant recognises the value of engaging younger audiences on issues related to water resources and the environment. As part of the publicity for the Summer 2024 Consultation, the Applicant wrote local to education establishments, including schools and colleges, to raise aware awareness of the consultation. These consultees were invited to comment on the Project, please see Appendix F.26 (Section 47 cover letter) and section 9.5 of the Consultation Report for more information. |
| Wider community | CON32      | Feedback was provided on the quality of public information events. The respondent noted there was a lack of detailed knowledge among staff, and that ' <i>white washed standard</i> ' answers were provided to questions. | N                    | All consultation staff were fully briefed and supported by technical specialists to provide accurate information. However, the Applicant recognises that some attendees sought more detailed responses than staff were able to provide. The Summer 2024 Consultation presented the preliminary environmental and other impacts of the Project. The Project has                                                                                                                                          |

|                 |            |                                                                                                                                                                                                         |                      | since been refined, and the findings of the EIA is presented in the ES.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Wider community | CON33      | The respondent attended a public information event and felt their questions were answered. The respondent noted that it left the event with the assurance that the Project was a good solution.         | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Wider community | CON34      | An organisation said it found it difficult to comment on the high-level description of the Project.                                                                                                     | N                    | The Applicant has noted this comment. The consultation materials were prepared to provide an appropriate level of information to a broad audience for the stage of the Project, in line with the requirements of the PA 2008 and associated guidance. This included a PEI Report at the Summer 2024 Consultation containing a considerable amount of environmental information on the anticipated likely significant effects of the Project and a whole chapter on the Project description. Further information on the description of the Project can be found in ES Chapter 3 Description of Proposed Development, Volume I (Document reference 6.1, DCO Volume 6). |
| Wider community | CON35      | Concerns were raised about the clarity and accuracy of consultation materials, with some respondents finding them misleading and noted it was not made clear who would receive the new source of water. | N                    | Consultation materials were prepared to ensure information was clear, accurate, and proportionate to the stage of the Project. The Applicant confirms that information was included in the consultation materials                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

Hampshire Water Transfer and Water Recycling Project  
 Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|           |            | <p>Respondents criticised the development from the Summer 2022 Consultation to the Summer 2024 Consultation. It was perceived that nothing had changed, and the residents have been ignored, with an apparent lack of consideration for greener or cheaper alternatives.</p> <p>It was viewed that the Project has changed significantly from its initial purpose, and that the approach outlined in the 2022 Consultation was <i>'a smoke screen for the true plans'</i>.</p> |                      | <p>explaining that the Project would provide a new water resource for its Hampshire supply area.</p> <p>The design of the Project was refined following the Summer 2022 Consultation, which presented the preferred pipeline corridor, to the Summer 2024 Consultation which presented the proposed pipeline routes and sites for the Above Ground Plant (AGP). The consultation brochure and 2024 Scheme Development Summary from the Summer 2024 Consultation both outlined how the Project had been developed since the Summer 2022 Consultation having regard to ongoing environmental surveys, design development and feedback from consultation and engagement. It was made clear in the Summer 2024 Consultation materials why the chosen technological solution remained the preferred approach and how this continued to be selected through the Water Resources South East (WRSE) Regional Plan and the Applicant's emerging WRMP24. The Project presented in the Summer 2024 Consultation remained fundamentally the same proposal as that presented in the Summer 2022 Consultation.</p> |

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                             | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Wider community | CON36      | Feedback pertained to how the public was consulted with some stating that the consultation zone should have been extended to reach customers and those who lived across the region. | N                    | The four consultation zones were defined in consultation with local authorities through the 2024 SoCC. This was in accordance with Section 47 of the PA 2008 to ensure that those most likely to be affected by the Project were directly consulted. In addition to statutory notifications within the defined area, wider awareness was raised through press, online materials, and social media to enable participation from interested parties across the region. The Applicant considers that the Summer 2024 Consultation provided reasonable opportunity for both affected stakeholders and the wider public to engage with the proposals. Through engagement with the AoCM, local authorities confirmed that the Applicant has complied with Section 47 of the PA 2008. In addition, the Applicant's emerging WRMP24, in which the Project has been selected, has been through an extensive consultation process with customers, and therefore, consulting customers more widely as part of the Summer 2024 Consultation for the Project was not proportional. |
| Wider community | CON37      | Respondents noted difficulty with reading the maps and the level of detail included in them.                                                                                        | N                    | In developing the consultation materials, the Applicant designed the Book of Plans to be accessible to a broad audience, in line with best practice.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

**Consultation Report Appendix F – Statutory Summer 2024 Consultation**

| Consultee       | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | A respondent provided specific feedback on the Book of Plans and noted that it did not fully show the intentions of the sites located in Pipeline Sections H and J.                                                                                                                                                                                                                                                                                                                   |                      | Detailed information about the design development of these proposed routes can be found in the Scheme Development Report (Document reference 5.10, DCO Volume 5).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Wider community | CON38      | <p>The respondent stated that Ofwat reported that the Applicant's Gate 2 submission and associated annexes were difficult to navigate due to figures having been redacted, with inconsistencies and inaccuracies identified.</p> <p>The respondent suggested that Ofwat review the redacted versions of the Gate 2 report and associated annexes on the Applicant's website.</p> <p>It was viewed that the redaction of the information has limited meaningful public engagement.</p> | N                    | <p>The Gate 2 submission referenced by the respondent formed part of the regulatory process overseen by Ofwat under the Regulators' Alliance for Progressing Infrastructure Development (RAPID) programme and was separate from the statutory consultation conducted under the PA 2008. RAPID is made up of the three water regulators: Ofwat, the EA and the Drinking Water Inspectorate (DWI). It was established to work with the industry to promote the development of strategic water resources infrastructure. Certain information within the Gate 2 documents was redacted to comply with confidentiality requirements set by Ofwat and project partners. The Applicant acknowledges that this limited the level of detail publicly available at that stage; however, comprehensive and unredacted information relevant to the DCO has been provided through the Summer 2024 Consultation materials and the submitted application documents to ensure meaningful public engagement.</p> |

**Table F29-21 Summary of issues raised on the theme of the equality impact assessment and the Applicant's response**

| UK Health Security Agency                                       | EQIA01     | UK Health Security Agency noted that there was no mention within the Equality Impact Assessment that the findings from the assessment in relation to vulnerable groups has been used to support the population and human health assessment. | N                    | <p>There is no mention within the Equality Impact Assessment that the findings from the assessment in relation to vulnerable groups have been used to support the population and human health assessment as this was not the case. This is because the Equality Impact Assessment follows the population and human health assessment, therefore the human health assessment informed the Equality Impact Assessment rather than the other way around.</p> <p>Although the Equality Impact Assessment (Document reference 7.14, DCO Volume 7) has been undertaken alongside the Environmental Impact Assessment (EIA) and the Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) and draws on evidence presented in the Human health assessment, in Environmental Statement (ES) Chapter 17 Socio-economics, tourism and health Volume I (Document reference 6.1, DCO Volume 6), it does not form part of the ES. The Equality Impact Assessment has a specific and defined purpose in relation to the Public Sector Equality Duty and the Equality Act</p> |

|           |            |                         |                      | <p>The Summer 2024 Consultation included a range of approaches and media to maximise awareness of the Project and the consultation. These were designed to allow people with different needs across the community to take part in the consultation in a way that was accessible and convenient to them. Consultation methods included letters, leaflets, posters, adverts, social media, meetings with local organisations, notices, emails, a consultation website, deposit locations in regional and local hubs where consultation materials are made available, and public consultation events.</p> <p>The Applicant contacted organisations that support and represent seldom heard groups by post and by email on a non-prescribed basis. This included organisations that support and represent people with disabilities.</p> <p>In preparation for the Summer 2024 Consultation, the Applicant's Equality Impact Assessment team worked with the Applicant's Engagement and Consultation teams to input into the planning of public consultation events and materials, including consideration of the accessibility of consultation events and materials as outlined in Appendix E.9 (2024 SoCC).</p> |

| Rowlands Parish Council | PFC01      | <p>Rowlands Parish Council stated that the Project is seen as an expensive solution for providing drought resilience, both in terms of construction costs and through-life operational costs, which the respondent said is likely to increase bills for customers in the future.</p> <p>Rowlands Parish Council interpreted from the consultation material that customers' bills would increase by £30 per year over 20 years, to fund the construction of the Project, as well as the high running costs. It was also stated that construction costs have continued to increase from an estimated £550-£900 million in June 2023 to over £1.2 billion as of June 2024.</p> <p>The respondent also stated that the Project would initially affect the Applicant's customers financially, but over time, Portsmouth Water's customers may also face increased costs due to shared use of water from Havant Thicket Reservoir.</p> <p>The respondent said that the cost estimation of treating 30 megalitres per day (Ml/day) to pump to Otterbourne, using energy consumption information provided by The Applicant and the lowest energy cost currently paid by the company of</p> | N                    | <p>The Project was selected as the preferred solution from an extensive options appraisal process which considered a number of alternative options against a range of criteria, including best value. The Project has also been selected through both the Water Resources South East (WRSE) Regional Plan and the Applicant's emerging Water Resources Management Plan (WRMP24) processes with best value as a golden thread through each.</p> <p>Project costs have increased since early cost estimates for the scheme were published with a key factor being global and national influences and inflationary implications affecting both material and labour costs. This is also the case for costs relating to Havant Thicket Reservoir and is likely to be the case for estimated costs for any of the alternative solutions previously considered.</p> <p>As with all the Applicant's costs, funding for new infrastructure would be averaged across water supply customers' bills and would be subject to approval by the water industry regulator, Ofwat.</p> <p>While the Project provides critical drought resilience, it is also needed to support essential daily supplies to customers, which includes any sweetening flow that would</p> |

|-----------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                 |            | <p>It was suggested that property development should be more regulated to reduce demand and that developers should be taxed. It was stated that household payments should be directed to maintaining the existing infrastructure, described as an '<i>ageing Victorian network</i>,' before embarking on new projects.</p> <p>Concern was raised regarding a previous project on Eastern Road in Portsmouth, which was viewed as poorly executed, and has led to doubts about the Applicant's ability to successfully deliver this Project.</p> |                      | <p>Refer to the Funding Statement (Document reference 4.2, DCO Volume 4), and the Case for the Project (Document reference 5.6, DCO Volume 5) which contains a 'Value for Money' statement.</p> <p>Maintaining and repairing existing infrastructure is a core part of the Applicant's operation. Reducing leakage and investing in demand reduction measures are key to addressing the water supply shortfall in Hampshire but these can only be part of the overall solution, which also requires a large new water resource to maintain supplies into the future.</p> <p>To find out more information about the options appraisal process, refer to the Scheme Development Report (Document reference 5.10, DCO Volume 5). The Case for the Project (Document reference 5.6, DCO Volume 5) outlines how best value is a golden thread running through the WRMP process.</p> |
| Wider community | PFC06      | Respondents suggested alternative, short term, solutions were scoped and implemented which could provide incremental benefits and allow customers to see results from where the funds are being spent.                                                                                                                                                                                                                                                                                                                                          | N                    | The Project was selected as the preferred solution from an extensive options appraisal process which considered a number of alternative options against a range of assessments and criteria, including best value. There are no cheaper options available and other incremental, short-term, solutions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|           |            | <p>Concerns were raised by respondents about the short-term value of money invested in effluent recycling, with comparisons made to more sustainable solutions like winter storage reservoirs, which provide better value for money and more environmental benefits.</p> <p>Respondents believed that cheaper options were being overlooked in favour of acquiring as much funding as possible out of the public, and the government for the benefit of shareholders.</p> |                      | <p>will not address the scale of shortfall facing Hampshire in the timescales needed. New reservoirs have been considered within the Applicants emerging WRMP24, but these take a significant amount of time to develop, carry their own environmental impacts, and cannot rely on rainfall alone to provide the necessary volumes in Hampshire, hence would need to rely on river abstractions that the Applicant is required to reduce. The Applicant is already investing significantly in Havant Thicket Reservoir, and this plays a critical role in the Project by augmenting the volume of water that can be delivered to the Applicant's Otterbourne WSW.</p> <p>As a regulated industry, the amount of return that the Applicant can make on its investment is controlled by the water industry economic regulator, Ofwat. Ofwat exists to protect the consumer and ensure water companies deliver value for money by controlling costs that water companies can charge customers.</p> <p>The Scheme Development Report (Document reference 5.10, DCO Volume 5) provides more information about how the Project was selected. The Case for the Project (Document reference 5.6, DCO Volume 5) outlines how best value is a golden thread running through the WRMP process.</p> |

| <b>Prescribed bodies and local authorities Section 42(1)(a)</b> |            |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Eastleigh Borough Council (EBC), Winchester City Council (WCC)  | TPP01      | <p>Respondents commented that it is not clear what the active construction length would be at any one time or the duration of construction at any one location, this included a comment stating that there was a lack of clarity about the extent of temporary fencing.</p> <p>Additionally, it was noted that the expected timeframe for the Project is four years, and that the lifetime of the Project would be approximately one hundred years.</p> | N                    | <p>The Project would be constructed over approximately a five year period which is expected to commence in 2028, however a detailed construction programme has not been defined at this stage and would be developed by the Contractor once appointed. ES Chapter 3 Description of Proposed Development, Volume I (Document reference 6.1, DCO Volume 6) sets out the outline construction programme, which has informed the environmental assessments. The construction of the Project would be phased and spread along the route therefore construction works would not take place across the full extent of the Order Limits for the full construction duration.</p> <p>Temporary fencing would be required. The Outline Construction Environmental Management Plan (Document reference 7.1, DCO Volume 7) sets out the measures that would be implemented for the establishment and maintenance of this fencing.</p> |
| Havant Borough                                                  | TPP02      | The respondent noted that the local planning authority had limited resources and that, considering the ' <i>challenging</i>                                                                                                                                                                                                                                                                                                                             | N                    | A Planning Performance Agreement has been put in place to provide funding for local                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

Hampshire Water Transfer and Water Recycling Project  
Consultation Report Appendix F – Statutory Summer 2024 Consultation

| Consultee                              | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Council (HBC)                          |            | <p><i>timeline for the approval and build out stages of the Project,</i> the respondent requested that options be explored to cover resourcing.</p> <p>WCC provided feedback on the Development Consent Order (DCO) process timescales and noted that members have outlined concerns that the delivery of the Project can be achieved with the current Project timeline. The Council queried if intrusive evaluation is still planned as part of the EIA work and if not, sufficient time would need to be incorporated into the post-DCO schedule to allow for evaluation, reporting, consideration of results and design and implementation of archaeological mitigation works.</p> |                      | <p>planning authority engagement during the pre-application period.</p> <p>The Applicant has been engaging with WCC officers to keep the Council updated on the process and timescales and DCO submission, via regular bilateral meetings and the Local Authority Joint Officer Group.</p> <p>The DCO will contain provisions relating to procedures for approvals, consents and appeals relating to any applications made under requirement of the DCO.</p> |
| East Hampshire District Council (EHDC) | TPP03      | <p>The respondent commented that the information presented does not appear to clarify how long this recycling Project could be sustained and whether the water transfer process could negatively impact water supply in the Portsmouth Water area during drought periods.</p> <p>Additionally, it was noted that there was a lack of clarity regarding decommissioning, and which regulations would apply.</p>                                                                                                                                                                                                                                                                        | N                    | <p>The components of the Project are expected to have a design life of up to 100 years, however the operational life of the Project could be longer than this. After this time, the components of the Project would be reviewed to determine maintenance requirements. This is set out in ES Chapter 3 Description of Proposed Development, Volume 1 (Document reference 6.1, DCO Volume 6).</p>                                                             |

| Consultee                                                   | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                               | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                             |            |                                                                                                                                                                                                                                                                                                       |                      | <p>Implementation of the Project would not negatively impact water supply in the Portsmouth Water area, instead it would supplement water levels in Havant Thicket Reservoir to ensure more water is available in the Hampshire area.</p> <p>The DCO is not seeking consent for decommissioning of the Project, however an assessment of decommissioning is considered in the ES. The approach to the assessment of decommissioning is set out in ES Chapter 5 EIA approach and methodology, Volume I (Document reference 6.1, DCO Volume 6). Any decommissioning works would take place in the context of the regulatory framework in place at that time, which may include a requirement to seek additional consents, permits or licences.</p> |
| <b>Person with an Interest in the Land Section 42(1)(d)</b> |            |                                                                                                                                                                                                                                                                                                       |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| PIL                                                         | TPP04      | The respondent stated that the Project was long overdue.'                                                                                                                                                                                                                                             | N                    | The Applicant has noted this comment.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| PIL                                                         | TPP05      | The respondent stated that consideration should be given to the timing of the works. The respondent suggested this as they stated that the ground conditions in winter would likely be unsuitable for trenching and trenchless works. The respondent also suggested that the duration of installation | N                    | The Project would be constructed over approximately a five year period however; a detailed construction programme would be developed by the Contractor once appointed. ES Chapter 3 Description of Proposed Development, Volume I (Document reference 6.1, DCO Volume 6) sets out the outline                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Consultee | Issue code | Summary of issue raised                                                                                                                                                                                                                                                                                                                                                                                                            | Project change (Y/N) | The Applicant's response                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
